ing the fees of Naval Officers for entering and clearing vessels; and a Naval Officer at each of the ports was appointed. The Naval Officers being thus expressly authorized by the colony to enter and clear vessels, the Collectors assumed that none but Collectors could enter or clear. In 1710 a sloop belonging to Connecticut being seized at Newport, Rhode Island, for want of a clearance from the Collector at New London, the Governor and his Council espoused the cause of the owners and assumed all the expenses of litigation.

This board being informed by a letter from Coll. William Wanton, of Newport, to his Honor the Governor, that the Collector there hath made seizure of a sloop belonging to this colony, whereof Francis Whitmore is master, because the said sloop went from Saybrook to Newport with a clearing from the Naval Officer at Saybrook, and had not a clearing from Mr. Shackmaple, the Collector at New London: on consideration thereof, and of the resolve of the General Court in May last concerning masters of vessels who enter and clear with the Naval Officer in any port of this colony, that they shall not be obliged to enter and clear at any other port, but shall have free liberty to sail from the port where they so enter and clear directly, etc.; and also considering the desire of the General Court in October last that the Governor and Council do use their utmost endeavor to defend the rights, powers and privileges of this government in and concerning our several ports, do resolve that whatsoever is requisite to be done in this particular case, for the vindication of the vessel seized and justifying the clearing of the Naval Officer, be done at the charge of this government.

Changing the war from defensive to aggressive, the General Assembly, for so it was now named, passed a resolve in 1715,

that whatsoever person doth or shall at any time from and after the ending of the present session of this Assembly, pretend to have and exercise the power and office of a Collector in any place or port of this colony, before he has produced to the Governor and Council a commission for that end from the Lord High Treasurer, Commissioners of the Treasury, and the Commissioners of the Customs, and presented the same to be entered in record in the Secretary's Office, shall not be allowed to execute the said office of Collector.

A further resolve imposed a penalty of £100 on any person who should presume to act as Collector before his commission should be accepted and recorded. Before the end of June next following this enactment, the Governor and Council, at a meeting in New London, sent for Collector Shackmaple, and acquainting him with the said act, gave him opportunity to produce his commission. Mr. Shackmaple having produced a commission signed by a Surveyor-General, and another of like character but different date,

The Governor desired the said Captain Shackmaple if he had any letters or other papers from the Lord Treasurer formerly, or from the Commissioners of the Treasury, or the Customs, which could satisfy this Board that they were privy to his ever being employed as a Collector here, to produce them. But he not offering any such letters or papers, it was considered and resolved that notwithstanding the commissions so produced, he did not appear qualified with powers for the executing the office of Collector in this government, according to the Act of Parliament in the seventh and eighth year of King William the Third, intituled "An Act for Preventing Fraud and Regulating Abuses in the Plantation Trade," referred to in the Act of the Assembly above mentioned.

A few days afterward the Council ordered the naval officer at New London to prosecute the mas-

ter of a sloop who had sailed from that port without a clearance from the Naval Officer. Nothing is said in these instructions about a clearance from Collector Shackmaple, but there is no reason to doubt that he had cleared the sloop, and that this order to the Naval Officer was one gun in the battle for chartered rights.

In several instances where masters of vessels had fallen into trouble in foreign ports, because their clearances were signed by Naval Officers and not by Collectors, the Council certified that the vessels were duly qualified to trade, and that there was "no person in this colony with powers from the honorable the Commissioners of his Majesty's Customs for executing the office of Collector therein."

The position of the colonists was that their charter authorized them to regulate and control commerce both foreign and coastwise; though they did not deny the right of the home government to establish such regulations as the good of the whole empire might demand. Reluctantly the custom was introduced that the Governor should take the oath required to be taken by all governors of her Majesty's colonies or plantations in America, by an Act of Parliament entitled "An Act for Preventing Frauds and Regulating Abuses in the Plantation Trade." However conscientious the Governor might be in his fidelity to this oath, he was also equally faithful to his oath as Governor under the charter.

The outcome of the strife between the Royal Commissioners of the Customs and the colonists, was a double regulation of commerce. The colony had its laws respecting ports, Naval Officers, and duties; and the officers of the King under the Act of Parliament regulated the trade of the colony for the welfare of the British Empire. The colony, though holding that her own courts were competent to decide all controversies, was obliged to submit to the establishment of courts of admiralty, and to demit the claim that her Naval Officers could issue clearances of full validity.

So far as the writer has ascertained, the only duty which the colony imposed was that mentioned by Governor Leete in 1680, viz., a duty on wine and liquors. At the May session of 1708, this duty was fixed at fifty shillings for every pipe of wine and fifty shillings for every hogshead of rum; but at the October session the rate was reduced to ten shillings for a pipe of wine and ten shillings for a hogshead of rum. The money derived from this impost continued to be used for the promotion of learning; for in 1766, on the memorial of the President and Fellows of Yale College, showing the necessity of sufficient funds to enable them to support the officers needful for the instruction, government, and well-being of that society, praying for such aid and assistance as will enable them to support that important interest, so as to answer the true and great ends of its institution, a committee of the General Assembly reported that the want of sufficient funds is occasioned by the payment of considerable sums towards building the chapel, finishing a house for the professor of divinity and

for his support; also by the inability of the tenants, the great decrease of the number of students, and the withdrawal of the usual annual grant from this assembly; and recommended that the deficiency be paid out of the impost duty on rum, collected by the Naval Officers of the Ports of New London and New Haven. The General Assembly, after deducting the salary of one tutor, and thus reducing the sum to be paid from £159 12s. od. to £102 10s. 8d., passed a resolve ordering the Naval Officer of the Port of New Haven to pay that sum "to the treasurer of the college, out of said duty on rum or so much thereof as he hath money arising thereon in his hands. And in case he, said Naval Officer, have not sufficient, the Naval Officer for the Port of New London is ordered to pay the residue thereof to said treasurer, for the use and purposes aforesaid.

Until 1756 there was in the colony but one office for the collection of customs by what the colonists called the Home Government, and that was at New London. The *Connecticut Gazette*, the earliest newspaper in New Haven, reports during its first year, the clearances, inward and outward, at the Custom House in New London; and begins August 28, 1756, a similar report of the new office in New Haven. Its report on that day reads thus:

Custom House, New Haven, Inward Entries.—Wells and Johnson from Barbados; Gibbs from Anguilla. Captain Allen, Captain Miles, Captain Mansfield and Captain Smith are all safe arrived at Antigua.

On the 11th of September, the *Gazette* contains this announcement:

Notice is hereby given that all vessels to or from the following towns, viz.: Guilford, Branford, New Haven, Wallingford, Milford, Stratford, Derby, Fairfield, Norwalk, Stamford and Greenwich, belonging to the district of New Haven, are to be entered and cleared at the Custom House in New Haven, where an office for that purpose and to receive his Majesty's customs is now opened. And all masters of vessels are therefore required to apply for their dispatches at said office.

NICHOLAS LECHMERE,

Collector.

The earliest records preserved in the New Haven Custom House date from September, 1762. There is a book commencing with "A list of all ships and vessels cleared outward in the port of New Haven, in the colony of Connecticut, between the 16th day of September, 1762, and the 31st day of December, 1762;" and continuing the outward clearances into the subsequent years. There is another book commencing with "A list of all ships and vessels which have cleared inwards between the 16th day of September, 1762, and the 31st day of December, 1762;" and continuing the inward clearances into the subsequent years.

The British ministry had not at this date undertaken to tax the colonies for revenue. The strife excited by the first attempts to impose duties had subsided, and the colonists were content that Parliament should regulate trade and discriminate between commodities produced by British subjects and such as were brought in from foreign realms.

But when, in 1764, the right to raise a revenue, not by asking the colonists to tax themselves in

their colonial legislatures, but by means of a tax laid by Act of Parliament, was asserted, the colonists hastened to protest against the principle, and against all measures for carrying it into practice. It was in the interest of this protest that Connecticut sent out Jared Ingersoll; and other colonies sent out similar agents. True it was the stamp-tax, rather than duties on imports, which awakened the colonists; but as soon as they were awake they saw that the latter, equally with the former, invaded their rights as British subjects. The argument written by Governor Fitch, copies of which were carried by Mr. Ingersoll, freely acknowledges the right of Parliament to regulate trade for the welfare of the whole British empire, but denies its right to tax any British subjects not present by their representatives in the legislature where the tax was laid, and in particular denies its right to tax the people of Connecticut, because their rights and liberties as British subjects were under the special protection of a royal charter.

When the colonists found that their protest was unavailing, and that laws were enacted to take their property without their consent, they combined to render such legislation inoperative by abstaining not only from the use of stamps, but from the use and importation of whatever was made liable to impost. Such general agreement was there in this abstinence, that English merchants trading with the American colonies finding their occupation gone, turned upon the ministry for relief. The ministry yielding to the demands of the Americans, seconded by their friends in England, so altered the laws regulating trade, that tea was the only commodity carried from England to America on which an import duty was demanded. Tea was retained on the list, it is said at the special request of the King, for the sake of conserving the principle that the mother country could tax its colonies.

Of course, while this controversy was in progress, the Custom House was not in high esteem among the Sons of Liberty. In the account which Benedict Arnold gives in the *Connecticut Journal*, under the date of 29th January, 1766, of the whipping which he and others gave to an informer, it crops out that the officers of the Customs themselves discharged their duties perfunctorily. The informer endeavored to complain of Arnold on a Sunday, but, it being holy time, was desired to call on Monday. "Early" on Monday, Arnold having already heard of his intention, "gave him a little chastisement." The name of the officer who thus repelled the informer has not been transmitted to our time; but it is safe to infer that he was a New Haven man, and more in sympathy with his fellow citizens than with those who had placed him in office. Undoubtedly in such a state of public opinion in reference to duties on imports there was much smuggling.

In this state of feeling toward the Custom House and the duties its officers imposed, or were under obligation to impose, New Haven was not alone. Everywhere throughout the country the laws regulating trade were evaded, not only by such men as Benedict Arnold, but by merchants of far greater

moral sensitiveness than he. Dr. Gordon, in his narrative of the seizure of John Hancock's sloop *Liberty*, in Boston, on the 10th of June, 1768, after the Commissioners of the Customs, turning over a new leaf, had begun to enforce the laws with some degree of fidelity, says: "It had been the common practice for the tidewater, upon the arrival of a vessel, to repair to the cabin and there to remain drinking punch with the master, while the sailors and others on deck were employed in landing the wines, molasses, or other dutiable goods."

The Collector of the Port of Boston when the sloop *Liberty* was seized by the Custom House authorities, was Joseph Harrison. He and his son Richard were both severely handled by the mob which resisted the seizure. How long he had been Collector at that port the present writer has not ascertained, but sees no reason to doubt that he is the same person who, a few years before was Collector at New Haven, as appears from the following notice given in the *Connecticut Gazette* of June 1, 1762.

All merchants and masters of vessels who have any provision bonds now in the office are desired to produce certificates, that they may be canceled in due time, or they will be prosecuted according to Act of Parliament.

By order of the Surveyor-General,
JOSEPH HARRISON, Collector.

There are no Custom House records from which one can make a list of the Collectors before the Revolution. By accident the name of the first collector, Nicholas Lechmere, has been preserved in an advertisement. He entered upon the duties of his office in 1756, but the time when he demitted is not known. Another newspaper has preserved the name of Joseph Harrison as Collector in 1762. He probably left the office in 1764, as the *New London Gazette* of October 26th in that year, says: "Last Saturday, sailed from hence the Prince Henry, mast ship, Captain Robinson, for London. Jared Ingersoll and Joseph Harrison, Esqs.; Captain Samuel Willis, of Middletown; Mr. Samuel Wyllys, of Hartford, and some other gentlemen, went passengers in her." Samuel Peters, in his narrative, more amusing than veracious, of the finding of Gregson's will, informs his readers that Peter Harrison, Collector of his Majesty's customs, was residing at New Haven in 1768. As Joseph Harrison was Collector at Boston in 1768, it is probable that Peters tells the truth in saying that Peter Harrison was at that time Collector at New Haven, and as Joseph Harrison is known to have embarked for England in October, 1764, it may be inferred that Peter Harrison became Collector in that year. If so, Peter Harrison was Collector about eleven years, for he died April 30, 1775. He came to America with Bishop Berkeley in 1729, and resided some years in Boston as an architect before he was appointed Collector at New Haven. His most notable professional work in Boston was King's Chapel. The *Connecticut Journal* of May 3, 1775, contains the following obituary notice of him:

On Sunday last, Died in a fit, Peter Harrison, Esq., Collector of his Majesty's customs for this Port. He was

born in the City of York in England, and in point of family second to very few in America. The duties of the Christian, husband, parent, master, friend, were in Mr. Harrison seen as in a mirror. Bred a gentleman, he possessed in a complete degree all the habits which are the consequence of a uniform desire to please, grounded upon a good heart, and ripened upon experience. His integrity to his master awed the presumption of the illicit; while the trader found in him a director, counselor and friend. He was as superior to a bribe as inflexibly just. In his death learning appears veiled, and the fine art of Architecture has now in America no standard.

Of course there was no Collector of his Majesty's Customs stationed at New Haven after the death of Peter Harrison. From that time the port was under the exclusive control of the colony of Connecticut. During the War of the Revolution, which had already commenced when Mr. Harrison died, navigation was very much interrupted; a few clearances, however, were given by the Naval Officer. In the May session of the General Assembly in 1776, the Governor was appointed Naval Officer for the colony, and authorized to appoint a deputy at each of the ports of New London, New Haven, Middletown and Norwalk.

The peace of 1783 found Jonathan Fitch Naval Officer of the Port of New Haven and Collector of Customs for the County of New Haven. When the United States, having adopted a new Constitution, organized, in 1789, the Government as it now exists, Jonathan Fitch was appointed by President Washington Collector of the District of New Haven, and remained in office till his death, which occurred September 22, 1793. He was a son of Governor Fitch, of Norwalk, and had been a citizen of New Haven during the war, a prominent, active and trusted Whig. He was succeeded in the collectorship by David Austin, who also held the office to the end of life. He died February 5, 1801. Elizur Goodrich was appointed his successor by President John Adams, whose day of office was now in its eleventh, or, perhaps one might more accurately say, in its twelfth hour. Mr. Goodrich hardly had time to take his seat, when President Jefferson appointed Samuel Bishop Collector of the Port of New Haven in place of Elizur Goodrich, removed. This appointment occasioned a correspondence between the merchants of New Haven and President Jefferson, in which the President announced what he regarded as the true principles of civil service. This correspondence we think is well worthy of being reproduced, without any abridgement, at a time when so much interest is felt in the subject therein discussed.

TO THOMAS JEFFERSON, Esq.,

President of the United States.

The undersigned, merchants residing at the port and within the district of New Haven, respectfully remonstrate against the late removal of Elizur Goodrich, Esq., from the office of Collector for the district of New Haven, and the appointment of Samuel Bishop, Esq., to fill his vacancy. As the ground of our remonstrance, we represent that the office, while filled by Mr. Goodrich, was conducted with a promptness, integrity and ability satisfactory to the mercantile interests of this district; a promptness and ability not to be found in his successor.

Believing the character of E. Goodrich, Esq., as an officer,

to be unexceptionable, we lament that it should be considered necessary that a change in the administration must produce a change in the subordinate officers, and in this instance we have especially to lament that certain measures have succeeded in deceiving the President so far as to induce him to appoint a man to an important office who does not possess those qualifications necessary for the discharge of its duties. We hesitate not to say that, had the President known the circumstances and situation of the candidate, he would have rejected the application. To prove this, let facts be submitted to the consideration of the President. Samuel Bishop, Esq., will be seventy-eight years old in November next; he is laboring under a full portion of those infirmities which are incident to that advanced period of life. With these infirmities, and an alarming loss of eye-sight, though he was once a decent penman, it is with difficulty he can even write his name. He was never bred an accountant, nor had the course of his business ever led him to an acquaintance with the most simple forms of accounting. He is totally unacquainted with the system of Revenue Laws and the forms of doing mercantile business, and is now too far advanced in life and too much enfeebled both in body and mind ever to learn either. A man whose age, whose infirmities and want of the requisite knowledge is such, is unfit to be the Collector of the district of New Haven.

We are aware that it may be said he has sustained with reputation and now holds several offices in the city, town and county; but it will be remembered that none of them are by recent promotion. His office of Mayor he holds by charter, during the pleasure of the Legislature; and he is continued as Judge of the County Court, and Town Clerk, because the people of this State are not in the habit of neglecting those who once enjoyed their confidence by a long course of usefulness. Knowing the man as we do, we do not hesitate to say that he cannot, without aid, perform a single official act.

It may be said that the appointment was with a view to the aid of his son, Abraham Bishop, Esq., and that he is to be the Head Collector. We presume the business must be done by him, if done at all. Yet we cannot be led to believe that the President would knowingly appoint a person to the discharge of duties to which he was incompetent, with a design that they should be performed by his son. If however, this was the case, we explicitly state that Abraham Bishop, Esq., is so entirely destitute of public confidence, so conspicuous for his enmity to commerce and opposition to order, and so odious to his fellow-citizens, that we presume his warmest partisans would not have hazarded a recommendation of him.

Knowing these facts, of which we must believe the President ignorant, and relying on assurances that he will promote the general welfare without regarding distinction of parties, we cherish the idea that our grief at the rejection of Mr. Goodrich will not be augmented by the continuance of a father utterly unqualified for the office, or of a son so universally condemned. We assure the President that the sentiments thus expressed are the sentiments of the merchants and importers of the district. That such a class of citizens should be heard patiently, and their well-founded complaints redressed if practicable, we are fully persuaded. If it be an object to "restore harmony to social intercourse," and if "decision at the bar of public reason" be worthy of attention, surely such a portion of the community will not plead in vain for a reconsideration of his appointment, and that such an important office may be filled by a person competent to the performance of its duties, and in some degree acceptable to the public.

[Signed by Jeremiah Atwater, Elias Shipman, Abraham Bradley, Abel Burritt, and others, to the number of eighty persons.]

We certify that the signers of the foregoing remonstrance are the owners of more than seven-eighths of the navigation of the Port of New Haven.

ISAAC BEERS,
*President of the Bank, and of the Chamber
of Commerce in New Haven.*

ELIAS SHIPMAN,
*President of the New Haven Insurance
Company.*

THE PRESIDENT'S REPLY.

WASHINGTON, July 12, 1801.

GENTLEMEN, I have received the remonstrance you were pleased to address to me on the appointment of Samuel Bishop to the office of Collector of New Haven, lately vacated by the death of David Austin. The right of our fellow-citizens to represent to the public functionaries their opinion on proceedings interesting to them, is unquestionably a constitutional right, often useful, sometimes necessary, and will always be respectfully acknowledged by me.

Of the various executive duties, no one excites more anxious concern than that of placing the interest of our fellow-citizens in the hands of honest men with understanding sufficient for their station. No duty, at the same time, is more difficult to fulfill. The knowledge of character possessed by a single individual is of necessity limited. To seek out the best through the whole Union, we must resort to other information, which from the best of motives, is sometimes incorrect. In the case of Samuel Bishop, however, the subject of your remonstrance, time was taken, information was sought, and such obtained, as could leave no room to doubt of his fitness. From private sources it was learnt that his understanding was sound, his integrity pure, his character unstained. And the offices confided to him within his own State are public evidences of the estimation in which he is held by the State in general, and the city and township particularly, in which he lives. He is said to be the Town Clerk; a Justice of the Peace; Mayor of the City of New Haven, an office held at the will of the Legislature; Chief Judge of the Court of Common Pleas for New Haven County, a Court of high criminal and civil jurisdiction, wherein most causes are decided without the right of appeal or review; and sole Judge of Court of Probate, wherein he singly decides all questions of wills, settlements of estates, testate and intestate, appoints guardians, settles their accounts, and in fact has under his jurisdiction and care all the property, real and personal, of persons dying. The two last offices, in the annual gift of the Legislature, were given to him in May last.

Is it possible that the man to whom the Legislature of Connecticut has so recently committed trusts of such difficulty and magnitude is unfit to be the Collector of the district of New Haven, though acknowledged in the same writing to have obtained all this confidence by a long course of usefulness? It is objected indeed, in the remonstrance, that he is 77 years of age; but at a much more advanced age, our FRANKLIN was the ornament of human nature. He may not be able to perform in person all the details of his office; but if he gives us the benefit of his understanding, his integrity, his watchfulness, and takes care that all the details are well performed by himself or his necessary assistants, all public purposes will be answered. The remonstrance indeed does not allege that the office *has been* ill conducted, but only apprehends that it *will be* so. Should this happen in event, be assured I will do in it what shall be just and necessary for the public service. In the meantime he should be tried without being prejudged.

The removal, as it is called, of Mr. Goodrich, forms another subject of complaint. Declarations by myself in favor of *political tolerance*, exhortations to *harmony* and affection in social intercourse, and to respect for the *equal rights* of the minority, have on certain occasions been quoted and misconstrued into assurances that the tenure of office was not to be disturbed. But could candor apply such a construction? It is not in the remonstrance that we find it, but it leads to the explanations which that calls for.

When it is considered that during the late administration, those who were not of a particular sect of politics were excluded from all office—when, by a steady pursuit of this measure, nearly the whole offices of the United States were monopolized by that sect; when the public sentiment at length declared itself and burst open the doors of honor and confidence to those whose opinions they more approved—was it to be imagined that this monopoly of office was still to be continued in the hands of the minority? Does it violate their equal rights to assert some rights in the majority also? Is it political intolerance to claim a proportionate share in the direction of the public affairs? Can they not harmonize in society unless they have everything in their own hands?

If the will of the nation, manifested by their various elec-

tions, calls for an administration of government according with the opinions of those elected; if, for the fulfillment of that will, displacements are necessary, with whom can they so justly begin as with persons appointed in the last moments of an administration, not for its own aid, but to begin a career at the same time with their successors, by whom they have never been approved, and who could scarcely expect from them a cordial co-operation? Mr. Goodrich was one of these. Was it proper for him to place himself in office without knowing whether those whose agent he was to be could have confidence in his agency? Can the preference of another as the successor of Mr. Austin be candidly called a removal of Mr. Goodrich? If a due participation of office is a matter of right, how are vacancies to be obtained? Those by death are few; by resignation, none. Can any other mode then but removal be proposed? This is a painful office, but it is made my duty, and I meet it as such. I proceed in the operation with deliberation and inquiry, that it may injure the best men least and effect the purposes of justice and public utility with the least private distress; that it may be thrown as much as possible on delinquency, on oppression, on intolerance, on ante-revolutionary adherence to our enemies.

The remonstrance laments that "a change in the administration must produce a change in the subordinate officers;" in other words, that it should be deemed necessary for all officers to think with their principals. But on whom does this imputation bear? On those who have excluded from office every shade of opinion which was not theirs, or on those who have been so excluded? I lament sincerely that unessential differences in opinion should have been deemed sufficient to interdict half the society from the right and the blessings of self-government; to prescribe them as unworthy of every trust. It would have been to me a circumstance of great relief had I found a moderate participation of office in the hands of the majority; I would gladly have left to time and accident to raise them to their just share. But total exclusion calls for prompter correctives. I shall correct the procedure; but that done, return with joy to that state of things when the only questions concerning a candidate shall be: Is he honest? Is he capable? Is he faithful to the Constitution?

I tender you the homage of my highest respect.

THOMAS JEFFERSON.

To Elias Shipman, Esq., and others, Members of a Committee of the Merchants of New Haven.

On a monument in Lot No. 29, Maple avenue, Grove street Cemetery, is this inscription:

SAMUEL BISHOP,
Town Clerk of New Haven 54 years, its Representative at 54 sessions of the General Assembly, Judge of the County and Probate Courts, died Mayor of the City and Collector of the Port, August 7, 1803, Aged 80.

His son, Abraham Bishop, was appointed Collector in the place thus made vacant, and continued in the office till his death, in 1829.

Since the death of Abraham Bishop the Collectors of the Port have been:

William H. Ellis, 1829-41; James Donaghe, 1841-44; Royal R. Hinman, 1844-45; Norris Wilcox, 1845-49; James Donaghe, 1849-53; Minot A. Osborn, 1853-61; James F. Babcock, 1861-69; Cyrus Northrop, 1869-81; Amos J. Beers, 1881-85; John C. Byxbee, 1885.

The following table shows the value of imports and exports during the twelve years of Collector Northrop's administration, for each year.

	Imports.	Exports.
1869.....	\$207,142	\$120,828
1870.....	104,131	407,955
1871.....	252,521	550,240
1872.....	260,142	260,955
1873.....	196,730	308,095

	Imports.	Exports.
1874.....	\$203,894	\$1,347,772
1875.....	1,034,093	3,607,277
1876.....	1,071,629	3,049,467
1877.....	1,133,036	7,590,356
1878.....	998,651	2,853,659
1879.....	788,181	2,362,385
1880.....	957,793	115,051

"The imports and exports recorded at the Custom House here during these twelve years have been, with a few special exceptions, comparatively light. The imports have been confined almost exclusively to molasses and sugar, with an occasional invoice of rum or salt. In the years 1875-77, E. S. Wheeler & Co. were receiving cargoes of iron and steel from abroad, and these receipts swelled the figures for those years, as will be seen by the table. While the total exports have been far in advance of the total imports, it is owing to special causes and does not indicate the normal condition of business. The immense consignments of arms sent to Turkey by the Winchester Repeating Arms Company between 1874 and 1879, carried the value of exports into the millions. The value of exports in 1877 was almost seventy times as much as in 1880. Even the vessels which bring West India goods to this port, go to New York to load for the return trip, the facilities there being much

better. The exports consist principally of grain, flour, butter, cheese, lard, and other domestic provisions."

The customs collected during the twelve years of Collector Northrop's administration were:

1869, from May 1.....	\$187,701 00
1870.....	319,489 55
1871.....	307,498 55
1872.....	227,369 61
1873.....	350,540 00
1874.....	366,682 00
1875.....	350,330 63
1876.....	409,048 70
1877.....	298,028 69
1878.....	312,805 34
1879.....	299,026 22
1880.....	458,767 87
1881 (three months, estimated).....	40,000 00

The business of the Custom House was probably attended to by the Collector at his residence till 1818, when the Government erected a building for the purpose on the corner of West Water and State streets, facing the open space which has since been called Custom House square. In 1860 the erection of the Government Building on Church street was completed, and the portion of the edifice intended for that purpose became and has been from that time the CUSTOM HOUSE.

CHAPTER XVIII.

BANKS AND BANKING.

BY HON. CHARLES ATWATER.

THE business of banking in New Haven has kept pace with improvements and facilities in commercial intercourse throughout the country.

Ninety years ago a single bank, with a capital of fifty thousand dollars, seems to have afforded to the business men of New Haven all the requirements necessary for several years.

The Mechanics' Bank was chartered in 1824, consequently the community relied upon the \$50,000 bank capital for a period of thirty years. The Eagle Bank was chartered in 1811, and failed in 1825, affording little aid to the community.

Previous to 1800, New Haven was comparatively isolated from other portions of the country for the want of prompt intercourse between the principal centers of trade. Sailing vessels and stage-coaches supplied the carrying trade and the mails, a trip to New York often consuming a week's time. Now the steamboat, railroad and electric telegraph enable the business man to reach the most distant points of this country, and even of the world, in the space of a few hours.

The banking capital of New Haven is to-day more than five million dollars, and the deposits in the Savings Banks amount to nearly ten million dollars.

The banks of New Haven have been, on the whole, very conservative in their loans and discounts, and although they have passed through

several seasons of panic, resulting in suspension of specie payments and entailing severe losses through failures, their notes and deposits have been protected and no loss has occurred to the community. At the same time the stockholders have reaped a fair income upon their stock.

The National Banking Act stopped the State bank circulation in 1866, and all the New Haven banks, except the City and Mechanics' Banks, organized under the new law.

NEW HAVEN BANK.

The first motion toward the formation of a bank in New Haven appears to have been made at a meeting held in Mr. Thomas Atwater's tavern. The only record of the meeting which has been preserved is in a notice of another meeting to be held February 16, 1792, by adjournment. The *Connecticut Journal* of February 15th has this advertisement:

The meeting held at Mr. Thomas Atwater's respecting the forming a bank in this place, stands adjourned to Thursday evening, the 16th instant, when it is expected some other matters of importance will be laid before them. A general attendance of the inhabitants is desired.

Mr. Atwater's tavern was kept in the house which Dr. Dana in his *Century Sermon* erroneously speaks of as built by Joshua Atwater, one of the

first planters of New Haven. It was in reality built by Jonathan Atwater, a nephew of the before-mentioned Joshua, and was probably more than a hundred years old when the bank meetings were held. Some of the timbers of the frame were eighteen inches in diameter, and the bricks at the top of the stone chimney were stamped "London." Mr. William Glen endeavors, in 1772, to guide the public to the store, where he kept an assortment of goods, by informing them it was "next door to Mr. Atwater's tavern, opposite to the Rev. Mr. Whittlesey's, and near the Long Wharf."

The General Assembly, at the October session in 1792, chartered the bank in accordance with the prayer of the petitioners; but it was not organized till 1795. The reason of the delay probably was that the charter fixed the capital at \$100,000, a sum too great for New Haven in the eighteenth century. In October, 1795, the charter was amended, reducing the capital to \$50,000, with the privilege of increasing it to \$100,000.

A statement of the condition of the bank was required to be made to the Legislature once in two years. The books for subscription to the capital stock were opened on December 9, 1785, at the house of Ebenezer Parmalee, and four hundred shares were subscribed by eighty-three persons. Among the original subscribers are the names of Eli Whitney, John Nicoll, John Mills, Eneas Munson, Jr., Elizur Goodrich, Thaddeus Beecher, James Bassett, Titus Street, Frederick Hunt, Young Love Cutler, Pierpont Edwards, Timothy Atwater, Simeon Baldwin, David Daggett, and the Trowbridges, Hotchkisses, Darlings and Kimberleys, the ancestors of the grandchildren and great-grandchildren of the same names now living, some of whom have passed three-score years and ten. The first meeting of the stockholders was held December 22, 1795, and the following Board of Directors was chosen: David Austin, Isaac Beers, Elias Shipman, Elizur Goodrich, Joseph Drake, Timothy Phelps, John Nicoll, Thaddeus Beecher and Stephen Alling.

On the first Thursday of July, 1796, David Austin was elected President, and William Lyon took the oath of office as Cashier before Elizur Goodrich, Esq., Justice of the Peace.

On the 20th December previous, Mr. Lyon was sent to Philadelphia "to obtain, and carefully superintend and inspect while making, the mould and box and water letters necessary for the bank, and the paper for the bills." An instalment of twenty per cent. was called in, payable July 9, 1796. On February 16th, sixty thousand dollars in bills were ordered to be printed, of the denominations one, two, five and ten dollars. Notes for discount were received on Thursday, and credited to customers the following Friday. The hours of business were from 10 to 1 and 3 to 4 o'clock.

To obtain a discount, "a note expressing the sum needed, dated in New Haven and drawn and indorsed by a resident of the city and not more than thirty days to run, must be inclosed in a letter addressed to the Cashier by the person requesting

the loan." Drawers and indorsers not residing in the city were required "to appoint some place at which and some one of whom demand of payment may be made, and to whom notice of non-payment may be given." Ebenezer Parmalee's bill of six dollars for the expenses of several meetings at his house was ordered paid by the Board. Mr. Parmalee's house was a tavern at the corner of Chapel and Gregson streets, and after the discontinuance of Mr. Atwater's tavern, was the principal one in the city. The host was the father of the late Mrs. Abram Heaton.

March 10, 1796, William Lyon's house "was rented at twelve pounds per annum, for the use of that part of it used by the bank; the bank to fit it up, and to have the materials when taken down." The Directors attended the meetings of the Board by lot, one-half on alternate weeks, until otherwise ordered. The expense of fitting up the room in Mr. Lyon's house for banking purposes amounted to eleven pounds nine shillings and eleven-pence. The only security for the safe keeping of the cash was a small iron box, bought by Mr. Lyon in Philadelphia, about the capacity of a peck measure. The house of Mr. Lyon stood on Chapel street, between Orange and State, on the site of the present Lyon Building. March 28th, five hundred dollars was voted as the salary of the Cashier. By vote of the Board, Stephen Munson "was allowed six cents for each bank notice he carried until July next."

The first dividend was declared February 24, 1797. It was eight per cent. By a statement of the Cashier to the Stockholders, July 6th, it appears that this dividend absorbed all the profits of the bank up to that time, except one hundred dollars reserved to pay the expenses of organization; and no loss had accrued by bad debts or counterfeit money.

The second dividend, four per cent., was declared February 24, 1798, and at the same time it was voted "that the note of any person who had been under protest should not be received for collection."

July 6, 1798, Isaac Beers was chosen President.

April 15, 1799, Amos Doolittle was appointed to print the bills of the bank.

January 16, 1800, the Cashier was instructed to return to David Austin the National and New York Bank bills received from him on deposit, and in future no bills of any banks be taken on deposit but those of the New Haven Bank; but the notes of the National and New York Banks might be received in payment of notes. September 1st, William Mansfield was appointed "Runner of the bank."

December 3, 1801, the Board voted "not to receive for collection any note except such as were proper to discount, except notes of the New Haven Insurance Company, Custom House bonds, and notes executed in New York and made negotiable, if indorsed by two persons residing in New Haven."

January 28, 1802, an account was opened with the New York branch of the United States Bank.

May 10th it was voted to collect United States Treasury drafts on Samuel Bishop, Collector of the Port, and to pay for the same in sixty days. David Daggett was authorized to take Hartford Bank bills to present for specie. Notes and drafts sent to New York for collection to be at customers' risk.

February 7, 1803, Thaddeus Beecher was paid four dollars for carrying \$6,413 in his vessel to New York. In December the increased trade of the city requiring more capital, forty thousand dollars additional stock was subscribed.

October 2, 1805, the capital was further increased by nine hundred shares, and a premium of five per cent. was charged on all subscriptions from those who were not already Stockholders. This premium was divided among the old Stockholders, and amounted to fifteen dollars per share.

October, 1806, a gang of counterfeiters was discovered in New Haven, and through the agency of Elisha Wood and John Hotchkiss were arrested. The State of Connecticut and the Manhattan Bank of New York had each offered a reward of five hundred dollars for their detection. The following is a record of the Board of Directors in relation thereto. "Inasmuch as there is a third person, whose name, for sufficient reasons, must be concealed, who has acted under the orders of the bank in discovering the aforesaid villainy and giving information, who as yet has received no recompense,

"Voted, That the donation of one hundred dollars received from the Cheshire Bank at Keene, which was to be disposed of at the discretion of this Board, be paid to said third person, and fifty dollars from this bank be paid to the same man."

Mr. Lyon was allowed eight dollars and nine cents for his expenses going to and returning from Hartford February 26, 1809, he having been gone three days.

April 30, 1808, the Bridgeport Bank was informed that hereafter no more collections would be received from it "owing to the inconvenience incident thereto."

July, 1809, proposals were received for a lot for a banking-house. Of those offered but two were considered suitable. *First*, that of Thaddeus Beecher, for a lot east of the house lot of John Miles, fronting on Chapel street thirty feet, and extending northeasterly into the square sixty feet, at fifteen hundred dollars. *Second*, a lot of Abram Bradley 3d, at the corner of Chapel and Orange streets, twenty-five feet on Chapel and sixty feet on Orange street, for nineteen hundred dollars, with a covenant on the part of said Bradley, that if a building shall be erected in his life-time adjoining northwest of the bank, it shall be fire-proof. Mr. Bradley's lot was accepted.

The first record of post notes issued by the bank is under the date March 19, 1810, in a certificate of the President, which states that thirty had been burned which had been filled up and issued, and the balance, fifty-one, had not been used, and were also burned. September 6th it was voted "that the sum of foreign bank bills this bank may at any time have in possession is to be considered among the secrets of the bank, and should any

person apply to the Cashier for information on this subject, it will be sufficient for him to reply, 'if you have any bills of this bank we are ready to redeem them, either by giving you bills of other banks or specie, as you desire.'"

July 12, 1812, Mr. Beers resigned the presidency on account of the infirmities of age, having occupied the position fourteen years, and Eneas Monson, Jr., succeeded him. It does not appear that Mr. Beers received any compensation for his services during the time he acted as President.

October 13, 1813, John Nicoll was authorized to make loans in the City of New York. This is the first record of any loans made elsewhere than at the bank counter, and the President and Cashier were authorized to discount notes between Board meetings.

December 9, 1814, the bank voted to invest fifty thousand dollars in the stock of the City Bank of New York. On February 7th the bank agreed with the Secretary of the Treasury of the United States to receive deposits "arising from the customs, interest, revenue and direct tax, only in specie, bills of any of the banks in the City of New York or of this State, and Exchequer bills. July 1st, Henry R. Pyncheon was chosen Cashier at a salary of \$800. Eneas Monson, Jr., and Gilbert Totten were appointed a committee "to transfer the property of the bank to the new Cashier and to take account of the same." The following is the statement made at the time of the transfer, for which Mr. Pyncheon gave his receipt.

Gold of America, England, Spain and Portugal.....	\$15,240 25
Silver in dollars and parts of dollars..	29,759 75
Exclusive of dollars in Hartford Bank.....	8,000 00
Specie in use.....	891 27
	<hr/> \$53,891 27
Bank bills in vault.....	\$118,000 00
Bank bills in use.....	1,595 75
	<hr/> \$119,595 75

There had been issued seventy-three post notes, amounting to \$301,353.16, for which the retiring Cashier accounted to the bank. On the 16th of September following, all these post notes had been redeemed and burned.

December 15, 1817, the President was voted \$200 for six months' services. This is the first record of a compensation to that officer.

October 6, 1819, the bank gave public notice that in future notes of known bankrupts be not received for collection.

June, 1820, the State of Connecticut having become a Stockholder to an amount exceeding five thousand dollars, John H. Jacocks was appointed State Director.

July 6, 1826, Amos Townsend, Jr., was chosen Second Teller, but he had been in the service of the bank since 1825.

July 7, 1831, Eneas Monson, Jr., retired from the presidency and Henry Dennison succeeded him.

At this time the exchanges with the Mechanics' Bank were made daily and the balances paid weekly. December 29th, Amos Townsend, Jr., was chosen Cashier, in the place of Mr. Pynchon, deceased.

The year 1837 was memorable for the financial panic which swept the country, and the banks suspended specie payments. In June they issued notes in conformity with the law of the State, payable in the notes of other incorporated banks current in New York and Boston, with the condition of redemption printed on the face of the old notes. The banks returned to specie payments January 15, 1837.

January, 1847, Mr. Henry Dennison died, and Mr. Hervey Sanford was elected President. In this year spurious notes of the bank, printed from its own plates, were put in circulation, and were so well executed that they were received by the Suffolk Bank and even paid out by the New Haven Bank over its own counter. W. E. Brockway and others were arrested for the felony.

In June, 1865, the bank organized under the National Banking law. The officers of the new organization were Hervey Sanford, President; Amos Townsend, Cashier; Wilbur F. Day, Assistant Cashier. Mr. Sanford died January 6, 1869, and was succeeded by Mr. Day, who still holds the office of President.

It is a remarkable fact, that with a corporate existence of eighty-two years, this institution has had but four Presidents and three Cashiers, up to the change of its organization from a State to a National Bank.

From the early history of the old bank can be traced that local pride which for many years endowed with a special grace all who were town-born.

MECHANICS' BANK.

Of the old State banks incorporated by the State of Connecticut, but two in New Haven still retain their original charters, the Mechanics' and City Banks.

The Mechanics' was chartered by the General Assembly at its May Session, 1824. Capital stock, \$500,000; shares, \$100 each. Its stock was exempt from taxation, charter perpetual, and two-fifths of its capital to be subscribed to the stock of the Farmington Canal Company. Books for subscription to the capital stock of the bank were opened on April 6, 1825; William Mosely, Charles H. Pond, George Cowles, and William W. Boardman being the Commissioners to apportion the stock to the several subscribers. Of the five thousand shares subscribed, three thousand eight hundred and forty were apportioned to citizens of the City of New York, the remainder to citizens of New Haven and adjoining towns. The list of New Haven subscribers shows the names of nearly every prominent business firm, and almost every man of note in the several professions of law and medicine in the city. Of the original subscribers to the stock of the bank, it is believed not one is now living. The capital of the bank having been subscribed and apportioned, and an instalment of ten per cent.

paid in, the first Board of Directors was appointed on April 9, 1825. James Hillhouse, Abraham Bishop, William J. Forbes, W. B. Lawrence, Samuel Glover and W. W. Boardman, were chosen Directors, and James Hillhouse elected President.

At a meeting of the Directors, April 21, 1826, Abraham Bishop submitted a report, recommending the purchase of a building and lot of ground belonging to Captain Samuel Miles, for the sum of five thousand dollars, which was accepted. The premises bought were the lot on State street, formerly occupied for a banking-house. John G. Barnard, the first Cashier, was elected April 22, 1825, at a salary of one thousand dollars per annum.

On April 25, 1825, the bank subscribed for one thousand shares of the capital stock of the Farmington Canal Company.

On July 9, 1825, Nathan Smith was elected President of the Bank; the Board then consisting of Abram Heaton, William J. Forbes, Russell Hotchkiss, Samuel F. Lambert and Thomas Proctor.

At this time all the funds of the bank were loaned in New York on collateral security, being held to meet the call for payment on the Canal stock and the commencement of business.

Regular banking operations were commenced early in October, 1825, and on the 17th of the same month the first instalment on the Canal stock, twenty thousand dollars, was paid. About this time the Eagle Bank failed, and the panic which ensued therefrom will be remembered by many of our older citizens as an era in the financial history of our city. On March 13, 1826, the bank received one thousand shares of its own stock, valued at thirty-one thousand five hundred dollars, in part payment of a debt due from one of the Directors, and took in addition as collateral security six hundred and forty shares, waiving the payment of an instalment for eighteen months. May 4th, the Director above alluded to having become embarrassed in business, the six hundred and forty shares of stock were taken in payment of his obligations, and he resigned. Elihu Sanford was elected in his place.

July 3, 1826, the bank sold to Andrew Kidston (father of our respected fellow-citizen, Andrew L. Kidston) a lot of land taken from the northwest corner of the bank lot, for twenty dollars per rod.

The first dividend, three per cent., was declared payable July 1, 1826. On December 13th, Abram Heaton was appointed "to superintend the affairs of the bank during the absence of the Cashier," and W. W. Boardman "was authorized to sign the notes of the bank in place of the Cashier."

April 12, 1827, Mr. Boardman resigned as Director, and Charles Atwater was chosen to fill the vacancy. Mr. Barnard resigned as Cashier on account of ill-health on the same day, and John Fitch was chosen his successor. On June 30th the bank subscribed for an additional one thousand shares of Canal stock, thus completing its subscription of two hundred thousand dollars. On July 2d, Nathaniel Bacon was appointed book-keeper at a salary of four hundred dollars for six months. On July 26th the Board of Directors voted to loan

the Canal Company twenty-five thousand dollars, provided the New Haven Bank would do the same. The loan was made, and finally paid by the Canal Company in four hundred shares of the stock of the Hampshire and Hampden Canal Company, the bank having previously offered to sell the note, which amounted, with accumulated interest to \$28,039.40, for the sum of \$10,000. At that time the trustees of the Eagle Bank deposited in the Mechanics' Bank \$25,000 on interest at five per cent. In the month of October, notes were issued payable at the Phoenix Bank, New York.

The present system of express transportation not being known, the only mode of transmitting valuable packages was by private hand or by officers of the steamboats running between New Haven and New York. The steamboat company not being willing to assume any risk of loss by conveying the packages of bank notes, the bank, by a vote of the Board of Directors agreed to release them from all responsibility therefrom. To illustrate the confidence reposed in private individuals in those days, one of the business men of New Haven going to New York was requested to take a package of bank notes to be delivered to one of the Wall street banks. Arriving in New York, he met a stranger within a few squares of Wall street, of whom he inquired the way to the bank. The stranger said: "I am the cashier of that bank, and if you have any message I will deliver it for you." The New Haven man handed the package to the stranger and went his way. Fortunately the money was not misplaced.

May 8, 1828, John Fitch resigned as Cashier, and Henry A. Perkins was appointed to the vacancy, at a salary of \$1,200 per annum, he agreeing to perform the duties of Treasurer of the Canal Company without additional pay. Mr. Perkins resigned in August, and Mr. Fitch was reappointed. Nathan Smith retired from the presidency in December, 1829, and in March, Charles Atwater was elected President. Ransom Burritt was chosen book-keeper, at a salary of \$1,500 per annum, and John W. Fitch clerk, at \$200 per annum. Mr. Atwater resigned in April, 1832, to take the presidency of the City Bank, which had been recently chartered, and Nathan Smith was reappointed President for the remainder of the year. At the first meeting of the Directors in July, 1832, Eneas Munson was elected President, with a salary of \$400 a year. In July, 1835, John Fitch was elected President and his son, John W. Fitch, Cashier.

In the month of March, 1835, Charles A. Ingersoll and William H. Ellis were appointed a committee to visit Washington and interview the Secretary of the Treasury in relation to the bank becoming one of the depositories of the public money. The arrangements were perfected, and the institution became a "pet bank," so called in those days. It was stipulated that when the Government deposits amounted to more than one-half the capital of the bank, the Secretary of the Treasury might require collateral security for their safe keeping above that sum. Weekly returns to be made to the Treasurer of the United States, and

the books of the bank to be open to the inspection of an agent of the Treasury Department. The bank agreed to perform all transactions growing out of the public deposits, such as receiving, disbursing and transferring funds, without charge to the Government, the Secretary to give the bank reasonable notice of any transfers required by him. On May 10, 1837, the Government deposits were \$206,857.95, and the bank made over to the Secretary of the Treasury, as additional collateral, \$35,000 in specie, which the bank held in its own vault. In the fall of this year the panic of 1837 occurred, and disastrous failures of firms and banks were the consequence. Specie payments were suspended, and the Legislature was called upon to legalize the bank suspension. Notwithstanding the state of the times the bank declared its usual dividend, and fortified itself so as to be able to pay specie to the Government for its deposits and its circulating notes.

On July 29, 1839, Henry White was appointed agent of the bank to sell the stock of the New Haven and Northampton Company owned by the bank, for seventy-five cents per share, thus wiping out two-fifths of the capital of the institution. In consideration of this reduction of the capital to \$300,000, the Stockholders voted to so reduce it, which vote was confirmed by the Legislature at the following day session. On March 2, 1858, proposals were received and accepted for building a banking-house. The plans and specifications were drawn by Henry Austin, and the contract given to Marcus Bassett and Roswell J. Munson, who completed the building during the year. The old Miles House was sold to the Quinipiac Bank. In March, 1853, Israel K. Ward and George B. Curtiss were appointed clerks October 20, 1851, Mr. Curtiss being promoted to Teller in 1853, and William A. Law, book-keeper, the same year. Charles A. Sheldon was appointed clerk July 6, 1858. John W. Fitch was chosen President and George B. Curtiss, Cashier, the same date. Mr. Fitch died in 1861, sincerely mourned by his colleagues and by the citizens generally. He was a man of kindly sympathies and strong convictions, and will ever be remembered with respect by those who had dealings with him as a bank officer.

The War of the Rebellion having begun, and Governor Buckingham feeling the necessity of vigorous action on the part of this and other New England States, was much hampered in the movements of troops for the want of funds, no legislative action being possible for some months. The Directors of the Bank sympathizing with the Executive and the General Government, voted to loan to the State \$25,000, subject to the immediate call of the Governor, and the President at once informed him by telegraph and letter of the action of the Board. Governor Buckingham accepted the offer and the money was drawn. Afterwards other banks of the city made advances to the State prior to the meeting of the Legislature.

The Mechanics' Bank has been an educational institution, where many men have graduated to fill important financial positions in this and other cities.

Henry A. Perkins, late President of the Hartford Bank; Nathaniel A. Bacon, Israel K. Ward, and Charles A. Sheldon, of the Second National Bank; William Fitch, a Director in the same; Ransom Burritt, late Cashier of the New Haven County Bank; and Henry B. Smith, late Cashier of the Merchants' National Bank, were all as young men connected with the institution. The bank has done entirely a home business, and though since 1866 it has had no circulating notes, its dividends have been regular.

During the present year, the bank has bought a lot at the corner of Church and Centre streets, and as these sheets are passing through the press, the building is being renovated and prepared to serve as a banking-house.

THE CITY BANK

was chartered May, 1831, with an authorized capital of \$500,000; shares, \$100 each.

The friends of the Farmington Canal were at this time very solicitous that it should be extended to the Connecticut River, and the stockholders having realized nothing from their investment, the only hope remaining was to obtain funds by franchises granted by the General Assembly. Accordingly Nathan Smith, a prominent lawyer of the city, and interested in the canal, conceived the idea of a bank charter, and embodied in the act incorporating the City Bank, the peculiar features thereof as an equivalent for a bonus to be paid to the Canal Company.

The bank was to have a perpetual charter and its stock was to be free from taxation. It was to subscribe to the capital stock of the Hampshire and Hampden Canal Company the sum of \$100,000 when the bank was organized. When the tolls collected by the Canal Company were sufficient to afford a dividend of six per cent. per annum on its capital stock, the bank was to be liable to taxation in the same manner as other bank stock.

At the time the bank charter was granted, the business of New Haven did not require an increase of bank capital, and the large amount, being one-fifth of its capital, to be invested in canal stock which would evidently be a total loss, deterred the citizens of New Haven from subscribing. This Canal Company having already absorbed \$200,000 of the capital of the Mechanics' Bank, besides \$1,200,000 of private capital, still cried for more.

The bank was organized in December, 1831. Samuel St. John, Nathan Smith, Henry W. Edwards, John H. Coley, Hervey Sanford, Theron Towner, William Mix, and Horace R. Hotchkiss were chosen Directors. Samuel St. John was chosen President, and the first instalment was called in March 8, 1832. The bank then subscribed for one thousand shares of the stock of the Canal Company.

On April 24, 1832, Nathan Smith resigned as a Director and Charles Atwater was appointed in his place. Mr. St. John then resigned and Mr. Atwater was elected President and Nathaniel A. Bacon Cashier. On May 14th following, S. D.

Pardee was appointed book-keeper "on trial for thirty days." Mr. Pardee was connected with the bank either as Clerk, Cashier or Director to the day of his death. The President of the bank at this time devoted all his energies to filling up the stock subscriptions among the personal friends of the Directors in New Haven and New York. The first dividend was declared July 21, 1834, \$3.50 per share. On October 6, 1836, Stephen D. Pardee was chosen Cashier at a salary of \$1,000 per annum.

January 17, 1837, Ebenezer Seeley having notified the bank that a Committee of the Legislature had been appointed to investigate its affairs, the Directors voted to submit the books and papers of the bank to the inspection of the Committee, and Hervey Sanford and John Babcock were appointed a Committee to prosecute the hearing before the Legislative Committee.

The Committee met at the bank from time to time, visited New York for the purpose of finding evidence to prove the allegations of William Brown and others who had petitioned the Legislature, alleging that the funds of the bank were loaned in New York at usurious interest.

The Committee of the Legislature having made their investigation, reported to the General Assembly to repeal the charter of the bank. The Legislature voted to repeal the charter. The Governor vetoed the bill, giving as his reason therefor, "that the Committee had not proved any act of forfeiture by the bank." The Legislature not being able to pass the bill over the veto by the constitutional majority, the charter was saved.

The promoters of the repeal however had the satisfaction of showing their indignation at the result, by burning in effigy on the Lower Green, Governor Edwards and the President of the bank.

Thus the trial ended in smoke.

February 21, 1849, the bank bought the lot on the corner of Orange and Chapel street, of Mrs. Mary G. McCracken, for \$14,000, and sold 20 feet on the east side to Mr. John H. Coley for \$6,000. One of the most prominent and successful business men of the city of that day told the President of the bank that the Board of Directors ought to have a conservator appointed over them for paying such an exorbitant price for the lot, and that his children and grandchildren would never see the day when it could be resold to realize the first cost.

The present banking-house was built April 4, 1851. During the several bank suspensions which have occurred since its organization, the City Bank has maintained its integrity and redeemed its circulation in gold and silver. Since 1866 it has issued no circulating notes, and still maintains its organization as a State bank.

THE NEW HAVEN COUNTY BANK

was incorporated in 1834. Capital Stock, \$500,000; shares, \$25 each.

The books for the subscription to the capital stock were opened in New Haven under the super-

intendence of James M. L. Scoville, Erastus Lyman, Charles Yale, Eli B. Austin and Isaac Mix, on August 7, 1834.

The bank was required within twelve months from the time of its organization by the choice of Directors, to pay to the Treasury of the General Hospital Society of the State of Connecticut, for the use of the same, the sum of \$2,000; and the further sum of \$1,000 annually for three successive years thereafter, making in the whole the sum of \$5,000 to be paid to the Treasurer for the use of the Society. The bank was also required, at the several periods aforesaid, to pay the like sums, amounting in all to the farther sum of \$5,000, to the Hampshire and Hampden Canal Company, to aid in the completion thereof.

The commissioners were required to "publish in a paper" printed in New Haven, a list of all applicants for stock, the amount subscribed for by each, the amount allowed to each, and report a similar list to the General Assembly.

May 18, 1859, the capital was reduced to \$340,000, and shares to \$8, with privilege to increase to original amount.

The bank is organized under the National Banking Act as the New Haven County National Bank.

William H. Elliott was the first President. His successors have been Henry Hotchkiss, Willis Bristol and James G. English.

MERCHANTS' BANK.

Incorporated 1851. Capital, \$500,000; shares, \$50 each.

Books for subscription to the capital stock were opened in New Haven on the third Tuesday in July, 1851, under the superintendence of Samuel G. Hubbard, James S. Brooks, Adna Whiting, Eli T. Hoyt and William R. Hitchcock.

It was provided that no one person or corporation or copartnership be allowed to hold, directly or indirectly, at one and the same time, a greater amount of the capital stock actually paid in than \$50,000. In case of the failure of the bank, the holders of the bills or notes thereof, of the denomination of \$100 and under, to have a lien on all the estate of said bank, both real and personal, in possession, remainder, or reversion, and on all the debts due the bank and the securities for the same, and on all claims in favor of said bank of every nature whatever, and any conveyance, assignment, or transfer of any property hereinbefore specified, made in expectation of insolvency, or with a view to the same, to be void.

The President, Directors and Cashier to be liable as joint and several debtors to pay the debts of the bank, if, in case of the failure of the same, they exceed fifty per cent. over and beyond the total amount of the capital stock actually paid in, and of the moneys deposited.

Nathan Peck was President of the Merchants' Bank from its incorporation till his death. He was succeeded by ex-Governor Hobart B. Bigelow.

QUINNIPIAC BANK.

(Now THE YALE NATIONAL BANK.)

was organized in 1853, under the Free Banking Law of the State of Connecticut, with a capital of \$500,000. Circulation secured by deposit of securities with State Treasurer.

By an act passed July, 1855, all the free banks were permitted to become incorporations as the old banks of the State, and the securities for circulation returned to the several banks.

This institution organized under the National Banking Act as the Yale National Bank with a capital of \$750,000.

TRADESMEN'S BANK.

(Now THE NATIONAL TRADESMEN'S BANK.)

Incorporated 1854. Capital allowed, \$500,000; shares, \$100; provided the whole amount be called in within one year from July 11, 1854. Not to commence business until one-half of the capital be paid in; nor loan to any individual, copartnership or corporation, a sum exceeding ten per cent. of the capital actually paid in.

Books for subscription to the capital stock were opened in New Haven on the second Tuesday in July, 1854, under the superintendence of Commissioners Green Kendrick, of Waterbury; Dwight Morris, of Bridgeport; John C. Palmer, of East Haddam; Chauncey Jerome, of New Haven; and Stephen W. Kellogg, of Naugatuck. No one to hold exceeding \$50,000 of the stock.

Charter amended 1855. To go into operation when \$250,000 stock is subscribed for and fifty per cent. thereof paid in. May increase capital to original amount allowed by charter.

Now organized under the National Banking Law as the National Tradesmen's Bank.

ELM CITY BANK.

(Now THE SECOND NATIONAL BANK.)

Incorporated 1854. Capital, \$500,000; shares, \$100; to be called in within one year, and to commence business when one-half paid in. Not to loan exceeding ten per cent. of capital stock to any one individual, etc.

Books to be open for subscription to capital stock second Tuesday in July, 1854, under the superintendence of Leverett Candee, Adna Whiting, Seymour W. Baldwin, Dyer Ames, Jr., and Henry Trowbridge, or a majority of them. Two per cent. bonus to be paid to State.

Charter amended 1855. Allowed to commence business when \$100,000 shall be paid in. Charter again amended in 1857, to increase the capital \$400,000.

Organized under the National Banking Law with a capital of \$1,000,000 as the Second National Bank. E. C. Scranton was President till his death.

THE FIRST NATIONAL BANK

was organized under the National Banking Law in 1862. It was the first bank started under that Act in New England and the second in the United

States. The capital at the time of its organization was \$300,000, owned by five gentlemen, who were the Directors and still remain such, viz., James E. English, H. M. Welch, Daniel Trowbridge, Amos F. Barnes, and Elisha N. Welch.

H. M. Welch has been the President since the organization of the bank, and William Moulthrop Cashier. The present capital is \$500,000, with a surplus of \$120,000.

UNION TRUST COMPANY.

Incorporated May, 1868. Capital, \$100,000. Surplus by last report to the Bank Commissioners, \$20,000.

NEW HAVEN SAVINGS BANK.

Incorporated 1838.

Simeon Baldwin, Ralph I. Ingersoll, Roger Sherman, James Brewster, Wooster Hotchkiss, Elias Gilbert, Henry White, Elihu Atwater, Henry Peck, Eli Osborne, Marcus Merriman, Jr., John Fitch, Henry Hotchkiss, Amos Townsend, Jr., Stephen D. Pardee, Asa Budington, Francis T. Jarman, William J. Forbes, John Durrie, William Moseley, Henry Oaks, Sherman W. Knevals, and William G. Hooker, Corporators.

Deposits as reported October 1, 1884,	
to the Bank Commissioners	\$5,339,082 84
Surplus	210,000 00
Assets	\$5,602,652 81
Number of depositors	17,454

CONNECTICUT SAVINGS BANK.

Incorporated June 22, 1857.

E. C. Scranton, James Brewster, James E. English, Minot A. Osborn, Dennis Kimberly, P. S. Galpin, Charles R. Ingersoll, Daniel Trowbridge, Charles Hooker, John W. Mansfield, Sherman W. Knevals, James Punderford, Lucius Gilbert, William Lewis, Judson Canfield, Lucius R. Finch, N. D. Sperry, Samuel Noyes, C. S. Bushnell and Edward S. Rowland, Corporators.

Deposits as reported October 1,	
1884, to the Bank Commissioners	\$3,215,382 68
Surplus	125,958 18
Assets	\$3,362,044 60
Number of depositors	8,553

TOWNSEND SAVINGS BANK

was originally incorporated as the Townsend City Savings Bank, June 23, 1860.

Jonathan Knight, James M. Townsend, Nathan B. Ives, David Cook, Frederick A. Townsend, H. Lee Scranton, George K. Whiting, Elias B. Bishop, George H. Townsend, Ambrose Todd, Hugh Galbraith, James Olmstead, Benjamin Noyes, James F. Babcock, Ezekiel H. Trowbridge, Alfred Hughes, Leonard Bradley, Sereno H. Scranton, Henry G. Lewis, Edwin B. Bowditch, Charles A. Tuttle,

Charles T. Candee, Edward Hotchkiss, Smith G. Tuttle, and their successors, Corporators.

May 27, 1863, name changed by General Assembly to Townsend Savings Bank.

This institution ranked among the largest in the State, and on January 1, 1873, its reported deposits and surplus amounted to \$3,871,964.

On September 14th following, a statement of its affairs showed deposits to the amount of \$2,904,-099.

From January, 1874, to June 1st following, its deposits decreased \$300,000. At about this time the report of the Special Bank Commissioners was published, showing a loan by the bank on doubtful collaterals of \$394,000. This created a panic, and demands for deposits were renewed beyond any former occasion. An extraordinary effort was made to satisfy this demand, but the managers were soon compelled to require a notice of three months before any large sums would be paid. A large number of the depositors immediately gave the required notice, and the amount represented by them fell due about September 1st following.

During the months of June, July and August, a constant drain was kept up in a small way, and on September 1st the books showed a further reduction of \$400,000 in its deposits.

On September 11th, the Bank Commissioners received notice of their appointment, and were at once appealed to to give the bank immediate attention. An examination was commenced on September 14th, and the bank was closed to all business except collections, until its condition could be positively ascertained.

This examination resulted in an application by the Bank Commissioners to the State's Attorney for New Haven County, who prepared a petition, and Judge Phelps, of the Supreme Bench, after hearing the application, appointed Walter Osborne, T. E. Doolittle, and J. E. Redfield receivers, and the oversight of the bank passed into their hands.

The nominal value of assets as reported to the Bank Commissioners July 1, 1884, was \$1,781,-926.76. Of these assets the receivers say "it is impossible to give any cost or market value to any of the stock or bonds held by us."

NATIONAL SAVINGS BANK.

Incorporated June 20, 1866.

Charles Atwater, Hoadley B. Ives, William W. Stone, Bernard Reilly, James F. Babcock, John H. Benham, William Downes, N. D. Sperry, William E. Goodyear, Abner L. Train, David J. Peck, Patrick Ward, F. W. J. Sizer, Wilson H. Clark, Edward Downes, George A. Basserman, Maier Zunder, Edward Malley, and Sidney M. Stone, and their successors, Corporators.

MUTUAL SAVINGS' BANKS AND BUILDING ASSOCIATIONS.

The General Assembly of the State of Connecticut authorized the establishment of savings and building associations June 22, 1850. By their charters each institution was privileged to loan money to its members at any rate of interest obtainable; to receive money on deposit, not to exceed \$1,000 from any one person in any one year.

The first of these institutions established in the State was the Whitneyville Association in December, 1849. In March, 1850, the Mechanics' Savings' Bank and Building Association at Westville commenced business. In April the New Haven Building Association began operations. By the report of this institution to the Bank Commissioners, its condition in January, 1855, stood thus: Stock, 7,805½ shares, valued at \$385,615; and deposits, \$161,545. The average rate of bonus on permanent loans was 35 per cent., and on temporary loans two per cent. monthly. The dividends were 17 per cent. per annum. From this date these associations multiplied rapidly in the State, so that in 1855 there were forty-eight in active operation, and their success was unprecedented in the history of financial institutions.

In the autumn of that year the Supreme Court decided the monthly bonus which had been taken, illegal. This decision carried with it a forfeiture of all the interest and bonus stipulated for the future, and gave a check to the institutions. The principle that in borrowing money the more one paid the cheaper he got it, proved to be a falsity, and the unfortunate borrowers soon found they had deceived themselves by the theory.

The Mechanics' and Workingmen's Mutual Savings Bank and Building Association was the second organized in New Haven. The rate of bonus was ¾ per cent. monthly; reported dividends 5¼ per cent. quarterly. Its stock was \$190,000; deposits, \$144,000; loans, \$90,000, of which \$71,000 were secured by mortgage.

People's Saving Bank and Building Association. —This institution reported to the Bank Commissioners April 1, 1855: 2,359 shares, value \$58,173; deposits, \$30,734; loans, \$84,279. Rate of bonus reported on permanent loans, ¾ per cent. per month; on temporary loans one per cent. per month. Reported dividend, 14½ per cent. per annum.

CITY SAVINGS' BANK OF NEW HAVEN. —This institution was a sort of nondescript, organized and doing business professedly under the Building Associa-

tion Laws; but it did not conduct its affairs according to the model which the Legislature had before them when they passed the Act.

Any one wishing to study the history of these associations, and the thorough manner in which the falsity of the principles upon which they were founded has been demonstrated, are referred to Mr. William Franklin's work, "The Building Associations of Connecticut and other States Examined." By consent of the author, many facts embodied here have been taken from his work, for which Mr. Franklin has the thanks of the publishers.

BIOGRAPHIES.

HENRY HOTCHKISS.

Born April 9, 1801. Died December 15, 1871.

It is only within living memory that the business men of New Haven have adventured to any large extent in enterprises foreign to the natural development of the local interests of the town. For the first two centuries of its growth there was little surplus capital among its inhabitants and that little found its market in the increasing wants of a moderately prosperous community. Gradually, as capital increased, a wider field was needed for its investment, and sagacious capitalists united in joint-stock corporations and other forms of business enterprise without much reference to the kinds of industry in which their money was employed.

Among the earliest of our citizens who in any marked way exhibited this spirit of broader enterprise, was the late Henry Hotchkiss.

From the day, nearly two centuries and a half ago, when the first settlers landed at Quinnipiac, until to-day, the name of Hotchkiss—all of that name being the descendants of Samuel Hotchkiss, the original planter—has never ceased to be a familiar one to the people of New Haven; while for a period longer than falls within the recollection of any one now surviving, the name has been identified with the commerce and industry of Long Wharf.

Early in the present century Justus Hotchkiss was a well-known lumber merchant there, in connection with his brother-in-law, the late Russell Hotchkiss. Justus Hotchkiss died in 1812, and his only children, Henry and Lucius, were sent for their education to the academy in Fairfield, then under the instruction of the late Governor Dutton, where they remained until the former had reached the age of eighteen. For the next three years Henry served as a clerk to his uncle, who still continued the lumber business, and on attaining the age of twenty-one became a junior partner. In 1828, the uncle having retired, the brothers, under the firm title of H. & L. Hotchkiss, continued the family name on the wharf with a greatly extended business, till the year 1850. In connection with their shipping and mercantile enterprises the firm furnished the capital required by the late

Leverett Candee, one of the first licensees under the Goodyear patent, for the manufacture of rubber shoes. From 1842 to 1852 the Messrs. Hotchkiss were partners, as a private firm, with Mr. Candee, under the name of L. Candee & Co., the former furnishing whatever capital was needed while the latter superintended the manufacture of the goods. After many discouragements, arising both from an imperfect method of manufacture and from legal contests necessary to establish the validity of the Goodyear patents, the business became a successful one. Thus was laid the foundation of a great establishment.

In 1852 the firm of L. Candee & Co. was organized as a joint-stock company with a capital of \$200,000 (which was subsequently increased in 1869), Mr. Candee becoming its President. In 1863, Mr. Hotchkiss was made both President and Treasurer of the Company, and continued to discharge the duties of both offices with singular ability till 1869, when he was succeeded as Treasurer by his son, Henry L. Hotchkiss, who was also Secretary of the corporation, and who is now, and has been since his father's decease, its President.

Under the administration of both father and son the enterprise has assumed vast proportions, employing 1,500 operatives at the present time. In addition to the active management of this corporation, Mr. Hotchkiss accepted great responsibilities in directions so widely different as to indicate his singular aptitude for the management of great enterprises and the confidence reposed in his ability and integrity by those with whom he was associated.

He was one of the original Corporators and a Director in the large Waterbury brass manufactory, widely known as Holmes, Booth & Haydens. He was also President and a Director of the United States Pin Company of Seymour. For twenty-one years he was President of the New Haven County Bank, a position demanding at one time special financial ability on account of its large and complicated interests. Mr. Hotchkiss was also the first President of the Union Trust Company of New Haven, in which office he is succeeded by his son, Henry L. Hotchkiss. At the organization of the Union Trust Company, in 1871, he became its first President and as such served until his death.

Besides these important trusts, he was an original Corporator and subsequently a Trustee of the Shore Line Railroad Company, and as such was for some years prominent in its management.

Mr. Hotchkiss had no taste for civic honors and never allowed his name to be used as a candidate for political office. Almost the only exception to the rule of his life, to mind his own business, is found in his connection with the New Haven Colony Historical Society, in whose welfare he took great interest and of which he was a Director; and earlier in life, in his active participation in military matters, where he attained the rank of adjutant; and in the New Haven Fire Department, of which at one time he was the head.

Such an accumulation of corporate trusts, running through many years, makes it needless to

speak of the high regard, both for integrity and business skill, in which he was held by the commercial community.

The personal characteristics of Mr. Hotchkiss were somewhat marked. Utterly unpretending in his intercourse with his fellow men, he greatly disliked assumption and pretense in others. Shams of all kinds he held in little esteem. In business, in pleasure, in his dress, in the fashion and furniture of his house, he wanted things to be as they seemed. The house he built, and in which he died, was, like himself, square and solid. Sentimentality had no attraction for him. Scientific and scholarly attainments united with failure in practical matters were not to his mind. His reading ran but little in the direction of fiction or poetry, but rather in those lines that were most in harmony with the needs and the taste of a thorough man of business. Never making any parade of philanthropy, he was yet very helpful in a quiet way to many, especially young men, and said nothing about it.

In the darkest days of the Civil War no reality of his entire life was so real to him as the necessity of saving at all costs the Union of the States; and his investments for the support of the Government became larger as the prospects of ultimate success became gloomier.

Mr. Hotchkiss was eminently a home man, and only those who formed the family circle know how large a share of its happiness was due to the kindly, considerate indulgence of its head.

Mr. Hotchkiss was united in marriage May 22, 1823, to Elizabeth Daggett Prescott (born May 22, 1803), a daughter of Benjamin Prescott, the senior member of the then widely known shipping firm of Prescott & Sherman, and a member of the family whose name is forever associated with the best achievements of the country in arms, in literature, and in legislation.

Five children survive them, four daughters and one son. The latter, Henry L. Hotchkiss, who has succeeded his father in many important trusts, was married (February 25, 1875) to Jane Louisa Fitch, a daughter of the late Henry Trowbridge and granddaughter of Noah Webster, the lexicographer. Of the daughters, one is the wife of John O. Bronson, M.D., of Rhinebeck, N. Y., and the youngest is the wife of Captain Charles H. Townsend, formerly in command of one of the French passenger steamers running between New York and Havre.

MATTHEW G. ELLIOTT.

The family of Eliot possesses an ancient and honorable lineage which has adorned the historic page of both Old and New England. At almost the same time Sir John Eliot in England was the bold champion of an injured people against an arbitrary King, and Rev. John Eliot in Massachusetts was the friend, advocate, and "Apostle" of the untutored, unfortunate Indian. The latter's grandson, Rev. Dr. Jared Eliot, of Killingworth, Conn., was a famous divine, author and scholar of

Matthew G Elliott

H. C. Munster

the last century, the friend and correspondent of Benjamin Franklin and of Bishop Berkeley.

Great-grandson of Dr. Eliot, and fifth in descent from the beloved "Apostle to the Indians," is Matthew Griswold Elliott, of New Haven. He was born in the town of Kent, Litchfield County, Conn., November 16, 1805, and was named after his father's uncle, Matthew Griswold, Governor of Connecticut. His father, Matthew Elliott, was a farmer in Kent, highly esteemed by his fellow-townsmen, who several times chose him to represent them in the General Assembly.

The son followed the farmer's vocation until 1823, when he left the Litchfield hills and turned his steps toward New Haven. He began mercantile life first as a clerk with Mr. Elihu Sanford, who then conducted a large wholesale grocery trade in Custom House square. Mr. Elliott evinced such unusual aptitude for his new calling, that within four years he became Mr. Sanford's partner, and the two established what was probably the largest and most prosperous business in their line in the city.

Mr. Elliott's reliability and energy won prompt recognition in the community, and his services were sought for in the public councils. He was elected to the Board of Councilmen in 1844, and served three years. Afterward, from 1848 to 1851, he was a member of the Board of Aldermen, and was one of the most active men in the city government. For a portion of the time he was also at the head of the town government as First Selectman. It was under his administration that the old Almshouse was replaced by a new one, and his management of that transaction gave great satisfaction.

His interest in various corporate enterprises in and around our city began at an early period. He was a Director in the Farmington Canal Company, and became connected with its lineal successor, the New Haven and Northampton Railroad Company, in which he was a Director for many years. In 1852 he was made President of the newly-built New Haven and New London Railway Company, and, while holding that position, was instrumental in the formation of the Tradesmen's Bank of New Haven. Having resigned his position in the Railway Company, he was elected in 1855 to be the first President of this bank, which afterwards became a part of the National Banking system. During the thirty-one years that have intervened since 1855, Mr. Elliott has been annually chosen by the Board of Directors to occupy the honorable and responsible office of President. Over the welfare and prosperity of his charge he has watched with sedulous care, that it might be kept steadily and safely in the front rank among our banking institutions. His financial ability and experience have been of frequent service to the community. In the New Haven Savings Bank he is a Vice-President and one of the oldest Directors.

Mr. Elliott is a shrewd observer and of a retiring disposition. He has exceeded even the four-score years that are allotted to man "by reason of strength," yet he mingles in the daily walks of the

business world, an honored and honorable example to those who come after him. Mr. Elliott has been twice married; first, in 1834, to a daughter of Captain William Brintnall, of New Haven; and, after her death, to a daughter of Captain Caleb Brintnall, also of this city.

ERASTUS C. SCRANTON.

Erastus Clark Scranton was born at Madison, Conn., on the 16th of November in the year 1807. He received a common school education in the schools of his native place, and made his first business venture on shipboard in the capacity of cabin-boy. His success was rapid. He entered into mercantile life, gaining his first experience at Georgetown, D. C., where he tarried but a short time. He became master and afterwards owner of the ship, and eventually acquired a large interest in the coasting trade, extending his ventures along the coast as far as Florida. When about twenty-two years of age he married a lady of Westbrook, Conn., and for several years subsequent to that event continued to make his home in Madison.

In 1835 he established himself as a wholesale grocer at Augusta, Ga., and, until 1842, he conducted an extensive business there, and afterwards, for a short time, at Appalachicola, Fla. In the latter year Mr. Scranton returned northward to his native State and town, bringing with him, as the result of his activities, a handsome fortune. In New York he entered into a partnership with several gentlemen who were interested in trade with South America.

His diligence, ability and geniality won for him wide recognition and many warm friends. People learned to intrust to him the laboring oar in many public improvements, and he soon became identified with the business life of New Haven and its vicinity. He was among the active promoters of the Shore Line Railway.

His Madison neighbors selected him to represent them in the Lower House of the Legislature in 1851, 1856, and again in 1862, while in 1860 he served a term in the Connecticut Senate. In 1854 the business ties which had hitherto bound him to New York were severed, and in the next year Mr. Scranton was elected to the presidency of the Elm City Bank of New Haven, now the Second National Bank. It was then a young institution, but, under his management, grew and prospered beyond all expectation.

New Haven, therefore, was his business home for many years before 1864, when it became his permanent dwelling-place. In May, 1865, he was invited to become President of the New York and New Haven Railway Company, and accepted the offer.

At the head of these prominent public trusts he remained until his death, and he had an influential voice in the management of many other business enterprises and of educational institutions. Throughout the Civil War he was prominent among the supporters of the National Government, and was generously active in the organizations for sending southward contributions for the support of the

Union cause. The Republican party elected him to the mayoralty for the year 1865-66, during which time it became his sad duty to notice officially, with fitting words, the untimely death of Abraham Lincoln. Just at the close of the year 1866, on the 29th of December, Mr. Scranton was himself instantly cut off in the midst of his honors and usefulness by a railway accident at South Norwalk.

Thus New Haven's commercial life was deprived prematurely of a chief support, and the New Haven community lost a sagacious, public-spirited, and beloved citizen.

HOBART B. BIGELOW,

one of New Haven's citizens who has been entrusted with the administration of the highest public office, was born in North Haven, New Haven County, on the 16th of May, 1834. Upon his father's side he came from the Massachusetts Bigelow stock, a family that had made its record since colonial days for producing substantial, energetic and useful citizens. His mother was a Pierpont, a descendant of the Rev. James Pierpont, the second minister of New Haven, and one of the founders of Yale College. Mr. Bigelow's education was that common to the sons of farmers at that time. He attended the district school of North Haven, and when at about the age of ten his father moved to South Egremont, Mass., his education was continued there, in the same class of school, until he was old enough to enter the South Egremont Academy, where he remained until he was seventeen.

At this age he entered upon the work of life. He began to learn the trade of machinist with the Guilford Manufacturing Company. He remained with this Company until its failure, and after that went into the employ of the New Haven Manufacturing Company, then under the management of his uncle, Asahel Pierpont, of New Haven. Here his apprenticeship was finished, and he passed to the shops of Messrs. Ives & Smith, then occupying the factory now (1886) used by the firms of Barnum & Root and D. Frisbie & Co., at the lower end of Whitney avenue, adjoining the south side of the Canal Railroad track. Mr. Bigelow's business was for nearly twenty years carried on at this place. Until 1861 he had charge of the machine department as foreman, under both Ives & Smith and their successors, Wilcox & Gay. In 1861, upon the death of Mr. Gay, he bought out Mr. Cyprian Wilcox's interest in the machine-shop, and continued in his own name. Later he acquired of Mr. Wilcox the foundry connected with the establishment, and the business was carried on under the name of The Bigelow Manufacturing Company. At this place, under close, careful, and intelligent management, Mr. Bigelow's business grew until there was no longer space for his buildings. They had extended along Whitney avenue and through the block to Temple street, and in 1870 he was compelled to remove to a wider location. He bought a tract of land on Grape-vine Point, including a disused building originally

built for a machine-shop, and in this place the business has since been conducted.

Two years prior to his removal, Mr. Bigelow had added a department for the manufacture of boilers, a department for which his establishment has since become famous throughout the country. In 1875 the firm style was made H. B. Bigelow & Co., Henry Elson being received as partner, and in 1877 the partnership was extended by the entrance of Mr. George S. Barnum. Its present form is that of a corporation, The Bigelow Company, organized in 1883 under a special charter granted by the Legislature of that year.

Mr. Bigelow's continuous success in his business had not passed unnoticed by his fellow citizens, and in the period between 1863 and 1881 he was called upon to fill a variety of public stations. He was a member of the Common Council, as Councilman in the year 1863-64, and as Alderman 1864-65, under the mayoralty of the late Morris Tyler. He was Supervisor 1871-74, and filled most acceptably the office of Fire Commissioner for the years 1874-76. He also served one term as representative from New Haven in the General Assembly of 1875. So long an experience had especially fitted him to fill the place of Mayor, and though belonging to the party normally in the minority in New Haven, he was in 1879 elected for a two years' term by a very handsome majority.

Mr. Bigelow's administration of this office was marked by two events of peculiar and permanent interest to the citizens of New Haven. It was under his administration, and very largely due to his support and encouragement, that the East Rock Park Commission was created and the park opened, and this great addition to the beauty and comfort of the city made possible. The other was the well-planned and successful effort of the city government, under his encouragement and direction, for the building of the breakwaters which have been projected and are being carried on by the United States Government for the improvement of our harbor. Upon the close of his term as Mayor, he was called by the majority of the citizens of the State to occupy the office of Governor, a place which he filled with quiet dignity, thorough impartiality, and great good sense.

Mr. Bigelow was married in 1857 to Miss Eleanor Lewis, daughter of the late Philo Lewis, a branch of a family that has left its mark in the administration of New Haven City affairs. His family consists of two sons, of whom the elder is Secretary of the Bigelow Company, and the other is still pursuing his studies. In 1882, upon the death of Nathan Peck, he was elected President of the Merchants' National Bank of New Haven, of which he had been for several years a Director.

Since Governor Bigelow's retirement from official life, his attention has been devoted to his bank and to his company, with lesser interests in a large variety of business enterprises. His career has been pre-eminently that of a business man, familiar with and skillful in modern methods of conducting large enterprises, and basing his success upon thoroughness, energy, careful and thoughtful attention to

W B Bigelow

details, avoidance of speculation, and the severest integrity. His administration of public affairs has always been marked by the same characteristics. These qualities have won him the hearty esteem of

his fellow citizens, which has been deepened by a quiet, open-handed and broad-minded practical benevolence, of which very few realize the full extent.

CHAPTER XIX.

FINANCIAL PANICS.

IN New Haven, as well as elsewhere, the wheels of industry have sometimes ceased to move. We have already related that in the days of the embargo the seamen of the city and the artisans of every kind dependent on commerce for the means of subsistence were idle, and that the capital of those who owned ships was unproductive. Traffic of every kind being more or less closely connected with commerce, was affected by this paralysis of New Haven's principal industry.

When the War with Great Britain in 1812 was declared, the activity of New Haven was again smitten, and there was another period of idleness and distress.

Neither of these calamities can be attributed to over-trading. It was the embargo which originated the first and the war which caused the second of these depressions.

Of course, in both cases, the depression was accompanied with shrinkage of value, the destruction of credit, and many insolvencies. But since the last war with Great Britain there have been four crises in business which may be called financial panics, because produced largely by suspicion and fear. We do not mean that they are to be attributed solely to the subjective emotions of creditors, but that sparks of fire falling upon tinder caused a conflagration which might not have taken place if the sparks had fallen on less combustible material.

The first of these panics was occasioned by the failure of the Eagle Bank. After fourteen years of prosperity, this institution, without a moment's warning, suspended specie payments September 19, 1825, and never resumed. Investigation showed that the bank had loaned on insufficient security money enough to consume its entire capital, its deposits, and its circulation. No bank was ever more firmly established in the public confidence than this had been, so that its failure was the ruin of confidence. The abstraction of so much capital would be a serious calamity to New Haven with its present wealth; but comparatively it was a much greater loss to such a city as New Haven was in 1825. In addition to the destruction of \$1,500,000 of its working capital, the city suffered from the paralysis of that confidence which multiplies capital by means of credit. Consequently every kind of business was depressed, and every kind of property shrank in value as expressed in money. For instance, one of the directors of the bank who had borrowed half a million of its funds, was erecting a block of houses in Church street adjoining the Tontine. The contractors, unable to obtain funds from him, were obliged to suspend payment, and

when the houses, finished with money advanced by creditors, were sold to liquidate the debts, one of the houses brought only \$3,400, and the three aggregated only \$13,900. A person who knows how to appreciate the property to-day can hardly believe the statement.

There was no sudden recovery from the effects of this financial earthquake. The high granite base-ment of the banking-house, which the bank had begun to build on the corner of Chapel and Church streets, where the Exchange Building now is, stood for years; but there was no need of such a memorial of the defunct institution to keep it in memory. The granite was taken away in 1832 to prepare the ground for the erection of the Exchange Building, but the memory of the Eagle Bank survived the removal of the grand foundation of its projected banking-house. The failure of the Farmington Canal to meet the expectations of its projectors, retarded the growth of confidence and credit. In case of fire it furnished the city with a supply of water, and was in this respect beneficial; but it did little for the business of the city, and nothing for the enrichment of its stockholders. New Haven sank in it almost as much capital as in the Eagle Bank; and this additional drain upon its wealth prolonged the period during which it was difficult to procure the aid of borrowed capital in the transaction of business. Ground was broken for the canal in July, 1825, so that the disappointment and loss which it occasioned followed close upon the failure of the bank and enhanced its effect.

The next financial panic occurred in 1837. It was not, like that of 1825, a local disturbance, but it affected the whole country. Its history begins with the removal, in 1833, of the public deposits from the Bank of the United States to State banks selected by the Secretary of the Treasury. The Bank of the United States had been constituted by its charter the depository of the public money. In return for the benefit which the bank derived from this accession to its working capital, it was under engagement to transfer the public funds from place to place within the United States, or the territories thereof, and to distribute the same in payment of the public creditors, without charging commissions, or claiming allowance on account of difference of exchange. The bank had faithfully fulfilled its contract in regard to gratuitous exchange for the Government, and by its ubiquity had kept all exchange very nearly at par. Its notes were good everywhere throughout the land. For some reason President Andrew Jack-

son was hostile to this institution, and when Congress had passed a bill to renew its charter, which was soon to expire, he sent back the bill with his veto. Not content with this expression of his displeasure, he determined that the public deposits should be transferred to an association of State banks selected for the purpose. The Secretary of the Treasury (Mr. McLane) having conscientious objections to ordering the transfer from a bank entitled, both by its charter and by the service it had rendered, to be the custodian of the public funds and the fiscal agent of the Government, was appointed Secretary of State, in the expectation that his successor in the Treasury Department (Mr. Duane) would execute the President's will in respect to the deposits. On the 10th of September, 1833, General Jackson read an elaborate paper to the Cabinet, announcing his reasons for the removal of the deposits and appointing the 1st of October as the day when it should take place. On the 21st of September Mr. Duane announced to the President his intention not to order the removal. But the iron will of Jackson did not succumb. Duane was dismissed from his office, and Taney, afterward Chief Justice of the Supreme Court, was appointed in his place, by whom the requisite order for the removal of the public funds to the State banks was immediately given.

The measure produced a great derangement in the business of the whole country, and an almost total suspension of the accustomed action of the financial system. The United States Bank was obliged, by a regard to its own safety, to strike sail and withhold from the public the amount of accommodation it had been accustomed to afford. The rate of interest went up in six months from six to twelve per cent. per annum; stocks were depressed, some ten, some twenty, and some thirty per cent; commodities of every kind shrank so much in value as to threaten merchants and shopkeepers with ruin, especially if the goods had been purchased on credit. Labor felt the shock even more than capital. Mills and factories shut down their gates, and where workmen were not discharged their wages were reduced. This effect, however, was only temporary. When the change had been accomplished, and the "pet banks," as they were called, had the public money in their vaults, they loaned more copiously than they had ever been able to do before, and consequently the activity of business of every kind was as much greater than usual as had been its depression during the change. Stimulated by the large addition to their working capital afforded by the deposit of the public money, and anxious to earn enough to make large dividends, the banks so increased the volume of the currency in circulation, that labor was drawn from other branches of industry to those which are most easily affected by the state of the money market; and there was an unnatural and evil distribution of labor, causing a rate of production in some departments which could not be maintained, and was sure to bring, sooner or later, involuntary idleness and inability to purchase, to those dependent on these branches

of industry. To the superficial observer all seemed exceedingly prosperous in 1836. But the balance of trade was against us; coin was constantly shipped to Europe to pay for the excess of imports over exports; this excess was greater than usual in 1836 by reason of a wet summer and consequent damage to cereals, and in the spring of 1837 the bubble burst. On the 10th of May the banks in New York suspended specie payment, and their example was followed by the banks throughout the whole country as fast as the news of the suspension in New York reached them.

A committee of merchants immediately went to Washington, and in an address to President Van Buren, then recently inaugurated, made a statement of the distress prevalent in their city, from which we extract the following sentences:

Under a deep impression of the propriety of confining our declarations within moderate limits, we affirm that the value of real estate has within the last six months depreciated more than forty millions; that within the last two months there have been more than 250 failures of houses engaged in extensive business; that within the same period a decline of 20,000,000 of dollars has occurred in our local stocks, including those railroad and canal incorporations which, though chartered in other States, depend chiefly upon New York for their sale; that the immense amount of our merchandize in our warehouses has within the same period fallen in value at least thirty per cent; that within a few weeks not less than 20,000 individuals depending upon their daily labor for their daily bread have been discharged by their employers because the means of retaining them were exhausted; and that a complete blight has fallen upon a community heretofore so active, enterprising and prosperous. The error of our rulers has produced a wider desolation than the pestilence which depopulated our streets, or the conflagration which laid them in ashes.

The distress which the New York committee represented as existing in their city prevailed throughout the whole country. If it was greater in New York than in other cities, it was because New York was the greatest city in the land.

In New Haven all the banks suspended specie payments as soon as they heard of the suspension in New York, except the City Bank, whose circulation at that time was very small. The suspension of the banks was followed by the suspension of merchants and manufacturers, with this difference between them and the banks in the meaning of the suspension, namely that the latter were solvent and continued to pay out a paper currency which would be redeemed in the future, while the business men were, by the stoppage of business and the shrinkage of values, rendered insolvent. As the law at that time allowed a creditor to put an attachment on the property of his debtor for his own security without reference to the safety of other creditors, it was hardly possible for any man who owed anything to pass unscathed through the ordeal of universal suspicion. Old and conservative firms were obliged to go into liquidation; and men who supposed they were able to build for themselves handsome residences, and had paid instalments on them, were obliged to give the builder a deed of the property, and sacrifice whatever they had paid.

One feature of the time of inflation which preceded the panic of 1837, was speculation in real

estate. This feature was not peculiar to New Haven, but was noticeable throughout the country. Here, as elsewhere, tracts of land were purchased; avenues, streets and building-lots were staked out; and it was expected by the sanguine that the lots would rapidly rise in value. Some of these tracts of land have since relapsed to the use of the agriculturist, and others in the course of forty-eight years have become as thickly peopled as it was expected they would be in as many months. But those who went most boldly and deeply into such speculations lost what they invested and became insolvent.

The recovery from the depression which followed the panic of 1837 was gradual and slow. It was so gradual that one can hardly say it was complete in less than ten years from its commencement. But as specie payment was resumed by the banks in New Haven, and throughout New England and New York, May 10, 1838, on the anniversary of the suspension in New York, one year may be regarded as the measure of the panic and ten years as the measure of the hard times which it introduced.

The next panic occurred in 1857. Its causes were similar to those which had produced the panic twenty years before. Like that, it extended throughout the country. After a long period of prosperity in business of every kind, it was found that the excessive importation of foreign commodities was draining the country of specie, and the banks in New York, which had now become more than ever before the financial center of the country, thought it necessary for their own safety to diminish the amount of their liabilities by refusing to discount. The contraction commenced early in August, and was so great, that by the middle of September exchange on London had fallen below the point at which specie could be shipped without loss. The object of the contraction having been gained, the contraction ought to have ceased. Such was the judgment at the time of some of the most intelligent bank directors in New York and elsewhere.

The Hon. Nathan Appleton, of Boston, in a letter to the *Boston Daily Advertiser*, dated October 12, 1857, says:

The New York banks have been acting under a panic, and that panic they have communicated to others, until there is almost a total loss of confidence. The consequences are before us in the paralysis of all trade from Bangor to New Orleans; the stoppage of banks through a great part of the United States; the stoppage of factories; the discharge of thousands of laborers; the inability to bring our large crops of produce to market; the ruinous rate of two or three per cent. a month on the strongest paper; a ruinous depreciation in the price of all stocks, and even in exchange on London. In my whole experience I have never known a crisis as severe as the present, and, I must say, so wholly uncalled for.

The *Bankers' Magazine*, of November, 1857, says:

The contraction of bank accommodation at New York, it is now conceded, was unnecessarily sudden and too great. In view of the injury sustained by the city and State by such a course, a few of the more liberal managers of our city banks, early in September proposed essential relief by a moderate expansion. This course was a safe one in view of the then condition of the foreign exchanges and of the prospective increase of specie at this point. This measure was opposed

by a few and finally abandoned, as none could adopt it unless it was agreed upon as a general and concerted policy. The contraction increased until the loans were reduced to about 100 millions in the second week of October; the manufacturers, mechanics, merchants and tradesmen were all suffering from the decline of 20 millions of loans, and a still more violent contraction of bank circulation; two of the city banks had suspended on the 10th; two more on the 12th; many in the country had likewise suspended; Pennsylvania and Rhode Island were under a general suspension; and finally, on the 13th, the New York City banks concluded to suspend specie payment on their deposits and circulation. The Chemical Bank was the only exception, and that followed the course recommended by the others during the same week. This course of contraction is now considered by our leading bank directors as unnecessary and as productive of nearly all the evil which has arisen. A more liberal policy would have relieved the merchants and saved them from extraordinary losses. The capital of the banks, by mercantile failures, has been damaged from 33 to 50 per cent., a loss which will require many years to recover. The suspension of the city banks was precipitated by the heavy loss of the steamer *Central America* in September; by the gradual withdrawal of confidence among bill-holders, and finally among depositors; and by the heavy failures. Among these we may enumerate the Ohio Life and Trust Company, the Illinois Central Railroad Company, the New York and Erie Railroad Company, the Michigan Southern Railroad Company, and other corporations whose stock and bonds had been hitherto considered solid securities in this market, and whose failures served to destroy confidence among the Western bankers, and induced them to withdraw their remaining deposits from this city.

The suspension of specie payments put an end to the panic. The banks were now able and willing to make loans "in current funds," and as these funds were available for the transaction of business, the wheels of industry began to move, slowly and carefully indeed, but much to the gratification of the solid men who during the panic had found themselves as destitute of credit as if they had been insolvent.

On the 14th of December confidence was so far restored that the banks resumed specie payments. The panic had ruined many merchants and manufacturers who were attempting to do business with insufficient capital, and caused severe loss to some who, though solvent, were unprepared for a sudden disturbance of credit.

There was nothing peculiar in the effect of the storm upon New Haven. Our merchants and manufacturers suffered as did those in other cities, and it was not until the outbreak of the Rebellion that business became as brisk as it had been in 1856. During the Civil War, by the increase of paper money, and the immense amount of it put in circulation by the Government to provide the sinews of war, business became very active and continued so till the Rebellion collapsed and for several years afterward. It is said that when the war reached its greatest vigor, the Government was spending two millions per day. The circulation of so much paper currency necessarily inflated the price of all property beyond what it would be worth when that irredeemable medium should again be retired and all values once more expressed in gold.

During the progress of the return of nominal values to the standard of gold, there occurred in New York, in 1869, a fluctuation in the price of gold which created a panic, most severely felt in

New York, because that city is the financial center, but felt everywhere throughout the land. In a single day the price of gold was forced up from 134 to 165, threatening those whose property was in anything else than gold with additional loss. But the sale of four millions of gold by the Secretary of the Treasury on the next day reduced the rate of exchange as much and as suddenly as it had advanced, and restored the public to the confidence from which they had backslidden, that there was value in the paper currency furnished by the Government. This exciting day at the New York Exchange is still denominated "Black Friday."

In the further progress of the readjustment of values expressed in money, from the scale of prices caused by the circulation of so much paper currency, to a scale appropriate to specie, occurred a financial panic in 1873 whose effects were lasting and severe. It was the final collapse of the inflation consequent upon the war and its expenditures. The readjustment caused a nominal shrinkage in the value of the goods in the possession of every manufacturer, of every merchant, and of every shop-keeper.

The distress was of long continuance, for the reason that, though some firms could endure a de-

gree of shrinkage, none could foresee how far the decline would proceed. While property was thus of uncertain value, and on the decline as compared with money, debtors were naturally fearful and creditors as naturally suspicious. Besides there was little activity and no profit in trade. Merchants, one after another, were obliged to confess themselves bankrupt. In many cases manufacturers discharged their workmen, or retained but a few, and waited for better times. The decline of values affected real estate as well as the commodities of the merchant and the manufacturer; and in New Haven there has been no such reaction from the time of greatest depression in real estate to the present, as might reasonably have been expected in a city which has increased so much in population.

Since the panic of 1873 there has never been any expansion of credit so great as to threaten another explosion. Trade has seemed to have an automatic regulator, so that when too brisk it slows up of itself; and when dull, its dullness is in degree like the darkness of night, which is darkest just before day. If the banks profit by experience, and Congress shuns rash experiments and sudden changes, we may hope that the financial panics of the past may be the means of saving us from their repetition in the future.

CHAPTER XX.

INSURANCE.

PREVIOUS to 1797 there was no insurance company in New Haven, and there was seldom, if ever, any insurance effected against fire. If a man lost his house, friendly neighbors might perhaps contribute something to rebuild it; but apart from this contingency, every man was his own insurer against fire. There was really more need of marine than of fire insurance, because of the greater risk to which property in ships was exposed. Such risk was in the first place divided by joint ownership, a merchant preferring to have a share in several vessels rather than venture in any one of them a sum of money equal to its whole value. The risk was sometimes still further divided by obtaining fractional insurance from individual underwriters, who might be willing for a satisfactory premium to assume the risk on a fraction of a share. Of course a storm disturbed such underwriters as much as it did the owners of the ship and cargo; and both parties spent sleepless nights listening to the wind. But when the vessel came safely into port, these anxieties were forgotten and other risks were taken.

The General Assembly, at its October session in 1797, incorporated

THE NEW HAVEN INSURANCE COMPANY.

One of the articles of the charter expressly provides "that the business of the corporation shall be

wholly confined to marine insurance." The Company was evidently intended to do the same business which had been done before by individual underwriters, and with less risk to any one person. Only one or two instalments of the capital stock were paid in money, the Company accepting good indorsed notes for the balance. The first Board of Directors consisted of Elias Shipman, Joseph Drake, Stephen Alling, Frederic Hunt, Ebenezer Peck, Simeon Baldwin, Jeremiah Townsend, Timothy Phelps, Nathan Beers. At a meeting of the Board in January, 1798, Elias Shipman was chosen President, and Austin Denison, Clerk. In January, 1799, the Company made a dividend of three dollars on each share for the six months then ended; and in July of the same year made a dividend of five dollars on each share, out of the profits of the first six months in 1799. As the shares were only fifteen dollars, it appears that the Company was very successful in these first months of its business. The dividends were paid at the New Haven Bank, the Cashier, William Lyon, being the Treasurer of the Insurance Company. This Company continued to issue policies for about a third of a century, when it closed its office, divided its capital among the stockholders, and went into a state of quiescence, but retained its organization on account of claims it had on the United States for French spoiliations. A special act of the General Assembly was passed permitting this disposition of the Company's affairs. At first the Company voted to sus-

pend business for two years, "or until the committee provided for in the next vote shall judge it expedient to call a meeting of the stockholders, in order to resume the business." It was then "voted that Timothy Dwight, Elnathan Attwater, Marcus Merriman, Gilbert Totten, and Elihu Sanford be the committee to act for this Company, agreeably to the above vote." This was in 1831. In January, 1833, the following vote was passed:

Whereas, Many unfortunate circumstances have occurred which have prevented the stockholders of the New Haven Insurance Company from receiving any dividends for upwards of six years past, and whereas the prospect of making up our losses in future by continuing the business, is far from being of a flattering character; therefore

Resolved, That this Company should cease so far as respects issuing any policies of insurance hereafter.

The last dividend was made by a vote passed in July of the same year. The sum of \$7.25 for each share was in consequence of this vote paid to the stockholders.

Gilbert Totten was at this time President of the Company and the following persons were Stockholders, as appears from a call which they signed in July, 1832, for a meeting of the Company.

Timothy Dwight, Samuel Darling, Thomas Darling, A. Bradley, Elihu Sanford, Joseph M. Clark, James Hunt, Laban Smith, Samuel J. Clark, Benjamin Tallmadge, Henry and Lucius Hotchkiss, Russell Hotchkiss, William Lyon, Elnathan Attwater, Isaac Townsend, Eli Ives, Marcus Merriman, Eleazer T. Fitch, J. Forbes & Son, Titus Street.

THE OCEAN INSURANCE COMPANY OF NEW HAVEN

was incorporated by the General Assembly in October, 1818. Its capital was \$60,000, with liberty to increase to \$100,000. Its office was on Union Wharf, where it commenced business in June, 1819, Truman Woodward being its Secretary,

Probably the same causes which influenced the stockholders of the older marine insurance company to close up its affairs, prevented a profitable development of business by the Ocean Company. It does not appear to have long survived the date of its birth.

The first fire insurance company organized in New Haven was

THE MUTUAL ASSURANCE COMPANY.

It advertised, September 21, 1801,

That the Mutual Assurance Company have commenced business under their charter of incorporation, and that books are open for subscription at the office of the Secretary of the Corporation. Those who are desirous of becoming associates are requested to call on him and subscribe the books. In case persons living at a distance are desirous of becoming associates, their subscriptions may be made by proxy.

The terms of insurance are three-quarters of the appraised value of the building, at half of one per cent. for the first year; one-third of one per cent. for the second year; and one fourth thereafter.

All payments of premiums to be made to the Treasurer on receipt of policy, and no policy to take effect until the payments shall be by him indorsed.

The Secretary of the Company was Elizur Goodrich; and the Treasurer was Simeon Baldwin.

Mutual insurance not proving a success, a stock company was formed some time before October, 1815. At that date it was in existence and transacting business, John H. Lynde being its Secretary. Mr. Lynde died in that year; but in 1818, William Cannon was the Secretary. He notified the stockholders that the annual meeting for the choice of Directors will be held on Thursday the 4th of June. At that meeting Nathaniel Bacon, Andrew Kidston, Charles Denison, Joel Walter, Hervey Sanford, Samuel Hughes, Aaron Forbes, Leonard E. Wales, and William H. Elliot were chosen Directors. At a meeting of these Directors, Charles Denison was chosen President; H. R. Pynchon, Treasurer; and William Cannon, Secretary,

THE CITY FIRE INSURANCE COMPANY,

though of much more recent origin, is believed to be next in age. The year in which it was incorporated is not remembered. Wells Southworth was the first President, and Henry L. Cannon was Secretary. Just prior to the great fire in Portland, Me., in a period of business depression, the managers became discouraged and voluntarily retired the Company from active business. It had been successful in previous years, and on retiring paid all claims in full, and one hundred and forty per cent. to stockholders.

In 1874, James M. Mason, E. J. Mason and H. Mason bought the charter and started the Company anew; but the times were not propitious, and after two years the Company again retired, paying all claims and returning to stockholders the full amount of their investments.

THE SECURITY INSURANCE COMPANY

was organized in 1841, under the name of "Mutual Security Insurance Company," with \$200,000 of subscribed capital, of which \$50,000 was paid in. For two years the Company was run as a mixture of the stock and mutual systems. This proving to be unsuccessful, the mutual system was discontinued, and the name changed to correspond with the new departure.

The Company was designed originally to effect fire, marine and inland insurance, and after the change in its system had a good run of business in fire insurance in New Haven, and in marine insurance in New York. Its capital was increased in 1872 to \$100,000, and in 1874 to \$200,000. No New Haven corporation can quote from its directory more well-known names. Joseph N. Clarke was its first President. Philip S. Galpin was Secretary and Manager from 1841 till his death in 1871. Joseph N. Clarke, Elihu Attwater, Nathaniel A. Bacon, Willis Bristol, William H. Ellis, John English, H. S. Soule, Theron Towner, James Brewster, Henry Farnam, and Harvey Barnes were among its first directors.

The Company are now doing a large and successful business in both fire and marine insurance,

having agencies in all the principal cities of the country.

Charles S. Leete, President; H. Mason, Secretary; George E. Nettleton, Assistant Secretary; Charles S. Leete, Thomas R. Trowbridge, Daniel Trowbridge, J. D. Dewell, William R. Tyler, J. A. Bishop, Cornelius Pierpont, A. C. Wilcox, James M. Mason, Directors.

HOME INSURANCE COMPANY.

This Company was organized in 1859, and was pushed with great energy. It had at one time over a thousand agencies in the principal cities, and ranked among the largest fire insurance companies of the United States. It included in its directory a large number of prominent citizens of New Haven. In its haste to get to the head it became reckless, and in 1870 or 1871 its affairs were found to be in so bad a condition that it was put into the hand of a receiver. Its capital was entirely lost, and its creditors received only a small percentage on their claims.

The Home did principally fire business, but some marine and some inland. For years it paid handsome dividends, and its stock was largely held in New Haven by investors. Its failure was among the most notable financial troubles New Haven ever experienced.

QUINNIPIAC INSURANCE COMPANY.

This Company was chartered in 1869. J. D. Dewell, President; George S. Lester, Secretary; George E. Nettleton, Assistant Secretary; H. H. Bunnell, Treasurer; J. D. Dewell, H. H. Bunnell, Cornelius Pierpont, George S. Lester, C. S. Scranton, P. R. Carl, B. H. Douglass, H. P. Frost, S. Benjamin, Jr., H. H. Strong, R. C. Peck, A. H. Kellam, E. H. Barnes, E. Beecher, J. W. Brooks, Directors.

Cash capital, \$100,000.

The business was in fire insurance, and mainly local. In 1871 the Company voluntarily retired, paying all claims and returning its capital to stockholders in full.

Only one life insurance company has been located in New Haven.

THE AMERICAN NATIONAL LIFE AND TRUST COMPANY

was first organized under the name of the American Mutual Life Insurance Company. It was chartered by the General Assembly of Connecticut in May, 1847, and commenced business in the latter part of that year, Professor Benjamin Silliman, Sr., being President, and Benjamin Noyes, Secretary.

After several years the Company was reorganized and enlarged, its name being changed to the American National Life and Trust Company. Under this name the Company invested a large part of its funds in the erection of the edifice on Chapel street and opposite the Green, called the Insurance Build-

ing. It is 118 feet front by 100 feet in depth and 110 feet high. The corner-stone of this imposing edifice was laid October 28, 1871, by the Governor of the State in the presence of a large delegation from a national convention of officers of insurance companies then sitting in New York, who made an excursion to New Haven to participate in the ceremony. The officers of the American National Life and Trust Company at this time were Benjamin Noyes, President; John B. Robertson, Vice-President; Richard F. Lyon, Secretary; Willis Bristol, Treasurer.

Previous to the erection of the Insurance Building, the office of the Company had been in the Adelphi, at the corner of Chapel and Union streets. When the new edifice was completed, apartments on the second floor were occupied by the Company for the transaction of its affairs, the rest of the building being leased to various occupants.

Not long after the erection of the Insurance Building, it became evident that there was an unfriendly feeling between the Company and the Insurance Commissioner for the State of Connecticut. On the 14th of November the strife culminated in a notice from the Commissioner that his examination of the affairs of the Company showed that it was hopelessly and irredeemably insolvent, and that he should proceed to file with the Judge of Probate his application for the appointment of a trustee to close up its affairs. This notice was given by the Commissioner at a special meeting of the Directors called at his request. The announcement was received by the Directors with astonishment and indignation, they believing that the Company was in good condition. One of them asked for delay, offering to make good any deficiency which could be shown in the assets, and was told in reply that the application to the Court of Probate would be made immediately. From this time onward there was open war between the parties.

An investigation of the charges made by the Commissioner was commenced on the 5th of January, 1875, before the Hon. Levi B. Bradley, Judge of Probate, and the Hon. James Phelps, a Judge of the Supreme Court of Errors, and continued until the 9th of March. On the 12th of April the Judges decided that the allegations of the Insurance Commissioner were untrue, and his petition to have a receiver appointed was dismissed.

During the May session of the General Assembly the Commissioner endeavored to have the charter of the Company repealed, but did not succeed.

The Directors, in their search for relief from what they regarded as unjust and malicious persecution, found that a life insurance company had been chartered by a special act of the Congress of the United States, and that all the assets and liabilities of the American National Life and Trust Company could be transferred to the company chartered by Congress. For the sake of exempting itself from the control of Connecticut, the Company adopted the name of the company chartered by Congress, transferring to the new name all its assets. The name of the company chartered by Congress, under which the Connecticut Company

Chas Petersen

thus sheltered its property, was the National Capitol Life Insurance Company of Washington, D. C., and this was henceforth the name of the institution first chartered by the General Assembly of Connecticut as the American Mutual Life Insurance Company, and afterward recognized by the same authority as the American National Life and Trust Company. In consequence of this change of name and legal status, the principal or home office was henceforth in Washington, and the office in New Haven was nominally a branch office for the New England Department.

So far as relates to the protection of itself from the attacks of the Connecticut Commissioner in the courts and in the General Assembly, the transfer to the jurisdiction of the United States was effectual. But the attack upon the Company so injured its credit that very little new business came in, and many policy holders neglected to renew their policies. In process of time therefore the Company became really, as well as constructively, bankrupt, and ceased to keep an office for the transaction of business.

The Insurance Building, which the National Capitol Life Insurance Company had conveyed to the Treasurer of the United States by a deed of trust, is still in the hands of the Receiver appointed by the Superior Court of Connecticut, and the affairs of the Company are not yet entirely wound up.

A great deal of life insurance is effected in connection with societies and clubs; sometimes by membership and sometimes by a supplementary arrangement, in which a member covenants to pay a small sum to the family of every brother who has belonged to the Supplementary Mutual Benefit Association, and thereby secures to his own family a similar benefit at his decease.

There are besides these mutual benefit associations connected with Masonic and other societies, two independent mutual benefit associations in New Haven. One is the Connecticut Benefit Association, at 811 Chapel street, and the other is the New England Mutual Benefit Association, at (3) 81 Church street.

In addition to marine, inland, fire and life insurance, a new kind of insurance has recently come into vogue. Bank officers, railway conductors and ticket agents, trustees of estates, and others who occupy fiduciary positions, being required to give bonds for their fidelity, an insurance company has been formed in New York to insure for a premium the fidelity of fiduciaries. This company, called the American Security Company, having its headquarters at 160 Broadway, New York, has an office in New Haven, at 17 Hoadley's Building, where Messrs. N. D. Sperry, R. F. Lyon, and E. E. Boyd, the Agents of the Company, issue its guarantee bonds.

The following is a list of insurance agents in New Haven. As some of them operate in more

than one department of insurance, we shall not undertake to give the specialty of each operator.

Atwater, W. J.	Morse, Gardner.
Bowers, Caleb B.	Morse, John.
Callahan, E. A.	Nichols, J. W.
Cannon, H. L. & J. S.	North, John G.
Cooke, N. M., Jr.	North, John C.
Coolidge, E. C.	Oviatt, S. B.
Beecher, Edward C.	Parsons, H. S.
Dudley, Amos E. & Son.	Pond Bros.
Enscoe, M. R.	Post, John H.
Fitzpatrick, W.	Prothero, W. H.

BIOGRAPHIES.

CHARLES PETERSON.

An interesting romance is connected with the family history of Charles Peterson. It is related very nearly in his own words. His father's name was Carle Remipanport, afterward changed to Peterson. It was during 1794-95, the period of the French Revolution, that Captain William Fairchild, of New Haven, commanding the brig Shepherdess, was at Rouen, France, bound for Savannah, Ga. The mother of Carle arranged with Captain Fairchild to take her boy to Savannah, saying "that she would save one," the times being then revolutionary and bloody in France. When ready for sea, the lad, then about twelve, was brought on board by the mother, who appeared to Captain Fairchild to be a fine matronly woman of decision and character. She took off the yellow silk handkerchief from her neck and bound it around the boy, and with a kiss of desperation and love parted with her child forever. The silk kerchief he carried with him, as boy and man, around and around the globe, and when he died at St. Thomas in 1814, captain of the brig Cleopatra, it was sent home to his wife, and now (1886) remains tattered and worn, a sacred relic, the last love token of a devoted French mother to her son.

Captain Fairchild essentially adopted Carle, and at Savannah May 3, 1795, bound him regularly as an apprentice, and trained him up to his own profession, the sea. Captain Fairchild had two adopted daughters, Patty and Henrietta Miles, children of Captain William and Mary Hitchcock Miles, descended from Richard Miles, one of the first settlers of Milford, in 1639, who removed to New Haven in 1693. On his first arrival in New Haven, Carle met Henrietta scouring knives on the back stoop. Childish attachment ripened into love, and in 1809 they were married.

Before Carle was eighteen, he was mate of the brig Shepherdess. In 1801, being released from his indentures, he went, being then only nineteen years of age, with Captain Brintnall as second officer in the ship Oneida, on a second sealing voyage.

They visited the South Shetland Islands, and after catching a cargo of seals went to the Sandwich Islands and to China.

Charles Peterson was born in New Haven November 1, 1810. He attended Mr. John Lovell's school on the Lancasterian system, and at an early age learned the shoemaker's trade of Eldad Gilbert, on Cherry, now Wooster, street. This he abandoned upon attaining his majority, and entered upon the grocery business under the firm name of Gardner Morse & Peterson. After a few years in this, he went into the drug business, with Dr. Lewis Hotchkiss, on Chapel street. He then conducted a similar trade in drugs, chemicals, and paints in partnership with D. S. Glenney, on Chapel street, under the firm name, Peterson & Glenney. In 1854, Mr. Peterson disposed of his interest to his partner, D. S. Glenney, and turned his attention to the shipping business, for which he perhaps inherited an inclination from his seafaring father, the captain.

Trade with the West Indies and with other distant ports was greater than now, and in a few years of prosperous activity, Mr. Peterson gained a competent fortune. He retired in 1859 from the shipping business, having been elected the previous year a Director in the Security Insurance Company, in which he continued twenty-seven years. He was in 1869 elected President of the Company, remaining in that office until his decease, September 5, 1885. He was also a Trustee of the Connecticut Savings Bank for many years, and for a similar period was Secretary of the Hazard Powder Company, of Enfield.

In matters of State he was identified in his early years with the Whigs and in later years with the Democratic party. Mr. Peterson was equally active and prominent in matters of the church, being one of the original incorporators of St. Paul's Church, and served as a vestryman from its foundation. His relations with Dr. Croswell were close and affectionate. He always cherished the memory of the venerable rector most tenderly, and this despite the trying and naturally estranging circumstances of the separation of Trinity Parish in which Mr. Peterson bore a leading part, when, for the better convenience of the lower part of the city, St. Paul's was established by a colony from the mother church.

In general matters he was historically identified with the city, knew the old landmarks, and remembered the incidents and changes that always mark a growing town.

"I well recollect," says he, in a memorandum of historical reminiscences, "the old South Church in Church street, that was built for us by a missionary society in England for the propagation of the gospel in foreign parts. I recall when Trinity was first opened, and so fearful was my mother that the crowd would crush us, that we took seats low down on the Chapel street side, so we could flee. I remember when the lot where St. Paul's stands was sold, I think for \$600."

Mr. Peterson was intimately acquainted with the shipping trade of New Haven, and has left valuable memoranda of it, including histories of ships and

cruises of New Haven merchantmen, which are full of interesting and authentic information concerning the varying fortunes of our early sea captains.

When, in 1824, Lafayette visited this country and came to New Haven, Charles Peterson was presented to the old hero by Captain John Miles, as the son of a Frenchman, when, placing his hand upon the boy's head, he declared "the son of a Frenchman will always make a good American."

Mr. Peterson was one of the oldest members of the New Haven Colony Historical Society, and was for many years a Director. A memorial letter from its Secretary, Thomas R. Trowbridge, to his widow, expresses the sense of loss in his death, and a high estimate of his valuable qualities as a man, and as an active and historically well informed member of the society. A similar letter from the Vestry of St. Paul's Church, conveys an expression of sorrow and the sense of their great bereavement in losing one, "constant in his attendance upon its worship; liberal in the use of his means for the support of the church; deeply interested in whatever concerned its welfare. A churchman of pronounced convictions always held in charity, his life was blameless and above reproach. Of great gentleness and kindness, his example and influence were ever in behalf of peace."

The resolutions of the Board of Directors of the Security Insurance Company testify to his high character and worth, as follows: "His unswerving integrity won him the hearty respect of the community and the entire confidence and esteem of his associates in this Board, while by his kindness of manner, his thoughtfulness and unselfishness, he gained the affections of all those with whom he was intimately thrown in the management of the affairs of the office. He was a bright example of honesty, integrity and devotion to duty."

The Underwriters' Association passed a resolution of respect for his excellent worth in all the relations of a long and active business life, and a similar memorial was rendered by the Chamber of Commerce.

Mr. Peterson married, November 3, 1832, Janette, daughter of Eli Denslow, of New Haven. They have had ten children, of whom five sons and four daughters survive. The sons are Charles; Dr. George F., the dentist; Frederick I.; Edward S.; and A. Hazard. The daughters are Mrs. A. P. Hotchkiss, Mrs. Henry Merrill, Mrs. L. H. Stannard, and Miss Emma Peterson, all residing in New Haven.

GARDNER MORSE.

With the public interests and business history of New Haven during the last half century, the name of Gardner Morse has been inseparably identified. He was born at Marlboro, Mass., April 11, 1809, at the farm which had been the homestead of his ancestors for nearly two hundred years, and is still the residence of their descendants. He was the twelfth of thirteen children born to Stephen and Rebecca (How) Morse. At the age of sixteen he left home to enter the service of Timothy and

Caudin Merse

C. B. Sowers

Stephen Bishop, who were then prominent merchants in New Haven, and were located on State street. After six years he left their employment in order to establish a similar business on his own account in partnership with the late Charles Peterson, under the firm name of Morse & Peterson. The new firm located in one of the stores now occupied by Wallace B. Fenn & Co., and Mr. Morse continued in business there for six years. In 1837, being elected Collector of the city, town, and State taxes for New Haven, he severed his connection with mercantile life. For the next twenty years he devoted himself to the successful conduct of the collectorship, to which he was annually re-elected. He was recognized as a prudent and skillful executive officer, and received many important and responsible trusts from corporations and from private individuals. The agencies of several fire insurance companies in Connecticut, New York, and Pennsylvania were placed in his hands.

But he has been especially honored and trusted as an administrator of estates. He has thus stood in a fiduciary relation to the possessions of a host of prominent men of the former generation, among others to the real estate properties of Titus Street, James Hunt, Joel Root, Samuel Ward, William H. Elliot, Sidney Hull, D. W. Davenport, Henry Eld, Admiral Gregory, J. D. Beecher, John M. Garfield, Elam Hull, Levi Gilbert, Nathaniel A. Bacon, Elial T. Foot, and William W. Boardman. Many of these trusts, whose original owners are long since departed, remain, still unexpired, in the guardianship of Colonel Morse.

In the year 1852, he was the first of the three trustees to whom the town delegated the disposal of the old Almshouse property, and in all the financial transactions by which the new Almshouse was established he took a leading part. Again, when the property of the present Almshouse was conveyed to said trusteeship, to be used in the purchase and improvement of the new Spring Side Town Farm, Colonel Morse was one of the principal managers. The Trustees who were associated with him in 1852, were Henry White and Wyllys Peck, who are now both deceased, and who have been succeeded by H. M. Welch and Luzon B. Morris.

Mr. Morse has also been foremost in directing the expansion of the city into outlying districts. In connection with the late John W. Mansfield he was extensively engaged in the purchase and improvement of various unoccupied tracts, and in preparing the same for habitation, and for participation in urban duties and privileges. That portion of the city lying west of Park street, from Oak street to Davenport avenue, and now adorned by the Church of the Ascension, and by many attractive private residences, owes nearly its entire development to the enterprise of these gentlemen.

Mr. Morse has been for twenty-five years an Acting Trustee and member of the Loaning Committee of the New Haven Savings Bank, also for many years one of its Vice-Presidents. Besides his long employment in the Department of Taxes, he has served the town for a considerable time as a Trustee of the Town Deposit Fund. In the city government

he also filled the office of Fire Commissioner for twelve years (1862-74). With the government of the State, Mr. Morse has also held official connection, and it was in that service that he meritoriously won his familiar appellation of "Colonel." Those who are old enough to remember the former militia organization of Connecticut, will recall the fact that its degree of military discipline was a very fluctuating quantity. There were frequent periods when the only order was disorder, when insubordination was the rule, and when the trainings were neglected. The year 1835 was such a time in the history of the Second Regiment, when Gardner Morse, then not a member of the organization, was elected Colonel, and the late Minott A. Osborn was chosen Major. It is probable, that an easy time had been anticipated under the new commanders; if so, the lazy and merry men were grievously disappointed. Colonel Morse insisted on the fulfillment of the law to the very letter, and he was ably seconded by the genial Major. At the cost of much persistent effort, Colonel Morse compelled attendance upon training days, and brought his regiment into a high state of military order and perfection.

Mr. Morse's success in life is largely due to the same qualities that enabled him to discipline the disorganized militia. He unites quick perceptions, prompt and accurate judgment, to an extraordinary capacity for administration; while the whole is controlled by a firm will and tempered by good cheer and kindly sympathy.

He has been so long and so actively engaged among us, that his story is part of the history of our community. That community recognizes in him the author of much of its own growth, and honors him as that best of political products, a good citizen.

Mr. Morse is a member of the parish of Trinity Church, and has been for many years its Vestryman, Clerk, and Treasurer. He has also performed the duties of Trustee and Treasurer of Trinity Church Home.

He has been three times married, and has had twelve children, of whom eight are now living, two daughters and six sons, all residents of New Haven.

CALEB B. BOWERS.

Hon. Caleb B. Bowers was born in Middletown, Conn., April 21, 1820. He is the son of William and Almira (Bailey) Bowers, whose married life continued for more than sixty-two years. His father died in 1878; his mother is still living, at the advanced age of eighty-nine years. He comes from an ancestry traceable in three lines to the earliest days of the settlement of New England, viz.: George Bowers, at Scituate, Mass., in 1637; John Dwight, at Dedham, Mass., in 1635; and John Bailey, at Hartford, Conn., in 1660.

Among the numerous descendants of George Bowers have been some of the most prosperous merchants of the colonial days, and many distinguished in the learned professions. The subject of this sketch is fourth in line of descent from the Rev. Benjamin Bowers, a graduate of Harvard College,

who removed from Billerica, Mass., in 1740, to become the first Congregational minister in Middle Haddam, Conn., he being the great-grandson of George, the original settler. George was also the father of Rev. John Bowers, who came to New Haven in 1653. He was for a time engaged in teaching, and afterwards was settled as first minister in the town of Derby, Conn.

Mr. Bowers is descended from good revolutionary stock, both his grandfathers having served in the War for Independence; his maternal grandfather suffering, during many months, the horrors of the "Jersey Prison Ship," from which he was released on the restoration of peace, and where he loyally and persistently resisted repeated offers of freedom conditioned upon his enlistment in the service of the enemy.

Mr. Bowers' parents moved to Berlin, in Hartford County, during his infancy, where he spent his boyhood in the ordinary pursuits of country life, receiving the benefits of a common school education, supplemented by an academic course of two years.

At the age of sixteen years he taught a district school, and continued teaching as his vocation for fourteen years, prosecuting his studies of Latin, higher mathematics, modern languages and elementary law, and later in life made insurance law a specialty. At twenty years of age he was principal of the Academy in Portland, Conn., holding the position for four years, after which he became master of the Grammar School in Springfield, Mass., having supervision of all the schools of lower grade. During this period, from 1845 to 1849, he was a member of the Hampden County Teachers' Association, and also of the Massachusetts State Teachers' Association, in which positions he was an earnest and efficient laborer in the cause of popular education, delivering lectures and engaging in the discussion of important topics. He enjoyed the confidence of the Hon. Horace Mann, at that time the State Superintendent of the Board of Education, and the familiar intercourse of many other distinguished educators of that period.

In 1849 he married Fanny M., only daughter of Luther and Nancy (Baldwin) Cutter, of Springfield, Mass., and their union has been blessed by a family of three sons and one daughter, all of whom give promise of useful and honorable lives.

At the time of his marriage he terminated his labors as an instructor, since which he has passed an active and varied life, and in all its diversified requirements he has resolutely and successfully discharged the duties imposed creditably to himself and to the satisfaction of those whose interests he has been called upon to serve.

In 1850, he entered, by appointment, into public service in Washington, D. C., and was for nearly three years Acting Chief Examiner of the Post Office Department, being often assigned to important and responsible duties outside of the routine of his position. During these palmy days of the republic, he enjoyed the acquaintance of most of the public men of that time, and from his intercourse with them acquired much knowledge, which in after

days has proved of great service in other public positions to which he has been called.

Leaving Washington in 1853, he was chosen to the office of Secretary of the Hartford Fire Insurance Company, where he remained for five years, during which the Company experienced a degree of prosperity unexampled throughout its previous existence of nearly half a century. He was then invited to the presidency of the City Fire Insurance Company of Hartford, where for six years, by industry and good management, he maintained his well-earned reputation as a successful manager and skillful underwriter. He then organized under a new charter the Putnam Fire Insurance Company, and acted as its President for a year, leaving it with a large business established on a profitable basis. At this time, feeling the need of rest and recreation, unknown to him since his boyhood, he removed with his family to Claremont, N. H., where he intended to enjoy quite and retirement, but within the year he was elected a delegate at large from the State to the Philadelphia Union Convention of 1866, and, being in sympathy with its declared object and purposes, he accepted appointment and was the chosen Chairman of the State Delegation and served as the New England member of the Committee on Platform, of which the late Henry J. Raymond was Chairman. Subsequently he was appointed the Collector of Internal Revenue for the third New Hampshire District, serving in that capacity for several months, until his removal to New Haven, with marked success, and receiving the special commendation of the Secretary of the Treasury.

In 1867, Mr. Bowers was induced to return to his native State, selecting New Haven as his future home, with a view to the thorough education of his children.

Mr. Bowers in his later years has exemplified his early interest and belief in education, and he has afforded each of his children the best possible opportunities for liberal and scientific culture. Two of his sons were graduates of Yale College in the Classes of 1874 and 1879, one having chosen medicine as his profession and the other the law. They are also graduates, respectively, of the College of Physicians and Surgeons in New York and of the Yale Law School. His youngest son is now a member of the Senior Class at Yale, and his only daughter is a graduate of the school at Farmington, Conn., so long under the guidance of Miss Sarah Porter.

Since his residence in New Haven, Mr. Bowers has gained an honorable position as a citizen, and is highly esteemed for his courteous manners, sterling integrity, varied information, and business ability. He is identified with many of its business enterprises and public and charitable institutions.

He is a member of Trinity Church Vestry, Chairman of the Board of Visitors at the Hospital, a member of the Chamber of Commerce, a Director of the New Haven Colony Historical Society, a Director of the New Haven Water Company, President of the Underwriters' Association, and was for several years one of the Board of Fire Commissioners, being for a portion of the time its president,

Cha A. Wilson

and has filled other positions of trust and responsibility, in which he has exhibited an aptitude for public affairs, proving himself a safe and conservative leader, a wise counselor, and an efficient worker.

He was elected State Senator in 1875, and although without any previous legislative experience, he was chosen president of that body, filling the exalted position with great ability, and having much influence with his official associates. By a constitutional provision he became at several times the acting Governor of the State.

He was Chairman of the Committee on Railroads during this session, before which many important and vexatious questions were brought for investigation and trial. He was again elected for two years, 1877-78, and took a prominent part in debate, and carried through the Senate, by the decisive vote of sixteen to four, a bill creating a new board of commissioners for the better and more thorough supervision of insurance companies, but which, to the regret of many, was defeated in the House of Representatives.

Coming to New Haven with a competency resulting from years of industry and economy, Mr. Bowers has found time, in addition to attention to his private affairs and moderate pursuit of the insurance business, to take a somewhat active part in politics. He presided gracefully over the Democratic Congressional Convention at Middletown in 1875, guiding the turbulent elements with skill and success. He was an active and zealous supporter of Tilden and Hancock in their respective campaigns, making many eloquent and popular addresses in support of his chosen candidates. But as a politician, although a partisan, he has ever adopted as his rule of action in all matters involving the public welfare, the motto, "*Non sibi, sed patrie*," and has never been willing to sacrifice the highest interests of the people, nor prostitute official position, to mere party success or individual aggrandisement.

His patriotism was called into active exercise in the days of our civil strife, and he was prominent among the first few citizens of Hartford, where he then resided, who, in response to the call of President Lincoln, inaugurated the movement that culminated in the formation of Connecticut's First Regiment of Volunteers. On the morning following the first public meeting, he personally raised in a few hours, by subscription, more than \$2,000 to be used in the support of said volunteers, and also, in common with several of Hartford's wealthy and prominent citizens, pledged an amount equal to nearly one-fifth of his annual income, as a guaranty for the continued support of the regiment in the possible contingency of a failure of the State Legislature to provide the requisite means.

During the entire struggle he was an active and outspoken defender of the Government, and at all times ready by his efforts and his influence to uphold and maintain the integrity and entirety of the Union. By his extensive acquaintance and knowledge of men, he was enabled, at critical periods, to render valuable aid in securing prompt and harmonious action from men of diverse political views,

and was often consulted by Governor Buckingham in regard to the selection of suitable persons in the formation and officering of succeeding regiments.

As a citizen, Mr. Bowers' influence has ever been in support of good morals, sound instruction for the masses, honest government, and whatever is calculated to promote and advance the best interests of society.

CHARLES WILSON.

This prominent citizen of New Haven was born in Cornwall, Litchfield Co., Conn., May 29, 1830, a son of Elizur and Maria (Finck) Wilson. He spent his boyhood on his father's farm and in the common schools, and finished his education at one of the academies so popular at that time throughout the country. Later he was for a time a school teacher and clerk in a store.

In 1854 he came to New Haven and at once connected himself with the insurance business, with which he has since been so conspicuously identified. His thorough knowledge of underwriting in all its branches is proverbial, his experience in every capacity, from clerk and agent to secretary and vice-president, having made him familiar with insurance in all its minutiae. He has always represented first-class companies and done a large, but conservative, business, looking righteously to the safety of both insured and insurer. As a general agent he is well known over a large section of country, and his fairness in the adjustment of intricate cases has won him the respect of all interested.

Mr. Wilson has never interested himself in politics, his large business demanding his undivided attention. He has been often solicited by his fellow citizens to accept positions of trust and responsibility, but has uniformly declined such honors, although consenting once to represent his Ward in the Common Council of the City of New Haven. He is public-spirited and enterprising, and lends liberal support to all measures intended to promote the general good.

Reared as a Congregationalist, he united with the Old North Church (now the United Congregational Church) when he came to New Haven in 1854. After his removal to Humphrey street, he took a deep and helpful interest in the Humphrey street Congregational Church, toward the establishment and maintenance of which, as well as toward the erection of its house of worship, he has contributed with no stinting hand.

He has been twice married; first, in 1854, to Miss Anna E. Stone, a native of Kent, Litchfield County, who died in 1861; and second, in 1862, to Miss Sarah E. Porter, then a resident of New Haven. He has a son and a daughter living. His eldest son, Charles H., who was for some years his partner in business, died in 1884. His surviving son, Clarence P., is connected with his office, and is a young man of good abilities and bright promise.

Mr. Wilson is a man of fine presence, genial and courteous, and is justly popular with all classes of his fellow citizens. His business standing is deservedly high.

CHAPTER XXI.

STREETS, AVENUES, AND BRIDGES.

I. STREETS.

THE map of 1641 shows all the streets laid out at the first settlement of the town. The land which these streets covered having never been alienated by the original proprietors, belongs to the proprietors of common and undivided lands, subject to such rights as the public have in any land which has been used as a highway. These aboriginal streets do not belong, we repeat, as modern streets do, to the owners of the land which adjoins the street, but to that collective and mystic person described above as "the proprietors of common and undivided lands." These streets are, or at least were, four rods wide. In many instances the owners of adjoining lots have encroached upon the street; and, the encroachment being of ancient date, it has sometimes been difficult to define the street with exactness. All of this class of streets have however been carefully surveyed by the officials of the city; and the mere stones which they have placed at the angles of intersecting streets, though they do not determine the lines of the streets beyond all possible controversy, are probably very near the land-marks originally established.

Streets laid out since the first settlement of the town, having been taken from private property for the use of the public as highways, continue to be private property, subject to use as highways. It was a long time before any of this class of streets were cut through the original town plat. But, one after another, new streets remote from the center of the town were laid out; so that the map of 1775 shows more miles of street in the new township than on the old half-mile-square.

Space does not permit us to speak specifically of streets outside of the original town plat, but we propose briefly to relate the history of those within it which have been opened since the incorporation of the city.

Immediately after the organization of the city government, the principal streets were formally and authoritatively named.

At a city meeting of the City of New Haven, holden on the 22d day of September, 1784.

Resolved, That the streets in the City of New Haven be named as follows, viz.: The street from Capt. Samuel Munson's corner to Thomas Howell, Esq.'s shop, STATE STREET; the street from Cooper's corner to Capt. Robert Brown's corner, CHURCH STREET; the street from Dixwell's corner to Dunbar's corner, COLLEGE STREET; the street from Tench's corner to Andrews' corner, YORK STREET; the street from Capt. Samuel Munson's corner to Tench's, GROVE STREET; the street from Bishop's corner to Darling's corner, ELM STREET; the street from Rhode's corner to Mr. Isaac Doolittle's corner, CHAPEL STREET; the street from Andrews' corner to Thomas Howell, Esq.'s shop, GEORGE STREET; the street from John Whiting, Esq.'s corner to the Head of the Long Wharf, FLEET STREET; the street from Capt. Thomas Rice's to Ferry Point, WATER STREET; the street from Capt. Leveret Hubbard's corner to Capt. Trowbridge's corner, MEADOW STREET; the street from Mr. Hezekiah Sabin's to Douglas's house, UNION STREET; the street from

the Rope Walk to Storer's Ship Yard, OLIVE STREET; the street from Major William Munson's to Capt. Solomon Phipps', FAIR STREET; the street from Grove street across the squares a little west of Pierpont Edwards, Esq.'s house over into George street, ORANGE STREET; the street across the middle squares in front of the Court House and other public buildings, TEMPLE STREET; the street between the dwelling-house where Mr. Timothy Jones, deceased, dwelt, and where Mr. David Austin, Jr., now lives, up through the square to the Green and across the opposite square near the new jail, COURT STREET; the street across the upper squares from Grove street to George street, which runs between the dwelling-house and store of Henry Daggett, Esq., HIGH STREET; the street from Mr. Joseph Howell's across the squares between the old and new houses of Mr. Joel Atwater, CROWN STREET; the street from Mr. Ebenezer Townsend's corner to Capt. Moses Ventre's house, CHERRY STREET; the streets or ways from Mr. Josiah Burr's house out on Mt. Carmel and Amity roads, BROAD WAY.

Some long streets which are delineated on the map of 1775, are not mentioned in this attempt to affix names to the streets. Perhaps they were so remote from the center of population, and so little used, that no one cared to propose names for them; the name of some person living in the neighborhood sufficiently designating a street or road in the outskirts of the city. But on the other hand, names were by design appointed for streets across all of the nine aboriginal squares, although some of them were not yet opened; the appointment of names expressing an expectation that the streets would be laid out.

Referring again to the map of 1775, we see that at that date Crown street was open from State to Church, bisecting one of the aboriginal squares, and that the southern half of the bisected square was itself bisected by Little Orange street. The improbability that any new streets were opened during the Revolutionary War is so great, that we may assume that the map shows all the streets which were in use when the city was incorporated.

The first street opened by the newly constituted municipal authority, was High street from Chapel to George. It was laid out forty feet wide; and its lines, as marked on both sides of the street by mere stones, were established by a committee appointed for that purpose, whose report is signed August 4, 1784.

High street was not long afterward extended from Chapel to Elm, and an extension from Elm to Grove was ordered in 1827. This last order, however, was not carried into effect till some years later, when the new gateway to the cemetery was erected. On the same day on which names were given to the streets, Temple street was laid out and established. The city exerted its authority in so doing, not through a committee specially appointed for the purpose, but through its Mayor and Aldermen, who declare that they

Do survey, lay out and establish a new street in the City of New Haven, 50 feet in width, beginning 50 feet north-westerly from the northeasterly corner of Capt. John Mix's line upon the street that runs past the dwelling-house of

James Hillhouse and running through the land of said Capt. John Mix in a direct line with the front of the Court House and Meeting-houses, and then in the same direction through the land of Pelatiah Webster to the other highway, this day laid out through the lower part of said Webster's land, in front of the new house now building by Jeremiah Atwater; and said street is to extend easterly fifty feet in breadth from said westerly line in a range with said public buildings, through the land of said Pelatiah Webster, John Pierpont, and John Mix, and a small strip upon the land of the heirs of Samuel Mix, deceased: To be and remain an open public street for the use of said city forever—which street is called Temple street. In witness whereof we have hereunto set our hands this 22d day of September, 1784.

ROGER SHERMAN, *Mayor*.
SAMUEL BISHOP,
DAVID AUSTIN,
JOHN WHITING, *Aldermen*.

Temple street was afterward opened from Crown street to George street, but not with a width as great as it had north of Crown street. Within the last three or four years this section of the street has been widened with considerable expense in removing buildings.

The other highway alluded to "as this day laid out through the lower part of said Webster's land, and in front of the new house now building by Jeremiah Atwater," was that part of Crown street which lies between Church and College streets. It was a continuation westward of Crown street, as it is shown on the map of 1775. "The new house now building" by Steward Atwater was on the rear of the garden attached to the house he had hitherto occupied in College street, where his daughter Mrs. Anna Townsend lived, within the memory of many now living. "The new house" mentioned by the Mayor and Aldermen is now an old house. It stands next west of the residence of the Hon. Caleb B. Bowers.

In 1809, Crown street was, so far as municipal decree is concerned, extended through to York street; the width of it from College street to York street being fixed at 45 feet. But persons born since 1809 can remember when Crown street was not actually open to the public as far west as York street.

At the time of the incorporation of the city, Orange street was open from George to Crown; and the appointment of the name to the street as extended to Grove, implies an expectation that it would be so extended. The extension was indeed ordered on the very day when the streets were named.

We, the Mayor, Aldermen, and Common Council of the City of New Haven, do survey and establish a new street in the City of New Haven, fifty feet in width, beginning seventy-three and a half feet east from the easterly end of the dwelling-house of Townsend and Denison, formerly the dwelling-house of James Blakeslee, on the land of said Townsend and Denison, and the land belonging to the heirs of Joseph Noyes, deceased, in a direct line to the front or west side of the barn of Pierpont Edwards, Esq., then running through the land of said Edwards and the land belonging to the Grammar School, to the new highway this day laid out in front of the dwelling-house of Captain Phineas Bradley; and said street is to extend westerly fifty feet in width from the easterly line through the land of said Grammar School, lands belonging to the heirs of Colonel Nathan Whiting, deceased, and the said land of said heirs of Joseph Noyes, and said Townsend and Denison; to be and remain

a public street for the use of said city forever; which street is called Orange street. In witness whereof, we have hereunto set our hands this 22d day of September, 1784.

Wall street was surveyed, laid out, and established June 5, 1787. Its width was fixed at forty feet.

The western part of Court street was a court before the War of the Revolution. Here was the dwelling-house of Captain Phineas Bradley, of which mention is made by the Mayor, Aldermen and Common Council, in their order that Orange street should "extend to the new highway this day laid out in front of the dwelling-house of Captain Phineas Bradley." The order establishing Court street was dated September 22, 1784. The width was fixed at forty feet, and in length it extended from State to Church streets.

Library street is the only one of the streets which have been cut through the aboriginal squares about half way from side to side, which now remains to be noticed. It was opened in 1842, and was at first called Atwater street, because the land through which it was cut had long been the property of an Atwater family residing on York street. The name was afterwards changed to Library street, because the College Library stands near its eastern extremity.

Gregson street and Centre street are of a different class from those which cut aboriginal squares into equal, or nearly equal, sections. Centre street is but a prolongation of School alley, which Trinity Church opened through its glebe land. Private enterprise extended it westward to Temple street, and more recently, eastward to Orange street. The extension of it eastward was made by the late Henry White, Esq., through his own land, which reached from Church to Orange streets.

Gregson street, originally opened through the glebe land, has been prolonged southward to Crown street.

The city has employed its official engineers for years in defining the streets, both ancient and modern, until there are now few places where the street lines are not sufficiently determined by mere stones. The municipal authority has also in many streets established building lines, determining how far back from the street buildings must be placed. The distance of the building line from the street line differs very much in different streets, and even in different places in the same street. Near the corners of a block it is often much less than midway between the corners. On a business street it is much less than on a street where there are residences already placed far back from the street. The municipal regulations which determine building lines are established with much careful study of the requirements of each particular locality.

II.—AVENUES.

Streets leading into the town were called by the first planters, lanes. It does not appear that the word conveyed to their minds, as it does to ours, the idea of narrowness. The entrance into the

town from New York, Stamford, Milford and other places west of New Haven, was by West lane. The people of Cheshire came to town through Orchard street, then called Long lane. The approach from Wallingford and Middletown was by way of Neck Bridge and Neck lane. These approaches gradually ceased to be called lanes, and were known by the distinctive appellation of country roads, or, after the incorporation of turnpike companies, as turnpike roads. In a modern nomenclature such entrances into a city are called avenues. After two hundred and fifty years from the foundation of the city, the number of such entrances into New Haven is naturally greater than at first.

Commencing in the southwest, we find a modern approach to the city called Kimberly avenue. It crosses West River on a bridge built, in 1848, lower down on the river than any other bridge, by a joint committee of the two towns of Orange and New Haven. The New Haven committee were Isaac Thomson, Atwater Treat, and Sylvanus Butler. This avenue is the shortest route into the city from Savin Rock and West Haven, and is named Kimberly avenue in honor of a family which has resided in West Haven from colonial times to the present day, and numbers among its members one who was elected a Senator of the United States.

A little north of Kimberly avenue Bridge is the bridge on which the railroad to New York crosses the same river, and a little further north is the bridge of the Derby Railroad. Then on the same river, above the bridge of the Derby Railroad, is the bridge from which Davenport avenue, Congress avenue, and Columbus avenue diverge toward different parts of the city. This bridge has been known from the most ancient time by the name of West Bridge, and the road from it into the city, which we now call Davenport avenue, was at first called West lane, and afterward Milford turnpike. It was by this bridge that General Garth hoped to lead his troops into town on the morning of the 5th of July, 1779.

About a mile further north than West Bridge is the bridge on which Derby avenue crosses the same river. This is a comparatively modern bridge and equally modern road, having no history anterior to the time of turnpikes.

From Westville, still another mile further up the stream, is a fine broad avenue into the city bearing the name of Whalley, one of the regicide judges of King Charles, who found refuge and concealment in New Haven. The bridge on Whalley avenue is, however, a modern structure, more recent than the British invasion. General Garth crossed the river on the bridge near Blake's factory; and some of his troops, if not the main body, followed Goffe street toward the center of the town.

Roads from Amity, as Woodbridge was then called, and from Cheshire, converged at Goffe street into one and the same approach into the town. In the city ordinance affixing names to the streets, Broadway is the name given to "the streets or ways from the corner of York and Elm streets out on Mount Carmel and Amity Roads." Dixwell avenue has more recently been cut through

from the upper part of Broadway to the Mount Carmel road at the crossing of Munson street.

Further east than the Long lane of colonial days is the fine avenue into the city formed by the convergence at Whitneyville of the Farmington turnpike with the Hartford turnpike. Whitney avenue, at times almost impassable before it was provided with a sewer, now supplies eligible sites for suburban mansions and a fine career for generous steeds.

East of East Rock the city is approached by State street. The first planters called it Neck lane, because it connected the town with the neck of land between the two rivers whose confluence was at Grape-vine Point. Through this avenue the equestrian traveler of the olden time came from Middletown, or from Hartford, to New Haven. Governor Hopkins, as he lay on his death-bed in England, exclaimed, "How often have I pleased myself with thoughts of a joyful meeting with my father Eaton. I remember with what pleasure he would come down the street that he might meet me when I came from Hartford to New Haven; but with how much greater pleasure shall we shortly meet one another in heaven."

Grand street and Chapel street are both modern avenues into the city, dating only from the time when those streets were extended, by means of bridges, to the country east of the Quinnipiac.

Bridge street may be considered as an ancient avenue, having from a very early date conducted into town travelers from Branford, Guilford and New London, after they had crossed the Quinnipiac River in the ferry-boat established by public authority.

III. BRIDGES.

Having viewed the avenues by which the city is approached, we will briefly enumerate the bridges over which those who travel on these avenues cross the neighboring rivers.

But before we do so, we will give a moment's attention to another class of bridges. Fortunately for New Haven its streets are so much higher than the railroads which pass through the city, that very few of them cross the dangerous tracks on grade. The bridges over the railroads belong to and are maintained by the corporations which own the railroads. Most of them are unsightly structures of wood; but the railroad bridges in Chapel street and Grand street are prophecies of a new departure in favor of strength and neatness.

BRIDGES OVER WEST RIVER.

The first bridges provided at the common expense of the proprietors were bridges for foot men, cattle and carts being left to find their way through the water where it was sufficiently shallow. But, so early as the 25th of the 12th month in 1641, that is on the 25th of February, 1642, N. S., it was ordered at a General Court that as speedily as may be, a cart bridge be made over the West River. The bridge thus ordered was and is still called the West Bridge. It is the same to which Columbus street, Congress avenue, and Davenport avenue conduct as they converge. It is the

same over which the British general hoped to enter the city on the 5th of July, 1779. The first structure suffered early decay, for at a General Court February 11, 1655,

the townsmen informed that the West Bridge grows old and rotten, and they have had thoughts that it might be better to build a new one before this one be quite down; for as some workmen have said, it may save near twenty pounds in it, because it will be a considerable help in the work. Some propounded that this with mending might serve two or three years longer; but it was answered that it is so rotten as there is danger in cattle and men going over, especially carts; and some have said the charge of a new one will not be above ten pounds more than to repair the old one, if they do it substantially. The town to issue this matter left it to the townsmen to call workmen, viz., William Andrews, Jarvis Boykin, and George Smith, to view it again, and as they have information from them, they may either cause a new bridge to be builded, or repair the old one, as they shall think fit, and what they do therein the town hereby confirms, and desires them to see that this be at present so supported as danger to persons or cattle may be prevented.

With many reparations and renewals the West Bridge still brings travelers from more western towns into our city. It is now a substantial iron bridge, built in 1876. A dike was long ago built by the side of the causeway leading to it across the meadow, which, with the aid of a tide gate under the bridge, excluded the tide from the meadows above and greatly improved the quality of the grass. Barber in his *History and Antiquities of New Haven*, says this dike was built in 1769 principally through the efforts of Nathan Beers, he being an owner of much land there.

In the order of time, the next bridge built over the West River was that near Blake's factory in Westville. It was at first erected as a foot bridge in 1702. The proposal the next year to enlarge it sufficiently for the passage of horses was negatived by the vote of the town. Before the Revolutionary War, however, it had been widened and strengthened, so that when the British found that there was no passage for them across West Bridge, they pushed on up the river to cross this, which was then called Thompson's Bridge. On Stiles' diagram of the British invasion, it is named Derby Bridge.

A bridge on Whalley avenue was built by the Litchfield Turnpike Company, and another on Derby avenue by the Derby Turnpike Company. The contract for the latter was made in 1800. The Litchfield Turnpike Company is as old within one year as the Derby Turnpike Company; but some antiquarians are of opinion that for a time this Company depended on Thompson's Bridge and at a later day built one further down stream. This opinion is confirmed by the following notice published in the *Connecticut Journal*:

Notice is hereby given that there will be a meeting of the subscribers to the Turnpike Company, established on the road from Thompson's Bridge to Rimmond's Falls Bridge by Mrs. Dayton's, holden at the office of Henry Daggett, Esq., on Monday, the 23d of instant November, at two o'clock in the afternoon, to organize said subscribers and take measures to proceed in said business.

HENRY DAGGETT,
PETER JOHNSON,
THOMAS PUNDERSON,
Committee.

NEW HAVEN, November 10, 1801.

The Kimberly avenue Bridge was built when the avenue which leads to it was opened by the town in 1848.

There are yet four more bridges over West River, but they are not on great avenues leading into the city from other towns, and are of recent origin. They are on Martin, Chapel, Oak and Washington streets.

BRIDGES OVER MILL RIVER.

The earliest bridge over Mill River was a foot bridge or a horse bridge. Perhaps it was built before the permanent organization of civil authority, as there is no order to be found on the records for its erection. At a General Court, the 25th of 12th month, 1641, that is, in February, 1642, N. S., "it is ordered that the Neck Bridge shall be repaired forthwith, and that as speedily as may be, a cart bridge be made over the West River, and another over the Mill River." The natural inference from this record is that, soon after the date named, a cart bridge was built in Neck lane over Mill River, to take the place of the bridge which needed repair. From that time to the present, Neck Bridge has been prominent among the institutions of the town. Here Whalley and Goffe lay concealed, while the special constables, sent by the magistrates to apprehend them, rode over their heads with hue and cry. Here the militia from neighboring towns gathered to resist the British on the evening of the 5th of July, 1779, in such number, that early the next morning the city was evacuated without the application of the torch, which would have destroyed the city and provoked attack upon the retreating foe.

The bridge on Grand street which crosses Mill River was built by private subscription in 1819, and was at first called Barnesville Bridge. Having been hastily built, it soon needed repair. The public-spirited citizens who had contributed for its construction, did not feel that they were bound to maintain it, and the town authorities felt no responsibility for a bridge which did not belong to the town. It was however finally decided, in a suit for damages by a person who had been injured through a defect in the bridge, that the town was under obligation to keep it in good condition.

A bridge on Chapel street crosses Mill River, bringing Grape-vine Point, as our ancestors called the southern end of the neck between East River and Mill River, into closer connection with the center of the city.

Between Neck Bridge and the northern boundary of the city there is no other public bridge over Mill River than that on Orange street on the way from the city to East Rock Park, the bridge just below Whitney Lake being private. There was also, once, a private bridge on Rock Lane; but it was carried away by a tornado in 1839, and was never rebuilt. The bridges over Mill River which are further up stream than Orange street, are beyond the bounds of the City and Town of New Haven.

BRIDGES OVER QUINNIPIAC RIVER.

The act of the General Assembly incorporating the City of New Haven, in tracing its boundaries,

begins "at the northeast corner of the Long Bridge (so called) in said New Haven," and after perambulating the territory whose inhabitants were "ordained, constituted, and declared to be from time to time, and forever hereafter, one body corporate and politic, in fact and in name, by the name of the Mayor, Aldermen, Common Council and Freemen of the City of New Haven," returns "to the first mentioned point at the northeast corner of the Long Bridge."

The bridge thus selected as the beginning and the ending of the boundary of the city as at first fixed by the General Assembly, is now commonly known as Lewis Bridge. As long as the Middletown Turnpike Company was in existence, it was on their road from New Haven to Middletown. It is now a short bridge with a long causeway through the meadow on the east bank of the Quinnipiac.

The next bridge on this river, in the order of time, is also next in the downward flow of the stream. It was at first called the Dragon Bridge, perhaps from a tavern sign which did not so vividly portray Saint George as it did the dragon with which he fought.

During the Revolutionary War, the General Assembly, while in session at New Haven, appointed a committee on the subject of constructing a bridge over the Quinnipiac; and when their committee reported in favor of erecting it at Dragon, granted to the town of New Haven a lottery to aid in the undertaking. Owing to the depreciated currency of the country at this time, only about £300 was raised by the lottery, a sum inadequate to the purpose. Nothing further was done till about the year 1790, when the necessity for a bridge at Fair Haven had become still more urgent. The Legislature in that year granted permission to the town of New Haven to erect a bridge, and to receive tolls from travelers for a period of twenty years, during which time they were obliged to keep the bridge in repair. It was also stipulated in the grant, that no other bridge should be permitted on the Quinnipiac River within a certain distance. In 1791 the town transferred this grant to Henry Daggett, James Prescott, and Thomas Punderson, who agreed to build the bridge in consideration of receiving the tolls for twenty years, provided the town would open proper highways leading to it. The town also transferred to these contractors its part of the Long Bridge on the Middletown road. This bridge, being within the stipulated limit as to distance, and then nearly decayed, was removed on the completion of the Dragon Bridge in 1793. The people, however, who lived beyond the Long Bridge, made grievous and just complaint that they were obliged to go a long distance out of their way, over newly formed roads, and then turn back again to Neck Bridge before they could reach the city. Quite an excitement was created on the subject, and the Legislature was applied to for relief. The aggrieved parties offered to construct a free bridge at their own expense in place of that which had been removed, and to put the old causeway in complete repair. Notwithstanding the terms of

the grant to the town of New Haven, the General Assembly authorized the reconstruction of the Long Bridge. In this state of things the contractors for the construction of the Dragon Bridge applied to the town for relief. The usual way of raising money then, so that nobody would feel it, was by means of a lottery. So the General Assembly sanctioned a lottery on consideration that the bridge should be free. The avails of this lottery, together with the £300 raised by the first "East River Bridge Lottery" were paid over to the contractors in satisfaction of their claims. The bridge thus became a free bridge, with the obligation resting on the town of New Haven to keep it in repair for the twenty years contemplated in the original grant. Three years, however, before the expiration of this period, the bridge was carried away by a freshet, and an attempt was made to oblige East Haven to bear a portion of the expense of its repair. This having failed, a company was formed, to whom the Legislature granted authority to put it in repair and to collect tolls, until their capital should be returned with an interest of 12 per cent. per annum. This reimbursement of their expenses with the interest was attained in 1825, when the bridge became free. This bridge is on what is now called Grand avenue.

Before the construction of Fair Haven Bridge, there had been two ferries by which the inhabitants of East Haven and travelers further east could reach New Haven. One, called the old ferry, carried passengers from Red Rock to the foot of Ferry path, now Ferry street, whence they found their way to Neck Bridge. This ferry naturally came to an end when the new bridge over the Quinnipiac was completed. The New Ferry likewise, which crossed the united waters of the two rivers that come together at Grape-vine Point, lost some of its custom, and it was foreseen that unless a bridge was built there the travel from New Haven to the eastern part of Connecticut would, more and more, shun East Haven. The inhabitants of East Haven therefore applied to the General Assembly and obtained a grant authorizing them to erect Tomlinson's Bridge on the site of the New Ferry, and to collect tolls for its support. The enterprise was probably hastened by the fact that the Legislature had appointed a committee to consider and report on a road from the eastern part of the State through Dragon to New Haven.

An important subsidy was granted to Tomlinson's Bridge by the proprietors of the common and undivided lands in New Haven, who promised the Company the use of certain adjoining wharves as long as the bridge should be maintained. These wharves are now so valuable to the owners of railroads and steamboats, that the franchise of the Bridge Company has been bought, and is held, for the sake of its appurtenances.

There is one other bridge over the Quinnipiac. It is above Tomlinson's Bridge and below the bridge on Grand avenue. It is on the site of the Old Ferry, and reaches from the foot of the Old Ferry path on the west side, to Red Rock on the east side of the Quinnipiac. As a traveler from the

east leaves the west end of this bridge a single turn brings him into Chapel street, and on that street he can continue, not indeed in a perfectly straight line, but with only slight deflection, to the Chapel street Bridge over West River, and on to Ike Marvel's Farm, of Edgewood.

We have now surveyed all our bridges. There

are nine on West River, four on Mill River, and four on Quinnipiac or East River. Bridges further up stream are beyond the limits both of the city and of the town. With so many bridges and avenues, New Haven is on all sides easily accessible. The city which John Davenport built "four-square" has more entrances than there are gates into the New Jerusalem.

CHAPTER XXII.

TRAVEL AND TRANSPORTATION.

BY GEORGE DUTTON WATROUS.

AS one is whirled through New Haven in the six-hour express from Boston to New York, it is nearly impossible to realize how utterly different were the conditions of travel only a hundred years ago. Yet even then the facilities for travel by land were much in advance of those of the early part of the eighteenth century.

From far back in colonial times New Haven had ranked high as a sea-port, and both her foreign and her coasting trade had been of considerable importance. Freight and packet vessels plied frequently between this and adjoining seaboard towns, and really afforded all the means of intercourse which were needed. Indeed early colonization had conformed itself to the natural water-courses, and there were but few inland towns of consequence not accessible by navigable streams. But as the pressure of population became stronger, and the more available locations were appropriated, farming and industrial interests penetrated further and further from the reach of navigation. Here a valuable water-power and there a rich valley invited settlements, and the existing natural channels of trade were felt to be too tortuous or were entirely unavailable. Then there was found to be a need for a more direct land communication. This period, however, came quite late in New Haven's history.

In 1716 the inhabitants of Hartford expressed by a vote their dissatisfaction at the settlement of the "Collegiate School" at New Haven, and in it speak of the latter place as "being so very remote, and the transporting anything by water thither being so uncertain, there being but little communication between these counties [Hartford and New London] and New Haven."*

The Colonial Records for the next year give the first intimation of any regular means of communication between these towns. It was then enacted by the General Court of the Colony of Connecticut that

This Assembly do grant to Captain John Munson, of New Haven, that in consideration he hath first been at the cost and charge to set up a wagon, to pass and transport passengers and goods between Hartford and New Haven, which

may be of great benefit and advantage to the Colony in general; that he, said John Munson, shall have and enjoy to him, his executors, administrators and assigns, the sole and only privilege of transporting persons and goods between the towns aforesaid during the space of seven years next coming; provided, that it shall and may be lawful for any person to transport his own goods or any of his family in his own wagon, anything in this grant to the contrary hereof notwithstanding.

And this extraordinary privilege on condition that he shall annually,

at least on the first Monday of every month, excepting December, January, February and March, set forth with the said wagon from New Haven, and with all convenient dispatch drive up to Hartford, and thence in the same week return to New Haven, bad weather and extraordinary casualties excepted, on penalty of ten shillings each neglect.*

From this primitive period to the time of the incorporation of New Haven as a city, there was steady, though very slow, progress toward the development of a system of roads.

Here and there throughout the Colonial Records are found enactments relating to the laying out or improvement of highways. The usual course was for the General Court to appoint a committee to view the ground and report again to the Assembly. On the acceptance of the report it was instructed to lay out the road, and the several towns through which it passed were ordered to open, repair and make it fit for traveling at their own expense.

In 1759, the General Assembly was advised that the traveled road between Hartford and New Haven was sadly in need of straightening and repairing. As the road then passed through the townships of "Weathersfield, Farmington, Middletown and Wallingford," the complaint was not an unreasonable one, and a committee was appointed "with all care and diligence to view and observe said road now used in the various crooks and notable turns thereof, and them duly to note, and also with utmost care to find out how and where it may be practicable to shorten and better said way in whole or in part."† In 1760 changes were reported and the towns were ordered to make them and to see that the fences and other obstructions across the way were removed.

* Manuscript Records of the Colony of Connecticut, Vol. V, p. 101.

† Colonial Records 1786, p. 294.

* Hartford Town Votes, Vol. I, p. 244.

In this general manner one road after another was thrown open and improved, until, by 1770, it would seem that in nearly every available direction New Haven was provided with a highway, many of these being also post-roads.

In 1767, the Selectmen in the various towns were ordered to set up mile-stones on all of the post-roads of the colony, showing the distances from the county town. But these roads were sadly neglected, and often in a deplorable condition. Up to the time of the Revolution the greater part of the travel was still by water, and what land travel there was, was almost entirely on horseback, with occasionally a private carriage. The post-riders alternately jogged along merrily and plodded through bottomless mire, whiling the monotonous hours away by reading the mail committed to their charge, and quite content to make the six miles per hour required by law.

The Post Office Department, reorganized and placed upon a paying basis by Benjamin Franklin, was rapidly stretching out new feelers into new country, and by this time a grand post route from Maine to Georgia was in operation.

The Revolutionary War checked the growth of inland facilities, and communication, difficult in times of peace, was often entirely closed by the additional perils of war. What rude attempts at public conveyance had been made were abandoned.

These roads were well provided with public-houses, and travelers speak with high praise of the entertainment therein. Foreigners, however, used to find the assumption of an equal, if not a superior, air on the part of mine host irritating, contrasting it with the obsequiousness of continental inn-keepers. But the Marquis de Chastellux, who traveled much in this country in 1780-82, and was attached to the American Army, courteously explains it by saying that

Travelers are considered as giving them more trouble than money. The reason of this is, that the inn-keepers are all of them cultivators, at their ease, who do not stand in need of this slight profit. The greatest number of those who follow this profession are even compelled to it by the laws of the country, which have wisely provided that on all the great roads there shall be a public-house at the end of every six miles for the accommodation of travelers.*

It was of Litchfield that he was then speaking particularly. He was passing through it on his way to Albany from Providence, *via* Voluntown, Hartford, Litchfield and Fishkill.

After the Revolution communication was once more resumed, and stages, more or less frequent, and more or less commodious, began to run. The swiftly running mail-coaches had not yet come in. The roads were still far too bad to permit of such rapid travel, and indeed they had never been adopted anywhere until, in 1784, the experiment of forwarding the mail in coaches was tried in England. Success attended the trial, and the system rapidly spread over England and to this country. The old stage-coaches continued to travel slowly until the mail-coaches became general.

Brissot de Warville, who has written so charm-

ingly of his experiences in this country, and who has left us such valuable bits of every-day information, tells of a journey from Boston to New York by land in 1788.* He says: "Many persons have united in establishing a kind of diligence, or public stage, which passes regularly for the convenience of travelers. In the summer season the journey is performed in four days." This time however would seem to be exceptional, for many speak of it as only with difficulty accomplished in six. The vehicles, he says, varied according to the road to be traveled, sometimes a light, swift carriage, and again a lumbering, springless wagon.

I cannot refrain from adding an extract, illustrative of the *naïveté* of his style, and of his native gallantry, which may be appreciated by New Haveners. Speaking of New Haven and of his journey through it, he says:

New Haven yields not to Weathersfield for the beauty of the fair sex. * * * On the road you often meet these fair Connecticut girls, either driving a carriage, or alone on horseback galloping boldly; with an elegant hat on the head, a white apron, and a calico gown—usages which prove at once the early cultivation of their reason, since they are trusted so young to themselves, the safety of the road, and the general innocence of manners. You will see them hazarding themselves alone without protectors in the public stages. I am wrong to say *hazarding*. Who can offend them? They are here under the protection of public morals, of their own innocence. It is the consciousness of this innocence which renders them so complaisant and so good, for a stranger takes them by the hand and laughs with them and they are not offended at it.†

Samuel Breck, speaking of travel in 1787 between New York and Boston, says:

In those days there were two ways of getting to Boston: one was by a clumsy stage that travels about forty miles a day, with the same horses the whole day; so that by rising at 3 or 4 o'clock and prolonging the day's ride into night, one made out to reach Boston in six days; the other route was by packet-sloops up the Sound to Providence and thence by land to Boston. This was full of uncertainty, sometimes being traveled in three and sometimes in nine days.

I myself have been that length of time (nine days) going from New York to Boston.‡

The fare from Providence to New York by packet was \$6. There was at that time scarcely a town all along the coast that did not have its boats running frequently to New York. They were always comfortable, but with head-winds the time of arrival was never to be accurately prophesied.

All through the advertisements in the New Haven newspapers from this time on, notices appear of the sailing of regular or occasional packet-sloops to New York, Albany, Boston, or Savannah.

In 1791, a line of passenger boats was established to run twice weekly from New Haven to New York upon the arrival of the stage-coach from the eastward. Applications for passage or freight were to be made either to Bradley & Huggins, Thaddeus Beecher, or John Huggins, at their dwelling-houses; or to John Clarke at Smith's Tavern at the head of the Long Wharf.

It was just about this time that a new era in transportation agencies was beginning, that of Turnpikes.

The taking of toll upon roads for the purpose of maintaining and repairing them seems to have been practiced in England more than five centuries ago, since the time of William Philippe, the hermit, who inaugurated it. But up to the last of the eighteenth century the roads and turnpikes as well continued in an execrable condition. The system had not been carried out to satisfactory results and but little gain had come of it. This inefficiency was attributed to the principles upon which the management was conducted. The Turnpike Acts had established what are known as Turnpike Trusts. The management was vested in the people of the neighboring country for ten to fifteen miles around, perhaps to the number of one or two hundred, and the tolls seem to have been looked upon as a public revenue.

A writer in the *Edinburgh Review* of October, 1819, commenting on the badness of the roads and of this system, suggested that the proper way to secure the maximum benefit from the taking of tolls would be to put the building of new roads into the hands of private corporations, and let them devote the surplus revenue to the payment of dividends.*

This very system had been in vogue in Connecticut almost from the beginning of the era. The very first Turnpike Acts were of a nature quite similar to those establishing the English Turnpike Trusts. There was, for instance, the Act which authorized the collection of toll on the stage-road through Greenwich, passed in October, 1792. A gate was to be established by Commissioners to be appointed, and fare was to be taken at the rate of one shilling and six-pence for each traveling carriage of four wheels; two-pence for each man and horse, etc. The money was to be expended under the direction of the Commissioners, and they were to account for it to the County Court of Fairfield County.

There were only a few acts of this kind, and after a year or two the fever of turnpike building seized the good people of the State in earnest. From 1795 to 1836 vast numbers of turnpike companies were incorporated, the charters being upon a stereotyped plan. That of the Cheshire Company, chartered in 1800, to build a road from New Haven through Cheshire to Southington, may fairly be considered representative. A bond was to be filed, conditioned that assessed damages should be paid, and that the roads and bridges be built and maintained at the charge of the Company. Two gates were to be established and the rates of toll were fixed.

The exemption clause ran as follows:

Provided also, that persons traveling to attend public worship, funerals, society, town or freemen's meetings, and persons obliged to do military duty and traveling to attend trainings; persons going to and from grist mills; and persons living within one mile of said gates, and passing said gates more than one mile to attend their ordinary farming business, shall not be liable to the payment of said toll.

Three Commissioners were to be appointed to inspect and superintend the road and its management, and the Company was to present its accounts yearly to the General Assembly. When the Company should have received enough by tolls to repay the money spent, with interest at twelve per cent., the road was to be discharged from toll. The charter was a close one, not subject to revocation or amendment by the General Assembly.

As I have intimated, the anxiety to invest capital in the stock of turnpike companies soon reached a fever height, and the roads were rapidly built all over the State. As a rule, these investments turned out very unfortunately for the investors, but were of corresponding advantage to the State. Large returns were expected, but seldom realized. Yet, as an instrument of development, turnpikes have served their purpose, and served it well. A network of good roads spread over the State, and a fresh impulse was given to trade and commerce.

Some companies have prospered, but the majority have, either through railroad competition or lack of support, been unsuccessful. Out of all the companies chartered since 1792, only four remain in existence throughout the whole State. Some charters have expired by limitation, others by revocation or repeal, while other companies have simply slipped out of existence by virtue of the general laws or a non-exercise of powers.

The turnpikes, as a rule, followed the lines of the old highways, and the cost of construction was in general not great. The land had usually already been devoted to a public use; the material for building was generally the earth at hand, for graveling was almost unknown; and the improvements mostly consisted in avoiding hills, straightening, draining, and removing rocks. An opinion has prevailed that a principle was adopted of not allowing an ascent of greater than 5 degrees; if this is so, it was not adhered to.*

The first incorporated company whose road was to run from New Haven, was the Straits' Turnpike Company, often spelled Streights.

This was chartered in October, 1797, and its road was to run from the New Haven Court House to the Litchfield Court House, 36 miles. It took its name from a place in the highway, in the town of Woodbridge, called "The Straits." Three gates were to be established and tolls fixed—6.2 cents for mail-stages, 25 cents for others, etc. The road ran through the western part of the town of New Haven, and through Westville, then called Hotchkiss Town, where it was at a later day joined by road of the Rimmans Falls Company.

In May, 1798, the Derby Turnpike Company was chartered, to run from New Haven to Derby Landing. The capital stock was \$7,520, and the length of road eight miles. Of all the turnpike companies whose roads once left New Haven, this is the only one still in existence. It has only one gate, just beyond the Maltby Lakes, a few miles out of New Haven, and though not the only road to Derby, is much the best one. Its road originally

* *Edinburgh Review*, xxii, pp. 480-481.

* *American State Papers*, Vol. XX, pp. 725 et seq.

ran from York street, westward, and across West River. In 1847 the part east of Kensington street was discontinued, and since then there have been other portions abandoned to the care of the city. The road has never been a great financial success, though it has generally paid reasonable dividends. It began to pay in 1805, and, as a rule, has done so since. The building of the Naugatuck Railroad had a serious influence upon the profits, and though there was a reaction, the building of the Derby road caused another set back. The dividend paid for the last few years has been about 6 per cent. semi-annually. The Company has no officers except the four Directors, R. M. Bassett, J. E. Bassett, E. N. Shelton, and G. T. Hine, and a Clerk and Treasurer. Mr. J. E. Bassett acts in both the latter capacities, and receives the munificent salary of \$10 a year.

The Rimmons Falls Company ran its road, of six miles in length, into New Haven, joining the Streights Company's road in Hotchkiss Town.

The most important of these roads was that of the Hartford and New Haven Turnpike Company, incorporated in October, 1798. There were to be 800 shares of stock, four gates, and bonds in the sum of \$50,000 were to be filed with the State Treasurer that all damages should be paid and the road kept in proper repair and condition. James Hillhouse was greatly interested in this project, and appears as one of the corporators and soon afterward as President of the Company. In November of 1798 a meeting was called to receive subscriptions, and a local paper of December 6th says that the subscriptions had all been filled up and several applicants disappointed. The length of the road was thirty-four and three-quarter miles. It ran from Grove street, out of what is now Whitney avenue, crossed Mill River, near what is now the foot of Whitney Lake, and continued northward. In 1815 the present entrance into the city was altered by continuing Temple street northward through land of Mr. Hillhouse, until it intersected the turnpike road, so that there were two branches, as is now the case.

The Cheshire Turnpike Company, whose organization has been mentioned, made use of the Hartford road for entering the city, and an Act of 1815 provided that between "Whitney's Gun Factory" and the State House, it should be kept in repair at the joint expense of the two companies.

In 1802 was incorporated the New Haven and Milford Turnpike Company, upon the petition of Jeremiah Atwater and others. There were to be 100 shares of stock, and one gate was to be erected at such place between the New Haven Court House and the Milford Meeting-house as either of the three Judges of the County Court might establish. In 1804, on the petition of I. Beers and others, showing that a dispute had arisen as to the place where the road was to enter the squares of the city, it was resolved by the General Assembly that the old road from George street to West Bridge be confirmed as a part of the turnpike road. In 1836, this road, running west of the Hospital, was exchanged for the town road, running east of it,

by mutual assent and the ratification of the Legislature.

In 1813 the Middletown, Durham and New Haven Turnpike Company was chartered, and in 1817 the Dragon Turnpike Company. The latter was to run from the east line of Olive street in New Haven, through Dragon (now Fair Haven), to Norwich Landing. The time for taking up shares was subsequently extended to six months from May, 1819; but this road seems never to have been built.

The Fair Haven Turnpike Company was incorporated in May, 1824; from Killingworth to Dragon Bridge.

In connection with these roads, it seems most natural to make some slight mention of Tomlinson's Bridge, that ancient structure so long a grievance to our citizens, now no more.

The Bridge Company was chartered in October, 1796, under the legal name of "The Company for Erecting and Supporting a Toll Bridge from New Haven to East Haven."

The *Connecticut Journal* of April 25, 1798, contains a notice relating to it as follows:

The Subscriber is happy to inform the Public that the Bridge from New Haven to East Haven is passable for foot people. A Box will be put on Mr. Woodward's Store, and the toll will be left to the generosity of those Gentlemen that walk over the Bridge.

ZENAS WHITING.

EAST HAVEN, 24 April, 1798.

The Hartford and New Haven Railroad Company purchased a majority of the Bridge stock at an early period of its existence, and on the consolidation of that road with the New York and New Haven Railroad Company in 1872, it passed into the hands of the latter company as successor to the rights and property of the old road.

At the session of the Legislature in 1885, the Bridge Company was ordered to construct a new and suitable bridge in place of the venerable one that had so long remained there.

The commands of the Legislature have been obeyed, and a handsome iron drawbridge was completed by the Railroad Company by the 1st of December of the same year in which it was ordered.

With the growth of the turnpike system, rapidly covering the State with excellent roads, and rendering communication no longer a burden, but a pleasure, there sprang up once more an increase of travel and of traffic. Through routes began to shape themselves over the connected, though independent, bits of improved roads. Stage lines increased in number and importance, and the speed attained by the coaches grew from year to year.

The trunk road from Georgia to Maine entered New Haven and thence diverged, one branch toward Hartford and the other *via* New London and Providence.

This transformation was taking place all over the East. In 1794 a stage route was opened from Portland, Me., to Whitestown, near Utica, N. Y. Albany had become a famous stage center; and in

the first quarter of the next century the "Old National Pike" was in its full glory.

In the communication by the Secretary of the Treasury to the Senate of the United States, April 6, 1808, a report, somewhat incomplete (because, as the Collector of the District of Connecticut naively says, he had a cold and could not easily get all the information desired), is given of the condition of the several turnpike roads and companies throughout this State.

Among other things it is said that when the Connecticut Turnpike Company's road is completed, the whole of the route from New York to Boston (in Connecticut) will be a turnpike road (except a short space of very level road from Fairfield to Stratford); *i. e.*, the Connecticut, the New Haven and Milford, the Hartford and New Haven, the Hartford and Tolland, and the Stafford Pool Turnpikes. These, so says the report, "constitute as good a route, perhaps, as can be hoped for. I speak in reference to distance, the nature of the ground, and the state of the population generally. The road itself is susceptible of vast improvement," etc.*

President Dwight says, writing about 1814, that six turnpike roads commencing at New Haven were at that time in use.

One through Berlin, and by a branch through Middletown also, to Hartford, and thence in four different ways to Boston, etc.; another to Farmington, and thence through Litchfield to Albany, and thence to Niagara, and by branches to Hudson and Catskill, and thence to the Susquehanna River, etc.; by another branch up Naugatuck River, through Waterbury and Norfolk to Stockbridge and Albany; the fourth through Humphreysville to Southbury, and thence to Cornwall; the fifth through Derby to New Milford; the sixth to Stratford Ferry and thence to New York.†

He adds, in a note, that a turnpike road was in 1814 finished between New Haven and Middletown.

Of the earlier stage-coach lines it would be neither practicable nor desirable to give a complete history, and I select one as an illustration of the state of passenger travel at that time, and as a standard by which to mark its later progress and development.

In the *Connecticut Journal* of July 19, 1797, appears an advertisement of a weekly stage line to Litchfield, to start from New Haven at 4 o'clock P.M., and to arrive every Wednesday afternoon.

Each passenger pays 4d. a mile, and allowed 14 lbs. baggage gratis—150 lbs. same as a passenger. Every favor will be gratefully acknowledged by the public's humble servants, Joseph Wheeler, Garwood H. Cunningham.

Later in the year the same men, with three associates, advertise to run a stage twice weekly through Litchfield to Sheffield, there to exchange with a stage which ran from New York to Vermont. The stage to start from Mr. Butler's, in New Haven, and the fare is to be 6¼ cents a mile. The proprietors assert that they will not be accountable for baggage, and that it is to be carried at the owner's risk.

By the first few years of the new century great results by way of increased accommodations had followed the improvement of the roads. In 1804 a mail stage left Boston daily for New York at 5 A.M.; at 11 P.M. it was to arrive at Wilbraham; whence it again started at 1 A.M., *via* Springfield and New Haven, to arrive in New York at 11 A.M. of the next day. A line also ran three times weekly by way of Providence.

In 1810 was advertised the Boston, Hartford, New Haven, New York and Philadelphia Mail Stage Line. A coach left Boston daily (Sundays excepted) at 4 A.M., and arrived at Hartford at 8 P.M., the fare for that distance being \$6.50. The next day it left Hartford at 9 A.M., New Haven at 7 P.M., and arrived at New York at noon of the third day. From Boston to Hartford fresh horses were put in every ten miles.

In 1811 a new line was announced to Albany, leaving New Haven at 5 A.M. every Wednesday, and arriving in Albany at 4 P.M. of the next day.

The New York and Boston New Line Diligence Stage in 1813 yet further shortened the time. By leaving New York at 2 A.M., Hartford was reached on the first night and Boston on the next.

In 1815 stages ran from New Haven by three different routes to Hartford, and thence either by the upper road (*via* Springfield and Wooster) or by the lower road (*via* Pomfret) to Boston.

By 1817 the disturbing element of steamboat competition had come in to reduce the price of conveyance, and Messrs. Ezekiel Lovejoy & Co. advertise to run a stage to New York in thirteen hours, and for what they regard as the absurdly low sum of \$5. For years the price had been \$8, and was then \$1 less than by the steamboat and \$1 more than by the packets.

These were the good old days to which our grandfathers even yet love to look back. Time has blurred the recollections of the discomforts and the annoyances, and only the rose-colored picture remains of the madly-galloping horses, the merry horn, the crowds of gaping villagers, and the cosy, comfortable inn.

Fine old-fashioned gentlemen like Samuel Breck, turned with loathing from the dirty, greasy, promiscuous carriages of the early railways, and sighed for the days when a man might travel with dignity and at his leisure in his own carriage and four, or at least in a post-chaise. He describes enthusiastically a journey which he made in 1810, in a hackney-coach, with four horses, from Philadelphia to Boston. He says:

We arrived at Mrs. Lloyd's at Boston, before sundown, without accident, and after one of the pleasantest rides imaginable. The roads are turnpiked all the way, and of seven ferries that a traveler was obliged formerly to pass, there remains now but that at Paulus Hook (from New York to Jersey City), which can never be bridged. The roads are not only extremely improved, but the distances are shortened thirty-six miles between Philadelphia and Boston. A stage runs from Hartford to Boston every day on the new road, 102½ miles, from 4 o'clock A.M. to 8 P.M.*

This is one side of the picture. Edward Everett,

* American State Papers, Vol. XX, p. 873.

† Dwight's Travels, Vol. I, p. 107.

* Recollections of Samuel Breck, p. 271.

writing of a trip to New York in 1814, and by this very stage line, gives us another:

I was to leave Boston early on Monday morning, October 31st, for New York, *via* Hartford, a journey, at that season of the year, of two very hard days. Early Monday morning, really late Sunday night, a messenger was sent round to wake up the passengers who had engaged seats, and prepare them to be called for by the stage coach, which in this case took place a little after midnight. We reached Hartford without accident, but not till about eleven o'clock at night, after a most weary day's work of nearly twenty-three hours.

The programme of the route assumed an arrival at Hartford at 8 P.M., and a start at three o'clock next morning. But we were allowed but a short hour for supper and rest, and again started just after midnight. On the way to New Haven, though with my knees bent to an acute angle by the baggage on the floor of the coach, I was obliged to carry a fellow traveler of about ten years old in my lap. We reached New Haven about sunrise.

I was ready to drop from fatigue, but intended to proceed directly to New York. The friendly remonstrances of General David Humphreys, whom I met on the steps of the inn, induced me to stop at New Haven, where I passed a most agreeable day under his friendly guidance.*

Now, just as stage traveling had nearly reached its maximum of speed and comfort, yet another agency came into operation.

The steamboat as a mechanical possibility had been known in America from the early experiments of Fitch and Rumsey in 1783. As is well known, the first successful steamboat was that constructed by Fulton in 1807, and navigated upon the Hudson, but it was not till eight years later that New Haven began to enjoy the benefits of steam transportation.

In the marine list of the *Columbian Register*, March 28, 1815, appears the following, which seems to be the first notice of any steamboat arrival at this port:

Arrived March 21st. The elegant Steamboat Fulton, Capt. Elihu S. Bunker, 11 hours from New York, with 30 passengers. [The Steamboat arrives at and departs from Tomlinson's Bridge, at the east end of the City.]

Later in the season the Fulton commenced running regularly to New York twice a week, and later yet three times.

Business began to adjust itself to the new conditions of travel. Mr. Henry Butler, a popular host, moved his hotel from the New England Coffee House, on Church street, to a place "on the bank near the bridge, where the Fulton leaves," and it was opened in May, 1816, as the New Steamboat Hotel. The stage office was also kept there, and most of the stages ran down to the wharf to connect with the boat.

In this year a new steamer, the Connecticut, commenced running in connection with the Fulton, the former between New York and New London, and the latter between New York and New Haven, under the name of the Sound Steamboat Line. Two years afterward, the experiment was successfully tried of extending the line to Norwich.

In 1819, Mr. Butler advertises the Connecticut Hotel near the steamboat landing. He says that

great facilities for transportation have made New Haven a popular place of resort for Southern families in summer, and urges the advantages of his house and location.

About this time there began to be a great deal of hard feeling toward New York and the New York boats, on account of the exclusive privileges which the State had granted to Robert Fulton and Robert R. Livingston, of navigating the waters of the State by vessels driven by steam or by fire. New Haveners began to complain because they were shut off in New York from privileges which the Fulton Steamboat Company was allowed to exercise in Connecticut.

In this spirit of warfare the boat United States was purchased in New York by some of our citizens, to run from here to New York, in 1821. Yet so high did the feeling run, that the boat was not even permitted to get up steam enough to leave the city, and she had to be towed outside the jurisdiction of the State.

An act was passed in the spring of 1822 by the Connecticut Legislature to protect the citizens of this State in the use of their steamboats. The boats of the New York monopolists were not to be allowed to enter Connecticut unless reciprocal privileges were given in New York, and a state of war declared *pro tanto*.

The citizens of New Haven were thus cut off from direct steam communication with New York, but the steamboat United States, Captain Beecher, ran from New Haven to Byram River, the boundary line of New York State, and there connected with a stage line for New York.

This state of things lasted until the decision of the famous case of *Gibbons vs. Ogden** in March, 1824, reversing a decree of the Court of Errors in New York, and declaring the act of New York unconstitutional.

Two months later the New Haven Steamboat Company was chartered, in May, 1824.

On March 9, the Connecticut arrived for the first time since the law excluding the Fulton Company's boats from our waters. The New Haven boat, the United States, commenced running the next Monday, the fare being reduced to \$3. By 1825, the field seems to have been left alone to the New Haven boats.

The *Columbian Register* in the spring of that year congratulates New Haven that there are three boats running regularly to New York, all receiving liberal support and all owned by our own citizens. These seem to have been the United States and the Hudson by day, and the Providence, Captain Tomlinson, as an evening boat.

A short time afterward the steamboat office was removed from the head of Long Wharf to the "new and commodious store lately erected at Tomlinson's Bridge."

In 1828, the New Haven Steamboat Company reduced the fare to New York to \$2.50, meals included. The boats employed were the United States and Hudson, and Joel Root was the agent. A year

* Old and New Vol. VII, p. 17.

* *Gibbons vs. Ogden*, 9 Wheat. (U. S. Supreme Court), 1.

later the fare from Hartford to New York was \$3, both boat and stage fares included.

September 11, 1830, the boiler of the United States exploded, just as she was leaving New York, opposite Blackwell's Island. Of the thirty-two passengers on board two were killed outright, and several afterward died in consequence of injuries received.

Within the next two or three years rates were further cut down by competition, and two handsome new boats were put on the line, the *Superior* and the *Splendid*. A new set of stages was run to Hartford in connection with them, and the time was reduced to only ten or eleven hours from New York to Hartford. These two boats were said to be the fastest and most elegant on the Sound.

A contract was made between the Hartford and New Haven Railroad Company and the old New Haven Steamboat Company on the 13th of October, 1838, for a working arrangement. This bargain, when it subsequently became known, caused much ill feeling, and a pamphlet, headed "Secret Monopoly," divulged all its provisions. These were principally that the railroad agreed to enter into no engagement to run its cars in connection with any other steamboat line from New York to New Haven, and that the steamboat company should pay \$500 per year to the railroad until the road should be in operation to Hartford, then \$1,200.

This arrangement worked well until the middle of May, 1839, when the Connecticut River Steamboat Company (Commodore Vanderbilt's line) threatened to touch at New Haven on its way to and from New York, and to run in opposition to the old line. In addition to this danger, the old company was burdened by an oppressive mail contract, which compelled it to run its boats every day. Sooner than contend against these obstacles, it decided to sell its boats to the Connecticut River Line and discontinue its business.

The new owners, as successors to the obligations of the old, engaged to fulfill this contract with the railroad company. They soon began to evade it. On the 16th of May, 1839, Commodore Vanderbilt wrote a letter threatening that unless the fare was raised above the contract prices, he would have to run inferior boats. He soon began to boast that he would break down the railroad, and tried to keep his word by withdrawing the New York and the New Haven, and putting on the day line the *Bolivar*, an old ferry-boat, entirely unfit for the purpose.

This treatment induced the railroad company to apply to the Legislature for the right to purchase steamboats for use in connection with its business. In 1839, the desired power was given to charter, or purchase and hold, such number of steamboats to be used in connection with its business as it might deem expedient, to an amount not to exceed \$200,000, and to increase the capital stock to the same amount.

It had the further effect of creating great hostility to Commodore Vanderbilt and his line, and an active opposition sprang up. It first took the form of individual venture, and Captain Peck

for a short time ran the *American Eagle*. A most disastrous cutting of rates followed, and in the fall of 1840 the fare to New York dropped to 25 cents, and even to 12½.

The next year, 1841, an opposition company was organized under the general law of 1837, with the name of the New Haven Steamboat and Transportation Company. Subscription to the stock was solicited on the ground of patriotism, and a list of perhaps 250 subscribers was obtained. This Company, at first under the name of the Citizens' Line, began by running the *Telegraph*, Captain Deming. She proved unsatisfactory, and the *Belle* was purchased. Captain Richard Peck, a well known and respected citizen of New Haven, to whom the writer is indebted for much of his information concerning steamboat matters, was put in command, and the *Belle* soon drew to herself most of the patronage. She ran about two years, and passed into the hands of the Connecticut River Steamboat Company.

The Hartford and New Haven Railroad Company ran the *Traveler* and the *Champion* for some years in connection with its business, and then sold them out to Mr. Chester W. Chapin, of Springfield, about 1850.

When the New Haven Steamboat Company sold out its boats, it did not, however, give up its charter. Through Captain Beecher, Mr. Thomas R. Trowbridge, and others, it was kept alive, and a new company was subsequently organized, which purchased it. It is therefore still in existence. The first boat built under the new management was the *Granite State*, in 1853. Later came the *Elm City*, in 1856; the *Continental*, in 1861; and the *C. H. Northam*. The Company now runs the *Continental* and the *C. H. Northam* on its regular day and night lines. The *Elm City* is kept as a spare boat; the New Haven is used as a Sunday and freight boat; and the *Eleanor F. Peck* as a freight boat around New York.

The only opposition lines since the days of the *Belle*, have been the *Propeller* Line and the *Starin* Line. The former, known as the New Haven Transportation Company, owned the New Haven and the *Northampton*. The latter boat was sunk off the harbor by the *Continental* and the other was sold. The *Starin* Line runs two boats regularly between New Haven and New York, the *J. H. Starin* and the *Erastus Corning*.

The success of the Erie Canal, the enormous returns from similar investments in England, and the feeling that the turnpike system had reached the climax of its development, with no further hope of substantial improvement, all contributed to turn the popular mind to thoughts of a new agency for internal communication.

The Eastern States were seized with an epidemic of canal fever. Especially was this true of New England. In Connecticut, Massachusetts and Vermont, numerous charters were granted, and the problem of cheap and easy transportation seemed about to be solved.

As early as 1820, a plan was proposed for divert-

ing the water from the Farmington River to Southington, and thence by the Quinnipiac River to Tomlinson's Bridge. This was claimed to have the double advantage of clearing out the harbor and of affording inland communication with the northern part of the State. Somewhat later a direct canal was suggested. Both were at first scouted as being not only impracticable, but indeed an utter impossibility.

By the next year however, popular sentiment had changed, and a meeting of the citizens of New Haven was held at the County Hotel, December 10, to consider the question. Resolutions were passed that a survey should be made and the cost of a canal up the Farmington Valley estimated. A committee, consisting of George Hoadley, William H. Jones, Isaac Mills, David De Forest, and Eli Whitney, was appointed, with power to act.

Early in 1822, a petition for incorporation was handed in to the Legislature, and in the same year the Farmington Canal Company was chartered.

In August of the same year a meeting of citizens of the towns of Hampshire and Hampden Counties, in Massachusetts, was held, to take steps for the building of a canal to connect the upper end of the Farmington Canal, at the State line, with the Connecticut River at Northampton. In 1823, a corporation was chartered for this purpose, under the name of the Hampshire and Hampden Canal Company. Subscriptions were opened for stock in the Farmington Canal in July, 1823, and much encouragement was given to the promoters of the work by the liberal spirit which was manifested by the citizens of New Haven.

Joel Root was the first President of the Company; George Hoadley, Treasurer; and W. W. Boardman, Secretary. In 1825, James Hillhouse was chosen Superintendent. A survey was made in this year, and it was estimated that the canal could be made for \$420,698.88, exclusive of land damages. The next year, 1824, the Mechanics' Bank of New Haven was chartered, on condition that it should make a subscription of \$200,000 to the stock of the Farmington Canal Company.

The work was commenced July 4, 1825, at Salmon Brook Village in the town of Granby, in the presence of from two to three thousand people, and with the appropriate ceremonies of a procession, an oration, prayer, the reading of the Declaration of Independence, and the inevitable banquet. The first spadeful of earth was dug by Governor Wolcott, followed by the President of the Company. The spade used is now in the possession of the New Haven Colony Historical Society.

Much life and amusement was contributed to the occasion by a canal barge fitted up by Captain George Rowland, of this city, which was drawn from New Haven by four horses, and which contained a party of New Haven gentlemen.

In the procession the boat was drawn by six horses, and carried the Governor, the President and Engineer of the Company, and other men of prominence. On its way up from New Haven and back again, the boat's crew was cheered and

bells were rung and salutes fired in several of the towns.*

In 1825 and 1826 the work was quite vigorously pushed on, and on May 8, 1826, it was unanimously voted "that the stock of this Company be united with that of the Hampshire and Hampden Canal Company, to the extent and for the purpose of constituting the net amount of tolls and proceeds of both a general fund for dividends, as soon as both canals shall have been completed."

A union of stocks on this basis was effected during the year, each company however preserving its separate corporate existence. The interests of the two companies were now more closely united than ever, and the idea of a further extension began to come forward more prominently. The friends of the canal looked forward to an ultimate communication through the States of Massachusetts and Vermont with Canada, and thence by the existing lines of river, lakes and canals to the Mississippi. This was indeed a grand project and by no means chimerical. The question of internal improvements was then one of the most important in politics, and the attitude of the administration, though by no means friendly to all devices for squandering public funds, was at least such that aid to an enterprise of unquestioned national benefit in times of both war and peace might fairly be expected.

But the canal had a deadly foe in the Connecticut River Company. Much money had been spent by this corporation in improving the navigation of the Connecticut River above Hartford, and it proposed to extend its operations above Northampton, thus becoming an active competitor for the business of the Connecticut Valley and its adjoining country. This opposition followed the Canal Company from State to National Legislature, and, together with the increasing feeling in favor of railroads, defeated the plan for a national subscription to the Canal stocks so ably urged by James Hillhouse, President and Agent, in 1829-30. New Haven's interests were, of course, all on the side of the canal, and in 1826 there was danger of much ill-feeling between New Haven and Hartford on this matter.†

In this year, 1826, there was considerable discussion as to the line which the canal should take through New Haven. Four different surveys were made and reported, though only two were seriously thought of. The arguments for the western course, as presented in a local paper, were: that it would be the cheapest to lay out; fewer bridges would be required; a "bason" might be conveniently built near Broadway for the landing of lumber, stone and heavier freight; and that it would be at a higher grade and so more useful if a strong head of water were required for fires.‡

Seven reasons were given for the other route, and the one subsequently adopted, through the creek between State and Union streets. The need of a central route through the business part of the

* *Columbian Register*, July 9, 1825.

† *Hartford Mercury*, June 11, 1826.

‡ *Columbian Register*, February 18, 1826.

city, the availability of a constant supply of water in case of fire, and the purification of the old creek were all urged, and finally prevailed.*

In 1827 the canal suffered its first serious shock of financial paralysis. The funds from the stock subscriptions were exhausted, and from this time forth it was only the heroic and indomitable pluck of its managers which kept it from ruin. James Hillhouse was really the soul and spirit of the enterprise, and up to his death, in 1832, he labored unremittingly for its success.

This is not the place to write of men or their histories, but it is remarkable that three of New Haven's most generous benefactors, and most public-spirited citizens, Hillhouse, Sheffield, and Farnam, should all have been identified with this canal, and should all have given their best energies for its success. Unfortunate it certainly was as an investment. But is it not as probably true that it had its influence in the development of a sturdy, invincible strength of character among our citizens, as it certainly is that New Haven's material interests were by it greatly promoted?

The financial embarrassment was much relieved by a subscription of \$100,000 to the stock by the City of New Haven in 1829. By the summer of 1827, Captain Rowland had completed an elegant packet-boat for use on the canal, called the New England. But he was obliged to wait nearly a year before he could use it. In the spring of the next year the canal was in use to Cheshire, and later to Farmington. On the 4th of July, being the anniversary of the opening three years before, two excursion boats, the New England and the DeWitt Clinton, with several people on board, started for Farmington. A breach in the bank kept them from going beyond Southington, whence they returned the next day.

In the latter part of 1829, the Hampshire and Hampden Canal was completed as far as Westfield, Mass., and a continuous line of navigation was opened from New Haven to that town. The effects were soon perceptible in an increased activity of business and the diminished price of many of the more essential commodities of life. The story of this Company's experience is much the same as that of the Farmington Company—great scarcity of funds and frequent injuries from freshets and malicious enemies.

In 1832, the Company was assisted by a subscription of \$100,000 made to its stock by the City Bank of New Haven, which was incorporated at that condition. Pleading appeals were made for subscriptions to the bank. It was said to be the canal's last hope, and that real estate, which had appreciated 33 per cent in consequence of the canal would correspondingly decline.

The work of extension to the Connecticut River was carried on under the superintendence of Captain James Goodrich, the President, and of Mr. Henry Farnam, Chief Engineer, and completed to Northampton in 1835.

The operation of the canal certainly gave a con-

siderable stimulus to New Haven's inland commerce. From the local papers, which published an inland navigation list, it would appear that the arrivals and clearances frequently ran as high as sixteen or seventeen each per week. There was only a trifling passenger business, except occasional excursions on some of the finer packet-boats. These were generally advertised in some such manner as this:

The New England will leave Hillhouse Basin for Good-year's Hotel on Wednesday, and return at sunset—fare 50 cents. Select parties accommodated at any time.

The principal articles of import were wood, cider, apples, cider-brandy, butter, etc.; and of export, hides, sugar, molasses, flour, coffee and salt.

The canal stood fairly well in popular favor, and occasionally some enthusiast would endeavor by fulsome eulogy to bring it into yet higher esteem. Some of these effusions are quite amusing, for instance this one in the *Connecticut Journal* for June 9, 1829:

No, every stockholder will and must have the satisfaction of having contributed to a work, infinitely of more importance to the world than the work of slaughter accomplished by Lord Wellington on the fields of Waterloo. His ended in human butcheries which deluged the country in human blood; but *this work, to the very latest posterity*, will stand as a monument of human wisdom and good.

Or this, from the same pen, in July:

Away, then! all coldness, all indifference, and all brutal opposition! This canal will shine with meridian splendor when its opposers shall have been for years and ages shrouded in the land of darkness.

But in spite of all efforts the canal did not prosper, and the only stockholder who ever received a dividend seems to have been the farmer who made complaint to the officers that no returns ever came in, and who was recommended to mow the grass along the tow-path. This he did yearly to his great satisfaction and emolument.

The failure was largely due to circumstances which could never have been foreseen, and instead of the canal's standing a "monument of human wisdom and good," its memory is a monument to noble, but misdirected, efforts.

As early as 1828, the effects of the improvement in railroads were seen by far-sighted men to be disastrous to canal enterprises, and a railroad was suggested in substitution for the projected canal northward.* The prophecy proved a true one, and it was in great measure the introduction of railways which stood in the way of the canal's ultimate success.

Extraordinary losses and damages by freshets made it absolutely necessary that some steps be taken to save the property from ruin. The plan proposed and followed led to the formation of the New Haven and Northampton Company in 1836. According to this arrangement the entire stock of both companies was to be relinquished and they were to be merged into the new company. The creditors of both were to subscribe the amount of their debts to the new company, some at par and some at a discount of 75

* *Columbian Register*, January 21, 1826.

* *Connecticut Journal*, December 22, 1829.

per cent, and there was to be a cash subscription of \$135,000. The total loss to the two companies was \$1,039,41.62, and the amount of capital paid in to the new company was \$216,112.39, of which \$145,927.47 was paid in debts, leaving a cash capital of \$120,184.92. Severe and stringent as these measures were, this seemed to be the only way in which this important work could be rescued from destruction and maintained until its place could be supplied by a railroad. Much praise is due to the founder of this new company, the Hon. Nathan Smith, and to Judge Hinckley, for the perseverance with which they worked out this solution. The property and franchises of the old companies were conveyed to the new one, and the management thus passed largely into different hands.

Further freshets, and the deterioration of the property, necessitated large expenditures, and in 1839 the City of New Haven came to its relief by an offer of credit to the extent of \$100,000. \$20,000 in bonds was at once issued, but on application for the rest, in 1840, it was refused. Instead of this the city agreed to give \$3,000 a year, for thirty years, for the use of the water in the canal, to relinquish its mortgage, and to give up the \$20,000 already loaned.

Not only did the canal furnish New Haven with a considerable supply of water for ordinary uses, but also a water power by which a great deal of machinery was moved. In 1836, Mr. Rowland built the "City Mill" upon a part of the property now used as the City Market. He raised a handsome brick building, and established a grist mill and feed store in the very heart of the city.

The New Haven Packet Boat Company was organized in 1838, for running a daily line of passenger boats to Northampton. The Company, through the efforts of Mr. Nathaniel A. Bacon, did a profitable business, and the punctuality and comfort of the boats were highly commended. The running time to Northampton was twenty-six hours, and the fare, including meals, was \$3.75.

In 1841, a business communication was first established between New York City and the upper part of Massachusetts, Vermont and New Hampshire.

In 1843, Joseph E. Sheffield was elected President of the Company. The business done increased rapidly, but extraordinary losses still continued, and bonds had to be issued to pay the floating debt. In 1845, Mr. Sheffield resigned, having sold the greater part of his stock, and heavy losses this year turned the thoughts of the Directors to the building of a railroad to take the place of the canal. At the suggestion of Mr. Farnam, the Superintendent, a survey for a railroad was made by Mr. Alexander C. Twining in that year. The next year Mr. Sheffield and his friends bought in a large amount of the stock which was owned in New York by parties unwilling to make further advances either for canal or railroad. A charter was granted, and the work commenced in January, 1847.

Before following out the history of the transformation of the plant of this Company from canal into railroad, it is more fitting to go back a little and trace out the early fortunes of New Haven's first railroad.

The successful application of steam power to the drawing of railway carriages in England, led to most enthusiastic propositions for its use in this country. Discussions of the possibilities of its uses were often exaggerated far beyond even the results subsequently attained. Some thought that a rate of a hundred miles an hour would shortly be reached, with the improvements fairly to be expected.

New Haven however was not too eager to be in the vanguard of progress. She had already her elephantine canal, ample service on the Sound by steam and sail, and a capital system of turnpikes and highways. The railway age was well advanced therefore before New Haven could be roused from her apathy.

By 1829, two important railways had been commenced in the United States (not including the first one of all at Quincy, Mass.), though steam had not been determined on as a motive power. The first steam locomotive which ever ran in America was imported from England, and was used upon the Delaware and Hudson Canal Company's Railroad August 8, 1829.

Not till the 30's were any steps taken here toward the building of a road. About that time the newspapers began to handle the subject, gingerly at first, but soon with great energy. In an editorial of 1830, an amusing account of anticipated results is given.

Gentlemen will keep their own steam coaches, and find it cheap, pleasant and convenient to travel, and not at the slow rate of twenty miles the day, in their private vehicles. Stables will cease to be an annoyance; steam carriages will be patient animals, never kicking for flies, nor whisking their tails in men's mouths, nor sending out noisome odors. When a gentleman would take a ride, he has only to direct

John to put the kettle on, and
Whiff away in a jiffy.*

At various intervals during the year 1832, an enthusiastic citizen, signing himself "Clinton," wrote numerous letters to the *Connecticut Journal*, urging the building of a railroad from Hartford to New Haven by way of Middletown. A road was already building from Boston to Worcester, and this road, it was claimed, would be a link in the chain from Boston to New York. "Construct this railroad between Hartford and New Haven *via* Middletown," he says in one of the earliest letters, "and soon the FULL-ORBED SPLENDORS OF A NOON-DAY BUSINESS ON IT will crown all efforts with abundant success." He later discusses the *pros* and *cons*. The most serious objections seemed to be those advanced in behalf of the rights and interests already vested in the canal and the turnpikes. "The former it could not injure," he says, "because there have never been many passengers upon the canal. A railroad could not divert a dollar's worth of freight from it; and if a railroad should add to the

* *Connecticut Journal*, January 26, 1830.

wealth and enterprise of New Haven, this would add a higher tone of interest in the canals." As to the turnpikes, "They," he says, "occupy quite a different country from the railroad, and have been of comparatively little importance to the public or to the stockholders." If there is anything to the argument of interference with vested rights, "Why," he asks, "did the Legislature charter three or four turnpikes ending at both Hartford and New Haven?" Another plan was to quiet the turnpikes for a few thousand dollars. These roads have been useful, it was said, but poorly paid public servants, and ought not to be turned out unpensioned.

About this time a road was threatened from Boston *via* Providence, Norwich, and New London, if New Haven's road was not built, which would divert the through travel from New Haven.

"Clinton" subsequently discusses the questions of probable profits, the kind of power to be used, and of terminations and local jealousies. "It is evident," he says, "that about 18 per cent. can be made annually on passengers alone." He proposes for New Haven three stations, to accommodate all sorts and conditions of men, one in front of the Tontine, another at the Canal Basin, and a third at the Steamboat Wharf.

It scarcely seems credible that any one could combat the road on any other ground than of private vested interests or the probable failure as a business enterprise. But it was not alone such obstacles that had to be contended against. As an exponent of the views of the stagnant part of the community, and doubtless a large element in it, hear what "A Writer in the Review" says, as quoted in the *Connecticut Journal*.

The whole project he ridicules, and argues that it may appear even injurious to Hartford; and that the interests of Hartford would be against shortening the distance to New York, if there were any chance of preserving the then existing relations of country and towns.

An attempt is made later in the year again to frighten our citizens out of their sloth and indifference. Roads are to be built, it is said, from Boston to Providence and from Providence to Stonington; and a road has been chartered to run from Norwich either to Providence or Worcester at its election.

In May, 1833, James Brewster and others presented to the Legislature a memorial for a railroad from New Haven to Hartford. In the same year the charter was granted; the well-known names of Joel Root, Obadiah Pease, and James Brewster being among the incorporators. The corporate name was "The Hartford and New Haven Railroad Company."

The Company was authorized to construct a single, double, or treble railroad from some suitable point in the town of Hartford, by the most direct and feasible route, to the City of New Haven and to the navigable waters of New Haven Harbor, at some point between the Canal Basin and the west end of Tomlinson's Bridge, so called. The capital stock was to be \$500,000, with the privilege of increasing the same to \$1,000,000. The Company was authorized to fix the tolls and charges to be

received for the transportation of persons and property, provided that such rates should be fixed annually by the Company in March, and immediately published in the papers, and that they should not be raised at any other time during the year. The capital stock was made free from taxation until the profits collected by the corporation should afford a dividend of 5 per cent. per annum. If \$100,000 should not be expended upon the road within four years, or if the road should not be constructed and operated within six years, then the rights of the corporation were to cease. The charter was a close one, *i. e.*, not subject to amendment or repeal by the Legislature.

For the next year or two little seems to have been done beyond effecting an organization in 1835, and the survey and receiving the report of the engineer, Mr. A. C. Twining. This report included estimates as to the probable value of the business upon the new road, based upon the business done by the stage and steamboat lines, and verified by the affidavits of their officers.

Early in 1835 the subject of the railroad excited great attention both in Hartford and New Haven. A grand line of communication was talked of from Boston to Washington. The work from Washington to New York was promised to be finished in the year, and the railroads from Boston to Worcester and Providence were nearly completed. There was still another project, to connect Boston and New York by a road along Long Island. These plans it was felt would draw away travel from New Haven and Hartford. Three main routes, with several branches and combinations of them, were suggested from New Haven to Hartford—the western, by way of New Britain; the middle, *via* Meriden; and the eastern, *via* Middletown. An undignified squabble ensued between the friends of each, and charges of deception by false maps and statements were freely made.

The Middletown route was first laid aside as being too difficult. The one *via* Meriden was then decided on by the Directors, but the friends of the western way appealed to the Commissioners, who refused to confirm the lay-out without further information. The Meriden route was finally decided on.

Petty, small-minded objections were made to the mode of entrance to the City of New Haven. It will be remembered that the charter provided that the termination of the road should be at or near Tomlinson's Bridge, at tide-water. While the charter's command could not be disobeyed, it was charged that private interests in adjoining property had secured this provision, and that the city's welfare had been sacrificed to a few private purses.

In April, 1836, notice was given that the road had been located for the first eighteen miles to Meriden, and the attention of contractors was called to this fact, James Brewster signing the notice as agent.

Another scare further stimulated interest and ambition, for it was rumored that a charter was to be applied for for a railroad from New Haven to Norwich, to connect with the Norwich and Wor-

chester road, then building, to form a through line from Boston to New York.

Suggestions were made for a public demonstration on the first breaking of the ground, which was expected to occur about the middle of June, 1836. This plan seems to have been abandoned.

The early financial history of this corporation is of the same sad nature as that of the canal. There was the same difficulty in collecting assessments and procuring capital in any way, and the same heroic endeavors on the part of a few determined men, who stuck by the Company through thick and thin. What James Hillhouse was to the old Farmington Canal in its infancy, James Brewster was to the railroad. But lest our citizens be too hastily condemned for lack of public spirit, it ought in fairness to be remembered that just while the Railroad Company and the Northampton Company were most in need of funds, there came the panic of 1837, and many a liberal man was financially crippled and unable to meet his obligations. Suits often had to be resorted to to collect unpaid stock subscriptions, and even then the whole could not be obtained. In the spring and summer of 1837 the treasury was completely exhausted, and a temporary loan of \$6,000 was procured.

In the springs of 1837 and 1838, unsuccessful applications were presented to the Legislature for aid in behalf of this Company, the Housatonic Railroad Company, and the Norwich and Worcester Railroad Company. A favorable report was obtained from the Committee on Internal Improvements, and a lengthy report was printed, but the aid was refused.

Device after device was resorted to to procure or economize money, and great sacrifices were made. The President was paid a salary of but \$1,000 per annum, and by dint of unwearied efforts the road was finally carried through.

In 1838 the road was opened as far as Meriden, and the Directors were under the difficult necessity of operating one-half of the road while building the other. This first portion was completed about the 1st of December.

E. H. Brodhead, the principal engineer, resigned about this time, and the business was confided to James N. Palmer and George C. Miller, of New York. The sections of the new portion were offered to the contractors October 11, 1838. The whole road was in running order by December of the next year, and the first train ran through to Hartford on the 14th of that month.

The Company had from an early period been in possession of a majority of the stock of the Tomlinson's Bridge, the popular name for the more legal one of "The Company for Erecting and Supporting a Toll Bridge from New Haven to East Haven." It had purchased fifty-seven and one-half out of the sixty shares for the sum of \$57,787.50, the par value of them being \$1,000 each. This purchase was made on account of the valuable property and privileges of the Bridge Company, of great importance to the railroad by reason of its termination at New Haven, as provided for in the charter. A wharf in connection with it was built,

and was ready in 1839, and the Company was prepared for peace or war with the steamboat managers. The details of this struggle and its outcome have already been given.

In 1835 the Hartford and Springfield Railroad Company was chartered, to build a road from Hartford to Springfield, provided leave should be given by the State of Massachusetts so to do. The incorporators were the same as those of the Hartford and New Haven road, and it was the intention that these companies should be ultimately merged. The charter was in general similar to that of the New Haven Company. Power was given to bridge the Connecticut River, provided no prejudice of the rights of the Enfield Bridge Company should result. Massachusetts chartered the Hartford and Springfield Railroad Corporation, in 1839, and the two roads were, in 1840, authorized to unite, taking the name of the Massachusetts Company.

Numerous extensions of time were granted from year to year, and the Hartford and New Haven Railroad Company and the Hartford and Springfield Railroad Corporation were consolidated, in 1847, by action of the stockholders of both, under the name of the former Company.

The opening of the railroad in 1838 was not marked by the grotesqueness which characterized similar events in the case of the earlier railroads. The public had become familiarized with railway travel, and most people had already seen or heard of the iron horse. The science of railroad building and operation had taken rapid strides since the Rainhill experiments in England, and the preliminary obstacles in the way of a new agency had largely been removed. The sad fate of the colored fireman of the "Best Friend of Charleston" had clearly demonstrated the impracticability of sitting upon the safety-valve of the locomotive; and one by one experience developed the conditions of success.

In 1845, the Branch Company was incorporated, to construct a railroad from some point on the Connecticut River within the City of Hartford, to connect and unite with the extension road of the Hartford and New Haven Railroad Company at some point within the town of Hartford. This Company consolidated with the Hartford and New Haven Railroad Company, by the action of both companies in 1850, as did also the Middletown Railroad Company, chartered in 1844.

The Middletown Extension Railroad Company, to unite the Middletown Branch with the Connecticut River, incorporated in 1857, was merged in 1861.

The New Britain and Middletown Railroad Company was merged in 1868, having been incorporated in 1852.

Yet another branch was added in 1871, having been chartered in 1868, under the name of the Windsor Locks and Suffield Railroad Company.

Before taking up the history of the New York and New Haven road, it would perhaps be more natural to go back to that of the New Haven and Northampton Company, from the time when the

substitution of a railroad for the canal was first seriously thought of.

The failure of the canal to accomplish the ends desired had been so clearly demonstrated, that there seemed but little question that something radical should be done. The arguments in favor of a railroad upon this particular route were very alluring. It was said that the water privileges of the company alone were of great value, and that a railroad could be built along the line of the canal for a far less cost than anywhere else in the State. The land was already secured, and the important elements of grading and land damages would not have to be considered. The water too, it was urged, would be of great value for city purposes, and a revenue might be derived from that. It was proposed originally to build the road upon either the towing-path or the berme bank, though this plan was in some cases departed from.

It has already been said that, in 1846, large quantities of stock of the New Haven and Northampton Company changed hands, and Mr. Sheffield and his friends held a controlling interest. Mr. Sheffield was again chosen President, and Henry Farnam Engineer and Superintendent. An act amendatory of the charter was passed, entitled "An Act to Incorporate the Farmington Canal Railroad." Under this the New Haven and Northampton Company was empowered to build a railroad from the Canal Basin at New Haven, through the City of New Haven to some point in the town of Farmington, with liberty to extend it to the north line of the State. The Canal Company was authorized to add to its stock by increasing the nominal value of the shares from \$25 to \$100.

The road was to be so constructed as not to interfere with the Cheshire Turnpike Company, and that part of it through the City of New Haven was to be constructed as the Common Council should prescribe. Ample provisions were made for the appraisal and purchase of the shares of dissenting stockholders. This Act was passed in 1846.

The first petition to the Legislature was for a railroad to Granby, with a branch from Farmington to Collinsville, and another from Cheshire to Waterbury.

The treatment of the latter request was for years a standing grievance to the Canal road. It always felt itself most unjustly treated, and that the usefulness and prosperity of the road was greatly impaired by the continued refusal to charter this branch. It has always been supposed that it was the better generated opposition of the Naugatuck road, chartered in 1845, which killed it. However that may be, the matter was postponed to the next session of the Legislature, and no reasons were given.

At the time of the first report of the Directors since the chartering of the railroad, the only debts of the Company were the \$60,000 of outstanding 5 per cent. bonds (the interest on which was provided for until 1869, by the contract with the city before spoken of), and \$72,000 of 6 per cent. bonds. There was no floating debt. The Company really seemed to be fairly upon its feet and to be in a

position to flourish. The Directors had every confidence in the advantages of the property; they hoped to extend the road to Pittsfield, there to connect with the Western; to connect with the Connecticut Valley and New England at Westfield; and by the hoped-for branch to reach Waterbury and the trade of the Naugatuck Valley.

By the last day of December, 1847, trains were running to Cheshire, and a month later to Plainville. At this time there were but three stockholders in the City of New Haven, besides the original projectors, first and foremost of whom were Messrs. Sheffield and Farnam. Afterward a more general interest was shown by a subscription of nearly two thousand shares, distributed among over two hundred stockholders.

The Directors with complacency say: "And as it is destined to become the main stem of a great extent of future roads, both into the Farmington Valley to Pittsfield, and direct to Springfield, we have run it nearly straight and level, instead of following the canal, as it was originally intended."

Before the Legislature, in 1847, the Collinsville Branch, the Cheshire Branch, and the application to own and use steamboats on the same terms as the Hartford and New Haven Railroad Company, were all defeated.

About this time negotiations were being made with the New York and New Haven Railroad Company concerning the latter's entrance into the City of New Haven and other matters. The New York road had decided to build around the city rather than through it upon the surface. Arrangements were therefore made in August, 1847, for a lease to it of the Canal road for twenty years, at \$45,000 rental annually, together with a provision for contingent increase, the road to be delivered when completed.

There were in all three leases to the New York and New Haven Railroad, but of them and their purposes later.

It was thought that this plan would secure the payment of regular dividends on the \$60 per share paid in, and a co-operation in future extensions of the road.

It was intended to keep a supply of water outside of the City of New Haven for use in the city, and to keep the canal open, especially above Plainville, until the road should be extended to the State line.

In 1848, Massachusetts chartered the Pittsfield and New Haven Railway; the road from Plainville and Collinsville was put under contract; the prayer for extension to the State line granted; the capital stock increased by 5,000 shares; power to run steamers in connection with the road given; and a further increase of stock permitted for this purpose. The Company was also authorized to discontinue its canal in New Haven and to construct its railroad in and upon the bed of the canal. In October, 1848, it was voted to suspend construction towards Collinsville and return to the original idea of building along the line of the canal. A contract was made with Messrs. Farnam & Sheffield to build the new road from Farmington River to Granby (State line), and thence to the Western Railroad (now

part of the Boston and Albany Railroad), for the 5,000 shares of new capital stock.

Massachusetts, in 1849, refused to charter this last named part from the State line to West Springfield. The contractors asked for and obtained a new arrangement by which they were to receive \$500,000 of bonds, convertible into stock, and were to build both from Farmington to the State line and from Farmington to Collinsville. The road was promptly and honestly constructed, and in the best manner, and on July 1, 1849, was delivered over to the lessees.

There were three distinct leases made to the New York and New Haven Railroad Company. The contracts of lease themselves, their histories, and those of the railroads while they were in force, deserve a more detailed description than can be here given of them, principally because of the light which they shed upon the relationships of the then existing roads, and upon the causes which influenced their later growth and development.

The first of these bears date of January 11, 1848, and was of that part of the road from Grand street, in New Haven, to Plainville, for twenty years, at a rental of \$45,000 annually, with numerous other provisions and conditions. The road was to be delivered when completed as far as Plainville. As before stated, the road was delivered July 1, 1849. The object of this lease was to compel a connection of the Hartford road with the New York road in the center of the city, instead of at the wharf of the Steamboat Company.

The second, that of March 4, 1848, conveyed, by a perpetual lease, the property of the Company from Grand street, in New Haven, to the Canal Basin, and included lands east of the canal, and four acres at the head of the basin; among other lots, one granted by the city to the New Haven and Northampton Company for the purpose of erecting a station-house (where the old depot now stands). By the terms of the lease, one track was reserved to the use of the Canal Company.

These two leases have been regarded as mutually advantageous in general, though in some respects unfortunate for the lessor Company.

The third lease was made February 16, 1850, of all the roads and franchises of the Company above Plainville. It will be recollected that the Canal Company had relied upon extending its road northward, to connect either at West Springfield with the Western Railroad, or at Pittsfield with the road there for Albany and the North. The Massachusetts Legislature refused the Springfield extension in 1849, and in 1850 it was again urged with all prospects of success. But opposition came from a most unexpected and deadly quarter, the President of the Western Railway himself. In despair the Company resorted to a lease to the New York road, hoping with its aid and alliance to procure the needed extensions. The basis of the rental was a sum of \$40,000 annually.

Most serious charges were made by the Canal Company against the New York road for the conduct of its officers while it controlled these roads. It is claimed that by treacherous violations of both

the letter and the spirit of the leases, the Canal road was sacrificed to a rival road (the Hartford and New Haven) and to a rival locality. It was claimed that contracts were made secretly between the New York road and the Hartford road, which undermined the whole purpose and spirit of these agreements.

In the papers in a suit brought against the New York and New Haven Railroad Company by the Hartford and New Haven Railroad Company, for breach of these very agreements, they are set forth. One of them, dated April 30, 1849, provides that the Hartford road shall discontinue its line of day boats, and shall run all its trains, except one, into the Chapel street depot, instead of to the steamboat wharf. In another, the New York road undertakes to endeavor to prevent the further extension of the Canal road, and to prevent its competition with the Hartford road. In another, of March 16, 1850, the New York road agrees not to book passengers to Hartford *via* Plainville and the Hartford, Providence and Fishkill road; the Hartford road on its part agreeing not to ticket to any point west of Hartford. Under date of April 16, 1850, in a modification of the former contract, the New York road agrees not to forfeit or give up its lease of the Canal road beyond Plainville, this for the purpose of preventing competition of the Canal road with the Hartford and New Haven.

Some years later a mandamus was applied for by the Attorney for the State against the Hartford and New Haven Railroad Company to compel it to run its trains to the steamboat wharf to accommodate the public. By way of return, the Hartford road set up its contract of March 16, 1850, and its consideration, the agreement of the New York road to prevent the extension of the Canal road, and that the New York road insisted on holding it to its bargain not to run passenger trains to the steamboat wharf. The case being reserved for the Supreme Court, it was held that this return was insufficient, and that the contract with the New York road was void as against public policy.*

The liabilities of the Northampton Company as they appeared in the balance sheet of June 1, 1850, were as follows:

Capital stock, 11,493 shares at 75 per cent.....	\$861,975 00
Capital stock, 36 shares at 25 per cent.....	900 00
7 per cent. bonds, due in 1869.....	500,000 00
6 " " (now due).....	12,000 00
5 " " due in 1854.....	50,473 01
Notes.....	50,043 05

The old canal account was closed on the books at \$389,493.56.

From this time on until the expiration of the leases, July 1, 1869, there is but little of importance to record. Some forty-one miles were added to the road, and by 1870 it was opened to New Hartford and also to Williamsburgh (eight miles above Northampton).

All throughout the duration of the leases bitter complaints of treachery and injustice were made

* *State v. Hartford and New Haven Railroad Company*, Conn. p. 538.

against the New York road for betraying the Canal road into the hands of its rival, yet upon the truth or falsity of these charges it is not my place here to comment.

The road was left in a dilapidated condition by the lessees, and large expenditures were necessary to put it in a proper state of repair again. A suit was brought against the New York road for a share in the New Britain earnings, and for damages on account of violations of the Plainville lease by former officers of the New York road. At the time of the report of 1870 (the first since the leases), this suit was still in Court. It was subsequently settled on payment of a few thousand dollars.

In this same report it was stated that at a late session of the Legislature the people of Waterbury had succeeded in procuring a charter for a road to connect with Cheshire, one step toward a realization of the long dreamed of project of connecting New Haven with the Naugatuck Valley. This charter was granted in 1870, and the Company was incorporated under the name of the Waterbury and Cheshire Railroad Company. Hopes were also entertained of a connection between Holyoke and Westfield, and of one with the Connecticut Western, then under contract. This same report says that the persistent efforts of the two principal railroads of the State (the New York and New Haven, and the Hartford and New Haven) to consolidate, were at the last session of the Legislature for a third time defeated.

The subsequent history of the road may be briefly given. The Holyoke and Westfield Railroad, a little over eleven miles in length, has been leased to it in perpetuity. Two extensions were opened in 1881; one to North Adams through the Hoosac Tunnel, over the Troy and Greenfield Railroad; and the other to Turner's Falls. The former gives a means of access to Albany, Troy, and Saratoga. In the same year a majority of the stock passed into the hands of the New York, New Haven and Hartford Railroad Company.

The road is weighed down by an enormous funded and floating debt. The general balance sheet of September 30, 1884, shows the former to be \$3,200,000; the capital stock to be \$2,460,000; and the total liabilities to be \$6,882,057.54.

Mr. Charles N. Yeamans, of Westfield, Mass., is the President, and Mr. E. A. Ray, of New Haven, the Treasurer, Secretary and General Ticket Agent. There is a Board of nine Directors, five of whom are also Directors of the New York, New Haven and Hartford Railroad Company.

It was not till after the Hartford and New Haven road had been in successful operation for some years that serious thought was given to a land connection of New York with New Haven by rail. Several steamboats were running regularly between these cities and the need of a railroad was not felt. Indeed, so many advantages were steamboats in those days thought to possess over railways, that the earlier railroads of Connecticut were built merely as means of access from the inland to the lines of Sound steamers. A railroad between places already

served by a steamboat line was looked upon as a superfluity.

By 1844, however, this view had changed, and the Legislature of Connecticut was asked for and granted a charter to the New York and New Haven Railroad Company. Foremost in this enterprise, though it is not generally known, was Mr. Joseph E. Sheffield. Not long afterward he dissociated himself from the undertaking, and the credit due him for giving it the first impetus is seldom awarded. It was he who procured the charter, subscribed for a majority of the stock, had the road surveyed by Professor Twining, and paid most of the bills therefor.

After the books had remained open for subscription for ten days, there were only three New Haven subscribers, one of whom was Judge Hitchcock.

A grave obstacle to success, and one which undoubtedly explains much of the apathy at the first inception of the plan, was that no means of access to New York City or through New York State had yet been granted.

Arrangements were made by Mr. Sheffield and Judge Hitchcock to negotiate the stock in England with the Barings. The untimely death of Judge Hitchcock prevented this and nearly killed all hope of a completion of the project.

An application to the New York Legislature in 1845, to run to New York City, was unsuccessful on account of the determined opposition of the Harlem road and of the Westchester Turnpike Company. An agreement was finally reached with the Harlem road, almost on its own terms, in 1846, for which another, even more onerous, was substituted in 1848. One made with the Westchester Turnpike Company was ratified in July, 1849. In May, 1846, the New York and New Haven Railroad was authorized to join with the Harlem road at or near Williams' Bridge.

Among the Directors elected this year are the familiar names of Joseph E. Sheffield, Anson G. Phelps, Robert Schuyler, and Stephen Tomlinson.

Indifference, however still reigned, and Mr. Sheffield disgusted with the lack of enterprise gave it up. Nevertheless he remained a stockholder in both the New York and New Haven and the Hartford and New Haven roads for some time longer.

There was still nothing done until Mr. Alfred Bishop took hold of the matter. In the fall of 1846 he made a proposal to build the whole road under one contract, and later in the same year the contract was made with him and with Messrs. G. L. Schuyler and S. G. Miller. Mr. Schuyler subsequently transferred his interest to Mr. Bishop. By December 31, 1846, the whole of the capital stock was subscribed. By the spring of the next year the line had been located and approved by the Commissioners.

The line adopted was in the main that surveyed by Professor Twining, except from the Harlem Junction to New Rochelle, the entrance into Bridgeport, and the entrance to New Haven. Professor Twining's line was run to a point on the western edge of the head of the harbor, and from thence was indefinite, except that it contemplated

crossing the Harbor and the Canal Basin on piles, and running along the shoal water to the Hartford road. It was thought much better to adopt the canal route, and it was decided to enter the city on the east bank of the canal. This plan was later abandoned, in consequence of the agreement of 1848 with the New Haven and Northampton Company already referred to, and an entrance by way of the bed of the canal determined upon.

It will be remembered that one of the three leases conveyed lands south of Chapel street to be used for the purpose of building a station-house. Upon these was erected what is now known as the Old Depot, which was used as a passenger station by the principal roads of the city, until the building of the new depot at the foot of Meadow street in 1874. Admirers of that artistic structure may be interested in the allusion to it made in the report of the Board of Directors in 1849.

The liberal treatment and high consideration extended to this Company by the Government and intelligent citizens of New Haven, have induced the only departure from a strict rule of economy in the construction of the road which had been adopted by the Directors, and have led to the erection of a station-house, from a design of a popular architect of the city, of more ornament and elegance than would otherwise have been built.

The clock was presented by an owner of one of the adjoining buildings.

There were further delays, which prevented the completion of the road until the winter of 1849.

Additional arrangements were made with the Harlem road in 1849 concerning the payment for the transit of trains over the Harlem tracks and the rates for the haulage of cars into New York City. These are still in force.

At that time, and for several years afterward, the passenger station in New York was at Canal street, and the cars were drawn by horses into the city. The car houses were at Forty-second street.

By April 30, 1849, the long pending negotiations with the Hartford road ended in a contract. The substance of this has already been given, relating chiefly to the discontinuance of day trains to the steamboat landing and to the fare to be charged by the night boats. Facilities were to be given the Hartford road for its business, at the station-house in New Haven. In consideration of these agreements the New York road was to pay \$20,000 annually for five years—\$10,000 to the Hartford Railroad Company and \$10,000 to the Connecticut River Steamboat Company.

The cost of the road and equipment was \$2,701,879.13, exceeding the original estimate by \$201,879.13. The fares were made very low: \$1.50 from New Haven to New York, and fifty cents from Bridgeport, on account of the steamboat competition.

In the years 1853-55, the road was subjected to two most crucial tests of its stability and endurance. Two catastrophes, either of which alone might well overwhelm a less vigorous road, followed each other almost within a year, and threatened the road's very existence.

The first was what is usually spoken of as the

"Norwalk Disaster." On the 6th of May, 1853, a train heavily laden with passengers, many of them delegates returning from a medical convention held at New York, on its way to New Haven plunged through an open draw into the Norwalk River. Forty-four persons met instant death, one died a few days later in consequence of injuries then received, and many were seriously injured. Attempts have been made to make a mystery of this accident and its cause, but, according to the best obtainable authority, it was caused by nothing more than a flagrant breach of orders on the part of the engineer and conductor in disregarding the draw-signal, which was plainly visible. The conductor, Comstock, was subsequently indicted for manslaughter, but never convicted. The heavy claims for damages prevented the payment of the dividend for that year which the earnings would have warranted, and absorbed the sum of \$252,311.50. Forty of the claims for those killed were settled, two were in negotiation, and two were in suit at the time of the report for 1854. Most of the claims for injuries were settled.

The second calamity was the defalcation of the President, Robert Schuyler, who had been at the head of the road ever since its organization in 1846. He was a member of the firm of R. & G. L. Schuyler, bankers and brokers of New York, and ranked among the foremost of New York's capitalists. Up to the very moment of discovery he had been regarded as a man of the highest ability and honor, and held positions of trust in several of the most important Eastern railroads. In the New York road he was Transfer Agent as well as President, and this former office gave him the opportunity to carry out his designs.

The suspension of dividends in consequence of the Norwalk accident had caused a fall in the stock of the road in 1854, from 85 on June 23d to 79 July 1st, and to 69 July 3d. Upon an examination of the books to see who were selling, suspicions were aroused, and it was discovered that false certificates of stock to the amount of \$1,000,000 had been issued to the firm of R. & G. L. Schuyler, and by it pledged as collateral to raise money. There had been no check upon Mr. Schuyler except his honor, and the non-payment of dividends gave him the chance to issue certificates in unlimited quantities without exciting suspicion. On July 3, 1854, he wrote a letter to the Directors resigning his offices, calling attention to the state of the books, saying that much would be found there that was wrong, and exonerating his brother from blame. He himself disappeared from public view, is thought to have lived for some time in New York in concealment, and to have died abroad soon afterward.

But his acts plunged the road into a limitless sea of litigation. One suit was brought by the road itself, called the "Omnibus Suit," against over three hundred defendants, for the purpose of having the spurious stock separated from the good, and of settling several other questions. The Courts had held that as the corporation itself had no power to increase its stock, *à fortiori*, its agent,

unauthorized, could not, and therefore these certificates were void. Subsequently it was held that the Company was liable for its negligence in allowing its operations to be so carelessly managed, and was under an obligation to pay the amounts on which the stock had been issued, by way of damages. Much of this litigation was settled on the basis of one good for two bogus shares; the rest was litigated to the end and recovery had against the Company. A Connecticut case illustrates one phase of the subject.*

The heavy expenses to which the Company was put in consequence of this litigation, and the damages which it was forced to pay, necessitated an application to the Legislature for assistance in some direction. In 1855 the Company was empowered to issue \$3,000,000 of mortgage bonds for the purpose of retiring the old bonds and securing and paying just claims. \$800,000 of 6 per cent. bonds were issued in the same year, payable October 1, 1875, and holders of unsecured 7 per cent. bonds were allowed to exchange them for the secured 6 per cent.

In the same year the Directors of the road were authorized, for the express purpose of adjusting the claims against it arising out of the Schuyler transactions, to increase the capital stock of the Company by an amount not exceeding the sum of two millions of dollars.

In these ways the emergency was bridged over, yet it was some time before the road recovered from these two shocks. In 1857 it attempted to again pay dividends, but was served with two injunctions. These were subsequently dissolved.

In this year the Company determined to rid itself of the heavy loss incurred by the haulage of cars through New York to the Canal street station. Arrangements were made with the Harlem road for the use of one-half of the square on Fourth avenue between Twenty-sixth and Twenty-seventh streets, now known as Madison Square Garden. The building of a depot was begun in February of this year.

The road was now in successful operation again, though its debts were still heavy, the bond account standing at \$2,159,500. The losses on the Canal road extension showed a considerable decrease from those of the year preceding.

In 1867, Mr. William D. Bishop, of Bridgeport, was elected President, and under his wise and far-sighted management, those plans of consolidation were consummated whose beneficent effects on both the contracting railroads and the public have been so marked.

As has been stated, the efforts of the New York and New Haven road, and of the Hartford and New Haven road to consolidate had been defeated by the opposition of other railroads for some time. The inconvenience of a separate management of two roads so intimately related by the necessities of position; the inharmonious clashing of interest and opinion, which inevitably did and would arise, and the economy of one set of officials over two,

made this union appear most desirable. The convenience to and safety of the public further demanded a unity of management.

On the 3d of August, 1870, the railroads entered into perpetual covenants and agreements for a union, which were ratified by a unanimous vote of the stockholders of the Hartford and New Haven road, and by a vote, almost unanimous, of the stockholders of the New York and New Haven road.

In 1871 a public act was passed by the Connecticut Legislature giving to the Hartford and New Haven road power to merge its corporate existence into that of the New York and New Haven Company, and empowering the Directors of these two railroads to enter into valid agreements for the conditions and terms of the consolidation. The act further provided that when this agreement should be ratified by the stockholders of each, the consolidated corporation should continue a body politic and corporate under the name of the New York, New Haven and Hartford Railroad Company.* The railroads were finally consolidated by the action of both companies August 6, 1872. April 5, 1872, a similar act of authorization was passed by the State of Massachusetts.

The Shore Line Railway had been leased on November 1, 1870, to the New York and New Haven Railroad Company at an annual rental of \$100,000. The lease was transferred to the consolidated Company as successor to the rights of the lessee. The three principal railroads entering New Haven thereupon came under one management, an arrangement which had become a virtual necessity.

Very little of moment remains to be said as to the history of this railroad since the consolidation, except that there has been a steady increase in the improvement of the road and equipment, in the accommodation of the public, and the amount of freight and passengers carried. The new depot was built in 1874, and was first used as a passenger station in that year.

In 1879, Mr. Bishop, whose health had given way under the strain to which his most valuable and honorably performed services to the road had subjected him, resigned from the presidency of it and Mr. George H. Watrous, of New Haven, was elected to fill his place. Mr. Watrous abandoned a successful law practice to take the position, and has held it up to this time. Mr. E. M. Reed is the road's Vice-President, and Mr. O. M. Shepard its General Superintendent.

The Boston and New York Air Line Railroad passed into the control of this Company on the 1st of October, 1882, it having been operated since February, 1879, under an agreement between the two companies. By the new arrangement the road was leased for a term of ninety-nine years to the New York, New Haven and Hartford road on a rental sufficient to pay a 4 per cent. semi-annual dividend on the preferred stock, and the interest on the bonds and taxes.

In 1881, the New York, New Haven and Hartford road acquired a majority of the stock of the New Haven and Northampton Company. It is

* Bridgeport Bank vs. New York and New Haven Railroad, 30 Conn., 231.

* Public Acts of Connecticut, 1871, Chap. 129.

understood that this step was deemed highly desirable by the Directors, to protect both the road and the public from the evils of a threatened parallel road from Boston to New York, which scheme involved the use of the road of the Canal Company as a connecting link in the chain.

One of the first roads thought of for shortening the distance from New York to Boston was the New York, Providence and Boston. The history of this road is of but little interest to New Haveners, except as it forms an important part of the Shore Line route to Boston, and as it is one of the earliest roads of the State. A report on the survey of a route from Stonington to Rhode Island was made in March, 1832. The Connecticut petition was dated January 4, 1832, and a charter of extraordinary liberality was granted.

Another early projected route between New York and Boston was that by way of Middletown and Willimantic. A company was chartered in 1846 to run a railroad over this route, under the name of the New York and Boston Railroad Company. Efforts to build the road were attended with unusual difficulty, so says the report of this Company in 1850, on account of the unscrupulous opposition of a leading city of the State (Hartford) and of the opposition of the railroad and steamboat companies. The charter allowed the Company to build through the towns of Middletown and Windham to the east line of the State, and to make lawful contracts for the operation of its road in connection with other roads. The capital stock was to be \$2,000,000, with the privilege of increasing it to \$3,000,000.

By 1855 a report was made by the engineer, Mr. T. W. Pratt, to the Company. He states that the Commissioners in the three States of Connecticut, Rhode Island and Massachusetts have approved of the entire line, and that these separate corporations have been empowered to unite into one. The subscription to the whole project was then \$1,000,000. Considerable work was done under this charter, though the road was not completed.

In 1867 another charter was granted for a railroad over this route, under the name of the New Haven, Middletown and Willimantic Railroad Company. This Company bought out the interests of the old Company. The charter given was a liberal one, and subsequent amendments authorized loans of credit by the towns through which the route ran, and stock subscriptions on the part of some of them. The road was opened in 1873.

In 1875 the road was sold under foreclosure; the bonds exchanged for new stock; and a new corporation chartered under the title of the Boston and New York Air Line Railroad, the present name. The later fortunes of this ill-starred road have been spoken of under the head of the New York, New Haven and Hartford Railroad Company.

The same reasons which delayed the appearance of the New York and New Haven Railroad, operated in the same manner to prevent the construc-

tion of a road out of New Haven eastward—that is, the early popular preference for steamboat over railway traveling.

When the New York and New Haven project was fairly under way, it was seen that by a continuance of the line along the coast, a route, pleasant and fairly direct might be carried through to Boston, by a connection between the already constructed roads, the New York and New Haven on the one hand, and the New York, Providence and Boston on the other. As has been said, this latter road was one of the first in the State, having been chartered in 1832. With this object in view, the New Haven and New London Railroad Company was chartered in 1848, to run a road from some suitable point in the City of New Haven, across the Connecticut River, to some suitable point in the City of New London. The capital stock was to be \$500,000, with the privilege of increasing it by \$1,000,000. Authority was not given however to bridge the Connecticut River. A further resolution associated Dennis Kimberly, James Brewster, and others with the original corporators.

The next year authority was given to borrow a sum not exceeding \$450,000. In 1854 further authority was given to issue, to the amount of \$100,000, bonds bearing interest at 10 per cent. The road was opened in July, 1852.

In this same year the New London and Stonington Railroad Company was chartered to run from a point in the town of Groton, on the east bank of the Thames, to the terminus of the New York, Providence and Boston Railroad at Stonington.

In 1856 the Legislature authorized a consolidation of the New Haven and New London Railroad Company and the New London and Stonington Railroad Company, under the name of the New Haven, New London and Stonington Railroad Company. The road considering itself ill-treated as to its facilities for doing business in New Haven, applied, in 1859, to Judge Butler for a mandamus to compel the New York and New Haven road to give it facilities equal to those which the Hartford road enjoyed. The contracts of that road with the Hartford road were set up, but the peremptory writ was granted.

The holders of the first mortgage 7 per cent. bonds of the New Haven and New London Railroad Company were in June, 1864, incorporated, under the title of the Shore Line Railway, with all the powers conferred upon the New Haven and New London road. The Company was empowered to buy of the trustees all the property and franchises conveyed to them, whenever the title should have become absolute after foreclosure. The Company was organized after this plan, and has ever since existed as the Shore Line Railway. The later history of the road, so far as important, and its relations to the New York and New Haven road, have already been given.

In this same year, 1848, the New Haven, Danbury and Erie Railroad Company was chartered by Connecticut to connect with the Erie Railroad in New York, but the road was never built.

The story of New Haven's latest and only remaining railroad involves a chapter of history which it is not pleasurable to recall.

The charter of the Naugatuck Railroad, granted in 1845, authorized the Company to build its railroad "from some suitable point in the town of Plymouth, or in the town of Waterbury, to Derby, and thence to the City of New Haven, or to the town of Milford, or to the town of Bridgeport," etc.

In the next year the New Haven and Northampton Company was authorized to build its road. As said before, the design of that Company was to build a branch from Waterbury to Cheshire, and in that way to divert the trade of the Naugatuck Valley to New Haven. A clause permitting such a branch was put into the proposed bill, and a petition for it was largely signed by the people of Waterbury and Winsted. The people of Bridgeport, Birmingham, and Ansonia seeing the apathy of our wealthy citizens in this cause, enlisted the support of others among them, and persuaded, by private negotiations, the Waterbury delegation to the Legislature to withhold the petition, under the assurance that the Naugatuck road should run by way of Derby and end at New Haven. To the amazement of all interested in the Canal road, to whom these arrangements were unknown, the clause authorizing this branch to Cheshire was stricken out.

While the Naugatuck road was building, Mr. Alfred Bishop, the contractor, made a liberal proposition to the New Haven people. He promised that the road would be built to New Haven, and that place be made the terminus, if its citizens would subscribe for \$75,000 of the capital stock. Partly through a preference of some citizens for the Cheshire plan, and partly through the pure inertia of others, the proposal was not accepted. With a blindness almost incredible, the citizens of New Haven sacrificed the rich trade of the Naugatuck Valley, and when their eyes became opened to the enormity of their blunder, tried to make amends by sacrificing themselves to the Derby Railroad.

All of the added prosperity which Bridgeport has received by reason of the Naugatuck road might have been New Haven's. And if capitalists had but advanced the trifling sum of \$75,000, they would have been well repaid by an ownership to that extent in a ten per cent. dividend paying road. Instead of this, our city as a municipality, and our citizens, have burdened themselves by many times this amount with little prospect of any return in the near future.

The New Haven and Derby Railroad, which was built for the purpose of tapping the Naugatuck Valley, and of regaining that which had been so foolishly lost, was incorporated in 1864, among the incorporators being Cornelius S. Bushnell, Henry Dutton, N. D. Sperry, and Charles Peterson. The capital stock was placed at \$500,000, with a limit of \$700,000 at the pleasure of the Company. Three years were given from the passage of the act within which to expend \$100,000, and five years in which to put the road into operation.

In June, 1867, an Act of the Legislature, upon the petition of the City of New Haven, authorized the city to subscribe for and take two thousand shares of the capital stock of the road, and to borrow \$200,000 at a rate of not over seven per cent. annually, for the purpose of paying for the stock. This however on the condition that so long as the city remained a stockholder, the Mayor and one Alderman, to be annually elected by the Common Council of New Haven, shall be Directors in the road. At stockholders' meetings the city was to have one vote for every four shares of stock it owned. The resolution was to take effect when it should have been approved by a special vote of the freemen of the city. The stock was subscribed to by the city in accordance with this plan.

On the 25th of January, 1869, three votes were passed by the freemen of the city concerning a loan of credit to the railroad. These were subsequently confirmed by the Legislature, and the city was given the power to guarantee the second mortgage bonds of the Company to the extent of \$225,000. The mortgage was made to the city. With all this aid the road has never been a prosperous one. It was very expensive one to build, and it was too late in the day to get the cream of the Naugatuck Valley business. It was opened to Ansonia, thirteen miles, on August 1, 1871.

The capital stock authorized by vote of the Company was \$457,000, of which 4,466 full shares, paid in with cash, were issued. The general balance sheet of September, 1884, shows liabilities to the amount of \$1,164,859.44, including a debt to the City of New Haven of \$75,000. The city at that time had paid out over \$200,000 as interest on the guaranteed bonds. Taking these items together, it is seen that the "Little Derby" has proved quite an expensive pet.

Besides the part which the Derby road has played in the development of the city in the line of its legitimate business, it has entered very largely as an element into many of the speculative schemes for building a road from New Haven to New York as a "parallel" to the New York and New Haven Road.

The Derby road runs directly west from the city and in the most natural unoccupied line between it and New York. It has also the advantage of a good entrance into New Haven, and good terminal facilities, so that nearly all of these plans have contemplated its co-operation.

A very brief sketch of some of these projects may not be without interest.

The idea of paralleling first became prominent in 1866. The New York and New Haven road was then unpopular, especially in Fairfield County, and it was maintained, perhaps not without cause, and at least with apparent honesty, that the public convenience was not satisfactorily consulted, and that public needs required additional facilities. In that year a petition of Mr. Camp, and others, of Norwalk, was presented to the Legislature for a charter for a parallel road. The marketing of land entered somewhat into this plan, as it has always done in later ones, yet the petitioners seem to have been

sincere. The petition was defeated that year, as well as in the two subsequent ones. In 1869 the biggest fight of all took place and the petition was again defeated. For a year or two the matter slumbered.

The General Railroad Law of 1871 partly covered the points especially desired by the friends of the "Parallel;" it included, however, no power to build bridges over navigable waters, and in 1874 this road, organized under the General Law, with the name of the New York and Eastern Railroad, petitioned for authority to bridge the Housatonic River. When, in 1871, the existing roads agreed to withdraw all opposition to the General Railroad Law, on condition that no opposition should be made to the consolidation of the old companies, the power to bridge navigable streams was purposely left out of the law, it being understood that if any parallel road were built it should be built by way of Derby, and should be no nearer to the old line. The old road therefore looked upon this petition as a violation of faith, and so clearly were the speculative designs of the new road, and its utter want of ability to stand fairly upon its feet and face the public, brought out, that the petition was not granted. Three or four successive attempts to organize and get started under the General Law were made without success.

Mr. S. E. Olmstead and his son-in-law were in all or most of these projects.

Before the Derby road was completed, a corporation was chartered under the name of the New England and Erie Railroad Company, having among its incorporators many of those already embarked in the Derby enterprise. This road was to run through Derby and Danbury to the New York State line, there to connect with another company's line which crossed the Hudson. This was in 1868. In 1870 these three companies were authorized to consolidate. The New England and Erie it is needless to say has never been built.

In 1882 the Jewell petition for a special charter came up for action, claiming to have no connection with any of the "old parallel" schemes, though making use of the same line. In connection with this petition there were certain revelations made, from which it appeared that there was at the bottom of it a "construction company" and a speculative scheme of the worst possible form. The petition was not granted, but the General Railroad Law was amended so as to give the power to bridge navigable waters, and to give increased privileges concerning the issuing of bonds.

Some of the latest "parallel" roads are known as the New York and Connecticut Air Line Railroad, the Hartford and Harlem Railroad, and the New York and Boston Inland Railroad. These companies are either dead or in their last gasps. Into details it is unnecessary to enter.

It may in general be said of the various "parallel" plans that many who at first upheld them are now protestants against them, and that as a rule they have passed into the hands of New York

and Boston speculators. Some of them were inspired by an honest belief in the necessity for further accommodations; some were for the purpose of enriching their promoters through the agency of construction companies; and some were blackmailing schemes of the worst description.

It would give an inadequate idea of New Haven's traveling facilities, were all mention omitted of her horse railroads, by which she is well served in all directions.

The oldest, most useful, and most prosperous of these roads is the Fair Haven and Westville. A charter of great liberality conferred upon this Company, in 1860, the power to build a railroad between these two villages as termini, with a number of lateral branches extending to nearly every quarter of the city. Most of these have been since built, and the Company now has, in addition to its direct line, a road to the steamboat wharf, a branch from the corner of State and Chapel street to the new depot, and a branch up West Chapel street. Under the presidency of Mr. Hoadley B. Ives the road is ably managed to the satisfaction of both stockholders and the public.

The New Haven and West Haven road, and the New Haven and Centreville road, were both incorporated in 1865. The former used to run from Church street by way of Congress avenue to West Haven. It now runs past the new depot, rejoining the old route in Howard avenue. The latter ran from Broadway, in New Haven, to Centreville. It has since been extended, *via* Elm and Church streets, to the corner of Church and Chapel streets.

At this point now center all the horse railroads of the city; the remaining ones being the State street Horse Railroad, chartered in 1868, and in 1871 authorized to extend to Chapel street by way of Elm and Church; the New Haven and Allingtown Horse Railroad, whose first charter was given in 1872, and which is now known as the Sylvan avenue Horse Railroad; and the Whitney avenue Horse Railway Company, running to Lake Whitney.

An attempt has been made in this chapter to present a sketch, merely, of the facilities for transportation which New Haven has enjoyed during her existence as a city. Occasionally when local interest or clearness seemed to demand it, more attention has been given to details. It is not pretended, however, that it is in all respects complete; especially is this true as to the enumeration of the stage-coach and packet lines. The intention of the writer has been, more particularly, to emphasize the successive steps in the development of our present transportation system.

The influence of railroads and steamboats upon the business, commerce, and prosperity of our city has been too apparent to call for further comment. For matters of pure statistics the reader is referred to the reports of the companies themselves and of the Railroad Commissioners.

James A. Davis

C. M. Keen

BIOGRAPHIES.

EDWARD MORDECAI REED

was born in Lancaster County, Pa., on the 17th of November, 1821. For two generations at least, his ancestors had been residents of the Keystone State. His father followed at first the occupation of an architect and builder, but afterwards cultivated a farm.

Mr. Reed attended the common schools of his native place, and from his earliest years manifested a strong predilection for the study of mechanics and machinery. At the age of sixteen he was apprenticed to a machinist in Lancaster City, and worked in the foundry and machine-shop owned by Boone & Cockley. He mastered the details of his profession so rapidly that, when only twenty years of age, he was made general foreman of the establishment.

Early in 1843, he began his long experience in railroading, by serving as a locomotive engineer on the Baltimore and Ohio Railway. In 1845, he received an appointment under the Philadelphia and Reading Railroad Company, as master of machinery in the Port Richmond shops at Philadelphia. In the same year, Mr. Reed accepted a call to Havana, Cuba, where he was placed in charge of the machinery and of the operation of the Havana and Guines Railway.

Three years later he left the West Indies, and came to Connecticut. He obtained here the responsible position of master mechanic for the Hartford and New Haven Railway Company, and has since remained a citizen of our State. He was appointed Superintendent of the Hartford road in 1853, and retained that place until 1872. In the latter year the Hartford and New York Railway Companies were united, under the general title of the New York, New Haven and Hartford Railroad Company, and Mr. Reed was advanced to the General Superintendency of the consolidated road. Two years later he was chosen Vice-President of the road, which position he still holds.

Mr. Reed is by profession a civil and mechanical engineer. He has built a large number of stationary engines and locomotives, and has designed and erected many bridges and buildings. He has been prominently instrumental in raising our principal means of communication to its present prosperous state, and Yale College, in 1885, recognized his public services and scientific attainments by bestowing upon him the honorary degree of A. M.

JAMES A. DAVIS,

for some years the lessee and operator of the Whitney avenue Horse Railroad, is known as well for his identification as a brick-maker and otherwise, with New Haven's manufacturing industry.

He is a son of Edward and Betsey (Augur) Davis, and was born in Hamden, June 6, 1844. His younger years were passed in doing his part on his father's farm and gaining the rudiments of an edu-

cation in the common schools. Later he was a student for a time in the private school of Professor Edwin Robbins, on State street, New Haven.

Mr. Davis became a resident of New Haven in 1872, at which time he began business as a contractor on public and private improvements. About ten years ago, in partnership with William J. Atwater and William E. Davis (his brother), he established the New Haven Concrete Company, in which he is still a stockholder. The firm of William E. Davis & Co. (consisting of William E. and James A. Davis) was organized in 1882, and with yards in Hamden and office in Grand street, entered extensively upon the manufacture of brick. Mr. Davis is also a member of the firm of C. B. & J. A. Davis, contractors, Holyoke, Mass., and one of the proprietors of a large boarding and sales stable in the same city, of which his cousin, C. B. Davis, is manager. His lease of the Whitney avenue Horse Railroad dates from October, 1877.

Mr. Davis is Republican politically. He is identified with the Whitneyville Congregational Church.

He was married January 6, 1875, to Miss S. E. Parks, of Bridgeport.

HON. W. W. WARD.

Among the prominent business men of New Haven and vicinity at the beginning of the present century were four brothers, Henry, Thomas, James and Jacob Ward, all seafaring men. Thomas and Henry Ward were extensively engaged in shipping general export merchandise from New Haven and West Haven to the West Indies, with a large warehouse at West Haven Four Corners, and storehouses and other shipping facilities at Long Wharf. An incident connected with this period of their business career was the following: On one occasion, during the War of 1812, Jacob Ward accompanied Thomas and Henry Ward to New York by row-boat to buy a brig. On their way the trio stopped over night at Hart's Island, and resuming their journey, after rowing several hours discovered that their money (a considerable sum) which had been carried by Thomas was missing. Returning to Hart's Island, they were overjoyed to find it under a pillow in the hotel, where it had been placed for safe keeping the previous night. About 1835, the Ward Brothers lost property to the amount of some \$70,000 by a fire at Long Wharf.

The only male representative of this old and honorable family in West Haven is Mr. W. W. Ward, whose name heads this article. He was born in West Haven in 1830, a son of Jacob and Henrietta (Kimberley) Ward. His early life was passed on his father's place and in the common schools, where he received the basis of his practical education. He passed his early manhood in various kinds of business with satisfactory success,

and in 1867 became the Superintendent of the New Haven and West Haven Horse Railroad Company, since which time he has managed the business of that corporation with success and to the satisfaction of the stockholders and the public.

Republican in politics, Mr. Ward has never been a politician in the usual acceptance of the term, and has never sought or willingly consented to accept office of any kind. A few years ago, however, he was prevailed upon to become a candidate for Representative in the Legislature of Connecticut. His election followed, and his term of office was passed in such a manner that he won the approbation of his constituents, his party, and the public. He declined renomination and has since devoted his time exclusively to the interests of his business. Though taking a deep interest in public affairs and in the public good, he is sufficiently disinterested to wish simply the greatest good to the greatest number, without regard to his own personal interests.

Reared in the Episcopal Church, he has all his life inclined to that denomination, and has been for years a member of Christ's Church of West Haven. His standing in business and commercial circles is deservedly high.

Mr. Ward's brothers, George, Minott, and Israel K. Ward, were well-known in various walks in life. George was a seafaring man and is now a resident of Florida; Minott Ward was, during his life, a sea captain, and was lost off Cape Hatteras on March 31, 1865; Israel K. Ward was prominently connected with the banking interests of New Haven, and was highly respected by a wide circle of acquaintances. He was Cashier and for twenty-five years connected with the Second National Bank of New Haven. He died in 1883.

Mr. Ward's sister, Louisa, married Adrian C. Hickmann, and is living in West Haven.

GEORGE H. WATROUS.

Although the family of Mr. Watrous was originally of Connecticut extraction, he is by birth a son of the Keystone State.

George Henry Watrous first saw the light on the 26th of April, 1829, in Bridgewater, Pa. While he was yet an infant the family removed to Conklin, N. Y. As Mr. Watrous approached the age of manhood, he determined to leave the paternal farm and to obtain an education. The studies preparatory for college were completed at Homer Academy in Cortland County, N. Y., a school whose excellence won for it a high rank among educational institutions. In 1850 he began his collegiate career by joining the Sophomore Class of Madison University. The next year brought him to New Haven and to Yale, where he entered the Class of 1853 in its Junior year. Graduating with honor in the ensuing year, he decided to devote himself to the law, and at once commenced a two years' course at the Yale Law School. Throughout this time of professional study he was dependent, in part, upon his own resources, and was employed as instructor of Greek in General Russell's

School. A story is related of him while thus engaged, which is strikingly indicative of those characteristics that have contributed to his success in subsequent life. The Baptist Church, near General Russell's School, had a tall steeple, whose instability under heavy winds periodically frightened the neighborhood. During a Greek recitation the scholars saw the steeple swaying, and cried out in fright, "Look, look, the steeple is falling!" Mr. Watrous quietly replied, "That is not in your lesson; go on!"

For about a year after receiving the degree of LL. B. he was in the law-office of the Hon. Henry B. Harrison, and with him and Mr. Charles L. English was active in forming the Republican party throughout the State. Of that party he has remained to this day a consistent and influential member. In February, 1857, Mr. Watrous left the office of Governor Harrison and formed a partnership with the late Governor Henry Dutton, a combination which endured until 1860, when Governor Dutton was elevated to the Supreme Bench of the State. The legal alliance with him introduced Mr. Watrous to the responsibilities of a large practice and determined the trend of his future study. The new firm was Counsel for the New York and New Haven Railway Company, and Mr. Watrous made a specialty of corporation law and of the relations of railway corporations in particular. The bulk of his professional labor has been performed, therefore, in civil causes and in suits relating to both municipal and commercial corporations. He has not sought engagements in criminal causes, but has been retained for the defense in three somewhat celebrated capital cases, the most prominent of which was the famous Hayden trial.

After Mr. Dutton became a Judge, Mr. Watrous took sole charge of the business that had belonged to the firm, and remained alone at the head of his large and increasing practice until 1879. Mr. Watrous' intellectual acumen and comprehensive mental grasp won for him honorable distinction in every department of the law to which he addressed himself, and his superiority within his chosen specialty was speedily recognized. After 1864 the office of Counsel to the Corporation of the Hartford road was added to the previous trust of a similar nature under the New York and New Haven Corporation. His influence aided in the consolidation of the two roads, which occurred in 1872, and he naturally succeeded to the very responsible office of Counsel to the newly-formed corporation.

In 1879, that corporation, in which he had been a Director since 1875, duly acknowledged his merit and crowned his services by electing him to the presidency of the consolidated road. There is no executive office in New England which carries with it more burdensome responsibilities, or demands a more accurate knowledge of men and a more patient fidelity. President Watrous has discharged each and every one of these obligations in a manner which proves him to be a thoroughly efficient executive officer, and which has secured for him the respect of all classes in the community. Under his management New Haven's communica-

Geo. A. Matthews,
" "

tions with the outside world have been arranged to the satisfaction of the business world; the local oversight of the road has been carefully intrusted to competent officers; and the firm resolution and ready observation of the President have succeeded in materially extending the system of roads over which he rules, and in insuring its security and prosperity.

Mr. Watrous' name has become a familiar feature in the management of many of New Haven's public institutions. Besides an interest in many of the roads that belong to the "consolidated" system, or are dependent upon it, he also sustains official relations with local and national banking institutions, with the City Gas and Water Companies, with the Horse-railway Companies, etc.

Mr. Watrous has not sought political preferment, and yet has found time to serve his fellow-citizens as a member of the municipal government in various capacities. He was a member of the lower branch of the Court of Common Council from 1860 to 1862, and of the upper branch in 1863. In the following year he represented the town in the Lower

House of the State Legislature. He also performed the duties of a Road Commissioner for the City from 1866, until June 30, 1870. He was for several years a member of the Board of Education. Public trusts more strictly consonant with his private occupations were those of City Attorney, which office he held from 1862 till 1865, and of Corporation Counsel for the City, which post he occupied during the year 1872.

Mr. Watrous married his first wife in 1857, Miss Harriet J. Dutton, the daughter of his partner. She died, leaving him with three children. In 1874 he married Miss Lillie M. Graves, of Litchfield, Conn., by whom he has also three living children.

The sphere of Mr. Watrous' career has now widened out far beyond the limits of a professional activity, and beyond our municipal boundaries. Called to administer the affairs of an institution which is a State in itself, he exerts a potent influence upon the welfare of many communities. But all the increase of his responsibilities has but served to augment the esteem in which he is held by the public.

CHAPTER XXIII.

THE POST OFFICE.

PROBABLY the earliest Post-Office in North America is described in the following extract from the records of the General Court of Massachusetts: "It is ordered that notice be given that Richard Fairbanks, his house in Boston, is the place appointed for all letters which are brought from beyond the seas or are to be sent thither, are to be left with him; and he is to take care that they are to be delivered or sent according to the directions; and he is allowed for every letter *id.*, and must answer all miscarriages through his own neglect in this kind; provided that no man be compelled to having his own letters except he please." In 1657, the colony of Virginia passed a law requiring each plantation to provide a messenger to convey the government despatches as they arrived, each planter in succession sending a messenger to the next, and so on to the final destination. The penalty for neglecting this duty was a hogshead of tobacco. In 1672, Governor Lovelace, of New York, established a post to go monthly from New York City to Boston and back. The post-riders set out from New York and Boston simultaneously on Monday morning, and on the Saturday following they met at the half-way house in Saybrook, Connecticut; whence, having exchanged mails, they returned each to the place from which he had come. In 1686, an order was made in New York that all letters coming from beyond sea should be delivered at the Custom House. The postage was four-pence half-penny for a single letter and nine-pence for every packet or double letter, "one-half of the money to be given to the poor" under the direction of the Captain-General and the Council, and the other half to the officers

of the Custom House. In 1691-92, a Postmaster-General for the British Colonies in America was appointed by letters patent from the King, with authority to erect post offices. This office was continued, and, in 1753, Benjamin Franklin received the appointment of Postmaster-General, having previously been Postmaster in Philadelphia. The appointment of Franklin to be Postmaster in Philadelphia is thus advertised in Franklin's newspaper:

October 27, 1737.

Notice is hereby given that the Post Office of Philadelphia is now kept at B. Franklin's in Market street, and that Henry Pratt is appointed Riding Postmaster for all stages between Philadelphia and Newport in Virginia, who sets out about the beginning of each month, and returns in twenty-four days, by whom gentlemen, merchants and others, may have their letters carefully conveyed and business faithfully transacted, he having given good security for the same to the Honorable Colonel Spotswood, Postmaster-General of all his Majesty's dominions in America.

Colonel Spotswood dying in 1753, Franklin was appointed to succeed him, and held the office twenty-one years, till 1774, when he was ejected because of his opposition to the oppressive measures of the British ministry. William Hunter, a printer in Williamsburgh, Virginia, was associated with Franklin in this appointment. Hunter died in August 1761, and, so far as the writer has ascertained, Franklin had no associate in the office after the death of Hunter.

About a year after his ejection, Franklin was restored to the position of Postmaster-General by appointment of the Continental Congress; and when, in 1776, he vacated it that he might accept the more important position of ambassador to

France, his son-in-law, Richard Bache, became Postmaster-General.

It was while Franklin was Postmaster-General, by authority of the King, that a Post Office was first opened in New Haven. The immediate occasion of its establishment seems to have been the French War, and the importance of postal communication between the soldiers and the friends whom they had left behind. It had a close connection with the *Connecticut Gazette*, being established simultaneously with that periodical, of which the first postmaster was the editor, and being kept in the same building. This building was "near the Hay-market" and the hay-market was an open space at the corner of State and St. John streets, where for many years after the establishment of the *Gazette* and the Post Office were "the Hay-scales."

It was in April, 1755, that the Post Office was opened, and the *Gazette* commenced its weekly excursions from the neighborhood of the Hay-market. About two years afterward both institutions, if we may properly regard them as in any sense distinct, were removed to what is now called Custom House square, to a building on the east side of that square and next south of Water street. Until recently this has been regarded in New Haven as the earliest site of the Post Office, the only file of the *Gazette* in New Haven before the Brinley collection was acquired, beginning with No. 130, which bears the imprint: "Printed by J. Parker and Company at the Post Office, near Captain Peck's at the Long Wharf."

The twins seem to have had a migratory disposition, for before July 8, 1758, both *Gazette* and Post Office had been removed to a house on George street, which is still standing. Number 170 of the *Gazette* under the above date has this imprint: "New Haven: Printed by J. Parker and Company at the Post Office, at the house where Colonel David Wooster lately lived." Colonel Wooster, afterwards Major-General of the Militia of Connecticut, until he removed to Wooster street, owned and occupied the house at No. 282 George street, nearly fronting College street. This house he conveyed, July 28, 1757, to a syndicate of gentlemen, of whom Aaron Day, his class-mate in college and his partner in trade, was one. In the *Gazette* of December 15, 1759, Mr. Day thus offers the house for sale: "To be sold at public vendue at the house of Mr. Aaron Day, on Thursday, the 10th day of January next, at 5 o'clock in the afternoon, a large dwelling-house now in the possession of Mr. John Holt, Postmaster, where the printing-office is now kept." Not long after, perhaps on the day appointed for the vendue, the house was sold, and the printer and postmaster were obliged to remove. The *Gazette* of June 21, 1760, contains their announcement as follows:

We hereby inform our customers and all persons concerned, that the printing and post offices are removed to the house where Mr. William Greenough lately lived, near Captain Joseph Trowbridge's, at the waterside, where the business will be carried on as usual. We hope our next removal will be to a house of our own.

THE PRINTERS.

The house where Mr. Greenough had lived was at the corner of Meadow and Water streets, and on the west side of Meadow. He having married the Widow Mix, had gone to reside in her house where the Battell Chapel now is, and consequently his house at the waterside could be hired for the printing-office and the Post Office.

The Mr. John Holt, Postmaster, mentioned in Mr. Day's advertisement, was a member of the firm of James Parker and Company. Mr. Parker was a partner in a printing-office and newspaper in New York. He had a partner by the name of Weyman, who managed the business of the office in New York till 1759, when he retired from the firm. This event made a new arrangement necessary, and Mr. Holt went to New York to take the place of Mr. Weyman. This change of residence is announced in an appendix to the notice of removing the printing-office from the Wooster house to the Greenough house: "The printer of this paper being about to remove to New York, desires all persons whose accounts have been unpaid above the usual and limited time of credit, immediately to discharge them; else he shall be obliged to leave them in other hands to collect; and he hopes they will not be against allowing interest. The business will be carried on as usual by Mr. Thomas Green in New Haven."

Several successive numbers of the *Gazette* after Mr. Holt's removal to New York bear the imprint: "New Haven: Printed by J. Parker and Company at the Post Office, at the house where Mr. Greenough lived, near Captain Trowbridge's, at the waterside." The *Gazette* of December 5, 1761, announces another removal: "The public are hereby informed that the printing and post offices are now kept at the house where Captain Hatch lately lived." The writer being ignorant of the location of Captain Hatch's dwelling, cannot inform his readers where the Post Office was kept in 1762 and the years which followed. In April, 1764, the publication of the *Gazette* was suspended, and the Post Office must for about fifteen months have missed its twin. When Benjamin Mecom came to New Haven in 1765 to revive the *Gazette*, he located his printing-office at the Post Office, and thus the duality was restored. But though he lets us know that the *Gazette* was printed at the Post Office, he does not define the place so that we can ascertain where our great-grandfathers went for their letters and papers in the year when the Stamp Act went into operation. Advertisers sometimes mention the office: as for instance, William Wolcot advertises at his house in New Haven next door to the Post Office; but who can tell us where William Wolcot dwelt in 1765?

We learn the name of the first postmaster in New Haven from Mr. Aaron Day's advertisement of the house "now in the possession of Mr. John Holt, Postmaster," as well as from an official announcement, dated June 7, 1758, over the signature, "John Holt, D. Post Master," of the rates of postage and the kinds of money which would be accepted. Mr. Holt was a partner in the printing-house of James Parker and Company and while he

resided in New Haven was the editor of the *Gazette* as well as the Postmaster of the town. A sketch of his biography from the pen of Isaiah Thomas, the historian of American printing, may be found on an earlier page of this volume in the chapter on the Periodical Press.

When Mr. Holt removed to New York, in 1760, Thomas Green, another partner in the firm of James Parker and Company, gave attention to the Post Office, which by the favor of Franklin and Hunter was a perquisite of the printers. Perhaps, indeed, James Parker was by this time, as we learn by his official signature that he was in 1765, Secretary of the General Post Office of North America.

When Mr. Green ceased to print the *Gazette*, and went to reside for a time in Hartford, Benjamin Mecom came to New Haven to resume the publication of the *Gazette*, not immediately, indeed, but about fifteen months after Mr. Green ceased to publish the *Gazette*. Mr. Mecom, by the favor of his uncle, the Postmaster-General, received the appointment to be Postmaster in New Haven, and as he expected to come a year sooner than he did, there was probably no postmaster between Green and Mecom.

In the last number of the *Gazette*, dated February 28, 1768, but evidently printed some time in March, Mecom thus announces the appointment of his successor: "Mr. Luke Babcock is appointed Postmaster for this town in the room of the printer of this paper, who works at the place where the Post Office was lately kept." The announcement is not without ambiguity, and needs for its elucidation some activity in those processes of thought by which hypotheses become guides to the truth. Luke Babcock was a graduate of Yale College in the Class of 1755, who went to England, in 1769, to receive ordination in the Church of England. The writer conjectures that in February, 1768, he was the editor of the *Connecticut Journal*, the new paper whose establishment had compelled Mecom to abandon the *Gazette*. It would appear from the advertisement that the latter still expected to remain in town as a job printer.

Having now followed the New Haven Post Office in its travels from one house to another, and in its change of postmasters nearly to the time when Franklin was ejected from his position as Postmaster-General, let us go over the same years again to notice the methods in which the postal service was conducted.

Under this head is presented first a prolix announcement from the New Haven Postmaster in regard to newspaper postage:

NEW HAVEN POST OFFICE, June 7, 1758.

Whereas, The additional instructions to the Deputy Postmasters which have been published in all the English newspapers on the continent, took place the 1st inst., requiring a small consideration of 9d. sterling for all distances not exceeding every fifty miles, for the carriage of newspapers; and making the Postmaster liable to the said payments to the riders and also to the payment for the papers to the printers: In consequence of which instructions, the papers, except those sent gratis to the printers and public offices have been stopped by the printers till fresh orders have been received by the way of the Postmasters, or till some new method of conveyance is concluded on; and whereas some gentlemen

to whom this office is convenient may desire to have the said papers continued to them and may be at a loss how to get them: I have therefore with regard to myself thought proper to give this public notice of the rules I intend to observe and the terms on which those that choose may be supplied with the New York or Boston papers through my hands. As I shall endeavor to avoid all needless trouble or perplexity in our accounts, and all hazard of losing by the papers I send for, for which I am liable, I shall expect to have the money paid down for all these papers, in such money as is current in the respective places where they are printed; and so long as the money lasts I shall continue punctually to send the papers and no longer. I think this the only method I can take with safety and convenience; for though it might be very safe to trust many of the gentlemen, yet if any trust is given, some will expect it that either will not or cannot be punctual; death would sometimes occasion a failure, and sometimes it would be impossible to get York or Boston money. Nor can it justly be thought a hardship that the ready money is insisted on. The payment of so small a sum can be no great difficulty to any person that can with prudence send for the papers; at least a man may reasonably be expected to have the power of restraining his curiosity till he can procure money to pay the necessary expense of indulging it.

Whoever then sends to me money that will pass in York or Boston and desires to have the papers from either of these places, I will immediately write for them and send them along by the first post with the same care as if our own papers. The postage from New York to New Haven will be 2s., lawful money, per annum, and afterward at the same rate in proportion to the distances. From New Haven those I send by the special post, if for persons who take our papers, will be sent gratis as before, but if for any that do not take our own papers, the charge on them will be the same as if they had been sent by the general post, viz.: Those above 100 miles will be 2s. and 3d. sterling; those above 150 miles 3s. And when any persons have money not yet run out, in the hands of the printers, I shall be willing to discount it with those who apply to me for the papers.

JOHN HOLT,
D. Post Master.

In the same number of the *Gazette* occurs the announcement of James Parker and Company, which may be found in the chapter on the Periodical Press, offering to subscribe "five pounds lawful money" toward the establishment of a special post to Albany and the franking of all letters to the Connecticut soldiers in the army. This is mentioned here to illustrate the close connection which subsisted between the Post Office and the printing-office, Franklin being the root and Parker, Green and Holt being branches of one and the same tree. About a year after Holt had removed from New Haven to New York, the monthly mail between New York and Boston became a weekly. In the *Gazette* of June 15, 1761, is the following announcement of James Parker and Company, the proprietors of that paper:

Whereas, The Postmasters-General have agreed that there shall be a constant weekly post established between Boston and New York, to set out from those places on Thursdays and to meet on Saturdays at or near Hartford, returning to Boston and New York on Wednesdays, provided the said post shall not be expensive to the General Post Office; and whereas, it is supposed that the said post cannot yet be supported by the profits arising to the Post Office from the letters it will receive thereby; and yet that it will be a very great public conveniency, more especially to the people between Boston and New Haven, where there is now no regular post established, though there are many considerable trading towns on the road, and the distance is much less, the road much better, and the passage not liable so to obstructions from ferries as the New London Road; and whereas, the said proposed post cannot be supported unless the deficiency of the profits arising from it to defray the expense is made up by subscription:—These are therefore to desire all gentlemen

and others who would promote this design, that they will, in the several places concerned, agree among themselves upon proper persons to take in subscriptions for such sums as any persons shall be willing to contribute to the aforesaid purpose, and to transmit the subscriptions as soon as possible to James Parker and Company, printers in New Haven and in New York, and Mr. Richard Draper, printer in Boston, who will faithfully account for whatever sums they receive, and who propose to undertake to be managers in this business, and to set it on foot as soon as ever they shall find that the contribution will be likely to support the expense.

JAMES PARKER & COMPANY.

NEW HAVEN, JUNE 12, 1761.

This extract from the *Gazette* illustrates at once both the need which the General Post Office had of help and the methods by which the Postmaster-General was able to secure it through his fellow-craftsmen and natural allies, the printers.

Routes through the more densely settled parts of the country yielded revenue; but if those who dwelt in less populous regions desired a post they must make up by contribution whatever excess of cost there might be over the amount of postage. Printers of newspapers willingly took the lead in promoting such contributions, expecting that every new post route would bring new subscribers. It is said that the Colonial Post Office had never yielded any revenue to speak of before Franklin commenced to manage it; and that under his administration its profits increased to £3,000 per annum.

An announcement dated "General Post Office, North America, August 24, 1765, gives notice of the rates of postage on letters." It is signed "By command of the D. Postmaster-General, James Parker, Secretary;" Dr. Franklin having given his old friend a position in the General Post Office. It ordered that letters by land to or from any chief Post Office in America from or to any other part thereof, not exceeding 60 miles from such chief Post Office or from the office where such letter not passing through a chief office may be put in, shall pay, single, four-pence; double, eight-pence; treble, one shilling; the ounce, one shilling and four-pence. For longer distances the postage was proportionately greater. Letters by sea paid two-pence additional, and letters by special posts the same addition.

Mr. William Goddard, a printer in Philadelphia and Baltimore, feeling that the rate of newspaper postage was oppressively high, conceived the idea of taking advantage of the popular indignation against the British Ministry, and thereby establishing an opposition post by means of a joint stock company. In the spring of 1774 he made a journey eastward as far as Salem, Mass., advocating his project in every large town, and stirring up the people to withhold the revenue which their oppressors wrenched from them by means of the Post Office. The people were in the mood to hear him, and the more so when news came of the ejection of Franklin. Large sums were subscribed throughout New England, and New Haven partook in the enthusiasm. The *Connecticut Journal* of May 27, 1774, announces: "We have the pleasure of assuring the public that the subscription for establishing a new and constitutional post office was opened in this town last evening and has already met with great encouragement from many of the respectable

inhabitants of this place." Mr. Goddard's plan had already been put in operation between Philadelphia and Baltimore, but there is no evidence that the plan which he proposed for establishing postal arrangements for the whole country was even temporarily in operation. Perhaps all the difficulties in its way might have been obviated in the course of time, if the hostilities which broke out in the spring of 1775 had not made some arrangements for postal communication immediately and imperatively necessary.

Dr. Franklin's displacement was dated January 31, 1774, so that Mr. Goddard's journey through New England must have been undertaken immediately after the news of his ejection reached America. But arrangements for this punishment of Franklin had been begun months before. Without the knowledge of Franklin, an inspector was sent from England to examine and report on the condition of the American post offices. Hugh Finlay, the inspector, kept a journal of his visit to Canada in the summer of 1773, and of his journey thence through New England to New York. October 26th he was at Providence; November 7th he was at New London; November 11th he says:

Finding it would be convenient to have an hour's conversation with the western rider, I set out for Saybrook and arrived there about two o'clock. I found the road pretty good from the rope ferry, where I found old Hurd, the western rider, waiting Mumford's arrival; he had been here three hours; it is very unc customary for the riders to be detained at this season, but I conclude he finds it impossible to pass at the Rhode Island ferries, from high contrary winds. This man Hurd at 72 is strong and robust; he has been in the service 46 years; he pretends that he makes nothing by it and says he will give it up—that at present he only rides for his health's sake, which induces him to keep it. It is well known that he has made an estate by his riding, and, it is said, in the following way: Way letters he makes his own perquisite, or rather he has done so in former times. At present each office checks him a little. He does much business on the road on commission; he is a public carrier, and loads his horse with merchandise for people living in his route; he receives cash and carries money backward and forward, takes care of returned horses, and in short refuses no business, however it may affect his speed as post.

At New Haven, Finlay writes:

It is a large, flourishing seaport town. Went to the Post Office (Christopher Kilby, Postmaster). Examined his books; questioned him and found that he understands his business thoroughly; he laments that he cannot put the Acts of Parliament in force. He complains much of the post-riders; says they come loaded with bundles, packages, boxes, canisters, etc.; every package has a letter affixed to it, which the rider claims as his own property and perquisite; nay, sometimes a small bundle of chips, straw or old paper accompanying a sealed packet or large letter, and the riders insist that such letters are exempted from postage. The riders have told Mr. Kilby that the devil might ride for them if these way letters and packets were to be taken from them. In short, they come so loaded that it is impossible for them to come in time. The portmanteaus seldom come locked; the consequence is that the riders stuff them with bundles of shoes, stockings, canisters, money or anything they get to carry, which tears the portmanteaus and rubs the letters to pieces; this should be prevented by locking the mails.*

This inspector seems to have been satisfied with the New Haven Postmaster; but the result of all this inspection was that Franklin was removed and the inspector succeeded him in the office. But

* Magazine of American History, Vol. XIII, p. 195.

notwithstanding all the complaints against Franklin's administration, the Post Office, which under his management yielded £3,000 per annum, never again contributed a farthing to the British treasury. The displacement of Franklin created an intense excitement throughout America. The people discovered that the British ministry had no right to establish post offices in the colonies, and were ready to invest money in a scheme as impracticable as that proposed by Mr. Goddard in the spring of 1774.

Captain Kilby died March 1, 1764, before he had heard of the displacement of Franklin and the appointment in his place of the inspector who had visited New Haven in the preceding November.

While Mr. Goddard was still endeavoring to make arrangement for a postal service independent of the government, tidings came flying through the land of the massacre at Lexington.

As soon as these tidings reached New York, the ministerial post was discontinued by order of the new Postmaster-General. In the *Connecticut Journal* of May 10, 1775, the editor says:

We hear that the post having been interrupted, the Postmaster (who has hitherto without legal authority been appointed from home, and as a convenience permitted here unquestioned) has discharged the riders, the expense of which he has no longer a fund to support. An office for this necessary business will doubtless be put under proper regulations by the Continental Congress, and no more be permitted to return to the rapacious hands of unauthorized intruders; since it would be the most contemptible pusillanimity to suffer a revenue to be raised from our property to defray the expenses of cutting our throats. We hear Mr. William Goddard, who has been a great sufferer, with many others, by the malpractice of an illegal holder of this office, is now on a journey to the eastward in order to put the business under proper regulations to be laid before Congress.

Three days after the date of this announcement, the Massachusetts Provincial Congress established fourteen post offices in their province, and made arrangements for post-riders on certain roads. Rates of postage were also fixed at twenty-five per cent. advance on those which the people were accustomed to pay. The Committee of Intelligence in New York, about a week earlier had assumed the responsibility of employing the same post-riders who had been discharged, "to depart from this city on the usual days and to go the usual stages," and had given notice "that Mr. Ebenezer Hazard has undertaken to receive and forward letters from this city." Their announcement is thus ended: "From information received by the committee from Connecticut, it will be necessary, in order to prevent letters from being opened by the committees on the road, that they be inspected here by some well-known member of the General Committee, and by him indorsed with his name as one of the Committee of New York."

These postal arrangements were designed to be provisional only, and to give place to permanent arrangements to be made by the Continental Congress. A committee was raised in that body before the end of the month and charged with the duty of considering "the best means of establishing posts for conveying letters and intelligence throughout this continent." In July this commit-

tee having reported, Congress appointed Benjamin Franklin Postmaster-General, with a salary of \$1,000 per annum, and fixed the rates of postage at 20 per cent. less than those appointed by Parliament.

On the 30th of August, Congress

Resolved, That the communication of intelligence with frequency and dispatch from one part to another of this extensive continent is essentially requisite to its safety; that therefore there be employed on the several post-roads a rider for every twenty-five or thirty miles, whose business it shall be to proceed through his stage three times in every week, setting out immediately on receipt of the mail, and traveling with the same by night and by day without stopping until he shall have delivered it to the next rider; and that the Postmaster-General be desired, either by the use of way-bills, or by such other means as he shall find most efficacious, to prevent delays in the riders, or to discover where they happen, that such dilatory riders may be discharged.

And as it is requisite that the Deputy Postmasters should attend with punctuality at their several offices for the receipt and delivery of letters, *Resolved*, That it be recommended to the Assemblies and Conventions of these States to consider how far it may be consistent with the policy and good of their respective States to excuse such Deputy Postmasters from those public duties which may call them from attendance at their offices, and to proceed therein as to their wisdom shall seem best.

"In consequence of the foregoing resolution of Congress for the more frequent and speedy communication of intelligence," says the *Connecticut Journal* of September 11, 1776, "William Goddard, Esq., Surveyor of the General Post Office, arrived here last evening on his way through these Northern States, in order to carry into immediate execution that necessary and important business."

Returning now from this digression into the conduct of the postal service in general to the office of Luke Babcock, who became Postmaster in New Haven, in 1768, we can only say that he was probably succeeded by Captain Christopher Kilby, when Mr. Babcock went to England to receive Holy Orders in 1769. Captain Kilby died in office on Sunday, March 1, 1774. He was succeeded by his son, John Kilby, who though he was, as the Probate Records show, a minor, kept the office till the end of the calendar year. In the *Connecticut Journal* of December 28, 1774, is this advertisement:

Post Office.—Mr. Elias Beers being appointed D. Postmaster for this town, in the room of Mr. John Kilby, resigned, the office will be removed from Mrs. Kilby's to Mr. Beers' shop on Thursday, the 5th of next month.

Captain Kilby's dwelling-house is described on the Probate Records as facing the Green. Abel Morse a few years later announces that he has removed to New Haven, and "carries on the book-binding business in its various branches a little south of the College, in the store formerly occupied as a post office by Mr. Kilby." With the aid of these two hints we may locate the Post Office, in the time of Captain Kilby, in Chapel street, between Temple and College streets, and probably near the latter street. Mr. Elias Beers' shop was a wooden building of two stories in College street, next south of the building in which his brother, Isaac Beers, kept an inn and afterwards a book store. It is re-

membered by the writer and by many of the older citizens of New Haven. Its site, as well as that of the inn, is now covered by Mosely's New Haven House. Mr. Elias Beers kept a miscellaneous assortment of goods, and was accustomed, even after he kept the Post Office, to advertise his shop as opposite the printing-office. The *Connecticut Journal*, after its printers left the Old County House, was printed in the second story of the building "on the northeast corner of the President's lot." The President's lot was bounded south by Chapel street and east by College street. The Postmaster adhered for a long time to the rule of advertising his wares as "at his shop opposite the Printing Office," but occasionally departs from it, and seems to assume that the public have at last learned where letters sent by post are delivered. Under date of August 1, 1792, is: "Enfield Falls Lottery Tickets for sale by Elias Beers, at the Post Office, New Haven."

It was while Mr. Beers was in office that a change was made in the authority by which the postal service was conducted, and in January, 1776, he advertises the letters in his possession as a list of letters remaining at the *Constitutional Post Office*, January 5, 1776. It was his custom afterward to advertise letters at the beginning of every quarter and to append to the notice, "N. B. Those names without any towns annexed are for New Haven." Gradually the number of distant towns served by his office diminished; doubtless for the reason that offices were multiplied.

Under date of April 12, 1780, the editor of the *Journal* says:

By a late regulation of the Post Office, we expect in future to receive four mails in a week: two from the westward and two from the eastward, which will render it most convenient to publish our paper on Thursdays, by which we shall be able to insert the latest Southern and Western intelligence.

In July, 1783, Mr. Beers appends to his quarterly list of letters this notice: "In future the mails at this office will be closed as follows, viz.: The mails for the westward, on Monday evenings at 7 o'clock; and those for the eastward, on Friday evenings at 7 o'clock. The posts will set out early the next morning."

In 1793, appeared this notice:

POST OFFICE, NEW HAVEN, November, 1793. —The mails will arrive and close at this office until the first of May next, as follows, viz.:

Southern Mail arrives on Tuesdays and Fridays, at 7 o'clock P.M. Closes the same evening, 8.30 o'clock P.M.
Eastern Mail, via Hartford, arrives on Mondays and Thursdays, 1 o'clock P.M. Closes the same day, 2 o'clock P.M.

Eastern Mail, via New London, arrives on Mondays and Thursdays at 1 o'clock P.M. Closes on Thursdays and Fridays at 8 o'clock P.M.

By an Act of Congress regulating the Post Office, it is enacted, "That all letters brought to any Post Office half an hour before the time of making up the mail at such office shall be forwarded therein."

Notice is accordingly given that all letters brought to the office, not conformable to the above recited act, will lie over for next post.

ELIAS BEERS,
Postmaster.

In January, 1799, the Post Office was "removed to the Brick Building in Chapel street, between the houses of Messrs. Joseph Darling and Elias Shipman." But the removal did not take place because Mr. Beers ceased to be Postmaster, for the quarterly list of letters remaining in the office is signed Elias Beers, Postmaster. Joseph Darling's house was on the lot which is now occupied by the Yale University Club, and Mr. Shipman's was the same which is now occupied by the Quinnipiac Club. The new location must have been very near, if not identical with that occupied by Captain Christopher Kilby when he was Postmaster.

In March, 1802, about one year after the inauguration of President Jefferson, Jesse Atwater received the appointment of Postmaster, in the room of Elias Beers, dismissed. Dr. E. H. Leffingwell remembers that when his father's family removed to New Haven in 1808, Jesse Atwater kept the Post Office in a one-story building on the west side of State street, a few doors north of Chapel street. The writer has not ascertained whether this was the first location of the office after Mr. Atwater's appointment, but has seen an account book of Colonel William Lyon, in which he charges Mr. Atwater with one year's rent of house and one year's rent of Post Office. William H. Jones was appointed Postmaster in New Haven, May 3, 1814, in the room of Jesse Atwater, deceased. He continued to serve for more than 27 years. At one time—perhaps immediately after his appointment—the office was in Church street, nearly opposite the site of the United States Building, in which the affairs of the Post Office and of the Custom House are now administered. It was next door south of and within the same brick walls as Sydney Babcock's book store, from which so many juvenile books were issued. When the Tontine was built, Mr. Jones became its landlord, and removed the Post Office to the basement of that building. During his administration, the appointment of Postmasters in offices of the first-class was transferred from the Postmaster-General to the President of the United States acting with the concurrence of the Senate. Mr. Jones' commission by the President was dated July 9, 1836. Some time before this change he had removed the office from the Tontine to a one-story brick building on the corner of Chapel and Union streets, where the Second National Bank now stands. It had previously been occupied as a storage and auction-room by Joel Atwater, who had also an auction-room on State street.

Henry Huggins was the next appointee, Mr. Jones being removed by President John Tyler in January, 1842, after a service of twenty-seven years and eight months, a longer service than that of any other postmaster in New Haven, but only five months longer than that of Elias Beers. Mr. Huggins kept the office in the same building in which Mr. Jones kept it in the later years of his term. He gave satisfaction to the people of New Haven, but became obnoxious to the person who had given him the appointment and was ejected in 1844, Edward A. Mitchell being appointed September 12, and coming into possession October 24th. Mr.

Mitchell was the father of the Hon. Charles L. Mitchell, the present representative in Congress of the district to which New Haven belongs. It is said that he first made and used postage stamps for prepayment of postage in America. When the office was open, prepayment could be made in money; but wishing to provide some way in which prepaid letters could be deposited when the office was closed, he issued stamped envelopes, which guaranteed to those who purchased them that the Postmaster would prepay the letters to which the stamps were attached. This little private enterprise of the New Haven Postmaster was the forerunner of the system by which the postage is prepaid on millions of letters every day in the year and in all parts of the country.

When Mr. Mitchell took the office the rates of postage were 6, 10, 12½ and 25 cents for single letters, according to distance, no prepayment being required. During his term of office, the rates were reduced to 10 and 5 cents, according to distance, and subsequently to 5 cents uniform for all distances, the weight not exceeding one-quarter ounce and prepayment required. This arrangement occasioned great inconvenience for those who wished to deposit letters in the office when its doors were not open, and Mr. Mitchell took the responsibility of issuing envelopes bearing an imprint, of which a *fac-simile* is here given. Each stamp bore the

signature of the Postmaster, and they were sold at the cost of postage and envelopes as an accommodation. Some post offices refused to recognize them and reported the facts to the department. As however the stamps could only be used at the New Haven office and were sent as prepaid matter, properly entered on the New Haven post bill, there could be no loss to the Government, and the department taking a liberal view of the matter, authorized their continuance. They were intended merely as an accommodation to the citizens, and in the absence of any Government stamps were much appreciated. There is no doubt that the adoption of stamps by our Government was hastened by the issue of these prepaid envelopes, and it can be truly said that they were the first stamps issued in the United States.

John B. Robertson was appointed Postmaster in New Haven June 14, 1849, and assumed the duties of the office on the 2d of July, the removal of Mr. Mitchell being occasioned by the election of General Zachary Taylor to the presidency. During his administration, the building in which the office

had been kept was taken down and another erected in its place, which afforded on its first floor much better accommodation for the Post Office, and on its second floor a commodious public hall. These improvements were made by James Brewster, Esq., the owner of the property, and the public room over the Post Office, which was the most popular place in the city for lectures and concerts, was known as Brewster's Hall. While the old building was being taken down and a better one erected in its place, the Post Office was kept in the Adelphi Building on the other side of the street.

The next presidential election brought another change of Postmasters in New Haven, Lucius A. Thomas being appointed by President Pierce in the room of John B. Robertson. Mr. Thomas retained the office not only while Pierce was President, but through the administration of Buchanan, going out and giving place to Nehemiah D. Sperry in April, 1861, after the election of Lincoln.

The men who have successively filled the office of Postmaster in New Haven have, so far as is known to any now living, given good satisfaction to those whom they have served. From Elias Beers to the latest decedent, all have received public testimony to the fidelity and courtesy with which they have discharged the duties of the office.

When Mr. Sperry was removed, in May, 1885, at the expiration of his sixth term of office, a public banquet was given him, at which men of different political parties and of various pursuits united to honor the man who had been Postmaster for twenty-four years, and had discharged the duties of the office satisfactorily to all.

Benjamin R. English succeeded Mr. Sperry, and is now the Postmaster of New Haven.

The building occupied by the Post Office was erected by the United States while Mr. Thomas was Postmaster, at a cost of \$225,000, including the land; about \$200,000 having been expended on the edifice. A large addition to the rear, increasing the working capacity about 80 per cent., has recently been made.

The New Haven Post Office is the first in Connecticut and the twentieth in the United States in the amount of mail matter received and delivered; but its receipts for postage are so much diminished, in consequence of the remittance of postal stamps to this neighborhood in payment for small manufactured articles, that its gross receipts are less than those of some offices which dispatch and receive much smaller mail bags. For example, during the year ending June 30, 1884, the office in Hartford handled 3,396,147 pieces, and the office in New Haven 8,099,774 pieces; yet the receipt of money at Hartford exceeded that at New Haven. It is said that a single firm of card-printers in the neighborhood of New Haven take in some \$37,000 per annum in postage stamps. These, if sold by the Post Office in New Haven, would without other help make its receipts greater than the receipts at Hartford. The total value of postage stamps thus brought to the neighborhood of New Haven is believed to be \$55,000.

BIOGRAPHIES.

EDWARD A. MITCHELL.

was born at Bristol, Conn., in the year 1815. At an early age he manifested that exceptional business capacity which later in life made him so eminent among the citizens of New Haven.

Although never prominently identified with politics, he was appointed Postmaster of New Haven by President Tyler, which position he retained under President Pierce.

During the last twenty years of his life he was identified with many of the foremost manufacturing interests of the State, notably among which are Rogers, Smith & Co., the Winchester Repeating Arms Co., the Meriden Britannia Co., Benedict & Burnham Manufacturing Co., and the Willimantic Linen Co.

As a man, both in the public and private walks of life, he was one to whom the sincerest respect and love could not be denied. Mr. Mitchell died at Fernhurst, his country home in East Haven, September 14, 1876.

HON. NEHEMIAH DAY SPERRY.

The ancient town of Woodbridge, which adjoins New Haven on the west, spreads itself out for many square miles over a broad ridge, at an elevation of from three to six hundred feet above the city. It has no village or central settlement, and the stranger is at a loss to locate it; but he is content to search for it in vain, driving along its firm roads among its beautiful farms and woods, drinking in its pure and bracing air, and occasionally getting a glimpse of the distant city and harbor, or a wider outlook over Long Island Sound.

In one of its most picturesque localities, near the head of the famous Woodbridge Ravine, where the brook forms a large trout-pool and a pretty cascade preparatory to its downward rush, stands a low, old-fashioned farm-house, known as the "Sperry Place." It has been in possession of the family ever since a grant of land was made to Richard Sperry, one of the original settlers of the town, who afterwards made himself famous in the history of the colony by supplying the wants of the regicides Goffe and Whalley while they were in hiding in the Judges' Cave on the opposite ridge of West Rock. The last of the family to occupy the farm-house were Enoch and Atlanta Sperry, who here reared a family of five sons and one daughter.

Nehemiah Day Sperry, their third son, was born July 10, 1827. Descended from old New England stock, he inherited the sturdy Puritan character, which was still further developed by his early training. Brought up on a New England farm, where a living is with difficulty wrung from the cold soil, he acquired a vigorous frame, and habits of industry and prudence. The beauty of nature around him nourished in him the imagination and sentiment which the daily drudgery of farm-work might

have crushed; and the trout-brook close at hand gave him a taste which has clung to him through life.

His education, apart from that which is gained by an active mind in contact with the great world, and which is of much more importance than any that a college can give, was chiefly obtained in the district school-house. It was a plain, low house, standing beneath three elms, on the main road from New Haven to Seymour. Its one room, rudely furnished with slabs, and warmed in winter by a large open fire, accommodated about fifty-five scholars. Often here in the evenings social religious meetings were held, the ladies bringing their silver, brass, or glass candlesticks. And from these services, as well as from the more formal Sunday worship in the meeting-house, where the Gospel was preached with much austerity, and, more than all, from the influence of his Christian home, he received impressions and ideas which contributed to mold his principles and shape his character. While he was yet little more than a boy, he exchanged the position of a pupil for that of a teacher, and during the winter months of several years conducted successfully various district schools. The last season of his teaching he received the highest salary paid in Connecticut for district-school teaching. The committee having in charge several schools, offered a prize to the one which should make the greatest improvement during the term. The prize was awarded to the school taught by Mr. Sperry.

At the age of fourteen he went to New Haven to attend school, doing chores for his board. On the first Sunday, the family with whom he boarded not being altogether proud of the appearance of the country boy, contrived to have him conducted to a small Primitive Methodist church, instead of taking him with them to their pew in a more fashionable place of worship; but the young man, with characteristic penetration and ambition, instantly detected the trick, and quickly made his appearance, panting with haste, at the Centre or Middle Brick Church, where Dr. Leonard Bacon was then in the prime of his ministry. Here he attended regularly for some time, but was subsequently induced to take a seat in the Chapel Street Church, afterwards the Church of the Redeemer, which he soon joined, and of which he became, and still continues to be, a prominent, liberal and efficient member.

Having learned his trade, that of a mason builder, he went into business, forming a partnership with his brother-in law, Willis M. Smith. The firm is still in existence, and is the oldest continuous one in the city. To it New Haven owes many of its finest and most important buildings.

Mr. Sperry's activity, ambition, and public spirit however, could not long be confined within the limits of private business. He immediately identified himself with his new home, and exerted himself to promote its best public interests. He early

E A Mitchell

A. D. Murray

joined the Masonic fraternity, and rapidly rose to its higher degrees. He interested himself in every social and public movement, and through all his life has been among the foremost to welcome and advocate every good enterprise and public improvement. He organized the first street railroad company in the State, and subsequently secured most of the legislation respecting such roads. He was one of the active promoters of the construction of the New Haven and Derby Railroad, designed to bring to the city the trade of the Naugatuck Valley and the West, and has been a director in the management of other railroads, and of many manufacturing companies.

But it was in the field of politics that his public spirit, natural shrewdness and tact, remarkable faculty of organization, and large knowledge of men and human nature found the widest scope. Having served in various capacities of the government of his adopted city and town, he would have been nominated in 1855 for the Governorship of the State, but that he lacked the requisite age. His youth, however, did not disqualify him for the office of Secretary of State, to which he was elected for two successive terms. While he held that office the constitutional amendment making reading a qualification for voting was proposed and prepared at his suggestion, and pressed to a successful issue. The first meeting of friends to consider the amendment was held in his office.

His intense patriotism led him to throw himself heartily into the American party, which at that time sprung suddenly into existence. He was a member of the National American Convention which met at Philadelphia in June, 1855, to formulate a party platform, and was a member of the committee on platform. The committee was made up of one from each State, and was in session about one week. The great fight in the committee was on the question of slavery, and the pro-slavery men secured a majority of one. True to the New England principles of liberty in which he had been reared, Mr. Sperry cast his vote and used his influence on the anti-slavery side. A majority and a minority report was made to the convention, exciting a bitter discussion which lasted several days. When the final vote was taken, New York cast her vote in favor of the majority report, and thereby gave the pro-slavery men a majority of the votes cast. The anti-slavery men thereupon withdrew in a body to the parlors of the Girard House, and, after organization, passed a resolution, and sent it to the country with an address. It was as follows:

"That we demand the unconditional restoration of that time-honored compromise known as the Missouri Prohibition, which was destroyed in utter disregard of the popular will—a wrong no lapse of time can palliate, and no plea for its continuance can justify; and that we will use all constitutional means to maintain the positive guarantee of its compact until the object for which it was enacted has been consummated by the admission of Kansas and Nebraska as free States."

Among those who, with Mr. Sperry, bolted the convention, and passed the Girard House resolu-

tion, were many who have since become famous, such as Henry Wilson, James Buffington, and Andrew J. Richmond, of Massachusetts; Governor Anthony Colby, of New Hampshire; Schuyler Colfax, William Cumbuck, and Godlove S. Orth, of Indiana; Governor Thomas H. Ford, of Ohio; and others. This was the first bolt in any national convention on the subject of slavery. Whatever may have been the origin of the Republican party, it was this bolt which gave it existence and importance as a political power.

From this time Mr. Sperry naturally affiliated with the Republican party. He was a member of the convention which, in 1856, nominated John C. Fremont for the presidency. He was soon made Chairman of the State Republican Committee, a position which he occupied for many years before and during the war. Under his management Connecticut was always Republican in politics. Having secured the election of Governor Buckingham by a notable victory, he was able to lend efficient aid in the nomination and election of President Lincoln. He was also elected a member and the Secretary of the National Republican Committee, was also a delegate to the Baltimore convention which renominated Mr. Lincoln, and was elected one of the Executive Committee of seven which had the re-election of Mr. Lincoln in charge, and which held frequent sessions at the Astor House in New York from the time of their appointment till the election. When the secret history of this committee is written, it will be found that Mr. Sperry rendered important services to the country as a member of it, to which it is as yet improper to make more than a passing allusion. In his own city during the war, he was chairman of the Recruiting Committee chosen by the citizens to fill up the quota of men charged to New Haven.

In these various positions he gained large control of the Republican party and of the course of politics in his own State; contributed much to the success of the Government and the help of the soldiers in the War of the Rebellion; gained the acquaintance and confidence of public men all over the country, and exerted a wide influence. When the Monitor was built he became bondsman for the builders, having full confidence that it could whip the Merrimac. With President Lincoln and his advisers he was on terms of intimacy, and no one was more trusted and relied upon by them than Mr. Sperry. He was the President of the State Republican Convention which named General Grant for the presidency, and was one of the early supporters, in Connecticut, of his candidacy. Mr. Sperry's political action of course involved him in many antagonisms, and brought upon him sharp attacks, which he bore with habitual good nature and serenity. Every one admitted that he was an able and dangerous antagonist; most allowed, in the end, that he was a fair and honorable one. There is one thing which has always distinguished him from the ordinary politician, and that is, that in all his political conduct he has been governed by regard to great underlying principles and public in-

terests, and has not made politics a mere means of gaining private or even party ends.

In 1878, the New Haven Board of Education abolished the reading of the Bible in the public schools. Their action caused much dissatisfaction, and this dissatisfaction Mr. Sperry, true to his own education, headed and fostered. At the next school election he organized and led a campaign, in which, owing to his earnest appeals from the platform and through the press, and not less to his shrewd management, by which Protestants and Roman Catholics were united, the *personnel* of the Board was changed, by a popular vote of nearly three to one, and the Bible was replaced in the schools, where it still remains. His achievement brought him an unexpected but gratifying note from Sir Charles Reed, LL.D., Chairman of the London School Board, in which he said:

"Allow me, a stranger, to congratulate you on your splendid triumph in favor of the good old Book. In these days we cannot afford to banish the true foundation of all moral and religious training, without which our common schools would be worthless to a community seeking to train a virtuous and God-fearing people."

On the accession of President Lincoln, Mr. Sperry received the appointment of Postmaster of New Haven, and this appointment was afterwards several times renewed, so that he held the office uninterruptedly for six terms under seven different Presidents. Under his management the business of the office increased immensely, owing as much to the skill and liberality with which it was conducted, as to the demands of the people. It came to be regarded by the Department as the model office, and so satisfactorily was it managed, both to the Government and to the people, that for many years during the latter part of his administration no one ventured to compete with Mr. Sperry for his position. At the close of the twenty-four years of his service, the general accounts of the office, the business of which had for some years amounted to millions annually, balanced within eight cents. During the administration of the Post Office Department by Postmaster-General A. W. Randall, Mr. Sperry was offered, but declined, an appointment on a commission to travel in Europe and examine the postal systems of various countries. On the election of President Garfield, it was anticipated by Mr. Sperry's friends and fellow-citizens that he would be invited to take the portfolio of Postmaster-General. The State government in all its branches was substantially unanimous in desiring it, and it was also strongly favored by a majority of all the Senators from New England. But when it was found that New England could have but one seat in the cabinet, and might have a higher one, Mr. Sperry refused to stand in the way of more important interests. Postmaster-General Hatton, on retiring from office March 4, 1885, said in an open letter, that for ability and efficiency the best offices in the country

ranked in the following order: New Haven, Cincinnati, Philadelphia.

Mr. Sperry retired from office May 16, 1885, as good-naturedly and smilingly as if he had been promoted. His retirement was made by his friends and fellow-citizens the occasion of tendering him a public banquet in token of their appreciation and respect. The largest opera-house in the city was filled with tables, around which were seated more than four hundred of the most prominent citizens, irrespective of political opinions or affiliations; while the galleries were crowded with ladies. The two United States Senators from Connecticut, ex-Postmaster-General James, representatives of existing and past city and State governments and congressional delegations, long-time friends and old-time opponents, united in bestowing an ovation of which any man might well be proud.

Since his retirement, Mr. Sperry has not ceased to keep an eye upon public interests. His latest movement has been to suggest a system of constant collection and publication by the National Government of facts relating to the condition of business in its various branches. The suggestion met with instant general favor, and seems likely to be brought in some shape to the attention of Congress, and to lead to important results. The National Board of Trade, of which Mr. Sperry is a member, has adopted his plan, and recommended it to our law-making power at Washington.

In person, Mr. Sperry is tall, erect, dignified, but in disposition he is full of kindness, genial, sympathetic, generous, overflowing with fun, and always ready to laugh, even at his own expense. Strong in his convictions, inflexible in his principles, but large in his charity and tender in his feelings, true as steel in his friendships, and ever ready to stretch out his hand to help others, he has endeared himself to a host of friends, who go to him constantly for counsel or help. How freely and liberally he responds to such demands, and how much he has done privately, in all kinds of ways, for the relief and help of others, especially of young men, only a few intimate friends know. His social popularity is indicated by the fact that he has been President of the Quinnipiac Club, in New Haven, for the past ten years.

Mr. Sperry is still in the prime of life, and it will be strange if his tried character and abilities, and large experience and acquaintance with men and affairs, are allowed to be permanently withdrawn from the public service, and if, in the fluctuating course of human events, his name does not yet occupy a prominent place in the history of the future.

Mr. Sperry was married, in 1847, to Eliza H. Sperry, daughter of Willis and Catherine Sperry, of Woodbridge. Mrs. Sperry died in 1873, leaving two daughters. In the winter of 1875, Mr. Sperry was married to Minnie B. Newton, daughter of Erastus and Caroline Newton, of Lockport, N. Y.

CHAPTER XXIV.

INNS AND HOTELS.

THE first mention in the records of New Haven of a house for the entertainment of strangers occurs about seven years after the arrival of the planters; but it is implied in the mention that the institution was already existent. William Andrews, who kept the ordinary, was "licensed to draw wine and to sell by retayle." He was also authorized to fence in twenty acres of the public domain for a convenient place to put strangers' horses in. As Mr. Andrews lived in what we now call Grove street, and much of the travel was by water, "it was propounded that another ordinary might be set up toward the waterside, but none was found fit for the present, only it was left with John Livermore to consider of, if he can be free and fit to undertake it." A year later "Brother Philip Leeke was desired to keep an ordinary or inn, and to provide for the refreshing of seamen, which he took into consideration." As "Brother Leeke" lived by the waterside, this motion was evidently designed to remove the inconveniences caused by the distance of the inn from the water.

Probably Goodman Leeke did not decide to keep the ordinary; for a year and a half later it was propounded to the Court "that, seeing William Andrews who hath kept the ordinary is about or hath laid it down, that therefore some other might be found to do it, that so strangers might know whither to go to be refreshed; but the Court again propounded it to William Andrews to see if he would not still keep it. He answered, he would consider of it, and in a short time give in his answer to the Magistrates." A month later "William Andrews was desired to acquaint the Court what he intended to do about the ordinary. He answered that though he was willing, he desired the Court would provide another, because his wife is at present unwilling. But he had further time given him to consider of it, and to come to the Governor and give his answer."

A few weeks later, "the Governor acquainted the Court that Brother Andrews had been with him about keeping the ordinary, and is willing to keep it if he could see a way how he might be able to provide things at the best hand in season. He therefore propounds that the town would buy his house, house-lot, and land, and make him such pay as he might buy provisions in season at best hand, and he will live in it, and pay them rent by the year till he can provide himself of another house, convenient and nearer the waterside, for this purpose, and he will refer the price to indifferent men to judge. The Governor asked the Court if they would not choose some to consider with Brother Andrews of this matter; and they agreed to do it, and chose Richard Miles, Henry Lendall, Thomas Munson, Jarvis Boykin, Francis Newman and John Cooper as a committee to consider of it, and make report to the Court as they should find cause. Further, William Andrews

propounds that he might have some part of the Oyster-shell Field for a pasture for strangers' horses, and some meadow ground which lies convenient to get hay for strangers' horses in the winter, all which, upon the issue of the former matter, the Court would consider further of."

The next mention of this matter occurs under date of October 9, 1648, as follows:

William Andrews, who keeps the ordinary, propounded to the Court that he might have some help afforded him for the better carrying it on. He was wished to acquaint the Court with what he desired: He said, first, a convenient house near the water-side; secondly, £100 of provision laid in, and he would return it again to the town so soon as it pleased God to enable him: which was taken into consideration to be prepared against another Court.

At the next meeting, which was on the 30th of the same month, the question concerning the ordinary was again brought forward by William Andrews, who

Desired the Court that they would provide some other to keep the ordinary, else furnish him with £100 and a convenient house. Mr. Evance said that himself and four more would lend him £5 apiece for three years freely, which was looked upon as a kind offer, but that would not answer, and some proposition was made concerning John Harriman's keeping of it, and about the house [that] was Mr. Lamberton's, upon which occasion it was referred till Mr. Goodyear came home.

On the third day of the following January the question whether William Andrews should keep the ordinary which had so long vexed the meetings of the town was brought to a final issue.

It was propounded that some course might be settled about an ordinary. William Andrews said he was unprovided, and unless the town afforded him help he could not keep it. It was then said that John Harriman hath been propounded and is willing; whereupon the Court ordered that John Harriman and his wife keep the ordinary for this town till the Court see cause to alter it.

But John Harriman was no sooner appointed to keep the ordinary, and thus authorized to draw wine by retail, than he

Was called to answer for drawing wine by retail, before he kept the ordinary, without order. He answered he did it for Mr. Goodyear, but wherein he hath done anything contrary to order he leaves himself with the Court. He was asked if he did not own the thing: he said there came several that pleaded necessity and said they could not be supplied elsewhere, which had some, and he did let the seamen which worked about the ship have some betwixt meals: but he was told if he would confess no more, it might be proved that he sold out of the house, out of cases of necessity; for Robert Basset sent and had wine two or three times: he said he knew not that Robert Basset had any but upon Mr. Goodyear's account: but was told, yes, for he sent his money for it. He said, he left himself with the Court; but because Mr. Goodyear who is somewhat concerned in the thing is not now in Court, it was respited.

At the next meeting Mr. Goodyear declared to the Court that that which John Harriman was questioned for last Court, in drawing wine without order, was occasioned by him; for when the ship-carpenters came from the Bay to work upon the ship, they required wine to their diet, which he was fain to provide at his great charge. Toward the latter end of their being there, William Andrews pressed to leave the ordinary, and proposition was made to John

Harriman in the Court to keep it, and then William Andrews being without wine, some did come to John Harriman's and pressed to have some, pleading necessity; upon which he spoke to the Governor, telling him how people pressed for wine for their necessity. He said, why doth he not let them have it? intending to have him take upon him the ordinary and so let them have it in an orderly way; but he understood it not so; but that was his error, for he told them what the Governor said, and after they did let some folks have some; but for any disorder, he hopes none can say there was any.

The Governor said: That it is a breach of order is clear, and for his part he never intended anything but that he should let people have wine orderly; but for any disorder, he heard of none. The Court considering that it is a breach of order and that for which others have been fined, could not pass it by, but ordered that Mr. Goodyear pay to the town for this breach of order 40 shillings.

And so the law was vindicated in the punishment of the "Worshipful Deputy Governor." The persons who have been mentioned as propounded to keep the ordinary, were, without exception, members of the church, and it is doubtful whether any other than a man whose character was thus indorsed could have obtained a license. Possibly however a free planter, who was not a church member, would have been accepted if propounded for the responsible position of innkeeper. But the Puritanism of New England confining the retailing of wine and spirituous liquors to houses provided for the entertainment of travelers, commissioned only the most trustworthy men to be innkeepers. Some observations of President Dwight on this point are worthy of attention. In the narrative of his Journey to Berwick, he thus speaks of the commencement of his return:

In the afternoon we began our progress to Boston by Piscataqua Bridge, and rode to Somersworth, where we lodged at an excellent house kept by a Captain R. This gentleman, for he amply merits the title, had just buried his wife and quitted the business of an innkeeper. With some persuasion, however, he consented to lodge us; but with evident apprehensions that we should find less agreeable accommodations than we wished. The treatment which we received from him and all his, was such as favorite friends might have expected from a very hospitable and well-bred family. I never found an inn more agreeable. The tenderness and respect with which our host spoke of his deceased wife, would indeed of themselves have rendered ordinary entertainment sufficiently pleasing to us.

He then continues, still addressing his imaginary English friend:

Your countrymen so often laugh at the fact that inns in New England are kept by persons whose titles indicate them to be men of some consequence, that I suspect you will smile at the preceding paragraph. An innkeeper in Great Britain, if I have not been misinformed, has usually no other respectability in the eye of his countrymen besides what he derives from his property, his civil manners, and his exact attention to the wishes of his guests. The fact is otherwise in New England. Our ancestors considered an inn as a place where corruption would naturally arise and might easily spread; as a place where travelers must trust themselves, their horses, baggage and money; where women, as well as men, must at times lodge, might need humane and delicate offices, and might be subjected to disagreeable exposures. To provide for safety and comfort, and against danger and mischief in all these cases, they took particular pains, in their laws and administrations, to prevent inns from being kept by vicious, unprincipled, worthless men. Every innkeeper in Connecticut must be recommended by the Selectmen, and civil authority, constables and grand jurors of the town in which he resides; and then licensed at the discretion of the Court of Common Pleas. Sub-

stantially in the same manner is the business regulated in Massachusetts and New Hampshire. In consequence of this system, men of no small personal respectability have ever kept inns in this country. Here the contempt with which Englishmen regard this subject is not experienced and is unknown. Any honest business is of course respectable when it is usually found in respectable hands. Whatever employment, on the contrary, is ordinarily pursued, or whatever station is filled by worthless and despicable men, will itself soon become despicable. This subject has been so long a topic of ridicule, that it has attracted my attention to some extent. A course of observation has convinced me that our ancestors were directed in their views concerning it by wisdom only. Unhappily we have departed from their system in instances sufficiently numerous to show but too plainly our own folly. A great part of the New England innkeepers however, and their families, treat a decent stranger who behaves civilly to them in such a manner as to show him plainly that they feel an interest in his happiness; and if he is sick or unhappy, will cheerfully contribute everything in their power to his relief. However smart then your countrymen may be upon this subject, permit me to wish that mine will for a long time select none but respectable men to be their innkeepers.

Mr. Harriman commenced to keep the ordinary in 1649 and continued to serve the town in that occupation till 1671. That he persevered twice as many years as his predecessor does not clearly prove that he was content in it. We will quote from the records of the proceedings at a General Court the 17th of December, 1656, to show some of the troubles with which he was afflicted:

The Governor acquainted the town that the occasion of this meeting is to perfect that business propounded the last town-meeting concerning the ordinary, John Harriman having declared himself since, that he cannot keep it any longer. He hath neither bread nor beer to carry it on, nor can get corn to furnish himself for his wampum which he takes upon that occasion.

Whereupon the Court and townsmen have met and considered how he may be supplied, and have thought upon this way, that seeing the jurisdiction is in his debt and the town in the jurisdiction's debt, that therefore they would furnish him with about forty bushels of wheat and some rye, which may for the present serve him in his occasions; and it may be set off in men's rates, the last of which is due in March next. And after much debate several men gave in their names and quantity they would furnish him with; which was taken notice of by the secretary; about as much as before mentioned, and a note of it given to John Harriman that he might act therein accordingly. Also it was propounded that seeing wampum is now a drug and will not provide him matter to carry on that business, whether he may not refuse it, or at least be left to his liberty what wampum to take, without offense to the town. Whereupon it was declared that they leave that matter to himself, and what he doth therein shall be without offense to them.

Mr. Andrews had been embarrassed by the want of sufficient capital to buy provisions for the ordinary; but Mr. Harriman was so fortunate that his property was in silver, which he had loaned to the colony. His trouble was that his business brought him only wampum, and that sometimes of such inferior quality that he could make no use of it. The permission to refuse wampum and demand silver of those whom he refreshed at the ordinary seems to have induced him to keep on in the business for a time.* However, on the 9th of January,

* In 1661, "wampum was declared to be no longer a legal tender in Massachusetts. Rhode Island passed a similar decree the next year, and Connecticut probably soon afterward. But though wampum now ceased to be legally current, it lingered among the people for years, and constituted in great part the small change of the community." Wampum: a paper presented to the Numismatic and Antiquarian Society of Philadelphia. By Ashbel Woodward, M.D.

1671, he peremptorily declined to do so any longer.

John Harriman, Senior, gave notice to the town of his laying down of keeping the ordinary for several reasons by him presented in a writing under his hand which was now read to the town; wherein also he desired the town to provide another for the place and work. He was earnestly desired to continue in the work, at least until the next town meeting. He seemed not willing to engage it. In the issue it was left with the townsmen to consider the matter and endeavor to prepare some meet person and make their return at the next town-meeting.

At the next meeting the townsmen made report through Jeremiah Osborne that they "had considered and labored in the business, but could find none willing to undertake it, and therefore did return the business to the town again." On the 26th of June, in the same year,

it was propounded about one to keep the ordinary, and the town was acquainted what endeavors had been used with some about it since the last town meeting; and in the issue Abraham Dickerman was by vote appointed to keep the ordinary in New Haven; who declared that he should accept it upon trial.

We may assume from the custom of the times that Mr. Harriman did not discontinue the entertainment of strangers till the appointment of his successor. The standing of Mr. Harriman in the community may be measured by these several considerations: he was a church-member and the appointee of the town to the responsible position of innkeeper; he brought up his son to learning, John Harriman, Jr., having graduated at Harvard College in 1667. But, on the other hand, he is styled Goodman on the records, and never Mr., as was his son, when, after his graduation, he taught the Hopkins Grammar School and sometimes supplied the pulpit after it became vacant by the death of Mr. Street in April, 1674. The records for 1674 speak of a rate for the maintenance of the ministry, of which Mr. Harriman was to have £70 and another preacher of the name of Taylor was to have £63 17s.

During King Philip's War, John Harriman's house was fortified by the town. Four houses in different neighborhoods were selected to be fortified and defended in the last extremity; but there is no positive evidence that any of the houses were actually stockaded, except that of the former innkeeper. The evidence that his house was used as a garrison lies in the fact that he claimed remuneration for damage by such use.

Goodman Harriman acquainted the town that the sentinels going daily upon his house upon the platform did do him some damage, breaking or removing the shingles (they being decayed) so that the water came the more into the house, and did propound that if the town did think it for their convenience to make use of his house that way, that they would do something in helping him to cover it.

There is evidence that while Mr. Harriman kept the ordinary he removed his residence. The writer has not been able to determine with certainty where he commenced the business, but from the mention of Mr. Lamberton's house when Mr. Harriman was first nominated, and from the connection between him and Mr. Goodyear in business, it seems probable that the Lamberton house, vacated

when the widow of Mr. Lamberton became the wife of Mr. Goodyear, and conveniently situated for the refreshing of seamen and ship-builders, was used as an ordinary. After Mr. Goodyear's death his house and home-lot, on the corner of Chapel and College streets, was sold by order of the Court for the benefit of his creditors, and Mr. Harriman became the purchaser. The deed is dated March 22, 1658-59, and conveys, "with Mrs. Goodyear's consent, the house lately belonging to Mr. Goodyear, with the barn and kitchen and whatever else is included in the sum of £120 as expressed in the inventory, with the home-lot proper to the house." About a year later the commissioners on the estate of Mr. Goodyear conveyed to Henry Lindon, by order of the Court, an adjoining lot, and Mr. Lindon, on the 1st of May, 1660, conveyed the same lot to John Harriman, describing it as the home-lot called Mr. Hawkins' lot, and inserting the condition, "If John Harriman leaves the ordinary the lot is to be tendered to the town upon just considerations." In 1680, John Harriman records these two lots as containing three acres each. Originally, one of these lots had been laid out to Stephen Goodyear and the other to a friend of Goodyear who had taken stock in the plantation, but failed to come in person. By conveyance from Hawkins, Goodyear had become possessed of three acres in addition to the three that were his from the first. On the corner lot stood the Goodyear mansion, which, some six or seven years before his death, he had offered to give for the use of the college which he and others were so desirous to see set up in New Haven. The six acres which John Harriman thus acquired he devised by his will, dated 1683, to his son of the same name. In March, 1700, N. S., John Harriman, minister of the Gospel, then of Elizabethtown, New Jersey, and Hannah, his wife, conveyed the six acres to "John Harriman, Jr., Inkeeper," and in 1703, the last named "John Harriman, Jr., of Elizabethtown, New Jersey, Cordwainer," conveyed to Captain John Miles "one acre and my Mansion House." This acre was bounded north by Market place; west by street; south by Captain John Miles' land; east by land of John Harriman, Jr. It is the opinion of Henry D. White, Esq., who has kindly traced the conveyance of the property, that the Beers house which immediately preceded the edifice which we call the New Haven House, or some portion of the Beers house, may have been "the Mansion House," erected by Deputy-Governor Goodyear, and conveyed to Captain John Miles by the third John Harriman.

At first thought this location of the ordinary does not seem to answer the requirement that it should be near the water. But if one keeps in mind that the first planters landed near the corner of College and George streets, it will appear that the site where Moseley's New Haven House stands, though now remote from any wharf, was not at that time inconvenient for travelers who came or went by water.

Abraham Dickerman, or as he was not long after styled, Lieutenant Dickerman, was probably born in England, came in childhood with his parents to

Massachusetts, married Mary, daughter of John Cook, December 2, 1658, and after the birth of his first child removed to New Haven. In 1668, he bought of Thomas Kimberly, Senior, his "dwelling-house and barn with all other appurtenances there-to belonging, which said house, barn and house-lot was formerly in possession of Richard Perry." The home-lot of Richard Perry was on the northeast corner of Church and Elm streets, and there is no reason to doubt that the ordinary was kept on that corner in 1661 and for some years thereafter.

Lieutenant Dickerman was a man of mark in New Haven, having represented the town in the General Assembly for twenty-one sessions between 1668 and 1696. His son, Deacon Isaac Dickerman, also had a long service in the Legislature, having been appointed deputy for fifty-nine sessions. He was one of the deputies for New Haven when the attempt was made to remove the College from New Haven to the northern part of the State. Dr. Leonard Bacon was wont to say of that attempt that it was the only contest between New Haven and Hartford in which New Haven had not been defeated. Lieutenant Abraham Dickerman was also entrusted by the town to act as their committee or agent in the settlement of the Rev. James Pierpont.

Mr. Dickerman having accepted the appointment to keep the ordinary upon trial, found the business as unsatisfactory as his predecessors had done. The want of a circulating medium was a serious impediment to all trade; but especially so where barter was impossible, because one of the parties was non-resident. The rude currency of the aborigines, which at first did good service, was found to be in many instances of so poor material that, like debased or clipped coin, it lost purchasing power as it passed from hand to hand. An inn-keeper was especially liable to loss by the use of wampum, for no one would receive it in payment for grain or flesh, and still less for West India goods. In about four years after he began, Mr. Dickerman gave his second notice that he wished to retire from the ordinary.

April 27, 1675.

Abraham Dickerman spake to the town and told them he had formerly given notice of his laying down the ordinary, and had desired the town to provide another person to keep it; and said he was not provided to carry it on, and that he would not have the hazard of breach of law, or inconvenience by his keeping it at present, being not provided as is necessary for such a business. The town answered that it was now late and many gone; therefore desired him to let the matter alone till another meeting.

But of course Mr. Dickerman was not immediately released. Four years later, April 27, 1680,

Abraham Dickerman (as he had done formerly) did again give notice to the town of his purpose to leave off keeping the ordinary, and did not see a course taken to settling of another in that work; but did desire it might not be offensive if he left it off, which he did intend to do.

A few months afterward

John Cooper, one of the townsmen, informed that they had considered the business of the ordinary and had spoken with some persons, but could not prevail with any to keep the ordinary, and therefore desired the town would consider the business and provide some person to keep it that they may be satisfied with. And the town did desire and appoint the

magistrates and townsmen, their committee, to take that matter into consideration and to provide a meet person to keep an ordinary, that the town be not destitute. and if the town have any land that is fit for pasturage, they would be willing to afford them encouragement.

The writer has not ascertained how the ordinary was carried on between 1680 and 1690. Perhaps Lieutenant Dickerman was as unsuccessful in his attempt to lay it down in 1680, as he had been in 1675; and again, perhaps, some record has been overlooked. Investigation becomes more difficult after Mr. Dickerman's day, because about that time New Haven discovered that it was subject to the laws of Connecticut, and that the General Assembly had committed to the County Court the trust of issuing licenses to innkeepers; and so the town gradually ceased to debate about the ordinary. During the decade of which we write there was an ordinary at the Iron-works at East Haven, for on "February 14, 1686, O. S., John Potter, who had been licensed to keep an ordinary for entertainment at Stoney River, now declared that he doth lay it down."

On the 24th of March, 1690, O. S.,

Lieutenant Sherman moved for a consideration of the matter about Captain Miles keeping an ordinary and for issue of it. After much debate *pro* and *con*, and Mr. Bishop had informed the town that George Pardee, Senior, had a license to keep ordinary by order of the County Court; with much debate about the business, it was at last put to vote and the major vote of the persons present carried it to chose Captain Miles to keep ordinary.

Captain Miles was at this time, in all probability, residing in the Goodyear Mansion House, Mr. Harriman having deceased, and his son to whom he had devised the property being a resident of Elizabethton, New Jersey. In 1703, as we have already seen, the old mansion became the property of Captain Miles, by conveyance from the third John Harriman. In October, 1701, the General Assembly of Connecticut sat in New Haven, and continued to hold its October sessions there till the new constitution was adopted more than a century afterward. As there was no public building except the Meeting-house till 1717, probably the Council sat at Captain Miles' inn. The lower house at their October session in 1702 voted: "This Court doth allow to Captain John Miles, five pounds in pay for the colony expenses in his house by the Court of Assistants and this General Court." The special mention of the General Court may imply that Captain Miles furnished committee rooms as well as a Council Chamber. The grant to Captain Miles in 1703 was for three pounds instead of the sum allowed in 1702.

How long Captain Miles continued to keep the ordinary in the Goodyear mansion has not been ascertained; but as there is no indication either on the map of 1724 or on the map of 1748, that the house was an inn, probably there was an interval of about a quarter of a century after Captain Miles vacated it and before it came into the possession of Isaac Beers, about the middle of the century, during which it was not a public-house.

At the proclamation of King George the Third in 1761, after the ceremonies at the Council Cham-

ber in the Court House, "the Governor, the Deputy Governor and Council, with numbers of clergy and other gentlemen of distinction, were again escorted to Mr. Beers', where an elegant entertainment was provided on the occasion." If tradition can make anything certain, this was the house, Mr. Beers being still the landlord, where Washington spent a night when he passed through New Haven on his way to take command of the army before Boston in 1775. Here Parson Whitelsey being invited to dine with the distinguished strangers, ascertained the age of the recently appointed commander-in-chief by diplomatically remarking that he must have been very young when he accompanied General Braddock to Fort Du Quesne. We know definitely when Mr. Beers retired from the business of an innkeeper. He advertises in the *Connecticut Journal* of February 18, 1778:

Isaac Beers returns his thanks to the public who have favored him with their custom since he has kept a public-house. He now informs them that by reason of a multiplicity of other business and the ill state of his health, he shall discontinue the same after the last day of instant February. Therefore he gives this notice that his former customers may not be disappointed in expecting entertainment as in times past.

Whatever may have been the truth in regard to the occupancy of the Goodyear mansion as an inn in the earlier years of the eighteenth century, the business of an innkeeper seems to have continued in the family of Miles. December 26, 1709, "Serjeant Richard Miles hath liberty granted to him to keep a house of public entertainment, he attending the law." This record is to be understood probably as a recommendation of him to the County Court as a proper person to receive a license, New Haven being in transition from its former habit of appointing innkeepers by vote of the town to the Connecticut method, in which appointments were made by the County Court upon the nomination of the Civil Authority, the Selectmen and the Grand Jurors of a town. This was only one of many things in which the subjugated colony was slow in learning the new ways required of her by the laws of Connecticut. Patience was necessary on the part of the victors lest their yoke should gall beyond endurance; and as at first they had allowed the magistrates of New Haven to govern "according to the laws of Connecticut, or such of their own as were not contrary to the charter," so they patiently waited for a gradual assimilation of the methods of New Haven to those of Connecticut.

A similar nomination of Richard Miles was continued from year to year till 1716; only in 1713 it was "put to vote whether the town would choose Lieutenant Richard Miles to keep a public-house of entertainment and passed in the negative."

December 17, 1711, upon the desire of Mr. Jeremiah Osborne that the town would grant him liberty to keep a house of public entertainment, it was granted to him, he qualifying himself thereunto as the law directs.

The reader will have noticed that the first planters of the town styled the one house provided for

the entertainment of strangers "the ordinary." The word passed out of use with the seventeenth century, and *tavern* became in the eighteenth century the more usual appellation of such a house. The word *inn* has not been very much used in New Haven, though the person who kept a tavern was usually described in conveyances as an "inn-keeper." Etymologically, an ordinary was a house of entertainment at a fixed price; a tavern was a place for refreshment with food and drink; while an inn was understood to include lodging as well as diet and drink, and to provide for a longer stay than a tavern. But practically there was no difference between an ordinary, a tavern, and an inn. Either name was used according to the preference of an individual or the custom of the place. Modern usage dignifies the largest and best houses of entertainment by calling them hotels. But in the olden time there were no such large public-houses in New Haven or elsewhere as those which we call hotels. A tavern was usually larger than the average dwelling-house, but not larger than the mansions of the most opulent families.

On the Wadsworth map of 1748 are four public-houses. James Peck kept an inn at the head of the wharf. He was the father of Captain Ebenezer Peck mentioned in Mr. Goodrich's account of the invasion of New Haven, and, as the writer supposes, was referred to by James Parker and Company in their advertisement of the *Connecticut Gazette* in No. 130. James Peck probably inherited the house where his inn was kept, as it appears on the map of 1724, drawn by Joseph Brown, as the house of William Peck. Samuel Cooke kept an inn in Chapel street, between Temple and College streets; John Mix was an inn-keeper at the corner of College and Elm streets, where West Divinity Hall now stands; and Israel Munson kept an inn on College street, further north than Mix's. Within the memory of persons now living, the house which in 1748 was kept by John Mix was called Cook's Tavern. Earlier than Cook and later than Mix its landlord was Justus Butler.

In 1763, mention is made in one of the advertisements of the *Gazette* of "John Beecher, Innkeeper at New Haven," and four years later is this advertisement:

To be sold cheap at Capt. John Beecher's Golden Ball Tavern, till next Wednesday, a large number of choice Philadelphia breeches, from fifteen to eighteen shillings a pair.

In 1769 occurs in the *Connecticut Journal* a notice of a vendue at the house of Captain John Beecher (the Golden Ball on the Green). Under date of March 29, 1780, an advertisement of "Richard Cutler's Store, opposite Mr. Beecher's Tavern," gives us further information in regard to the location of the Golden Ball. It was opposite Cutler corner; and as it was not on the Glebe land, it must have been where the Exchange Building now is.

In 1772, Joseph Smith, cordwainer or shoemaker, gives notice that his shop is "at the sign of the Green Boot and Shoe, next door to Mr. Baldwin's Tavern and near the upper end of Leather

Lane." Baldwin's Tavern was in the house previously owned and occupied by Colonel, afterward General, Wooster.

In the same year William Glen advertises an assortment of goods at his store next door to Mr. Atwater's Tavern, opposite to the Rev. Mr. Whittlesey's, and near the Long Wharf. Doubtless the tavern here mentioned as a way-mark, is the same which eleven years later is described in the *Journal* of May 22, 1783, as Mr. Thomas Atwater's Tavern near Long Wharf. It was probably just opened as a tavern when Mr. Glen used it in his advertisement as a way-mark, for Mr. Thomas Atwater was married to Margaret Macomber, May 28, 1772.

In the "Yale Book" are some extracts from the records of the Linonian Society relating how its anniversary was celebrated in 1773:

The Society convened at 11 o'clock at the dwelling-house of Mr. Thomas Atwater; two orations were delivered, the election of officers was held, and the first part of a lecture on Heads was exhibited, when we adjourned, says the chronicler, to the dining-room, where we found an elegant entertainment prepared. After dinner, as soon as matters could be properly adjusted, the new comedy, entitled the *West Indian*, was represented. * * * The whole received peculiar beauty from the officers appearing dressed in regimentals, and the actresses in full and elegant suits of lady's apparel. Between the third and fourth acts a musical dialogue was sung between Fenn and Johnson in the characters of *Damon* and *Clora*. An epilogue, made expressly on the occasion, and delivered by Hale *Secundus*,* was received with approbation. The musical dialogue was then again repeated, a humorous dissertation was delivered, and, at the request of several gentlemen who were not present in the former part of the day, the first part of the lecture on Heads was again exhibited. After a short pause, which was enlivened with a "Cheerful" Glass, a pathetic valedictory oration was delivered by Mead and answered by Tullar. At five o'clock the assembly walked in procession to the College and then dispersed.

Mr. Thomas Atwater entertained the society again in the following year (1774), and the performances were of a similar character.

It was at this tavern that the preliminary meeting for the organization of a bank was held in 1792, as related in the chapter on Banks.

Among the taverns of the city at the time of the Revolutionary War was one sometimes called the Tory Tavern. The house is still standing in Elm street, on the lot adjoining that on which is the First Methodist Church. It was built by Nicholas Callahan between 1772 and 1776. In 1781 the property was confiscated, Callahan being then "with the enemies of the United States." The property was bought by William McCrackan, and after several conveyances to persons who successively owned it for short periods, it was bought by Isaac Tomlinson in 1791, who, in 1792, sold it to Jonathan Mix. The Rev. Dr. Leonard Bacon, who lived in the house for several years, speaks of a ball-room "at the eastern side of the house on the second floor," which in his day had been divided into two apartments. It is probably too late now to ascertain whether the ball-room was there in

the time of Callahan. It is evident from Dr. Bacon's article in the *New Englander* of January, 1882, on "Old Times in Connecticut," that he had connected the name of Mix and no other name with the ball-room. We shall by and by allege reasons for believing that Dr. Bacon was mistaken in conceiving that this was the place where Dr. Mason F. Cogswell and others met for a dance on the 17th of November, 1787. But in this Tory tavern, in the first months of the Revolutionary War, probably the outspoken Tories of New Haven were wont to meet to talk over the news from the seat of war, to expatiate on the folly of the Whigs, and to strengthen one another in the expectation that the rebellion would speedily collapse.

Several taverns are incidentally mentioned in the numbers of the *Connecticut Journal* for 1783, and usually in advertisements of merchandise to be sold in shops near them. Under date of January, 1783, "Stocking-weaving at the sign of the Stocking Leg near Mr. Hawley's Tavern." August 6, 1783, "Josiah Burr at his house near Mr. Page's Tavern." The record made in 1784 of the names of the streets gives us the location of Josiah Burr's house, but not of Page's Tavern. August 13, 1783, "The stage will leave Smith's Coffee-House." On the 22d of December, 1784, Mr. Jedidiah Morse advertises that on Tuesday next will be published and ready for sale by the author, at the book store of Abel Morse, next door to Mr. Scot's Tavern, "Geography made Easy." As Abel Morse's book store was in State street, we have discovered that Scot's Tavern was also on that street.

Under date of January 26, 1785, is this advertisement: "To be sold, that large and convenient dwelling-house that is now occupied as the City Tavern, together with the stables and outhouses, situated on Water street, one hundred yards east of the Long Wharf." Within the memory of persons now living this was called Bulford's Tavern. In April, 1786, "Jacob Brown, one of the proprietors of the stages, informs the public that he has opened a house of entertainment in the City of New Haven." In May, 1787, he advertises that he has removed from the house he lately occupied on the Green, to Colonel Hubbard's elegant stone house near the Old Market, where those who wish to take passage in the stage, and others, may be decently entertained. November 15, 1786, Maltby and Fowler advertise goods which they have for sale at their store just by Miles' Tavern, Chapel street." September 19, 1787, Hezekiah Beardsley advertises an assortment of drugs "at his store directly opposite Mr. John Miles' Tavern." The tavern thus referred to was the same house afterward for many years, and within the remembrance of citizens now living, kept by Jesse Buck, and called Buck's Tavern. The person who kept it in 1786 was doubtless a descendant of Captain Miles, who in 1690 was chosen by the town to keep its ordinary. Contemporary with those thus mentioned in the journal, was the tavern of Jonathan Atwater at the corner of College and Crown streets. Its sign was a bunch of grapes. Mr. Goodrich, in his paper on the Invasion of New Haven by the Brit-

* There were two persons of the name of Hale in the Class of 1773. I think the designation *secundus* distinguishes Nathan Hale, "The Martyr Spy," from Rev. Amos Hale, whose name is the first of the two in the alphabetical list.

ish, says it was built by Joel Atwater in 1771. It may be true that Joel Atwater kept the Bunch of Grapes at the time of the invasion, but the tavern was older than "Joel Atwater's new house."

Jonathan Atwater thus advertises a stray, August 6, 1763:

Taken up as a stray, on the 1st instant, a large bay horse, about 9 or 10 years old, better than 14 hands high, a natural trotter, branded 224 on the upper part of his left buttock. The owner may have him by proving his property and paying charges. Inquire of Jonathan Atwater at the Bunch of Grapes Tavern in New Haven.

Jonathan Atwater, the father of Joel, was not living in 1763, and Jonathan, the brother of Joel, removed to Bethany. Whether the removal was later than 1763 the writer has not ascertained. If earlier, he must have been at the time of his advertisement visiting at the Bunch of Grapes. In 1763 it had been kept by two persons in succession, neither of whom was of the name of Atwater. In the *Gazette* of July 9, 1763, is this advertisement:

Verdine Elsworth, Innkeeper, at the sign of the Bunch of Grapes, near the entrance of the town, in the house John Stout lately removed from, takes this [lacuna] to acquaint the public that he keeps good entertainment for man and horse.

When Crown street was laid out it was "between the old and new houses of Mr. Joel Atwater." I think therefore the Bunch of Grapes must have been on the north side of Crown street. The "new house" on the south side of Crown street is still standing, and is occupied by descendants of Joel Atwater. There is no reason for discrediting the tradition that he was the keeper of an inn in one of his two houses at the time of the invasion. Dr. John Skinner told Mr. Horace Day that he spent his first night in New Haven at the Bunch of Grapes. He became an inhabitant of the town, marrying a daughter of Roger Sherman, and building a house not far from the place where, as a stranger, he had tarried for a night.

Some time in the last decade but one of the eighteenth century, Joseph Peck, being the keeper of the jail, kept a tavern in the county house connected with the jail. It stood within the present limit of the College Campus, in front of the site where the Lyceum now is. The county house and the jail were removed from the Green to this place soon after the incorporation of the city, and remained here till about 1800, when, new accommodations having been provided for the county in Church street, these buildings were removed. At an earlier date, when the county house was on the Green, a tavern was kept in it by Stephen Munson.

Contemporary was the tavern of Mr. Ebenezer Parmele, at the corner of Chapel and Gregon streets. The books for subscription to the capital stock of the New Haven Bank were opened here on the 9th of December, 1795. The Chamber of Commerce, which was organized in 1794, held its weekly sessions in this tavern "in the front room on the lower floor," and paid Mr. Parmele for the use of it "eight shillings for each session, he to furnish good candle light and good fire." The New Haven Insurance Company held its meetings here.

That Mr. George Smith kept a tavern near the head of the Long Wharf in 1787, appears in the following advertisement:

All persons desirous of sending small bundles, letters, etc., to New York in the Catherine Packet, John Clark, Master, are desired to leave them at Mr. George Smith's Tavern, near the head of the Long Wharf, New Haven; where articles of the like kind, brought from New York in said packet, will be left.

May 9, 1787.

There was also as early as 1786 a public-house at the corner of Court and Orange streets, called the Assembly House or the City Assembly Room. It was kept by John Mix, Junior, who, in 1785, leased the lot for 99 years from the Hopkins Grammar School, and appears to have opened his house in the summer of the following year. In the *Connecticut Journal* of August 2, 1786, he had the following advertisement:

A musician wanted immediately (or by the 20th of August), to live in a family. A person who understands the rules of music and is a good performer on the violin may meet with generous encouragement and constant employ by applying to the subscriber at the City Assembly Room in New Haven.

JOHN MIX, Junior.

§ * ¶ None need apply but those who can be well recommended for their honesty and sobriety.

July 24, 1786.

His expectation of patronage seems to have increased, for, having continued this advertisement till August 16th, he exhibits this in the next number:

Wanted for commencement evening and the evening following, four or five excellent performers on the violin; a number of cooks and attendants for the week.

The subscriber wishes to contract for a number of fat turkeys and fowls; a quantity of butter, cheese and eggs; and a number of other articles of provisions. Apply immediately at the City Assembly Room.

August 16.

JOHN MIX, Jun.

From year to year similar advertisements indicate that this was the center of the festivities of Commencement week. The writer feels confident that here was the dance on the 17th of November, 1787, which is referred to in the diary of Dr. Mason F. Cogswell, on which Dr. Bacon comments in his article entitled *Old Times in Connecticut*. The evidence that here was the Mr. Mix's at which the young people of New Haven were wont to dance, sufficiently appears in the following advertisement dated only eleven days after the evening when Dr. Cogswell "joined a party of about twenty couples at Mr. Mix's:"

DANCING SCHOOL.

The dancing school kept by M. Charles J. De Berard is now open for the reception of ladies and gentlemen at the City Assembly Room in Court street. N. B.—Ladies and gentlemen in the country who wish to attend the dancing school may be accommodated with genteel boarding and lodging at the City Assembly Room, by the public's most humble servant.

JOHN MIX, Junior.

NEW HAVEN, November 28, 1787.

Mons. Charles De Berard having been an officer in the French Army, had preferred to remain in America rather than return to France to face the consequences of a duel in which he had been engaged. One of his descendants residing in Syracuse, N. Y., possesses a catalogue of the pupils attending his dancing school in New Haven in 1792.

Mr. Goodrich, in his paper on the British invasion, incidentally mentions the tradition that Talleyrand stayed at Mix's Assembly House when he visited New Haven in July, 1794.

In the *Connecticut Journal* of January 6, 1789, is found mention of Eber Sperry's Tavern at the corner of Elm and York streets.

Before the end of the eighteenth century came an entire assimilation of New Haven to the Connecticut method of appointing taverners. In the archives of the County Court (now in the keeping of the Superior Court, for the reason that the New Haven County Court has followed the New Haven Colony into non-existence), are the nominations of the civil authority, the Selectmen and the Grand Jury of "persons whom they think fit and suitable to keep an house or houses of public entertainment" in the town of New Haven during the year 1808. These persons are Justus Butler, Jacob Ogden, John Clark, Joseph Nichol, Asa Morgan, Simon Wells, John Howe, Amasa Good-year, Daniel Candee, Jonathan Maltby, Charles Lewis, James B. Reynolds, Stephen Rowe, Joel Pardee, Linus Lines, Benjamin Lewis, John Mix and William Love. On the 14th of March these additional were nominated: Andrew Farrell, Richard Thomas, Elisha Frost, Zenas Cooke and Jared Leavenworth.

The list shows a large increase in the number of taverners since the time of William Andrews and John Harriman. But it is to be remembered that some, perhaps more than half of these, resided at a distance from the center of the town, and kept houses of entertainment for teamsters and cattle-drivers, and that probably some were taverners rather than inn-keepers, applying for a license in order to "retail drink" rather than to lodge strangers. Whatever may be the reason that so many were nominated, Dr. Dwight counted only twelve inn-keepers, in 1811, within the limits of the city.

Several of these taverners continued to be nominated year after year for a long period, but most of their names have passed into oblivion. Justus Butler and Jacob Ogden are, however, remembered by some of our older citizens. Justus Butler's tavern was on the lot now occupied by the Post Office building. He removed thither in 1796, having previously kept the house at the corner of Elm and College streets. His tavern was in high repute among *bon vivants* for the excellence of its cuisine; and not only was Mr. Butler an enthusiast in his art, but some of his patrons were so enthusiastic as to maintain that there was no limit to his capability. A lawyer from out of town who had heard his New Haven brethren declare that Butler never failed to fill an order, expressed a desire to have bear meat for supper, and Butler happening to have among his guests a man who was traveling with some trained bears, bought one of the animals and filled the order at the time appointed. In December, 1816, Mr. Butler gives notice that he "has removed from the large house he lately occupied in Church street to one nearly on the opposite side of the street." When President Monroe visited

New Haven in June, 1817, he dined with his suite and the dignitaries of the city and of the Commonwealth at Butler's, and at the close of the repast gave audible expression to his content. Mr. Butler is said to have declared that this was the supreme moment of his life—that having now successfully entertained the chief magistrate of the nation, he had nothing more to look forward to in this world, and was ready to die.

Jacob Ogden kept the Coffee-House on the site where the Tontine was afterward built. The house itself was removed to a lot further north on the same street, where it became the home of the Rev. Dr. Leonard Bacon. Before Mr. Ogden kept the Coffee-House he had been a prominent man in Hartford, both in business circles and in the vestry of Christ's Church. His removal to New Haven was occasioned by a reverse of fortune. The Coffee-House stood some distance back from Church street, so that there was a grass plot in front on which in Court term the lawyers sat after dinner and after supper. Ogden's Coffee-House is the same institution which at an earlier date was called Smith's Coffee-House, and as such was advertised in 1783, as the place from which "the stage will take its departure." Four years before 1783 the house had been the home of Joshua Chandler and his family. When the British left New Haven on the 6th of July, 1779, Chandler and his family left all they had and went with the invaders, never more to return.

David Austin, Thomas Howell, and Jeremiah Atwater give notice in the *Connecticut Journal* of December 15, 1779:

We, the subscribers, being appointed Commissioners by the Hon. Court of Probate for the District of New Haven, to receive and examine the claims of the creditors to the estate of Joshua Chandler, lately resident in New Haven, now with the enemies of the United States, hereby give notice that we shall attend for that purpose at the house in which said Chandler lately dwelt, in said New Haven, on the first Monday of January next, and on the first Mondays of the five following months.

Charles Chauncey, Esq., is appointed administrator on the estate of said Joshua Chandler.

In about eleven months after the Chandlers left their house, its conversion into a public-house is thus advertised:

New Haven Coffee-House is just opened by the subscriber at the house lately occupied by Mr. Chandler, the east side of the Green, where all persons who may favor him with their custom may depend on the best usage and the readiest attendance given by the public's humble servant,
JABEZ SMITH.

The writer does not know who kept the Coffee-House after Jabez Smith retired from it and before the coming of Mr. Ogden. He thinks, however, that it was Henry Butler, who in 1816, soon after the steamboat Fulton began to make regular trips to New York, advertises that he has removed from the New England Coffee House in Church street to the Steamboat Hotel on the bank, near the bridge where the Fulton arrives and takes her departure. A few weeks later he advertises that the corner-stone of a new steamboat hotel was laid on the 4th of May, to be built by Messrs. Tomlinson & Townsend, in connection with the

proprietors of the steamboat Fulton, for the convenience of passengers traveling in the boats. "It will be," he says, "when completed, the most superb edifice of the kind, as respects appearance, convenience and situation, that there is in the United States."

The "new steamboat hotel" was called the Pavilion, and for several years was much resorted to in summer by families from the Southern States and the West Indies.

In 1824, when Lafayette visited New Haven, he was entertained at Morse's Tavern, or Morse's Hotel, as it was sometimes called in accordance with modern usage. It was on the corner of Church and Crown streets, where the Hoadley Building now is, and as it was selected by the city government for the entertainment of their distinguished guest, was doubtless considered as, at the time, the best house of public entertainment in the city. What had become of Justus Butler the writer does not know, but assumes that he was not at that time keeping the tavern on the other side of the street. The coffee-house, too, had ceased to be a public-house, if indeed it had not already started on its journey northward. It was at Morse's that the dinner was provided by the First Ecclesiastical Society for the Council which installed Dr. Bacon in 1825. For the instruction of those who think that the golden age is in the past, and that there has been no progress in the right direction within the last sixty years, we copy the bill which the Society paid for the entertainment of the "Reverend and Beloved."

NEW HAVEN, March 8th, 1825.

	<hr/>
	\$88.50

March 23d, Recd. payment for A. Morse,
G. MORSE.

The building in which Morse's Hotel had been kept was bought by James Brewster, and converted into a carriage factory. He built a brick addition, with an entrance on Crown street, for the accommodation of the "Franklin Institute," a literary association of which Mr. Brewster was a liberal patron, if not the founder, designed for the improvement of young mechanics and other young men by means of lectures and courses of study.

The carriage-shop, however, was more prosperous than the Institute, and soon occupied both parts of the edifice, the old and the new.

About the time that Morse's Hotel was abandoned, the Tontine was erected and occupied as a house of public entertainment.

The Tontine plan of investment was originated by Lorenzo Tonti in the seventeenth century. Its essential feature is that as one shareholder after another is removed by death, his share becomes the property of the survivors. In the New Haven Company it

is provided that when the number of shareholders is reduced to seven, all the property, real and personal, shall revert in fee simple to those seven persons and the company come to an end. The Tontine Coffee-House, for so it was at first called in memory of Smith's Coffee-House and Ogden's Coffee-House which had preceded it, was for a time kept by A. Andrews; afterward by William H. Jones, who being the Postmaster of the city, found the basement of the Tontine Building sufficiently capacious for the business of the office. The Tontine was afterward kept by S. W. Allis till the New Haven House was built by Mr. Augustus R. Street, when Mr. Allis removed thither and became the first of its landlords.

Mr. Street when building the elegant edifice which he presented to the School of the Fine Arts, sold the New Haven House to Yale College, by whom it was sold to Mr. S. H. Moseley, its present owner and manager.

We have now brought the history of inns and hotels in New Haven to the time when some of the existent public-houses were built and opened. It only remains to mention in alphabetical order the present hotels of the city. The directory for 1886 contains the following list:

Adams House, George street.
City Hotel, Wooster, corner of Union street.
Durant Hotel, State street.
Elliott House, Chapel, corner of Olive street.
Elm House, Water street, corner State street.
Fair Haven Hotel, Grand street.
Franklin House, Greene, corner of Franklin.
Grand Union Hotel, Chapel street.
Herbert House, Dixwell avenue.
Hotel Arcade, Wooster street.
Hotel Brunswick, Court street.
Hotel Converse, State street, corner George street.
Hotel Hanover, St. John street.
Hotel Yale, Court street.
Kenwick House, Chapel street.
Kimberly Avenue Hotel, Kimberly avenue.
King's Hotel, Chapel street.
London House, Wooster street.
Maines Hotel, Church street.
Merchants' Hotel, State street.
New Haven House, Chapel, corner of College street.
Powers' Hotel, State street.
Selden House, State street.
Seymour House, George street.
Tontine, Church street.
Traeger's Hotel, Center street.
Tremont House, Court, corner of Orange street.
Union House, Union street.
Winchester Hotel, Ashmun, corner of Henry street.
Windsor Hotel, Union street.
Woolsey House, Meadow street.

These profess to be public-houses for the entertainment of travelers, in distinction from restaurants. By a judicious selection a stranger may find comfortable lodging in a style suited to the length of his purse, and with a more manly philosophy than that of Shenstone, may alter one word in the poet's verse and say:

Here, waiter, take my sordid ore,
Which lackeys else might hope to win;
It buys what courts have not in store,
It buys me freedom at an inn.
Whoe'er has traveled life's dull round,
Where'er his stages may have been,
May [smile] to think he still has found,
The warmest welcome at an inn.

BIOGRAPHIES.

SETH HAMILTON MOSELEY.

The Moseley family in England (spelled also Maudsley, Modesley, Mosly, and in other ways) has been traced back through several generations prior to the European settlement of this country. In these early periods it embraced not a few men prominent in Church and State, men of learning and of active business enterprises. But in the brief biography now proposed we must leave this English history of the family with this passing reference.

The first American ancestor of the subject of this sketch was John (1) Moseley, who, with his wife Cecilia (written also Cicily or Sisily), came to Dorchester, Mass., in 1630, in the ship *Mary and John*, with the Warham and Maverick company, the body of whom removed six years later to Connecticut, and founded the town of Windsor. The Moseley family with others remained in Dorchester. From this John (1) Moseley, the line of descent ran through Thomas (2), who married Mary Cooper; Ebenezer (3), whose wife was Hannah Weeks; Nathaniel (4), who married Sarah Capen; Nathaniel (5), whose wife was Rosanna Allworth; and Samuel (6).

The first Nathaniel (4), born December 1, 1766, with his wife, Sarah Capen, before the year 1745, removed from Dorchester to that part of Windham, Conn., now the town of Hampton. Here his brother Samuel, a graduate of Harvard College, 1729, had, in 1734, been ordained and set over the parish church, and here he filled the pastoral office from 1734 to his death in 1791. Nathaniel (4) was made a deacon in his brother's church in 1761.

The second Nathaniel (5) lived in that part of Windham, Conn., now the town of Chaplin, and here his son Samuel (6), one of several children, was born August 16, 1780, and married, May 8, 1803, Beulah Alworth, of Chaplin, who died soon after the birth of a daughter. She was a woman of beautiful character, and much beloved. On February 17, 1808, he married his second wife, Polly, daughter of Jonathan and Lydia (Bill) Tarbox, of Hebron, Conn., who was born July 17, 1782. They had nine children, of whom two were daughters. The subject of this record, the youngest of these children, was born in that part of Springfield, Mass., known as the Sixteen-Acre Mills, on July 19, 1826.

In his early years he attended the district school near his father's house. At the age of twelve, having an aptitude for study, he was entered at the Springfield High School, as it then was, and commenced a course of education preparatory to college. To carry out this purpose of a collegiate education he struggled for years with ill-health, which often compelled him to abandon the school-room. In 1843, the Massasoit House, at Springfield, entered upon its long and successful career. Young Moseley, being then seventeen years old, found employment in this house, his motive being

to earn money for his college course. In the following two winters he taught school in Somers, Conn., for the same object. He was for a time connected with the Wesleyan Academy, Wilbraham, in this preparatory course.

At last becoming discouraged with the ill-health which seemed always to settle upon him as soon as he was fairly launched upon his studies, he accepted a position in the Massasoit House, and began what proved to be his life work. He remained in this house not far from fourteen years, or until 1858, and it is entirely safe to say that his services conduced largely to its growth and prosperity. He had come to be recognized by hotel men far and wide as having remarkable qualifications for this department of business, and inviting offers began to present themselves. In 1858 he was chosen by Mr. Albert Clark to be his partner in the Brevoort House, New York, which was long regarded as a hotel having no superior in this country. The strong confidence which Mr. Clark had in him was shown by offering him an equal interest in the business. But Mr. Moseley had only a small amount of money saved from his previous salary to secure an interest costing something more than \$50,000. Under these conditions (Mr. Moseley being unwilling that any friend should run any risk by being his indorser) Mr. Clark took his notes, payable on demand, with no security save the confidence he had in the integrity of the man and his ability to make a success of their united enterprise. The result soon showed that the operation was a success, and entirely safe and secure to both parties.

While connected with the Massasoit House, he had been united in marriage, December 4, 1855, with Sarah Jane, daughter of General Benjamin E. Cook, of Northampton, Mass. The children of this marriage were, William Hamilton Moseley, born in Springfield, October 22, 1857, now associated with his father in business, and Sarah Emma Clark Moseley, born in New York, March 8, 1859, and now living in New Haven. Eight days after her birth, the wife and mother, greatly beloved in all the circle of her kindred and acquaintance, was called away by death.

After four years of most successful business in the Brevoort House, Mr. Moseley was so utterly broken in health by his cares and domestic affliction, that the physicians decided he must leave his position at once, or pay the forfeit with his life. The very general opinion among his friends was that he could not recover, whatever he might do, but closing out his business he devoted himself assiduously to the work of recovery. In these later years those who know him best have often said that his own determined will, carrying out persistently such plans as his best reason suggested and approved, brought him back to health.

For a year after leaving his position he was terribly prostrated and a great sufferer. As soon as he

Leik H. Massey

Saml H. Crane.

felt that he could possibly travel, he set out upon an extended journey through Europe and the East, occupying a large portion of the years 1863-64. For the next three years he gave himself to the same general regimen in this country, traveling and recreating.

In November, 1867, he purchased the New Haven House, which was then the property of Yale College, a part of the estate left by the late Augustus R. Street for the establishment of the Art School of the College.

About the same time, he was again united in marriage with Miss Elizabeth Rogers Perkins, daughter of Henry and Abby Barker (Noyes) Perkins, of Salem, Conn. By this marriage there have been two children, Julia Noyes Moseley, born in New Haven October 6, 1868, and Henry Perkins Moseley, born in New Haven April 14, 1872. The son is pursuing studies preparatory to college.

The brief space to which this sketch is necessarily limited forbids further expansion. The people of New Haven, and travelers from far and near know the excellence of Moseley's New Haven House since he came into possession of the property in 1867. As a citizen of New Haven, interested in its Christian and benevolent enterprises, his record is plain and open, and is a record of positive activities for good objects and ends.

SAMUEL H. CRANE

was born in Springfield, Mass., November 9, 1839, the son of Samuel R. Crane, of Washington, Berkshire County, Mass., and Mary W. Butler, of Pittsfield.

Mr. Crane received a common school education in Springfield, and in 1855 engaged as telegraph operator at the Massasoit House. Remaining there four years, he came in 1859 to New Haven, and

was employed in the office of the New Haven, Hartford, and Springfield Railroad Company, at Belle Dock. After six years service there, he was engaged as clerk at the Savin Rock House during two seasons. In the fall of 1866 he went to St. Augustine and assisted in the management of the Florida House.

Filling two seasons there, he returned north in 1867, and engaged as assistant manager of the Charles Island House off the Milford Coast. In the fall of 1868 he went to Norfolk, Va., and returning shortly after, took charge of the Beach House at West Haven. Mr. Crane returned in 1869 to St. Augustine, and took the management of the Florida House. After fulfilling one season in charge of the Sea View House in West Haven, he came, in 1874, to the Elliott House, New Haven, and shortly after assumed sole control of it, and so remains to-day, 1886.

While here, he has also supervised the management of the Sea View House, the Branford Point House, and the Crocker House at New London.

Mr. Crane was married in Newtown, Maryland, to Ellen L. Barnes, of Fair Haven, April 14, 1869. They have one daughter and one son.

Mr. Crane has developed with much application, a natural talent in the arts, and is a practical oil painter, having from childhood pursued it as an amateur.

The Elliott House, ranking first-class among the New Haven hotels under the hand of Mr. Crane, has come to supplement, in the lower part of the city, a want long felt of well ordered and generous accommodations, and his native *bonhomie* and cheer have made him well known as a reliable and capable host, attentively meeting the often irksome and arduous demands made by the house and home wants of a growing city.

CHAPTER XXV.

PUBLIC AMUSEMENTS.

Compiled under the supervision of Mr. C. C. Benham.

THE first planters of New Haven were too serious to feel the need of amusement for themselves or to provide it for their children. But it is an error to think that they were positively hostile to the social festivity which is natural to all who are pleasantly situated, and especially to those who are in the morning of life. If the fathers of the new settlement made no provision for meetings of mirth, they did not attempt to prohibit the younger members of society from providing for themselves. Of course they attempted to regulate such meetings, that they might not become nurseries of vice. It was with such intent that the General Court ordered that single persons shall not "meet together upon pretence of husking Indian corn out of the family to which they belong after nine of the clock at night, unless the master or parent of such person

or persons be with them to prevent disorders at such times, or some fit person intrusted to that end by the said parent or master."

The social amusements of the young people of the first generation were connected with the frequent huskings of the autumnal season, the occasional house-raising, and the regularly recurring trainings, of which there were six in the year. On the last named occasions the soldiers were required to "exercise themselves in running, wrestling and leaping, and the like manly exercises;" and were encouraged to play at cudgel, back-sword, stool-ball, nine-pins, and quoits.

The young men who were contestants in these athletic games were surrounded by a crowd of interested spectators of both sexes and of every age. The people of the town came to the Market Place

to witness these by-plays of the General Training as the Greeks flocked to the Isthmian games.

As the first generation gave place to the second, some amusements came into vogue which were less pleasing to the older and more sedate people. In 1660, the General Court protested against "night meetings unseasonably," "corrupt songs," "foolish jesting," "wanton and lascivious carriages," "mixt dancings" and "immoderate playing at any sort of sports and games." About a year later this declaration of the Court was read as a warning to Samuel Andrews, Goodwife Spinnage and James Heaton, when, being summoned before the Court, they were charged with allowing young persons to play cards in their houses. Goodwife Spinnage said that the scholars had played at cards at her house on the last days of the week and on play-days in the afternoon, but in the evening, never. Andrews confessed he had done wrong, and professed his hearty sorrow. Heaton "acknowledged that he might have spent his time better, and if it were to do again, he would not do it, being it is judged unlawful and gives offence; but for the thing itself, unless all recreation is unlawful, he cannot see that what he hath done is evil." The Court suspended judgment, "hoping that this will be a warning to them to take heed of such evil practices and to improve their houses to better purposes for time to come than herein they have done." But as if Heaton had given less satisfaction than the others, he was called again some three months afterward, when he "declared unto the Court that he understood that there were reports abroad of his miscarriage in suffering some young persons to be at his house at an unseasonable time; which report he acknowledged to be true, and professed his hearty sorrow for it, and his desire to see the evil of it more and more, and that God would help him for time to come to keep a conscience void of offense toward God and toward men." In less than a year after this second appearance before the Court, Mr. Heaton married the daughter of the teaching elder and was from that time so exemplary, that twenty-five years later, when the church was without an elder, he was sent to Boston and Portsmouth, in company with Deputy-Governor Jones, in search of a suitable candidate to fill the vacancy.

When the second generation in their turn were giving place to their successors, the amusements of the young people had become still more displeasing to the magistrates, elders and other persons of gravity. In 1692 the ministers of New Haven County united in proposing a lecture to be preached in the several towns, the object of which was "to further religion and reformation in these declining times." The Town of New Haven, in town-meeting assembled, thankfully accepted the proposal, but "recommended to the authority, town-officers and heads of families to take the utmost care they can to prevent all disorders; especially on lecture days; and particularly that there be no horse-racings on such days."

In the latter part of the eighteenth century dancing was very fashionable in New Haven. Two

causes conspired to cultivate a taste for this amusement. One was the residence here of French families driven from their native land by the terrors of the French Revolution, many of the Frenchmen being not only skillful practitioners, but teachers of the terpsichorean art. Another was the presence in the city of a considerable number of resident graduates of the College, who seem to have given themselves to this amusement with an enthusiasm hardly surpassed by that of their charming partners.

During the same period, also, the presence of the College in the city contributed to the cultivation of the drama. The Linonian Society, and at a later date the Brothers in Unity, were wont to give an annual exhibition of tragedies, farces and comedies, with such aids of costume and scenery as were within reach and not prohibited by the Faculty.

It is on record that President Dwight when an undergraduate was an actor on the stage of the Linonian Society. At the anniversary of the same society in 1772, the play was "The Beaux's Stratagems;" and among the performers were Nathan Hale, the martyr spy, and James Hillhouse, the first Commissioner of the School Fund.

Probably the first theatrical entertainment in New Haven by professional actors was given on the 3d of April, 1800. The *Connecticut Journal* of that date contains this announcement:

THEATER.

This evening, Thursday, April 3, at Mr. Booth's Assembly Hall, New Haven, will be presented a variety of theatrical entertainments, called an Evening's Regale.

The evening's entertainment to commence with a monody on the death of General George Washington, as lately spoken in the principal theaters of America.

A popular new song, called "Nong, Tong, Paw; or, John Bull's Trip to France."

"Bucks, have at ye all; or, the Picture of a Play-house."

"THE KIDNAPER; OR, THE IRISHMAN IN LONDON."

Gulwell.....by a young gentleman.

Mons. Lebarose.....by Mr. Lattin.

Paddy O'Blarney.....by Mr. Ormsby.

The favorite song, called "The Hobbies."

The humorous satirical sketch called "The Drunken Man," as wrote by Kippesly.

To which will be added a celebrated Pantomime called

"THE DEATH OF HARLEQUIN."

Harlequin.....by Mr. Lattin.

Pantaloon.....by a young gentleman.

Cuddy Soft Skull.....by Mr. Ormsby.

Columbine.....by a young lady.

After which, by a grand piece of machinery, an exact representation of Captain Truxton's victory, displaying the engagement between the Constellation and L'Insurgent, with a beautiful view of the sea and the fishes sporting in the waves. A grand procession of Neptune and Amphitrite in their majestic car, drawn by sea-horses, with a view of uncommon fishes, sea-lions, sea-fowl of different kinds, mermaids, etc., etc.

The whole to conclude with the popular Federal song called "American Commerce and Freedom."

Tickets 1s. 6d. each, to be had at the theater. Performance to commence at 7 o'clock.

*. * No person admitted without a ticket.

Theatrical amusement was, however, of slow growth. The clergy set themselves against it, and the great revival of religion which characterized the early years of the present century enabled the

clergy to put a taboo upon this amusement; so that probably no play was presented in New Haven by professionals for thirty years. Amateur performances were, however, tolerated, if not approved; and the three college societies very nearly, if not quite, supplied what little demand there was for dramatic entertainments. Some quite respectable historical tragedies were written by undergraduates and exhibited by their class-mates. After the establishment of the Lancasterian school, "Lovell's Exhibitions" provided a similar entertainment for a much more numerous class of people than could be accommodated in the Linonian or the Brothers' Hall. Once at least Lovell's exhibition was held in the Methodist Church over the Lancasterian school, and was as numerously attended as the space would permit.

A great change has taken place in public sentiment within the last fifty years in regard to dramatic entertainments. We shall now proceed to sketch briefly the history of the theatre since its introduction as one of the permanent institutions of the city.

In 1847 the city was visited by negro minstrels, or by persons calling themselves by that appellation. They called themselves also the "Apollonians," and "The Baker Family." In 1848, the New Haven Elocution Class gave a dramatic entertainment in the hall of the Mechanics' Institute in Street's Building, corner of Chapel and State streets.

In 1849, the New Haven Elocution Class gave a dramatic performance in Temple Hall, Court and Orange streets. In this and previous performances, the female characters were taken by boys and young men.

In 1850, "The Lady of Lyons" and "The Loan of a Lover" were given at Exchange Hall by the New Haven Elocution Class.

Mr. Elisha Homan announced, in 1851, that, assisted by his brothers and sisters and members of the New Haven Elocution Class, he would give a series of five dramatic performances, commencing February 26th. The attempt was so successful that in December of the same year, another series of plays, lasting for four weeks, was announced by the Homan family, assisted by the Elocution Class.

In 1852, the Homan family and the Elocution Class gave plays through Christmas week, followed by a series from February 14th to 19th, and another series from March 28th to April 1st.

During the winter and spring of 1853, Mr. George H. Wyatt and his company presented plays

at the Temple. During the same year the Homan family opened a permanent theatre in Exchange Hall, corner of Church and Chapel streets, under the name of Homan's Athæneum, with a new stage and scenery. Their first appearance was September 16th, and the announcement of permanence was made at the performance on September 19th.

But a rival was already in the field; for "Wyatt's Dramatic Lyceum" announced itself September 5th, promising to give dramatic performances for four weeks from date, at Temple Hall, with new stage and scenery. These two institutions were both in operation through the season of 1853-54.

In September, 1854, Mr. Henry Plunkett became lessee and manager of the Homan Theatre, and named it Plunkett's Olympic. He introduced a higher class of plays than had been seen in the city. But he was not successful, and gave up the theatre after running it for two seasons. It was then taken for a short season by a stock company of actors; but they soon retired, and the theatre was permanently closed.

The American Theatre, in a hall corner of Church and Crown streets, was opened in 1855, and after a short season failed.

The Union Theatre, in Union Hall, Union street, was opened about the same time, and had a similar history of failure.

Music Hall, erected by Mr. Samuel Peck, was opened November 19, 1860, with a promenade concert by the New York Philharmonic Society. In 1869 the stage was remodeled and fitted with scenery and appliances for dramatic performances. In 1870 the ownership was transferred to Mr. Clark Peck, who changed the name of the building to Grand Opera House. In 1884 it was leased to Mr. G. B. Bunnell, being for a time known as Bunnell's Museum, but more recently as Bunnell's Grand Opera House.

New Haven Opera House, built by Dr. Paul C. Skiff, was opened February 19, 1877, by the Providence Opera Company in "Rosedale." The stage is sixty-five feet deep, and is one of the best in New England.

Carll's Opera House, built by Mr. Peter R. Carll and a stock company, was opened September 20, 1880. It is the second hall of its kind in size to be found in New England, seating 2,000 people. It has a very large stage, furnished with artistical and mechanical appliances, handsome dressing and reception rooms, and other conveniences, so that it is generally considered by experts one of the best constructed buildings of the kind to be found in the country.

CHAPTER XXVI.

TREES AND PARKS.

BY HENRY HOWE.

Author of "Historical Collections of Virginia," "Historical Collections of Ohio," "Historical Collections of the Great West," etc.

[This article is largely derived from "New Haven's Green and Elms," by Henry Howe, published in the *New Haven Journal and Courier* in 1883-84.]

NEW HAVEN has always been famous as a city of gardens. By the original laying out of the town in large squares, extensive grounds have been one of its marked features from an early day. The soil is highly favorable to the cultivation of fruits and vegetables, being a light, warm, sandy loam, easily tilled, and duly responsive to the care of the gardener.

But the especial charm of our city is its elms. The abundance and beauty of the trees of this species justifies the fanciful appellation often applied to it—"Elm City" or "The City of Elms." This descriptive term was first used by a widow lady, who, half a century since, lived in a large white house on Temple street, on the lot north of the Chapel of the United Church. Her maiden name was Louisa Caroline Huggins. She was town-born (1799), and at the time of her marriage (1818) to Cornelius Tuthill, was called "the belle of New Haven." Our memory of her is that of a tall lady of fine figure, sparkling black eyes, unusual vivacity of manner and speech, and absorbed in literary work. With a family of remarkably bright children around her, she entered upon a literary career, and in the course of a life prolonged to over eighty years, became the authoress of more than thirty different works, principally books for the young, some of which run through many editions. Some of her stories were reprinted in England. The latter part of her life was passed in Boston and Princeton. She lies buried in the Grove street Cemetery, among the honored dead. No other female author of equal reputation has been born in New Haven.

The earliest elms known in the history of our city were the two shown on the map of General Wadsworth as "Trees planted in 1686." They were the only trees engraved on it, and were placed on Elm street, just below what is now Temple street, in front of the residence of "James Pierpont, Gentleman." His house was a little nearer the street than the Bristol mansion, now occupying the same home-lot. It was built for his father, the Rev. James Pierpont, by the voluntary contributions of the people. The history of these trees is thus given by Dr. Bacon in his "Historical Discourses."

As the people were bringing in their free-will offerings of one lund and another to complete and furnish the building, one from [a poor parliament, William Cooper by name] de mung too, one thing for the object, and having nothing else to offer, brought on his shoulder from the farms two

elm saplings, and planted them before the door of the minister's house. Under their shade, some forty years afterwards (1726), Jonathan Edwards then soon to take rank in the intellectual world with Locke and Leibnitz—spoke words of mingled love and piety in the ear of Sarah Pierpont. Under their shade when some sixty summers (1746) had passed over them, Whitefield stood on a platform and lifted up that voice the tones of which lingered so long in thousands of hearts.

Five years before Jonathan Edwards married Sarah Pierpont, after a successful courtship under these elms, he wrote the quaint and delightful description of her already given on pages 112-13. She was eighteen years of age when she was married to Mr. Edwards. Authorities of the time speak of her as a lady of rare beauty and great virtue. Dr. Hopkins, who first saw her when the mother of seven children, says she was more than ordinarily beautiful; and her portrait, taken by Smybert, "while it presents a form and features not often rivaled, presents also that peculiar loveliness of expression which is the combined result of intelligence, cheerfulness and benevolence." This portrait, with one of her husband, are in the Art Gallery of Yale College.

Both of these trees were standing in 1825, the last was taken down about 1840. Its circumference was eighteen feet, exceeding by two feet any elm now in the city. A section of it was preserved many years by the Misses Foster.

It was under these trees that Whitefield, looking up to the skies had that famous imaginary conversation with Father Abraham, when he successively inquired if he had any Seceders up there? any Congregationalists? any Presbyterians? any Baptists? etc. Receiving to each query a negative answer, he inquired: "Whom have you?" And Father Abraham answered, "We know none of those names up here. We have in heaven all those, and only those, who love the Lord Jesus Christ."

The platform was built for Whitefield's use by James Pierpont, the "gentleman." He was what was called in that day in theology "a new light," and the principal founder of the society which built the Blue Meeting-house. He contributed so largely to the building of that structure that it almost ruined him, nearly throwing him out of his profession as "gentleman."

Framed and hanging in Yale College Library are pencil pictures by the late Robert Bakewell of two ancient elms that stood side by side in front of Battell Chapel. They were sawn down in 1877 and 1879. The investigations of the very careful historian of our elms, Professor William H. Brewer, proved that the oldest, the north tree, was set out in 1738 or 1739. It was then about ten years old.

On that corner, back from the street, once stood the mansion and female seminary of the Reverend Claudius Herrick, who died May 26, 1831, aged 56 years. It was a famous spot early in this century, being one of the earliest institutions established in the Union for the instruction of young ladies in the higher branches. It was founded by him about the year 1808, at the suggestion of President Dwight, and aggregated in a long term of years several thousand pupils. A tall blonde and a sweet-tempered, gentle-voiced man was Claudius Herrick, the inevitable consequence of being enveloped in a cloud of maidenly innocence and budding beauty, whose possessors he was gracefully conducting along the highways and byways of pleasing knowledge. The mansion was what they call a double house, having a door in the middle; was of two stories, low between joists, and of a dark brown hue, never having had a particle of paint. A deep garden was in the rear. The lot was broad, grass-turfed, and shrub-adorned. With the noble elms in front and groups of merry girls in the yard, the whole formed a picturesque scene grateful alike to the eye and the heart.

Within the old home-lot, but now on the College Campus, is a scarlet oak named the "Herrick Oak." It was set out there to commemorate the spot of his birth, by the late E. C. Herrick, a son of Claudius, and College Treasurer, one of the purest and best men and brightest intellects known in the history of New Haven. He had previously failed in an attempt to raise an oak near the same spot from an acorn from the "Charter Oak." The only other oak known to us in the vicinity is the "Fellowes Oak," which stands on the Green a few rods north of Trinity Church. It was imported from England, and is a recent gift to the city of the late Richard S. Fellowes. As these oaks will probably outlive several generations of our elms, we make this record of measurements taken by the writer September 8, 1886. The Herrick oak has at four feet from the ground a girth of thirty-four inches. It first branches six and one-third feet from the base. Diameter of spread of branches N. and S. is forty-five feet. Extreme height about thirty-two feet. The Fellowes oak has four feet from the ground a girth of twenty-two inches. Diameter of spread of branches E. and W. twenty feet. Extreme height about twenty-three feet. In England are what are called "gospel oaks," so-called because for a thousand years they have marked the boundaries of parishes.

The artist, Robert Bakewell, who made the drawing of the Herrick elms, deserves more than a passing notice. He was the son of an eminent English geologist, served his time in the banking-house of the poet Rogers, and then, after a little venture in Mexico, came to New Haven one summer day, in the year 1828, with a letter from his father to Professor Silliman. In his travels in Europe in 1808-10 Mr. Silliman had made the acquaintance of the elder Bakewell, and they were warm friends. He at once took the son into favor, finding employment for him in illustrating his scientific works, and entering his name on the

college catalogue as its teacher in drawing. So close was his friendship, that for forty successive Thanksgivings Bakewell was an invited guest at his table.

Mr. Bakewell was a rare acquisition, ministering to us in the love of the beautiful at a period when little else was thought of than the necessities of life. He was a lovable character every way, exceedingly modest and gentle, with a nervous hesitancy of speech, and impressed us, as did the poet Percival, by his shrinking delicacy. Among other pictures by him was the large elm within the Green, about two hundred feet northerly from the New Haven House, which he predicted would become one of our most noble and expansive trees. It is one of a row that extended across the Green to Elm street, some of which were removed on the building of the State House, and two of which are now standing beyond its north facade.

We extract the following from a communication of the writer to the *New Haven Journal and Courier*:

On a winter's day, about forty years ago, after an ice-storm, Mr. Bakewell met a friend on the Green and told him of a mishap which had befallen his pet tree, which he had claimed was destined to be "the elm of New Haven," and he then took him to it and pointed out where one of the top branches had broken down by its weight of ice, and was endangering the branches below. He expressed so much feeling in regard to it, was so anxious that it should be removed, that his friend immediately started off and informed the Mayor, the ever-vivacious and cheery Philip S. Galpin. The Mayor's eyes, which always laughed, twinkled as he was told of the distress of poor Mr. Bakewell, and replying, "We'll remedy that," he at once dispatched a man to saw off the broken branch.

Mr. Bakewell made many pleasant pictures of things dear to New Haven associations, but the best picture is the impression he left of himself upon the hearts of those who enjoyed the wealth of his friendship, the true gold that came from one inspired with the love of the beautiful, because, Christian as he was, he saw therein the smile of God.

In the twilight of a summer's evening we were standing upon the sward of our Green conversing with an old gentleman upon his peculiarities, his shyness and modesty. Bakewell was never married, and to our remark that perhaps in his early life he had some disappointment of a tender nature which might account for this, he replied: "Yes, he had a heart history; that I know." His rejoinder astonished us. Our surmise was indeed correct, and in all eagerness we listened to the revelation, which, however, was different from our anticipation and about in this wise: "You remember," said he, "about fifty years ago we had seasons of revival in religion, when occurred a condition of things of which the present generation have but a faint conception, when for days together the people would drop their business and flock in crowds to church and labor for the conversion of their fellow-men. It was in the year 1832, I think, or thereabouts, that there was a season of this kind, a four days' meeting held in the Centre Church. On an evening after the close of an eloquent sermon from the Rev. Dr. Thomas Skinner, of Philadelphia, the speaker invited those who were ready to take 'a stand on the Lord's side to rise in their seats.' Up they sprang all over the house, until perhaps one hundred were standing, men, women and children. I happened to be in the seat behind Mr. Bakewell, then a young man, when I saw him lean forward, and, with both hands, grasp the back of the pew in his front. He rose but a little way, and then, overcome by his modesty, fell back. The speaker dropped a few more words of sublime exhortation and the tears stood in many eyes. It was indeed a solemn scene. Again I saw Bakewell bend forward and grasp the pew, and then he arose to his feet, and there he stood with the light of heaven upon his brow, and so remained until his dying day—and that was his heart history."

We are tempted to give a personal anecdote of Mr. Bakewell, whose interest in our New Haven elms, and in this tree in particular, is worthy of an enduring record. With painstaking interest he had given a young man a series of drawing-lessons. When finished his pupil took out his pocket-book to pay him, when he said: "No! I wish you to accept of what I have done for you as a testimony of the respect in which I hold the memory of your father." He had known that father when living, had stood over and closed his eyes in death, and now that he himself is no more it is not to be wondered at that the memory of this beautiful compliment is still living in the heart of that pupil, so that he is here constrained to show the tenderness in which he holds the memory of his friend and the great friend of this tree by naming it "the Robert Bakewell elm."

The great planting of the elms had its inception in an order issued from the Common Council September 22, 1784, and approved in city meeting June 5, 1787, for the laying out of Temple street to Grove street. The avenue through the Hillhouse Farm, one hundred and five feet wide, now Hillhouse avenue, was surveyed and laid out, and the elms planted in 1792, the guiding stakes being driven by a young man, by the name of Day, in the employ of Mr. Hillhouse. Our informant had this information from Mr. Day himself when he was a venerable old gentleman occupying the position of President of Yale College.

Professor Brewer had at one time in his possession the original paper drawn up by Colonel James Hillhouse, to which various citizens had subscribed, stating the amount each would pay for beautifying the Green, by planting elms and preventing the washing of the sand. Its date was in the spring of 1787. Professor Brewer's investigations show that the greater part of the elm planting was between this date and 1796, though some of it was within the first decade of this century. The late Professor A. C. Twining stated to us, in 1883, that when a schoolboy (about 1808) he saw James Hillhouse setting out elms between the Centre and North Churches. They were trees about a foot in diameter, entirely divested of foliage, huge forking poles with roots attached, which, to his astonishment, sprouted and grew and became the now noble trees under which, when his hair was silvered with age, he was delighted to walk.*

Rev. David Austin planted the inner rows of elms on the east and west side of the Lower Green, but the great work on the two Greens and through Temple street is ascribed to James Hillhouse, who obtained his trees from his Meriden Farm. Men of far-seeing, hopeful and creative spirits like Hillhouse were then, as ever, rare. He was a born genius for leadership and an untiring worker. He would at any time throw off his coat and take hold and labor with his hands on the roughest, hardest work, when by so doing he could expedite an enterprise. He set the little town, which had then less than a thousand families, agog, so that even

children were aroused to help him. Among the boys who assisted was Ogden Edwards, born in 1781, afterward a New York City Judge, and Henry Baldwin, born in 1779, afterward a Judge of the Supreme Court of the United States. The latter once said, in the presence of Mrs. Worthington Hooker, then a young lady, and a daughter of Governor Edwards: "I held many an elm while Hillhouse shoveled in the earth." Even the girls caught the enthusiasm. There was, for instance, Caroline Shipman, who became Mrs. Garnet Duncan, of Louisville, Ky. She was a daughter of Elias Shipman, a leading merchant, who lived in "the house now occupied by the Quinnipiac Club." She watered the trees which Hillhouse had planted along on Chapel street in front of her home, and with her own hands set out an elm.

The most noted of our elms is that on the corner of Church and Chapel streets. An eccentric character named Jerry Allen, poet and pedagogue, brought it on his back from Hamden plains, and, after several ineffectual attempts to sell it for cash, made a trade with Thaddeus Beecher, who kept a store on the Exchange corner. His compensation, tradition says, was a pint of rum and a few trifling articles additional. This elm was planted on the very day of the death of Benjamin Franklin, April 17, 1790, and is named in his honor. Not older than others in the city, it owes its peculiarly thrifty condition to its being in a moist and otherwise favorable soil. Its girth two feet from the ground is 16 feet; at five feet, 13 feet 11 inches; height, 80 feet.

We take the account of the Nathan Beers elm from the *Journal*.

The elm that stands on Grove street, just west of the entrance to Hillhouse avenue at the end of the Sheffield place, is an imperious, cloud-climbing individual, towering by our measurement to full one hundred feet, the tallest of our elms, as well as the greatest in girth, and containing, we think, the most wood. Its openness to the view, with its enormous stature, renders it a most majestic specimen. Its length of trunk prevents its size from making the impression it would otherwise. Two feet from the ground it measures 16 feet 3 inches; at five feet, 14 feet 2 inches. It owes its superiority perhaps to the old botanic garden hard by into which its roots must widely spread, its openness to the sun, and, perhaps an original superiority of constitution. It is of the Etruscan vase form. We predict for it a greater size in the future, and venture to name it, in honor of a patriarch of the American Revolution, "the Nathan Beers elm."

In the Grove street Cemetery is this monumental inscription in Maple avenue, Lot No. 22:

NATHAN BEERS.

Born February 14, 1753. Died February 11, 1849.

He served his country in the Army of the Revolution as Lieutenant and Paymaster from March, 1777, until after the army was disbanded. Was Deacon of the North Church from 1804 until his decease.

Nathan Beers was one of the three sons of the "venerable Nathan Beers," who was murdered in cold blood by the British on the invasion of our city, and in his own residence, which stood on the northwest corner of Chapel and York streets. At the outbreak of the war this son, Nathan, was a member of the Governor's Guard, which, under Benedict Arnold, marched to take part in the siege of Boston under Washington. After the war he was steward of Yale College, where he was ruined by his kindness in crediting stu-

*Mr. Ruel P. Cowles communicates the following: "The Rev. Daniel Wadsworth was visiting at my house about the year 1870. I think he was at this time about ninety-five years of age, and the oldest living graduate of Yale College. While driving through Temple street and up Hillhouse avenue, on one occasion, he remarked to me that he saw Mr. James Hillhouse plant many of the elms, and said some of them were no larger than my driving-whip. I suppose he referred to the time he was in college." Mr. Wadsworth graduated in 1788. If he and Professor Twining both remembered correctly concerning the size of the transplanted trees, Mr. Hillhouse used much smaller trees in 1792 than in 1808. (L. C. C. 1883.)

dents. He had taken the position at the earnest request of President Dwight, having at the time quite a large property. Several decades passed. No one had any legal claim upon him, when he received quite a sum as back pension for his services in the ranks that had bled for liberty. With this in hand he sought out his old creditors, and where they were dead their heirs, and paid them in full, and then remained what the world calls "a poor man." He attained the great age of ninety-six years.

His home was on the lot adjoining this tall elm, where he passed his last years in horticulture, his residence being about two hundred feet distant, facing the avenue, near the Sheffield mansion. It was the old style of New England house, with the door in the center and sloping rear, and at one time probably graced too by the tall well sweep and pendant moss-covered bucket. A kinsman of ours he was, we are proud to say, and now he rises before us in memory as a patriarch of noble mien and graceful presence. When he entered a room where there was company, it was "something worth the while" to see him, he was so stately, so filled with the dignity of the George Washington era. This, combined with the sweetness and the moral grandeur of his character, left upon the mind an enduring picture that we would not well part from. Though so deaf he could not hear a word that was uttered, he was every Sabbath in his seat at church, his face ever upturned to the minister with an expression so calm, so peaceful, that one could but feel that every feature was under the celestial light. A fine portrait of him by Jocelyn is in the possession of his grandson, Dr. Levi Ives.

He hoped to live long enough to pay his creditors interest also on his old debts, but although attaining nearly a century of life, was unable to accomplish it. We sometimes think that no man is so selfish as to be insensible to an act of nobility, but we err in this judgment when the demon of avarice gets one in his clutches. Ambition and lust may have compassion on a victim, but avarice never. This truth finds an illustration in the instance of one of his creditors living in Bethany, who on being paid the principal of his long out-lasted debt refused to give a receipt therefor unless the interest was then paid to him.

On the night previous to the execution of Major André, Nathan Beers was officer of the guard, and in the morning he stood beside him. He said that André was perfectly calm. The only sign of nervousness he exhibited was the rolling of a pebble to and fro under his shoe, as he was standing awaiting the final order for his execution. As a last thing, although he was a stranger to Mr. Beers, but probably attracted by the kindness of his countenance, he took from his coat pocket a pen and ink sketch and handed it to him, saying in effect: "This is a portrait I drew of myself yesterday by looking in a mirror. I have no further use for it, and I should like you to take it." This portrait for many years was hung framed in the Trumbull Gallery of Yale College. In 1821, at the time of the removal of the remains of Major André to England, a lock of his hair was procured and placed in this framed picture. In the course of the years of its exhibition some thief stole this lock, and in consequence, fearful that the original sketch might likewise be stolen, it was thereafter no longer exposed to public view. It is carefully preserved among the archives of the College.

During his last years the Governor's Guards at the close of a day of parade often marched to the residence of the old veteran on the avenue to give him a salute. He was not much of a speech-maker, but on one of these occasions he came out in front of his house and said: "Boys, I thank you for the honor you pay me, and while I am too deaf to hear your guns, I must say your powder smells good."

In his last years he lost his mental powers, and was wont to go often on a week-day and sit on the steps of the North Church under the impression it was Sunday, and wait there for the sexton to come with the keys to open the sanctuary. It was sad thus to see him, for he was wont to shed tears at the sexton's seeming delay and at the sight around him of the apparent desecration of the Lord's holy day. It is pleasing to know that the Grand Army

of the Republic, on every recurring Decoration Day, strew flowers over the grave of this Christian patriot.

We associate no single tree, but rather the whole family of the elms with the name of James Hill-house.

Professor Brewer judges that under the most favorable conditions an elm may have a life of two, or even three, centuries. One of the Pierpont elms had a life of full one hundred and sixty years. We know of no tree of this family anywhere that has stood two centuries. Most of our elms are now about a century from the seed.

New Haven has only one park strictly speaking, but under this general term we may include all our public plats of turf-covered ground; at the head of which stands our far-famed Green, which, with its majestic walls of elms, has impressed so many hearts. "This public square" says Dr. Bacon in one of his masterly civic orations delivered Decoration Day, 1879, "was called by the founders of our city the market-place. It was designed not as a park or a mere pleasure ground, but as a place for public buildings, for military parades and exercises, for a meeting for the buyers and sellers, for the concourse of the people, for all such public uses as were served of old by the Forum at Rome and the Agora at Athens, called in our English bibles, Market."

The Green is the heart of New Haven, the central spot of its love. To one born and reared here, the very name touches a sacred and patriotic chord. And when, far away, he thinks of his native city, this spot of all others rises sweet in memory—God, country, law, learning, and all humanities in and around, seem to have here their symbols or associations.

From the earliest times it has been alike a religious and a patriotic center. From it soldiers have marched forth to meet the foe of home and country. Sermons, prayers, psalms, orations, discharge of musketry, ringing of bells, trumpet blasts, drum beats, the shouts of multitudes and the roar of artillery have ascended from this spot for more than two centuries. Seven generations have come, acted their parts, and then for them the curtain has dropped.

According to the map in the City Engineer's Office, the measurements of the Green are:

On College street.....	828.55 feet.
Church street.....	831.42 "
Elm street.....	838.5 "
Chapel street.....	848.6 "
Average.....	839 "

The fence incloses a trifle in excess of 16 acres, and the entire area with the bounding streets is about 21 acres. The distance around the fence is 3,357 feet, or 163 feet less than two-thirds of a mile. Walking around the square on the opposite sides of the bounding streets, one would pass a few feet in excess of two-thirds of a mile. The Green at the Church street line is 18 feet, and at the College street line 37 feet above high-water mark, a difference of 18 feet. The upper or west

Green is the broadest: an equalizing line from Chapel to Elm streets would run through the vestibule of the three churches.

We again quote from the *Journal*:

The Green originally was not an attractive spot. At one period, near the Elm and Church street corner, was a pen for swine. Tradition says the Green was full of cobblestones, and so boggy that in places it was ditched. Near the southeast corner arose a small rivulet or run, which, going out where the town pump now is, crossed southerly to the Cutler corner, ran through that square and the next square and crossing State street, about two hundred feet northerly from the corner of George, emptied just beyond into East Creek, which was on the line of the railroad. On the Green around the sources of this rivulet the alders grew profusely, which the Indians, wanting straight sticks for arrows, were wont to gather. Some of the early settlers built their dwellings from wood cut from the Green.

The surveyor who laid out our original nine squares was John Brockett. He was the eldest son of an English baronet, forsook his prospects for rank and fortune at home, and crossed a broad ocean in some little cockle-shell of a vessel to this then wilderness, drawn thither by the dimpling eyelids of a Puritan girl. He was married about 1642, was the progenitor of the Connecticut Brocketts and of the eminent Pennington family of New Jersey. The genealogy of the Tuttle family states that he was the eldest son and heir apparent of Sir John Brockett, of Brockett Hall and Manor, County Hertfordshire, Baronet. The manor and hall is now in the possession of the Temple family, and was the country seat of the late Lord Palmerston. John Brockett was prominent in public affairs, especially in the capacity of surveyor. He died March, 1690, aged eighty. Whether he married the lady whose attractions drew him to these shores is unknown.

In laying out our nine squares, Brockett probably had no better instrument than a common surveyor's compass, and the difficulty was increased by the thickness of the underbrush. Running his lines through the woods, perfect accuracy was not practicable nor probably sought for, and, as a consequence, there is not a single corner in our original city plot that is an exact right angle. The half-mile square is a little in excess. Each side, taking the inner lines of the bordering streets, averages about fifty-one feet over that distance. The map in the City Surveyor's Office, as measured for us by Mr. Kelly, gives the distance around the four sides as 10,763 feet, or 203 feet in excess of two miles. The measurements are: State street 2,678 feet, and its opposite, York street, 2,690, or 12 feet the longest; Grove street, 2,691, and its opposite, George street, 2,704, or 13 feet the longest.

Our ancestors reserved the Green for a market-place in the English sense of the appellation, but we have no evidence that any market-house was built upon it till 1785. Then for a few years there was a market-house near the southeast corner of the Green. Up to 1798 the Green was not inclosed, but was traveled in all directions by ox-teams and vehicles. In July, 1799, it was voted that "it would add to the convenience of the citizens and to the ornament of the city, that the Green or public square of the city should be leveled and the upper and lower sections railed in, and suitable fences erected to preserve the same from the passing of carriages and teams, and that water-courses should be prepared for conducting off the water."

At the same time Pierpont Edwards (lawyer), James Hill-house (College Treasurer), and Isaac Beers (bookseller near the College and brother of Deacon Nathan Beers), were authorized to "superintend and accomplish the same, provided the same be done without expense to the city." A subscription was then taken for the purpose, and the grass sold yearly to pay part of the expense and keep the fence in repair. In September, 1803, it was voted that James Hill-house, Isaac Beers and Thaddeus Beecher be a committee to examine and adjust the accounts of Mr. David Austin, to ascertain what he expended in railing and ornamenting the Green (setting out elms, we presume), and make report if anything, and if anything, what sum is legally and equitably due to him from the city on account of moneys so expended. From the above record it is evident that the city finally paid a small amount toward the expense of inclosing the Green.

The fence was likewise built through the Green on both sides of Temple street, making two inclosures, the upper and lower Green.

It was a neat post and rail fence, painted white, with two rails. About forty years since it was taken to Milford and put around its Green, where it still remains, but in a dilapidated condition. It was succeeded by the present iron fence, at a cost of a trifle less than seven thousand dollars.

As late as 1830 the cows from the town Poor-house were sometimes pastured on the Upper Green, which was then in places quite sandy. In boyhood the writer saw laborers on the Lower Green mowing the grass, and haystacks dotting its surface on a summer evening—cones of fragrance. About forty years since, for a term of years the destruction of the elms was threatened by the visitation of the canker-worm. Some seasons many of the trees were almost entirely stripped of their foliage. They looked as if blighted by fire, and pedestrians underneath were greatly annoyed by the worms falling on them. Fears that the elms would be destroyed led, during the mayoralty of Aaron N. Skinner, to the planting of the maples now on the Upper Green; the pest not visiting maples.

Besides the old Green, the city has the following open areas, whose dimensions we express in acres and tenths. Wooster Square, 4.66; Clinton Park, 3.78; Jocelyn Square, 2.61; York Square, 1.02; Spiroworth Square, .83; Munson Park, .59; Upper Broadway Park, .57; Hamilton place Park, .53; Fountain Park, .33; Lower Broadway Park, .30; Temple street Park, .14; Houston Park, .06; State and Lawrence streets Park, .04; Sherman and Winthrop avenues Park, .03; Kimberly and Green-which avenues Park, .02.

Several of them are insignificant grass plats, formed by two roads meeting at a slight angle, leaving a strip too narrow for building and thus, of necessity, thrown open to the public. Others were given by land-owners to popularize their surrounding possessions. In the great era of land speculation in 1835-36, the Messrs. Jocelyn thus gave to the public Jocelyn and Spiroworth squares. The latter, which is in the Hallock quarter, derives its name from a slender spindling sort of grass which grows only on poor, sandy soil. About that time York square was formed by several gentlemen, who built for themselves around it, in that retired nook off from Broadway, some palatial residences with Grecian fronts.

One of the most picturesque places in the city is the wide area called Broadway, as seen from the corner of York street. There, in the course of a few hundred feet, come in from the West four converging highways, viz., Elm street, Whalley, Goffe and Dixwell avenues. These have at their junction two small gem-like parks, one a little west of the other, but both in full view, where noble elms in the prime of their beauty give a crowning elegance to the whole expanse. One of its main charms is the modest little Episcopal church, in simple Gothic architecture, founded by the sisters, the Misses Edwards, who have so long been identified with female education in our city. It is sweetly

snuggled in behind the trees, giving a sort of moral aroma to the place.

Broadway is one of the highest points on the city plain, forty-two feet above high-water mark, and twenty-three feet above the corner of Chapel and Church streets. It is the avenue by which "the red coats," as the old people of the last generation called the British soldiers, came to town. Within the remembrance of the writer, two old houses were standing which had upon them marks of the conflict—for Broadway was a battle-ground. One was the Tuttle House, in which the beams in the attic were scarred with bullet-holes. It stood on the site of the little church, with its front door facing east, and hay-scales before it. It had once been painted red, but the paint had faded with the years. The other, the Augur mansion, also faced east, and stood at the junction of Goffe and Whalley avenues. Over the front door was a hole made by a cannon ball, which lodged in the chimney. It was perhaps fired from one of Captain Phineas Bradley's cannon upon the advancing foe. He was grandfather of General Luther Bradley, U.S.A.

It was about the year 1830 that the elms were set out by the contributions of the neighbors. Broadway then had some prominent men. Among these we note a few, beginning with the poet Percival and his friend, the delicately constituted and gifted Hezekiah Augur, a small, spare, erect man of the sanguine nervous type, whose group of "Jephthah and His Daughter," now in the Yale Art School, when produced excited great attention and pride among his fellow-citizens, it being, we think, the first group in marble executed by an American. Among the *on dits* in regard to it, is that wherein, among a knot of citizens standing on the corner of Chapel and Church streets, the question arose, "Who was Jephthah?" Unable to decide, two of them started on an interrogating tour, stopping in store after store and getting varied replies, until they came to that of a good deacon, whom they found busy with knife in hand cutting out trunk straps. At their question he looked up and said, "I really at this moment don't exactly remember. Was not Jephthah one of Bonaparte's generals?"

Daniel Read, the musical author and teacher of singing. His noble psalm tune, "Windham," sung to the words,

Broad is the road that leads to death,
And thousands walk together there, etc.

has sunk into the hearts of multitudes for now exactly the full century past.

Dr. Levi Ives, Deacon of the North Church, who discovered the pathology of croup. He was a kindly, generous man, and on visiting patients who pleaded poverty, where he advised delicacies, such as chicken broth, etc., would always say, "send to my house." He was an ardent Jeffersonian Democrat, and is alluded to in Theodore Dwight's political pasquinade in ridicule of a festival in New Haven March 3, 1803, beginning with

Ye tribes of faction join
Your daughters and your wives;
Moll Cary's come to town
To dance with Deacon Ives.

Rev. Dr. Eleazer T. Fitch, College Pastor, and Professor of Divinity in Yale, who had the family trait, extreme modesty, and never heard the bell calling him to his pulpit without a nervous shrinking. He possessed fine mechanical and artistic abilities, could construct anything, composed music, and was an eloquent divine. The tones of his voice were singularly pathetic, thrilling like music.

Rev. Samuel Merwin, for many decades the faithful pastor of the North Church, which greatly flourished under his ministrations. He was of a tender sympathetic nature, and had a keen sense of the proprieties; his faith was like a mountain and he was especially fervent in prayer, wherein he often brought out with a grateful unction the promise, "Though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool." As these words dropped from his lips, they touched the heart of the listener with an ineffable sense of reconciliation and peace.

Colonel Elisha Hull, a wealthy manufacturer of soap and candles, which he largely exported to the West Indies. The citizens were accustomed to sell him their ashes and grease, for which he sent a cart from house to house to gather them up, they receiving their pay in a return of soap and tallow candles.

William H. Ellis, who although noted last, was not least—for he was every way a ponderous man, turning the scale at 260 pounds, and had more common sense than half a dozen ordinary men rolled into one—began life as servant to Timothy Atwater, the proprietor of a soap and candle factory, and eventually adopted the vocation of a butcher. One day he dropped his cleaver, pulled off his white apron, emerged from a cellar just south of the Glebe Building, where his meat shop was, and took the position, by invitation of President Andrew Jackson, of Collector of the Port of New Haven. From that time forth it was said he carried the Democracy of Connecticut in his pocket. Ellis had with him, as tide-waiter, a man named Myers. He was a German, one of the half-dozen then in the city, and a man of quick wit. Naturally elated, a few days after his appointment, Ellis said: "Myers, what do people say about my being Collector?" "Dey say," he rejoined, "you've been Collector before." "What do they mean?" "Collector of soap grease and ashes for Timothy Atwater."

Myers deserves a passing notice, for he was a noted New Haven character. In the Napoleonic wars, near the beginning of this century, he ran away from home to avoid conscription, and settled in New Haven, married, and raised a good family. A son of his graduated at West Point and became an honored officer in the Union army during the Rebellion. Myers had lived here twenty or thirty years in the occupation of drayman, in which time he had lost all knowledge of his father's family, when one evening he entered the bar-room of Bishop's Tavern, which then stood where the Post Office now is. He found there a German peddler with whom he opened a conversation. In a few minutes the group around the wood fire were

astonished by seeing Myers and the peddler spring from their chairs and rush into each other's arms, with the exclamation, "Mein Gott, it is mein brudder."

Myers was not the only German that our city obtained through their hatred of war. Several families in and around Broadway were founded by Hessian soldiers, who, on the retreat of the British on July 6, 1779, hid and remained behind. They married here and founded families. Their names were Le Forge, Clyme, Bromlee, and Knevals. A grandson of the latter is a law partner of ex-President Arthur.

Wooster square, next to the old Green, is our largest and most important open space, containing four and two-thirds acres. Previous to 1825 it was a pasture land where Governor English states that he once saw in his youth a ploughing match. At that date the city bought it, for \$6,000, of Abraham Bishop, being the only land, we believe, ever purchased for a square by the city, excepting the original acquisition from the Indians. Mr. Bishop also owned the adjoining land east. The city claimed that he was also to include the strip for a street east, now known as Wooster place. In a resulting litigation the city was defeated. The square was first inclosed with a wooden fence, which was replaced in 1853 with iron railings at an expense of \$4,000. Individuals planted the trees at a cost of some \$1,500.

This square is densely shaded by a large variety of trees. By reason of its quiet and seclusion, and the domesticity of the neighborhood, it is the most frequented resort in the city, in the warm days of summer, for mothers and nurses with young children. Over one hundred babes, some in arms and some in carriages, have been counted there at one time by Charles E. Stokes, who for seven years past has been its guardian policeman.

The most striking topographical features of New Haven are the two precipitous walls of trap rock rising from the northern boundary of the plain, known respectively as East and West Rock. These, with the picturesque cone of Mount Carmel (736 feet in altitude), some six miles farther inland, and the softly-wooded and grass-carpeted hills on the right and left of the plain, give to the city a very beautiful setting as seen from the mouth of the harbor, five miles away. The Dutch, on their discovery of the site, were, from the ruddy appearance of these rocks, induced to give it the name of Rodenberg or Red Mountain. West Rock, where its wall faces the city, rises 387 feet; a mile north, 485 feet; and three miles, 600 feet. The range is about seventeen miles in length.

Near by, easterly from its southern termination, but facing also the south, is a smaller mountain, Pine Rock, 274 feet high. Sixty years ago there was a cave or fissure on its walled face, called Fry's Cave, in which dwelt a hermit, a wild, solitary being, who would sometimes wander into and through the town, begging from house to house.

On West Rock, at a point 365 feet high, is the

cluster of five rocks, the tallest about eighteen feet high, so noted in our history as Judges' Cave, where the regicides Goffe and Whalley were concealed. They were originally parts of a single huge boulder, which Professor Dana says weighed at least a thousand tons, and came in the glacier period from the Mount Tom range. This range begins in South Mountain, in Meriden, where it is 996 feet high, and ends in Mount Tom, Massachusetts, where it is 1,214 feet high.

The East Rock range is a little less distant from the center of the city than the other—fairly about two miles. Its entire length is only a mile and a half, and extreme height 362 feet. Average breadth half a mile. As West Rock has a smaller companion in Pine Rock, East Rock has a satellite in Mill Rock, 228 feet in altitude, lying west of its north end, the village of Whitneyville intervening. It is crowned by a single residence, with a grand outlook, that of Professor William P. Blake. South of Mill Rock begins Sachem's Ridge, ending at Hillhouse avenue, half a mile from the Green. Its extreme height is 140 feet.

Mill River passes in front of East Rock, close to its base, and penetrates the interior 15 miles. The 35-foot dam at Whitneyville has converted several miles of it into a long, beautiful lake, from which the city obtains its water. In the rear of East Rock lies the broad, beautiful valley of the Quinnipiac River, the stream being 33 miles in length, with thousands of acres of salt meadow in its lower part. These two streams for miles are separated by the Quinnipiac Ridge, a high, grassy, farm-covered tract of rolling land. Such is the general surrounding of East Rock Ridge. Its lower mass is red sandstone. In the igneous period the basaltic lava burst through fissures and, flowing over, formed the precipitous columnar face which gives its front such an impressive, almost fearful aspect, as one stands at its base looking up.

Since the establishment of Central Park in New York, in 1851, parks have come to be regarded as a necessity to every large city. Some fifteen years ago, Mr. John W. Bishop, who was largely interested in real estate in that quarter, offered to give the city the two eastern spurs of East Rock, Indian Head and Snake Rock, if they would spend \$3,000 annually in improving the land for a park. He later offered to waive this condition, but was defeated by the efforts of owners of land in the western part of the town, who wanted a park in their own neighborhood. In 1876 the subject of parks was reopened by a petition headed by President Porter and the late Mayor Fitch. Mr. Bishop had by this time sold off much of the land which he had formerly offered the city, but he agreed to give most of what he had left if others would make similar contributions of land or money, and if East Rock were made the center of the park. Plenty of other sites were offered—for a consideration. The decision was not long held in abeyance, so East Rock Park was established, in 1880, by charter from the Legislature. It comprises, in round figures, 353 acres, of which 50 acres were given by

Mr. Bishop, 20 by Yale College, and 17 by five other donors. In addition to the gift of 87 acres as above noted, Mayor Lewis, in his message for 1884, stated there had then been expended "upon the Park, \$73,144 for lands, roads and incidentals, of which \$18,885 was subscribed by citizens, \$24,000 came from the annual \$6,000 payments of the city, and the balance from the city in payment of assessments for condemned land." The land belonged to about 125 different parties, the tracts varying in size from a small building lot to one of many acres. Only 144 acres of it is in New Haven; 209 acres, the larger part, being within the line of Hamden.

Early in 1882, Donald G. Mitchell was requested to draw up a plan for the "harmonious development" of the park. After careful study of the ground, he designed a map of a lay-out, which, with a report, was made the basis of future work. The general aim of his plan was, "To make accessory and enjoyable not only the more commanding localities, but the retired nooks and recesses of the range * * * endeavoring, however, to subordinate the walks and roads and plantings to the grander features of interest, under the conviction that the things best worth seeing there will always be the rocks and woods and views as nature left them."

East Rock Park is in its infancy, but its promises for the future are such as will eventually give it the reputation of being a gem among the parks. What other presents such a sublime frontage to the approaching stranger? What other has such a variety of scenery inland and seaward? The eye rests also on interesting historic points around the city and down the harbor, grateful to the pride of country, as they are associated with memories honorable to the heroic self-sacrifice and bravery of our fathers.

Mr. Mitchell, in his report to the Commissioners, gave this detail of the topography:

The area proposed for the park is a crescent-shaped body of land, two miles north by east from the Green, with its convex side toward the city, its prominent feature being a great up-lift of basaltic cliff, which, in its highest part, reaches an elevation of three hundred and sixty feet, and shows a precipitous face from seventy to a hundred feet in height by some eighteen hundred feet in length. This great line of precipice is convex in shape, and fronts the city; it is fringed with a dwarf growth of wood, and the rocky *debris* at its foot slopes to the banks of Mill River, which, with its narrow hem of salt meadow, skirts the rock upon the south and west.

East of the southernmost end of the main cliff, and separated from it by a wooded gorge, rises a lesser basaltic hill, known as Indian Head, which repeats in miniature the features of its larger neighbor, and has only some sixty feet less of elevation. Thence the rocky framework of the park lands tends southeasterly and ends in Snake Rock, where trap and red sandstone both appear. This last cliff, some two hundred feet in height, forms the southern horn of the crescent shape to which I have likened the general area.

North of East Rock proper there is another dip of the land, though not so gorge-like as at the southern end, yet showing a very picturesque sylvan glade, which is flanked by heavy forest growth on the north. This forest growth covers the southern slope of a new transverse line of rocky ridge, whose eastern extremity is known as Whitney Peak, [two hundred and eighty feet elevation], and which at the west ends in a bold, rocky buttress of cliff at the Whitney

Dam. North of this barrier again, easy slopes of wooded and tilled land carry the park area to the shores of the lake, and to the so-called Ridge road, which forms for a considerable distance the northern boundary.

The eastern border is a curved line, nearly parallel with the North Haven road, and some six or seven hundred feet distant therefrom for more than half its length—following generally the bottom of the slope which the hill-land makes in its descent to the level of the Quinnipiac valley, and touching State street at what I have designated as the Quinnipiac entrance. The eastern slope is seamed with several rocky ravines, heavily wooded, which receive the flow of a few scattered springs upon the flank of the hill.

A forest growth covers at least four-fifths of the area, stunted and dwarfed where the rock comes near to the surface, and heavy and luxuriant where the soil is deep.

There is scarcely a level spot upon the entire range, and in places it is extremely wild and rough, with picturesque, solitary dells, varied woods, underbrush, jagged rocks, and occasionally rare wild flowers. Before the construction of a rude carriage road, about forty years ago, through the ravine between Indian Head and the main peak, it was much visited by pedestrians for the wildness of its scenery and the beauty and grandeur of its outlooks. The main peak was then, as now, the favorite point of view. From here the eye takes in the elm-embowered city, the harbor, with the hills and plains that bound it; and beyond, a vast stretch, east and west, of the great inland sea, with Long Island itself, its nearest point twenty-five miles away, its sand-hills often towering up and shining brightly in contrast with its dark, somber forests. It is said that the extent of the Long Island shore under the eye from this point is fifty-eight miles, nearly half its entire length.

On the north part of the ridge, looking west, one gazes on Whitneyville, with its glassy chain of lakes, Mill Rock, and then the bold profile of West Rock beyond, with its long wooded range, six hundred feet high, running to the far north. From the rear of the ridge the view north is beautiful and extensive, stretching one-third the distance across the State. It is up the broad level valley of the Quinnipiac, with its bounding hills. The wood-crowned Saltonstall ridge incloses it on the east, and on the west lie the grassy farms of the Quinnipiac ridge. Six miles further away, on the left these pastoral uplands are ended by the huge form of the Sleeping Giant, two miles long and seven hundred and thirty-six feet high, with his head, the softly rounded cone, Mount Carmel, at its southwest termination. Sixteen miles away, in Meriden, to the right of the Giant, but still on the left front, boldly rises in mid-air, one thousand feet, the south end of the Mount Tom range, which, with the Berlin range on the right front, melts into the blue of the overhanging sky. The meadows of the winding Quinnipiac, with their myriads of cones of salt hay, have thus a beautiful setting, over whose level surface the clouds of summer are wont to chase their flitting shadows. These salt meadows comprise three thousand five hundred acres and lie broad under the eye for nearly seven miles to where the spires of the churches of North Haven come in view, mere dots in the gray distance.

Early in this century the Turner family were part owners of East Rock and of land north of it.

A member of this family, Seth Turner, in consequence, it is said, of disappointment in love, returned from Massachusetts whither his parents had removed, built a rough stone hut on the summit of his ancestral acres, and took up the life of a hermit. The hut was about twelve feet square and partly underground. He had a garden walled around, and kept a few sheep and goats. He was sometimes seen in town with a little cart drawn by a single goat, peddling roots and herbs. He acted upon the apothegm "Silence is golden," rarely speaking to any one and avoiding human society. On November 2, 1823, his lifeless body was found frozen in his hut.

About the year 1843, Elizur Hubbell, a silver-plater, of New Haven, built a small house for refreshment at the outlook. The approach then was by a very precipitous road between Indian Head and the main peak. He was bought out by a respectable old couple by the name of Smith, who earned a little money by furnishing accommodation to visitors. One day, just before noon, in the year 1848, they were surprised and murdered by a man named McCaffrey. He was arrested, tried, sentenced, and executed for the crime in 1850. He confessed that his sole incentive was money, none of which he obtained. A few years later Milton J. Stewart purchased the top of the rock, and retained possession until bought out by the Park Commissioners. He was an industrious, busy man. With his own hands alone he built a large stone house and kept watch over his property with a dog and gun. A stranger in search of the picturesque on nearing his mansion would be met by Stewart with the greeting, "I charge you ten cents." "What for?" "For my view." Mr. Stewart built for a front access a series of wooden steps up the face of the ledge, some seventy feet or more in height. Among his works was the building, on the summit of the mountain, of a steamboat about forty feet long, called "Stewart's steamboat." It was never finished, and the exoterics have failed to discover how it was to be launched.

Until the middle of this century there were no means of ascending to the summit excepting on foot. There was a cart road at the base for the use of the quarrymen, who obtained an abundance of stone for cellar walls, and a bridge for their use over Mill River at Rock lane, near the north front. Pedestrians usually came by the way of State street Bridge, anciently called Neck Bridge, and so noted in our early history, being on the highway to Wallingford, Middletown, Hartford, etc. Until quite recently, that neck of upland south of the south end of the range, west of State street, east of the salt marsh, and extending south to Neck Bridge, was a dense forest of evergreens, mostly pine and spruce, with some cedars, through which ran a winding lane, densely shaded, and much visited by young people fifty years ago. One spot was especially attractive. It was about a quarter of a mile from the bridge, and extended from the lane to the meadow bank. It was called the "Seat of Happiness," and consisted of a grove of stately, solemn pines. The ground, level as a house floor, was soft

to the feet, being everywhere covered with the spicular leaves, which in successive years had fallen from the trees. These formed a natural carpet in one uniform russet hue, here and there brightened by dashes of gold from the sunlight glinting through openings above, and all the brighter by contrast with the dark, somber trunks and deep verdure of the pines which responded in mournful whisperings to the softest breathings of the air.

THE SOLDIERS' MONUMENT.

On the summit of East Rock Park is to be a granite column in memory of the soldiers of New Haven who have died in the service of their country. This monument had its origin in a proposal which originated with the members of the Admiral Foote Post of the Grand Army of the Republic, John McCarthy and Charles E. Fowler being especially active. The Post held an enthusiastic meeting on the 5th of April, 1879, and this was among their resolutions passed:

Resolved, That Admiral Foote Post, No. 17, department of Connecticut, G. A. R., respectfully petition the Honorable Court of Common Council of the City of New Haven, in behalf of the soldiers and sailors of the late war, to set apart and dedicate the five-sided lot of ground just south of the Liberty Pole on the old Green for a site for a memorial fountain or monument to the citizens who enlisted from the Town or City of New Haven, and died in the service of their country in the War of the Revolution, in the War of 1812, the War with Mexico, and the War for the Union and the suppression of the rebellion.

The Post's overture was for a memorial fountain, built of granite, at an estimated cost of \$25,000, which they thought they could raise by dime subscriptions. The Council, with surprising alacrity, granted their petition, and on the ensuing memorial day there was a great celebration on the Green, when the five-sided site, so delineated by the asphalt walks, was formally dedicated by Admiral Foote Post. Mayor H. B. Bigelow presided at the exercises, and Rev. Dr. Leonard Bacon delivered a memorial oration. Department-Commander Charles E. Fowler made the dedicatory speech, and a large chorus of school children, under Professor Jepson, rendered appropriate songs.

Nothing, however, was done toward raising the funds, and various distracting projects arose, dividing public opinion between a Memorial Hall, a Free Library, and a monument on East Rock.

In December of 1883, the Grand Army again asked at a town-meeting for a memorial for the soldiers, and, \$50,000 being appropriated, a large committee was appointed to act with one from the Grand Army for devising the best form that could be given to the memorial. A monumental column was decided on. Three sub-committees were then appointed, viz., *On Site*.—Ex-Governor Bigelow, Colonel Healey, Town-Agent Reynolds, Colonel Samuel Tolles, and Theodore A. Tuttle. *On Design*.—General S. E. Merwin, Ex-Governor J. E. English, Governor Henry B. Harrison, Colonel Fox, and J. D. Plunkett. *On Finance*.—John McCarthy, General Frank D. Sloat, and Conrad Hofacker.

SOLDIERS' MONUMENT.

The site selected was the summit of East Rock Park, and the design that of Moffatt & Doyle, of New York. The monument is 110 feet in height from its base to the statue of the Angel of Peace on its summit. The base, the pedestal, and the shaft are to be of a reddish granite; the statue at the top, like the bas-reliefs and statues on the lower portion of the monument, is bronze. The pedestal is square, consisting of a series of stone steps, five in number, the lowest 40 feet square. The base, 17 feet high, is square and of uniform massive blocks of stone with casements, one of which is for the entrance and ascent to the summit, the others being merely blanks. Between the base and the commencement of the shaft, which is a smooth column, are eight feet of ornamental masonry, on the four corners of which at the base are four bronze figures, nine feet high, in a sitting posture, with their backs to the shaft. These are (1) The Genius of History, reading a book in her lap; (2) Victory, with trumpet and laurel wreath; (3) Prosperity, with the horn of plenty; (4) Patriotism, with bare neck and arms, drawing a sword. This noble monument commemorates the four great wars in which this country has been engaged since the first blow for liberty was struck at Lexington, and each one of these bas-reliefs itself is a mute reminder of an important struggle. Over the entrance the scene depicted is the surrender of General Lee to General Grant at Appomattox. Figures of Grant and Lee occupy the foreground, and between them stands a little table on which the terms of unconditional surrender were made. On the topmost portion of the base, under the bas-relief, are the words, in raised letters of granite,

Shiloh, Gettysburg and Antietam,

and below these words, and over the top of the casement, are the numerals

1861-65.

On the back of the monument the scene depicted is that of Commodore Perry on Lake Erie. The great commander is in the act of writing his famous dispatch:

We have met the enemy and they are ours.

This picture also contains a representation of the dismantled British fleet. On the base, under this picture, are inscribed the words:

Lake Erie, Bridgewater and New Orleans.

The dates over the casement are 1812-15.

An illustration of General Scott entering the conquered City of Mexico occupies one of the other faces of the monument.

Palo Alto, Monterey and Chapultepec,

and the dates 1846-48 are mentioned on the stone below.

The fourth bas-relief is a picture of the surrender of General Cornwallis at Yorktown; a figure of

Washington stands in the foreground receiving the British generals' swords.

Bunker Hill, Bennington and Yorktown, and the dates 1775-83 are inscribed below it.

The shaft of the monument towers up seventy-five feet. It is circular in form and slightly tapering. Its base is ten feet in diameter. The column rests on a sculptured wreath. Above this there are a few feet of ornamental masonry, and then there is a band of thirteen chiseled stars representing the thirteen original states. Above this the uniform blocks of granite are unornamented until the ornamentation around the four look-out windows is reached.

A spiral staircase, well lighted by look-out windows, leads to the apex of the monument, which is nearly cone-shaped, and crowned by the bronze Angel of Peace eleven feet high. She has one hand outstretched holding and dispensing blessings, while the other is lifted high aloft to Heaven.

A grand feature of the park is the beautiful, easy winding drives to the summit. These, by their varied curvings, give not only charming vistas, but in places near by show in awe-inspiring profile the frowning, jagged cliffs of the mountain itself as a foreground to a broad expansive scene of peace and beauty, on mainland and sea.

The total length of the carriage-drives is in excess of five miles. The first drive finished was that made by the city from Bishop's Gate, at the southeastern entrance at Cedar Hill, to Indian Head. Not until this was opened did the public begin to realize the superb value of the park, a feeling which culminated into enthusiasm on the completion of the Farnam drive, in 1883, to the summit. On the decease of Mr. Farnam, his widow continued its extension, in all two and a quarter miles, at a total cost of \$15,000.

Farnam Drive begins at the base of the frowning cliff at the Orange street Bridge and winds through the northern half of the park. In the spring of 1885, Ex-Governor James E. English gladdened the hearts of his fellow-citizens by a like munificent offer, a contribution of \$10,000 for a similar drive complementary to the other, to be called The English Drive, to start at the same point, the Orange street Bridge, and, winding through the southern half of the park, as the other through the northern, to terminate at the same place, the Lookout Point; this with the understanding that it should be finished by May, 1886.

Henry Farnam and James E. English, founders of their own fortunes, both beginning life as builders—the one of canals and railroads, the other of dwellings and business structures—thus crown their successful careers by building these beneficent memorials on the face of the everlasting rock, to remain till

Seas shall waste,

The skies to smoke decay;

Rocks fall to dust,

And mountains melt away.

BIOGRAPHY.

WILLIS MINOR SMITH

was born in Woodbridge, New Haven County, April 5, 1819, the son of Daniel Treat and Rebecca (Sperry) Smith.

He was the ninth in a family of ten children, five sons and five daughters. His father died when he was fourteen years of age, being suddenly killed by the falling of a tree.

The house in which he was born was owned and occupied by the Rev. Benjamin Woodbridge, from whom the town was named, and it was left as a gift to Daniel Treat Smith. This famous old house has a secret closet, built close to the chimney, with a sliding panel in the wall. It will accommodate two persons, and local tradition reports that it has often held the regicides, when, fleeing from their hiding-place on West Rock, they escaped out into Woodbridge. There is also upon the premises of this house a well, made through the solid rock, which has a secret hiding-place, a recess or shelf in the rock, and here sometimes, when hard pressed, a regicide was let down and concealed. Mr. Smith's great-grandmother, when a child, often carried provisions to a secluded spot at the foot of West Rock, and left them on a certain stump for the regicides. Watching their opportunity at night, they would descend from their place of shelter, near the top of the rock, still known as Judges' Cave, and securing the food, return to their retreat.

Mr. Smith worked on his father's farm and attended school until 1835. He then came to New Haven, and was apprenticed to the firm of Hine, Peck & Perkins, to learn the mason's trade. Stephen P. Perkins was junior member in this firm. That year he worked on the Saunders Building at Chapel and Orange streets, now known as the Union Trust Company Building. He was also employed on the Halleck residence at Oyster Point, and the Free Church on Church street, now the American Theatre. The following year, 1836, the year after the great fire in New York, he went to that city and took part in rebuilding the burnt district. Returning to New Haven, he served out his time as apprentice, and, after working for some years as a journeyman, formed a copartnership, in 1847, with N. D. Sperry, which copartnership still exists, the firm being at this time the oldest in New Haven, and probably in the State.

Among the first buildings erected by the young firm, was the Second Congregational Church in Fair Haven East. In 1849 they built the O. E. Maltby residence in Fair Haven, and the same year a residence on Grand street, and the next season three handsome dwellings on Olive street for Joel Ives, Minott A. Osborne, and James F. Babcock, the two last then rival editors of New Haven. In 1851 they built Henry Ives' residence at Orange and Wall streets, and houses for Judson Canfield and Philemon Hoadley on Crown street.

The next season they erected N. F. Hall's fine

residence on Orange street, and later made alterations in the Chapel street Church. In 1855 they built the Hall Block on Orange street, and the next season the Chaplain Block on Chapel street below Union; also about this time the residence of E. S. Rowland at Green and Academy streets, and that of N. D. Sperry at Orange and Bradley streets. In 1860 they erected the Judson Building on State street, facing Elm; the elegant Perit residence on Hillhouse avenue; and a block of houses on Temple street.

In 1862 they put up the Tremont House, and a year or so later Mr. Smith completed his own handsome residence on Orange street. Soon after the firm built the block of houses on Trumbull street near Orange, and the one on Orange street at the corner of Trumbull.

In 1869 they built the Farnam College, and immediately afterward the elegant Farnam residence on Hillhouse avenue. Then the Durfee College, continuing the new square on the Yale grounds; the Insurance Building on Chapel street, extending over Gregson; the White Buildings, extending from Church street through Center to Orange, and including the Temple of Music; the Morris Tyler Building on Chapel street; the Garfield Buildings, one on Chapel, the other on State street; the handsome building owned by Governor English, and occupied by Proctor, McGuire & Co.; the Kensington Flat; the Pitkin Building; W. H. Farnam's residence on Hillhouse avenue at Trumbull street; Henry C. Kingsley's residence diagonally across from this; the fine stone building of the Yale Seniors' secret society, known as the Wolf's Head, at Trumbull and Prospect streets; Battell Chapel on the Yale Campus; the Sloane Memorial Laboratory and the Winchester Observatory, both Yale buildings; the chancels of St. Paul's and Trinity; and the Staples Block on Trumbull street, are all their work.

In addition, the firm have made the extensive alterations and extensions to the New Haven Post Office, and have put up hundreds of other buildings in New Haven, throughout Massachusetts, and in New York City, and are now erecting the Lawrance Hall for Yale College.

In connection with the finer residences named, it may be mentioned that the Henry Farnam place is already willed to Yale College, and may eventually become the residence of the President.

Before the Lawrance College was fully completed, Mr. Smith's firm was awarded another important contract, the building of the Soldiers' Monument in East Rock Park. It is quite safe to say that a more intricate piece of mechanical work was never undertaken in New Haven; and from the very first Mr. Smith took sole charge of it.

There were many—some of them good mechanics too—who stood ready to volunteer their advice as to how the work should be done, the derricks constructed, and the stones raised and put

Willis A. Smith

in place; but the subject of our sketch had his own ideas with regard to the matter, and has carried them out most successfully, not a single accident having occurred from the beginning to the completion of the work.

The builders were greatly inconvenienced by the non-arrival of the bronze figures, and, in regard to this, ex-Governor English, the Treasurer of the Building Committee, said the reason they were not on hand, was simply because neither the architects, nor anybody else, supposed it possible for the contractors to put up the work with such unprecedented rapidity.

Referring to this last triumph of Mr. Smith's wonderful mechanical skill, the *Palladium* of August 26, 1886, said:

The work of stone-laying has been much more difficult than ordinary work of the kind, owing to the great weight of the material and the additional weight which it is to bear, and also to the proportions of the structure. The rapidity with which the work has been done has seldom been equaled, and progress would have been much slower had not the contractors felt that there was danger that delay and disaster might be caused if their men were obliged to work in such an elevated place during the September gales.

* * * * *

Willis M. Smith has had the general superintendence of the tower building, and now that it is finished he is relieved from a great responsibility. Although he is about sixty-five years of age, he still carries out his principle of never sending his men into a position into which he is not willing to go himself. Throughout the progress of the work, whenever a basis of operations has been established at a new altitude, he has been the first person to mount to and occupy it, and yesterday, when the highest position for a derrick was reached, he climbed to the cross-beam, and, assuming an heroic position, remarked to those below him, "Boys, there's a fine view up here."

In planning for the construction of the monument, Mr. Smith had to solve a problem very much like that of the reel in the bottle. Until the building of the shaft was completed, raising the stones was a comparatively simple operation, a single derrick in the center, supported by timbers, answering all purposes. But when the time for closing the top of the shaft arrived, some three weeks ago, this would no longer answer. It was removed, and a "straddle-derrick" was substituted. The frame of this derrick was in the form of a triangle. The base consisted of a beam, extending through and outside the shaft, an aperture having temporarily been left for the purpose. The other sides extended from this, and at the apex which their upper ends formed, were the pulley-blocks to be used for hoisting. The circu-

lar stone having been placed over the circular shaft, the straddle-derrick was replaced with the simple one in order that the stones for what is known as the roof of the monument, and which tapers much more than the shaft below, might be laid. This work having been finished, the use of the triangular structure was again necessary in order to lay the five stones of gradually decreasing size to intervene between the roof of the tower and the bronze. Again it was arranged in a new position. Yesterday noon the last of these stones was laid, and an iron bar, two inches in diameter and six feet long, was passed through them vertically and securely fastened. A hearty cheer went up when the job was finished.

It will thus be seen that Mr. Smith's firm has erected most of New Haven's finest and costliest buildings, public and private, and by common consent stands at the head of the building trade.

Although Mr. Smith has had a partner throughout his business career, he has had the sole responsibility and direction of the practical and mechanical operations. It is rare that a church is built without some one or more workmen being killed. Through his long business career, Mr. Smith has managed with such care and prudence that fortunately no fatal accident has befallen his workmen, and rarely has any occurred.

The greater demands upon builders arising from growing needs, larger resources, and finer taste, has made the labor and responsibility of building far heavier than formerly, and new methods of working are required for new operations. These Mr. Smith has frequently met by his own inventive resources. Thus he has devised an adjustable derrick for raising stone, suited to greater or less heights. He has also perfected a formerly unknown method for laying building stone in the winter season, by heating it.

Mr. Smith married, November 25, 1844, Mary E., daughter of Wyllys Sperry, a prominent resident of Woodbridge. They have one child, a daughter, who is the wife of Edward W. Dawson, the author.

Mr. Smith is distinguished for his modest and retiring disposition, for his love of home life, and his sincere attachment to the Christian religion.

He has been connected with the Society of the Church of the Redeemer for more than forty years, and has been a member of it for many years.

CHAPTER XXVII.

ARTIFICIAL ILLUMINATION.

FOR a century and a half New England had no other artificial illumination than that afforded by candles. The 19th of May, 1780, was a remarkably dark day. The Legislature of Connecticut was then in session at Hartford. A very general opinion prevailed that the Day of Judgment was at hand. The House of Representatives being unable to transact their business, adjourned. A proposal to adjourn the Council was under consideration. When the opinion of Abraham Davenport, of Stamford, was asked, he replied, "I am against adjournment. The Day of Judgment is

either approaching or it is not. If it is not, there is no cause for an adjournment; if it is, I choose to be found doing my duty. I wish therefore that candles may be brought."

On another occasion, almost a century earlier, the General Assembly had prolonged its deliberations till the darkness of evening made it necessary to bring in candles. Sir Edmund Andross had appeared in the Assembly and demanded, in the King's name, the surrender of the Charter. Governor Treat remonstrated against the injustice in a speech, in which he gave a narrative of the ex-

pense, the hardships and the dangers by means of which the country had been planted by its inhabitants; of the bloody wars in which they had defended it from savages and from foreigners; of his own exposures for the same purpose; and declared that it was like giving up his life now, to surrender the patent and privileges so dearly bought and so long enjoyed.

Candles must be snuffed; and on this occasion it came to pass that all the candles were snuffed simultaneously, and by such blundering hands that every light was extinguished. The Charter, which had been brought in and laid on the table, ready to be given up if it must be, disappeared before the candles could be relighted, and so was preserved.

Even since the eighteenth century began to count its years, the Chapel of Yale College was lighted with candles. Tradition relates that, on a certain occasion when it was the duty of one of the younger professors to read, after prayers, an order which had been passed by the Faculty, the Reverend President perceived that the professor was embarrassed for want of light, and offered him one of the luminaries shining from the pulpit in the sentence, begun in the regulation Latin, but ending in the more facile vernacular, "*Domine Day, will you have a candle?*"

New England had engaged to some extent in the whale-fishery before the Revolution; but from the peace of 1783 this industry grew in importance till the middle of the nineteenth century, when it reached its greatest height. Few men now living can remember when the Chapel of Yale College was lighted with candles, or when candles diffused more light in the dwelling-houses of New Haven than the oil of whales. When the whale-fishery began to decline in the middle of the present century, a mixture of alcohol and turpentine was used as a cheaper substitute for oil.

About the middle of the century, while this "burning fluid," consisting of turpentine and alcohol, was in use, petroleum, or rock oil as it was at first called, was discovered. It was found in some counties of Pennsylvania on the surface of the ground, and collected in what would now be considered small quantities. New Haven men were from the first interested in this discovery, and some of the stock of the earliest petroleum company in the United States—the Pennsylvania Rock Oil Company—was owned in New Haven. This Company owned about 1,200 acres of land in Venango County, Pa., which they had purchased for 50 cents an acre, and had a lease, for 99 years, of all lands in the vicinity which were supposed to contain any rock oil. The deeds, conveying the lands they had purchased, described them as bounded on one side by Oil Creek, and on all other sides, by "no man's land." So destitute of value had the land been considered, that no man was disposed to own it. The owners of the leased lands reserved nothing but the right to store the logs which were rafted down the creek. In 1856 the Pennsylvania Rock Oil Company executed a lease to persons in New York, who engaged to de-

velop the resources of these lands and pay a royalty on the minerals and oils, the royalty on the oil being twelve cents a gallon. Before this party had begun their work, the hard times of 1857 crippled them, and, as they looked around for some escape from their contract, they discovered that the wife of one of the persons from whom the Pennsylvania Rock Oil Company had purchased land, had neglected to sign the deed. Taking advantage of this technicality, they repudiated their contract.

Mr. James M. Townsend conceived and suggested the idea of examining this property with a view of assuming the lease surrendered by the party in New York. Among Mr. Townsend's acquaintances was a man by the name of E. L. Drake, who had been a conductor on the New York and New Haven Railroad, but was at that time idle by reason of severe illness. Mr. Townsend having acquainted Mr. Drake with his plans, the latter offered to go to Venango Co., Pa., for a small compensation, saying, that as a railroad man, he could procure a free pass. He accordingly made the journey, perfected the title to the lands, and on his return, reported that he believed that a fortune could be made by collecting the oil and selling it in small quantities for medicinal purposes. Acting upon this report, Mr. Townsend organized a new company by the name of "The Seneca Oil Company," by whom the lease surrendered by the New York people was assumed. Mr. Drake was again sent out, as the agent of the Seneca Oil Company, to develop the resources of the lands of which the Company had control.

At first the oil was gathered, as it always had been before, by spreading woolen blankets and absorbing the oil spread out on the surface of the water in the trenches which the workmen dug. This process not proving lucrative, the Directors of the Seneca Oil Company hired a man who had bored salt wells at Syracuse, N. Y., to go to Pennsylvania and bore for oil. The boring continued till the auger had gone down sixty-eight feet, but without success. The stockholders in New Haven were by this time discouraged, and determined to abandon the enterprise. The Directors sent Mr. Drake five hundred dollars, directing him to pay his bills and come home. On the 29th day of August, 1859, one day before this order reached him, the auger suddenly dropped four inches and up came the oil for which they had long bored in vain.

Instantly the news began to spread. The same day, Titusville, then a small village, was electrified by the dwellers along Oil Creek coming into town and crying out to every person they met: "The Yankee has struck oil." That cry was the beginning of a sound which has gone out into all the earth.

In this first oil-well the oil rose to within five feet of the surface. With a common pump it yielded five hundred gallons of oil in a day, and with a force pump the yield was increased to twice that quantity. The oil was stored in immense tanks, where, by an unlucky accident, it took fire, so that the first fruits of the discovery were lost. The bor-

Wm. T. Boardman

ing of other wells by other parties so increased the production of petroleum, that the price declined from one dollar per gallon to one dollar per barrel. The Seneca Oil Company, therefore, having expended a considerable sum of money in preparing the way of this new industry, did not reap a corresponding harvest. But history must award to a New Haven man the honor of boring, with New Haven capital, the first of the oil-wells which have increased the wealth of the world.

The New Haven Gas Company antedates the use of petroleum as an illuminant. The Company was chartered in 1847, and commenced business in the following year. The first dwelling-house in which a meter was placed, was that of Professor B. Silliman, Jr., who had from the first been an active promoter of the enterprise. His mansion in Hill-house avenue was illuminated with gas on the evening preceding Thanksgiving Day in November, 1848. The first business house in which a meter was placed was the book store of Durrie & Peck (now H. H. Peck) in Chapel street, Henry Peck, the junior partner, being then Mayor of the city. The streets were first lighted with gas in the spring of 1849. No street lamps had been supported by the city previous to this time; but here and there an enterprising citizen kept a light before his premises to illustrate the sentiment,

How far that little candle throws his beams,
So shines a good deed in a naughty world.

The earliest of these benefactors of the public and of themselves, is said to have been Philip Saunders, the proprietor of a grocery on that corner of Chapel and Orange streets where now is the Union Trust Company.

The business of the Gas Company increased, so that, on the 1st of December, 1855, the number of public lamps was 189, and the number of consumers was 1,252. It has continued to increase till now the city supports 860 gas lamps, and the number of gas consumers is about 5,000. The Hon. William W. Boardman was President of the Company from its organization till his death in 1871.

He was succeeded by Mr. Daniel Trowbridge, who has continued in the office till the present time.

The first electric light company in New Haven was not a financial success. It was organized in 1881, and employed the Weston system. After a trial of eighteen months, it being found that the lights were both unsatisfactory and expensive, the company was reorganized under the name of the New Haven Electric Light Company, and substituted the Thompson-Houston apparatus for the Weston. The first lights of the new company were exhibited December 1, 1883, and the number of lights has been increased till there are now 225 lights; of which more than two-thirds are in stores. After a trial of the new system for more than two years, the lights are found to be superior to those of the old company in steadiness, and to be less expensive; so that with the same charge as before for each light, the company are giving good satisfaction to their customers and to the public, and at the same time making a handsome profit instead of a ruinous loss. The directors believe that this species of electric light will be found suitable for inside as well as outside illumination, and confidently anticipate its adoption in factories and stores.

Some of the larger factories in the city have already apparatus of their own for producing electric light, and are well satisfied with this illuminant.

The question arises whether, if these anticipations should become reality, electricity will drive out the use of gas? Perhaps for lighting streets it may; but there is nothing in the present condition of electric light in New Haven to justify the belief that it will take the place of gas in dwelling-houses. As the building of railroads has increased the demand for horses, so perhaps will the use of electric light occasion the requirement of an amount of artificial illumination a hundredfold greater than would have been deemed sufficient but for this wonderful illuminator, and thus it may promote, rather than diminish, the use of lesser lights.

BIOGRAPHY.

WILLIAM WHITING BOARDMAN

was born at New Milford, Conn., on the 10th of October, 1794. He belonged to an old New Milford family, prominent in the history of town and State from the earliest times. His father, Hon. Elijah Boardman, was United States Senator from Connecticut in the first part of this century, and died in the public service. His mother was Mary Anna Whiting, a woman of remarkable intelligence and amiability. She was descended from two notable Connecticut men, Major-General John Mason and William Whiting, one of the first settlers at Hartford, and a friend of the famous Rev. Thomas Hooker.

Mr. Boardman studied at the Litchfield and Colchester Academies, and entered Yale College shortly before he was fourteen years old, graduating in 1812, the youngest member of his class. After graduation he studied law at Litchfield, and later at the Cambridge Law School, and immediately afterward established himself in his profession at New Haven.

In 1824, the Legislature elected him to be Judge of Probate, and he held the office for five years. In the same year began his service in the city government, lasting through two terms in the Board of Councilmen and eight in the Board of Aldermen. His last employment in the latter capacity was in the years 1865-66, when he was known as

the chief promoter of a plan for mutual city insurance.

For several years he served in the Governor's Foot Guard, rising to the rank of Major. While in command he quelled, with admirable tact and prompt decision, a riot growing out of popular feeling against the Medical College.

Judge Boardman repeatedly represented the town in both branches of the State Legislature, and was once Speaker of the House. His last service in the House was in 1851. In 1840 he was chosen to fill the vacancy in the United States House of Representatives caused by the resignation of the Hon. William L. Storrs. Shortly afterward he was elected to represent this district in the Twenty-sixth Congress, and served through the sessions of that body with great distinction. During the last twenty-five years of his life he retired from public service, and devoted himself almost exclusively to his domestic affairs and to the management of his large property.

On the 28th of July, 1857, he married Miss Lucy M. Hall, of Poland, Ohio.

He was especially interested in the prosperity of religious and charitable institutions, and gave to them liberally of his time, his money, and his sympathies. He was an efficient member of the Episcopal Church, and was Junior Warden of Trinity Church at the time of his death. He was frequently chosen as delegate to Episcopal conventions, both local and national, and always asserted a commanding influence in church councils. Trinity College honored him with the degree of A.M. in 1845, and of LL.D. in 1863. Of that institution he was a Trustee, and also of various educational, ecclesiastic, and eleemosynary foundations.

Judge Boardman contributed largely to the success of the New Haven Water Company after the city refused to build the water-works. Of that Company he was a Director, and for a number of years its President. He held similar positions in the Gas Company, the State Hospital, the Tradesmen's Bank, and the New York and New Haven Railroad Company.

In general he was quick to espouse the cause of public improvement, and gave of his time and means to every enterprise that promised to develop and build up the community. He was a conscientious steward of his ample fortune, scrupulously honest—a clear-headed, resolute, sincere man. He had a nervous, vigorous organization, both mental and physical. His nature was of that positive kind which possesses the elements of great personal power. Popular clamor and opposition could not shake his independence of thought and action. An ideal presiding officer, he has been seen to take the chair of an assembly when two-thirds of those present were hostile to the purpose of the meeting, and by his dignity and fearless address carry the business to a successful termination. He supported the cause of the Union with all the ardor of his being, and during his last hours was heard to exclaim, "Sustain the Government."

He died peacefully on the 27th of August, 1871, at the ripe age of seventy-seven years.

Judge Boardman was above the average stature, and of fine presence and bearing. Under a decided and sometimes brusque manner, there was concealed unusual tenderness of spirit. He was an appreciative neighbor, a genial companion, and a loving friend. "Those who knew him best, loved him best."

CHAPTER XXVIII.

WATER SUPPLY.

BENEATH the plain on which New Haven is built, is a plentiful supply of good water. In some places wells are twenty and even twenty-five feet deep; but elsewhere the water rises quite near to the surface. At the corner of the Green, where the town pump assuages the thirst of the multitude, the water level is about four feet lower than the sidewalk. Tradition reports that in the seventeenth century a stream flowed constantly from the Green to the Cutler corner, and thence diagonally, across the Lamberton Quarter, to East Creek. At the same time, copious springs gushed from the bank between George street and West Creek.

The level of the water is, of course, in consequence of the removal of forests, somewhat lower at the present day than it was two centuries ago. The reduction of inequalities in the surface of the ground has also tended to deprive us of the sparkling springs at which our forefathers quenched their thirst.

Wells were the main dependence of the inhabitants of our town for drinking water during more than two centuries. It was not till New Haven had become a manufacturing city, and felt the need of water for the production of steam in her workshops, that reservoirs were constructed and pipes laid for the introduction of a more plentiful supply than could be drawn from wells.

The increasing compactness of the city, and the substitution of a railroad for the Farmington Canal, forced upon thoughtful citizens thoughts of fire, and of the means of putting it in check.

The New Haven Water Company was incorporated in 1849. It made little progress, however, toward the creation of water-works for several years, during which the public mind was agitated with debate whether it was better that the city, in its corporate capacity, should provide water, or leave it to be provided by the company, which, having procured a charter for that purpose, had not yet

begun the construction of its works. At a city meeting, held June 1, 1852, a resolution was passed appointing a committee to inquire and report the most feasible method of supplying the city with water for the extinguishment of fires and other purposes. A careful investigation was made of the various sources of supply around the city, and trustworthy information was furnished to the committee in regard to the amount of water required, the capacity of the streams, and many other facts indispensable to a proper conception of the magnitude and great importance of the project.

The report of the committee was printed and ready for circulation in February, 1853, and its merits were thoroughly discussed by the friends and the opponents of the measure. The committee recommended,

First.—To procure a supply of water for the city, to be brought at the expense of the city from the Quinnipiac or the Mill River.

Second.—To instruct the committee to make application to the Legislature for such addition to the charter of the city as to provide for the transfer of the rights and privileges of the New Haven Water Company to the city, and any other matters proper to carry into effect the objects expressed in the first proposition.

A city meeting was held March 21, 1853, to take action on the report, at which Mayor Skinner, chairman of the committee, made a full statement of the objects of the meeting, and of the course taken by the committee. A resolution was then passed that an adjourned meeting be held on the 26th day of the same month, to vote by ballot on the propositions presented by the committee. Accordingly on the 26th of March the ballot was taken, and the city voted, by a large majority, in favor of both propositions.

In accordance with this vote, a Board of Water Commissioners was appointed and organized which, after an examination occupying five months, aided by celebrated engineers, adopted a plan and consummated a contract for water power, lands, etc., with Mr. Eli Whitney.

Meanwhile opposition to the construction of water-works by the city increased, till, on a petition to the General Assembly that another ballot should be taken, a bill passed that body ordering a new ballot and requiring a three-fifths vote in its favor to make it binding. On the 17th of July, 1854, this ballot was taken, and the proposition that the city should build the water-works was defeated by a large majority.

Of course nothing more was done by the city, except to satisfy Mr. Whitney for the failure of the Water Commissioners to fulfill their contract.

The introduction of water into the city being thus left to private enterprise, the New Haven Water Company, which from the first had maintained its organization, again came to the front. The original corporators assigned the charter, in 1856, to Eli Whitney, who petitioned the General Assembly in the name of the Company for suitable amendments, and having obtained them reorganized the Company. It was principally due to his energy and

assumption of pecuniary responsibility, in behalf of what was then considered a doubtful enterprise, that the works were finally constructed, Mr. Whitney advancing to the Company more than \$75,000.

The plan of the works was greatly enlarged beyond that which had been proposed by the city's engineer. The dam at Whitneyville creating the lake is thirty-five feet high and thirty-two feet thick at its base. In anticipation of its construction and the flowage it would cause, twenty buildings and three bridges were removed. The covered bridge of one hundred feet span was taken up whole and placed on abutments about forty feet high, a quarter of a mile up the stream from where it originally stood. Long lines of highway were also changed to avoid flowage.

The contractors for the construction of the works were Eli Whitney and Charles McClellan & Son. The sum paid them was \$350,000, of which \$150,000 was in cash, \$100,000 in bonds, and \$100,000 in stock.

The Company and contractors had unusual trials and difficulties, owing to the persistent efforts of opponents, who tried to obtain a rival charter with intent to supply the city from the Orange Hills.

The construction was commenced in the spring of 1860, under the charge of Mr. J. W. Adams as chief engineer and Mr. Thomas N. Doughty as his assistant. Water was introduced into the distributing mains on the 1st of January, 1862. The length of mains laid down at that date was 17 $\frac{93}{100}$ miles. The Company has now more than one hundred miles of pipe.

Mill River is the source from which the supply was at first obtained. It has a watershed of fifty-six square miles, and affords a daily amount throughout the year of 120,000,000 gallons. Since then two additions have been made to the supply. First, the franchises of a rival company owning the lakes in Maltby Park, west of the city, were purchased, and afterward, in view of the increase of population, the waters of Saltonstall Lake were acquired and added to the bountiful sources already at command. The additions were made in view of prospective, and not of present need. Mill River would of itself, with sufficient reservoirs, supply a city of 100,000 inhabitants.

Soon after the introduction of water into its pipes, the Company made a contract to supply water for all the occasions of the city, including those of the Fire Department, for the period of twenty years. This contract provided that the city at any time during the continuance of the contract, after ten years from the date thereof, might purchase the water-works, by paying an amount equal to the capital stock paid in and invested, together with interest of ten per cent. per annum on the same, less all dividends declared by the Company, and the city thereupon assuming the payment of all the bonds and other liabilities of the Company. This contract being made in 1862, the public mind was greatly agitated as the period of twenty years during which the city had the option of purchase drew toward an end. The same difference of opinion

existed as twenty years before in regard to the comparative desirableness of water-works owned by the city and water-works owned by a chartered corporation. The question was submitted to a popular vote, and the majority decided that the water-works should not be purchased by the city. This decision of the city not to buy, released the water company from all obligation to sell; and the two parties now make such terms as they can with one another, the water rent of the city increasing from time to time with the increase of population. At present the annual payment is \$16,000.

The different sources from which the Company derives its supply, all afford pure, agreeable and salubrious water. In the summer of 1865 there was a disagreeable taste and odor. Upon investigation it was discovered to be due to the use of water which had stood too long in the reservoir. The impartation of motion soon corrected the evil, and there has never been any serious complaint since then of the quality of the water. On the contrary, those who have observed the effects of the city water upon the human system, generally concur in the opinion that it is more favorable to health than that which our fathers drew from

The old oaken bucket, the iron bound bucket,
The moss covered bucket which hung in the well.

The effect of the water, by reason of its purity and softness, on steam boilers, is such as to prevent the formation of scale and keep the interior perfectly clean, thus greatly economizing the use of fuel.

The quality of the water, which the friends of the Company were delighted to find so excellent when only Mill River was drawn from, has not deteriorated since the lakes have been added to the supply. Citizens of New Haven may well congratulate themselves, not only on the abundance of water with which the city is blessed, but on its excellent quality, whether compared with that which quenched the thirst of their predecessors, or with that which is offered them when visiting in other cities.

The Hon. Erastus C. Scranton was the first President of the Water Company, but was obliged by the pressure of other duties to resign the office before the works were built. He was succeeded by Mr. David Cook, by whom the first printed report of the Board of Directors is signed. When the second annual report was issued, in 1864, the Hon. William W. Boardman was President, and he continued in the office till 1868, when he was succeeded by Mr. Henry S. Dawson, who has been President of the Company from that time to the present.

BIOGRAPHY.

HENRY SHEPARD DAWSON,

the son of a farmer, was born in New Hartford, Conn., July 3, 1813. His father's given name was Holt, his mother's maiden name, Irene Shepard. He lost his father when twelve years of age, and ever after supported himself.

On June 4, 1836, he married Miss Elizabeth Alling, of Orange. They had nine children, of whom only two survive, Sidney Holt, born in 1842, and Augustus Edward, born in 1844.

Mr. Dawson learned the trade of a hat finisher, at which he worked as a journeyman in eight different States, and in Washington when Andrew Jackson was President. He was a merchant in Plymouth Hollow for two years; and in 1841, when twenty-eight years of age, entered as a clerk in his brother's store on State street, New Haven. In connection with his nephew, B. H. Douglass, he bought out his brother. The firm Dawson & Douglass continued for many years in the business of general merchandise and manufacturers of confectionery, and were also engaged in the West India trade, running for eight years from one to three vessels to Porto Rico and San Domingo. From \$30,000 per annum their business increased to \$800,000.

With an ardent, philanthropic nature, with faith in God and faith in man, Mr. Dawson early identified himself with public enterprises. He was the first President of the Derby Railroad, a work vitally important to the prosperity of the city. Since 1866 he has been President of the New Haven Water

Company, though for years previously he had been its Vice-President, and its success was doubtless due as much to his efforts as to those of any other person. It so absorbed him that he gave up his lucrative mercantile business, selling out to Mr. Douglass, and resigned his railroad presidency to devote his entire energies to the Water Company.

The original charter of the Water Company was granted in 1849, and a number of the ablest business men attempted to build water-works, but failed in getting the stock subscribed, the people lacking faith. In 1853 the charter was altered to enable the city to build them. After accepting this, the city finally refused to order the issue of its bonds through which alone the work could be prosecuted. Several more years elapsed and nothing was done, and it seemed as if New Haven was doomed to stagnate through the supineness of her people, and remain little more than an academic town, while smaller towns, through the introduction of water power, were becoming hives of manufacturing industry and places of general thrift.

While the prospects were so gloomy for the future of the city, seven gentlemen met, in 1859, in a private parlor, for one more effort. All honor to their names! They were Henry S. Dawson, Henry G. Lewis, E. C. Scranton, James F. Babcock, Minott A. Osborn, David Cook, and David G. Peck. Of these, Messrs. Dawson and Lewis alone are living.

After a very great effort on the part of these gentlemen, the stock was subscribed. The contract for the construction of the works was made in the

Wm. L. Garrison

spring of 1860, when suddenly the claims of a rival company were sprung upon them, and a conflict for the mastery began, which continued until after water was introduced in the city in 1862. It was only by indomitable pluck, hard work, anxious days and sleepless nights, that Mr. Dawson and his associates saved the city from the sore disaster of the ruin of this most beneficent institution.

From the knowledge gained in his early experiences, Mr. Dawson sympathizes with struggling working people, and he has unbounded faith in and for the masses. He has lately established a charity called "The Bread Fund," by a gift of \$1,000 to the city, which is characteristic of him. This is a nucleus. He hopes and believes that this fund will ultimately reach a large amount, so large that at a future day the poor may be fed and clad by the free-will offerings of their more fortunate, prosperous fellow-citizens without begging and without a resort to taxation, thus creating peace and good-will between all classes.

During the most distressing period of the rebel-

lion, when the hearts of multitudes were in anguish as to the result, Mr. Dawson's faith never forsook him; but his patience did when McClellan, with his magnificent army of 200,000 men, lay idle for month after month before Washington, under pretense of guarding the city. At this juncture he wrote to President Lincoln to call for 25,000 volunteers over forty-five years of age, to go to Washington, equipped at their own expense, asking only their food of the Government, while they would defend the city and allow the army to move upon the enemy. Had the call been made, he would have been one of the volunteers.

Mr. Dawson has filled many positions in the city government, and has always proved true to his trusts. He is exactly six feet in height, full-chested, of extraordinary personal agility, and his eyes are intensely black and sparkling, while their brows are heavy, dark and overhanging; his beard is long, white and flowing; his countenance patriarchal, impressive and quickly responsive to every shade of emotion, whether it be joy, sadness, sympathy or indignation.

CHAPTER XXIX.

SEWERAGE.

TWO kinds of drainage are essential to the health of a city. A porous soil is favorable to a dry atmosphere and thus to health. But, however dry the soil of a city may be by nature, there must be some means devised, as the city increases in population, of removing the dampness and filth produced by so many animal organisms; or else, however dry the soil may have been originally, the air is poisoned more and more, from day to day, till a pestilence depopulates the city.

New Haven has by nature a dry soil, and till the middle of the present century had so sparse a population that there was little need of sewerage. There were indeed at an early date some subterranean sluices, by means of which a heavy rainfall could be conducted into the two creeks which nature had provided for the drainage of the town plat.

The sewerage of the city which its increasing population required, commenced with the introduction of the Mill River water in 1861. A sewer discharging into the harbor was immediately constructed through State and George streets, at the expense of the city.

The introduction of water through our streets, says Mayor Welch, in his address to the Common Council, in 1862,

will give rise to the important subject of sewerage, and will demand at the hands of the Council the greatest consideration. The construction of the George street sewer, though at heavy expense, will be of great benefit to all living on that slope of the city. Accurate surveys have established that by connecting sewers the drainage from State, Church, College, and numerous streets may be turned into the main channel.

George street sewer was built under a supposed public

necessity, and therefore was paid for entirely from the city treasury. As other sewers, if ordered, may not come under like influences, and as we have no law assessing benefits on adjoining proprietors for sewer work, it is a proper subject for inquiry whether a public law is not required whereby a part of the cost may be assessed to adjoining land-owners, and the balance paid by the city?

The George street sewer having been constructed at the expense of the city, without any assessment on private property, a charge was made of fifty dollars for each connection with it, whenever it was opened for the benefit of an adjoining proprietor.

We have said above that the sewerage of the city commenced with the introduction of the Mill River water. The George street sewer was intended as the commencement of a system; but it was soon seen that some much more extensive plan must be devised to answer the requirements of the whole city, especially in view of its prospective increase.

The plain on which New Haven is built has but little elevation above the level of the sea, and is of considerable extent. These features of the site made the drainage of the city a comparatively difficult problem, and the municipal authorities wisely sought the best professional advice. Noticing that Chicago had similar, though still greater, natural difficulties to surmount, and hearing that the sewers of Chicago, though not yet completed, had already improved the sanitary condition of that city, they employed Mr. E. S. Chesbrough, C. E., then City Engineer of Chicago, to prepare a plan for a system of sewers adapted to the peculiar requirements of New Haven.

Mr. Chesbrough forwarded to Mayor Lewis a pre-

liminary report on the 4th of March, 1871, and a final report on the 30th of December, 1872.

The preliminary report assumes that the following objects are essential in any plan that might be adopted, viz.:

First.—Undoubted efficiency in the works as far as they may be carried out, to meet existing demands.

Second.—Capability of further extension to meet future demands, without rendering useless important portions at first constructed.

Third.—The least possible expenditure compatible with the foregoing essentials; and

Fourth.—The consequent use, as far as practicable, of existing sewers.

During the interval between the two reports, sewer work was prosecuted in accordance with these views, so that every sewer laid, whether large or small, contributed toward the completion of the system.

The general plan recommended by Mr. Chesbrough, and adopted by the city authorities, is thus described in his final report.

The area of the present corporate limits of New Haven between Mill and West Rivers, is about thirty-eight hundred acres. A small portion of this area, about two hundred acres bordering West River, and about one hundred acres bordering Mill River, is salt marsh.

The topography of the city is such as to afford facilities for the construction of an excellent system of drainage at a very reasonable expense. The locations of the railroads, particularly the Derby road and the Northampton road, render necessary a modification of what would otherwise be the most natural and efficient plan.

The surface drainage of the eastern portion of the city, comprising an area of about eight hundred acres, flows into Mill River. That of the central district, about twelve hundred acres, flows southerly into the harbor. The western district, an area of about sixteen hundred acres, is drained by the West River.

There is a very small area in the northern part of the city, the surface drainage of which flows at first northerly, but it passes into Beaver Pond Brook and ultimately into West River.

The elevation of the central portion of the city—for instance, Church street between the Post Office and the City Hall—is about twenty feet above tide. The elevation of College street directly in front of the principal College buildings, is about forty feet above tide. This plain rises very gradually in a northerly direction. The elevation of the summit between the harbor and West River is about forty-five feet above tide at the intersection of Orchard street and Whalley avenue.

Prospect Hill in the eastern district rises to about one hundred and fifty feet above tide-water, but the drainage of this part of the city is so simple and obvious, that it is hardly possible to adopt any other plan for it than the correct and natural one. The details of such a plan must be left till the streets are laid out.

For convenience in describing and understanding the plan of drainage, the area of the city has been divided into five drainage districts. The boundaries of these are as follows:

District No. 1 is bounded on the west by Olive street as far as Chapel street and by the Northampton Railroad from Chapel street to Trumbull street, thence by a line running to the junction of Sperry and Goffe streets, thence by Webster and Winter to Charles street, thence by a line running to the junction of Dixwell avenue and Shelton avenue, and thence by Shelton avenue to Ivy. It is bounded on the north by Ivy street and Highland avenue to the summit of Prospect Hill. This district comprises all the city limits on the east side of Prospect Hill as far as Mill River. It is bounded on the east by Mill River, and on the south by the harbor.

District No. 2 is bounded on the west by West River; on the north it extends very nearly to the northern line of the

city. It is bounded on the east by District No. 1, as far as Sperry street, and by Sperry, Garden, Gill and Day streets to West George street; and on the south by West George street and Derby avenue.

District No. 3 is bounded on the north and east by Districts No. 1 and No. 2, on the south by the Derby railroad; and on the west by Daggett street to Congress avenue, Vernon street to Davenport avenue, Hubbard and Howe streets to George street, and by George street to Day street. It is proposed to locate the outlet for this district along an extension of Meadow street to the channel of the harbor.

District No. 4 is bounded on the north by District No. 2; east by District No. 3; on the south by the Derby Railroad; and on the west by West River.

District No. 5 embraces all that part of the city south of the Derby Railroad.

The foregoing description gives, in the language of the report itself, a general outline of the districts, without defining exactly the bounds of each. Slight changes have since been made in the boundaries of the districts thus outlined; and another district was necessarily added to the system to provide for Fair Haven, which was comprehended within the city limits after Mr. Chesbrough began his studies.

The sewage of District No. 1 is discharged into the harbor at the foot of East street through a sewer which is built out to the channel on piles, the bottom being of plank, the sides of stone, and the arch of brick.

By an ingenious contrivance the East street sewer is relieved in case of a heavy rainfall by a sewer which crosses it at Laurel street and empties into Mill River. The contrivance consists of a dam which confines the sewage water, and forces it to flow through the East street sewer till the depth of water increases to twenty-three inches, when it overflows the dam and passes off into the river, so diluted with rain water as to be harmless.

Two other overflows have recently been constructed to relieve the East street main, one at Grand street and one at Greene street; the latter of creosoted wood where it is beneath the Foundry of Messrs. Wheeler & Mallory.

There being no opportunity of relieving the main outlet in District No. 3 by an intercepting sewer, the whole volume of sewage from the central part of the town is brought under Meadow street, and under the track of the Consolidated Railroad to deep water in the harbor, where it is discharged through an outlet six feet in diameter.

The three remaining districts of the five included in Mr. Chesbrough's plan were to have their respective outlets into West River; and the plan included several such auxiliaries as District No. 1 has in the Laurel street overflow. Some changes have been made in the details of the plan as the work proceeded, the chief of which provides that the Boulevard sewer by the side of West River, shall discharge, not into West River, but into deep water on the east side of Oyster Point. This sewer, the construction of which is already commenced, is to reach from Oyster Point along the western slope of the city to Westville, and is of greater size at its lower end than any other in the city, its transverse diameter at the outlet being seven feet and its height five feet nine inches.

District No. 6 comprehends the territory between Mill and Quinnipiac Rivers. It was not included in the plan of Mr. Chesbrough, because it was not within the limits of the city when the matter was submitted to his consideration. The present plan includes for this district two main sewers, one discharging at the foot of James street, and the other at the foot of Poplar street, the latter being already constructed as far north as Grand street. Both these sewers are to be relieved by overflows into the two rivers which inclose the district.

When the sewers which the Chesbrough plan, as thus supplemented by the studies of our own engineers, contemplates are all built, New Haven will possess the means of a very efficient drainage. Already the sanitary condition of the city is improved by what has been done since 1861. One after another, masses of filth are removed; and by connection with the sewers, one house after another escapes the disagreeable and dangerous gases which in the olden time rose from every homestead, however inimical to filth its inhabitants might be.

In some parts of the city, sewerage has been made to contribute to surface drainage. For example, Commerce street was laid out where the bed of West Creek once was, and but for precautions taken, the earth with which the bed of the old creek was filled and raised to the desired level, would have been continuously moistened by the springs which had fed the creek with little streams from the east and from the west. Rows of draining tile were laid to intercept these streams and conduct the water immediately to the sewers, and with such success that few streets are drier than that which marks the course of the creek through which the first planters of New Haven sailed as far up as the foot of College street.

Study of the sewerage of the city brings to view many ingenious devices and inventions of the civil engineers who conduct this subterranean work. A sewer-well is a device for discharging into a deep sewer one which is much nearer the surface of the ground. Such a well makes it possible to place a sewer only twelve or fifteen feet below the surface, which but for such an expedient must have been put at twice the depth. The cost of construction and of making connections is of course much less than if the sewer were twice as deep.

Several contrivances have been devised for cleaning and flushing the sewers. A wooden cylinder is used for removing the constantly increasing sediment and the hard substances which by accident sometimes lodge in the sewers which are too small for the passage of a man. The cylinder being an inch less in diameter than the caliber of the tube, rises to the top when a cistern full of water is dropped through a man-hole behind it, and thus causes the water to scour the bottom of the sewer, the cylinder being kept under control by a cord reeled off at the surface. By this contrivance such velocity is given to the water that neither sediment nor brick-bat can remain in place. Brick sewers are cleaned by means of a specially designed truck,

made adjustable to fit any size and shape, which runs through the sewer and transports the obstructive matter gathered by the workman to man-holes, where the buckets are hoisted out.

All sewers having an interior diameter of 24 inches or more are built of brick. Those between 15 and 24 inches are of brick or of vitrified stoneware, at the discretion of the engineer, taking into consideration the prices of materials and the particular requirements of the locality; brick sewers being more expensive, but preferable in damp places, because the material, though not sufficiently porous to allow the escape of sewage, is always slowly, but surely, drawing off into the sewers from the earth above them, the excess of moisture. The smaller sewers are now made of vitrified stoneware, the use of cement pipes having been abandoned.

Some of the streets in New Haven have so little elevation above the level of the sea, that the engineers have not been able to give the sewers as high a grade as is desirable. Of the sewers now built, that in East Water street, between Franklin and East street, has the least grade, there being but one foot fall in a length of 1,093 feet. The main outlet sewer on the extension of East street has a grade of one foot fall in 1,000 feet. The Boulevard sewer is to have in the lower part of its course only one foot fall in 2,500 feet. Experience has shown that the East street sewer is kept clean by the action of the tide; and it is confidently expected that Neptune will considerably render a similar service to the western side of the city when the Boulevard sewer invites him to enter.

The aggregate length of sewers constructed to January 1, 1886, is forty-four miles.

When the George street sewer was built, there was no law authorizing the city to assess upon adjoining proprietors any part of its cost. A difficult part of the problem of sewerage was to determine what part of the cost should be borne by the public and what part by the owners of the land specially benefited. It was finally settled that one-half of the whole cost should be paid out of the public treasury, and the other half assessed on the owners of the property whose value was enhanced by the sewers. But as large sewers were necessary in some streets and small sewers were sufficient in other streets, the expense of the whole system was estimated, and the aggregate divided by the number of feet. One half of this quotient, the other half being paid by the city, was the sum to be assessed on adjoining proprietors for every foot of sewer in front of their premises. By this rule the average cost of sewers, with all their appurtenances, being about \$7 per foot, \$1.75 is assessed on land-owners on each side of a street for every foot of sewer, an equitable rebate being allowed on corner lots which have been previously assessed.

Maps are kept in the office of the City Engineer which show in every street the location, size, and material of the sewer; the grade of the street and of the sewer; the depth of such sewer below the surface of the street; and the height above mean

high water. Such a map shows the location of the man-holes, basins, culverts, and hubs for house connections, and indicates whether such connections have been put in. Distances are accurately marked on the map, so that by measurement from the curb-stones and from the man-holes, any hub can be found with the least digging possible in the case.

The Hon. Henry G. Lewis was the Mayor of New Haven when Mr. Chesbrough was employed to devise a system of sewerage. The city is greatly indebted to Mr. Lewis for the foresight which pro-

vided the system, and the persistent energy with which the work of construction was prosecuted till the tide of public opinion had risen to strong approbation.

Mr. Charles E. Fowler was City Engineer, or, as the officer was then styled, City Surveyor, and had charge of the work of construction till his lamented death. Mr. A. B. Hill, C. E., who had been his assistant, became his successor, and still superintends this, as well as other departments of public works.

CHAPTER XXX.

HEALTH.

BY PROFESSOR WILLIAM H. BREWER.

THE town of New Haven is a healthy one, and its death rate very low as compared with other places of its size. This has been the case as a whole since there have been any statistics kept, and all the data we have indicate that this has been so ever since its first settlement. This fact might also be legitimately inferred from the nature of its site and the character of its people.

SOIL AND TOPOGRAPHY.

The natural features of soil, climate, topography, exposure and position are all favorable to health.

The bay and harbor open southward to the Sound, which is here more than twenty miles wide, giving us free circulation of air in that direction, and in summer a maritime climate. The town incloses the bay from the old Light-house to West River, but most of the population live on a sandy plain or terrace not over fifty feet above tide-water, between the West and Quinnipiac Rivers. This plain extends southward across West River to the Sound, and northward into Hamden; and, taken as a whole, with its immediate surroundings forms a rather well-defined topographical region, having a distinctive character and most uncommon interest.

The sandy terrace spoken of is bounded on the east by the sandstone and trap ridges of East Haven, granite forming the rocky shore from Morris Cove to the old Light-house. On the west it is bounded by the rounded, wooded hills which constitute the Woodbridge plateau; hills of moderate height, and consisting geologically of highly metamorphic rocks which are much folded and contorted. On the north it is bounded by the Mount Carmel range, a trap ridge, which is in places over eight hundred feet in height.

Along the northern borders of the town, rising abruptly from this plain, are the four well known trap hills, or "Rocks," having wooded slopes on their far sides, but presenting bold precipices and picturesque crags toward the city.

East Rock, three hundred and sixty feet high, lies between the Quinnipiac and Mill Rivers, rising

almost in a single crag on its front, and extending northward a few miles as a low sandstone ridge. Immediately west of this is Mill Rock, two hundred and twenty-five feet high, Mill River flowing in the narrow gorge between the two and which is here dammed, forming the Whitney Lake, New Haven's present chief water supply.

Pine Rock rises from the plain a mile and a half farther west, and is two hundred and seventy-one feet high, and a scant mile still farther west, and separated from it by Wilmot's Brook, is West Rock. This is four hundred and five feet high, and extends northward some miles as a bold, rocky, wooded ridge, throwing off a spur on the eastern side which curves around to Mount Carmel, and thus forms the northern boundary of this distinctive region. West River flows along the west base of this ridge.

Beaver Meadows, or Beaver Ponds, is a narrow, peaty swamp which occupies a remarkable depression in the plain between Pine and Mill Rocks, whose bases are a mile apart. This depression in the plain is a mile and a half long and from a few rods to one-fourth of a mile wide, mostly occupied by a deep, peaty bog, the bottom of which is below the sea level, and the existence and character of which is a problem to both sanitarians and geologists. It is apparently the remains of an old river channel, left unfilled when the great glacier left the valley at the time the region was wrought into its present shape. It is fed by pure springs; a considerable stream issues from it; and its sides are mostly abrupt, rising to the level of the dry sandy terrace above, which extends northward around these isolated hills and is continuous with the Hamden plains.

Several low, rounded, gentle ridges, composed of soft coarse red sandstone, of triassic age, running in a general north and south direction, rise from the general level of the plain. One stretches northward from East Rock into Hamden, and two others extend southward from Mill and Pine Rocks into the city. The origin of these ridges is as interesting as their aspect is picturesque. The general features of this plain were determined, topographically, by the great glacier which, in a former geological

Henry L. Davis

period, came from the far north, down the Connecticut Valley and passed out off the coast, and which ground and scoured away the softer sandstones, while the harder trap rock resisted the abrasion. These two sandstone ridges stretch southward from Mill and Pine Rocks, just as on a planed board one sometimes sees a minute ridge of wood stretch from a slightly projecting nail which nicked the planing tool. Beaver Hill, a hundred feet high, south of Pine Rock and Prospect Hill, a hundred and fifty feet high, in the shelter of Mill Rock, were thus left by the great glacier which planed away the sandstone on either side.

At the time of the settlement, two small streams, which have now disappeared, crossed a part of the plain included within the city.

West Creek flowed where Commerce street now is, crossing Chapel street near Park street, and vessels could then come up to above High street. The stream first disappeared at its upper part as the town grew, but between George and Oak streets it remained as a foul sluggish stream with swampy sides, a vexatious source of ill-health for some 240 years. The trouble lingered until about a dozen years ago, when a sewer was laid in its bed, the swamps were drained and filled up, and Commerce street laid out on its site, since which it has entirely disappeared as a surface stream.

Between the head of this stream and the Beaver Meadows, there was formerly a series of remarkable depressions, to which the name "Kettle Holes" have been given by geologists, their bottoms occupied by peaty swamps or water, some of which have been troublesome sanitary problems, but as the city has spread about them they have been, or are being, filled up or drained.

Another small stream, called East Creek, came down north of the present cemetery. This channel was enlarged into the Farmington Canal in 1828, which twenty years later gave way to the tracks of the Canal Railroad. In the old bed of this stream the railroads pass through the heart of the city, under the streets. The natural waters are now carried off through the sewers, so that the stream has disappeared from the surface.

But these two old water-courses have been long-standing problems in the sanitation of the city, making the sewerage much more difficult, and in one way and another have had a curious and permanent influence on the history of the place. They, in fact, determined the whole street plan of the city. Between them the original nine squares were laid out, and the direction of all the streets of the city, except those on Oyster Point, bears some natural relation to them.

The sand and gravel of the plain are deep and stratified, and make dry building sites and dry streets. Good water can be found at a moderate depth, and wells constituted the only water supply for more than 200 years, and there are still nearly 3,000 in use in the town.

While this dry sandy soil is in many ways favorable to health, and was of even greater relative value in the earlier history of the place than now, it has also its disadvantages. Its porous char-

acter made cesspools so easily effective for concealing filth, that it delayed the time of sewerage the city until the increasing soil pollution showed itself in a positive way on the health of the community and in the character of the diseases, and since the introduction of city water has made sewers a sanitary necessity.

The growing city has encroached on the bay. Streets now exist where formerly vessels went, and some sanitary problems incident to these made-lands are in store for the city to solve in the future.

The native trees are mostly those incident to a dry, deep soil, the oak, chestnut, elm, ash, maple, etc., and in the streets of the city the American elm flourishes with especial luxuriance. As might be expected from the varied topographical features, the local flora is very rich in species, embracing as it does both coast and inland vegetation. A catalogue prepared by local botanists enumerates more than 1,200 species of flowering plants growing spontaneously in the vicinity, a very unusual number to be found in one place, and amounting to nearly one-half of all the kinds which are found north of Virginia and east of the Mississippi.

Salt meadows lie on either side. Those on West River formerly extended up three miles from the bay, through which the stream sluggishly meandered, but a dike built a century or more ago has restricted the area, and the stream is now being straightened. Those on the Quinnipiac are much more extensive.

The city is sheltered from the full force of the winter winds by the high rocks and ridges which inclose it on the north and northwest, and with the southerly and southwesterly winds of summer tempered by the Sound and the ocean beyond, the climate is mild and salubrious.

Such are the chief natural features of the region, which, if considered in detail, are wonderfully varied. In fact, I know of no other city in the whole wide world that has such a variety of topographical and geological features in its immediate vicinity. Excepting limestone, all the other great classes of rock which go to make up the crust of our planet are found here—granite, sedimentary sandstone, eruptive dikes, and metamorphic rocks of great variety of texture and composition. And the surface topography furnishes almost every kind of feature known to map-makers—coast and inland, sandy beach and rocky shore, salt-water bay and fresh-water land-locked lakes, both natural and artificial. There are sluggish rivers winding through low salt meadows, and sparkling brooks leaping in bright cascades in the rocky hills; natural streams, artificial canals, and dry water-courses; there are barren sands and fertile valleys; there are rugged, though low, mountains and monotonous plains; there are gentle slopes, picturesque precipices and grand crags; there are rolling hills and abrupt steepes; there are woodlands, and fields and gardens, and farms and orchards, and all the features incident to a large city and its approaches by land and water, with its roads and railroads, and bridges and cuts, and embankments and wharves; there are deep navigable waters and shallow sand-

bars, and overflowed tide-lands and rocky reefs, and beyond all the broad blue Sound, stretching away to the horizon. In short, there is almost every variety of feature, except glaciers and perpetual snow, which a topographer is ever called upon to portray on a map, and all within five miles of the City Hall. This wonderful variety of geological structure and topographic feature, imparts peculiar picturesqueness to the landscape, and perhaps no other drives in the country of equal length present such a number and variety of striking and beautiful views as those in East Rock Park.

These picturesque and beautiful natural features have their healthful influences, and I doubt not are one important reason why this is a healthy city.

EARLY HEALTH HISTORY.

The early health history must needs be very incomplete, from the scarcity of data. The healing art was crude, medical science in its mere infancy; sanitary science, as we now know it, had no existence, and official records relate to other matters. Without vital statistics we can have only a crude means of comparing the health of different places at one time, or of the same place at different periods, and such statistics are entirely lacking until after the Revolutionary War. In 1672, an act was passed in the colony providing for a record of the births and deaths, but it was not enforced, and it appears to have been dropped from the statute books with the revision of 1702.

In the *Connecticut Journal* of March 18, 1789, a medical man recommended that "an accurate register of the bills of mortality" be kept, as such a record "has been found to be of great utility in most civilized countries," but nothing came of it until many years later. Private letters, diaries, etc., give incidental mention of particular years when some specially dreaded disease became epidemic, or when there was more general sickness than usual, or when an unusual number of the better known citizens died, and these mere glimpses contain about all that is now known of the matter for the first hundred and sixty years of the colonial history.

The local newspapers give curiously little information on this point; only an occasional mention of some prevailing epidemic, which it assumes its readers know all about, is all that we find until the yellow fever epidemic of 1794, which occupies more attention; the official action regarding it is published, and the next year tables of deaths begin to be published.

Noah Webster published, in 1799, "A Brief History of Epidemic and Pestilent Diseases," in which there are many detached bits of information as to epidemics in New Haven. The Medical Society which was organized in the last century, began to keep a list of deaths some time after 1800, which list is said to be still in existence, but it was necessarily very imperfect. In 1799 the Connecticut Academy of Arts and Sciences was organized, and one of its first works was to issue a circular asking for information pertaining to the town. As a result of this, Rev. Timothy Dwight,

President of Yale College, prepared "A Statistical Account of the City of New Haven." This paper appears to have been in preparation for many years, and was first published in 1811. It has been made more accessible by republication in the City Year Book for 1873, pp. 417 to 476. In this he appears to have collected all the information accessible, both as to epidemic years and death statistics. He collected the tables printed in the newspapers for the preceding sixteen years, and gives other figures where he can get them. Some of the church societies had kept lists of their burials, and he prints that of the First Society for the twenty-four years from 1763 to 1786 inclusive.

Inasmuch as most of the early lists related to burials, it often includes persons who lived out of the town, but who worshiped in it during their lives and were buried here, and thus went to swell the list.

A new settlement has many conditions favorable to health, unless the natural features are bad. The colonial stock was a hardy and vigorous race of men, and their simple and regular lives, as well as moral habits, were favorable to health. The sparse population escaped the dangers incident to crowding, the soil was not yet saturated with the filth incident to long occupation, and various other conditions lessened the dangers to which the older and denser communities of Europe were then subject. Filth diseases were less liable to break out, and contagious diseases were easier controlled.

There were some special dangers, but they were more than counterbalanced by the advantages. The hardships of the times were less destructive to life than is popularly believed, but the clearing up of the forest and disturbing a new soil brought malarial diseases; but in fact these appear to have been no more severe than have visited the town within the last twenty years. If the death rate was high at times, and epidemics raged which are now almost unknown, it is because our modern knowledge has given us better control over them, and this town was then no worse off than the rest of the world.

There was then a much greater difference between the mortality of different years than now. Certain of the zymotic diseases, then known under the general term of "fevers," often became epidemic and very fatal, and our health history, until the present century, consists almost entirely of the mention of the exceptional years of much sickness. These diseases, mostly arising from local causes, were often very local, so a bad year in one town might not be a bad one in another not far away. They were usually attributed to atmospheric influences beyond our control.

In 1647 there was a "malignant fever" here. In 1655 "a faint cough" was so prevalent throughout New England that few persons escaped, "occasioned by a strange distemper of the air." In the spring of the same year, Mr. Davenport writes that "the winter hath been extraordinarily long and sharp and sickly among us," and that his own family had been spared "from the common sickness in this town." Trumbull says that there was

great sickness and mortality throughout New England in 1658, that "the season was intemperate and the crops light." Webster says that "in 1668 a comet appeared with a stupendous coma. This was attended with malignant diseases in America."

For many years after this there are scarcely any data. President Dwight says that "antecedent to 1735 and 1736, no particular account of the diseases in this town are recorded," and for the remainder of that century I cannot do better than to quote him, as but little has been added since to what he wrote. "About 1736 the *Angina Maligna* was prevalent and extensively fatal. It appeared in 1742, and most of those whom it seized it carried off. It visited the town again in 1773 and 1774, and was followed in the autumn of each year by a destructive dysentery." "The most prevalent autumnal disease is the dysentery. Its greatest ravages were in 1751, 1773, 1774, 1775, 1776, 1777, and 1795." "In 1761 an inflammatory fever prevailed here, which was fatal in a considerable number of instances. In East Haven it carried off, the same year, about forty of the most robust inhabitants." "In 1794 the yellow fever appeared in New Haven; of 160 persons who were seized by it, 64 died." "In 1805 a few cases resembling yellow fever appeared." "The typhus fever became epidemic the autumn of 1805, and continued through the winter following." He says that for the past forty years "the existing fevers have generally assumed a typhus character." "The measles were epidemic in 1739, 1748, 1758, 1772, 1783, 1789, 1790, 1795, and 1802. Influenza in 1737, 1747, 1757, 1761, 1771, 1781, 1789, 1790, and 1802."

The yellow fever in 1794 created a great fear, and the newspapers of the day contain lists of the sick and the deaths, a kind of information they had not before published, and the epidemic led to better records after. The *Connecticut Journal* at the close of the year (January 1, 1795) contained a list of the deaths the previous year, and this was the beginning of the publication of vital statistics here. They were continued each succeeding year, giving the deaths by months, and sometimes also by ages; but the classification by ages under twenty years was not uniform, nor were they always given. The *Journal* of January 6, 1803, gives a list of the total burials for preceding years, back to 1789. President Dwight republishes these totals and adds other figures, among which is a table of deaths in the First (Church) Society for twenty-four years, 1763 to 1786.

COMPARISON OF DEATH STATISTICS.

The difference between the mortality of different years was then very much greater than now, and along with this the distribution by season and by months was very different. Now, the deaths are more evenly distributed through the year, and it is very rare indeed that the deaths in any one month are but half of the average, or rise to twice the monthly average; but then there were often months with but a third of the average number, and others with three times the average.

In illustration of this, I have compiled the fol-

lowing table of deaths by months for the first ten years in which we have the figures, namely, 1794 to 1803, inclusive. These figures are taken from the various numbers of the *Connecticut Journal*.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total
1794.....	8	10	12	12	27	13	24	33	21	5	5	180	
1795.....	5	8	6	6	7	6	24	59	18	9	5	159	
1796.....	6	3	3	3	1	13	11	11	6	4	3	67	
1797.....	5	6	6	1	6	8	2	5	1	3	9	58	
1798.....	2	3	8	2	11	8	12	13	7	4	8	78	
1799.....	9	7	7	8	1	5	5	8	6	7	6	60	
1800.....	6	6	6	6	3	11	7	11	2	6	7	79	
1801.....	3	6	6	3	6	6	13	16	15	8	9	95	
1802.....	3	12	10	10	7	8	6	18	12	6	10	106	
1803.....	0	4	7	5	12	20	16	35	18	11	3	145	
Total.....	56	65	68	53	65	90	85	145	186	102	60	61	1,036

In these 120 months there was 1,036 deaths, an average of 8.7 per month; but there are three months with but a single death, and 23 months in which the number did not exceed 3, scarcely a third of the average. On the other hand it was 18, or more than twice the average on 11 months, three times above 30, and once it rose to 59, or more than six times the average. It is very noticeable also that August, September and October are the fatal months. In 1794 the number is swelled by 64 deaths from yellow fever, and if the population was then 5,000, it is a death rate of 36 per thousand. In 1795, President Dwight tells us about 750 persons had the dysentery, of whom 54 died. The death rate that year must have been over 31 per thousand. The *Connecticut Journal* of December 31st of that year, says that 75 of the 159 deaths were from dysentery, and in its issue of January 4, 1797, it says that 16 of the 67 deaths the next year were from the same cause. There was another epidemic of dysentery in 1815, and again in 1879.

The distinction between typhus and typhoid fever was not then well understood by physicians, and I suspect that the typhus epidemic of 1805 was typhoid. There was a total of 126 deaths that year, 20 in September and 26 in October, and indeed, if the tables are continued the next ten years, we find that the autumn is the fatal season.

A similar table of the deaths of the town for the last eleven years, 1875 to 1885 inclusive, which is the whole period during which the Board of Health has published its vital statistics, would show that in those 131 months there were 13,592 deaths, or an average of 103.7 per month. The lowest number in any month is 64, or 39 per cent. below the average, and the highest 186, or 78 per cent. above the average. Only four times has it sunk to 70, and twice to above 150. In nine of these eleven years July was the most fatal month, made so by infantile diarrhoea in those sections of the city where poverty and filth most prevail. One year the largest number of deaths was in August, one year in March.

This naturally suggests a comparison of the deaths by ages at these different periods.

In these modern days child mortality is so very much greater in the large cities than in the country and in the smaller villages, that we naturally conclude it must be very much greater than it was a hundred years ago, when New Haven was a mere village in population, but such does not appear to be the case. The first data we have, and when the population of the town was but three to five thousand, the child mortality, as compared with the total deaths, was greater than now.

President Dwight gives us a table of the deaths occurring in the First (Church) Society during the twenty-four years, 1763 to 1786 inclusive, and 45½ per cent. of those deaths were of persons under twenty years of age. And this society probably represented the better portion of the community. The population of the town was then about 4,000.

In the *Connecticut Journal*, the tables given in successive years from 1796 to 1809, inclusive, there is a classification by ages for all the years except 1804 and 1805. In the other twelve years there is a total of 1,105 deaths, 48¼ per cent. of which were of persons under twenty years. The population then ranged from about 5,000 to a little less than 7,000. Of the 13,592 deaths in this town in the eleven years, 1875 to 1885, inclusive, 6,134, or 45¾ per cent. were of persons less than twenty years of age, a smaller proportion than at either of the earlier periods cited, and which represent all of our earliest data.

No less interesting is a comparison of the deaths of old people at these two periods, that is, 1796-1809 with 1875-85. During the first period 9¼ per cent. of the total deaths were of persons over seventy years of age, during the last period 12¼ per cent. In the first period 3¼ per cent. of the deaths were of people over eighty years, in the last 4¼ per cent. These averages show, in a striking way, the effects of better hygiene and modern public sanitation in preserving life. During these last eleven years, 1,626 of the deaths were of persons over 70 years old, 662 of persons over 80, 97 over 90, and 3 over 100 years old.

SMALL-POX.

Of all diseases, small-pox was the one which was most dreaded and popularly caused most terror. And no wonder, for in the mother country, previous to vaccination, it often caused a tenth of the deaths, and sometimes much more. Moreover, many of the survivors were maimed or disfigured for life, and every town had its blind beggars and its paupers, who had been made so by this scourge. More laws were passed in the colony to control or prevent this disease than all others put together.

It first appears on the statute books of the colony in 1711, and the laws, amended from time to time, were of extreme severity. The Selectmen, or they with the Justices of the Peace or the Civil Authority (the Justices of Peace and the Constables), as

the law provided, might isolate the infected, take possession of any house to shelter them, impress nurses to take care of them, with penalties of fines and imprisonment for neglect without sufficient excuse. A law of 1750 provided for cases of sickness which might even be suspected to be of small-pox, that signals be displayed, and to prevent the spread of the infection, that "all Owners of Dogs shall destroy their Dogs or cause them to be killed."

Inoculation for small-pox was introduced from Constantinople into England in or about 1719, and into Boston in 1721. It met with great opposition, and even created riots in both places. I have no information as to its introduction into this town, but it evidently led to breaches of the peace in this State, for it came in direct conflict with the laws then existing relating to small-pox, and consequently it came before the Colonial Legislature at its session of March, 1760, and after a long preamble, beginning with

Whereas, Notwithstanding the Provision made in said Act for preventing the spreading of Small-Pox or other Infectious or Contagious Disease, and for the Prevention of the Inhabitants from such Infection, divers Persons have presumed to go into the Practice of being Inoculated in order to receive Small Pox, and have invited others to bring the Infection into several Towns for the Purpose; and in some Instances have carried on that Practice without the Leave of and even in Opposition to the Minds of the Select-Men of the Town; to the great Terror of the Inhabitants and Disturbance of the Peace, etc.

An act was passed forbidding the practice without first obtaining the consent of the Selectmen and the Civil Authority. This was modified in 1761, so that even they must first get the consent to give the permission by vote at a town-meeting, and later the same year, after a preamble which says of the practice "which hath greatly terrified many of the Inhabitants of this Colony; and if such Practice should be continued would endanger the People and create great Disquietude," etc., they passed an act forbidding it, *in toto*, under strong penalties. The act was to be in force until October, 1761, and was continued at successive sessions, but at last appears to have been neglected, and the prohibition expired by limitation.

Immediately after the Revolutionary War, in 1783, there was a revision of the laws, and, by this time the practice having probably settled into some shape, it is again provided for, with the old limitations as to permission and precautions, and from that time on it was regularly practiced. The laws regulating it were modified in 1796, and about that time, and later, advertisements in the newspapers tell of the authorized pest-houses where inoculation might be performed. Young people, more particularly the boys, were thus treated; and often girls, the better to prepare them for very possible contingencies of life. An item in the *Journal* tells of the death of a young bride, daughter of one of the most prominent families of the city, in the pest-house, whither she had gone to be inoculated, to be the better prepared to be the head of a household where the pest might at any time come. The provisions for inoculation existed on the statute-

books until 1875, but it has not been practiced in this town since vaccination became well-established, some sixty years ago, except in very isolated cases of persons who had been exposed to the small-pox and suspected that they might have taken it in the natural way.

Vaccination was introduced here soon after the beginning of this century, and appears to have met less active opposition than in the Old World. The practice became legally authorized in May, 1821, when an act was passed authorizing boards of health to vaccinate the public in certain contingencies at the expense of the town, and that statute remains essentially the same until this day. Under its beneficent working, and with the popular sentiment in favor of the practice, small-pox has practically disappeared, there rarely being any cases at all, and there have been but two deaths caused by it among our inhabitants during the last ten years, a marked contrast with the last century, when we are told of burials at midnight in the old grave-yard on the Green, the corpse wrapped in tarred sail-cloth, preceded and followed by men with lighted lanterns giving warning to all whom they might meet, to keep away.

OTHER SPECIAL DISEASES.

The cholera came to New Haven on its first visit to America, in 1832, and 32 persons died of it—not a large number for a city of over 11,000 inhabitants. There were also a few cases reported in 1849.

Consumption is now the most fatal disease, as indeed it is in most of the country. During the last eleven years there have been 1,977 deaths by "pulmonary consumption," or $14\frac{1}{2}$ per cent. of the total deaths. Large as this number seems, it is, in proportion to the living population, less than in most other places near us. In 1883, the Health Officer addressed a circular of inquiry on this matter to many cities, when it was found that our ratio of fatal cases of this disease compared with the living, was not only smaller than in most places in New England, but less than in such Southern cities as Washington, Wilmington, Richmond and Atlanta. It is also notable that the most of the deaths by this disease are of foreigners or persons of foreign parentage. This has been a matter of common experience in our monthly examination of deaths, but I have the complete figures for but three years, 1877, 1878, and 1881. In these three years there were 544 deaths by pulmonary consumption of persons whose nativity was known. Of these only 199 were of American parentage, while 345 were foreigners or of foreign parentage.

Typhoid fever was relatively much more common formerly than now, and it is diminishing as the sewers of the city are advancing. I have not the figures convenient previous to 1868, but from that year to 1874, inclusive, the deaths by typhoid fever constituted from 4 to $8\frac{1}{2}$ per cent. of the total deaths, while for the last ten years they have been but $1\frac{1}{10}$ to $2\frac{6}{10}$ per cent., and have constituted less than 2 per cent. in seven of the ten years.

SANITARY ADMINISTRATION.

So far as I can learn, there were no public acts relating to the public health in our colony until 1711, when "An Act providing in Case of Sickness" was passed, "for the better preventing the Spreading of Infection," etc., already alluded to under small-pox, and giving the Selectmen certain powers to that end; and this body remained practically the Board of Health until 1872. The acts and the powers of the Selectmen were modified from time to time; sometimes they had to act with the civil authority, at others independently of it, but they were the Board, or had the naming of the Board. An act of 1795 empowered them to appoint a Health Officer, to whom they might delegate certain powers. This was an outcome of the yellow fever of the previous year, and is the first appearance of such an office on the statute books of the State.

As previously stated, the year 1805 was one of much sickness. Webster and Dwight both speak of the typhus fever here (probably typhoid), and of cases resembling yellow fever, and a "*Board of Health*" came into existence the coming spring. This term first comes into the statute books of the State in 1821, when an act was passed which declared "that the Civil Authority and Selectmen of these several towns shall constitute a Board of Health in their respective towns," that they might appoint health committees, health officers, etc.

But we had a Health Board in fact and in name much earlier, whose volume of manuscript records, still in good preservation, begins thus: "At a meeting of the Board of Health in the town of New Haven, holden at the Office of Henry Daggett, Esq., on the 17th day of March, A. D. 1806, Henry Daggett, Esq., was (by ballot) elected President; Elisha Munson, Clerk. It was further voted that Noah Webster and Isaac Tomlinson be a committee to fix the boundaries of quarantine in the harbor, and that Elizur Goodrich, Simeon Baldwin, and John Barker, Esquires, be a committee to devise a general scheme of regulations under the law 'providing in case of sickness,' etc. They adjourned to the 20th, when quarantine boundaries were established, by-laws and regulations relating to the public health were made, a health committee established, its powers defined, a health officer provided for to visit the vessels, etc. They then adjourned to March 22d, when they chose (by ballot) Dr. John Barker, Noah Webster, Isaac Tomlinson, and Daniel Read a Health Committee, and Dr. John Barker, Health Officer. A Board of Health, essentially thus constituted, continued until, by amendment of the City Charter, July 1872, a special Board of Health was created as a department of the city government. Any list of the numerous officers of this old Board, during the sixty-six years of its existence, would be entirely too long for this place.

The new Board has jurisdiction over the whole town, and all the functions of the old Board except that of public vaccination, which, by a curious decision, based on supposed law rather than common sense, is alone left in the hands of the Selectmen.

The Board thus constituted consists of six members (three of whom must be physicians) appointees of the Mayor, with the approval of the Aldermen, and the Mayor, *ex officio*. It was organized August 8, 1872. Judge F. J. Betts was elected President; Dr. H. A. Carrington, Health Officer; and C. R. Wheedon, Esq., Clerk. Hon. L. W. Sperry was President 1873 to 1876, and Professor William H. Brewer from 1876 to the present time. Dr. C. A. Lindsley was chosen Health Officer in 1873, and still remains in the office; and Ward Bailey, Esq., became Clerk in 1886. The Board makes an annual report, and since 1875 has published annually the vital statistics of the town.

PRESENT HEALTH.

For ten years, 1867 to 1876, inclusive, the death rate was from 16.14 (in 1867) to 24.95 (in 1870) per thousand living. By that time the public sanitary improvements were well begun, and since then the death rate has not reached twenty. The figures are: for 1877, 19.75; 1878, 17.99; 1879, 16.73; 1880, 17.82; 1881, 19.10; 1882, 18.65; 1883, 18.37; 1884, 17.55; and 1885, 17.43—truly a remarkable record for a city of its age and size, and which led the National Board of Health to publish the statement that New Haven had the lowest death rate of any sea-port of its size in the world.

CHAPTER XXXI.

THE MUNICIPAL HISTORY OF NEW HAVEN.

I.—THE TOWN GOVERNMENT.

BY PROFESSOR CHARLES H. LEVERMORE.

A COMMUNITY, like a musical instrument, may possess a tone peculiar to itself; and the founders of New Haven breathed into their handiwork a harmony which, in some modulations, grew more distinct with the years. Though relatively small in size, New Haven has succeeded in preserving and continuously developing a strong individuality throughout a quarter of a millennium.

Resolving this personality into its original parts, we find the municipal customs and commercial ambitions of the merchants of London, the freest city of the realm; the usages of village life in Kent, the freest shire of the realm;* and uniting, molding the whole, the inflexible, lofty purposes of Theophilus Eaton, together with the fervent Puritanism and scholastic zeal of John Davenport.

The Quinnipiac company, of about three hundred souls, which landed at the foot of the Red Hills in April, 1638, was mainly the product of these influences, and it was the germ of the new municipality.

From the formation of the company in 1636-37, until the autumn of 1639, the colony was probably governed by the officers and members of the joint-stock association of proprietors; but no trace appears of any Court for judicature, or of even the name of a magistrate. However, there is a record of a General Court of the town, or town meeting, held very soon after the landing. The legislation of that Democratic folk-moot was the organic law of the colony for more than a year, and furnished the kernel for New Haven's future polity. All that is known concerning it was inscribed upon the opening pages of the Records in June, 1639, in these words:

It is remembered, There was a cou^t [covenant] solemnly made by the whole assembly of free planters of this plantation the

first day of extraordinary humiliation w^{ch} we had after wee came together, thatt, as in matters thatt concerne the gathering and ordering of a church, so likewise in all publike offices w^{ch} concerne civill order, as choyce of magistrates and officers, making and repealing of lawes, deviding allotments of inheritance, and all things of like nature, we would all of us be ordered by those rules, w^{ch} the scripture holds forth to us.

Secretary Thomas Fugill explains further,

This covenant was called a plantation covenant to distinguish itt from a church covenant, w^{ch} could nott att thatt time be made, a church not being then gathered, butt was deferred till a church might be gathered according to God.

Connecticut and New Haven, the two New England colonies which made, at the outset, no public acknowledgment of English sovereignty, constructed their civic machinery in a most leisurely manner. Connecticut waited three years. The founders of New Haven spent a year, after the adoption of the Plantation Covenant, in discussing and proving the foundations of ecclesiastic and secular authority. The most contested point was that of the proper suffrage qualification. Some of the settlers, among them the Rev. Samuel Eaton, desired to imitate the example of Plymouth and Connecticut, where any free planter might be admitted to the franchise. On the other hand, Mr. Davenport, Theophilus Eaton, and their followers argued that only church members should be made free burgesses. Mr. Davenport was not a Fifth Monarchy man. He expressly refused to affirm that "the right and power of choosing civil magistrates belongs to the Church of Christ," but he urged the bestowal of the franchise upon church members alone, because they alone could display a certificate of trustworthiness.* At the same time he insisted that the Church and the State, as institutions, must be entirely separated, and denied that his theory must necessarily subordinate the one to the other. As a matter of fact, in 1659, a deaconship in Davenport's church was held to disqualify Matthew Gilbert for the magistracy.

* It is to be remembered that for a man to evade the objections of bondage to say that his father was born in the Shyre of Kent—"Lombard's Perambulation of Kent" Ed. of 1891, p. 100.

* The roots of Davenport's political philosophy can be found partly in the writings of Thomas Cartwright, but pre-eminently in those of Richard Hooker, "The Judicious Hooker."

The final decision was made in the second New Haven town meeting of which there is any record, June 4, 1639.* The object of the assembly was twofold. "All the free planters assembled together in a generall meetinge to consult about settling civill government according to God, and about the nomination of persons thatt might be founde by consent of all fittest in all respects for the foundation worke of a church which was intend to be gathered in Quinipieck." After solemn invocation, Mr. Davenport struck the key-note for the day. He counseled his hearers to "Consider seriously, in the presence and feare of God, the weight of the business they met about, and nott to be rash or sleight in giving their votes to things they understoode nott, butt to digest fully and throughly what should be propounded to them, and withtout respect to men, as they should be satisfied and persuaded in their owne mindes to give their answers in such sort as they would be willing they should stand upon recorde for posterity."

Mr. Davenport then presented six resolutions, or, as he called them, "Quæries." In order to shut the door against the possibility of a misunderstanding, the planters voted twice upon each proposal by "holding up their hands;" first, when Mr. Davenport had read his "Quæry," and, secondly, when Mr. Newman had written the same in "carracters," and had repeated it to the people. Without a dissenting voice it was agreed that the Scriptures "Doe hold forth a perfect rule" for all the duties of men; that the Plantation Covenant was and should be binding; that all the free planters desired to be eventually admitted into church-fellowship; and that they were all bound to establish such "Civill order as might best conduce to the secureing of the purity and peace of the ordinances to themselves and their posterity according to God." The key-stone of the arch was the fifth "Quæry," "Whether they thatt are in the foundation worke of the Church shall be the free burgesses, and shall alone chuse magistrates and officers, make laws, and elect other freemen out of the like estate of church-fellowship." Mr. Davenport delivered a short exposition of his own opinion, and "Then he satt doune, praying the company freely to consider whether they would have itt voted att this time, or nott." After a silence, Mr. Theophilus Eaton called for the question. There was no negative voice in the vote nor in its repetition.

But Democracy was not to be changed into Aristocracy without a tardy plea for a more uniform freedom. One man, probably the Rev. Samuel Eaton, was ready to demonstrate with his voice his kinship with Hampden and with Vane. He granted that freemen and magistrates alike ought to be God-fearing men, and that in the Church such men should "Orderarily" be found; "Onely att this he stuck, 'That free planters ought nott to give this power out of their hands.'" A debate ensued. One individual answered that the free planters did

not lose their freedom, for everything was done by their consent. Mr. Eaton replied that the free planters ought to be able to resume power into their own hands again, "if things were nott orderly carryed." This was a perilous point, and Mr. Theophilus Eaton interposed with the remark, "In all places they chuse committyes, in like manner the companies of London chuse the liveryes by whom the publique magistrates are chosen. In this the rest are not wronged, because they expect in time to be of y^e livery themselves, and to have the same power." This was likely to be a conclusive appeal to the London auditors. Rev. Samuel Eaton would say no more after his brother's speech. When requested to explain his opinions more freely, he refused, and said they might nott rationally demand itt, seeing he lett the vote passe on freely, and did not speake till after itt was past, because he would nott hinder whatt they agreed upon." The fifth "Quæry" was then put to vote for a third time, and was again unanimously affirmed. Then occurred what modern political speech would term a "stampede." "And some of them professed thatt, whereas they did waver before they came to the assembly, they were now fully convinced thatt itt is the minde of God."

Finally a committee was chosen which should select from among its own members the traditional number of seven men to be the first "Pillars" of the new Church, and the first burgesses of the new State. The seven proved to be Mr. Theophilus Eaton, Mr. John Davenport, Mr. Robert Newman, Mr. Matthew Gilbert, Thomas Fugill, John Punder-son, and Jerimy Dixon.

All the "Quæries" together formed the famous "Fundamentall Agreement," the written Constitution of New Haven Colony. It received subsequently the finishing touch in the enactment "That all those thatt hereafter should be received as planters into this plantation should also submit to the said fundamentall agreement, and should sign their names thereto." Underneath are written one hundred and eleven names. It was a Puritan principle of general acceptance that the organization of a church ought to precede the establishment of civil government.

Not until the 22d of August did the "Seven Pillars" frame themselves into a church. After two months more of waiting, October 25, 1639, they came together again and resolved themselves into a State. Their first act, after the opening prayer, was to abolish all public offices and trusts that had previously existed. Then certain "Members of approved churches" were made freemen, and took an oath of fidelity to "this jurisdiction," to "the civill government here settled," and to "the lawes and orders which, according to God, shall be made by the Court;" but not a syllable suggests fidelity to England or to England's laws. After words of Scriptural admonition by Mr. Davenport, Mr. Theophilus Eaton was elected to be magistrate "for the tearme of one whole year."

The first election sermon ever preached in New Haven was delivered by Mr. Davenport from the well-chosen text, "Judge righteously between

* The place of assembly was probably Mr. Robert Newman's barn, situated on Temple street, between Elm and Grove.

every man and his brother, and the stranger that is with him. Ye shall not respect persons in judgment; ye shall hear the small as well as the great, ye shall not be afraid of the face of man, for the judgment is God's." *

As assistants to the Magistrate four Deputies were elected, Messrs. Robert Newman, Mathew Gilbert, Nathaniel Turner, and Thomas Fugill. Thomas Fugill also obtained a third honor, the post of "Publique Notary," or Town Clerk. "Marshall" was the title given to Robert Seely, who performed the duties of a Constable. He was ordered to "Warne courts according to the direction of the Magistrate; to serve and execute warrants; to attend the court at all times, to be ready and diligent in his person or by his deputy to execute sentences; and in all other occasions to attend the service of the plantation in all things appertaining to his office." The time of the yearly elections was fixed in the last week of October, and the Assembly adjourned after one more affirmation of the Alpha and Omega of this political creed, "The worde of God shall be the only rule to be attended unto in ordering the affayres of government in this plantation."

So the birth of a State was achieved. Henceforth those who were outside the Church's pale could exercise a freeman's privilege only in the occasional assemblies of the town or of its divisions, to decide upon the disposition of the common fields. Thus we read, "January 4, 1640. It is agreed by the towne, and accordingly ordered by the Court that the neck shall be planted or sown for seven years." The organic legislation of the assembly in Newman's barn was never altered. It was the instrument of town government until 1643, and the kernel of colonial administration thereafter until it vanished before the charter of 1662.

Secretary Fugill enumerated at the beginning of the Town Records the names of seventy freemen of the Court of New Haven; but, inasmuch as several of these names belonged to settlers at Milford or Stamford, it is probable that New Haven, or Quinnipiac rather, had no more than fifty resident burgesses. Their assembly was the ultimate source of sovereignty in the plantation, and was called "The Generall Courte." Its regular annual session, upon the last Wednesday in October, was known as the "Generall Courte of Elections." All free planters and burgesses were expected to attend the General Courts, but the burgesses alone could share in the transactions. The novelty of court meetings soon wore away, and attendance was enforced by compulsory methods. After November 7, 1642, any freeman who failed to put in an appearance before the end of the roll-call, was fined 1s. 6d; planters who were not freemen atoned for similar absence by the payment of one shilling.

The Yankee intellect, however, managed to evade this law by departing from the Court immediately after the roll-call. It was necessary to prohibit such action under pain of fines in February, 1645. Subsequently those who desired to leave the meeting sought, and usually obtained, the permission of the

Court. Sometimes the General Court itself took immediate cognizance of absentees and late-comers, as on the 20th of November, 1648, when "Mathew Camfield came late, but the Court past it by, because he was forced to goe looke after some catle." But usually the Town Clerk turned his list of fines over to the judgment of the Particular Court. The Magistrate summoned the General Court through the Marshal's warning, and the meeting assembled at the beating of the town drum. As the circumference of the township widened to include the newly-founded villages of Stamford and Southold, the New Haven Court assumed the functions without the name of a superior legislative authority, and it elected Constables and Magistrates for the dependent hamlets.* Meanwhile the local household was methodically set in order. The town plat was described and settled before the foundation of the State, and the interval that elapsed before the formation of the colonial government in 1643 was mainly devoted to the partition of the adjacent outlands.

A Court, in November, 1639, referred the "laying out of allotments for inheritance," to a committee consisting of the Rev. Samuel Eaton, Goodman Andrews, the Magistrate and four Deputies, or the "Reeve and Four Best Men," as a seeker after historical parallels might say. Three weeks later the Magistrate and four Deputies and Mr. Davenport were elected a Proprietors' Committee, to have the future disposal of all town lots, and power to admit any persons as planters in the town, or to reject the same. This committee of the community still holds its ground, a corporation with life and records unbroken for 246 years.

At the same time, the first tax in the new State was voted for the purpose of building a meeting-house. The rate was 30s. on the hundred pounds, and the sum appropriated was £500, which shows a total valuation of about £35,000.† This was the last assessment upon the basis of the investments in the Quinnipiac Company. The ensuing taxation was levied upon the land only, and it so continued until 1649. Owing to the reverses of fortune at Delaware and elsewhere, the incidence of taxation had then become oppressive, and the town voted to adopt almost bodily the Massachusetts tax-law. There was a prolonged debate over the adjustment of rates upon polls and personal property in general. A committee representing the quarters of the town was elected to make all needful revisions and to sit as a Board of Relief. The first grand jury lists were thereupon issued in 1651.

The jurisdiction of the monthly Court of Magistrate Eaton and his four deputies was at first wide and vague. He took cognizance of any matters that seemed to the magistrate worthy of immediate decision. He sent drunkards to the whipping-post, registered wills and administered estates, heard civil suits, and established the watch with the regulations appertaining thereto.

In Courts of every description the influence of

* For examples of the same custom among English towns in the sixteenth century, see Toulmin Smith's *Parish*, p. 389.

† There is an allusion only to a previous tax of 25s.

* Deuteronomy 1, 17, 17.

the Magistrate was paramount. The four deputies chosen in the autumn of 1642 were expressly told that they might assist the Court by way of advice, but should have no power of sentencing. Even this shadowy authority they retained only six months at a time; but, after 1645, they were elected annually, like other officers. The helm was not left entirely to Mr. Eaton's guidance. In the fall of 1641, Mr. Stephen Goodyear, an enterprising merchant, was elevated to the magistracy, and the two men occupied the chief places in the town, and afterwards in the colony, until 1657, the year of Eaton's death and of Goodyear's departure.

In civil cases it was at first the consistent policy of the community, and of the Court itself, to encourage the settlement of disputes by arbitration outside of Court. This time-honored custom of appeal was doubtless deemed especially decorous in disputes between members of one church body.

When New Haven acquired a colonial hegemony in 1643, the town's territory was diminished, the authority of its town-meeting correspondingly shorn away, and the functions of its Courts more clearly defined. The Magistrates of the town, usually four in number, were now elected by the Colonial Legislature, upon nomination by the freemen. New Haven's two deputies to that Legislature were theoretically only equals of the representatives from each of the five other towns. But practically the pre-eminence and prominence of the General Town Court were enhanced. In the autumn of 1643 it was the Town Court that dispatched a military contingent to the assistance of Uncas; and, in the next year, when an Indian outbreak was feared, the Town Court did not hesitate to appoint a council of war for the colony.

The work of the Monthly Court, however, was now explicitly marked out. It was ordered to sit every first "Third Day," or Tuesday, of each month at nine o'clock in the morning. It was given jurisdiction over all civil causes involving no more than twenty pounds, and over any criminal cause, "when the punishment, by Scripture-light, exceeds not stocking and whipping, or a fine of not more than five pounds." The verdict depended upon the majority vote of the Court, ties being broken by the casting vote in the hands of the Governor or of the Deputy-Governor, or of the magistrates who were present. Appeals from the decision lay to the Court of Magistrates for the jurisdiction. In the *personnel* of the Bench the greatest alteration for the better took place. The four Deputies no longer constituted an advisory board, but were elected Judges, with full powers. This arrangement did not indeed introduce trial by jury, which Governor Eaton had rejected from New Haven,* but nevertheless it did establish a check upon the one-man-power of the Magistrate, and created a sort of standing jury of judges, a measure which does not lack advocates at the present day.

Magistrate and Governor Eaton personally, however, retained his *patria potestas* until the day of

his death, and the whole town was his family. No other New England leader came any nearer the ancient type of the village headman, or borsholder. In the Monthly Court he was judge, jury, lawyers, and law-books, all in one. His very first judicial act was to try a foreign Indian for murders alleged to have been committed within Connecticut jurisdiction and in time of war. The Indian was beheaded, and the head was "pitched upon a pole in the market-place," the first ornament of the New Haven Green. Yet Eaton was not a severe magistrate. As the Mosaic Code which he obeyed was much more lenient than the English law of that day, so Eaton himself was more lenient than the Mosaic Code.

The executions for bestiality, which seem now so unnatural, were in consonance with the intelligence of that day; and the alleged criminals, who indeed confessed the crimes, belonged, with one exception, to the dependent population of the town and colony, which was by general admission of the very worst description. It was this nondescript rabble-folk that made crimes of drunkenness prominent in the judicial annals of the town. The wealth of the community helped to maintain a somewhat non-Puritan standard of high living. The merchants imported their own wines, and the town always had enough to eat and more than enough to drink. Drunkenness even invaded the precincts of the church and caused excommunications. James Heywood, after being cast out of the church for intoxication, was brought before the Court for secular punishment. Eaton's summing up is a fine sample of its kind.

Local self-government did not stop with the two Courts that have been described. A still narrower division of the body politic was in part affected within the squares, or "Quarters," of the town plot. These Quarters became rudimentary tithings, a result facilitated not only by the city idea that dominated the settlement, but also by the allotment of the Quarters in accordance with the local derivation of individuals of the company from England, as "The Herefordshire Quarter" or the "Yorkshire Quarter." It appears also in Southern England at that time the word "Quarter" meant a township, so that the term in New Haven probably had more than a mathematical signification.* The Quarters were the units to which the divisions of the outland were assigned.

The inhabitants of each Quarter assembled by themselves to determine the manner and means of division in severalty, and each Quarter was for a long time the proprietor of common lands. At sundry times the Quarters sought and obtained permission of the town to lease a portion of their lands to Indians, and in 1665, no little scandal arose in the town because "some Indians worked upon their lands in the Quarters upon the Sabbath day." Moreover each Quarter had its moots and its elected officers.

In 1644, after the town had been "much exer-

* "Which was so settled upon some reasons urged by Mr. Eaton (a great reader and traveler) against that way."—Hubbard's History of New England

* See Worsley's History of the Isle of Wight, p. 210, quoted in Toulmin Smith's Parish, p. 497.

cised with hogs distroying of corne," the General Court ordered each Quarter to appoint its own fence-viewers. Three years later it was proposed that the newly-created officers, called Haywards, should be "Payde by the severall Quarters which employ them, as they shall agree." The Court assented to the motion. "And it was agreed to meet in the severall Quarters to put it in execution." At the same time the Quarter-moots were legally recognized thus: "If the Quarters have seasonable warning of a meeting, and if any come nott, yett the major part maye agree any course for the good of the Quarter, provided it crosses no order of the Courte already made."* Although fence-viewers were soon elected in town, rather than in Quarter, meetings, yet down to the time of the Revolution, these officers were said to be chosen for the various Quarters, the old nomenclature of 1640 being preserved.

Doubtless the first settlers saw in the Quarters the wards of their imagined metropolis, but, as poverty and misfortune overwhelmed them, the towns-folk forgot locality and lineage, lost sight of the fancy of a city, and drew closer together into a compact hamlet.

The Puritan settlers were forced to realize their membership in the church militant. Every colony rallied around its Miles Standish. In Massachusetts it was John Endicott, in Connecticut it was John Mason, in New Haven it was Captain Nathaniel Turner, a Massachusetts soldier who had fought in the Pequot War. The military organization preceded the foundation of the State, and was doubtless effected provisionally soon after the landing at Quinnipiac; at any rate the little army in complete array marches at once into historic view. November 25, 1639, the order was made

Thatt every one thatt beares armes [*i. e.*, all males between 16 and 60 years of age, if not exempted by office] shall be compleatly furnished with arms, viz., a muskett, a sworde, bandaleers, a rest, a pound of powder, 20 bulletts fitted to their muskett, or four pounds of pistoll-shott or swan shott at least, and be ready to show them in the Markett Place, upon Munday, the 16th [?] of this moneth, before Captaine Turner and Lieutenant Seely, under penalty of twenty shillings fine for default or absence.

The first plan contemplated a weekly squadron-training, a monthly drill for all the militia, and a "view of armour" in every alternate month. But so much soldiering was deemed too onerous. It was finally determined that general trainings should occur at least six times between March and November, a "strict view of armour" at least once in a quarter, and squadron-trainings midway between the general training days. A detailed schedule of fines for various degrees of lateness, absence, and of defective equipment caused the pence and wampum to accumulate in the Town Treasury.† Captain Turner was not formally inducted into office until the 1st of September, 1640, the day on which the plantation was officially christened New Haven.

The Captain was "empowered with the command and ordering of watches, the exercising and trayning of soldiers, and whatsoever of like nature might be needful."

Two years later the official roster was somewhat tardily completed by the choice of four Corporals, four Sergeants, and an "Ancient;" and Marshal Seely was confirmed as Lieutenant.

English traditions were obeyed in the order authorizing the Captain and Lieutenant to raise a general hue and cry against the Indian foe; no man could refuse to go, "though it should be to the extreme hazard of his life." Another venerable English institution which was reproduced, at least partially, in New Haven, was the town armor. No cuirass of steel was in use, but the town did own many made of cotton-wool, and disposed of them at public sale in the later part of the century.

So early as 1642 the town was the possessor of drums, "great gunns," and pikes, which latter were subsequently kept in a "chist" in the meeting-house.* Beside these weapons, a colonial law, which was probably framed to secure conformity with New Haven usage, ordered every plantation in the jurisdiction to provide "a partison for its Lieutenant, cullars for its Ensigne, and halberts for its Serjants."

Training days were proverbially holidays, and some persons may be surprised to know that Puritan New Haven established martial games by law. Target-shooting thrice in a year was stimulated by the offer of prizes of not more than five shillings value, while the laws of the jurisdiction (Eaton's code) required the practice of cudgel-playing, back-sword, running, wrestling, leaping, "and the like manly exercises." However, the line must be drawn somewhere, and the General Court drew it at "stoole-bale, nine-pins, and quoits." "Such like games are forbidden until the millitary exercise of the day be finished."

It was the fortunate lot of this carefully disciplined band never to march in hostile array against any but distant foes and in defense of other colonies.

After 1644, there was an artillery company auxiliary to the militia, and for a few years prior to the dissolution of the colony, a cavalry troop, whose equipments were, after 1764, left in the care of the townsmen. Armed attendance at the meeting-house upon days of religious service was at first the duty of every man in the town who was a member of the watch; but, after 1643, the four squadrons of the trained band in rotation performed this work. They came fully armed, and a few kept watch outside the house, while the major part kept ward within. July 7, 1646, John Morse was fined ten shillings because he shirked his duty of walking the rounds on the Lord's day, and instead tarried in the meeting-house.

Captain Turner's absence at Delaware, and his early death in "the great shippe," rendered his captaincy of but little avail to New Haven. Not until

* Town Records, I., 13, 127, 267, II., 225, III., 134.

† After 1644, the fines for the first or absence or tardiness were fixed at 10 and 25 respectively, but the Court invariably used its discretion.

* See Johns Hopkins University Studies in History and Political Science, I., viii.

1661 did the Town Court proceed to elect his successor, when Lieutenant John Nash was chosen. Whereupon he modestly declared that he could not "feel a call of God to that place;" that he was entirely unworthy of such dignity; and desired to abase himself. After mutual remonstrance, the matter was postponed. Lieutenant Nash thanked the town for sparing him, and said, "If God shall persuade my heart of His call to this work, I shall be willing to do the town service." More than a year passed before he was "persuaded." Will our public men ever use such language again?

At the union with Connecticut, the control of the militia was transferred from the Town Court to the Legislature.

The martial organization was completed in 1640 by the establishment of a watch for night service. New Haven's first police force was under the immediate oversight of the Captain, and was so divided that the men of the town watched in turn from March to October yearly. Each night a guard was composed of six men and the master of the watch. In 1642 there were in all thirty-one separate watches, comprising two hundred and seventeen men. Every night at sundown the drum was beaten, and within half an hour the master of the watch must be "att the Court of garde," which stood on the Green. Disorders were precluded by a provision that, in making up the watch, "young and less satisfying persons shall be joyned with another more ancient and trusty."* That such a curb was needful appears a few years later when the Court felt compelled to prohibit "any from sitting with the watch as it had been a custome to doe, whereby they idle away their time."

Watch duty was esteemed burdensome, and there was a general endeavor to escape from serving either in the watch or in the militia. Officers in Church and State were exempt from the beginning. Farmers were allowed, for the sake of safety, to keep one man at home upon training days, but if the farmer owned a house-lot in the town plat he must furnish a member of the watch. Most of the members and traders gradually gained, upon one plea or another, exemption from watching, until those who could not avoid the service raised the cry of "Injustice." The petition of the ship carpenters for exemption provoked a general discussion, which resulted in a reference to the Massachusetts customs. Governor Winthrop forwarded a copy of the law of exemptions in that colony, which was, with slight modifications, accepted by the town in 1648. Thereby the persons excused from "trayning, watching, and warding" were Magistrates, Deputies, Elders of Churches, deacons, all professed schoole-masters, physitians and surgeons allowed by authority in any of these plantations, the treasurer, officers of the Courts and of the military also, Masters of shippes and of other vessells above 15 tunne and upward, servants of remote farmes without y^e two mile, millers, and such as are discharged for bodily infirmity. But sonnns and servants are nott freed except one sonn or one servant to every magistrate and teaching elder. Seamen and shipp carpenters must watch as others doe, and trayne twice a year. All these persons must have compleat armes in their houses, except magistrates and teaching elders.

* Town Records, II, 31.

During the oft-recurring expectations of war with the Dutch, these rules were abrogated, and every one was mustered into the watch except the very highest secular and ecclesiastic dignitaries. Despite the frequent fears, no Dutch or Indian foe ever disturbed the nightly peace of New Haven and its watchmen. The most vexatious enemy indeed was the natural one, slumber. The Town Court gravely proclaimed, in 1642, that "from henceforwards, none of the watchmen shall have liberty to sleep during the watch." Several years afterward there was a violent scandal in the town, because a certain late stroller, named Samuel Hodgkins, who had himself been fined for sleeping in his watch, had found not only the sentinel asleep at his post, but, inside the watch-house the master also slumbering in his chair, and the men on the floor around him "all snortinge." Within a month the disquiet was apparently allayed, but some one observed Hodgkins closely, and ere long he was hailed before the monthly Court to receive reproof "Because he attendeth not Ordinances upon the Saboth dayes, but it is said, stayeth at home and sleepeth away his time."

After Manhattan passed into English hands, the watch gradually fell into desuetude. It was revived only temporarily upon occasions of panic, like King Philip's War.

Intimately connected with the military service in a community where every man was an armed policeman, were the riot-quelling, peace-preserving functions of the Marshal. This officer at the outset, in 1639, received a rather indefinite promise of additional duties, and the promise was fulfilled. In 1642 he was desired to perform the part of a universal Pound-keeper. "It is ordered thatt whosoever findes any things thatt are lost shall deliver them to the Marshall, to be kept safe till the owners challeng them." Marshal Seely probably found his work too laborious to permit of his serving, as the other officials did, for honor only. After January, 1643, he was authorized to receive fees, fourpence each for a warrant or summons, but for serving an "attachment," sixpence. Moreover, every unfortunate whom the Marshal jailed, must pay to him for turning the key, one shilling, a venerable bit of English custom. When the town had passed under a colonial government, its Marshal was invariably Marshal of the jurisdiction also. With the increase of dignity, a stated salary of three pounds per annum took the place of the former fees. In 1645, his duties as custodian of lost articles became more lucrative and more unpleasant. The Marshal was ordered to be also the Town Crier, and to receive one penny for every "cry" from the owner of the thing lost, if he could find him. Of all articles in his care he was enjoined to keep account in a "Paper booke," and, if necessary to cry them twice on lecture-days; and, for a third time at the Fair, "when the greatest concourse of people may be present and hear it." For a short time after 1645, the melancholy destruction of corn by "Hoggs," caused the Court to appoint the Marshal also as a Viewer of Fences.

In October of the last mentioned year, he was named keeper of the hooks and hinges of the town-gates, "least they be lost." Finally this Marshal, Pound-keeper, Town Crier, and Fence Viewer, sustained in part the responsibility of a Tithingman. Tithingmen, strangely enough, were not imported into primitive New Haven. Their traditional duties were divided between the Corporals and the Marshal. In 1650, the town voted that there should be a two-shilling fine upon any one who stands or sits without the meeting-house in the time of the Ordinances without sufficient reason, "and the Corporalls are desired to goe out now and then to prevent such disorders." * Three years afterward the Marshal received a general commission, entitling him to seek out and seize all straying boys on the Sabbath, and to bring them into church. These commands were repeatedly enjoined upon the Marshal and the Corporals, so that a prevalent looseness of conduct may be imagined.

A public servant peculiar to the times was the Town Drummer. At first, indeed, inasmuch as his principal tasks were connected with the Watch and Ward, he was supported by the members of the watch. But his drum announced any public assembly, and was a species of primitive town-clock, so that it was entirely proper to begin, in 1642, the taxing of every planter for the support of the Town Drummer. The salary which he drew yearly from the treasury averaged from four to five pounds, a goodly compensation in those days.

Robert Bassett, the most notable of the town drummers, was thus instructed in his duties. He must drum every evening at sunset, and every morning "halfe-an-houer before day in the market-place, and in some of the streets." The last watch was ordered to call him one hour before day, and "to walke with him as a guard while he continues beatinge." Furthermore he was desired to beat the drum twice upon "Lord's-dayes and Lecture-dayes upon the meeting-house that soe those who live far off may hear it the more distinkly; and he promised soe to doe."

Robert Bassett was a roving, lusty Englishman, somewhat reckless of the higher powers, a ring-leader in merry makings among the lesser folk, and decidedly out of place in a Puritan "State, whose design is Religion." The Court Records for August 1, 1648, afford a ludicrous picture of a spree at Bassett's house on the previous Friday. Ten men, mariners and ship-builders, had resorted to Bassett's after sunset, and like Falstaff, called loudly for sack, which the jovial host supplied freely. "The miscariage continued till betwixt tenn and eleven of the clocke, to the great provocation of God, the disturbance of the peace, and to such a height of disorder, that strangers wondered at it." The owner of the pinnace grew tipsily jocular, and hailed the boatswain as "Brother Loggerhead." "They fell first to wrestling, then to blows, and therin grew to that feircnes that the master of the pinnace thought the boatswain would

have pulled out his eies, and they tumbled on the ground, down the hill into the creeke and mire, shamfully wallowing therein. The owner of the pinnace, being sore afraid, ran about the streets, crying 'Hoe, the watch! Hoe, the watch!' The watch made hast, and for the present stopped the disorder; but, in this rage and distemper, the boatswaine fell a swearing, 'Wounds and hart,' as if he were not onely angry with men, but would provoake the high and blessed God." Still later Bassett and the owner of the pinnace fell into altercation, "So that the disorder was verey great and verey offensive, the noyse and oathes being heard to the other side of the creeke." Verily, a fearful revel to intrude upon Mr. Davenport's dreams of a perfect Zion and a millennial glory! It cost Bassett five pounds, but a man, ignorant of drumming, must surely have paid for the fault with a scarified back, or an enforced exile. Bassett soon after removed to Stamford, where he was noted as a person seditious against the New Haven polity. The town drummer, however, flourished until the advent of the first bell in 1681, and even then he was but gradually superseded.

As the years rolled on, the originally simple town administration was enveloped in a cloud of minor officials. When the town associated itself with others into a colony, and attempted to realize its commercial aspiration, the necessities of trade, the traditions and example of England and the sister colonies, combined together to produce Measurers, Weighers, Sealers, Keepers and Inspectors.

In 1640-41, when Lamberton's trade with Virginia and Delaware was fairly under way, the Court chose Brother Peck to "Measure all the corne that comes into the plantation to be solde, and, for that, a role to be made to strike the bushell with." As a toll, Brother Peck could receive "One halfe-peny" to every bushel. This by-law was practically superseded in 1643, when the Commissioners recommended a uniform standard of measures throughout the united colonies. Shortly afterwards the town deputed Richard Miles, William Davis, and Nicholas Elsey to "See that all the measures in the Toun be made according to the stande sent from the Bay." This work was probably accomplished in the meeting-house July 19, 1644, after which time the Sealers of measures became a fixed fact in New Haven's municipal economy.

Sealers of leather were first elected in 1646, to examine and stamp leather for the fees of four-pence a "hyde" and two-pence a "skinc." Oddly enough the leather of the first quality was to be marked "N. G.," that of inferior worth, "N. F." The New Haven tanners and shoemakers were very unsatisfactory workmen, and there were loud complaints against both the quality and the price of shoes. There is a pathetic gentleness about one of the orders in 1648: "It was propounded to the shoemakers that, seeing hides are now neare as cheape as they are in England, that shoes might be sould more reasonable than they have bine; and the shoemakers promised they would consider of it."

One of the most humble, versatile, and appar-

* Town Records, II, 17.

ently successful of New Haven's first public servants, was Goodman John Cooper, or Cowper. In 1643, he became, by sanction of the Monthly Court, the first public chimney-sweeper, and was given powers of inspection and control of all chimneys in town, with a schedule of suitable fees. After three years the duty of the Town Crier was differentiated from the Marshal's office, and Cooper was chosen to cry in the Marshal's stead.* Goodman Cooper developed the true office-holding instinct, and made himself so generally useful, that the Court, in 1648, queried whether he might not be the man to solve the vexing problem of fences and cattle.

The first pounds, two of them, had been built in 1643, and two pound-keepers had been chosen at that time. Each quarter had chosen its own Pounders and Fence-Viewers, who, in 1647, were first called Haywards, and authorized to mend fences, as well as to secure straying animals. Without dispensing with these officers in any way, Cooper was appointed to be the first "Publique Pounder," a sort of Town Superintendent. He was instructed to spend "Two dayes in a weeke to view all y^e fences, and pound catle and swine, and to tell every man whose fenc is defective onc every weeke." In return he should receive two-pence on every acre of corn-field within the two miles square, and Pounder's fees besides. Brother Cooper resigned his office of chimney-sweeper, which was never filled again,† and applied himself vigorously to his new vocation. In one winter he summoned many of the most influential brethren in the town for defective fences, and complaints and fines began to rain in at the Court meetings. "The Court was evidently not prepared for such diligence, for, although complimenting the zealous Cooper, it wiped out all charges, and began anew with a clean score for everybody.

Road surveyors were first chosen in 1644, and were annually chosen for three years thereafter. They had power to impress men and teams for the work of repairs. An attempt was also made to create individual pride in the highways by commanding every man throughout the town to repair and maintain the footpaths and the "road before his homelott the breadth of two rodds."

In accordance with a colonial enactment of 1654, the town provided itself from time to time with Gaugers of Casks and with Viewers of Corn. Eaton's Code seeks in Deuteronomy and Micah a precarious authority for the enactment that "All cask used in trade shall be of London assize." There is little trace of the activity of these officers beyond the occasional records of their election, while of the official who, according to law, ought to have been chosen to keep the Assize of Bread there is no witness whatever, although in 1647 and

in 1649 there was serious complaint of diminution in size of the baker's loaves.

Obscure, but by no means unimportant functionaries, were the Supervisors and Branders of Cattle and Horses. It is probable that these officers were first chosen during the period of threatened hostilities with the Dutch in 1653-54, when the Legislature forbade the departure of horses from the jurisdiction without a license for the act. Five years later, the Court "having information of some indirect proceedings by some persons," in branding their own horses, renewed the orders that such marking must be done by the town officer, and that horses bought or sold must be registered. Of the Hog-reeve, who figures in the public service of other colonies and of the mother country, there is no trace in New Haven.

There were still a number of public trusts which were either of short continuance or were caused by peculiar local circumstances. Under the former characterization must be included the beer-brewer, Mr. Stephen Goodyear. In February, 1647, the Town Court authorized him to "Brew Beare for this Towne, all others excluded without the like liberty and consent of the Towne." The monopoly, however,* was abandoned at least by 1655. Still more ephemeral was the office of Truckmaster with the Indians, to which Mr. Gregson was chosen in 1640. The Quinnipiac native was not likely to afford much trade to any but the vendors of fire-water. The position of Town Ferryman at the Quinnipiac River was, however, an office of more moment and of longer duration. The first Ferryman, Francis Browne, was elected to that post for one year by the Town Court in 1645, and was required to tend the ferry at the Red Rock every day from sunrise to sunset, "excepting Saboth dayes and other times of solemne publique worship of God." In return, beside the fees which were from time to time regulated by the town, he was allowed a house, three acres of land in the Oyster-shell Field (commons) rent free, and exemption from training. The public Ferryman existed for more than a century, but the Canoe Viewer, who was at first associated with him, soon disappeared. There seems to have been but one election to such an office.

The great care taken to relieve the Church as a body from any action not wholly religious in its bearings, is evinced by the fact that the General Court of the town regularly elected the menial care-takers of the meeting-house. Indeed the freemen in the Town Court were all church members, yet the distinction between a church-meeting and a town-meeting was evidently maintained with care. It was the Town Court, in April, 1643, that formally elected Sister Preston to "sweepe and dresse the meeting-house every weeke, and to have one shilling for her paines." Four years later a similar Court intrusted to Brother Preston the "opening and shutting of the meeting-house dores." Again, in 1660, the same authority elected "Sister Pecke, the widow, to sweepe the meeting-house in place

* He had two successors in the office, which was continued till 1683, when the "New Sign Post" seems to have superseded it. The sign-post served for a century and, in turn, yielded to the newspaper.

† Several efforts were made by the Court to fill the position, but no man could be induced to accept it. In 1658 the townsmen finally informed the Court that they "could prevail upon no man to be chimney-sweeper."—Town Records, II, 284.

* The first example of exclusive legislation occurred early in 1649, when a license system was established. The town "Licensed Peter Brown to bake to sell, so long as he gives no offence in itt justly."

of Sister Preston." These worthies, therefore, remained members of the town administration until the "unhallowed rule" of Connecticut swept away the old distinctions and reduced the Church to a dependent position.

The collectors of college corn, chosen first in 1644, as custodians of a voluntary contribution for the relief of poor scholars at Harvard College, were regularly elected until the troubles of colonial dissolution impoverished the town. That which had been a free-will offering came to be regarded as a necessary tax. The teacher of the Free School, and even the doctor, were also partially identified with the municipal service. Mr. Cheever, the first school-master, probably derived very little income from private sources, inasmuch as he drew from the town treasury, in 1642, a salary of twenty pounds, which was afterwards increased to thirty pounds. The bargains with his successors, until the establishment of the Hopkins School, were completed in the Town Court. The master employed in November, 1651, obtained from the town such terms as these: "Twenty pounds, his chamber and dyet (at Mr. Atwater's valued at 5s. per week), 30s. for traveling expenses, libbertie once a year, in harvest time, to goe for his friends, and, if he be called away to some other employment for the Honnor of Christ, he may go."*

Professional physicians were so scarce and valuable in those days, that when one came within reach the town treated with him as with a foreign potentate, and offered house, lands, and public salary. In one instance the Town Court forced a doctor to remain in town though against his will. But most of these characters appear to have been roving fellows, who were in such demand only by reason of the principle that half a loaf is better than no bread.

As the younger men of the town came into power the caste-like influence of the magistracy was circumscribed. The Court of Five, or rather the magistracy as a class, held through the first decade not only judicial but also the executive power. The multiplication of administrative officers created one species of check upon the magistracy. The very frequent meetings of the Town Court also preserved a popular supremacy. But the obligations to attend town meetings from eight to ten times in a year was burdensome. The parish institutions of the mother country, and the usages of the sister colonies, suggested the means of relief. The Town Court of November 17, 1651, voted to follow the example set by Massachusetts and Connecticut ten years before.†

It was propounded that there might be some men chosen to consider and carry on the towne affaires, that these meetings, which spend the towne much time, may not be so often. The Court approved the motion and chose one out of each Quarter to this worke, viz.: Francis Newman, John Cooper, Jarvis Boykin, Mr. Atwater, William Fowler, Richard Miles, Henry Lindon, Thos. Kimberley, and Mathew Camfield, which are to stand in this Trust until the Towne Elections in May come twelvemonth; and they are by this Court

authorized to be Townsmen, to order all matters about Fences, Swine, and all other things in the generall occasions of the Towne, except extraordinary charges, matters of Election in May yearly, and the disposing of the Towne's land.

These were the first Townsmen or Selectmen of New Haven, members of the agricultural rather than of the wealthy merchant class. The number was soon increased to ten, the idea of district representation being preserved; "William Russell was chosen for the bankside against the harbor and the creek as far as Robert Pigg's." But in 1653 the list was diminished to seven, where, with some slight fluctuations, it has remained. Two years later it was ordered that hereafter they be chosen by "papers, as other officers are, without respect to them that have served before." In 1654 the town first voted that Townsmen might draw orders on the Treasurer in favor of those whom they employed, and that such orders must be presented at the treasury within a month after the work was done. For the first few years the Townsmen were slow to act upon their own responsibility, but were continually demanding of the Town Court permission for an intended deed, or sanction for an accomplished one. The record of their doings was carefully kept, and entered in the lump upon the pages of the Town Records. In the spring following their first appointment, at a meeting of the Town Court, the initial orders of the Townsmen were read over, and "what was done was by silence confirmed."

The Townsmen agreed among themselves to meet in public session on the first Monday of every month at five o'clock P.M.; "If any of the Townsmen be absent, or come not seasonably, they shall pay 2s. 6d." The place of this assembly was the "ordinary," or tavern, as appears from the notice to that effect, January 13, 1659, and also from accusations brought against them in 1675, at the town-meeting, of extravagant indulgence in liquors at the town's expense. Jeremiah Osborne, in the name of the townsmen, reported that they had spent thirty shillings upon the landlord's score in the last year, and was likely to spend as much more this year; if the town did not approve, the Townsmen would pay it themselves. There the Reform movement seems to have rested.

The first conflict between the Townsmen and the Magistracy for local supremacy pertained to the subject of land-alienation, and resulted in a conclusive triumph for the former. The by-law creating the office of Townsmen had removed from their control the disposing of the town's land. This seemed to be a reservation in favor of the Proprietors' Committee, and its proper rights. But the Magistracy, the Elders of the Town, especially in the Winthrop case, tried to assume, for themselves, control over domestic transfers. This the Townsmen resisted. In many towns in the other colonies the ancient village community law was enforced, by virtue of which any inhabitant, wishing to alienate his land, must first offer the refusal of it to the town. New Haven had placed no restriction on exchange among the planters beyond the necessity of registry. But the Townsmen, in the first

* Town Records, II, 92, 107.

† However, Townsmen in Connecticut were at first Judges, afterwards joined the care of common lands, and gradually reached the modern status. Conn. Col. Rec. I, 7, 214.

year of their existence, ordered that "None but admitted planters shall keep Swine or Cattell within the liberties of this Towne, without leave from the Towne, nor shall any planter let any of his common for swine or other Cattell to any that is not a planter without the Towne's consent." But the Townsmen first directly asserted their power over the sale or lease of town-lots when, in July, 1656, "They sent to Mr. Hooke to desire him on y^e Towne's behalf, that, if he sould his house, the Towne might have the refusall of it." *

In the winter of 1658-59, John Winthrop, Jr., decided not to become a resident of New Haven, and wished to dispose of his house, one of the finest in the town. When it was discovered that he contemplated leasing it to a man of no prominence, and without consulting the authorities, there was an uproar. Mr. Davenport wrote to him, remonstrating, "This way of letting it unto such men will not be for your profit, nor for the Town's satisfaction." The Townsmen, on their part, maintained that the matter belonged to their province, and they asked Governor Newman to write to Mr. Winthrop a message similar to the one given to Parson Hooke. Mr. Davenport's immediate friends, on the other hand, urged the claims of the Magistracy to treat with Mr. Winthrop.† In accordance with the latter view, Winthrop announced that he would leave the house in the hands of Messrs. Newman, Gilbert, Davenport, and John Davenport, Jr. But the Townsmen resolved that they "liked not that arrangement." They managed to see Winthrop, and to buy the property for the town. Whereupon their opponents exclaimed that Mr. John Winthrop, a person of high rank and estimation, and of much-needed skill withal in medicine, had been driven away from the town. The whole dispute was ventilated in public meeting, August 8, 1659.

Mr. Davenport said that Winthrop had always wished to retain liberty to live in New Haven. He moved that the bargain should not be carried out, but should be "stayed awhile, as some stones were come for the iron-worke, which might be an inducement to Mr. Winthrop to come hither." The Townsmen replied that they would not dance attendance upon John Winthrop, and that, if he ever wished to reside again in New Haven, the usual road was open to him. For the first time in the history of the town or colony, Mr. Davenport was defeated. The town voted to sustain its representatives.

Henceforward the Townsmen were supreme in New Haven's administration. In the next year, 1660, they gained access to the financial management of the town. Previously the Magistracy, including the Monthly Court, had been annually elected auditors. The Townsmen were now empowered to keep account of all "rates, fines, rents, and other incomes of the towne," and to charge the Treas-

urer therewith; and "the Townsmen and the Court together shall be auditors."

It is a significant fact, that, in the following winter, Mathew Gilbert and Robert Treat, leaders of the "Elder" or Conservative Party in town and colony, opened negotiations with Governor Stuyvesant for an English emigration from New Haven to the banks of the Delaware. The negotiation was broken off, resumed, protracted through the charter troubles, checked by the downfall of the Dutch, renewed with Cartaret, and finally completed in the settlement of Newark in 1666.

The unconditional surrender of New Haven Colony to Connecticut, December 13, 1664, was ratified by the New Haven town-meeting on the 7th of the following January. The actual condition and numbers of the body of freemen immediately after that event are doubtful. A feeling of bitterness prevented compliance with Connecticut's registration laws, and made the oath of allegiance to that colony a stone of stumbling and a rock of offense. In 1664, the Connecticut Council had voted not to press the "Actual swearing of freemen at New Haven at present." In May, two years later, the Assembly sent "Mr. Shearman to give the freemen's oath to any who would take it." He administered the oath to just nine men. However, the "Constables," in 1669, reported ninety-one freemen in New Haven, indicating a total population of about 500. With the year 1665, the town began to adapt itself to the new circumstances. The last echoes of the recent quarrel were heard in the resolution that the town would aid Mr. (late Governor) Leete in his legal controversy with Bray Rossiter, the leader of the Guilford malcontents, and in the following vote: "The Town was acquainted that Connecticut expects we should beare our part of the charges of the Pattent. It was debated and concluded that we judge it not righteous nor reasonable that we should beare patent charges."*

Until the middle of the following year, the town was occupied in administering upon the effects of the defunct colony. The sister towns desired some compensation for the money which they had formerly contributed to the colony school, now extinct, which sums they believed to have benefited New Haven alone. The town chanced to have in its keeping two cannon which had once maintained the honor and dignity of New Haven Colony against Dutch and Indians, by pointing out over the waters of the harbor. In a spasm of generosity the town voted to its ancient comrades all its right "in the two great gunns." But the Yankees of Milford, etc., were wide-awake also, and finally, in July, 1666, New Haven agreed to settle all accounts by the payment of twenty pounds.

In March, 1665, the first summons to a Connecticut General Assembly was received, and John Cooper and Lieutenant Munson were elected to be the first Deputies from New Haven. The session was deferred, however, until April, and John Cooper and James Bishop, who were then elected, were the

* The Rev. Mr. Hooke was then on the point of sailing for England, where he became a Court Chaplain to Oliver Cromwell.

† The Plantation Laws of 1645 expressly surrendered the right of admitting planters, and of controlling sales and leases to strangers or non-planters, into the hands of the Magistrates, Elders and Deacons.—Town Records, I, 201.

* Town Records, III, 65-6.

first representatives who really sat in the Connecticut Legislature. In May, in compliance with the new laws, two Constables were chosen, although the office of Marshal was not discontinued until 1670. Messrs. Jones, Gilbert, Nash and Bishop, who had been selected by the recent Legislature to fill the Magistracy at New Haven, took the oath of office in full town-meeting. The title, "General Court of the Town," was now generally replaced by that of town-meeting, and Mr. Jones was named by the town as the permanent moderator of such assemblies. His first public duty was the somewhat unpleasant one of reading the Connecticut Laws aloud to the people, August 14, 1665.

It was thereafter enacted that a Monthly Court should be held as formerly, "if occasion require, on the first third day of the weeke in every month, for tryall of all cases that may be tried by this Court without a jury; and in October, December, March and June, there shall be juries if any cases require it." "3s. 4d. must be payd for every action, beside the jury fees, when the jury is called. Defendants shall have three days' warning, unless they agree otherwise." A suspicion that the golden age of Arcadian rule had departed may have lurked behind this order: "The Townsmen shall see that at least one roome of the prison be made safe for prisoners."

On the 3d of October, 1665, the last vestige of the peculiar polity of Davenport and Eaton was removed. Trial by jury became an actual fact, as it was already a legal one. The panel included only six men, "John Gibbs, Henry Rutherford, John Cooper, William Andrews, Henry Glover, and Thomas Munson, Foreman." This was the first Court of Quarter Sessions at New Haven, although the division of the colony into four counties was not consummated until the next year, when New Haven attained the minor dignity of a county seat.

On the 20th of December, the year of first things closed with the first Coroner's Jury, again of six men, who delivered upon the body of Henry Morrill a verdict of suicide. A probable reason for the rash act is suggested about a year later, when Goody Morrill was fined 3s. for "Provoking and Striking an Indian," the magistrates, at the same time, somewhat boastfully "declaring themselves ready to doe justice as well to Indians as to English."

By 1668, the official machinery of the town was smoothly rolling. There were a few omissions and additions. Military officers were no longer chosen in the town-meetings, and the Deputies to the Monthly Court were things of the past. The Secretary was called "The Recorder." Two Road Surveyors filled an office which had been revived in 1666, after an interval of twenty years, and a Board of four Assessors was elected under the clumsy name of "Listers for the estates of men." Hereafter also there were three Constables, two for New Haven and one for the "Iron-worke," as East Haven was called. The town-meetings were still rather frequent, and the Townsmen often submitted for approval the reports of their own month-

ly meetings. There were three town election days in the year, one in the spring, when the greater number of offices were filled; one in September, to choose Deputies to the fall meeting of the Assembly; and one in November, for the election of Constables.

As yet the General Court of Elections for the colony was held at Hartford only, so that if all the freemen had assembled there yearly who had the right to appear, Connecticut would have been as pure a democracy as ancient Athens. But the custom was cumbersome, and in May, 1670, the Assembly enacted that henceforth freemen might be present at Hartford by proxy. Henceforth the town election in the spring was divided into two parts. In the morning, after the choice of the Deputies to the Assembly, the proxies of the freemen were recorded for the coming election of Governor, Deputy Governor, and Assistants at Hartford. The afternoon was set apart for the discussion and determination of local business. The custom of "Reading the minutes of the last meeting" is now mentioned, as though it were a new habit (1671). This election town-meeting sometimes had so much business to transact, that it sat from early morn till late at eve. Abuses crept in. Many went away as night came on, and the few who remained passed important laws, or one party tried to tire out another by long sitting. In 1701, some local Solomon moved, and it was voted, "That no town-meeting shall continue after the sun is no longer in sight, and the moderator shall determine when that is." This confidence in the moderator's good faith and eyesight endured till 1713. Afterwards this town-meeting was prolonged through two days, the first, called "Proxies' Day," being devoted to the election of officers, the second to the transaction of town business.

It had been Mr. Davenport's intention that the Church in his Town-State should be supported entirely by voluntary contributions. In Connecticut, on the other hand, the ministers were paid by a general town tax. Mr. Davenport's plan partially broke down so early as 1650-51, when some were found to pay nothing, while many more made the contribution-box the receptacle of bad wampum.* In 1667, Mr. Jones proposed in town-meeting that the Elders should be made public officials, since their maintenance had been for ten years a source of scandalous trouble. The town did not hearken to Mr. Jones, but ten years later, March 13, 1677, Deacon Peck, the Church Treasurer, repeated the motion and the argument. The town agreed and voted to raise yearly for the Elders' support, a tax of two-pence half-penny in the pound. Henceforth the Elder was a public functionary, and the Minister's tax, usually of two-pence in the pound, a regular feature of the annual budget. Even the charities which the Church had previously superintended, were handed over to the town. In 1684, the townsmen reported that the "Widow Banister had formerly been relieved by the Church Treasury

* Town Records, II, 17, 93.

from the deacon, but now, there being no Church Treasury, shee must be supplied from the Tounne." And it was so done.

The enforced attention paid to agriculture revived the question of land distribution, which had lain dormant for a generation. There were six divisions of the town lands between 1675 and 1722, and the spacious township began to be dotted with farms and incipient villages. In 1670 the northern portion of the New Haven purchase was set off to the "New Village," which was immediately incorporated as "Wallingford," and the resultant town boundaries of New Haven were first perambulated in 1683. The institution of this ancient custom is recorded April 2, 1683, thus: "The Townsmen desired Sergeant Winston to give Milford, Wallingford and Brandford, notis that the perambulation be made" around all the common boundaries with New Haven.*

The relation between New Haven and the villages that sprang up beneath its shelter were, however, rarely so peaceful, and so quickly adjusted as in the case of Wallingford. With the hamlet of East Haven, including Fair Haven, a quarrel endured for more than a century. The outlying settlements might seek for separation in two ways: in one, as towns, they attained complete independence, maintained their own church and school, and were incorporated by the Legislature; in the other, as villages, they were still subservient to the mother town, possessing territorial independence only, with village commons of their own. East Haven made the first demand for village privileges at the Town Court of February 28, 1659. The subject was debated with great acrimony, although Mr. Davenport championed the cause of the would-be villagers. The matter was lost sight of in the ensuing troubles, but was brought to light again in 1667.

In 1679, the town incorporated East Haven as a village, but the East Haveners were not then contented. They wished to play "Town," so in 1684, the village, without any authority, filled a list of town offices with only four different incumbents for all, attaching to each this proviso, "If the Tounne of New Haven shall appoint them." New Haven interposed no objection, and within two or three years both the village and the townlet naturally expired. This is believed to be the first and last instance wherein a subordinate portion of a town, with the consent of the whole town, but without authority from the Legislature, assumed the essential functions of municipal sovereignty. With the beginning of the eighteenth century, East Haven aspired again to township honors, became involved with New Haven in a dispute about the common lands, was disgracefully treated by the Legislature, and for seventy-five years persisted in calling itself a town, although forced to submit to New Haven's authority. Ecclesiastical independence it did obtain from Town and State in

1709, thus becoming the pioneer for the parishes of West Haven and North Haven in 1715 and 1716 respectively.

The Marshal was now no more, and the military seem to have been no longer reliable for restraining the light-minded persons in "y^e meeting." The way was open for the appearance of the Tithingman. December 16, 1678, the town commissioned "William Payne and Samuel Hemingway to take a stick or wand and smite such as are unruly, or of uncomely behavior in y^e meeting, and to acquaynt their parents." Possibly these gentlemen performed such services during the remainder of their lives, for the office was not filled again until 1723, when the word "Tithingman" is first used, and when yearly elections to that office began. December 16th of that year seven Tithingmen were chosen in town-meeting: two each for the First Society, for West Haven, for East, Haven and one for North Haven.

Five years after Messrs. Payne and Hemingway were appointed to watch children in the meeting-house, the Townsmen bestirred themselves also in the cause of juvenile discipline and morality. "The Townsmen agreed to goe to all the inhabitants of the towne and farmes to see how the children are educated in reading the word of God. Lieutenant Munson and John Chidsey took the square of the towne; John Cooper, Sr., and Lieutenant Moses Mansfield, all the west side of the East River and so down to Goodman Dorman's; Sergeants Winston and Dickerman the suburbs, and the west side of the West River." The need of such measures may be inferred from another entry in the Records at about the same time, wherein the Freemen of New Haven in town-meeting assembled, voted to recommend to the authorities that horse-racing on lecture-days ought to be prevented, and that on such days children and servants ought not to lounge around the taverns and tippie with strangers.*

The attack of Randolph, Dudley, and Andros, in 1685, on the Connecticut Charter had been foreseen. The Legislature advised each town in the colony to survey its territory and lawfully incorporate itself under the Charter. In accordance with this advice, New Haven's Patent was obtained and read in town-meeting April 27, 1686.† The township is granted by the "Governor and Company of Connecticut Colony, in accordance with his late Majestys gracious charter in the 14th year of his reign" to three Magistrates and three Townsmen. * * * "to be held according to the tenor of East Greenwich in Kent in free and common soccage." The Patent was signed January 6, 1686, "In the first yeare of the reigne of our Sovereigne Lord James the Second of England, Scotland, France and Ireland, King, Defender of the Faith, etc.," by Robert Treat, Governor, and by John Allyn, Secretary. Thus Connecticut rooted its famous charter among the local institutions of its people, and awaited the coming storm.

* Heaps of stones were the landmarks. In bounding the Indian land at Morris' Cove, more stones are mentioned. The old term is noteworthy. It is still in use in New Haven. Town Records, IV, 444. See City Year Book, 1875.

* Town Records, IV, 63.

† *Ibid.*, 21-23.

In 1703, when Dudley and Cornbury repeated the assault upon Connecticut, the Legislature again adopted the same measure and issued to the towns "Confirmations" of their previous Patents. The Indian treaties, the Patent, and its confirmation, are New Haven's documentary titles to her territory. Andros' brief sway made very little impression upon the town's history. "The Lawes and Orders sent from Boston by his Excellencies command" were read and published. The suspension of the General Assemblies relieved the Freemen from the necessity of choosing Deputies, and town-meetings were not quite so frequent.

For the first time since the town's foundation, permission was granted that John Osbell and John Hancock, single men, might live by themselves "until the Towne see fit to alter it."

Andros and his Council were prisoners on the 18th of April, 1689. New Haven town-meeting assembled on the 3d of May, and the scribe, in his joy and fear, produced this unwieldy sentence:

After the opening of the Town-meeting and prayer made for direction from God in this dangerous juncture, the Towne were informed of the late dissolution of the Government at Boston by the Governor, Sir Edmund Andross, his resignation of the same; with surrender of the Castle and fort into other hands intrusted till further order from the present powers in England; and this change hastened by the discovery of a dangerous plot against Boston to destroy that place, as we are credibly informed, which great overture hath occasioned and necessitated the freemen in all or most places in this colony to choose their Deputies to meet together in y^e usuall place and at the usuall tyme of election to consider together what to doe, and to have the proxies of the freemen ready, if need be, in order to the Re-assuming and Settlement of Government according to charter, to prevent anarchy and confusion and the Danngerous effects thereof, especially when we have grounds or cause to suspect Indian or other enemies.

With the beginning of the French and Indian Wars, and the introduction of a soldier element, the town experienced an alarming increase of intemperance. It may have been a common experience of this sort that enabled the town, in 1701, in accordance with the new law of the colony, to elect for the first time Justices of the Peace (two of them, April 29th). Thirteen years later, on December 20th, the first Grand Jury was drawn. Liquor was sold in the town by a very easy license system. In October, 1701, the Colonial Legislature met, for the first time, in New Haven. The additional capacity for fluids which the Magistrates and Deputies were expected to furnish may be gauged by the fact that the September town-meeting licensed "Five more men to sell Rum only while the Court sits." But a healthier public sentiment was already at work, and had already conducted a successful agitation against the scandalous abuse of liquor-drinking at funerals.

Through the first half of the eighteenth century the town shared in the lethargy with which Walpole enveloped the English world. The town government was practically as complete as it is to-day. The town rounded out the circles of its local, domestic life, and, like all the great and small colonial units, unconsciously husbanded its growing strength for the struggle that was to follow. Public and

private citizens wrangled over projected roads, erected public buildings, and waged a fierce warfare against sorrel, barberry bushes, and predatory geese.

After 1750, both foreign and domestic commerce sprang up, and wealth and population rapidly increased. The revival of business drew official attention for the first time to the development of what has since been one of New Haven's leading industries, the oyster trade. The town-meeting in February, 1762, enacted the first Oyster Laws, which were typical of the annual legislation upon the subject for a long time afterward.

Whereas, Many persons have made a practise of catching and destroying the oysters in the harbor of New Haven, in the months of May, June, July and August, which is to the great detriment of the inhabitants of the town of New Haven, which to prevent;

*Vote*d, That no person shall be allowed to rake up and catch any oysters in the harbor of New Haven, or the Cove, from the first day of May to the first day of September, under a proportionate penalty of 20 shillings per bushel, but the Selectmen may allow any person to catch a small quantity of oysters in case of sickness or necessity.

The same penalty was affixed to carrying off oyster-shells, and a committee of five was elected to "Prosecute Breaches of the Vote." Violations of the law were indeed sometimes punished, but always with a lenient hand.

Commercial prosperity was accompanied, as usual, by social hardness of heart, and by depression of the lower classes. In 1763, the town's paupers were disposed of by auction to the lowest bidder for the ensuing year, and the practice continued for a generation. Nothing more is heard of friendly visits of inquiry and sympathy by the townsmen to the houses of the poor. Primitive solicitude is replaced by official conciseness. Irishmen and coals were both first imported into New Haven in 1763, and were probably both sold in the same public market; the advertisement of the human commodity at least is still extant.*

But it was the commercial element, the new blood in the town, "Interlopers," as the individuals were called, which took the lead in resistance to England. The town-meeting which first broached a revolutionary topic in New Haven was held under auspicious omens on the 22d of February, 1763, at which time the first Committee of Correspondence reported the first non-importation agreement. During the Stamp Act period the departments of town government wherein the stamped paper was to be used were at a standstill, and a fortnight before the repeal of the Act, we find the town-meeting requesting the "Said Courts, Magistrates, Justices, especially the Honorable Superior Court, by way of example to the others, together with the respective Officers of such Courts, and the Practitioners at the Bar" to proceed in the transaction of their usual business, according "To the Laws of this Colony."

September 10, 1770, the town elected eight delegates to a colonial convention, summoned for the 13th at New Haven, for the purpose of encouraging non-importation and domestic manufactures. The same meeting chose a committee of thirty-eight members to watch over the "Commercial

* Barber's Antiquities, p. 113.

Interests" of the town. When the Boston Port Bill came to kindle resentment into wrath, New Haven was prompt to act. The result of the public excitement upon the town government was mainly the creation of committees. Nearly every town-meeting appointed a new one, for purposes of "Consideration." Eighteen prominent citizens were named as a Committee of Correspondence in the town-meeting of May 23, 1774, which voted according to the customary formula: "That we will, to the utmost of our abilities, assert and defend the Liberties and Immunities of British America, and that we will co-operate with our sister towns in any constitutional measures," etc.

Shortly after a Committee of Subscriptions was chosen. The officers of the town were still unchanged, except that one new department was added, viz.: "The Committee of Encroachment on Highways," a body which seems to have found abundant occupation. It appears also that the town had an Excise Master of its own. The Selectmen were ordered to call town-meetings whenever the Committee of Correspondence desired it, but after November 14, 1774, the most important committee in the town was the Committee of Inspection. This latter committee was chosen in accordance with the recommendations of the Continental Congress, and the town, in order probably to facilitate convenience of assembling, voted that the major part of the committee should be within the limits of the First Society. A by-law of the same year ordered that among the Selectmen, one must hereafter be in the First Society, one in White Haven, one in the Church,* and one in Fair Haven.

The labor of the Selectmen was so increased by the war, that in 1775 their numbers were changed, by permission of the Legislature, from seven to thirteen. The climax of committees was reached November 6, 1775, when, in addition to those already existing, one was intrusted with the erection of a fort at Black Rock, another with the building of a beacon on Indian Hill, another with the procurement of floating defenses in the harbor, and another with the enforcement of the following resolution:

Voted, That every person who looks upon himself as bound, either from conscience or choice, to give intelligence to our enemies of our situation, or otherwise take an active part against us, or to yield obedience to any command of his Majesty, King George the Third, so far as to take up arms against this town, or the United Colonies, be desired peaceably to depart.

Meanwhile the Committee of Inspection was examining citizens for "Calling Gage an honest man," for "Declaring that Whigs are liars," and even for "Speaking slightly of the money emitted by our Assembly."

Throughout this period, the Records of the Selectmen, which had become in general very concise and non-communicative, contain long columns of payments, and of disbursement of supplies for the soldiers and their families. The town offered as bounties to every volunteer two pounds, and "Annually for three years if they stay so long,"

one pair of good strong shoes, one pair of good yarn stockings, and one shirt. In 1777, the Selectmen introduced public inoculation for small-pox, but it was unfortunate and was straightway forbidden until 1784. In December, 1777, the Selectmen recorded that they had set free the three negro slaves of Mr. Darling. The anti-slavery sentiment in the town was strong, as appears from one of the many objections which the town-meetings of December, 1777, and January, 1778, respectively, urged against the proposed "Articles of Confederation of the United States of America." "We object also to furnishing troops in proportion to the white inhabitants only, as we hope the time may be when the black man may be a freeman and the owner of property, and then he ought to bear his share of military burdens." In 1782, the first attempt was made to find some better way of caring for the poor, but the result was failure, and in January, 1783, the Selectmen were again commissioned to "sell the Town poor, that they may be supported in the cheapest manner." In the next year the town signalized the advent of peace by setting to the rest of the State an example in the vexed question of treatment of Tories. Under the lead especially of Pierpont Edwards, the town voted to welcome all, excepting only those who had been engaged in unauthorized and lawless warfare.

Already the town had withdrawn what had promised to be a fruitless opposition to a renewed effort by the outlying parishes towards incorporation. While at the center of the township a new city was emerging, at its circumference the towns of East Haven, North Haven, Hamden and Woodbridge were leaving the chrysalis parish-state. The town set the seal of its final approval upon the division of its territory on the 28th of March, 1785; but the parish of West Haven, through the opposition of Milford, was debarred from town-privileges until 1822.

After February 10, 1784, the City of New Haven was an organized fact, and henceforth the most important portion of the township learned to derive its official life more particularly through the organs of the city than through those of the town. But the transfer of authority was made very gradually. The Act of 1784 secured to the infant city but little more than improved judicial machinery. The major part of what was deemed public duty was left with the town. As the city broadened out, and as its conception of public service widened, the responsibilities of the town government little by little diminished, especially as, after the separation of West Haven, the territory of the township outside of the city became small in extent. But so late as 1855, the highest public salaries in the town were paid to members of the town government. The Town Agent headed the list with twelve hundred dollars per annum; the remuneration of the First Selectman had reached the flood-mark of eight hundred dollars, while the Mayor and the City Clerk each received but five hundred dollars. However, from that time the town government descended in the scale of comparison, and began to occupy its present subordinate rank. In 1860,

* The Ecclesiastical Society of Trinity Church.—EDITOR.

the Mayor and the City Clerk obtained respectively the salaries of one thousand and of eight hundred dollars.

Both before and after the Revolution, the scourge of small-pox was the source of frequent municipal action. The town maintained a strict quarantine against vessels from New York in 1793 and 1794. In the latter year the town elected three physicians to be Health Officers of the Port.

In 1788-89, the custom was adopted of farming out to some one person the most of the town's expenses, including the care of the poor. Previous to that time the care of paupers had cost the town about six hundred pounds yearly. Under the contract system the town's poor cost about £270. But the arrangement did not prove to be satisfactory, and was abandoned after a few years' trial.

The first specimen of a balance-sheet of town accounts for the year was entered in the records for December, 1799. The total expenditure was six hundred and thirty pounds. Of that amount, the sum of five hundred and fourteen pounds was devoted to the care of paupers. In 1819, a Board of Relief was differentiated from the Selectmen's office. Under the first three Presidents the town-meeting essayed to play a prominent part in national politics. It assured Washington that it would sustain his policy of neutrality. It forwarded to the House of Representatives its guarded approval of Jay's treaty. But it was most prolific of advice for Thomas Jefferson. In August, 1808, Elias Shipman, Noah Webster, David Daggett, Jonathan Ingersoll, and Thomas Painter, Esqs., by order of the town, prepared and sent to the President a memorial of no less than forty-five hundred words, setting forth New Haven's opinion of the embargo, or, as it was popularly termed in New Haven, "the Dambargo." The town-meeting of January 28, 1809, was far more revolutionary than the famous Hartford Convention, and proposed to "seek redress," to "oppose the torrent of oppression," etc.

The town ratified the State Constitution of 1818 by a vote of 430 to 218,* and at about the same time officially and emphatically condemned and denounced slavery. In 1841, the town appropriated \$150 for a school for colored children, and in the following year established two such schools.

During these two decades the election of Tithingmen became impartial. They were first chosen for the Baptist and Methodist societies in 1821, but Trinity had no Tithingmen until 1833.† The Universalist and Roman Catholic Churches received this token of official recognition in 1836. In 1849 a special town-meeting was called, because the first election of Tithingmen must be made for the Society of Mishkan Israel; or, as the Records express it, "For the Society of Miskin Israel." During the

following decade the town annually chose Tithingmen for about thirty congregations. In 1866, the election was relinquished to the congregations themselves, and some of them still make the annual selection.

The special town-meeting of 1849, for "Miskin Israel," was held in accordance with the requirements of the latest revision of the By-Laws concerning town elections. This revision, made in 1835, ordered that the Town Clerk should open the meeting at 9 A.M., and, with the Selectmen, count the ballots for Moderator. Inspectors of the vote were to be appointed by the Moderator. Ballots might be cast for any number of Selectmen and Constables, not exceeding seven; for any number of Grand Jurors, not exceeding six; for any number of Surveyors of Highways, for "Tythingmen, Haywards, Gaugers, Packers, Sealers of Weights and Measures, and Pound-keepers; for Town Clerk, Treasurer, Collector of State Tax, and of Town Tax." At nine the next morning the town-meeting reassembled for transacting business, and if there had been on the previous day a failure to elect at least five Selectmen, two Grand Jurors, or two Tithingmen in each congregation, the deficiency must be made good.

In 1837, the town profited very materially by folly in high places. On January 17th it voted to accept its proportion of the United States surplus deposited with this State, in accordance with the conditions imposed by the Legislature, appropriating the interest of such moneys to educational purposes. New Haven's share was \$27,427.67, which was forthwith loaned on New Haven real estate, and which has figured ever since in the annual town budget. Out of the proceeds of this fund the schools for colored children were supported.

In the decade between 1840 and 1850, was begun the agitation which resulted in the establishment of the Town Liquor Agency. Previous to 1840, the town had invariably maintained the special license system. In January 10th of that year, free rum was thus introduced:

Voted, That all persons be allowed to sell wines and spirituous liquors in the Town of New Haven during the current year.

This by-law was several times re-enacted. In four years the Grand Jurors' fees for prosecutions increased from twenty-seven dollars in 1839 to nearly one thousand dollars in 1843; the town tax rate rose from two to three cents, and the balance in the town treasury decreased from \$3,000 to \$301. These figures did not escape notice, and a vigorous anti-rum agitation was begun, especially under the leadership of Mr. Charles B. Lines. Between 1843 and 1854 the battle was fought mainly in legislative halls. A State law was finally secured, by virtue of which towns might allow the sale of liquor only at certain agencies, and then only for sacramental, medical, or chemical purposes. Mr. Lines thereupon presented the town-meeting of July 25, 1854, with motions that all existing licenses should be revoked; that the Selectmen

* In October, 1818, William Bristol and Nathan Smith were the delegates to that convention. Town Records, VI, 62.

† Trinity Church did not need Tithingmen, if its worshippers were generally as good as those who have been described. Spying a boy who was truant from school during the service, he rushed up to the offender with a word. "You're a rebel, I tell you, doing an' behaving in a *Cherish*! You thought you was in a Presbyterian meeting-house, didn't you, hey?"—N. H. Hist. Soc. Papers, I, 68.

should hire some one agent to sell whatever liquor might be needed; and that they should be empowered to draw from the treasury for that purpose.

Jonathan Stoddard's proposal to table these resolutions was approved by 803 to 671. The meeting then adopted a series of resolutions offered by Stoddard, to the effect that the Selectmen might appropriate, in 1860, the sum of six and one-quarter cents for the purpose mentioned, and that the money should be used in "the faithful execution of the law." During the summer the fight was renewed a second and a third time. At the last Mr. Lines was successful by 1,640 yeas to 1,407 nays, and for a number of years thereafter the Town Liquor Agency formed a feature of the town administration, and its reports figured in the annual budget. The books of the agent are preserved, wherein the quarts and half-pints are entered opposite the purchaser's name in the proper column of "Sacramental, Medical, or Chemical." It is easily inferred that the "medical" column was abundantly patronized. The Town Liquor Agency had another name in colloquial speech, as appears by the town's action November 28, 1856.

Voted, That Lucius Gilbert and Judson Canfield be a committee to investigate the affairs of the Town Agency, or Maine Law Grog-shop, and report to the Selectmen.

In the ensuing spring the Maine Law Grog shop was closed, and with the admitted failure of prohibition throughout the State, the experiment of a public agency was abandoned.

The Town Agent, measured by his present duties and powers, is a modern growth upon the ancient trunk of town government. But though the special importance of the office is of recent date, its beginnings can be traced far back in the town's history. The general power to sue for the town was bestowed upon the townsmen in December, 1700. The care of the poor had been enrolled among their responsibilities even before that time. Throughout the eighteenth century the townsmen, as a body, performed such offices, or delegated the labor to some of their own number. From 1800, through the first half of this century, the town, at its annual business meeting, usually divided the town agency between two of the Selectmen, and, for the first time, bestowed upon each the title, "Town Agent." For example, in 1800, the first Selectman, Jeremiah Atwater, was appointed an agent to sue and to be sued for the town; while Thomas Punderson, the Second Selectman, was chosen the Town Agent to take care of the poor. The usage was not invariable. In 1803-4 the Selectmen collectively were chosen agents to sue and to be sued, and to the First Selectman the duties of a Town Agent were not always given.

But since 1848 there has been only one Town Agent. The increase at that time of the foreign population gave to him a responsibility and a power which caused the office to be regarded as a separate department, although custom retained the agent's duties in the hands of the First Selectman. The Town Agent, since 1848, has received a larger compensation than any other town officer. The an-

nual distribution of large sums for what is called "Outside Relief" is virtually under his control. These facts have given him a hold upon a large body of voters, and have made his place the most influential one in the town government, much to be desired by the local Cæsars. Since 1878 each party has adopted the custom of designating upon its town ticket a candidate for the town agency. This is merely a political device, intended to render the office more popular in its character, and to forestall any action by the Selectmen. The period of municipal expansion, and of the introduction of modern improvements, which witnessed the transformation of the city, saw no official changes in the township.

At the beginning of the Civil War, public action was mainly abandoned to individual initiative. In official circles sympathies were very much divided. New Haven sent to Congress, in 1860, a petition for legislation that might satisfy the slaveholders. The first town-meeting which took energetic measures was held on the 5th of August, 1862. Resolutions were adopted referring to the "Causeless war," and enabling the Treasurer to borrow \$75,000 for the payment of bounties, which had been fixed at \$175 *per capita*. The issue of town bonds to the value of \$180,000 was authorized.

New Haven's quota of enlistments was not complete, and whispers of an impending draft occasioned some ugly talk. In the September town-meeting resolutions intended to prepare the way for a draft were opposed by Mr. James Gallagher, and were rejected. In the summer of 1863 the draft came, and too many of the people were ready to imitate New York's dreadful example, but the firmness of Mayor Morris Tyler, and of the authorities generally, aided greatly in preventing an outbreak. The town-meeting of July 23d voted that the town would hereafter purchase exemption for any conscript whose family necessities required his presence at home. Inducements of liberal individual offers finally relieved New Haven from the actual necessity of a draft, and in January, 1864, the Selectmen were authorized to pay \$300 to set free any citizen from enrollment.

The latest movement, which has taken the shape of an alleged reform in township government, is the agitation in favor of consolidating town and city under one Board of Officers. This effort was begun in 1852, when both town and city, the former leading the way, appointed committees to consider the possibility of abolishing the dual government. The only probable effect of the conference was the discontinuance, after November 12, 1855, of the separate town election meeting. Henceforth town officers were elected by districts at voting places designated by the Selectmen. The practical result was that town and city elections were conducted at the same time and place and by the same machinery. The story of the city's growth, however, is necessarily a story of the absorption and relative wane of the township. A town-meeting in June, 1865, voiced its strong opposition to certain charter

amendments which the city government was pushing in the Legislature. These amendments were thought to give the city too wide a jurisdiction. They were finally embodied in the charter of 1869. In July of the next year, 1870, the Fair Haven peninsula was included within the city limits, and the Westville region was all that then remained exclusively under the rule of the town government. In 1881, however, the township was enlarged by the western and more important half of the town of East Haven, including the borough of Fair Haven, and all the lands bordering on the eastern side of the harbor. The annexation of this territory, which had been set off from the old township for nearly one hundred years, was welcomed by New Haven especially, because it secured to her fuller jurisdiction over navigation in the harbor and in the river. The annexation was made under condition that the consolidation should be with the town and not with the city. Petitions from the city to the Legislature in 1883 and 1884, looking towards the abolition of the dual town and city government, have therefore aroused no slight resistance. However, the town government is too strongly rooted in the organic law of the State to be dislodged by anything but a constitutional amendment. It is probable that no further governmental consolidation will be practicable until the boundaries of the city and of the town are one and the same.

Following is the list of offices to which the Free-men of New Haven Town annually elect one hundred and fifty-two incumbents. It is not to be supposed, however, that the nominating convention of each party spends its valuable time in canvassing the merits of candidates for all these offices. Those assemblies of statesmen nominate only for the offices that are rendered attractive by money or by power. The chairman, or some committee, is commissioned to fill out the rest of the list at pleasure. The nine members of New Haven's Board of Education are elected for terms of three years each by the voters of the New Haven School District, which includes the whole township excepting Westville, and a small region at Southend.

New Haven Town Officers are:

7 Selectmen.	5 Managers of Town De-
Town Agent.	posit Fund.
Treasurer.	5 Poundkeepers.
Tax Collector.	5 Haywards.
Town Clerk.	6 Grand Jurors.
Registrar of Vital Statis-	7 Constables.
tics.	7 Surveyors of Highways.
2 Registrars of Voters.	7 Fence Viewers.
3 Sealers of Weights and	7 Gaugers and Inspectors.
Measures.	9 Packers.
5 Members of the Board	9 Weighers.
of Relief.	56 Justices of the Peace.
5 Assessors.	

DEPUTIES FROM THE TOWN OF NEW HAVEN TO THE GENERAL COURT OF NEW HAVEN COLONY.

(First Session of the General Court, October 27, 1643.)

1643. October—Captain Nathaniel Turner, Mr. George Lamberton.
1644. April, October—Captain Nathaniel Turner, Mr. Richard Malbon.

1645. April—Captain Nathaniel Turner, Mr. Richard Malbon; October—Captain Nathaniel Turner, Captain Richard Malbon.
1646. April, October—Brother John Wakeman, Brother Ezekiel Cheever.
1647. April—; October—Mr. John Wakeman, Mr. Francis Newman.
1648. May—Mr. John Wakeman, Mr. Jasper Crane; October—
1649. May, October—Mr. Jasper Crane, Mr. Francis Newman.
1650. May—Mr. Jasper Crane, Mr. Francis Newman.
1651. May—Mr. Francis Newman, Mr. Richard Miles.

1699. May, October—Mr. John Alling, Mr. Abraham Bradley.
1700. May—Mr. John Alling, Deacon Abraham Bradley; October—Mr. John Alling, Deacon Abraham Bradley.
1701. May—Mr. Jeremiah Osborne, Lieutenant Thomas Talmadge; October—Mr. Jeremiah Osborne, Mr. John Alling.
1702. May—Mr. Jeremiah Osborne, Mr. John Alling; October—Mr. John Alling, Lieutenant Thomas Talmadge.
1703. May, October—Mr. John Alling, Lieutenant Thomas Talmadge.
1704. May—Mr. Jeremiah Osborne, Mr. Joseph Moss; October—Mr. Abraham Bradley, Ensign John Bassett.
1705. May, October—Mr. Jeremiah Osborne, Mr. Joseph Moss, Jr.
1706. May—Mr. Jeremiah Osborne, Mr. Joseph Moss, Jr.; October—Lieutenant Thomas Talmadge, Deacon Abraham Bradley.
1707. May—Mr. William Thomson, Deacon Abraham Bradley; October—Lieutenant Samuel Smith, Deacon Abraham Bradley.
1708. May—Lieutenant Samuel Smith, Deacon Abraham Bradley; October—Captain Nathan Andrews, Deacon Abraham Bradley.
1709. May—Mr. Jeremiah Osborne, Mr. Abraham Bradley; October—Mr. John Todd, Ensign John Bassett.
1710. May—Mr. Abraham Bradley, Lieutenant Samuel Smith; October—Captain John Bassett, Mr. Samuel Bishop.
1711. May, October—Mr. Samuel Bishop, Mr. Nathaniel Yale.
1712. May—Mr. Samuel Bishop, Mr. Nathaniel Yale; October—Lieutenant Samuel Smith, Mr. Samuel Cooke.
1713. May—Lieutenant Samuel Smith, Mr. Samuel Cooke; October—Mr. Nathaniel Yale, Mr. Samuel Cooke.
1714. May—Mr. Samuel Bishop, Mr. Samuel Cooke; October—Mr. Nathaniel Yale, Mr. Samuel Cooke.
1715. May—Mr. Samuel Bishop, Mr. Samuel Cooke; October—Mr. Samuel Bishop, Mr. Nathaniel Yale.
1716. May—Captain Joseph Whiting, Captain Samuel Thomson; October—Mr. Nathaniel Yale, Captain Samuel Thomson.
1717. May, October—Mr. Nathaniel Yale, Captain Samuel Thomson.
1718. May, October—Ensign Isaac Dickerman, Sergeant Theophilus Munson.
1719. May—Ensign Isaac Dickerman, Sergeant Theophilus Munson; October—Ensign Isaac Dickerman, Sergeant John Gilbert.
1720. May—Ensign Isaac Dickerman, Sergeant Theophilus Munson; October—Ensign Isaac Dickerman, Sergeant John Gilbert.
1721. May, October—Ensign Isaac Dickerman, Sergeant John Gilbert.
1722. May—Captain Joseph Whiting, Ensign Isaac Dickerman; October—Mr. Nathaniel Yale, Ensign Isaac Dickerman.
1723. May, October—Mr. Nathaniel Yale, Captain Isaac Dickerman.
1724. May—Captain Joseph Whiting, Captain John Munson; October—Captain Isaac Dickerman, Captain John Munson.
1725. May, October—Captain Isaac Dickerman, Captain John Munson.
1726. May, October—Captain Isaac Dickerman, Captain John Munson.
1727. May, October—Captain John Munson, Captain Isaac Dickerman.
1728. May, October—Captain Isaac Dickerman, Captain John Munson.
1729. May, October—Captain John Munson, Captain Isaac Dickerman.
1730. May, October—Captain Isaac Dickerman, Captain Jonathan Alling.
1731. May, October—Captain Isaac Dickerman, Captain Jonathan Alling.
1732. May—Captain Isaac Dickerman, Captain Jonathan Alling; October—Mr. Isaac Dickerman, Mr. Isaac Johnson.
1733. May, October—Mr. Isaac Dickerman, Mr. Jonathan Alling.
1734. May, October—Mr. Isaac Dickerman, Mr. Jonathan Alling.
1735. May, October—Mr. Isaac Dickerman, Mr. Jonathan Alling.
1736. May—Mr. Isaac Dickerman, Mr. Jonathan Alling; October—Mr. Jonathan Alling, Mr. Joseph Mix.
1737. May—Captain Jonathan Alling, Mr. Joseph Mix; October—Captain Isaac Dickerman, Captain Jonathan Alling.
1738. May, October—Captain Isaac Dickerman, Captain Jonathan Alling.
1739. May, October—Captain Isaac Dickerman, Mr. John Hitchcock.
1740. May, October—Captain Isaac Dickerman, Mr. John Hitchcock.
1741. May—Captain Isaac Dickerman, Mr. John Hitchcock; October—Mr. John Hitchcock, Captain Jonathan Alling.
1742. May, October—Captain Jonathan Alling, Mr. John Hitchcock.
1743. May—Captain Jonathan Alling, Mr. John Hitchcock; October—Mr. John Hitchcock, Captain Jonathan Alling.
1744. May—Mr. John Hitchcock, Captain Jonathan Alling; October—Captain John Hubbard, Mr. John Hitchcock.
1745. May, October—Captain John Hubbard, Mr. John Hitchcock.
1746. May, October—Mr. John Hitchcock, Captain Samuel Sherman.
1747. May—Mr. John Hitchcock, Captain Samuel Sherman; October—Captain Isaac Dickerman, Captain Samuel Sherman.
1748. May, October—Captain Isaac Dickerman, Captain Samuel Sherman.
1749. May, October—Captain Isaac Dickerman, Captain Samuel Sherman.
1750. May—Captain Isaac Dickerman, Captain Samuel Sherman; October—Captain John Hubbard, Captain Isaac Dickerman.
1751. May—Captain Isaac Dickerman, Captain Samuel Sherman; October—Captain John Hubbard, Mr. Chauncey Whittlesey.
1752. May, October—Captain Isaac Dickerman, Captain John Hubbard.
1753. May—Major John Hubbard, Captain Isaac Dickerman; October—Major John Hubbard, Mr. Chauncey Whittlesey.

1754. May—Major John Hubbard, Mr. Samuel Cooke; October—Major John Hubbard, Mr. Chauncey Whittlesey.
1755. May—Captain Samuel Sherman, Mr. Samuel Cook; October—Major John Hubbard, Mr. Chauncey Whittlesey.
1756. May, October—Captain Isaac Dickerman, Mr. Samuel Sherman.
1757. May—Captain Isaac Dickerman, Colonel David Wooster; October—Captain Isaac Dickerman, Mr. John Hubbard.
1758. May, October—Colonel John Hubbard, Mr. John Whiting.
1759. May—Mr. John Whiting, Mr. Daniel Lyman; October—Colonel John Hubbard, Mr. John Whiting.
1760. May—Mr. Daniel Lyman, Mr. Samuel Bishop; October—Colonel John Hubbard, Mr. John Whiting.
1761. May, October—Mr. Daniel Lyman, Mr. Samuel Bishop.
1762. May, October—Mr. Daniel Lyman, Mr. Samuel Bishop.
1763. May, October—Mr. Daniel Lyman, Mr. Samuel Bishop.
1764. May—Colonel John Hubbard, Mr. Enos Alling; October—Mr. Roger Sherman, Mr. Samuel Bishop.
1765. May—Mr. Roger Sherman, Mr. Samuel Bishop, Jr.; October—Mr. Roger Sherman, Mr. Samuel Bishop.
1766. May—Roger Sherman, Esq., Mr. Samuel Bishop; October—Mr. Daniel Lyman, Mr. Samuel Bishop.
1767. May, October—Mr. Daniel Lyman, Mr. Samuel Bishop.
1768. May, October—Mr. Samuel Bishop, Jr., Mr. Joshua Chandler.
1769. May, October—Colonel Nathan Whiting, Mr. Joshua Chandler.
1770. May, October—Colonel Nathan Whiting, Mr. Joshua Chandler.
1771. May, October—Mr. Joshua Chandler, Mr. James A. Hillhouse.
1772. May, October—Mr. James A. Hillhouse, Mr. Samuel Bishop.
1773. May—Mr. James A. Hillhouse, Mr. Samuel Bishop; October—Mr. Samuel Bishop, Mr. Thomas Howell.
1774. May—Mr. Samuel Bishop, Mr. Thomas Darling; October—Mr. Samuel Bishop, Mr. Joshua Chandler.
1775. May, October—Mr. Samuel Bishop, Captain Jonathan Fitch.
1776. May, October—Mr. Samuel Bishop, Jr., Colonel Jonathan Fitch.
1777. May, October—Mr. Samuel Bishop, Jr., Mr. Pierpont Edwards.
1778. May, October—Mr. Samuel Bishop, Mr. Eneas Munson.
1779. May, October—Mr. Samuel Bishop, Mr. Eneas Munson.
1780. May—Mr. Samuel Bishop, Captain James Hillhouse; October—Captain James Hillhouse, Dr. Eneas Munson.
1781. May, October—Captain James Hillhouse, Dr. Eneas Munson.
1782. May, October—Captain Henry Daggett, Captain Jesse Ford.
1783. May—Captain Henry Daggett, Captain James Hillhouse; October—Captain Henry Daggett, Captain Jesse Ford.
1784. May, October—Mr. Pierpont Edwards, Captain James Hillhouse.
1785. May—Mr. Simeon Bristol, Mr. Pierpont Edwards; October—Mr. James Hillhouse, Mr. Jonathan Ingersoll.
1786. May—Mr. Simeon Bristol, Mr. Timothy Jones; October—Mr. Timothy Jones, Mr. Samuel Bishop.
1787. May—Captain Silas Kimberley, Mr. Charles Chauncey; October—Mr. Pierpont Edwards, Mr. Charles Chauncey.
1788. May—Mr. Pierpont Edwards, Mr. Elias Shipman; October—Mr. Jeremiah Atwater, Mr. Elias Shipman.
1789. May—Mr. Pierpont Edwards, Mr. Charles Chauncey; October—Mr. Pierpont Edwards, Mr. Jonathan Ingersoll.
1790. May—Mr. Pierpont Edwards, Mr. John Heyliger; October—Mr. Pierpont Edwards, Mr. Jonathan Ingersoll.
1791. May—Mr. Jonathan Ingersoll, Mr. David Austin; October—Mr. Jonathan Ingersoll, Mr. David Daggett.
1792. May—Mr. David Daggett, Mr. William Hillhouse, Jr.; October—Mr. David Daggett, Mr. David Austin.
1793. May, October—Mr. David Daggett, Mr. William Hillhouse.
1794. May—Mr. David Daggett, Mr. Isaac Beers; October—Mr. David Daggett, Mr. Abel Burritt.
1795. May, October—Mr. David Daggett, Mr. Elizur Goodrich.
1796. May, October—Mr. David Daggett, Mr. Elizur Goodrich.

TOWNSMEN OR SELECTMEN OF THE TOWN OF NEW HAVEN.

1651. November 17—Francis Newman, John Cooper, Jarvis Boykin, Mr. Atwater, William Fowler, Richard Miles, Henry Lindon, Thomas Kimberley, Mathew Camfield. Chosen to serve until May, 1652.
 1652. May 10—Francis Newman, John Cooper, Jarvis Boykin, Mr. Atwater, William Fowler, Richard Miles, Henry Lindon, Thomas Kimberley, Samuel Whitehead. William Russell "for the Bankside against the harbor and the creek as far as Robert Piggs."
 1653. May 23—Mr. Gibbard, John Cooper, Samuel Whitehead, William Russell, William Davis, John Punderson, James Bishop.
 1654. May 22—William Davis, John Punderson, James Bishop, John Gibbs, David Atwater, John Harriman, William Tompson. June 14—John Cooper was chosen in the place of John Harriman, "Who was too busy."
 1655. May 21—William Davis, John Cooper, Henry Lindon, John Gibbs, William Tompson, Lieutenant John Nash, William Peck. "It is ordered that hereafter they be chosen by Papers as other Officers are, without respect to them that have served before."
 1656. May 19—Henry Lindon, William Davis, John Gibbs, Samuel Whitehead, Thomas Munson, William Bradley. Jarvis Boykin.
 1657. May 18—Lieutenant Nash, John Gibbs, Jarvis Boykin, Thomas Munson, William Bradley, Samuel Whitehead, Roger Allen.
 1658. May 17—John Gibbs, Henry Lindon, John Cooper,

Samuel Whitehead, Jarvis Boykin, Thomas Munson, William Bradley.

1659. May 16—Roger Allen, Samuel Whitehead, Nicholas Ely, James Bishop, John Cooper, William Davis, Abraham Dowlittle. "John Harriman was next in choice in case the Providence of God do hinder any of the others."

1660. April 23—William Judson, Roger Allen, Abraham Dowlittle, Henry Glover, John Harriman, John Cooper, Nicholas Ely. "Ordered that Townsmen shall be chosen before the latter end of April yearly, and shall keep account of all Rates, Fines, Rents and other incomes of the Town and charge the Treasurer therewith; and the Townsmen and the Court shall be Auditors."

1661. April 29—Roger Allen, John Harriman, John Cooper, Sergeant Andrews, Henry Glover, Nicholas Ely, William Paine.

1662. April 28—William Andrews, Thomas Munson, Roger Alling, John Harriman, Henry Glover, William Bradley, William Paine.

1663. April 27—It was voted to have but five Townsmen. The first ballot showed a tie between Roger Allen and Thomas Morris. Upon the second ballot the tellers were unable to agree. Thereupon Goodman Allen's motion that both should serve prevailed, and the number of Townsmen was made six instead of five. The other four were Thomas Munson, Thomas Kimberley, Sr., John Harriman, William Russell.

1664. April 28—Samuel Whitehead, Thomas Kimberley, Sr., John Harriman, William Russell, Roger Allen, Thomas Morris.

1665. May 1—Roger Alling, Henry Rutherford, John Cooper, John Gibbs, John Winston, John Harriman. May 22—On account of union with Connecticut, the aforesaid six Townsmen were confirmed in office. July 25th they were re-elected, and Mr. Benjamin Ling was added.

1666. April 30—Henry Rutherford, Benjamin Ling, Roger Alling, John Harriman, John Gibbs, William Andrews, John Punderson.

1667. April 29—Samuel Whitehead, Benjamin Ling, Roger Alling, John Harriman, Abraham Dowlittle, Jeremiah Osborne.

1668. April 29—Benjamin Ling, Roger Alling, Lieutenant Thomas Munson, William Bradley, Samuel Whitehead, Abraham Dowlittle, Jeremiah Osborne.

1669. April 26—John Cooper, Sr., John Harriman, Sr., William Bradley, Abraham Dowlittle, Jeremiah Osborne, John Winston, Abraham Dickerman.

1670. May 2—John Cooper, Sr., John Harriman, Sr., Henry Glover, James Heaton, Jeremiah Osborne, John Winston, Abraham Dickerman.

1671. April 25—Captain John Nash, John Cooper, Sr., John Winston, Jeremiah Osborne, Abraham Dickerman, James Heaton, Moses Mansfield.

1672. April 30—Captain John Nash, John Cooper, Sr., John Winston, Jeremiah Osborne, Abraham Dickerman, Samuel Whitehead, Moses Mansfield.

1673. April 29—Captain John Nash, John Cooper, Sr., John Winston, Jeremiah Osborne, Abraham Dickerman, Samuel Whitehead, William Bradley.

1674. April 28—Moses Mansfield, John Cooper, Sr., John Winston, Jeremiah Osborne, Abraham Dickerman, Samuel Whitehead, William Bradley.

1675. April 27—John Cooper, William Bradley, Jeremiah Osborne, John Winston, Abraham Dickerman, Henry Glover, Thomas Munson.

1676. April 25—John Cooper, William Bradley, Moses Mansfield, John Winston, Abraham Dickerman, Henry Glover, Thomas Munson.

1677. April 24—Mr. William Jones, Captain Thomas Munson, Lieutenant Mansfield, John Cooper, Sr., Henry Glover, William Bradley, Abraham Dickerman.

1678. April 30—John Nash, Captain Thomas Munson, Lieutenant Mansfield, John Cooper, Sr., Henry Glover, William Bradley, Abraham Dickerman.

1679. April 29—John Harriman, John Winston, John Chidsey, John Cooper, Sr., Henry Glover, William Bradley, Abraham Dickerman.

1680. April 27—Thomas Trowbridge, John Winston, John Chidsey, John Cooper, Sr., Henry Glover, William Bradley, Abraham Dickerman.

1681. April 26—Henry Glover, John Cooper, Sr., John Winston, Thomas Trowbridge, John Chidsey, Thomas Munson, Moses Mansfield.

1682. April 25—Abraham Dickerman, John Cooper, Sr., John Winston, Thomas Trowbridge, John Chidsey, Thomas Munson, Moses Mansfield.

1683. April 24—Abraham Dickerman, John Cooper, Sr., John Winston, Thomas Trowbridge, John Chidsey, Thomas Munson, Moses Mansfield.

1684. April 29—Thomas Trowbridge, Moses Mansfield, Abraham Dickerman, John Winston, John Cooper, Sr., John Alling, Jr., Thomas Kimberly.

1685. April 28—Thomas Trowbridge, Moses Mansfield, Abraham Dickerman, John Winston, John Cooper, Sr., John Alling, Jr., Thomas Kimberly.

1686. April 27—Thomas Trowbridge, Moses Mansfield, Abraham Dickerman, John Winston, John Cooper, Sr., John Alling, Jr., Thomas Kimberly.

1687. April 26—Moses Mansfield, Abraham Dickerman, Thomas Trowbridge, Sergeant John Winston, Sergeant John Allen, Thomas Kimberly, John Punderson.

1688. May 22—Abraham Dickerman, John Winston, John Allen, John Punderson, James Heaton, Ensign Daniel Sherman, John Thompson, Sr., Joseph Moss.

1689. May 3—Moses Mansfield, Abraham Dickerman, Daniel Sherman, John Allen, James Heaton, John Winston, Joseph Moss.

1690. April 29—Moses Mansfield, Abraham Dickerman, Daniel Sherman, John Allen, James Heaton, Captain John Miles, Joseph Moss.

1691. April 28—Moses Mansfield, Abraham Dickerman, Daniel Sherman, John Allen, Thomas Kimberly, Captain John Miles, Joseph Moss.

1692. April —Moses Mansfield, Abraham Dickerman, Daniel Sherman, John Allen, Thomas Kimberly, Captain John Miles, Joseph Moss.

1693. April —John Ball, Abraham Dickerman, Daniel Sherman, John Allen, Thomas Kimberly, Thomas Tuttle, Joseph Moss.

1694. April 24—John Ball, Abraham Dickerman, Daniel Sherman, Abraham Bradley, Thomas Kimberly, Thomas Tuttle, Joseph Moss.

1695. April 29—Lieutenant Daniel Sherman, Sergeant John Ball, Sergeant John Cooper, Sergeant Thomas Talmadge, Sergeant James Heaton, Abraham Bradley, Ensign John Sacket.

1696. April 28—Lieutenant Daniel Sherman, Sergeant John Ball, Sergeant John Cooper, Sergeant Thomas Talmadge, Sergeant James Heaton, John Morris, Ensign John Sacket.

1697. April 27—Lieutenant Daniel Sherman, Sergeant John Ball, Sergeant John Cooper, Sergeant Thomas Talmadge, Sergeant James Heaton, John Morris, Ensign John Sacket.

1698. April 26—Abraham Dickerman, Sergeant John Ball, Sergeant John Cooper, Sergeant Thomas Talmadge, John Alling, John Morris, Ensign John Sacket.

1699. March 20—Abraham Dickerman, Ensign John Sacket, Thomas Talmadge, James Heaton, John Ball, John Morris, Eliazer Brown.

1700. March 11—Lieutenant John Sacket, Lieutenant Thomas Talmadge, Sergeant John Ball, Sergeant Eliazer Browne, Mr. Samuel Bishop, Samuel Smith, Nathaniel Bradley.

1701. March 10—Captain Nathan Andrews, Sergeant Eliazer Browne, Mr. Samuel Bishop, Mr. Samuel Smith, Mr. Nathaniel Bradley, Mr. William Thomson, Mr. William Johnson, Sr.

1702. March 16—Captain Nathan Andrews, Lieutenant Thomas Talmadge, Sergeant John Cooper, Thomas Kimberly, Mr. John Todd, Mr. William Thomson, Mr. Jonathan Atwater. December 21—Captain Nathan Andrews, Lieutenant Thomas Talmadge, Sergeant John Cooper, Mr. John Pain, Mr. John Todd, Mr. William Thomson, Mr. Jonathan Atwater.

1703. December 20—Captain Nathan Andrews, Lieutenant Thomas Talmadge, Ensign John Bassett, Mr. William Thomson, Mr. John Todd, Mr. Jonathan Atwater, Mr. John Mix, Sr.

1704. December 18—Lieutenant Thomas Talmadge, Lieutenant John Munson, Ensign John Bassett, Lieutenant Jo-

seph Sacket, Mr. John Todd, Mr. Samuel Bishop, Sergeant John Thomson.

1705. December 24—Lieutenant Thomas Talmadge, Lieutenant John Munson, Lieutenant Joseph Sacket, Mr. Samuel Bishop, Sergeant John Thomson, Sergeant William Willmott, Caleb Mix.

1706. December 23—Lieutenant Thomas Talmadge, Mr. Samuel Bishop, Sergeant John Thomson, Lieutenant Samuel Smith, Mr. John Todd, Mr. Nathaniel Yale, Samuel Thomson.

1707. December 29—Lieutenant Thomas Talmadge, Lieutenant Samuel Smith, Mr. Samuel Bishop, Mr. John Todd, Sergeant John Thomson, Mr. Nathaniel Yale, Mr. Samuel Thomson.

1708. December 20—Mr. John Morris, Mr. Samuel Bishop, Ensign John Bassett, Sergeant John Thomson, Mr. Samuel Thomson, Mr. John Gilbert, Mr. John Punderson.

1709. December 19—Lieutenant John Thomson, Mr. Samuel Bishop, Ensign John Bassett, Mr. John Morris, Mr. Samuel Thomson, Mr. John Gilbert, Mr. John Punderson.

1710. December 18—Mr. Samuel Bishop, Lieutenant Samuel Thomson, Lieutenant Richard Miles, Sergeant John Gilbert, Nathaniel Heaton, John Punderson, Sergeant Abraham Dickerman.

1711. December 17—Captain John Munson, Lieutenant Samuel Thomson, Ensign Eleazar Holt, Sergeant John Gilbert, Nathaniel Bradley, Nathaniel Heaton, John Punderson.

1712. December 15—Mr. Samuel Bishop, Mr. Nathaniel Heaton, Sergeant John Gilbert, Sergeant Theophilus Munson, Sergeant Isaac Dickerman, Mr. Samuel Mix, Mr. John Punderson.

1713. December 21—Mr. Samuel Bishop, Mr. Nathaniel Heaton, Sergeant John Gilbert, Sergeant Theophilus Munson, Sergeant Isaac Dickerman, Mr. John Mix, Lieutenant William Johnson.

1714. December 13—Ensign Isaac Dickerman, Sergeant Theophilus Munson, Nathaniel Heaton, Daniel Sherman, Jr., John Mix, Samuel Ives, John Punderson, Jr.

1715. December 12—Sergeant Abraham Dickerman, Sergeant Theophilus Munson, Ensign Isaac Dickerman, John Punderson, Thomas Trowbridge, Samuel Ives, Sergeant Samuel Peck.

1716. December —Sergeant Abraham Dickerman, Sergeant Theophilus Munson, Ensign Isaac Dickerman, John Brady, Thomas Trowbridge, Samuel Ives, Sergeant Samuel Peck.

1717. December 18—Theophilus Munson, Abraham Dickerman, Isaac Dickerman, John Brady, Samuel Candee, Joseph Ives, Sergeant Samuel Peck.

1718. December 22—Captain Joseph Ives, Abraham Dickerman, Isaac Dickerman, John Brady, Samuel Candee, Joseph Mix, Nathaniel Hitchcock.

1719. December 21—Captain Joseph Ives, Isaac Dickerman, John Gilbert, Joseph Mix, Nathaniel Hitchcock, John Sherman, Caleb Hotchkis.

1720. December 19—Mr. Moses Mansfield, Joseph Mix, Caleb Hotchkis, Samuel Hotchkis, of East Haven, John Hitchcock, Joseph Brady, Thomas Stevens.

1721. December 11—Mr. Moses Mansfield, Mr. Jonathan Mansfield, Sergeant Caleb Hotchkis, John Johnson, Ensign Thomas Painter, Samuel Todd, Samuel Goodsell.

1722. December 17—Captain Isaac Dickerman, Captain Samuel Smith, Mr. Moses Mansfield, Mr. Jonathan Mansfield, Mr. Joseph Mix, Sergeant Joseph Turner, William Brady.

1723. December 16—Captain Isaac Dickerman, Mr. Jonathan Mansfield, Captain Samuel Smith, Sergeant Jonathan Alling, Sergeant Moses Blacksley, Thomas Allcock, James Talmadge.

1724. December 21—Captain Isaac Dickerman, Mr. Jonathan Mansfield, Captain Samuel Smith, Captain Thomas Smith, Ensign Samuel Ives, James Peck, James Talmadge.

1725. December 20—Captain Isaac Dickerman, Mr. Jonathan Mansfield, Captain Samuel Smith, Sergeant John Hitchcock, Thomas Punderson, Joseph Holt, Samuel Bradley.

1726. December 19—Captain Samuel Smith, Ensign Theophilus Munson, Thomas Punderson, Thomas Ives, Samuel Goodsell, James Talmadge, John Ball, Jr.

1727. December 11—Captain Samuel Smith, Ensign The-

ophilus Munson, Sergeant Gideon Andrews, James Tallmadge, Sergeant John Ball, Jr., Joseph Cooper, Joseph Tuttle, Jr.

1728. December 9—Mr. John Prout, Captain Jonathan Alling, James Tallmadge, Israel Bunnell, John Ball, Jr., John Humberston, Joseph Tuttle, Jr.

1729. December 8—Mr. Nathaniel Bradley, Captain Jonathan Alling, Captain Joseph Ives, Ensign Jonathan Mansfield, Mr. Samuel Hotchkiss, Lieutenant Abraham Dickerman, Sergeant Israel Bunnell.

1730. December 14—Captain Isaac Dickerman, Lieutenant Joseph Mix, Lieutenant Stephen Trowbridge, Caleb Mix, Israel Bunnell, John Denison, David Yale.

1731. December 13—Captain Isaac Dickerman, Stephen Munson, Robert Tallmadge, Thomas Punderson, Thomas Allcock, Lieutenant John Granniss, Ebenezer Smith.

1732. December 11—Captain Isaac Dickerman, Lieutenant Samuel Smith, Lieutenant John Granniss, Mr. John Hitchcock, Mr. Stephen Howell, Mr. Ebenezer Smith, Mr. Robert Tallmadge.

1733. December 10—Mr. John Hitchcock, Mr. Stephen Howell, Captain John Granniss, Ensign Gideon Andrews, Ensign Joseph Smith, Mr. Stephen Munson, Mr. Samuel Goodsell.

1734. December 9—Captain John Granniss, Lieutenant Joseph Mix, Ensign Gideon Andrews, Mr. John Hitchcock, Ensign Joseph Smith, Mr. Stephen Howell, Samuel Bradley, of East Haven.

1735. December 15—Lieutenant Joseph Mix, Ensign Gideon Andrews, Mr. John Hitchcock, Sergeant Daniel Perkins, Ebenezer Smith, Isaiah Tuttle, Abraham Chidsey.

1736. December 13—Captain James Tallmadge, Lieutenant Daniel Perkins, Ensign Jonathan Mansfield, Mr. Thomas Allcock, Captain John Munson, Isaiah Tuttle, Deliverance Painter.

1737. December 12—Captain John Munson, Lieutenant Joseph Mix, Lieutenant Israel Bunnell, Mr. Thomas Punderson, Mr. Thomas Allcock, Mr. John Hitchcock, Mr. Samuel Barnes.

1738. December 11—Captain James Tallmadge, Lieutenant Joseph Mix, Lieutenant Israel Bunnell, Ensign Jonathan Mansfield, Mr. Thomas Allcock, Mr. John Hitchcock, Mr. Samuel Barnes.

1739. December 10—Mr. James Pierpont, Captain James Tallmadge, Captain John Munson, Mr. John Hitchcock, Mr. Samuel Sherman, Lieutenant Samuel Sacket, Mr. Joseph Tuttle, Jr.

1740. December 8—Captain John Munson, Captain James Tallmadge, Lieutenant Joseph Mix, Mr. John Hitchcock, Mr. Samuel Sherman, Lieutenant Samuel Sacket, Mr. Joseph Tuttle, Jr.

1741. December 14—Captain John Munson, Captain Andrew Tuttle, Captain Samuel Sherman, Mr. John Hitchcock, Mr. Samuel Mix, Mr. Abraham Chidsey, Lieutenant Samuel Sacket.

1742. December —Captain John Munson, Captain Andrew Tuttle, Captain Samuel Sherman, Mr. John Hitchcock, Mr. Samuel Mix, Mr. Gideon Potter, Lieutenant Samuel Sacket.

1743. December 12—Mr. John Hitchcock, Captain Andrew Tuttle, Mr. Samuel Mix, Mr. Gideon Potter, Mr. Jonathan Mansfield, Mr. Joseph Pierpont, Captain Samuel Sherman.

1744. December 10—Captain Andrew Tuttle, Captain Joseph Tuttle, Captain Samuel Sherman, Ensign Jonathan Mansfield, Mr. Samuel Mix, Mr. Joseph Pierpont, Sergeant James Peck.

1745. December 9—Mr. James Peck, Mr. Samuel Mix, Mr. Joseph Pierpont, Mr. Caleb Mix, Captain Beecher, Samuel Thomson, Ensign Jonathan Mansfield.

1746. December 8—Mr. Jonathan Mansfield, Mr. Samuel Mix, Mr. Caleb Mix, Mr. Israel Munson, Mr. Samuel Sherman, Mr. Joseph Tuttle, Jr., Mr. Isaiah Tuttle.

1747. December 14—Mr. Samuel Mix, Mr. Caleb Mix, Lieutenant Israel Munson, Captain Joseph Trowbridge, Captain Daniel Alling, Captain Joseph Tuttle, Jr., Mr. Isaiah Tuttle.

1748. December 12—Mr. Caleb Mix, Lieutenant Israel Munson, Mr. Caleb Hotchkiss, Lieutenant James Peck, Jr., Captain Daniel Alling, Captain Joseph Tuttle, Lieutenant Theophilus Goodyear.

1749. December 11—Mr. Israel Munson, Mr. Caleb Mix, Mr. Caleb Hotchkiss, Mr. Joseph Peck, Jr., Mr. Theophilus Goodyear, Mr. Nathaniel Kimberley, Mr. Samuel Hemingway.

1750. December 10—Mr. Caleb Hotchkiss, Mr. Caleb Mix, Mr. Israel Munson, Mr. James Peck, Jr., Mr. Rosewell Woodward, Lieutenant Nathaniel Kimberley, Captain Samuel Barnes.

1751. December 9—Mr. Caleb Hotchkiss, Mr. Caleb Mix, Mr. Israel Munson, Mr. James Peck, Jr., Mr. Rosewell Woodward, Lieutenant Nathaniel Kimberley, Captain Samuel Barnes.

1752. December 11—Mr. Caleb Hotchkiss, Mr. Caleb Mix, Mr. Israel Munson, Mr. James Peck, Jr., Mr. Rosewell Woodward, Lieutenant Nathaniel Kimberley, Captain Samuel Barnes.

1753. December 10—Mr. Caleb Hotchkiss, Mr. Caleb Mix, Mr. Israel Munson, Mr. James Peck, Jr., Captain Joseph Tuttle, Mr. Nathaniel Kimberley, Captain Samuel Sacket.

1754. December 19—Caleb Hotchkiss, Caleb Mix, Samuel Cook, Nathaniel Kimberley, Samuel Sacket, Stephen Sanford, Aaron Day.

1755. December 8—Mr. Caleb Mix, Mr. Caleb Hotchkiss, Mr. Samuel Cook, Mr. Aaron Day, Mr. Samuel Thomson, Jr., Mr. Nathaniel Kimberley, Mr. Thomas Mansfield.

1756. December 13—Mr. Caleb Mix, Mr. Aaron Day, Mr. Nathaniel Kimberley, Mr. Thomas Mansfield, Mr. Rosewell Woodward, Mr. John Mix, Mr. Abner Bradley.

1757. December —Mr. Caleb Mix, Mr. John Mix, Mr. Rosewell Woodward, Mr. Thomas Mansfield, Mr. William Greenough, Mr. Amos Hitchcock, Mr. Deliverance Painter.

1758. December 11—Mr. Caleb Mix, Mr. John Mix, Mr. Rosewell Woodward, Mr. Thomas Mansfield, Mr. William Greenough, Mr. Amos Hitchcock, Mr. John Thomas.

1759. December 10—John Mix, William Greenough, Amos Hitchcock, Rosewell Woodward, Thomas Mansfield, John Thomas, Aaron Day.

1760. December 8—John Mix, William Greenough, Amos Hitchcock, Rosewell Woodward, Thomas Mansfield, Israel Kimberley, Aaron Day.

1761. December 14—John Mix, William Greenough, Amos Hitchcock, John Woodward, Thomas Mansfield, Israel Kimberley, Aaron Day.

1762. December 13—William Greenough, John Mix, Amos Hitchcock, Thomas Howel, John Woodward, Joseph Pierpont, James Peck.

1763. December 12—William Greenough, John Mix, Amos Hitchcock, Thomas Howel, John Woodward, Joseph Pierpont, James Peck.

1764. December 10—William Greenough, Jonathan Mix, Amos Hitchcock, Thomas Howel, John Woodward, Joseph Pierpont, James Peck.

1765. December 9—William Greenough, John Mix, Amos Hitchcock, Thomas Howel, John Woodward, James Heaton, Jr., James Peck.

1766. December 8—John Woodward, Amos Hitchcock, John Mix, Amos Perkins, Stephen Ball, James Heaton, Jr., David Austin.

1767. December 14—John Woodward, Amos Hitchcock, John Mix, Stephen Ball, David Austin, Joshua Chandler, Esq., Andrew Bradley.

1768. December 12—Stephen Ball, Nathan Whiting, Esq., Phineas Bradley, Jeremiah Atwater, John Woodward, Joshua Chandler, Esq., Andrew Bradley.

1769. December 11—Stephen Ball, Nathan Whiting, Esq., Phineas Bradley, Jeremiah Atwater, John Woodward, Joshua Chandler, Esq., Andrew Bradley.

1770. December 10—Stephen Ball, Nathan Whiting, Esq., Phineas Bradley, Jeremiah Atwater, John Woodward, Joshua Chandler, Esq., Andrew Bradley.

1771. December 9—Stephen Ball, Benjamin Douglass, Phineas Bradley, Jeremiah Atwater, John Woodward, Joshua Chandler, Esq., Andrew Bradley.

1772. December 11—Stephen Ball, Benjamin Douglass, Phineas Bradley, Jeremiah Atwater, John Woodward, Joshua Chandler, Esq., David Perkins.

1773. December 20—Stephen Ball, Jeremiah Atwater, Stephen Mansfield, Timothy Jones, Jr., John Woodward, Joshua Chandler, David Perkins.

1774. December 20—Stephen Ball, Jeremiah Atwater,

James Gilbert, Isaac Doolittle, John Woodward, Joshua Chandler, David Perkins.

1775. December 11—Jonathan Fitch, Timothy Jones, Jr., Isaac Doolittle, James Gilbert, Amos Morris, Thomas Mansfield, Timothy Bradley.

1776. December 9—Jonathan Fitch, Timothy Jones, Jr., Isaac Doolittle, James Gilbert, Thomas Howell, Hezekiah Sabin, Abraham Auger, Amos Morris, Nehemiah Smith, Thomas Mansfield, Timothy Bradley, Samuel Atwater, Isaac Beecher, Jr.

1777. December 8—Jonathan Fitch, Caleb Hotchkiss, Jr., Timothy Jones, Jr., Hezekiah Sabin, James Gilbert, Abraham Auger, Isaac Doolittle, Amos Morris, Nehemiah Smith, Jesse Todd, Samuel Osborn, Samuel Atwater, Isaac Beecher, Jr.

1778. December 14—Jonathan Fitch, Caleb Hotchkiss, Jr., Timothy Jones, Jr., Jeremiah Atwater, James Gilbert, Abraham Auger, Isaac Doolittle, Amos Morris, Nehemiah Smith, Jesse Todd, Samuel Osborn, Samuel Atwater, Isaac Beecher, Jr.

1779. December 13—Jonathan Fitch, Timothy Jones, Jr., James Gilbert, Abraham Auger, Captain Joseph Trowbridge, Captain Stephen Smith, Nehemiah Smith, Ephraim Humeston, Samuel Osborn, Stephen Goodyear, Isaac Beecher, Jr., Charles Chauncey, Edwards Pierpoint.

1780. December 11—Timothy Jones, James Gilbert, John Hubbard, Joseph Peck, Jr., Peter Johnson, Obed Hotchkiss, Newman Trowbridge, Stephen Smith, Nehemiah Smith, Jesse Todd, Stephen Goodyear, Jesse Ford, Peter Perkins.

1781. December 10—John Hubbard, Joseph Munson, Abel Burrit, Henry Daggett, Stephen Smith, Nehemiah Smith, Enos Todd, Jesse Ford, Asa Goodyear, Peter Perkins. December 17—Mr. Lamberton Painter put in place of Nehemiah Smith.

1782. December 9—Deacon Thomas Howel, Joseph Munson, Jeremiah Atwater, Joel Gilbert, Isaac Chidsey, Joseph Howel, John Austin, Isaac Beers, Lamberton Painter, Noah Ives, Jesse Ford, Peter Perkins, Jonathan Dickerman.

1783. December 8—Joseph Howel, John Austin, Abraham Auger, Joseph Bradley, Isaac Chidsey, Samuel Candee, Noah Ives, Jesse Ford, Simeon Bristoll, Ezra Sperry, James Rice, Thomas Cooper, Jr., Michael Todd.

1784. December 13—James Rice, Abel Burrit, Michael Todd, Abraham Auger, Isaac Chidsey, Samuel Candee, Simeon Bristoll, Thomas Cooper, John Hubbard.

1785. December 12—James Rice, Abel Burrit, Abraham Auger, Joseph Bradley, Samuel Candee, Simeon Bristoll, Ephraim Humeston, John Hubbard, Samuel Mix.

1786. December 11—Stephen Ball, Elizur Goodrich, Samuel Candee, Thaddeus Beecher, Levi Ives, Elias Beers, Isaac Beers.

1787. December 10—Stephen Ball, Elias Beers, Levi Ives, Zina Denison, Isaac Beers, Nathan Smith, Erastus Bradley.

1788. December 8—Stephen Ball, Elias Beers, Levi Ives, Captain Joseph Bradley, Jeremiah Atwater, Erastus Bradley.

1789. December 14—Stephen Ball, Elias Beers, Levi Ives, Captain Joseph Bradley, Jeremiah Atwater, Erastus Bradley, Nathan Smith.

1790. December —Levi Ives, Thomas Punderson, Joseph Howell, Mark Leavenworth, Azel Kimberly.

1791. December 12—Levi Ives, Thomas Punderson, Joseph Howell, Simeon Baldwin, Thomas Painter.

1792. December 10—Levi Ives, Thomas Punderson, Joseph Howell, Simeon Baldwin, Thomas Painter.

1793. December 9—Levi Ives, Thomas Punderson, Simeon Baldwin, Dyer White, Joseph Drake, Thomas Painter.

1794. December 8—Stephen Alling, Nathan Beers, Hezekiah Hotchkiss, William Powell, Anson Clinton, Thaddeus Clark.

1795. December 14—Peter Johnson, Nathaniel Fitch, Medad Osborn, Russel Clark, Anson Clinton.

1796. December 12—Ebenezer Peck, Nathaniel Fitch, Medad Osborn, Russel Clark, Gold Smith.

1797. December 11—Ebenezer Peck, Nathaniel Fitch, Medad Osborn, Russel Clark, Gold Smith.

1798. December 10—Thomas Punderson, Medad Osborn, Gold Smith, Captain Honour Barney, Alexander Langmuir.

1799. December —Jeremiah Atwater, Thomas Punderson,

Edmond French, Gilead Kimberly, Medad Osborn, Francis Brown, William Brintnal.

1800. December 8—Jeremiah Atwater, Thomas Punderson, Edmond French, Gilead Kimberly, Medad Osborn, Francis Browne, William Brintnal.

1801. December 14—Jeremiah Atwater, Thomas Punderson, Timothy Atwater, Ebenezer Townsend, Stephen Twining, Nathan Smith, Joseph Prindle.

1802. December 13—Timothy Atwater, Nathaniel Kimberly, Samuel Punderson, Stephen Twining, William McCracken, who was excused, replaced by Thaddeus Perrit, also excused.

1803. December 12—Timothy Atwater, Samuel Punderson, Abraham Bradley, Samuel Sacket, Ezra Smith, Samuel Darling.

1804. December 10—Abraham Bradley, Samuel Punderson, Samuel Darling, Samuel Sacket, Ezra Smith.

1805. December 9—Samuel Punderson, Daniel Read, Henry Ward, James Merriman, Isaac Tomlinson. December 23—James Merriman excused, and Isaac Dickerman, Luther Bradley, Isaac Townsend, Jr., appointed.

1806. December 8—Samuel Punderson, Isaac Tomlinson, Justus Smith, William Walter.

1807. December 14—Samuel Punderson, Jeremiah Atwater, 3d, Jehiel Forbes and William Bristoll were chosen by ballot, and by show of hands, Justus Smith, of West Haven.

1808. December 12—Samuel Punderson, Jeremiah Atwater, 3d, Andrew Kidston, William Bristoll, Justus Smith.

1809. December 18—Jeremiah Atwater, 3d, Samuel Punderson, Andrew Kidston, Eleazer Foster, Justus Smith.

1810. December 10—Samuel Punderson, Jeremiah Atwater, 3d, Andrew Kidston, Eleazer Foster, Justus Smith.

1811. December 9—Samuel Punderson, Andrew Kidston, Eleazer Foster, Anson Clinton, Eli Hotchkiss.

1812. December 14—Samuel Punderson, Andrew Kidston, Eleazer Foster, Anson Clinton, Eli Hotchkiss.

1813. November 22—Samuel Punderson, Eleazer Foster, Mathew Read, Eliakim Kimberly, John Hunt, Jr.

1814. November 23—Samuel Punderson, Eleazer Foster, Mathew Read, John Hunt, Jr., Eliakim Kimberly.

1815. November 27—Samuel Punderson, Eleazer Foster, Mathew Reed, John Hunt, Jr., Eliakim Kimberly.

1816. November 25—Samuel Punderson, Eleazer Foster, Mathew Read, Solomon Collis, Eliakim Kimberly.

1817. November 24—Solomon Collis, Isaac Gilbert, Henry Ward, Lent Bishop, Anthony P. Sanford, Eleazer Foster, Charles Bostwick.

1818. November 30—Isaac Gilbert, Anthony P. Sanford, Samuel Huggins, Ralph I. Ingersoll, Thomas Ward.

1819. November 22—Elisha Punderson, Isaac Gilbert, Ralph I. Ingersoll, Nathan Peck, Henry Denison, Thomas Ward, John Rowe.

1820. November 27—Isaac Gilbert, Esq.; Ralph I. Ingersoll, Esq.; John Rowe, William Mix, Esq., Normand Dexter, Lent Bishop, Esq., Aaron Thomas, Jr.

1821. November 26—Isaac Gilbert, Esq., Ralph I. Ingersoll, Esq., John Rowe, William Mix, Esq., Jared Bradley, Lent Bishop, Esq., Aaron Thomas, Jr.

1822. November 25—John Miles, Isaac Gilbert, William Mix, John Rowe, William H. Jones.

1823. November 24—William Mix, William H. Jones, Eli Mix, Sr., James Barnes, James English, Charles A. Ingersoll.

1824. November 22—William Mix, William H. Jones, Eli Mix, Sr., John Rowe, James English, Charles A. Ingersoll.

1825. November 21—William Mix, William H. Jones, Eli Mix, Sr., Seth Barnes, James English, Charles A. Ingersoll.

1826. November 20—William Mix, William H. Jones, Charles A. Ingersoll, Anthony P. Sanford, Eli Mix.

1827. November 19—William Mix, William H. Jones, Charles A. Ingersoll, Anthony P. Sanford, Eli Mix, Andrew Kidston.

1828. November 29—William Mix, William H. Jones, James Brewster, Charles A. Ingersoll, Anthony P. Sanford.

1829. November 23—William Mix, William H. Jones, James Brewster, Charles A. Ingersoll, Anthony P. Sanford.

1830. November 22—William Mix, William H. Jones, Sidney Hull, Charles A. Ingersoll, Anthony P. Sanford.

1831. November 21—William Mix, Eli Mix, Anthony P. Sanford, Charles A. Ingersoll, Sidney Hull.

1832. November 26—William Mix, Eli Mix, Anthony P. Sanford, Joseph N. Clark, Elias Gilbert.

1833. November 18—William Mix, Eli Mix, Anthony P. Sanford, Joseph N. Clark, Elias Gilbert.

1834. November 24—Benjamin Beecher, Levi Gilbert, Nahum Hayward, Justus Harrison, Isaac Judson.

1835. November 23—Benjamin Beecher, Levi Gilbert, Nahum Hayward, Justus Harrison, Isaac Judson, John Beach, Sidney Hull.

1836. November 22—Benjamin Beecher, Levi Gilbert, Nahum Hayward, Justus Harrison, Isaac Judson, John Beach, Sidney Hull.

1837. November 28—Benjamin Beecher, Levi Gilbert, Nahum Hayward, Justus Harrison, Isaac Judson, John Beach, Marcus Merriman, Jr.

1838. November 27—Benjamin Beecher, Levi Gilbert, 2d, Nahum Hayward, Isaac Judson, Marcus Merriman, Jr., Richard M. Clark, Phillip S. Galpin.

1839. November 19—Benjamin Beecher, Levi Gilbert, 2d; Nahum Hayward, Isaac Judson, Elem Hull, Richard M. Clark, Wyllis Peck.

1840. December 7—Benjamin Beecher, Levi Gilbert, 2d, Nahum Hayward, Isaac Judson, Elem Hull, Richard M. Clark, Wyllis Peck.

1841. November 29—Benjamin Beecher, Nahum Hayward, Elem Hull, Jeremiah Barnett, Philip S. Galpin, Enos Sperry, John Peck.

1842. November 21—Benjamin Beecher, Jeremiah Barnett, Enos Sperry, Alfred Daggett, Caleb Mix, Charles B. Lines, Leonard Pardee.

1843. November 20—Benjamin Beecher, Caleb Mix, Enos Sperry, Alfred Daggett, Charles B. Lines, Leonard Pardee, Marcus Merriman, Jr.

1844. November 25—Benjamin Beecher, Caleb Mix, Henry A. Murray, Alfred Daggett, Charles B. Lines, Leonard Pardee, Marcus Merriman, Jr.

1845. November 24—Benjamin Beecher, Alfred Daggett, Charles B. Lines, Leonard Pardee, Benjamin R. Hitchcock, Cyprian Willcox, Henry A. Murray.

1846. November 23—Benjamin Beecher, Charles B. Lines, Leonard Pardee, Cyprian Willcox, Henry A. Murray, James E. English, Frederick Crosswell.

1847. November 22—Benjamin Beecher, Charles B. Lines, Leonard Pardee, Cyprian Willcox, Henry A. Murray, Marcus Merriman, Jr., Abram A. Thompson.

1848. November 20—Benjamin Beecher, Cyprian Willcox, Henry A. Murray, Abram A. Thompson, Elias Pierpont, Elias Gilbert (George street), James E. English.

1849. November 19—Benjamin Beecher, Abram A. Thompson, Elias Gilbert, James E. English, Chauncey Jerome, Jonathan Nicholson.

1850. November 25—Cyprian Willcox, James E. English, Elias Pierpont, Charles P. Hubbell, Dennis Carrington, Henry L. Cannon.

1851. November 25—Chauncey Jerome, Matthew Q. Elliot, Lucius R. Finch, James E. English.

1852. November 23—Chauncey Jerome, Lucius R. Finch, Miles Tuttle, Alfred Daggett, Thomas W. Ensign, Guy C. Hotchkiss.

1853. November 21—Alfred Daggett, Miles Tuttle, Thomas W. Ensign, Henry L. Cannon, Morris Tyler, Wales French, Nehemiah D. Sperry.

1854. November 24—Alfred Daggett, Miles Tuttle, Wales French, William Lewis, Hiram A. Gray.

1855. November 27—Alfred Daggett, William Lewis, Henry L. Cannon, John S. Farren, Russell Chapman, Philos Blake, James G. Hotchkiss.

1856. November 27—James E. English, John W. Mansfield, Stephen Gilbert, Newell C. Hall, William B. Johnson, Guy C. Hotchkiss, David M. King.

1857. November 23—James E. English, William B. Johnson, Stephen Gilbert, Newell C. Hall, Philander B. Hine, Guy C. Hotchkiss, Charles Lewis, Jr.

1858. November 29—James E. English, Stephen Gilbert, Newell C. Hall, Elmon Blakeslee, Charles Atwater, Jr., Charles Carlisle.

1859. November 30—James E. English, Stephen Gilbert, Newell C. Hall, Hiram Camp, Charles Atwater, Jr., Charles R. Pope, Charles Ruckoldt.

1860. December 21—James E. English, Stephen Gilbert, John Maher, Jr., Newell C. Hall, Augustus C. Willcox, David M. King, Charles R. Pope.

1861. November 29—Russell Hotchkiss, Stephen Gilbert, Newell C. Hall, Nicholas Countryman, John Maher, Jr., Charles R. Pope, Patrick Burns.

1862. November 28—William B. Johnson, Nicholas Countryman, John Maher, Thomas Brinley, Charles R. Pope, John W. Roux, Stephen Gilbert.

1863. November 27—Griswold I. Gilbert, Gaius F. Warner, Benjamin F. Mansfield, Hiram Camp, Willis Dickerman, Edward Bryan, William S. Johnson.

1864. November 8—Lucien W. Sperry, William Hillhouse, William R. Shelton, Allen Mix, George W. Hicks, John B. Ludington, Joseph D. Payne.

1865. November 7—Lucien W. Sperry, William Hillhouse, William R. Shelton, Allen Mix, Thomas Brinley, J. B. Ludington, Charles R. Pope.

1866. November 6—Lucien W. Sperry, William Hillhouse, William R. Shelton, Allen Mix, Thomas Brinley, Michael Eagan, Charles R. Pope.

1867. November 5—Lucien W. Sperry, William Hillhouse, William R. Shelton, Allen Mix, Thomas Brinley, Michael Eagan, Charles R. Pope.

1868. October 5—William R. Shelton, Thomas Brinley, William Hillhouse, Allen Mix, Charles Ruckoldt, James P. Hart, Cleveland G. Smith.

1869. October 4—William R. Shelton, Charles W. Allen, Anson Beecher, James E. Bishop, John P. Tuttle, Charles Ruckoldt, William B. De Forest.

1870. October 3—William K. Shelton, Thomas Brinley, Allen Mix, Charles Ruckoldt, William Hillhouse, James E. Bishop, Charles R. Pope.

1871. October 2—Willis M. Anthony, Frederick J. Betts, Ira Merwin, Martin Bergin, Joel A. Sperry, Charles F. Balbier, Horace S. Barnes.

1872. October 7—Willis M. Anthony, Thomas Brinley, Henry Killam, Charles F. Balbier, Stephen M. Wier, Alexander Foote, Henry L. Cannon.

1873. October 6—Willis M. Anthony, Thomas Brinley, Henry Killam, Charles F. Balbier, Stephen M. Wier, Samuel Johnson, Joseph B. Sargent.

1874. October 5—Benjamin F. Mansfield, Joseph B. Sargent, Charles F. Balbier, Samuel Johnson, Thomas Brinley, Henry Killam, Russell W. Norton.

1875. October 4—Benjamin F. Mansfield, Joseph B. Sargent, Charles F. Balbier, Samuel Johnson, Richard S. Merwin, Russell W. Norton, Henry Killam.

1876. November 7—Charles F. Balbier, James Punderford, Patrick McAveney, Edwin W. Cooper, Thomas Brinley, Thomas D. Jones, Russell W. Norton.

1877. December 4—Charles F. Balbier, Russell W. Norton, Edwin W. Cooper, Benjamin F. Mansfield, Louis Feldman, Alexander Foote, Charles C. Dennison.

1878. December 3—Benjamin F. Mansfield, Louis Feldman, Alexander Foote, Charles C. Dennison, Edwin W. Cooper, Patrick McAveney, Frank S. Andrew.

1879. December 2—James Reynolds, Edwin W. Cooper, Frank S. Andrew, Philip Hugo, Louis Feldman, Franklin H. Hart, Henry W. Crawford.

1880. December 9—James Reynolds, Edwin W. Cooper, Frank S. Andrew, Philip Hugo, Louis Feldman, Franklin H. Hart, Alexander Foote.

1881. December 6—James Reynolds, Edwin W. Cooper, Frank S. Andrew, Philip Hugo, Louis Feldman, William S. Beecher, Elizur H. Sperry.

1882. December 5—James Reynolds, Philip Hugo, Edwin W. Cooper, Hudson B. Forbes, Louis Feldman, William S. Beecher, Henry W. Crawford.

1883. December 4—James Reynolds, George F. Faulhaber, Julius Tyler, Benjamin R. English, John J. Treat, Louis Feldman, William S. Beecher.

1884. December 2—James Reynolds, Ernest Klenke, Julius Tyler, Isaac E. Brown, Louis Feldman, John L. Treat, William S. Beecher.

1885. December 1—James Reynolds, Ernest Klenke, Julius Tyler, John L. Treat, Louis Feldman, William S. Beecher, Isaac E. Brown.

II. THE CITY GOVERNMENT.

BY PROFESSOR CHARLES H. LEVERMORE.

It is probable that the first proposition for a city government resulted from the great stimulus imparted to New Haven's commercial prosperity in and after the period of the Seven Years' War (1755-62). The "interloping" element of the population, led by such men as Roger Sherman, David Wooster, and James A. Hillhouse, infused new life into the trade of the town. Looking doubtless to New York as their example, they initiated an agitation for urban honors, and procured from the town-meeting of December 9, 1771, the following legislation:

Whereas, A motion was made to the Town that this Town might have the Privileges of a City, and that proper measures might be taken to obtain the same. It is thereupon *Voted*, That Roger Sherman, John Whiting, Thomas Darling, Daniel Lyman, David Wooster, Joshua Chandler, James A. Hillhouse, Simeon Bristoll, Caleb Beecher, Esq., Samuel Bishop, Jr., and Messrs. James Peck, Benjamin Douglass, Ralph Isaacs, Adam Babcock, Thomas Howell, Joel Hotchkiss, Samuel Clark, Jr., and John Woodward, be a committee to take the same into consideration and judge of the motion what is left for the town to do with regard to the same, and report thereupon to the town at another town-meeting.*

The result of this committee's labors never reached the pages of the Town Records, and it is probable that the small local agitation was lost in the whirl of the wider national one.

When the discussion was revived upon the return of peace, the central figure was still the same—Roger Sherman. His position in the community was almost autocratic, and his relation to the embryonic city was like that of Theophilus Eaton to the primitive town. The influence that he wielded was acquired by pure force of character. He left the shoemaker's bench to become a member of the Governor's Council, a Judge of the Superior Court, and a member of the Continental Congress. To the four most important documentary expressions of the new national unity—The Address to the King, The Declaration of Independence, The Articles of Confederation, and The Constitution of the United States—his name was appended. When the city was actually organized, the mayoralty was continued in his hands until his death. When that event occurred, in 1793, he held the dignities of Mayor, Judge of the Superior Court, and Senator of the United States. He was a dominant element in the three chief political units—the Municipality, the State, and the Nation.

As soon as the war closed, the more active and intelligent citizens renewed the discussion of "City Privileges." Inasmuch as so many of New Haven's wealthy inhabitants had entertained Tory sentiments, the municipal question involved and excited sharp political dissensions. In the autumn of 1783, a petition for the incorporation of New Haven as a city obtained two hundred and fourteen signatures.† The petitioners aver that the "want of a due regulation of the internal police"

obstructs the normal growth of New Haven's commerce; also that "wharves, streets, and highways must be commodious for business, and must be kept continually in good repair." The Connecticut Assembly deliberated upon the subject at its October session in 1783, and postponed it to the adjourned session in January.

A town-meeting upon the 5th of January, 1784, instructed the town's representatives in the General Assembly to push on the incorporation of a portion of New Haven. The behest was speedily obeyed, for three days later an Act was passed incorporating "The Mayor, Aldermen, Common Council and Freeman of the City of New Haven." The 8th of January, therefore, is the city's birthday, although the new government was not organized until the 18th of February following. The forms of election were repeated on the ensuing 1st of June, which was the beginning of the municipal year.

The city was not divided into wards. The people elected a City Legislature, consisting of four Aldermen and twenty Councilmen. The number of Councilmen, however, was a fluctuating quantity. Twenty was, by the Charter, the maximum limit. It was reduced to ten, increased to twelve, then to fourteen, and, in 1833, the original number was restored. The Mayor and the Common Council were empowered in somewhat general terms to regulate local affairs, to maintain peace, and to afford security to property and person. The sentiment of that day was unfavorable to cities, and especially to popularly chosen executive officers. The Mayor of the city therefore, though chosen in the first instance by the suffrages of the community, held office during the pleasure of the State Legislature. Probate Judges, too, at that time were elected by the Assembly. The most noteworthy improvement wrought by the new *régime* was the establishment of a City Court, and the most important functions of the Mayor were judicial. The Mayor and the two senior Aldermen presided in the City Court, and enjoyed the same jurisdiction as the Court of Common Pleas in all civil causes originating within the bounds of the city, except such as concerned titles to real estate. At least one of the parties must be a resident of the city. The criminal jurisdiction of the Court was confined to offenses against the city ordinances. The ordinary criminal justice of the ancient Monthly Court of New Haven was still left to the Justices of the Peace for the town. Finally, the Freeman, in city meeting assembled, were the ultimate arbiters of municipal questions. They alone could levy taxes, and their ratification was essential to every By-Law enacted by the Mayor and Common Council. Even then no By-Law was valid until it had been published for three weeks successively in "Some public newspaper in or near said city." This arrangement would seem sufficiently clumsy, but still one more possible check was provided. Any By-Law of the city might be repealed, within six months after enactment, by any Superior Court holden in New Haven County, if the said Superior Court judged the By-Law to be unreasonable or unjust.

* Town Records, V, 19.

† See Professor J. B. Dexter's paper on "New Haven in 1784." The petition is preserved in the State Library.

Such pains were taken to prevent arbitrary municipal rule, yet in one instance the Charter itself seems to have authorized a violation of the privileges of the New Haven Proprietors. The city was empowered to exchange or sell the northwestern portion of the Green, in order to secure other land or highways, or another Green. However, the remainder of the Green was confirmed as a common or public walk, to remain so forever, never liable to be laid out in highways or to be appropriated to any other purpose. These clauses were intended to notify the New Haven Proprietors' Committee that their authority over the public square was now vested in the city, and that they could no longer vote away building sites upon the Green.*

President Stiles records in his journal, that out of about six hundred adult males within the city limits, 345 were qualified to become freemen.† Only 261 took the freeman's oath in time for the first election, and of this number 240 cast their votes for Mayor. Roger Sherman received 125 voices, just enough to elect him; Thomas Howell, Deacon of the First Church, received 102 votes; and 22 freemen preferred Thomas Darling.

The first Aldermen were Thomas Howell, Samuel Bishop, David Austin, and Isaac Beers. Josiah Meigs became the first City Clerk, and Hezekiah Sabin the Treasurer. The Sheriffs chosen were Elias Stillwell and Parsons Clark. The first city tax of one penny in the pound was ordered on the 3d of April, and David Austin, Stephen Ball, and Jeremiah Atwater were appointed to make a list of rates. The first By-Law prohibited the erection of buildings without a permit under the penalty of ten pounds, the heaviest amercement which the Council was allowed to enjoin. It was at first intended to assemble the City Council "by posting notices on each corner of the eight central squares." This somewhat rural method of convocation was discontinued in September, 1784, and the City Clerk was instructed to inform members of the government of a meeting whenever the Mayor required it. The annual city meetings on the first Tuesday of every June, at 9 A.M., were summoned by the tolling of the State House bell.

After the beginning of the municipal year on the 1st of June, the Common Council earnestly set about filling up the frame of city government. In July, By-Laws were passed, creating a host of inspectors and gaugers. Articles offered for sale must be inspected and branded. There were enactments against nuisances, against obstruction of highways, and against disregard of sanitary precautions. One of the first Ordinances provided for the establishment of a public market. The Ordinance was from time to time suspended, until in the next year two city markets were built by subscription, one on the southeast corner of the Green, the other where the present city market stands. All retailing of butter, eggs, meat and vegetables elsewhere be-

tween sunrise and eleven o'clock of the forenoon was forbidden, under penalty of twenty shillings. Forthwith a great controversy arose among the citizens over the question of public markets vs. the old-fashioned peddlers' market in covered wagons. The peddlers triumphed, in 1826, by the repeal of the Market Ordinance, but the question remained an open one. President Dwight, a zealous champion for the city market, called its overthrow "A striking example of the power of habitual prejudice."*

In June of the initial year the Charter was found lacking in an unexpected manner. The little village city desired to grant the freedom of its privileges to the "Hon. William Michael St. John de Crevecoeur, Consul-General to his Most Christian Majesty for the States of Connecticut, New York, and New Jersey," to his children, and to his wife, who bore the incongruous name of "Mehitabel." The Common Council requested Pierpont Edwards and James Hillhouse to secure from the General Assembly an act empowering the city to bestow the freedom thereof upon any person or persons residing without the limits thereof. The needful legislation was speedily obtained, and the distinguished strangers were duly honored.

New Haven's welcome to strangers in those days was intended to be a warm one. Immigration was actively fostered. In September, 1784, a committee, including the most eminent citizens of the place, was chosen

To assist all such strangers as come to this city for the purpose of settling therein, in procuring houses and land on the most reasonable terms; and to prevent such persons, as far as possible, from being imposed upon with respect to rent and the value of houses and land; and to give them such information and intelligence with respect to business, markets and commerce; mode of living, customs and manners as such strangers may need; and to cultivate an easy acquaintance of such strangers with the citizens thereof, that their residence therein may be rendered as eligible and agreeable as possible.

If this programme was carefully followed, the home-seeker must have thought the New Haven community an Arcadia. In the previous generation the first Irish immigrants were sold at auction, yet the new *regime* did not succeed in attracting working men of the better sort, unless indeed President Dwight's opinion of his fellow-citizens was untrustworthy. Writing in the first decade of this century, he extolled the intelligence and virtue of the community as a whole, but branded the artisan and laboring classes, both white and black, as hopelessly vicious.

A glance at the list of civil offices which were called into existence between 1784 and 1790, will reveal the extent of the corporate endeavor to guarantee honest trade, and to regulate private greed or carelessness. Besides the Mayor, Aldermen, Councilmen, Sheriffs, and City Clerk, the following officials were yearly elected: Gaugers of molasses, rum and other spirituous liquors; Inspectors of pot and pearl-ash; Inspectors and Cutters of hoops, staves, heading and ready-made casks; Inspectors and Cutters of plank, boards, clap-boards,

* The site of the present United Church was granted to the Fair Haven Church and Society in 1770, by vote of the Proprietors.

† Suffrage was limited to those who held personal estate at least worth £40, or real estate renting for £2 per annum. Those who had remained loyal to the King during the Revolution might also be disfranchised.

* Dwight's Travels, I, 95.

oars, shingles, and scantling; Weighers of hay; Inspectors and measurers of wood; Inspectors of wheat, rye, Indian corn, and flour; Inspectors and packers of beef, pork, and fish; Inspector of tobacco; Pound-keepers.

In September, 1784, the various roads, ways, and alleys in the town plat were dignified with permanent names, and the first year of urban existence closed with an application to the General Assembly for wider powers, especially in respect to the laying out of highways. The discussion of a proposed Workhouse began, and was continued until 1791, when a Workhouse was built. To it were consigned indiscriminately all kinds of petty criminals, beggars, insane persons, and both vicious and virtuous paupers. Such was the practice until 1849, when the Rev. S. W. S. Dutton became the leader in an agitation which resulted in the transfer of the insane to Hartford, and the separation of the worthy poor from their evil associates.

The first Fire Department of the city, a sort of universal Militia organization, was begun in 1788-89. Legislation concerning it was very frequent, and numerous fines for non-observance of the rules were often inflicted, but almost invariably repealed at the next session of the city meeting.

The small-pox, which was more dreaded and seemingly more common than fire, caused the establishment of the first Board of Health in 1795. The fear of this disease compelled attention to the drainage of the city. The East Creek had become particularly filthy. A committee of ten persons, called "The Health Committee of the City of New Haven," was empowered to abate nuisances and to improve, as it saw fit, the sanitary condition of the city. The new Board of Health obtained permission from the Legislature to establish a Quarantine for foreign ships. All the work of the Board was performed at its own expense.

Individual enterprise and private subscriptions accomplished most of the public works of that day—roads, bridges, dikes, and even some streets. First and foremost in such good works were David Austin and James Hillhouse, who were chiefly instrumental in fencing and adorning the Green; but the City By-Laws which authorized these improvements conclude with the words, "Provided the same be done without expense to the city." The commerce and wealth of the city were now rapidly increasing, yet both town and city were borrowing money to pay even running expenses. In 1790, the first City Treasury By-Laws vested in the City Clerk the sole power to draw upon the treasury orders, which must first be certified by the Mayor. The Treasurer was also ordered to keep a registered list of bills presented, and pay them in due order.

In 1798-99, the city passed Ordinances to protect the recently beautified Green from depredations, and the gentlemen who had been most active in the improvements were delegated to take care of their own work. The principal causes of their anxiety were unruly geese and Yale students. Straying geese and cattle, the storage of gunpowder, and the peril of fire, provoked almost continual legislation.

In 1800 the City Clerk was designated as the Clerk of the Common Council. The state of the finances grew worse instead of better. The City Court was intended to derive support from the fines levied in it, but the penalties were not carefully collected. A step forward was taken in 1803, when the Common Council was empowered to appoint a City Attorney. The water supply furnished a vexatious question. In 1804 it was proposed in city meeting that an aqueduct should be built. Two years later the consent of the General Assembly was received, and a committee, headed by Noah Webster, was appointed to manage the construction of the aqueduct. But poverty prevented the successful termination of their labors. The city stumbled along with what aid it could get from creeks and wells until the formation of a water company. Unavailing efforts were made to improve the quantity and quality of the water in the East Creek, and during the first few years of this century a small sewer was laid in Chapel street.

In the year 1807, the first Methodist Church and Society were allowed to buy a building lot, an event of great significance. The embargo declared in the same year paralyzed the town's commerce, transformed New Haven into a manufacturing center, and intensified the division between the local Federalists and Jeffersonians.

Throughout the ensuing war, and until the time of Monroe's administration, the city slumbered. In the year 1811 indeed, there is no record of a city meeting or of a session of the Court of Common Council. In 1818, with the discussion of a new State Constitution, municipal activity recommenced. The Common Council ordered side-walks on the principal streets, but the city meeting, three days later, vetoed the ordinance. In 1819, a By-Law directed the Common Council to elect a Sexton, a Leader of the Hearses, Bellringers, and other officers necessary to the service of burial. Two years later, the removal of the monuments of the old burying ground on the Green to the new Grove street Cemetery, was authorized.

The Assize of Bread in 1820, recalls the similar assize of one hundred and seventy years before. At the same time a rudimentary Police Department was created by the establishment of a night watch. In July of the same year the city meeting placed the seal of its final approval upon the ordinance permitting the Methodists to build a church on the northwest corner of the Green. In 1821, the Fire Department was greatly improved. The Fire Wardens who had been all responsible heretofore, were now empowered to elect a Chief Engineer and five Assistant Engineers. Hereafter buildings might be demolished, in order to prevent the spread of fire, by command of the Chief Engineer, without waiting, as formerly, for the consent of the Mayor and the majority of the Aldermen. In the same year the numerous amendments to the City Charter were consolidated with it, and the General Assembly recast the charters of all the cities in the State into one Act.* In 1827, the

* See Private Laws of Connecticut, III, p. 325.

city voted to give \$5,000 and a site to the new State House, and, two years later, \$100,000 were subscribed to the Farmington Canal. This subscription was a heavy weight upon the city, and sent the rate of taxation up to seventy mills on the dollar.

In 1831, the Mayor and citizens assembled in great excitement to protest against the proposed establishment in the city of a college for negroes. Strong language was used, and resolutions of warning were drawn up by a committee consisting of William Bristol, Simeon Baldwin, Ralph I. Ingersoll, Samuel J. Hitchcock, Jehiel Forbes, Samuel Wadsworth, John Durrie, Samuel Punderson, Augustus R. Street, and Isaac H. Townsend. The municipal service was increased in 1834 by the creation of the office of Superintendent of Sidewalks, subject to appointment by the Common Council. Under the supervision of this officer the work of paving was begun, and went slowly on in the face of determined opposition on the part of some citizens. The By-Laws relating to city elections were revised and improved in 1835, and the City Auditorship was established as a separate office.

In the following year it was voted that the Watch should serve both day and night.* The labors of the watchmen were perhaps somewhat lessened, in 1839, by the return of the Fair Haven territory to the jurisdiction of the town government. However, it was a desire to economize, to save the annual expense of less than two thousand dollars, which prompted the proposal, in June, 1842, to abolish the Watch altogether. The motion was defeated by only three votes in a poll of two hundred and seventy-five. One year later the city meeting actually instructed the Court of Common Council to discontinue the Watch, and from 1843 to 1848 the department remained in partial abeyance. A night watch was retained, and in January, 1845, on account of depredations by students, and others, the Mayor and Aldermen were commissioned to increase, at their discretion, the number of night-watchmen. Finally, a succession of incendiary fires scared the people back to common sense.

Charter amendments, in 1842, were intended to reform the City Court. The judicial powers previously enjoyed by the Mayor and Aldermen-Judges were conferred upon a new officer called the Recorder. Ordinary police jurisdiction was, however, still left in the hands of the Justices of the Peace. But the amendment seems to have been partially nullified, for the Aldermen-Judges continued to figure in the yearly elections and to sit as side Judges with the Recorder.†

During the mayoralty of the late Henry Peck (1846-50) began the series of changes and advancements which transformed New Haven from a village into a city. The personal efforts of the Mayor were largely instrumental in procuring gas-

light for the city in 1848. New Haven was the second small city in the country to illuminate its streets with gas; Trenton, N. J., being the first. The opening of the New York and the Canal Railways, in 1848, increased the business activity of New Haven, and brought an increasing Irish element into the population of the place. The New York road broke down a steamboat monopoly which had been oppressive, but the scepter of selfishness was inherited by the Hartford and New Haven Railway Corporation, which had been in operation since 1839. Against the Canal Railway, in which, as the heir of the ill-fated Canal Company, New Haven was deeply interested, the Hartford and New Haven Company waged unrelenting and unscrupulous warfare, finally preventing its connection with Springfield in a manner which an indignant city meeting at New Haven thus characterized: "An act of cunning and high-handed oppression, of doubtful legality, unworthy of honorable men, and disgraceful to a corporation."

From 1850 to 1852, the problem of a water supply demanded solution. The proposal of a contract with the New Haven Water Company led to a city vote in 1850 to buy the water-works for the city. A counter agitation was begun, and city meetings were frequent and disorderly. The number of voters was so great that the Mayor could not control the assemblage, and the tellers could not agree in their enumeration. In 1853 it was finally decided that the vote of the previous year was rescinded, but the matter lingered until 1856, and ended in lawsuits which cost the city between fifteen and twenty thousand dollars. It was probably this unhappy experience that fortunately induced the abolition of the city meeting.

The revulsion of feeling was sudden, for, in 1849, the city forbade the Common Council to appropriate more than one hundred dollars without the approval of a city meeting called for that purpose. This By-Law was shortly after repealed, and, in the spring of 1854, a city meeting resolved as follows:

That the Mayor, Aldermen, and Common Council be requested to digest a Constitution or plan of government for the City of New Haven, to be submitted to the citizens, by which all the powers now vested in the municipal corporation, styled the Mayor, Aldermen, Common Council and Freemen, shall be vested in a representative body or bodies to be chosen by electors residing in the City of New Haven, and that the same be prepared and submitted in season to be passed upon in city meeting, and, if approved, to be carried to the Legislature for its sanction.

This resolution was the germ which developed into the Charter of 1857.

In 1860 the sanitary condition of the city had become alarming. It was practically devoid of sewers, the old water-courses were cesspools, the soil was tainted by thousands of private vaults, and the most efficient scavengers that the city could boast were the pigs, horses, and cattle, which roamed in the streets contrary to the ordinance. In 1861 the swine and cattle were generally removed from the streets through the efforts, to a great extent, of the Hon. James F. Babcock, but the introduction of sewerage was a reform of slower growth.

* June 20, 1830.

† Some lawyers, the late Ralph I. Ingersoll among them, believed that this Court had no constitutional jurisdiction.

In the summer of 1860, Samuel Peck brought suit against the city for damages on account of municipal neglect to provide sewers. Under this spur the city government went to work, and Mayor Welch lent vigorous aid, but there were numerous hindrances to progress. The nature of some of the obstacles can be conjectured from the ordinance of the Common Council in 1861: "That in accepting bids for building the sewer [George Street], no contract should be made with any person not a citizen of New Haven, and that the whole, so far as practicable, should be in the hands of New Haven citizens." Councilman Healey tried to add a provision that no laborer should receive less than a dollar a day.

The Police and Fire Departments were remodeled in 1861, and placed under the control of Boards of six Commissioners, each of whom held office for three years. Up to this time the Fire Department had been composed of volunteer companies, which, as in other cities, had acquired great political power and even social influence. Henceforth the Chief Engineer was subordinate to the Commissioners, and the Department consisted of paid companies. These reforms mark New Haven's transition from a village into a real city, although the sewerage system did not begin to approach completion until Mayor Lewis' term (1870-77).

The various changes in the municipal service were not embodied in organic law until the Charter of 1869, New Haven's fourth charter. The Charter was drawn up by the Common Council in 1867, and granted by the Legislature in the next year. But a city meeting in September, 1868, rejected it, apparently for the sole reason that it vested in the city all the title of the State to the tide-water flats within the city limits. In 1869, the Charter, shorn of this objectionable clause, was presented once more, and was adopted.

Besides the usual enlargement of the duties of the Common Council, the most prominent feature of the Charter of 1869 was the establishment of the present City Court. The Recorder's Court was abolished, and both civil and criminal jurisdictions were entrusted to the City Court's Judge and Assistant Judge, chosen by the General Assembly. As before, the City Attorney was the appointee of the Court, but the functions of legal adviser to the Corporation were transferred from him to the newly-created officer, the Corporation Counsel. The annual city elections were hereafter to be held on the first Monday in October, and the municipal and calendar years were made coterminous.

The fifth and latest City Charter, that of 1881, has fixed the city election for the first Tuesday in December, and has endeavored to improve the arrangement of the various departments, especially by insuring equal representation of the two political parties upon the Boards of Commissioners. Prior to 1853, the Ward system did not exist in New Haven; the four Wards of that year became six in 1857. In 1870, the Fair Haven peninsula was reunited to the city, and the number of Wards increased to ten in 1874. Three years later, the city was redistricted into twelve Wards.

New Haven's urban development has been marked by the careful conservatism so generally characteristic of the community. One hundred years ago some individuals of great enterprise and ability obtained for their city a transient promise of commercial greatness, and to their private initiative was mainly due the municipal improvement of those years. The troubles with England destroyed the foreign trade and blighted the hopes of growth and wealth. Until 1860, or at least until 1848, New Haven was a quiet collegiate village rather than a city. Within the present generation, New Haven has begun to exert the public activities of a live and growing city, but it has progressed by hesitating steps rather than by hasty strides. It has been necessary to contend against a discouraging amount of stolid inertia in the successive struggles for pavements, lights, water, sewers, good streets, etc., and especially in the efforts to improve the municipal administration.

About 1860 there were concerted and intelligent attempts to amend the public service, and from that time a praiseworthy tendency to lengthen the official tenures has been evident in the political life of the community. At the present time the thirty-six Councilmen and the Treasurer are the only prominent members of the city government who are subject to annual elections. The Mayor, the twenty-four Aldermen, the City Clerk, Auditor, Sheriff, and the Corporation Counsel are among those who are chosen for two years, while all the members of the Departmental Commissions and the Coroner serve for three years. The more recent endeavor to secure non-partisan Boards of Commissioners was also well-intentioned, and was doubtless the best thing that could be done with the existing clumsy departmental machinery. Nevertheless very little has been accomplished in the necessary work of releasing the city government from its dependence upon the management and intrigue of partisan politics.

PRINCIPAL MEMBERS OF THE PRESENT CITY GOVERNMENT.

Elected by the People.

Mayor.

24 Aldermen.	36 Councilmen.
Treasurer.	City Clerk.
Auditor.	Sheriff.

Elected by the Common Council, separately or conjointly.

- 6 Commissioners of Public Works.
- 6 Commissioners of Police.
- 6 Commissioners of Fire Department.
- 6 Commissioners of Finance.
- Corporation Council.
- 4 Standing Committees.
- 17 Joint Standing Committees.
- 2 Boards of Compensation, 3 members each.
- 2 Boards of Commissioners of Sinking Funds, 3 members each.
- Assistant City Clerk.
- 144 Jurors of the City Court.
- Weighers, Measurers, Surveyors, Inspectors, and Constables.
- Sealer of Weights and Measures.
- 3 Supervisors of Steam Boilers.
- Clerks and Janitor.

Appointed by Mayor, subject to confirmation.

- 3 Commissioners of Public Buildings.
- 2 Commissioners of East Rock Park.
- 6 Commissioners of Public Health.

Appointed in 1881 by Citizen Donors of the Park, subject to confirmation by the Mayor.

- 3 Park Commissioners, who are afterwards self perpetuating.

Elected by the various Commissions.

All Subordinates in the Department.

Elected by the Legislature of the State.

- Judge of the City Court—two years' term.
- Associate Judge of the City Court—two years' term.
- 6 Harbor Commissioners—three years' term.

MEMBERS OF THE COURT OF COMMON COUNCIL OF THE CITY OF NEW HAVEN FROM THE ORGANIZATION OF THE CITY GOVERNMENT, FEBRUARY 10, 1784, TO JANUARY, 1885.

City incorporated January 8, 1784. Divided into four Wards in 1853; into six in 1857; into ten in 1874; into twelve in 1877.

The officers whose names are marked by a star, were elected February 10, 1784. There were two elections in that year, one in February, when the city government was organized, and another June 1st, when the municipal year began.

The dates in the list are inclusive.

Adriance, John B., Councilman, Second Ward, June, 1870, to January, 1872.

Ahern, Michael, Councilman, Third Ward, 1876.

Allen, Charles J., Councilman, 1835-37, 1843.

Allen, Charles W., Councilman, 1852, Fourth Ward, 1853.

Allen, George S., Councilman, Fourth Ward, 1873-74; Alderman, Fifth Ward, October, 1874, to January, 1876.

Allen, Heman B., Councilman, Sixth Ward, 1857.

Alling, George, Councilman, 1852; Sixth Ward, 1860; Second Ward, 1874.

Alling, Stephen, Councilman, 1799-1808.

Altman, Frank, Councilman, Second Ward, June, 1870, to January, 1872.

Anderson, Isaac, Councilman, 1844-45, 1849-50; Alderman, Sixth Ward, 1861.

Andrews, Burr, Councilman, Third Ward, 1853.

Andrews, Everett C., Councilman, First Ward, 1867.

Andruss, Henry F., Councilman, Fifth Ward, 1869.

Anthony, Willis M., Councilman, Third Ward, 1854-56.

Armstrong, Charles P., Alderman, Second Ward, 1878-80.

Armstrong, Montgomery, Councilman, Second Ward, 1856, Third Ward, 1857-58; Alderman, Third Ward, 1859.

Armstrong, Richmond W., Alderman, Second Ward, 1883-84.

Arnold, George S., Councilman, Second Ward, 1878-80.

Atwater, Charles, Junior, Alderman, Fourth Ward, 1858.

Atwater, Elihu, Councilman, 1834; Alderman, 1842-43, 1849.

*Atwater, Jeremiah, Councilman, 1784-87.

Atwater, Jeremiah J., Councilman, First Ward, 1865.

Atwater, William J., Councilman, Sixth Ward, June, 1870, to January, 1871, 1872; Alderman, Eighth Ward, 1878-80.

*Augur, Abraham, Councilman, 1784.

Augur, J. Minott, Councilman, Sixth Ward, 1864-65.

*Austin, David, Alderman, 1784-97.

Austin, Eli B., Councilman, 1838-41.

Austin, Elijah, Councilman, 1787-91.

Austin, Henry, Councilman, Second Ward, 1854.

Babcock, Avery C., Councilman, 1847.

Babcock, John, 2d, Councilman, 1827-33.

Bailey, Daniel J., Councilman, Third Ward, 1869.

Baird, Andrew, Councilman, Fourth Ward, 1883.

Baldwin, Charles A., Councilman, First Ward, 1872-73; Alderman, Tenth Ward, October, 1874, to December 31, 1876.

Baldwin, Charles L., Councilman, Second Ward, 1873-74; Alderman, First Ward, October 1, 1874, to December 31, 1881, 1883-84.

Baldwin, Robert E., Councilman, Tenth Ward, 1876-77.

Baldwin, Roger S., Councilman, 1826; Alderman, 1828.

Baldwin, Simeon, Councilman, 1798-99; Alderman, 1800-15, 1823, 1825, 1828.

Baldwin, Simeon E., Councilman, Sixth Ward, 1867-68; Alderman, January 1, 1876, to January 1, 1878.

Baldwin, William, Councilman, 1819.

Baldwin, William B., Councilman, 1850-52; Fourth Ward, 1855.

*Ball, Stephen, Councilman, 1784-96.

Barber, Joseph, Councilman, 1838.

Barden, Llewellyn J., Councilman, Eleventh Ward, 1881.

Barker, James P., Councilman, Fifth Ward, 1881; Alderman, Fifth Ward, 1883-84.

Barnes, Augustus B., Councilman, Seventh Ward, 1877.

Barnes, Amos F., Councilman, Third Ward, 1855-56.

Barnes, Henry D., Councilman, Seventh Ward, June, 1870, to January 1, 1872.

Barnes, Samuel H., Councilman, Fourth Ward, 1882, Fifth Ward, 1885.

Barnes, Seth, Councilman, 1821-22.

Barnes, T. Attwater, Councilman, Eighth Ward, 1881-82; Alderman, Eighth Ward, 1883-84.

Barnum, Starr H., Councilman, Ninth Ward, April, 1875, to fill vacancy until January 1, 1876.

Bartlett, William T., Councilman, First Ward, 1876-77; Alderman, First Ward, 1878-80.

Basserman, George A., Councilman, Third Ward, 1860.

Bassett, Julius G., Councilman, Third Ward, 1874.

Bassett, Samuel S., Councilman, Second Ward, 1856.

Bates, Charles, Councilman, Sixth Ward, 1865-66.

Beach, George E., Councilman, First Ward, 1865-67.

Beach, Henry O., Councilman, First Ward, 1859-60; Alderman, First Ward, 1861.

Beach, John S., Councilman, First Ward, 1853.

Beach, William, Councilman, Fourth Ward, 1855-58; Alderman, Fifth Ward, November 29, 1861-62.

*Beardsley, Ebenezer, Councilman, 1784-87.

Beckley, William A., Councilman, Eighth Ward, 1880.

Beebe, Philander B., Councilman, Seventh Ward, 1856; Alderman, Eleventh Ward, 1878-80.

Beecher, Benjamin, Alderman, 1833-38.

Beecher, Benjamin, Jr., Councilman, 1847-50, Third Ward, 1856, Fourth Ward, 1857.

Beecher, Thaddeus, Councilman, 1788-1817.

Beecher, Mariner, Jr., Councilman, Third Ward, 1868.

Beers, Amos J., Councilman, Fourth Ward, 1868; Alderman, Fourth Ward, 1869.

*Beers, Isaac, Alderman, 1784; Councilman, 1785-1810.

Beers, Nathan, Councilman, 1790-96.

Beers, Thomas J., Councilman, Fifth Ward, 1879.

Beers, William A., Councilman, First Ward, 1879.

Belcher, John D., Jr., Councilman, Sixth Ward, 1885.

Benedict, Henry W., Councilman, 1852; Second Ward, 1859-60.

Benton, Herbert E., Councilman, Tenth Ward, 1880-81; Alderman, Tenth Ward, 1882-85.

Benton, William L., Councilman, Second Ward, 1859-60.

Benton, Seth F., Councilman, Seventh Ward, June, 1870, to January 1, 1872.

Bergin, Martin, Councilman, Fifth Ward, June, 1870, to January 1, 1872; Alderman, Fifth Ward, 1873-74.

Bigelow, Hobart B., Councilman, Sixth Ward, 1863; Alderman, Sixth Ward, 1864.

Bishop, Abraham, Alderman, 1820-21, 1826.

Bishop, James E., Councilman, Twelfth Ward, 1880.

Bishop, Jeremiah A., Councilman, 1848-52.

Bishop, Jonathan M., Councilman, Tenth Ward, 1885.

Bishop, Lent, Councilman, 1819-20, 1832-33, 1835.

Bishop, Lent L., Councilman, 1836.

*Bishop, Samuel, Alderman, 1784-93.

Bishop, Samuel, Alderman, 1822.

Blackman, Elisha, Councilman, First Ward, 1853-55, Second Ward, 1862.

- Blake, John A., Councilman, First Ward, 1856-57.
 Blake, Philos, Alderman, 1830-41, Sixth Ward, 1857.
 Blakeman, George, Councilman, Sixth Ward, 1860-71.
 Blakeslee, Charles P., Councilman, Ninth Ward, 1884.
 Blakeslee, Charles W., Councilman, Tenth Ward, 1884-85.
 Blakeslee, D. A., Councilman, Second Ward, 1881-82.
 Blanchard, Henry W., Councilman, Fourth Ward, 1866-67.
 Blatchley, Charles C., Councilman, Seventh Ward, 1872.
 Boardman, William W., Councilman, 1824, First Ward, 1804; Alderman, 1825, 1827, 1829-31, 1850, 1805-66.

 Wheeler, William H., Councilman, Seventh Ward, 1875.
 White, Charles A., Councilman, First Ward, 1876-77.
 White, Dyer, Councilman, 1794-95; Alderman, 1798-1800.
 White, Henry, Alderman, 1849, 1852.
 White, Henry D., Councilman, Second Ward, 1866.
 Whiting, George I., Councilman, 1822.
 *Whiting, John, Councilman, 1784; Alderman, 1785.
 Whitney, Eli, Jr., Alderman, Ninth Ward, 1884-85.
 Whitmore, Franklin J., Alderman, Fourth Ward, 1872-73.
 Whittlesey, Charles B., Councilman, 1849. Died in office.
 Whittlesey, Charles B., Councilman, First Ward, 1855-57.
 Wier, Stephen M., Councilman, First Ward, 1859-61; Alderman, First Ward, 1862.
 Wilson, Augustus C., Councilman, Third Ward, 1855. Fourth Ward, 1860-61.
 Wilcoxson, David, Councilman, Third Ward, 1853.
 Wildman, Cornelius, Councilman, 1845-46.
 Willis, Patrick, Councilman, Sixth Ward, 1881; Alderman, Sixth Ward, 1882-83.
 Willoughby, Alvin L., Councilman, Fourth Ward, 1875-77.
 Wilmott, A. Burr, Councilman, Fifth Ward, 1863.
 Wilson, Charles H., Councilman, Eighth Ward, 1881.
 Winchester, Oliver F., Councilman Fourth Ward, 1853.
 Wines, Edward, Councilman, Fourth Ward, 1876.
 Winship, James, Councilman, 1839-42, 1849-50.
 Winship, Leonard, Councilman, Fourth Ward, 1869.
 Wood, James, Councilman, Second Ward, 1867-68.
 Wohlmaker, George, Councilman, Third Ward, 1873.
 Woodhouse, James H., Alderman, Twelfth Ward, 1879-80.
 Wolie, Isaac, Councilman, Fourth Ward, 1884-85.
 Woodruff, John, 2d, Councilman, 1850-52.
 Woodward, James M., Councilman, Second Ward, 1861-64.
 Woolsey, Theodore S., Councilman, Ninth Ward, 1879-80.
 Wright, Dexter R., Councilman, First Ward, 1868, 1872-73; Alderman, Tenth Ward, 1877-79.
 Wright, Carter, Councilman, Ninth Ward, 1875-76.
 Wrinn, James, Councilman, Third Ward, 1864.
 Wylie, John E., Councilman, Second Ward, 1857-58.
 Yale, Elihu, Councilman, First Ward, 1854-58.

MAYORS OF THE CITY OF NEW HAVEN.

Before 1826 the Mayor was elected by the citizens, but held his office during the pleasure of the General Assembly.

- * Hon. Roger Sherman, from February 10, 1784, to July 2, 1793.
- * Hon. Samuel Bishop, from August 19, 1793, to August 7, 1803.
- †† Hon. Elizur Goodrich, from September 1, 1803, to 1822.
- †† Hon. George Hoadley, from June 4, 1822, to 1826.
- †† Hon. Simeon Baldwin, from June 6, 1826, to 1827.
- † Hon. William Bristol, from June 5, 1827, to 1828.
- † Hon. David Daggett, from June 2, 1828, to 1830.
- † Hon. Ralph I. Ingersoll, from June 1, 1830, to 1831.
- † Hon. Dennis Kimberly, from June 7, 1831, to 1832.
- † Hon. Ebenezer Seeley, from June 5, 1832, to 1833.
- †† Hon. Dennis Kimberly, from June 4, 1833.
- † Hon. Noyes Darling, from June 10, 1833, to 1834.
- † Hon. Henry C. Flagg, from June 3, 1834, to 1839.
- † Hon. Samuel J. Hitchcock, from June 3, 1839, to 1842.
- † Hon. Philip S. Galpin, from June 6, 1842, to 1846.
- † Hon. Henry Peck, from June 1, 1846, to 1850.
- † Hon. Aaron N. Skinner, from June 3, 1850, to 1854.
- † Hon. Chauncey Jerome, from June 5, 1854, to 1855.
- † Hon. Alfred Blackman, from June 4, 1855, to 1856.
- * Hon. Philip S. Galpin, from June 2, 1856, to 1860.

- † Hon. Harmanus M. Welch, from June 4, 1860, to 1863.
- † Hon. Morris Tyler, from June 2, 1863, to 1865.
- † Hon. Erastus C. Scranton, from June 6, 1865, to 1866.
- † Hon. Lucien W. Sperry, from June 5, 1866, to 1869.
- † Hon. William Fitch, from June 1, 1869, to 1870.
- † Hon. Henry G. Lewis, from June 7, 1870, to January 1, 1877.
- † Hon. William R. Shelton, from January 1, 1877, to 1879.
- † Hon. Hobart B. Bigelow, from January 1, 1879, to 1881.
- † Hon. John B. Robertson, from January 1, 1881, to 1883.
- † Hon. Henry G. Lewis, from January 1, 1883, to 1885.
- † Hon. George F. Holcomb, from January 1, 1885.

* Died while in office. † Deceased.

- † Resigned: Elizur Goodrich, June, 1822.
 George Hoadley, May 11, 1826.
 Harmanus M. Welch, June 2, 1863.
 || Refused to serve.

III. —THE CITY SEAL AND FLAG.

BY HENRY PECK.

The original seal of the city was, I believe, made for the town. The original was lost and the one now in use is owned exclusively by the city. It is like this :

On all letter-heads and many official documents it is printed, as also on the envelopes used by the city. There has been a good deal of discussion as to the lost seal formerly used, but its history has become covered with obscurity.

The city flag, sixty by thirty-nine feet, was designed and procured by the present Auditor, John W. Lake. It is the first distinctive New Haven flag ever made; it is of dark blue bunting, with a white field occupying about a quarter of its surface. On the obverse is the same design as seen on the city seal. The other side has the coat of arms of the State, and, by way of ornamentation, there are the three vines placed over it, on the white. It is used only on some great occasions of public interest, or when the city desires to pay honor to guests from other cities. On such occasions it has been shown from the City Hall, by a cord stretching from a window to an elm tree on the opposite side of Church street.

There is owned, in addition, and used on certain public occasions when the Mayor and Common Councilmen take part, a small, silk, tinted State

flag, with a handsome staff, finished at the top with a spear-head. This is displayed by the City Sheriff at times when the Mayor, in front of the City Hall, accompanied by other city officials, reviews great processions on public days. The Sheriff, holding the flag-staff, stands near the Mayor.

The city, however, on public days, flies from the Liberty Pole on the Green only the United States flag. One is also displayed, as occasion warrants, from a city liberty-pole on Broadway, and on the plaza at the head of Long Wharf, generally called Custom House square, the old Custom House having been on the corner of Fleet (now State) and Water street.

IV.—CIVIC BUILDINGS.

From and after the union of the two colonies of Connecticut and New Haven, till 1701, the Colonial Legislature met at Hartford, both in May and in October. But in the May session of the year above mentioned, an act was passed as follows:

Whereas, The General Courts and Courts of Assistants have formerly, in a constant way, been holden at Hartford in the months of May and October annually: It is now ordered and enacted by the Deputy-Governor, Council and Representatives in General Court assembled:

That the General Court and Court of Assistants shall be holden at Hartford, in the month of May only, from year to year; and that the General Court and Court of Assistants that formerly hath been accustomed to be kept at Hartford in the month of October, shall be annually kept at New Haven, at the time accustomed for the sitting of those Courts, viz., the Court of Assistants on the first Thursday in the month of October, and the General Court on the second Thursday in the same month, any law, usage, or custom to the contrary notwithstanding.

Accordingly, the October session, in 1701, was holden at New Haven, and the October meeting in successive years, till after the Constitution of 1818 abolished October sessions, was in New Haven. When the October session of the General Assembly was thus removed to New Haven, there was no public building in the town except the Meeting-house. The same was true, indeed, of Hartford. Provision was made, in 1717, for the building of a State House, so-called, in Hartford, and three Court Houses in the Counties of New Haven, Fairfield and New London. Six hundred and fifty pounds was appropriated for the building in Hartford, and three hundred pounds for each of the three Court Houses. The map of 1748 shows the location of the New Haven Court House, and affirms that it was built in 1717. But perhaps the Act of the General Assembly in that year, appropriating money for the building, suggested the affirmation on the map. It is on record that, in 1718, the Court of Assistants held its October session in the library-room of the new College Building. Also it is on the records of the County Court, that the Court resolved and concluded at its sessions in January, 1719,

That it is necessary for the service of his Majesty that there be adjoined to the present prison-house a timber house of forty-five feet in length and twenty-two feet in breadth, two stories high, with chimneys at each end; and agreed that there be such a building erected on this condition, that the town of New Haven provide a suitable piece of land to set it upon.

Also it is on the records of the town, that at a town-meeting in New Haven, February 2, 1719,

The town, by a full vote, granted an half-quarter of an acre of land in the market-place, at the old prison-house, to build an house upon for his Majesty's service, to be improved according to the order of the County Court in January last, to be laid out by the townsmen as shall best accommodate the building.

These records of the County Court and of the town, show that the map has antedated the completion of the house, if those who drew the map meant that it was completed in 1717.

Warham Mather and Samuel Bishop, Esquires, and Captain Joseph Whiting, were appointed a committee to undertake and manage the affair of building the said house. In November of the same year, 1719,

The Clerk of the Court is hereby directed to make out an order to Captain Samuel Thompson, Treasurer of New Haven County, to deliver and pay what money shall be in his hands of the county's to Mr. Warham Mather, Mr. Samuel Bishop, and Captain Joseph Whiting, the committee appointed for undertaking and managing the affair of the building of a house adjoining to the present prison-house. It is also resolved that if subscriptions can be found sufficient to erect a twenty-foot addition to the aforementioned house, that the same be done, undertaken, and managed by the aforesaid committee.

It appears from the records that it was originally intended to join the new building to the prison, but for some reason the plan was modified, and the result was a building suitable for a Court House, but affording no additional security in the confinement of prisoners. The annex proposed, in case sufficient subscriptions should be offered, does not seem to have been built at that time. But in the May session of 1720, the General Assembly moved again for the secure keeping of prisoners. It

ordered that the County Court in the County of New Haven take immediate care that a suitable house be erected near or adjoining to the jail, and a keeper of the said jail provided to live therein, and all such fines and forfeitures as are or shall be recovered in said county at or before the Assembly in May next, and are payable to the treasury of the colony, be applied by said Court to defray the charges of building the said house and putting the said jail and yard about it in good repair; and that what shall be wanting of such fines and forfeitures for the said service, or to defray the charges of said work, shall be defrayed out of the treasury of the said county; and the said County Court is hereby empowered to raise such money as shall be so wanting by a rate on the inhabitants of the said county; and the said Court is hereby ordered to keep an account of the charge they are at in doing said work, and the manner wherein it is defrayed, and lay it before the Assembly in May next.

At the November session of the County Court in the same year (1720),

This Court, considering that the house already built is made use of and found suitable for a Court House, and that the General Assembly hath ordered that a prison-keeper's house be built in New Haven, and have ordered fines within said county for that; and this Court also concluding that it is necessary for the service of his Majesty in this county that there be adjoined to the present prison-house in New Haven, where it now stands, or on the Common where it now stands, or on the Common at the town's end, if the said town of New Haven shall allow the amoving of said prison thither, a timber house of twenty-six feet long, twenty feet wide, and one story and a half high, with a chimney at one end; this Court order such a house to be built, and the prison-house to be raised equal in height to said house, and appoint Warham Mather, John Hall, and Joseph Whiting,

Esqs., a committee to undertake and manage the affairs of said building.

The finances of the county did not come to ruin in consequence of these extraordinary expenditures for public buildings, for in April, 1727,

The Court, considering that there is something necessary to be done in the State House, and chairs needful for the same, and the cellar under the house still wants more to be done to it, all which affairs are left to the civil authority in New Haven to do therein as needful, and the money to answer the charge thereof to be drawn out of the county treasury, and what money remains in the treasury to be let on good bonds on interest till this Court shall otherwise order.

It appears that after both the houses were finished, the county had money to let.

There being no public building in New Haven before the erection of that which was called Yale College except the Meeting-house, the question arises, where did the General Assembly hold its October sessions from 1701 to 1718? The deputies doubtless met in the Meeting-house, as did the free-men of the town when called together in town-meeting; and there is evidence on the records of the Colonial Court in 1702 and 1703, that the Upper House sat in the ordinary or inn of Captain John Miles. In 1702 is the record: "This Court doth allow to Captain John Miles five pounds to pay for the colony expenses in his house by the Court of Assistants, and this General Court." The last clause may perhaps cover expenses for Committee Rooms for the Lower House. In 1703, Captain Miles' bill amounted to only three pounds.

The building of which the County Court makes mention in November, 1720, as already built and found suitable for a Court House, and again in April, 1727, as the State House, was, if built according to the original plan, forty-five feet in length, twenty-two feet in breadth, two stories high, with chimneys at each end. It contained certainly a Council Chamber for the Upper House of the General Assembly, and perhaps a larger room for the House of Deputies. The "Old Council Chamber," is spoken of in the advertisements of the *Connecticut Journal* after it had been converted into a printing-office. But the writer remembers no allusion to any apartment as belonging to the Lower House of the Legislature, neither has he been able to determine whether the County Court met in the Council Chamber or had the exclusive use of an apartment.

The Prison-keeper's House, as it is styled in the order which the Court made for its erection, or the County House, as it was afterwards called, was joined to the prison which had been previously erected. The prison does not seem to have kept its prisoners very securely after the keeper's house was joined to the prison, but doubtless the new arrangement was better than the old.

These buildings were contiguous one to another, and were between the site of the State House of 1830 and College street. They were doubtless both of them on "the half-quarter of an acre of land in the market-place," which the town granted to build an house upon for his Majesty's service. Near to them was the Grammar School, and probably one and the same well served the three build-

ings. Town-born citizens will perhaps remember the pump which once stood between the State House of 1830 and College street. That pump doubtless marked the place where was the well of the first County House.

About the time when the city was incorporated, these buildings were taken away from the Green. The State House was supplanted by a new edifice of brick, standing between the present sites of the Centre Church and Trinity Church; and the County House, with its prison attachment, was removed to the other side of College street, where the jail was walled in with a wall of timbers set in the ground close together, and of sufficient height to oppose in some degree the disposition of prisoners to wander away in search of more agreeable quarters. Before the removal of the buildings they had been used for mechanical purposes. As has been already intimated, the printing-office of the *Connecticut Journal* was in the old Council Chamber from the establishment of the paper in 1767, till June 6, 1772, when it was removed to the second story of "the new store on the northeast corner of the President's lot, near the Old College, and opposite Mr. Beers' tavern." Afterwards the State House was used as a shop for the manufacture of metal buttons.

In 1800, arrangements were made for erecting new County Buildings in Church street, where the City Hall now stands. The lot had belonged to the Hopkins Grammar School for about a century, and the difficulty of obtaining any adequate income by means of short leases was one of the reasons which induced the committee, in 1801, to make to the County of New Haven a lease of that part of their land on which the County House was placed, for 999 years. This conveyance was for a gross sum, in lieu of all future annual rents.

It was at first proposed that the County House should be of two stories; but this plan seemed so unwise to some citizens, including James Hillhouse, that they offered to add another story at their own expense, if the county authorities would not on other terms modify their plan. A meeting of the civil authority of the county was held at the State House on Monday, June 23, 1800, to "consider the propriety of adding another story to the new County House and Jail, either at the expense of the county or of certain individuals who have proposed to do the same at their own expense." The decision was to modify the original plan by adding another story, and to do it at the expense of the county. To the call for the meeting is added: "Dinner will be provided by Justus Butler at one o'clock." The County House was accordingly built three stories high with a prison attached to its rear, which was also at first three stories high; though it was afterward rebuilt on a modified plan which afforded two tiers of cells for the isolation of prisoners. The original prison had apartments for debtors as well as criminals, and some debtors were accommodated in the third story of the front building where they were treated rather as guests than as prisoners, though the beams of the sun came into their apartments between iron bars.

This County House, at least in its later years, contained no public offices, but only accommodations for the keeper of the jail and those whom he might, as an innkeeper, entertain. At an earlier date, however, there was a large room on the second floor occupied by the city for meetings of the Common Council. After the State House was completed, in 1830, this apartment was divided by partitions into bedrooms.

In 1857 a new County Jail was built on Whalley avenue, and the dwelling-house of the keeper attached to the prison was not, as before, provided with accommodations for a tavern. The new prison is, of course, much larger than the old, and the time of the jailer is fully occupied without undertaking to care for any but involuntary guests.

In 1763 the colony built a State House. It was of brick, and stood a little north of the site which the town afterward granted to Trinity Church. It was not in line with the three churches now standing on the Green, but was so near to the west line of Temple street that its steps projected into the street, as did the steps of the brick meeting-house erected by the First Church not long before. The cost of the building was borne by the county and colony in equal parts, each paying nine hundred and seven pounds, nine shillings, and three farthings.

The First Society, having purchased a new bell for their new brick meeting-house, the bell which had hung in the turret of the old meeting-house was purchased for the State House. On the Records of the First Society is the following :

Mr. Jared Ingersoll moving to this society to purchase the society's half of the old meeting-house bell at the price of twelve pounds ten shillings:

Voted, That he have the same at the price of twelve pounds ten shillings, paying out what is wanting of subscriptions for the new bell, and the surplus, if any be, to the use of the society. The said Mr. Ingersoll having also acquainted the society that his views in purchasing said bell are in order to have the new State House building in this town accommodated therewith;

Voted, That said Mr. Ingersoll be desired in behalf of this society to request the society of White Haven that they would sell their half of said bell to this society at the price aforesaid, and suffer the purchase money to lie unpaid in the hands of this society at present, during the further pleasure of the said two societies and until they or either of them shall otherwise choose or determine, in consideration of said White Haven society having, as usual, the benefit and advantage of this society's present bell at funerals, etc., and of this society's expense in ringing the same on Lord's days, evenings, etc. And in case White Haven society will let this society have their half of said bell as aforesaid;

Voted, That said Mr. Ingersoll may have that half of said bell also, paying therefor other like sum as aforesaid.

Some of the phraseology of this vote, which was probably drawn by Mr. Ingersoll, is better understood when one learns that he was on the Building Committee of the Meeting-house and also on the Building Committee of the State House.

Early in the present century the State House was enlarged to nearly double its original capacity by an addition in the rear. The roof was changed from the form of a gambrel to that of two planes meeting at the ridge and surmounted by a cupola midway between the ends of the ridge. In the high basement was kept a store of wood for the

winter's fuel. On the first floor, the front and rear doors opened into a hall, larger than one-half of the whole story, unfurnished with seats, but suitable for town-meetings. The south end of this story was partitioned off for a Court-room and jury-room. In the open hall, stairs ascended to the second story, where were accommodations for the two Houses of the General Assembly.

In 1827, incipient measures were taken in the Legislature toward the erection of a new State House in New Haven. William Moseley, Charles H. Pond, and John Q. Wilson, Esquires, were appointed a committee to superintend the erection of the building, and an appropriation was voted of \$26,000, on condition that the City and County of New Haven should appropriate \$10,000, and with the implied understanding that the State would appropriate a further sum of about \$13,000 for the last bills. The County of New Haven appropriated the avails of a tax of one per cent. on the grand list, and the city, though dissatisfied with the action of the county, voted in a city meeting "that the City of New Haven will raise and pay the residue of said sum of ten thousand dollars required by said Resolves of the General Assembly." The edifice was not entirely completed in May, 1830, but with the aid of temporary steps was prepared for the session of the Legislature at that time, and the Governor said in his message, "Notwithstanding the edifice at this session first occupied by the General Assembly is not entirely completed, it still affords increased and desirable accommodations and facilities in the transaction of the public business."

The building is in the simplest style of the Doric order, is one hundred and sixty feet in length and ninety feet in width, and presents at each end a pediment supported by six massive columns. The basement, above which the building rises two stories, is encrusted with white marble from Sing Sing, N. Y.; the steps are of the same materials; the rest of the building is stuccoed. The basement was for several years occupied by the city and town for offices and public meetings. On the first floor were a Court-room, an apartment for the Governor, and committee-rooms. On the second floor were chambers for the two Houses of the General Assembly and committee-rooms.

Since the building was vacated by the Legislature it has received no repairs, and is now in such a state of decay as to be a disgrace to the city. The people of New Haven are divided in opinion on the question whether it shall be repaired or demolished, but the opinion that it should be repaired and used for a free public library till some generous citizen shall give for such a purpose a more suitable edifice on a more convenient site, is gaining ground.

The earliest building belonging to the town was probably an Almshouse. It stood within the present limits of the College Campus and contiguous to the County House after the county buildings were removed to the west side of College street. It is said the same building is still standing on the west

side of College street between Wall and Grove streets. In the *Connecticut Journal* of May 28, 1880, is the following: "Died Sunday evening in this city, in the 51st year of his age, Mr. Joseph Peck, who for several years had been Keeper of New Haven County Jail and Overseer of the Poor House." Before the erection of this Almshouse, the town poor had been set up at vendue, as may be seen in an advertisement dated July 4, 1763, and copied in the chapter on the Periodical Press.

The second Almshouse was built on the south side of Elm street, about thirty rods west of the place where now stands the Orphan Asylum. It was built about the time when the County House in Church street was built, the same causes which

population has induced the town to purchase a farm at the base of West Rock, at which place accommodations will ere long be provided for the town poor, and the edifice when completed and occupied will be the Fourth Almshouse which the town has provided since the custom of "bidding off" the town poor came to an end.

The City Hall, Town Hall, or Hall of Records, as it is variously called, was erected at the joint expense of the city and the town. It stands where stood the County House and Jail built in 1800. The town purchased the land of the county in 1856 for \$25,000. June 23, 1860, the town appointed Philip S. Galpin, Frederick Crosswell, David

County Court House.

City Hall.

occasioned the removal of the County Buildings being influential also in the removal of the Poor-house. At first there was a building of wood containing eight rooms upon the first floor and the same above, the kitchen being in the basement. Another building was subsequently erected, which was occupied as a kitchen and for lodging-rooms. A further supplement was a stone building for a chapel, with a row of cells in the basement for the confinement of the refractory. These buildings were inclosed in 1815 by a high stone wall, so that the only ingress or egress was through the gate with the permission of the keeper.

The third Almshouse, first occupied in 1852, is of brick, and stands at the west end of Martin street.

The great value of land so near the center of

Cook, O. F. Winchester, Isaac Thomson and Sylvanus Butler, to co-operate with a similar committee on the part of the city to procure plans and contracts for the erection of a suitable fire-proof building for the safe keeping of the public records of the Town, City and Probate District of New Haven, and for the public use of said town, city and probate district of New Haven, upon the lot of land known as the County House lot. The sum of \$40,000 was also voted at this meeting as the proportionate share of the town toward the expense of the building. On the part of the city it appears that the Common Council on the 6th of July, 1859, appointed a committee to confer with the Selectmen relative to a joint ownership of the property on Church street, for the purpose of erecting thereupon a building for the Town Clerk's Office, Probate

Office, Council Chamber, and other requirements for city and town use, with authority to procure plans and estimates. This committee made their report to the Council on the 5th of September, 1859, recommending that proper action be taken to erect the building. Subsequently a city meeting was called, at which votes were passed almost unanimously in favor of carrying on the work, and asking the Legislature to give power to the city to issue bonds to the amount of \$60,000. A joint committee was appointed to examine plans, procure estimates, and arrange for the proper accommodation of the several public offices. The plans of Henry Austin were adopted, and contracts made with Perkins & Chatfield for the mason-work, and with Nicholas Countryman for the carpenter-work. The building was completed according to contract October 1, 1862, and immediately occupied by the officers of the city and town.

In 1873, a new County Court House, which the dilapidation of the State House after its desertion by the Legislature had made necessary, was completed. The cost of the building was \$120,000; the land was \$48,000; and the furniture, curbing and all extras cost \$14,000 in addition; so that the whole amount expended was \$182,000. It adjoins the City Hall on the north, and is built in the same style, the front being of Nova Scotia stone. It is 66 feet wide and extends about 120 feet from front to rear. The fine doorway is Gothic in appearance and flanked by highly polished pillars of Scotch granite. On the first floor are the offices of the Sheriff; County Commissioners; Clerk of Court of Common Pleas, with vault; the Common Pleas Court-room, with retiring-rooms for the Judges, the Jury, and the members of the Bar. On the second floor are the offices of the State Attorney; Clerk of the Superior Court, with vault; a library and committee-room; and the Superior Court-room, with retiring rooms similar to those on the first floor. The third floor furnishes apartments for the Yale Law School, consisting of a library, with librarian's and professors' rooms connecting therewith, and a lecture-room, 58 x 25 feet; also a Supreme Court-room with lobby and ante-room.

Soon after the county had erected the Court House on the north side of the City Hall, the city bought a lot on Court street, at a cost of \$20,000, and upon it constructed a building for the accommodation of the Police Department. It is of Philadelphia pressed brick, adorned with Nova Scotia and Portland stone. The entrance is flanked by two pillars of red Scotch granite. The building cost about \$75,000. It contains rooms for the City Court, the Clerk of the Court, the City Attorney, the Board of Police Commissioners, the Chief of Police, patrolmen's headquarters, a large drill-room for the police, and two sleeping-rooms for patrolmen. It is 76 feet wide by about 60 feet deep, and is connected by galleries with the City Hall.

More recently the city, for greater convenience, has erected a small precinct building in Grand street, between the Railroad and East street, for the Police Department.

The United States owns the building in which are accommodations for the Post Office, the Custom House, and the United States Courts. It was erected about thirty years ago, but has been enlarged to accommodate the increasing work of the Post Office.

V.—POLICE DEPARTMENT.

BY HENRY PECK.

The earliest settlers in New Haven were well disposed toward the firm establishment of a civil magistracy. Not only were there officers in the Church with special responsibilities and duties as preservers of the peace on the Lord's Day, but there were also constables, who, in addition to being officers of the Court for the service of writs, were, by common consent, to make arrests for violations of laws regarding public worship and for other misdemeanors. These men were generally harsh in speech and manner, and their moral treatment of prisoners was what in these days would be called severe. They were important members of the body politic, and were chosen from year to year.

When New Haven became a city, in 1784, the old Town Constable system of peace officers, together with the existing arrangements regarding officers inside the churches, was found sufficient for the public requirements for a long time. In 1820 a city by-law was passed constituting the Night Watch, to be kept under the direction of the Common Council, of not to exceed seven discreet persons as Superintendents, and the Watch not to exceed fifty discreet citizens, to hold office at the pleasure of the Court of Common Council. The members of the Watch had the same authority as constables, and were appointed whenever expedient.

In May, 1835, Henry C. Flagge being Mayor, the City Charter was so amended as to permit the Common Council to appoint not to exceed twenty-five Special Constables. There was at that time a legal provision that any one who should abuse the Mayor, City Watch, or the Special Constables, should be subject to the same penalties as for abusing or resisting any Justice of the Peace, Sheriff or Constable.

The Common Council met at the house of Henry Daggett on the 15th of August, 1803, and one of the transactions recorded was the appointment of Tilley Blakesley, whose name is spelled elsewhere "Blakeslee," as an impounder of horses, cattle and small animals. It will be seen that with the body of "Marshalls" who served writs for the higher Courts, Constables, Special Constables, Tythingmen of Churches, Night Watch and Impounders, New Haven was for many years amply furnished with officers to compel obedience to law.

In 1842, a city meeting instructed the Common Council to abolish the regular standing City Watch, and discontinue the employment of regular Watchmen. During the mayoralty of Philip S. Galpin, in 1845, a Freeman's meeting authorized the employment of a Special Night Watch. The maintenance and management of a Watch was a fre-

quent occasion for debate at Common Council meetings, and it often happened that men doing duty as members of the Watch exercised a good deal of liberty as to their method of serving the public.

At a Common Council meeting in September, 1835, on motion of George Rowland, Colonel Morse was authorized to employ Special Constables to preserve order and keep the peace on training days, at his own expense. Too often the old training days were the occasion of much drunkenness, gambling, and indecorous conduct, and it is probable that it was found convenient to empower the soldiers to act as peace officers outside of their authority as militiamen. On one occasion during a parade of militia on the Green, a soldier employed as a guard to prevent the people from occupying the space required for the evolutions of the soldiers, had the misfortune to wound, with his bayonet, the foot of a man who persisted in encroaching upon the part of the Green devoted to the soldiers. The circumstance led to considerable discussion among citizens as to whether, in time of peace, and without particular orders from his superior officers, a soldier had any right to use his bayonet in such a manner.

Samuel J. Hitchcock was Mayor in 1841, and in that year Zelotes Day, Wyllis Peck, and John Ritter were appointed to present a list of Special Constables, and in 1845 the Common Council authorized the appointment of Special Watchmen to quell riots and suppress mobs and any noisy and tumultuous assemblages. There were frequent collisions between the students of Yale College and the young men of the city in those days.

Lucius G. Peck, in April, 1847, was appointed to draft an act empowering members of the Sack and Bucket Fire Company to act as Special Constables in preserving property at fires. In 1848 a Watch of ten men was appointed, consisting of Thomas Baggott, Walter Blakeslee, William Grant, Thomas A. Catlin, George L. Beardsley, William D. Campbell, Charles J. Betts, Robert Griffing, Henry E. Shelly, and C. P. Church. Alderman Isaac Thomson was made Superintendent. This gentleman was at one time a Street Commissioner. In 1854 the Irish adopted citizens petitioned that some of their class might be appointed Special Constables. Their petition was tabled by the Common Council, a course which would not be taken were a similar petition to be presented at this time.

Jobamah Gunn was the first regular Captain of the Watch, the second being Hezekiah Gorham. He was followed in office by William Daggett, who served but a short time. Then Mr. Gorham's son became Captain; and in 1855, Lyman Bissell, who had been an officer in the regular army, and had been promoted as a reward for distinguished bravery in the Mexican War, was at the head of the Watch.

It was while he occupied this position that he went into the midst of a mob and quietly spiked the gun with which they meant to destroy South College. Mr. Henry Howe, in a little Outline

History of New Haven, printed by Mr. O. A. Dorman in 1884, thus relates the story:

Thirty years ago our only theatre, "Homan's," was in the Exchange Building, where the town boys and students were wont to gather for amusement. Collisions between them had arisen, the town boys crying, "Hustle the monkeys out!"—the students rarely retorting. Everything seemed ripening for a mob to culminate in a tragedy. The excitement grew intense, and furious threats filled the air from the town boys. On the night of the occurrence we are now to relate, about seventy students were there for mutual protection, and when they issued from the hall a mob of thousands filled the street in front awaiting their exit. Our police force numbered, all told, only eight men, under Captain Lyman Bissell. He had been an officer in the Mexican War, and is to-day living in our city, a retired Major in the regular army. As the students came out they were greeted with insulting cries and threatenings. By the advice of Bissell the students moved together on the south pavement of Chapel street in line, two by two, up toward the College. The mob rolled along beside them in the street filling the air with howlings. The others marched on singing their great College song "*Gaudeamus*."

When the students had got nearly to the top of the hill, just opposite the Club House, the leader of the mob, an Irishman, rushed forward and seized a student, a young man from Missouri, by the clothing under his neck, and began to drag him into the midst of the mob. Suddenly he let go his hold, staggered back, and then fell dead amidst the howling throng; a knife in the hands of the student had severed both ventricles of his heart. The police were present, and Bissell ordered his men to take the body to the police office, in the Glebe Building, Chapel street side, he going with them. The students, followed by the mob, reached the campus, and by the advice of Professor Silliman, retired to their rooms. Some little time elapsed when Bissell, then in the police office, heard the rattling of the caisson of a piece of artillery passing in the street. An old soldier, he knew what that sound meant. He went along with the rioters. They loaded the piece to the muzzle with cannon balls, grape-shot, stones, pieces of brick, etc., and drew it up before South College to batter down the walls; all was made ready, the gun duly pointed, the match lighted, and one of their number had got out his priming wire to make the connection free, when lo! he met with an obstruction, whereupon he exclaimed: "My God, boys, they have out-generated us after all—the gun is spiked!" He spoke the truth. Bissell had *spiked* the gun.

Major Bissell was succeeded by John C. Hayden, on July 1, 1855, who served until June 4, 1857. Frederick P. Gorham served from June 16, 1857, to June 22, 1859; Elihu Yale from June 21st, of that year, to June 15, 1860; and John C. Hayden was again Captain until June 21, 1861.

Many incendiary fires, in 1847, led to a city meeting being called for taking measures of a protective character. There are citizens who remember the volunteer patrol, which included a number of the students of Yale College, the streets being guarded at night in a year of many fires.

Fifty or sixty years ago the constabulary system was a terror to all boys fond of mischief. One of the most notable of the officials was Dr. John Skinner, who made arrests without warrant from Court or Justice of the Peace at his own pleasure, and New Haven children feared him mightily. He was distinguished by a black mark on a prominent nose, and by his sharp voice. Constable Munson was of the same school of officers, and Constable Jesse Knevals was also dreaded by evil-doers.

When Harmanus M. Welch was Mayor, in 1861, John C. Hollister, David J. Peck, William B. Johnson, George H. Watrous, and George A. Chapman,

were appointed to examine "A Bill for the Organization of a Police Department for the City of New Haven," then pending before the General Assembly, and promote its passage. This was the beginning of the foundation of the present excellent police system as it now exists. The first meeting of the Board of Police Commissioners thus created, was held on July 6, 1861. Rules for the government of the police force were adopted, and Merritt Clarke and William Grant were appointed policemen. August 6th, the Mayor read to the Board of Commissioners a communication from the Common Council, urging the appointment of policemen without delay. June 27th the Commissioners elected Jonathan W. Pond, Chief; Wales French, Captain; and Owen A. Monson, Lieutenant; and on the 26th, these policemen: Darby Hanley, Treadwell Smith, Philip Reilly, Leverett Howell, Philip Roller, Luther P. Darrow, Peter Sheridan, George A. Baldwin, Jefferson B. Shaw, Henry S. Catlin, William D. Campbell, and James Brady, besides a number of supernumeraries, among whom was Thomas Kennedy, for years the policeman at the consolidated railroad depot. In September a uniform was adopted for the men. Commissioner John W. Fitch died, and was succeeded by Edward Harrison.

It was against the rules for an officer to hold office under the State or Federal Government, and there was much jealousy and trouble among the men regarding rewards paid for arresting soldiers deserted from the army. The venerable James Stuart, who is still on the pay roll, was one of the early appointments to the Force. William M. Hyde (now Captain), Mr. Stuart, and Patrick Gallagher were added to the Force November, 1861. Captain French resigned in 1862. The Board of Commissioners for 1864 consisted of Willis M. Anthony, Philo Chatfield, Atwater Treat, William H. Bradley, Henry B. Harrison (Governor in 1885-86), and Marcus M. Rounds.

The Board voted, in 1863, that the Mayor would be justified in purchasing pistols for the men.

In 1864 the Charter was amended. The Chiefs and Acting Chiefs under the organization dating from 1861, were Jonathan W. Pond, from June 27th of that year, until July 16, 1864; Elihu Yale, from July 17th to October 10, 1865; and George M. White, from October 11th to September 1, 1866. William A. Lincoln was chosen September 1, 1866, but after a time resigned, and was followed by William J. Bowen, who also resigned in a few months, when William D. Catlin became Acting Chief, continuing in the office until July 6, 1871. William M. Hyde was thereafter Acting Chief, from July 7, 1871, to December 14, 1872, inclusive. Captain Hyde had offered him at different times the place of Chief of the Force, an honor which he never saw fit to accept, though actually called upon at various junctures in police affairs to assume the honors of the position.

December 15, 1872, Charles W. Allen, who had formerly been the Chief of the Fire Department, was elected Chief and was in office until February 19, 1879. His administration was notable for the

inauguration of a sort of military drill, which was thought to increase the efficiency of the policemen. Great care was taken in inspecting the uniforms of the officers, and much attention was paid to deportment. Chief Allen took great pride in having a fine looking body of men under his command. It was during his term of office that General Grant visited New Haven, the reunion of the Army of the Cumberland being held at the time.

William M. Hyde once more became Acting Chief on the retirement of Chief Allen, and so continued until the 10th of March, 1879, when Charles Webster was chosen Chief. He remained in office until his death, January 1, 1885, when Captain Hyde again became Acting Chief. The composition of the Board of Police Commissioners was on what has been designated the non-partisan plan. An equal number of Commissioners were selected from both the two great political parties, the idea of those who favored the plan being to avoid the domination of one party over the other in the matter of choosing policemen or dismissing them from service. The practical effect of the non-partisan scheme, however, was to greatly obstruct the business of the city in this department of public economy. There being three Democratic and three Republican Commissioners, neither party could elect a Chief as the public welfare required. By a Charter provision, the Mayor had no vote in case of a tie in an election of policemen, though he had a vote in cases of a tie, when ordinary matters were being acted upon.

About half a century ago, the police lock-up was in what is now the American Theatre Building on Church street. It was moved to the other side of the street, a few doors below Chapel; thence to an upper room of the Glebe Building, corner of Chapel and Church streets; and afterward to the basement of the Old State House on the Green.

When the City Hall was built, in 1861, the police quarters, Police Court, and lock-up were moved thither. A large building, exclusively for Police and City Court purposes, was built, at a cost of about \$75,000, on Court street, in 1873, Hon. Lynde Harrison being the principal mover in the enterprise. In this building is a commodious Court-room, a large room for the assembling of the policemen, a room with beds for officers on night duty who must attend Court in the morning, and a large drill room, besides other rooms. In the rear is a fine brick barn for police horses and vehicles.

The first police van, or "Black Maria," was put into service in 1873, and the same year the male and female prisoners were kept apart from each other. Another police building was erected on Grand street in 1883.

May 1, 1884, was introduced the Gamewell system of a police telephone and signal service, whereby electricity is made to do useful work and greatly improve the police protection of the city. At headquarters are the instruments and batteries for receiving and recording telephonic signals. In different parts of the city are station boxes for telephonic communication with the main office, and there are also a patrol wagon, ambulance, and

plenty of horses for responding to calls. The Force consists of nearly a hundred men, and by a graded plan there are always supernumeraries awaiting promotion to the regular Force.

Mounted officers are employed in summer at East Rock Park, where is located one of the signal boxes. There are regular detective officers who do no patrol duty, James P. Bremer and Philip Reilly being efficient in that line of police work.

The matter of a morgue has been agitated for years, but thus far the only place for a temporary deposit of persons meeting death in an untimely or unusual manner, is in a dark cellar under the City Hall.

There have been years when there has been no harmony between the Judges of the City Court and the Chiefs of Police, and justice has suffered in consequence; but of late years this has been reformed. Very few crimes are committed in New Haven in proportion to the extent of the population.

The total cost of the police in 1884 was \$104,913.54, of which \$97,427.45 was for the pay-roll and \$398.75 for Sunday watchmen at cemeteries. Other expenses were: for the Park Police, \$965.66; sundries, \$996.72; board of horses, \$699.96; rent of voting places, \$350; telegraph and telephone service, \$1,575; barn, \$2,500.

The total length of streets patrolled in January, 1885, was 131 miles, 17 miles being streets with paved roadways.

The police are generally moral, intelligent, sober men, faithful to duty, and are a credit to the city. In one of his numerous reports to the Police Commissioners, the late Chief Webster very truly said:

The duties of a policeman are arduous in the extreme. Through rain and sunshine, storm and snow, he patrols his beat, and in all cases, if faithful to his trust, looks carefully to the safety of the person and property of citizens. His work is more carefully scrutinized than that of any office in any other branch of the city departments. If a mistake is made by any member of the Police Force it is open to criticism, and oftentimes the entire Force is unnecessarily blamed on account of the acts of an individual member of the department.

The Commissioners, apparently recognizing the truth of this, immediately put on trial any officer charged with dereliction, and if found guilty of any but trifling faults, dismissal is the result. Due notice of trial is always given an accused officer, and he is allowed opportunity to produce witnesses in his own defense, and to make such statements as he may deem expedient.

The percentage of loss by robbery in New Haven is very much smaller than in most other cities.

The present head of the Police Force, Charles F. Bollman, was elected Chief July 13, 1885. He is thirty-nine years of age, a native of Germany, and came to this country when young. He is a member of the Bar, and at the time of his election was in good practice, being also the Coroner for New Haven County. He was for a short time in the military service of the Government during the late war. He took office as Chief of the Department August, 1885, and has given general satisfaction.

VI.—FIRE DEPARTMENT.

BY A. C. HENDRICK, CHIEF OF FIRE DEPARTMENT.

The first fire companies in New Haven were ordered by the City Council in 1789. Two engines were then purchased, and companies formed to manage them. The machines were manufactured by Ebenezer Chittenden, of New Haven, and the firemen of those days and the citizens generally took great pride in them, primitive as they must have been. On the 31st of December, 1789, James Hillhouse, Jeremiah Atwater, Colonel Joseph Drake, Benjamin Sanford, Joseph Howell, and Josiah Burr were appointed Fire Wardens to take command at fires in the order named. At the same meeting Elias Shipman was appointed foreman and Russell Clark "second" of Engine Company No. 1, and Colonel Hezekiah Sabin, foreman, and John Nicoll "second" of Engine Company No. 2. At a subsequent meeting of the Council, held July 5, 1790, the following persons were indorsed as members of Engine Company No. 1: Samuel Green, John Goodrich, Hanover Barney, Jacob Thompson, John Peck, Ambrose Ward, Jr., John Raymond, Nathan Beers, Isaac Guernsey, James Prescott, Henry Daggett, Jr., Stephen Ball, Jr., Jeremiah Atwater, 3d, Eli Hotchkiss, Ira Bartholomew, Nathaniel Fitch, Luther Fitch, and Alexander Langmuir.

Those indorsed as members of Engine Company No. 2 were: Henry York, James Merriman, Samuel Merriman, John Chandler, Stephen Dummer, Nathan Dummer, Edmund Smith, Nathan Fenton, Thomas Davis, Jr., Solomon Davis, Stephen Miles, Torbus Coil, Noah Barber, John Woodward, Amaziah Lucas, Joseph Mix, Ezekiel Hayes, Jr., and Eldad Mix.

About this time the Fire Wardens were instructed to make examinations of fire-places, chimneys, ovens, etc., and of all dwelling-houses and buildings, with regard to their safety. In the event that any were found unsafe, the Wardens were authorized to order repairs as needed. Occupants of dwelling-houses and buildings were required to sweep or burn out all chimneys as often as once in every two months. A fine of ten shillings was imposed by the authorities for neglect to comply with this law. Bonfires were not allowed within fifteen rods of any building, nor to burn after twelve o'clock at noon.

In June, 1791, the working force of the Fire Department was increased. To each company was added three men, making twenty instead of seventeen.

In June, 1794, John Goodrich, Joseph Peck, James Merriman, and Abraham Bishop, were appointed Fire Wardens in addition to those already appointed, and were detailed as Sackmen to remove all portable goods in case of fire to a place of safety.

On April 11, 1797, at a council meeting, Elizur Goodrich, David Daggett and Simeon Baldwin were appointed a committee to promote the enactment of a bill by the General Assembly requiring house-

holders to provide themselves and their houses with fire-buckets. This soon became a law, and fire-buckets were introduced, and every householder was required to provide himself with one, with his name prominently painted thereon; and in case of fire, by day or night, these buckets were either taken by the owners, or, being thrown from the houses to the sidewalks, were carried by other persons to fires, where two lines were formed from a well to the fire-engine. One line passed full buckets of water, the other passed back the empty ones. After the fire they were deposited on the Green, near the town pump, where citizens went to pick out their own and carry them home for future use. In later years a man was appointed to return the buckets to their owners, for which the city paid three cents each. Persons failing to provide themselves with buckets were liable to a fine of fifty cents for every three months they were without them.

In July, 1800, Elizur Goodrich, Dyer White and Stephen Alling, members of the Council, were appointed a committee to equip the firemen with fire-ladders and fire-hooks. After investigation, this committee recommended the purchase of a new fire-engine, six fire-ladders, and two fire-hooks. There was considerable delay in the purchase of an engine, as it was not completed until November, 1801, when Elias Shipman, Dyer White and Isaac Beers were authorized to form a company to take charge of it.

In February, 1801, a committee of the Council, comprising Elias Shipman, Simeon Baldwin and Isaac Beers, was appointed to prepare a plan of taxation upon property liable to destruction by fire, to be devoted to the use of the Fire Department. Later they reported a plan, which was adopted, and a tax was provided accordingly.

On February 3, 1801, a brewery was burned in Brewery street near Water street, in that portion of the city called the new township, with a loss of \$15,000, and an insurance of \$5,000.

As a better mode for locating fires, the Council, in October, 1803, divided the city into six wards.

At this time the Fire Wardens were instructed to wear thick leather fire-hats at fires, with the words "Fire Warden" painted thereon, so that they could be distinguished. Sackmen were given special powers while on duty at fires to insure the proper protection of property, and they were authorized to carry fire-trumpets. From 1803 to 1805, new and "large" fire-engines were purchased by the city, and their numbers ran in rotation from No. 1 to No. 4. During that time a cart was brought into requisition for carrying hooks and ladders, and Yale College provided fire-buckets for their premises by order of the city authorities. Firemen at this time wore strips of black leather across the fronts of their hats as badges by which they could be known at fires.

In 1806, no person was allowed to carry a lighted cigar nearer than four rods to any dwelling-house, building or barn. The penalty for such an offense was \$1.

In 1810, the first hook and ladder company was organized, of which William Mix was foreman.

In 1813 he organized another company of eight men, who attended fires armed with axes. They were paid three dollars per year for their services. His pay was four dollars per year. The first leather-hose used by the Fire Department was bought in 1812. Each of the four engines were supplied with sixty feet. This hose was small, and was sewed together.

On June 21, 1813, the Council attended the funeral of General James Merriman, a member of that body, and also Foreman of Engine Company No. 4. He died from natural causes.

A company of Sackmen was formed on February 22, 1814, and included the following named citizens: Abraham Bradley, Thaddeus Beecher, William Brintnall, Abraham Bradley, 3d, Charles Bostwick, Solomon Collis, Timothy Chittenden, Samuel Darling, Abraham Dummer, Jehiel Forbes, Ezekiel Hayes, William Leffingwell, Alexander Langmuir, Eneas Munson, Jr., Stephen Osborn, Ebenezer Peck, Jonathan E. Porter, Jesse Pardy, Archibald Rice, Roger Sherman, Anthony P. Sanford, John Scott, Jr., William Sherman, Jr., Isaac Townsend, Jr., William Austin, Jeremiah M. Atwater, Isaac Tomlinson, Daniel Trowbridge, Gilbert Totten, and William W. Woolsey. To these men the city distributed three hundred sacks, to be used at fires in saving portable property. Some members took as many as thirty-eight sacks and others only two or three.

From 1815 to 1820, the fire-engines were supplied with water for fires in the center of the city from the creek east of Fleet street, a lock having been placed there for the purpose.

The city authorities, in January, 1816, passed a vote calling upon the Sheriff of the county and his Deputies, and the town Constables, to attend fires to preserve order.

In February, 1817, the Council passed a resolution authorizing the Fire Department officials to pay the firemen for their services. Accordingly they received fifty cents for duty on "washing days," and one dollar for duty at fires.

On October 27, 1820, the great fire on Long Wharf occurred. Thirty buildings, including many stores, and four lumber yards were destroyed, and one dwelling-house was pulled down to stop the progress of the flames. The loss was \$70,000, insurance, \$3,000.

In January, 1821, action was taken by the Council to cause better and more general alarms of fire to be sounded. As a result, an arrangement was made to have all the church bells rung during the continuance of a fire. This duty was performed by the sextons of the churches and by an assistant, who was designated by the Council. To further assist the firemen in locating the fires, the city appointed two men to traverse the city on horseback when a fire occurred, who made an outcry of "fire," and designated its locality.

The first allusion in the records of the city to a Chief Engineer was in 1822, when Samuel Ward and Luther Bradley were mentioned as "Principal Engineers." How the positions were created does not appear.

On December 9, 1823, William Jones, William Brown and Daniel Smith were appointed Fire Department carmen. It was their duty to attend all fires with their horses and carts, and, under the directions of the Fire Wardens and Sackmen, to transport and move all portable goods from the burning buildings to a place of safety. They were paid by the city for their services. At the same meeting one of the city engines was condemned, and an effort was made to sell it to the village of Fair Haven. This failed, however, but the city purchased a new engine, known as No. 5. The company controlling it was under Russell Hotchkiss, foreman, and the engine was located in the alley on the glebe land, now known as Gregson street, near Chapel street, and was placed in commission about July 7, 1824.

In February, 1825, the Fire Wardens were instructed by the Council to oppose and prevent the location of a confectionery establishment on Church street, near Chapel street, it being feared that a conflagration might occur from an over-heated oven or chimney, caused by the heavy fires used in the preparation of candies. This precaution was deemed necessary, as the locality was central and thickly populated.

The old Liberian Hotel was totally destroyed by fire on September 17, 1825. It was situated at the foot of Greene street, upon the site now occupied by Mallory, Wheeler & Co., the lock manufacturers. The hotel was a notorious sailor dance-house, and its destruction was not regretted. "King" Lansing, a mulatto, was proprietor of the place. He afterwards kept a similar house on Fleet street.

The increased demand for fire appliances caused the city to purchase a new hook and ladder truck, and form a second company of laddersmen, on December 13, 1826. Oliver Smith was appointed foreman, and Elisha Dickerman, Jr., second. This apparatus was located on the Grammar School lot on Temple street.

In 1827, the authorities enacted stringent laws regulating the sale of gunpowder and its storage, as a precaution against explosion, accident and fire. Only certain merchants were permitted to sell it, and they were not allowed to keep on hand more than seven pounds at any one time.

On April 14, 1829, the Council ordered the Fire Department officials to purchase a quantity of leather-hose "secured with composition rivets." The fire apparatus was also ordered to be put in first-class order. As an incentive to competition, a bounty was offered to the company arriving first at a fire.

On December 1, 1829, Engine Company No. 6 was organized under David W. Buckingham as foreman. The company was made up of representative citizens, and was a popular organization. In June, 1830, it was merged into Columbia Hose with an increased membership. They ran a hose-cart and were located on Union street, near Chapel street.

In January, 1830, incendiary fires became very frequent, and terror reigned among the citizens. Mayor David Daggett, with the approval of the Council, offered a reward of \$100 for the arrest and

conviction of incendiaries. He appointed a special night watch, made up of fifty trustworthy citizens, who patrolled the streets for weeks and prevented depredation.

In August, 1832, the city entered into an agreement with George Rowland, the proprietor of Rowland's Mill, on Union street, by which a force pump was placed upon his premises with a capacity sufficient to supply the fire-engines with water in case of fire. The pump was run by water power connected with the mill, and was a source of water supply for the firemen for several years, at an annual rental of \$50. The pump and attachments belonged to the city.

In September, 1833, a company of firemen was organized, known and designated as Engine Company No. 6. The engine assigned to their charge was one formerly in use by Engine Company No. 3. This action of the Council did not please the firemen of No. 6, and they remonstrated, because they wanted a new engine. They were finally reconciled, and before many months a new one was purchased for them.

During the fall of 1833, the Fire Department force was increased by an Act of the General Assembly, and after distribution and enlistments the various companies had the following membership:

Engine Company No. 1	17 men.
" " No. 2	17 "
" " No. 3	30 "
" " No. 4	30 "
" " No. 5	30 "
" " No. 6	30 "
Columbia Hose Company	60 "

The total force of firemen at that time was about 300, including the Hook and Ladder-men, Fire Wardens, and Sackmen.

A general transfer of firemen from one company to another took place in January, 1834. The members of Engine Company No. 3 were transferred to Engine Company No. 2, and the members of Engine Company No. 2 were transferred to duty with a new company, known as Engine Company No. 7, of which Jesse Knevals was foreman. This company had its headquarters on Chapel street, just back of South College. About the same time the city purchased 800 feet of leather-hose, which was distributed among the companies of the Fire Department.

The first regularly appointed Board of Engineers was organized by the Council on June 10, 1834, when Richard M. Clark was appointed Chief Engineer, and the following Assistant Engineers: John Babcock, first; Caleb Mix, second; Ezra Hotchkiss, third; Henry Peck, fourth; Robert Atwater, fifth. The Fire Wardens were continued and had the general supervision of the Fire Department, and occupied the same position relatively as the Board of Fire Commissioners have in later years.

The first fire company in the village of Fair Haven was formed in August, 1835, of which Miles Tuttle was the foreman. The company was designated as Engine Company No. 8. The engine then in use is now in the possession of the Veteran Firemen's Association of New Haven.

Incendiaries again invaded New Haven about the holiday season in 1835. On December 23d of that year the Council passed a resolution authorizing the appointment of a special night watch. Prominent citizens volunteered their services and others were appointed. Fifty of these specials patrolled the streets three nights in succession, and then their places were taken by others.

Brewster & Collis, carriage manufacturers on East street, suffered by the burning of their establishment on December 25 (Christmas Day), 1836. The loss was \$65,000, insurance, \$35,000.

In March, 1836, at a meeting of the Council, the subject of furnishing the city with a water supply for fire purposes was discussed. The source from which water was to be obtained was the Farmington Canal. The plan had few supporters and was not brought to any successful termination. At a city meeting, held in May of that year, a vote was passed appointing Caleb Mix, Henry Peck, John Beach, Nathaniel Booth and Daniel Brown, a committee to urge the General Assembly representatives to secure the passage of such laws as would enable the City of New Haven to make its Fire Department more efficient in the extinguishment of fires, and to add to the force by the appointment of citizens from eighteen years of age and upwards. Their efforts were afterward realized; for such legislation was procured, and plans were carried out as far as practicable. During the year new engines were purchased to replace those which had become unserviceable. A bounty of \$5 was then given to hose companies and hook and ladder companies which were first to arrive at fires, and \$10 was given the engine company which played the first stream of water upon the fire.

In March, 1837, a hook and ladder company was organized in the village of Fair Haven under the foremanship of Seth F. Benton. In August of the same year the Committee on Fire Department of the Council reported in favor of several improvements, and as a result the Company of Engine No. 2 were favored with a new engine-house on York street, near Broadway, and a new house was provided for Engine Company No. 7 on Chapel street. On August 2, the great fire of 1837 took place. There were twenty buildings burned on Chapel and Orange streets, with a loss of \$35,000, which was mostly covered by insurance.

The Mayor and Aldermen offered a reward of \$100 for the arrest and conviction of incendiaries, owing to the revival of incendiary fires in the fall of 1837. The store of Henry N. Whittlesey on State street, was set on fire on the night of September 7, 1837, and later, George H. Merriman, colored, was arrested and convicted of the crime. Charles W. Curtis, a citizen, was paid the above reward, as he detected and his testimony convicted young Merriman.

The Fire Department authorities were greatly annoyed in January, 1838, by false alarms of fire which were caused early in the evening by the "public criers" employed by auctioneers. To avoid further annoyance in this direction, the Council were appealed to, and a law was enacted

prohibiting "criers" from shouting on the streets after sundown.

The steamboat New York, belonging to the New York and New Haven Steamboat Company, was burned to the water's edge while lying at her dock in New Haven on March 22, 1839. The loss was \$52,000, and no insurance.

The Council, upon recommendation of the Fire Wardens, decided to sell Engines Nos. 1, 2, 4, and 7, in May, 1839, and replace them with new and more modern machines of greater power. Engine No. 8, of Fair Haven, was thought to be of the proper build, and the new ones were to be similar in construction.

At a city meeting held on January 20, 1840, the by-laws were so changed and amended that the Fire Wardens and Foremen of the different fire companies constituted a Board of Fire Wardens whose duty it was to enforce the laws relating to fire. They were qualified to organize engine, hook and ladder, hose, and sack and bucket companies as far as necessity demanded, and to appoint and designate foremen and "seconds" of each, and annually appoint a chief engineer, assistant engineer, a clerk, and treasurer. They were authorized to select from their own members a suitable number of inspectors, whose duty it was to inspect all dwellings and buildings at least once in each year, and also to examine stoves, ovens, chimneys, etc., as to their safety from fire; inspectors to receive \$2 per day while actually employed. The Chief Engineer had supreme command at fires, and the Board Engineers were ordered to wear badges at fires so that they could be distinguished from other officials.

Charles W. Allen joined the Fire Department on April 29, 1841, and was a member of Engine Company No. 3. He afterward became a chief engineer, and filled the position faithfully and acceptably for many years.

The following Fire Department officials were appointed on September 7, 1841: Eli B. Austin, Chief Engineer; Assistants: Zelotes Day, First; Philip S. Galpin, second; Leverett Griswold, third; Henry Hotchkiss, fourth; Levi Gilbert, 2d, fifth.

The first fall review of the New Haven Fire Department occurred on October 30, 1841, and a memorable day that was to many an old fireman. The companies assembled on the Green at two o'clock in the afternoon and a trial of engines was had. Engine No. 7, whose house was on Chapel street, in the rear of Yale College, was placed at a reservoir in that vicinity, and played through a line of hose, laid on the south side of the Green in front of the State House, into Engine No. 8 of Fair Haven, which was playing on the Centre Church steeple. The students of Yale College were playing foot-ball upon the south side of the Green, and during their play came in contact with the firemen and trod upon the hose of Engine No. 7. They were asked to desist, but did not do so, and finally the two parties came to blows and the students were hustled off the Green by the firemen. They sorely felt their defeat, and later in the day, while the firemen were enjoying a supper in the State

House, bricks were thrown against the doors and word came to the firemen that their hose was being cut. With this information the firemen rushed out and met the students who were doubly reinforced. A brief struggle ensued without any very serious results, and the students were a second time driven from the Green. This put a stop to the quarrel for the day, but at midnight the students entered the house of Engine No. 7, and with axes and hammers set to work to demolish the engine. They succeeded in seriously damaging the apparatus, so that it was unfit for duty. The firemen discovered the depredators; an alarm of fire was raised; a large crowd assembled; and a riot was for a time imminent. Yale college paid seven hundred dollars to repair the engine and put it in first-class order, after which the company moved its quarters to Washington Hill, at the junction of Washington street and Congress avenue.

At a city meeting, held in April, 1842, a by-law was passed restricting fire companies from running their apparatus upon the sidewalks, except by order of the Chief Engineer or an Assistant Engineer, when the roadways were impassable.

In compliance with a petition of many citizens for the location of an engine in the northeastern portion of the city, on July 12, 1842, the Council ordered an engine-house to be built at the junction of Grand and State street, upon a triangular lot presented to the city by George Dummer. Later, Engine No. 4 was transferred to that locality.

The first firemen's excursion from New Haven was the trip of Engine Company No. 3 to New York, to attend the Croton Water celebration on August 29, 1842, on which occasion they were received and entertained by Empire Engine Company No. 42, of New York. The Council permitted No. 3 to leave the city two days and one night on this occasion, the Company assuming all risk of damage to their machine. This was the beginning of a lasting hospitality which afterwards sprung up between the fire companies of New York and New Haven.

Philip S. Galpin was elected Chief Engineer of the Fire Department on September 12, 1842. He was also Mayor of the city at the same time. He remained Chief Engineer for fourteen months, when he resigned, and was succeeded by Leverett Griswold, who was promoted from First Assistant Engineer.

The duties and responsibilities of the Chief Engineer were increased during 1843, and his salary was raised to two hundred dollars a year. In the fall of that year, Thomas C. Hollis, the present City Sheriff, was appointed a Fire Warden. He was afterwards an Assistant Engineer.

The rapid growth of New Haven demanded increased facilities for the Fire Department, and liberal appropriations were made in 1844 for new engines, engine-houses, hose, etc.

A resolution calling for the reorganization of the Fire Department was introduced at a city meeting on August 7, 1847. The subject was referred to a special committee, consisting of Ex-Mayor Philip S. Galpin, William H. Ellis, Alfred Daggett,

Nathaniel Booth, Morris Tyler, A. A. Thompson, Charles Robinson, James F. Babcock, J. T. Hemingway, and Henry Hotchkiss. This committee reported at a city meeting held in September of that year, and made the following recommendations, which were adopted: That there should be one Chief Engineer and seven Assistant Engineers appointed annually, and to remain in office until their successors were appointed, and they to constitute a Board of Engineers who had the general care and supervision of all Fire Department property, audited bills, and attended to the inspection of all buildings, for which latter service they received extra compensation of two dollars per day. They were authorized to employ a clerk, who kept a record of their doings and the accounts of the Fire Department, and annually made returns to the Board of Assessors of all its members, showing exemptions from poll-tax. The Chief Engineer had charge of repairs upon the Fire Department apparatus and houses, and received one hundred dollars per year for such extra service. The Assistant Engineers were ordered to attend all meetings of the Board of Engineers, wear suitable badges of office, and see that orders were executed at fires. The Chief Engineer and his Assistants were clothed with ample authority at fires, and had power to call upon any citizen present to assist the firemen.

Hiram Camp, afterward Chief Engineer of the Fire Department, joined Engine Company No. 4 on May 1, 1848. Mr. Camp is still living, and is the honored President of the Veteran Firemen's Association.

The paint and oil store of Nathaniel Booth on State street, upon the Merchants' Hotel site, was burned out on January 8, 1849. This was a stubborn, hard fire to fight. The weather was excessively cold, and the work of the firemen was accomplished with much hardship and under many difficulties. Two men were killed by falling walls. The old railroad depot, now the City Market, was in the process of erection at that time. The New York and New Haven Railroad Company sent a check for \$50 to the firemen, in appreciation of their services in saving their depot property, and from this the Firemen's Benevolent Association, since established on a sound basis, originated. The first benefit paid was \$15, to Charles Webster, a member of Engine Company No. 7, who was injured at a fire on September 24, 1851. Mr. Webster was afterward Chief of Police, and died in 1885, while holding that office.

The Marble Block on Chapel street was burned on February 13, 1849. Loss \$3,900, insurance the same.

Owing to numerous complaints made of improper conduct, the Board of Engineers issued orders, in April, 1851, forbidding firemen to frequent or enter the engine-houses on Sunday except in case of fire. A violation of this order was equivalent to dismissal.

Andrew J. Kennedy, afterwards a prominent fireman, and more recently the efficient Fire Marshal of New Haven, first joined the Fire Department on September 1, 1851, as a member of Engine Company

No. 2. Previous to this he had been a volunteer member of the same company, and had been a torch-boy for the Chief Engineer.

The Old Museum, located on Olive street at the foot of Court street, where Home place is now cut through, was totally destroyed by fire on August 21, 1851. The building, occupied by many tenants of the poorer class, was so filthy, pigs being kept in the attic and horses in the cellar, that its destruction was not regretted.

The Council held a special meeting on June 16, 1852, and passed a series of appropriate resolutions upon the death of Chief-Engineer James T. Hemingway, who was also a Councilman. Later, a substantial brownstone monument was erected in the Grove street Cemetery to his memory by his associate engineers, members of Neptune Engine Company No. 6, and other friends. Charles A. Nettleton, First Assistant Engineer, was promoted to the position of Chief Engineer, to fill out the unexpired term of Chief Hemingway.

In compliance with a great demand for the location of a fire-engine in the northeastern portion of the city, the Council, in September, 1852, appropriated \$2,500 for the purchase of a lot and the erection of an engine-house for Engine Company No. 10 on Hamilton street, near Grand street. In one year from that time the engine was located there and ready for duty.

Bevil Sperry, aged twenty-five years, a member of Engine Company No. 5, was killed at a fire in Simon Goodman's grocery store on State street, near Elm, on October 24, 1852. He was inside the burning building, holding the pipe and directing a stream from the engine to which he belonged, when the supports gave way that held a chimney, and in the crash he was caught and instantly killed while in the heroic discharge of duty. A handsome monument in memory of him was erected by Engine Company No. 5 over his grave in Evergreen Cemetery.

The city authorities became so well satisfied with the duties performed by the Fire Department, that in November, 1852, the Council voted to increase the pay. Each company with fifty men was paid \$400 annually, and those with less, proportionately. The Assistant Engineers received \$25 per year for their services.

The mode of electing the Chief Engineer and Assistants was changed in May, 1853. As amended the law called for the election of a Chief Engineer and seven Assistant Engineers on the last Monday in September in each year, the election being by ballot, and enrolled members of the Fire Department being the only persons qualified to vote. Each company voted by itself, and the foreman, or some other officer of the company, made known the result of the vote in each company, and those having the highest number of votes were declared elected Chief Engineer and Assistant Engineers upon indorsement by the Council. The first Board of Engineers elected under this new law was as follows: Charles W. Allen, Chief Engineer; Assistants: Hiram Camp, first; John Woodruff, 2d, second; Robert Edmondson, third; Howard B. En-

sign, fourth; Leverett G. Hemingway, fifth; Philip Pond, sixth; Nehemiah D. Sperry, seventh.

The Hon. John H. Leeds joined the Fire Department as a member of Engine Company No. 3 in October, 1853. Mr. Leeds was afterwards a member of the Board of Fire Commissioners under the present system, and to him the citizens are indebted in a great measure for the superior facilities provided in later years for their protection from fire.

The bell of the First Ecclesiastical Society was cracked while being rung for a fire in the winter of 1854, and in March of that year, the city paid \$178.50 to have it recast.

Upon recommendation of the Board of Engineers, on March 1, 1854, a squad of Fire Police was appointed. Each Fire Company designated four of its members to act in that capacity.

Owing to frequent false alarms of fire in the early part of 1854, the Board of Engineers issued orders to the Fire Department, on March 8th of that year, that thereafter the Court street Church bell would be the signal bell, and all other bells were to strike the district from that bell.

Chief-Engineer Charles W. Allen resigned his position in September, 1855. Later in the fall, a committee from the Council requested the withdrawal of his resignation. They informed him that the Council regretted his action and were well satisfied with his efficiency. Mr. Allen afterwards withdrew his resignation.

The annual parades and musters of the New Haven Fire Department at this time were very popular events. They were held in the fall of the year and attracted large numbers of visiting firemen from other cities, and crowds of spectators. On September 6, 1856, a monster muster was held. There were trials of engines for prizes, and Rippowan Engine Company, No. 1, of Stamford, won the first prize, \$500; Damper Engine Company, No. 4, of Hartford, the second prize, \$200; and Phoenix Engine Company, No. 12, of Brooklyn, N. Y., the third prize, \$100.

At the fall election in September, 1856, Hiram Camp was elected Chief Engineer, succeeding Charles W. Allen. He served in that capacity for several years and was an honored and efficient official.

By an accident on January 1, 1858, James B. T. Benjamin, a son of Everard Benjamin, and a member of Croton Engine Company No. 1, was run over by that machine while proceeding to a fire, and received injuries from which he died. He was an active and brave fireman, and his sad end was a severe blow to his comrades. His unbounded popularity called forth many tributes; among them was a set of resolutions from the Board of Engineers.

At this era of New Haven's growth, the Fire Department was frequently called upon to go to the adjoining villages in cases of fire. In January, 1858, the officials adopted a rule designating what engines were to attend such fires. For Fair Haven, Companies No. 6 and No. 10 were to respond, and for Westville, Engine Companies No. 2 and No. 5

were detailed. No other apparatus was allowed to go in either direction, except by permission of the Chief Engineer or one of his Assistants.

Thomas Bennett was the first Fire Marshal of New Haven. He was appointed on January 11, 1858. It was his duty to investigate the cause and origin of all fires occurring within the city limits, and see that the ordinances relating to the prevention of fires were properly enforced.

Foreman William W. Hubbell, of Engine Company No. 10, at the risk of his own life, bravely rescued several persons from a burning building at the corner of Grand and State streets in January, 1858. His heroic conduct was recognized by the citizens of New Haven, and the Council voted him a handsome set of resolutions for his brave act.

A row occurred between the firemen and the students of Yale College on the evening of February 9, 1858. Its origin was between the members of Engine Company No. 2, on High street, and the "Crocodile Club," which boarded at High and Elm streets. The club members claimed that water was thrown upon them as they passed the engine house, and a wordy altercation followed, which did not end until a fireman, William Miles, the assistant foreman of Engine Company No. 2, was shot and killed. A desperate fight took place, in which hose-wrenches, clubs, daggers, and pistols were used. An alarm of fire was raised and attracted a large crowd of firemen and citizens, and there was much excitement and danger of riot; but owing to the efforts of the police and the College Faculty no subsequent outbreak occurred. William H. McCulloch, Neilson A. Baldwin, and R. K. Belden, all students, were arrested on suspicion of firing the fatal shot. McCulloch and Baldwin were afterwards discharged, but Belden was held under \$2,500 bonds for the murder of Miles. The case never came to trial and the bonds were forfeited.

In August, 1858, an agreement was made between the City of New Haven and the New Haven Water Company for supplying the city with water for fire purposes, at the annual rental of \$4,000, for a term of twenty years.

In September, 1858, Engine Company No. 6 went to Hartford, and by its superior power won the celebrated Charter Oak Silver Trumpet after an exciting contest.

Walker's Building on Church street, was destroyed by fire on January 8, 1859. The fire broke out on the 7th and was apparently extinguished, but on the following day, which was Sunday, it rekindled, and the firemen had a stubborn fight in subduing it. The Council chamber was in this building. Loss \$5,000, fully insured.

The Fire Department lot on Artisan street, now occupied by Engine No. 2 and Hook and Ladder No. 1, was purchased by the city in August, 1859. The price paid was \$50 per front foot.

The first introduction of steam fire-engines into the New Haven Fire Department was the outcome from a petition signed by James Brewster and forty-one other manufactures and tax-payers, and also

by members of Engine Company No. 7, who wished to have charge of such a machine. This was in February, 1860, and two months later the Council appropriated \$4,000 for the purchase of a steamer and attachments. In October, 1860, a Portland, Me., machine was delivered to the city, and was located at the house of Engine Company No. 7, on Congress avenue. The engine was built by J. B. Johnson, and is still held in reserve by the New Haven Fire Department. It had a 10-inch cylinder, 10-inch stroke, reciprocating horizontal sleeve pump, 4½-inch plunger, and was an exceptionally good machine. A company was formed and Anson W. Francis was the foreman. He did not serve long, and John H. Pardee succeeded him. The machine was drawn to fires by horses, and Albert Stillwell was appointed engineer. Petty jealousies sprang up among the volunteer firemen belonging to the other companies, and many obstacles were thrown in the way of the new steam system. The old associations of the firemen were broken up, and they looked with disfavor upon the new mode of fighting fire. The first outbreak occurred at the Mount Pleasant Hotel fire on West Water street, on July 28, 1861, when an altercation took place between Engineer Stillwell, of Steam Engine No. 1, and Foreman John Schwab, of Engine Company No. 3, over the possession of a reservoir. Blows were exchanged, but without fatal results. An investigation was held, and Foreman Schwab was dismissed from the Fire Department, Engineer Stillwell being sustained in his position.

The old carpet factory on East street, reconstructed into tenement houses, was burned on December 21, 1860. It was occupied by families, some of whom lived upon the upper floors. Seven persons lost their lives. It was not known that any one had been killed until the following morning, when the firemen found the charred remains in the ruins. The new steamer did excellent service at this fire.

The city contracted for two new steam fire-engines in April, 1861, and during that year they were delivered. One of them was located in Artisan street, and was named H. M. Welch Steam Fire Engine Company No. 2, in honor of Mayor Harmanus M. Welch, who was then in office. The engine was a first-class Amoskeag, built at Manchester, N. H. It weighed 8,000 pounds and threw four streams of water. The other new engine was located at the corner of Park and Elm streets, and was named Constitution Steam Fire Engine Company No. 3. This engine, like No. 1, was built by J. B. Johnson, of Portland, Me., and had a 10-inch cylinder, 11-inch stroke, reciprocating horizontal sleeve pump, 5-inch plunger, and weighed 6,700 pounds. Both engines were drawn by horses, and companies of twenty men were formed and assigned to each engine. During that year the volunteer fire companies were disbanded and the steam fire-engine system was adopted upon a substantial basis, although the heavy expenses incurred created considerable discussion in the Council.

Water for the Fire Department use was not successfully introduced until the summer of 1862, when post fire-hydrants with two openings and a

four-inch valve were set, which afforded a good supply of water.

The By-Laws of the city were amended in April, 1862, reorganizing the Fire Department, and, as amended, called for the election of a Board of Fire Commissioners, comprising six members, to be chosen by the Council. The first Board of Fire Commissioners was elected by the Council on June 16, 1862: Hiram Camp and Marcus M. Rounds for one year each; Gardner Morse and Joel A. Sperry for two years; and Henry W. Benedict and George A. Chapman for three years. After that two members were appointed annually for the term of three years each. In those days substitutes were appointed for each member, to act in case of resignation or death. The inaugural meeting of the Commissioners was held on June 17, 1862, when Mayor Harmanus M. Welch presided as president, *ex officio*.

Charles W. Allen was chosen Chief Engineer June 24, 1862; John E. Lewis, First Assistant Engineer; and Howard B. Ensign, Second Assistant Engineer. They were the first officers in charge of the Fire Department under the new system.

The estimate of the Fire Department's expenses for 1863 was \$9,000.

A disastrous fire destroyed Treat & Davis' organ manufactory, Henry Hale & Co's. carriage factory, John F. Goodrich's carriage factory, Hugh Galbraith's carriage hardware factory, and the Davenport Church Society's Church, all in the vicinity of Franklin and Greene streets, on the night of May 1, 1864. The loss was \$65,594, insurance, \$28,950. On the night of August 24, 1864, the carriage manufactory of Durham & Booth, at the corner of Chapel and Hamilton streets, was gutted. The loss was \$57,924, insurance, \$21,624.

The term of office of Chief-Engineer Charles W. Allen expired on July 8, 1865, when Howard B. Ensign, an Assistant Engineer, was chosen to succeed him. Mr. Ensign resigned after serving two weeks, when Albert C. Hendrick was elected Chief Engineer, and has remained continuously in office since that time. He first became a fireman in July, 1850, at the age of 17 years, when he joined Franklin Hose Company No. 4. In July, 1851, he became Treasurer of that Company, and in September, 1852, was Secretary and Assistant Foreman. In that year he was promoted to be a member of Franklin Engine Company No. 4, and remained with that organization until July 6, 1854, when the authorities disbanded the Company. During the winter of 1854 and 1855, Mr. Hendrick spent considerable time in Memphis, Tenn., and worked at his trade of carriage-trimming. He returned to New Haven in the spring of 1855, and on February 8, 1858, joined Mutual Hook and Ladder Company No. 1, and was promoted to the position of Assistant Foreman during that year. In September, 1858, he was elected Foreman of the same Company. At the breaking out of the Civil War, Mr. Hendrick was among the first to enlist in the three months' campaign. He went out as First Sergeant of the New Haven Grays, Company C, Second Regiment Connecticut Volunteers, and afterwards re-enlisted

for three years and left for the front as First Lieutenant of Company C, Twelfth Regiment Connecticut Volunteers. After about two years' service he was promoted to be Captain of Company E. At the close of the war Mr. Hendrick returned to New Haven and again became identified with the Fire Department, receiving an appointment as private in Hook and Ladder Company No. 1, January 1, 1865. He was appointed to the position of Chief Engineer July 24, 1865.* At the same time, James W. Walter and George W. Corbusier were appointed Assistant Engineers, and, one year later, a third Assistant Engineer was appointed in the person of Charles C. Hall, who was promoted from Mutual Hook and Ladder Company No. 1. The Board of Fire Commissioners at this time consisted of Gardner Morse, Marcus M. Rounds, Edward Bryan, B. H. Douglass, John H. Leeds, and Lewis Elliott, Jr.

The first review and inspection of the Fire Department under the new system took place on September 27, 1865.

The New Haven Steam Saw Mill Company, at the foot of Chapel street, suffered a loss of \$30,000 by a partial destruction of their establishment at an early hour on the morning of September 28, 1865. The insurance paid was \$21,000.

The permanent members of Engine Company No. 3, when first located in their house at the corner of Park and Elm streets, slept in bunks on one side of the engine-house floor, so that they were near at hand to their apparatus in case of night fires. This unhealthy arrangement was dispensed with by the Fire Commissioners, on recommendation of the Chief Engineer, adding another story to the engine-house in the fall of 1865. Comfortable sleeping quarters were thus provided for the firemen.

The carriage manufactory of George T. Newhall, at Newhallville, was partially burned on January 10, 1866. Loss, \$30,500, insurance, \$10,500.

The New Haven Clock Company's factory, at the corner of St. John and Hamilton streets, extending to Wallace street, with considerable adjoining property, including many dwelling-houses, was destroyed by fire on April 30, 1866, involving a loss to the Clock Company and adjoining property owners of \$131,724, with an insurance of \$114,067. The extent of this great fire, and its attendant loss, caused the Clock Company, manufacturers and residents in the vicinity to make urgent appeals to the Council for the location of a steam fire-engine in their neighborhood. As a result, \$20,000 was appropriated from the city treasury for a lot on the corner of St. John and Wallace streets, and the erection of a substantial engine-house upon it, and, in the fall of 1867, Steam Fire Engine Company No. 4 was organized and stationed there with a first-class Hunneman steam fire-engine, under the foremanship of Treadwell Smith, now Captain of Police.

* Mr. Hendrick received the unanimous vote of the Fire Commissioners, and his administration has shown that he was particularly adapted to, and qualified for, the position. The present high standing of the New Haven Fire Department is due in a great measure to the wise judgment and efficient management of Chief Hendrick during the twenty years of his administration.—Ed.

The Plant Manufacturing Company, at 241 Grand street, suffered by fire on the night of December 7, 1866. Their loss was \$190,079, insurance, \$93,107.

On the night of December 31, 1866, one of the large tanks connected with Cowles & Leete's oil refinery, on Long Wharf, exploded, and the entire works were destroyed by fire. The Superintendent, Frederick Thompson, was instantly killed by the explosion.

Newell C. Hall's stockinet factory, on Prospect street, was burned out on October 11, 1867, causing a loss of \$54,000, upon which there was insurance of \$31,675.

In the latter part of the year 1867, the adoption of a telegraph system of fire-alarm became a necessity in the opinion of the Board of Fire Commissioners. In February, 1868, the Gamewell system of fire-alarm telegraph was adopted, at a cost of \$10,000, and on October 3, 1868, a public test of the apparatus was given and the city accepted the plant. J. M. Fairchild, of New Haven, a competent electrician, was its superintendent.

On May 4, 1868, Howard B. Ensign and Stiles Stevens were elected Fire Commissioners for a term of three years, and Chief-Engineer Albert C. Hendrick was re-elected for three years, from July 1, 1868; and Leonard L. Bassett, John L. Disbrow, and Andrew J. Kennedy were appointed Assistant Engineers to rank in the order named.

January 1, 1869, in a blinding snowstorm and severe cold weather, the machine-shop and round-house of the New York and New Haven Railroad Company was almost totally destroyed by fire. The buildings were located near Long Wharf, just below the railroad crossing. Much valuable machinery, several locomotives, and many cars were burned. Loss, \$157,550, insurance, \$64,550.

John C. Woods, a music dealer, at 221 State street, was experimenting with gasoline on the morning of September 21, 1869, in the basement of his store, when a barrel of the liquid exploded and set fire to the premises, badly burning him, and gutting the entire building, the upper part of which was occupied by Tuttle, Morehouse & Taylor, printers, who suffered greatly by the fire. The total loss was \$58,884, insurance, \$22,262.

Four permanent hose-drivers were added to the Fire Department in November, 1869. Heretofore the hose-drivers were call men. Their salary was made \$50 per month.

The carriage trimming factory of O. W. Swift, 71 Hamilton street, was destroyed by fire on the night of February 7, 1870. Loss, \$20,756, insurance, \$14,456.

The Fair Haven Keg and Can Company was totally destroyed by fire on August 4, 1870. Loss \$23,600, wholly covered by insurance.

The Fire Association of the Village of Fair Haven, by its agents, Charles C. Denison and Henry W. Crawford, on August 18, 1870, transferred to the City of New Haven its engine-house and hand-engine located on the corner of Pearl and Pierpont streets, in Fair Haven. This action was taken in consequence of the annexation of the Village of

Fair Haven to the City of New Haven. The city afterwards purchased the lot upon which the engine-house stood for \$1,525, and erected an engine and hook and ladder-house thereon, which was afterwards occupied by Engine Company No. 5, and Hook and Ladder Company No. 3. About this time Charles C. Denison was appointed an Assistant Engineer, and was assigned to duty more especially in the annexed district. While the attention of the Fire Department was turned in this direction, the residents of Newhallville became anxious for protection in their vicinity. In accordance with their petition, the Board of Fire Commissioners caused an engine-house to be erected on Division street to accommodate a volunteer hose company, known as Winchester Hose Company No. 6, which was maintained without expense to the city, except for hose and a second hand or reserve hose-carriage.

Assistant-Engineer Andrew J. Kennedy resigned his position on April 1, 1872, and two days later William H. Hubbard, hoseman on Engine Company No. 1, was promoted to fill the vacancy. John H. Leeds and Lewis Elliott, Jr., were re-elected Fire Commissioners on July 30th, for terms of three years each. The Board of Fire Commissioners, at a meeting held on October 1st, passed an order requiring every permanent member of the Fire Department to provide himself with a uniform dress to be worn on all occasions while on duty, on or before January 1, 1873.

The great fire in Boston took place on the night of November 9, 1872. Intelligence of the conflagration reached New Haven on the morning of the 10th, and assistance was tendered by Mayor Henry G. Lewis, Fire Commissioner John H. Leeds, and Chief-Engineer Albert C. Hendrick, which was promptly accepted by Mayor Gaston, of Boston. The same day Steam Engine No. 2 of the New Haven Fire Department, with Elbert E. Gillette, engineer, was sent to Boston on a special train, under the charge of Fire Commissioner Lewis Elliott, Jr., and Assistant-Engineer John L. Disbrow, and was manned by twenty picked firemen from the New Haven Fire Department. After a quick passage to Boston, the engine and firemen rendered valuable assistance in checking a second extensive conflagration which broke out that night. Afterwards the city and fire authorities of Boston tendered hearty thanks for the timely aid. During the fire a volunteer ex-fireman from New Haven, John Richardson, was painfully injured by falling from a building while assisting the New Haven firemen. He was tenderly cared for by the Boston authorities, and afterward recovered.

A gas carbonizer exploded in the basement of the jewelry store of Benjamin & Ford, on the corner of Chapel and State streets, on January 4, 1873, and set fire to the premises. Before the flames were extinguished, \$26,238 damage was done, upon which there was paid the sum of \$15,098 insurance.

In January, 1873, the Fire Commissioners voted to increase the pay to the members of the Fire Department, as follows :

	Per annum.
Chief Engineer.....	\$2,500
Assistant Engineers.....	250
Engineers of steamers.....	1,200
Drivers of steamers.....	840
Drivers of hose-tenders.....	720
Foremen and Stokers.....	150
Hosemen and Laddermen.....	130
Foremen, Fair Haven.....	120
Hosemen and Laddermen, Fair Haven.....	100

On June 15, 1873, the boiler manufactory of H. B. Bigelow & Co., on River street, Fair Haven, was partially destroyed by fire. Loss, \$67,065, insurance, \$50,065.

Eli Mix was appointed Fire Commissioner on July 13, 1873, succeeding Stiles Stevens, whose term of office expired, he having been a member of the Board since May 4, 1868.

In January, 1874, the force of the Fire Department was increased by locating Engine Company No. 8 in Edwards street, corner of Nash street, in a new house. The engine was named A. C. Hendrick, and, being fully manned and equipped, was put into commission in the spring of 1874, with James J. Bradnack as foreman.

The large oyster-keg factory of Kellogg & Ives, on Ferry street, Fair Haven, was totally destroyed by fire on the night of March 11, 1874. The origin was assigned to incendiarism. Loss, \$25,885, insurance the same amount. The fires of 1874 were large and disastrous. On September 7th of that year the works of the New Haven Wheel Company on York street, corner of Ashman street, were partially burned. The loss was \$115,464, upon which there was paid \$66,399 insurance. On October 1, 1874, the Wooster place Baptist Church was burned. The fire originated in the organ loft while repairs were being made. The loss was \$38,296, fully insured.

In October, 1874, in accordance with amendments to the City Charter, the Board of Fire Commissioners comprised five members instead of six. The Board appointed under that provision was John H. Leeds, Lewis Elliott, Jr., Hobart B. Bigelow, Caleb B. Bowers, and George A. Basserman. On October 20, 1874, Andrew J. Kennedy was appointed Fire Marshal by the Fire Commissioners, which position he has retained to the present day, having served the city efficiently and acceptably. In the absence of the Chief Engineer he is the next in command. Ezekiel G. Stoddard succeeded John H. Leeds as Fire Commissioner on June 28, 1875.

The pork-packing establishment of Sperry & Barnes, on Long Wharf, was partially burned on Sunday, November 26, 1876. Loss, \$124,434, insurance, \$94,434.

Benjamin R. English and John Ruff were appointed Fire Commissioners on January 2, 1877, in place of George A. Basserman and Hobart B. Bigelow, whose terms expired.

The Firemen's Benevolent Association has erected a handsome monument in Evergreen Cemetery in memory of deceased firemen of the City of New Haven. It was dedicated by the active Fire Department on July 9, 1877, in the pres-

ence of a large assemblage. The Hon. John H. Leeds delivered an address, and Mayor William R. Shelton unveiled the shaft, which is of granite, with a life-sized fireman on its summit, and other appropriate emblems on its panels.

One of the most destructive fires that has ever taken place in New Haven, was the burning of the buildings of the L. Candee Rubber Company on Greene, Wallace and East streets, on November 19, 1877. A singular coincidence in connection with this fire was the fact that it broke out at about five o'clock in the afternoon, when Chief-Engineer Hendrick and all his Assistant Engineers were inspecting the premises, with a number of visiting firemen from other cities, who were present at the annual fall review of the Fire Department which occurred that day. They were being conducted through the various departments of the establishment by Superintendent Lewis Elliott, Jr., who was at the time President of the Board of Fire Commissioners. While on the third floor of one of the buildings, where rubber boots were being manufactured, the fire broke out on the floor below them. It originated from the ignition of a pan of cement, which burned very rapidly, and soon spread the flames over the entire room. The flight of the visitors and employees was instant, there being no opportunity to suppress the flames, although appliances for the purpose were at hand. Hundreds of employes jumped from the windows and escaped by sliding down the conductor pipes, lightning rods, and adjoining trees, but in their wild efforts to get to a place of safety many of them were injured, and three persons lost their lives from their injuries. The alarm to the firemen was given from a private fire-alarm box on the premises, which summoned the entire Fire Department. The Chief Engineer took his position in front of the burning buildings, and gave out his orders to his subordinates so that every apparatus was stationed immediately upon its arrival. No time was lost, and every effort was promptly made to check the flames, but without success, as the fire swept through the entire establishment. The firemen prevented the fire from spreading to adjoining property. The loss was \$520,905, insurance, \$324,214.

In February, 1878, Edwin B. Nichols and James T. Mullen succeeded Lewis Elliott, Jr., and Ezekiel G. Stoddard, their terms having expired.

Nothing of special importance in fire matters happened in 1878. In February, 1879, E. M. Reed and Charles A. Baldwin succeeded Caleb B. Bowers and Edwin B. Nichols as Fire Commissioners.

The terms of office of Assistant-Engineers Leonard L. Bassett and Charles C. Denison expired on July 1, 1879, and the Fire Commissioners concluded to dispense with their services. This action was deemed advisable, from the fact that the permanent force of the Fire Department had been recently increased.

The Veteran Firemen's Association was organized on July 18, 1879, and at the present time its membership includes 591 names. This organiza-

tion was the outcome from a parade of veteran firemen on July 4, 1879, in honor of the one hundredth anniversary of the evacuation of the city by the British, and was a feature of great interest. The officers of the association are Hiram Camp, President; Frank M. Lovejoy, Morgan N. Atwater, Charles Atwater, Charles E. Hayes, Henry L. Clark, W. W. King, John H. Pardee, Miles Tuttle, Joseph Cunningham, Charles Doty, Albert C. Hendrick, R. T. Merwin, H. H. Grannis, Charles A. Nettleton, George Treadway, Vice-Presidents; Albert R. Goodnow, Secretary; James W. Walter, Treasurer.

In February, 1880, the terms of office of Fire Commissioners Benjamin R. English and John Ruff expired, and they were succeeded by William Fuller and Robert A. Brown. In the same year, E. M. Reed, Fire Commissioner, resigned, and George F. Holcomb was appointed to fill the unexpired term. In February, 1881, Curtis F. Evarts was added to the Board of Fire Commissioners upon Mr. Holcomb's withdrawal.

During 1881, after urgent petitions from the residents and manufacturers of Newhallville, Steam Fire Engine Company No. 6 was located on Division street, at a cost to the city of \$12,000.

In May, 1881, owing to amendments to the City Charter, the Board of Fire Commissioners was reorganized, and consisted of six instead of five members, being non-partisan in its composition. The members were Robert A. Brown, James T. Mullen, Curtis F. Evarts, John Ruff, Benjamin R. English, and Charles A. Baldwin. Mr. English remained in the Board until February 1, 1882, when John Redmond succeeded him.

In the spring of 1882, several disastrous fires occurred, among which was the destruction of the

dry goods store of Edward Malley & Co., on the corner of Chapel and Temple streets. The loss was \$189,873, insurance, \$164,992. On March 10th, the carriage manufactory of J. F. Goodrich & Co., 26 to 30 East street, was destroyed by fire. Loss, \$32,458, insurance, \$32,458. On March 17th, the Calvary Baptist Church, on the corner of Chapel and York streets, was burned. Loss, \$29,750, fully insured. On June 16th, the factory of the New Haven Car Trimming Company, on Newhall street, was totally destroyed by fire. Loss, \$38,668, insurance, \$24,894.

In February, 1883, Frank D. Welch succeeded Curtis F. Evarts as Fire Commissioner, whose term had expired.

The New Haven Clock Company suffered a partial destruction of their works on the morning of April 26, 1883. The loss was \$51,667, and insurance paid, \$46,999. Artisan street manufacturers suffered by a destructive fire on Sunday, September 2d, by which a loss of \$48,749 was involved, upon which there was \$45,789 insurance divided up among them. Later in the month the pork packing-house of F. S. Andrew & Co. and S. E. Merwin & Son was burned. The fire originated in the smoke-house of the first-named firm. The total loss was \$32,858, insurance paid, \$25,679. E. S. Wheeler & Co.'s iron rolling-mill, on Wolcott street, Fair Haven, was burned out on September 25, 1883. Loss, \$20,000, insurance, \$15,000.

Luther E. Jerome became a Fire Commissioner in February, 1884, and succeeded Charles A. Baldwin, whose term expired.

On June 3, 1884, another permanent man was added to the Fire Department, by the appointment of Edwin S. Davis, who was chosen for the position of permanent Captain of Engine Company No. 2.

BIOGRAPHIES.

MAJOR LYMAN BISSELL.

The village of Milton lies a few miles west of the village of Litchfield, but is in the same town. The first is in a valley; the last is on a hill thirteen hundred feet above the sea, and higher than any other point in Connecticut outside of Litchfield County. On the morning of October 20, 1813, the Congregational minister of Litchfield called at the house of Hiram Bissell, an ironmonger in Milton, to make a social visit, and found the family rejoicing over the advent of a man-child born the night before. The little fellow was brought out for his admiration; and the pastor, being requested to name him, gave the child his own name—Lyman. He was a short, stout man, thirty-eight years of age, with a large social nature and a mixture of drollery in his composition. The June previous a son had been born to him, of whom the world has since heard much, the Rev. Henry Ward Beecher.

Lyman Bissell grew into a stout lad, going to school in winter and working on the farm in sum-

mer. At the age of fourteen he went with an older brother to Poughkeepsie to learn the art of house-painting. In six months their employer, panic-stricken, ran away from his creditors, when the boys returned home. Lyman followed the business of house-painting for years; first at Waterbury, and then at New Haven, where he came in the spring of 1836 and remained till the outbreak of the Mexican War. At that period he was Captain of the National Blues, as the city artillery company was called. On the 9th of April, 1847, he was commissioned First Lieutenant in the Ninth Regiment of Infantry, U. S. A., a new regiment, consisting entirely of New England men. Its commander was Colonel Ransom, a graduate of Partridge's Military Academy at Middletown, and at the time of his appointment, principal of the Military Academy at Norwich, Vermont.

Soon after his arrival in Mexico, Lieutenant Bissell was assigned to the duty of Quartermaster of the brigade of General (afterward President) Pierce, and though in several minor actions was not in any

Lyman Bissell
Major U. S. Army

Charles Webster

general engagement. He was, however, in Puebla de los Angeles when it was besieged by the Mexicans. About 3,000 men sick with chronic diarrhoea, had been left here by Scott on his march through to Mexico, of whom nearly one-third died. Bissell was among the invalids. The siege lasted twenty-eight days, when it was raised by General Lane. During the siege Bissell had command of a company of convalescents stationed on the flat roof of a lofty church, the walls of which, projecting a few feet above the roof, served as a parapet.

On the 8th of September, 1847, Bissell was promoted to a captaincy. At the end of the war, his regiment being disbanded, he returned to New Haven, where he was appointed to the command of the newly organized Police Force. It was while he was Captain of the Police that he went *incognito* into the midst of a howling mob and spiked the cannon with which they thought to demolish South College, as related in another part of this chapter.

On the 3d of March, 1855, the regular army of the United States having been enlarged, Bissell was commissioned First Lieutenant in the new Ninth Regiment, which was sent the next December to Oregon in consequence of an Indian outbreak. There he remained with his company until after the close of the rebellion. On the 15th of March, 1861, he was commissioned Captain. During the last four years of the war he was stationed with his company on the Island of San Juan in Puget Sound. By treaty with Great Britain this island was, while the boundary question was pending, under the joint jurisdiction of the two powers. By agreement a company of British soldiers were posted at the west end, and a company of American soldiers, under Bissell, at the east end of San Juan, the two posts being fifteen miles apart. The island is a beautiful piece of ground, about eighteen miles long and three miles broad, alternating with dense forests of fir and open grassy prairies dotted with oak trees. Bissell and his soldiers lived in log huts with a block house for headquarters. For nearly four years he lived a very lonely life, all his fellow officers being in the East on recruiting service. There were a few families of French half-breeds on the island; and there were his soldiers, mostly Irish and Germans. But of these he could not make companions nor approach them in any conversation, except on business, lest he should break down that barrier of respect and authority which is essential to discipline. So for four years he lived in a sort of Robinson Crusoe isolation. Occasionally some of the British officers visited him, "jovial fellows," who brought mirth and laughter. With his spy-glass he could see the village of Victoria on Vancouver's Island, fifteen miles away, but was able to visit it but once. He drilled his men two hours each day, and tried to keep them out of mischief by occupation. Some of his own leisure hours he occupied in oil-painting, as he does to this day. He had an excellent garden where flourished every vegetable except those which grow on vines, as melons, pumpkins, squashes and cucumbers; for these the nights were too cool. The potatoes, cabbages

and corn were of superior quality, while the prairie furnished luscious beef and the best of milk. Three times a year a steamer came from San Francisco, blew off her steam and landed various stores.

On the 4th of March, 1864, Bissell was commissioned Major; but it was more than a year later when, in the summer of 1865, he learned the fact, through an officer arriving from the War Department with an order for him to proceed to New York and join his regiment.

On the 31st of December, 1870, while he was in Texas, he was placed on the retired list for "disability in line of duty." He now resides at his homestead, 308 Crown street, New Haven. His disability originated in his Mexican experience, but was aggravated by a terrible march, in the winter of 1860-61, from Fort Colville, on Columbia River, 480 miles, to Fort Vancouver. The ground was covered with snow; the thermometer often below zero. On one occasion he broke through the ice of a stream and caught cold—a cold from which he has never entirely recovered.

On the 12th of September, 1835, Major Bissell married Miss Clarissa M. Skeele, of New Durham, Greene County, N. Y. Their only child was born in September the next year. He is the widely known Dr. Evelyn L. Bissell, a practicing physician and surgeon of New Haven. In the War of the Rebellion he was Surgeon of the Fifth Connecticut; was in many battles; was twice taken prisoner, and was for a time an inmate of Libby Prison.

Major Bissell in his full prime was a splendid specimen of manly vigor. His weight is 210 pounds; his height about five feet ten inches; his chest measurement large; and his Webster-like head requires a larger hat than hatters ever keep in stock. He has keen black eyes, is of phlegmatic temperament, and of reticent habits. With nerves of iron, he is as calm in moments of deadly peril as in time of perfect safety.

CHARLES WEBSTER.

The late Charles Webster will be long remembered as the efficient Chief of Police of the City of New Haven. A son of Samuel and Betsy Webster, he was born in Portland, Me., January 27, 1819. When he was four years of age his parents removed to Hartford, Conn., where he lived until 1845, when he took up his residence in New Haven.

"Chief" Webster was educated to some extent in the common schools to which he had access, and while yet a mere boy learned the trade of morocco-dressing, and later he was employed for a number of years by Mason Gross, a morocco-dresser, of Hartford. After his removal to New Haven, he was for some time in the employ of T. Ensign & Son, morocco manufacturers and dealers in hides, on George street.

Mr. Webster's official and public career began when he became Keeper of the New Haven County Jail, a position which he filled with great credit for eighteen years. March 4, 1869, he was appointed Chief of Police, to succeed Charles W. Allen. He had formerly served as Police Clerk under "Chief"

Hayden. To his astuteness and his long experience with criminal classes, is attributed the comparative good order which prevailed in the city during his incumbency of office, and won him an enviable record for his remarkably able administration.

September 24, 1851, Mr. Webster was made a Mason in Wooster Lodge, No. 79, F. and A. M. He served as Worshipful Master from December 13, 1854, to December 26, 1855. He was exalted to the Royal Arch in Franklin Chapter, No. 2, November 9, 1854, and received the degrees of the Cryptic Rite in Harmony Council, No. 8, November 17, 1854. He was created a Knight Templar in New Haven Commandery, No. 2, April 24, 1856.

Of a friendly, sympathetic nature, and hospitable to a remarkable degree, Mr. Webster was widely and favorably known, not only in his public capacity, but in private life as well.

He was married December 25, 1840, to Janet M. Clark, of Farmington, Conn. He died January 1, 1885, leaving a widow and two daughters, one of the latter unmarried, the other, Mrs. Theron Todd, of Woodbridge, Conn.

A. C. HENDRICK.

The City of New Haven is justly proud of its admirable Fire Department. The credit for its past development and its present efficiency is largely due to the painstaking labor and executive ability of one man, Albert Cushman Hendrick.

He was born in New Haven on the 7th of March, 1833. His father, Joel D. Hendrick, was a hard-working man, who reared a large family of nine children. The young Hendrick received a common school education at John E. Lovell's famous Lancasterian School, wherein so many of New Haven's citizens obtained their early training. At that time Henry B. Harrison, now Governor of the State, was the assistant teacher. When Mr. Hendrick quitted school he entered the employ of Wiswell & Killem, and applied himself to learning the trade of coach-trimming.

His interest in the Fire Department began at an early date. Those were the days of volunteer service, and the various companies were active factors in both the social and political worlds. Mr. Hendrick was but little more than seventeen years old when, in July, 1850, he joined the Franklin Hose Company. The hose companies were composed of young men who were considered as serving a sort of apprenticeship, preliminary to possible entrance into the engine companies. Of this organization, which was domiciled on the corner of Grand and State streets, Mr. Hendrick was elected Treasurer in 1851, and in the following year he was made Secretary and Assistant Foreman. In the same year he was admitted to membership in the Franklin Engine Company, and retained his connection with that company until it disbanded, July 6, 1854.

Soon afterwards he journeyed southward, and worked at his trade in the City of Memphis, Tenn., until the spring of 1855, when he returned to New

Haven. Two years later Mr. Hendrick was again numbered in the New Haven Fire Department, being elected a member of Hook and Ladder Company No. 1. Within a year's time he became Foreman of the Company, which position he occupied at the breaking out of the Civil War.

Mr. Hendrick's military service had begun upon his return from the South in 1855, when he joined the New Haven Grays as a private. He was promoted to the rank of Corporal, and was First Sergeant of the Company when it volunteered, in the spring of 1861, for three months' service as Company C of the Second Connecticut Volunteers. At the expiration of the term of service, Mr. Hendrick was commissioned First Lieutenant of the Twelfth Regiment of Connecticut Volunteers, which was raised upon a three years' enlistment. Lieutenant Hendrick served with his regiment under Butler in the Department of the Gulf. It was the first to reach the City of New Orleans at the time of the capture of the place by Farragut's fleet. It performed garrison duty there for awhile, and was then sent into the field for more active service. It was especially noted for its steadiness and discipline, and shared in all the principal battles in the Department of the Gulf until it was sent north, with the Nineteenth Army Corps, to serve under Sheridan in the Shenandoah. Meanwhile, November 8, 1863, Lieutenant Hendrick rose to the rank of captain. He took part in the battle of Winchester, and in the engagement was slightly wounded by a fragment of shell. In December, 1864, Captain Hendrick's term of service expired, and he was mustered out, together with a large number of the officers of the regiment, which had been so depleted that it had become a battalion and fewer officers were needed. Thus ended Mr. Hendrick's long and honorable service in the field, but, since the war he has taken an active part in the organization of the National Guard.

August 25, 1869, he received an appointment on the staff of E. E. Bradley, Colonel commanding the Second Regiment Connecticut Militia, was elected Captain of the Grays in November of the same year, and was promoted December 6, 1875, to be Brigade Adjutant, with rank of Lieutenant-Colonel, on the staff of Brigadier-General William R. Smith, then the Commander of the Connecticut Brigade. Lieutenant-Colonel Hendrick resigned his position July 26, 1877. Since then he has been connected with the Veteran Grays, and is now the commanding officer of that organization. He is also a charter-member of the Admiral Foote Post, G. A. R.

Mr. Hendrick's long absence in camp and on battle-field had not diminished his interest in the workings of the Fire Department. He laid aside the Captain's uniform to don that of the fireman, and enrolled himself as a private in Hook and Ladder Company No. 1. In the same year his faithful service and devotion to the interests of the Department, and of the city, were recognized by his elevation to the post of Chief Engineer of the Fire Department, in which position he has remained to

*A. J. Hendrick
Chief Fire Dept*

this day. New Haven's Fire Department was re-organized upon the basis of paid service soon after the war began and while Mr. Hendrick was fighting his country's battles. When he took charge of it, three years later, it was still only an experiment. Its force was inadequate, its apparatus was old, its accommodations were poor.

Through the careful attention and fostering supervision of its Chief, it has now become a most prompt and serviceable department, equipped as well as any in the country with all the modern

improvements. The telegraph system especially has been brought to a degree of unsurpassed perfection, and is a model of its kind. Chief Hendrick has reduced the administration of his department to a science, and has made the development thereof the work of his life. His enthusiasm for his profession, and his achievements therein, are recognized abroad as well as at home. He is a member of the National Association of Fire Engineers, was the President of the Association in 1875, and has been for eight years its Treasurer.

CHAPTER XXXII.

HISTORY OF POLITICAL PARTIES.

BY HON. LYNDE HARRISON.

THE limits of this chapter will not permit any extended history of the different political questions and parties which have arisen, had their day, and passed away, since the foundation of the Town of New Haven. The tendency of human nature to discuss the questions of the day as they arise, and the disposition of men to divide and to oppose each other, have had their influence in New Haven since the days of Governor Eaton and John Davenport. The habit of discussing all kinds of questions concerning local government, in town-meetings, for more than two centuries, has made the Freemen of New Haven intelligent upon the political questions of the day and ready in their discussion. The leaders in these town-meeting discussions were the natural leaders of the respective political parties as they arose, and no man could hope for political success unless he was sustained by the followers of his party in town-meeting discussions, especially when they partook of a political character. The men who were elected as representatives to the General Assembly, or who held higher positions of public trust and honor, generally made their first mark in the New Haven town-meetings. During the last forty years men have become prominent for other reasons, and political questions have been discussed otherwise, but the influence of the town-meeting continued for two centuries, and only ceased when the population became so large that town-meetings were impracticable.

FROM 1638 TO 1664.

There were no political parties in New Haven, in the sense that they exist to-day, prior to the Revolution, but there was much sympathy with the political parties of England, and the politico-religious discussions of the early days took their tone and color from the sentiments of the Puritan and Anti-Stuart parties of England. If the civil war between Charles the First and the Parliament had commenced a few years sooner, it is not probable New Haven would have had the same founders, or that the settlement would have been made as early,

by many years. Davenport and Eaton sympathized with Cromwell, and very few of the early colonists would have dared to express feelings of adherence to the cause of Charles the First. The town-meetings of these early days were held to discuss questions pertaining to local government and the good order and management of the affairs of the plantation. Governor Eaton, Mr. Davenport, Mr. Good-year, Mr. Newman, and Mr. Malbone were the leaders in the debates. There was no occasion to take action in the Colonial Assembly or town-meeting upon the political questions which divided the English people at that time. Neither Cromwell, nor the Crown, before 1760, claimed any right to interfere with the independent law-making power of the English settlements. Subject only to the limitations of their charters, the colonists were independent, though it had been generally conceded that the Parliament in London might regulate the trade of the colonies. Before the union with Connecticut, the New Haven colonists legislated in town-meeting or Colonial Assembly, and divided from time to time into parties, first upon questions of local government, and second upon questions connected with the attempts of the founders of the colony to make all civil government subordinate to the being and welfare of the churches. For the purpose of securing the latter, no one could be a voter unless he was a member of some one or other of the approved churches of New England. The New Haven colonists had no sympathy with the restoration of Charles the Second in 1660. If there had been more of the time-serving spirit in the colony, it is probable an independent charter might have been procured, and prompt action by Davenport and his associates in this direction might have made New Haven to-day, with the towns under its former jurisdiction, as independent a State as Rhode Island; but the leaders of the New Haven colony were neither courtiers nor politicians.

The Charter of 1662 united New Haven with Connecticut. Most reluctantly did New Haven surrender its identity. For two or three years it was difficult to keep peace between the Connecticut and

New Haven colonies. There were some insurrections and tumults. A majority of the voters in New Haven opposed in various ways the union, and if the smaller towns under the jurisdiction of the New Haven colony had been willing to continue the conflict, civil war or a new charter would have resulted. After Guilford and Stamford had shown a readiness to yield to the union, the Freemen of New Haven found it necessary to take some action. The affairs of the colony of New Haven, especially within the town itself, were exceedingly embarrassed; the public debt was increasing; taxes could not be collected; many were dissatisfied with the government and refused to pay their taxes, and when officers appointed by the New Haven authorities attempted to collect them, those who favored submission refused to pay, and applied to the Hartford government for protection.

Upon this question of the union with Connecticut, the first political division occurred in the New Haven colony. Governor Leete convoked a Special Court at New Haven on the 7th of January, 1664. The assembly remained in session several days, and propositions were made from the Hartford authorities that New Haven should make no attempt to collect taxes from those who objected, until a conference could be held between the colonies. A majority of the Assembly were still opposed to the union, and Mr. Davenport and Mr. Street prepared a long paper for presentation to the Connecticut authorities, which they termed "The New Haven case stated." In this paper they set forth their deep sense of the injuries which the colony had suffered by the encroachments made by Connecticut upon their privileges. They declared that they settled at New Haven, with the consent of Hartford; had purchased of the Indians the whole tract of land which they had settled upon the seacoast, and had quietly possessed it for more than twenty years. They said that they had expended great estates in clearing and cultivating the land without any assistance from Connecticut, and had formed themselves voluntarily into a distinct commonwealth. They proceeded to state a great variety of instances in which Hartford, the other colonies, Parliament, Cromwell, the King, and his Council had recognized them as a distinct colony. They understood that while the Hartford people had procured a patent including New Haven, they had done so without the concurrence of New Haven, contrary to their express wishes, and with the promise of the Hartford people not to include them in the Charter. They further said that Mr. Winthrop, before his departure for England, had promised in his letters not to have New Haven included in the Charter, and that the Hartford Magistrates had agreed, if the patent should include them, they should be at full liberty to incorporate with them, or not, as should be most agreeable to their inclinations. They added that, contrary to all these promises, Connecticut proceeded to dismember New Haven by receiving members from Stamford and Guilford, and that after such dismemberment they had preposterously pretended to treat with them relative to the union. They said that the reading of the

Charter did not show on its face that New Haven was included, and that they had taken an appeal to the King to know his royal purpose. This remonstrance had no effect upon the continued efforts of the government at Hartford to include New Haven. But the majority of the New Haven Freemen persisted, and on the 25th of May, 1664, elected their Civil Officers, including a Governor. When the General Court assembled, the colony had become so weak by the defection of individuals in New Haven and elsewhere, that the members either did no business, or else put nothing upon record.

During the following summer, Colonel Nichols, acting under the Charter which King Charles had granted to the Duke of York, captured New York from the Dutch, and proceeded to take possession of the territory included in the Duke's patent of the 12th of March, 1664. The description of the territory embraced, fairly included the larger part under the jurisdiction of Connecticut and New Haven. This called for prompt action in both Hartford and New Haven. On the 11th of August, 1664, Governor Leete called a session of the General Court to determine what course ought to be taken to protect their territory from the new danger that threatened, and further attempts were made to unite with Connecticut. The Commissioners appointed to investigate and report, urged and advised a union with Connecticut as the best way to vindicate their liberties and hold their rights under the Winthrop patent as against the later patent to the Duke of York. But the party of Davenport and Eaton was still in the majority in New Haven, and they insisted "that to stand as God had kept them to that time was their best way." New Haven and Branford were fixed and obstinate in opposition to the union, and no vote to that effect could be obtained. Mr. Pierson, of Branford, and Mr. Davenport were the leaders in the opposition.

The Commissioners appointed to settle the boundary line between New York and Connecticut, however, included New Haven in the Connecticut patent. This determination of the Commissioners had such an effect upon the Freemen of New Haven, that, at a meeting of the General Court, and of the Freemen and inhabitants, held on the 13th of December, 1664, resolutions were unanimously passed, submitting, under protest, to the Connecticut patent, but only in a spirit of loyalty to the majesty of the King. The union was made complete at the general election held May 11, 1665. The feeling in Branford had been so strong, that Rev. Mr. Pierson, of that town, and almost his whole church removed to Newark, N. J. Because of this union several of the New Haven Freemen went into the Newark or Massachusetts jurisdiction, and Mr. Davenport moved to Boston. Soon after the union was effected the party feeling over the question subsided, and thus the first political issue raised in New Haven passed into history.

FROM 1665 TO 1775.

During the century that followed the union of the colonies, no issues were raised to produce

political parties which should contend in any manner for the control of the government. In the contest that arose between the Stuarts and the defenders of Protestant succession in England, the Connecticut colonists were almost unanimous in their sympathy with William of Orange against James the Second, and with Queen Anne and her successors in their conflicts with the Jacobites and adherents of the old and young Pretenders in 1716 and 1745. Because of the sympathy of France with the cause of the Stuarts, the English colonists were inclined to enter heartily into the wars that were carried on between France and England, and they freely contributed their money and their men to wage a warfare with the French colonists of Canada and Nova Scotia. The leading men of the colony had no thought of opposing the wishes of the crown and its ministers in these matters, and until 1760 there was a strong feeling of loyalty and devotion to the English King.

Notwithstanding their freedom from political controversies, there were a sufficient number of questions of local interest to keep the people excited upon public affairs. As the New Haven colony had looked upon the State as a means of supporting and building up the Church, so the Connecticut authorities looked upon themselves as the "nursing fathers of the Church." Many questions which are now settled quietly among the several religious societies of the State were carried to the General Assembly, and the members engaged in heated debates and divided into temporary parties upon questions of the regularity of the settlement or rejection of ministers, the convocation of councils, and the settlement of ecclesiastical questions and disputes of all kinds. Every year the time of the Legislature was occupied in settling disputes among the churches or their members. But the State proved to be a bad nurse for the churches. It meddled with everything, but it could settle nothing, for it had no power to enforce its decrees. Without the advantages of an Episcopal organization, it was called a "many-headed Civil Bishop." If the churches had been left to themselves, without interference on the part of the civil authorities, they would have organized and become consociated. These controversies produced an apathy of religious feeling and a lower state of morals than had existed in the earlier days.

After much discussion for several years, the Legislature, in May, 1708, passed an act requiring the ministers and churches to meet and form an ecclesiastical constitution. As a result of this the Saybrook Platform was drawn up in September, 1708. A majority of the churches put themselves under this constitution, and the members of these churches for many years formed the dominant party in the colony. Episcopalians, Baptists, and other dissenters from the standing order of churches, became a minority party in the State, and as such they were continually agitating for laws for their relief from taxation for the support of the regular churches, and for a recognition of their rights in other respects.

Philemon Robbins, who was settled at Branford,

in 1732 ventured to preach in the parish of Wallingford without the consent of the minister of that parish. He was deposed from his office and deprived of legal maintenance. But he condemned the injustice of the law, and a majority of the people of his church in Branford sustained him. Benjamin Pomeroy, of Hebron, preached in Colchester without having obtained consent of the local minister. And for this he, too, was denied the privilege of the civil provision for his support, but, as in the case of Mr. Robbins, he also was supported by his people. The action of the General Assembly in these cases made much trouble in Branford and Hebron in the collection of taxes, and the cases of these two gentlemen were before the General Assembly at Hartford or New Haven for many years. So much feeling was aroused over the case of Mr. Robbins, that in many of the towns representatives were elected upon the "Robbins issue," as it was called.

Before 1698 the Assembly consisted of but one House, but after that year there was a division, and the Governor and Magistrates composed the Upper House, while the representatives from the towns were called the Lower House. It was provided at this time that no law should be enacted or repealed, except by the consent of both houses. The leading man in New Haven in the latter part of the seventeenth century was William Jones, a son-in-law of Governor Eaton, and for many years either a Magistrate or Deputy Governor of Connecticut. He died in 1706, at the age of eighty-two. The General Assembly was then sitting in New Haven, and voted that in consideration of the many good services of Mr. Jones, the charges of his funeral be paid out of the public treasury.

From 1700 to 1731 there was a controversy with the colony of New York respecting the boundary line. Several sets of Commissioners were appointed, and on the 14th of May, 1731, a complete settlement was made. The last work of the Commissioners was done at Greenwich, Conn., Connecticut surrendering a tract of 60,000 acres in the interior to New York, and receiving as an equivalent the tract on the Sound now known as Greenwich. This settlement was not made however without much opposition on the part of the minority party in this State, especially the residents of Litchfield County.

In 1704, the people were very much excited over the efforts of Governor Dudley, of Massachusetts, and Governor Cornbury, of New York, to revoke the Charter of King Charles, and divide the territory of Connecticut between those two colonies. Many charges were filed against Connecticut, alleging that she harbored young men who belonged to the other jurisdictions, and that she refused to contribute toward the general welfare of the colonies. The General Assembly provided agents who represented the cause of the colony successfully in London, and the public interest in these attempts to dismember the colony created as much excitement as the heated political contests of this century.

To sustain the expedition against Canada in

1709, the Assembly authorized an emission of bills of credit to the amount of £8,000. To provide for its redemption taxes were imposed to pay one-half at the end of one year and the other half at the expiration of two years. During the whole of the eighteenth century, when paper money was so readily issued by some of the colonies, the Assembly of Connecticut was very conservative, and generally provided, by effective taxation, a means for the early redemption of all the bills of credit issued by the colony.

In 1745, a more full and complete Charter was granted to Yale College, upon the application of the Rector and Trustees. This gave the College a better standing for the reception of donations, and its membership increased rapidly. Its religious interests were in great need of attention however. The Rev. Mr. Noyes was advanced in years, and his preaching in the old meeting-house was not considered satisfactory, either in language or doctrine. The Corporation voted that they would choose a Professor of Divinity for the College as soon as they could procure a sufficient support for him. An apprehension arose in the colony that the Professor of Divinity selected might not be orthodox, and the matter came before the General Assembly. Upon this a minority of the people of New Haven, who seemed to be inimical to the government of the College, raised the objection that religion was not part of a college education, and therefore that no religious worship ought to be upheld, and that every student ought to be allowed to worship how or where he pleased, or as his parents or guardians should direct. To this the College authorities replied that it was absolutely necessary attendance upon religious exercises should be in one place, so that they could be present to observe the attendance and behavior of the students with their own eyes, and that if parents put their children at college under their control, they must be taught such religion as the authorities of the College prescribed. The Liberals replied that the students ought to be permitted to attend the worship of the Church of England, and that the Church of England is the established religion of the colony. To this the College authorities answered that the establishment of the Church of England was expressly limited to England and Wales, and that the statutes of England did not extend to the plantations. The objections of the Liberal party were answered at great length by President Clap, and the Assembly sustained the College authorities in the settlement of a Professor of Divinity in the College. Some of the principal men in New Haven were opposed to the Assembly's Catechism and the Confession of Faith, and they became fixed in their opposition to the College and to the settlement of a Professor of Divinity. Professor Daggett became, in 1756, the first Professor of Divinity, but this did not end the opposition. Pamphlets were issued against the College, its Charter, its President, and its government. It was said that there was corruption in the treasury and mismanagement of the funds; that the College authorities were not fit to manage its affairs; and

that the Legislature ought to appoint auditors of its accounts and affairs. In 1763, a memorial was presented to the General Assembly, representing that it was the founder of the College and had a right to appoint visitors and reform abuses. Jared Ingersoll and Samuel W. Johnson appeared as Counsel for the petitioners and against the College. The whole colony was divided into two parties upon the subject, and gentlemen representing them repaired to Hartford to hear the arguments of the Counsel on the one hand and of President Clap on the other.* A very large majority of the General Assembly of that date proved to be friends of the College and of its independence from colonial interference, and the petitioners were given leave to withdraw.

FROM 1775 TO 1787.

This was the period of the Revolutionary War.

While a very large majority of the people of New Haven were opposed to the Stamp Act and other attempts of the Crown to tax the colonists, most of the older men and the men of property in the colony were opposed to a resort to arms against the great power and wealth of England, sincerely believing that it could only result disastrously. When the news of the opening of the conflict in Massachusetts reached New Haven, the town was nearly equally divided upon the question of taking part in the controversy. A town-meeting was held upon the subject, and it was only by the energy and eloquence of Benedict Arnold that a vote was obtained expressing sympathy with their brethren in Massachusetts. When the war had fairly begun, a majority of the voters were steadily found on the patriot side, but there was always a large and respectable minority of Tories in New Haven who remained in the town during the war. Their numbers and influence undoubtedly saved New Haven from the destruction that came upon Norwalk, New London and Fairfield at the time of the raid of Governor Tryon along the coast. At the close of the Revolutionary War, many of the Tories found it convenient, if not necessary, to remove to Nova Scotia or England.

The prominent men of New Haven, leaders of the patriot party during this period, were Samuel Bishop, Colonel Jonathan Fitch, Dr. Æneas Munson, James Hillhouse, Henry Daggett, Jesse Ford, Pierpont Edwards, Simeon Bristol, Jonathan Ingersoll, and Timothy Jones. Some of these gentlemen afterwards became prominent in the councils of the young nation.

FROM 1787 TO 1818.

A large majority of the people of New Haven were in favor of the adoption of the Federal Constitution. For many years the party of Washington, Hamilton and Adams received a hearty support from the voters of New Haven. The standing

* Many of the arguments used since 1880 for a change in the constitution of the Corporation, or for the maintenance of the present system, are reburied weapons from the arsenals of 1763.

order of churches, as they were called, meaning the Congregational churches of the State, sustained the cause of the Federal party in New Haven. The clergy of these churches believed that the cause of law and order, religion and morality depended upon the success of the Federal party. The Episcopalians agreed with them, and such prominent men of the latter denomination as Judge Johnson, of Stratford, and Jonathan Ingersoll, of New Haven, were Federalists.

Upon the organization of the Republican, or Jeffersonian, party in the year 1800, many of the Baptists and Methodists, and all the Free Thinkers, became members of that party. Abraham Bishop, of New Haven, became their natural leader. These men formed for many years only a small minority in New Haven.*

The Federal party held absolute control of the politics of New Haven and Connecticut until 1814, at which time the unpopularity of the Hartford convention movement and their long exclusion from power at Washington had begun to tell upon its strength in Connecticut and New Haven. Those forces which are continually at work transforming a majority into a minority also tended to reduce the strength of the Federal party, and, in 1816, Judge Johnson and Mr. Ingersoll were solicited to join in a combination of all the dissenting churches of Connecticut for the overthrow of the old Federalist party, and especially of what was known as the "standing order." These two gentlemen were not then ready to leave their old associates, and promptly rejected the proposition. At this mo-

ment the Federal party should have rewarded the Episcopal wing of their organization for their loyalty, but the conservatism of the Congregational clergy prevented this, and their obstinacy brought about the downfall of their party.

The Phenix Bank, of Hartford, desired a charter of incorporation, and was prepared to pay a liberal bonus for it. To secure the co-operation of different political elements, it was proposed to divide the bonus between Yale College, the Congregational ministry of the State, and the Episcopalians for the Bishop's Fund. The Episcopal leaders insisted upon the passage of the bill. The Methodists and Baptists opposed it. The old standing order was not willing to give the Episcopal Church this recognition. The Episcopalians and Federalists together were able to pass it. Nathan Smith, of New Haven, made the closing speech in favor of the bill. It was one of the most eloquent addresses ever heard in the House of Representatives. But the Federalists could not be brought over in a body to its support, and the bill was killed. Thereupon the Episcopalians of the State abandoned the Federal party, and its vote in the State and in New Haven seriously diminished. A combination of all the religious sects opposed to the standing order, together with a few liberal Congregationalists like Oliver Wolcott, was formed into the party known as the Toleration party. Jonathan Ingersoll, who had been made Lieutenant-Governor of the State in 1816 by the Federalists, joined the new party, and the next year a convention was called at Hartford, which gave Connecticut the Constitution of 1818. William Bristol and Nathan Smith represented New Haven in this convention. Upon the question of adopting this Constitution, New Haven voted 430 in the affirmative and 218 in the negative. The County of New Haven gave a majority of 813 in favor of its adoption, which was a little more than one-half of the total majority given in the State.

It was during the period of Federal ascendancy in New Haven, that the famous controversy took place between President Jefferson and the merchants of New Haven over the appointment of the father of Abraham Bishop to the position of Collector of the Port of New Haven, already given *in extenso* in the chapter on the Custom House, pp. 321, 322. The son was so personally unpopular, that Mr. Jefferson did not think it advisable to make him at once the Collector of the Port of New Haven. The merchants of New Haven also could not bear to see him sitting in their Custom House. They hated him above all the Republicans of his day. Mr. Bishop subsequently proved to be a very good Collector, and was entirely acceptable to the merchants of New Haven. His political pamphlets had much to do with the later success of the cause of the Republican and Toleration parties in Connecticut, and he, with Mr. Wolcott, of Middletown, were the active leaders of the Republican party for many years.

Among the noted men of New Haven during this period who were prominent as political leaders, were Elias Shipman, Jeremiah Atwater, Charles

* An amount of personal abuse was used in the political battles of that period which would now cause revolt in any party which should attempt to build itself up by such means. An instance occurred in 1803, which, by means of verse, stereotyped itself in the memory of many. The father of Abraham Bishop was a deacon of the church in the United Societies of White Haven and Fair Haven. Dr. Levi Ives was another deacon of the same church. Both these two gentlemen took an early stand for Jefferson. At a Republican festival appointed for March 9, 1803, some songs were to be sung, and the *Hartford Courant* of March 2, proposed the following as appropriate for the occasion. It was privately spoken of as the production of Theodore Dwight.

Ye tribes of faction join
Your daughters and your wives,
Moll Carey's come to dine
And dance with Deacon Ives.

Ye ragged throng
Of Democrats,
As thick as rats,
Come join the song.

Old Deacon Bishop stands
With well befrizzled wig,
File-leader of the bands
To open with a jig.

With parrot toe
The poor old man
Tries all he can
To make it go.

Director Powell leans
And takes a pinch of snuff;
His words, like little beans,
His neighbors' pockets stuff.
Let all who please
Their footsteps ply
And from him fly,
Or stay and sneeze.

But oh, what human pen
Can Abraham's self describe!
The first of mortal men,
The last of treason's tribe.
With mighty voice
The patriot cries,
"Let earth and skies
And hell rejoice!!!"

These four stanzas are followed by eight others, which are not any more deferential to the Republicans than those already cited.—ED.

Chauncey, Jonathan Ingersoll, Pierpont Edwards, David Austin, David Daggett, Elizur Goodrich, Silas Merriman, William Hillhouse, Thomas Painter, Stephen Alling, Isaac Beers, Isaac Mills, Thomas Painter, Noah Webster, Jeremiah Townsend, Henry Daggett, Nathan Smith, Thaddeus Beecher, Gideon Kimberly, Charles Denison, Roger Sherman, James Merriman, Seth P. Staples, William Bristol, Eleazer Foster, Thomas Ward, Henry W. Edwards, and Abraham Bishop.

Of these gentlemen, Messrs. Edwards, Daggett, Goodrich, Denison and Bristol were elected Speakers of the House for one or more terms by the Federal party. Jonathan Ingersoll and Pierpont Edwards, who were Federalists for many years, joined the Toleration party in 1817, and were thereafter for several years prominent leaders in the Republican party, which elected Monroe and John Quincy Adams Presidents of the United States.

Henry W. Edwards was a son of Pierpont Edwards, and following his father into the Toleration party, he became one of the organizers of the Democratic party of Connecticut, when that party came into existence during the administration of President Jackson, and by that party he was several times elected Governor of Connecticut.

Nathan Smith was sent to the United States Senate by the Federalists, and he never severed his connection with that party upon questions of national politics.

Abraham Bishop continued to act with the Republicans until 1828, when he followed Henry Clay and John Quincy Adams in their opposition to Jackson, and in the later years of his life he was an ardent Whig.

Most of the Federalists who took part in public affairs in New Haven after the dissolution of that party, became naturally, on account of their belief in a liberal construction of the powers granted in the Federal Constitution, members of the Whig party. They had opposed the doctrines of Jefferson and his party, and they saw nothing they could approve a few years later in the administration and policy of Andrew Jackson.

A few of the younger Federalists of this period found the Toleration party of Wolcott and Ingersoll a convenient path by which to ally themselves with a national party which promised both power and patronage.

FROM 1818 TO 1854.

During this period the old Federal and Republican parties passed out of existence in New Haven, as well as in the country. Notwithstanding the large majority New Haven had given for the new Constitution, the Federal traditions were still strong in many of the voters, and when the Whig and Democratic parties came into existence, during the administration of President Jackson, the Federal theory of protection to American industries, and the feeling that President Jackson had erred in vetoing the Charter for the United States Bank, built up the Whig party rapidly, so that from 1834 until 1854 they had control of the local offices of New

Haven, and the town invariably gave decided majorities for the candidates of that party. At no Presidential or State election between 1824 and 1852 did New Haven give even a plurality of its votes for either the Jackson or Democratic parties.

Manufacturing was in its infancy in New Haven during this period, and the doctrine of protection found ready believers among the working men of the city. Nearly all the old Federalists were bitterly opposed to Jackson, and most of the Toleration leaders were admirers of Henry Clay. The men of property, with few exceptions, looked upon Jackson as an unfit man for President. But the sympathy of most Whigs with such legislation as restricted the sale of liquor, drove some men away from that party during the last twenty years of this period.

The construction of the Northampton Canal, the building of railroads, and the increase of manufacturing, brought a number of Irish immigrants into New Haven, and here, as elsewhere, these new citizens became members of the Democratic party. All property qualifications upon the right of suffrage were abolished in 1845. The Mexican War of 1846-48 was popular with many young men.

The Whig party was passing into a hopeless minority in national affairs. Free trade was then popular with the farmers in some of the country towns. The Whigs could not always control the Legislature. The State patronage was frequently in Democratic hands. All these causes tended to reduce the Whig majorities in New Haven, and at the close of this period the Democrats and Whigs were about equally divided in numbers, and the Free Soilers, who cast their first votes for Francis Gillett, in 1842, had gradually increased in numbers, until they held the balance of power.

A Maine Law, or Temperance party, came into existence in the State in 1853, and in 1854 it polled, in New Haven, 914 votes for Governor.

Notwithstanding the overwhelming defeat of the Whig party in 1852, those in New Haven stood bravely by their organization, until the party itself was swallowed up by the new American party, which first made itself felt in the State by the election of a few representatives in 1854.

During this period, the *Palladium*, under the management of James F. Babcock, and the *Journal and Courier*, under the management of J. B. Carrington, had become the organs of the Whig party. The *Register*, under the control of Minott A. Osborne, was the organ of the Democratic party. The councils of the two parties were generally held in the offices of their respective newspapers, and the editors and owners of these papers had great influence in shaping the policy and dispensing the patronage of their respective parties. Mr. Osborne held the office of Collector of the Port of New Haven for eight years as a reward for his services to the Democratic party, and he was succeeded for eight years by Mr. James F. Babcock, to compensate him for his services as a newspaper editor supporting the Whig and Republican parties.

Among the prominent men of New Haven who held political office during this period were Henry

W. Edwards, who was a representative for several years, and subsequently the most successful leader the Democrats had for many years, being Governor of the State in 1833 and in 1835-37; Jonathan Ingersoll, who was Lieutenant-Governor for several years when Oliver Wolcott was Governor; Charles Denison; Ralph I. Ingersoll, who was a Tolerantist and Republican for several years, and by those parties chosen a representative from New Haven, Speaker of the House, and representative in Congress; after Jackson's second election, Mr. Ingersoll became a Democrat, and for many years was a trusted leader of that party.

In 1827, Dennis Kimberly and Charles A. Ingersoll represented New Haven as Tolerantists or Republicans; a few years later, the former became a Whig, and the latter, from having been an opponent of Jackson, became one of his supporters, and an active Democrat.

In 1829, Philip S. Galpin represented New Haven at Hartford, elected by the anti-Jackson party; he was later in life an ardent Whig, and still later he became a Democrat on the slavery issue, and was by that party made Mayor of New Haven for several terms.

In 1830, William W. Boardman entered public life as Senator from the Fourth or New Haven district, that being the first year that Senators were elected by the several districts. Mr. Boardman was a prominent and wealthy lawyer. For many years he held public office at the hands of the Whig party, being representative from New Haven several years, and Speaker of the House in 1838, 1839 and 1845. In 1851 he represented New Haven for the last time, because he bolted the nomination of Roger S. Baldwin for U. S. Senator and, thereby preventing an election, prepared the way for the election of Isaac H. Toucey, a Democrat. Mr. Boardman served as a Whig in Congress prior to that act, and he never subsequently took much interest in public affairs, except that, as a Republican, he presided with great dignity over the State convention of that party at New Haven in 1865.

Silas Mix was elected to the House from New Haven in 1832 as a Democrat. He was then a brilliant young lawyer, only twenty-one years of age, and popular with masses of the people. Hon. Henry C. Flagg represented New Haven in the Senate in 1835. In 1837, Hon. Roger S. Baldwin entered public life as a Whig, representing the Fourth District. At a later date he was made representative from New Haven; Whig Governor in 1844-45; U. S. Senator until 1851; and Republican or Fremont elector in 1856.

Mr. James Donaghe was a Whig leader for many years, representative in 1837-38, and Collector of the Port of New Haven under President Taylor. Mr. Leverett Candee, the successful manufacturer, was an active Whig, and represented New Haven in 1839.

Hon. John B. Robertson was the junior Whig representative from New Haven in 1840. That party elected him Secretary of State in 1847-48. He was the Postmaster of New Haven under Presidents Taylor and Fillmore, from 1849 to 1853.

Mr. Robertson was born in South Carolina, and joined the Democratic party upon the slavery issue after the election of Mr. Buchanan. He was elected Mayor of New Haven by the Democrats in 1880, and was one of the most popular officials ever elected to that office.

Hon. Aaron N. Skinner was for many years a prominent Whig; he was Senator for the Fourth District in 1841, 1842, 1845, and at a later date Mayor of New Haven; it was in his term as Mayor that the controversy over the introduction of water into the city raged with great violence.

Hon. James F. Babcock entered the House for New Haven in 1841 as a Whig, and served in the State Senate in 1845 as an American and Whig. He was the Whig candidate for Congress in 1849 and 1851, but was defeated by a bolt in his own party.

In 1842, Hon. Henry Peck, the founder of the firm of booksellers now represented by H. H. Peck, was a Whig representative from New Haven for the first time. He subsequently served for several terms as representative and Senator, and he also held the office of Mayor of the city.

Hon. Eleazer K. Foster was for many years a leading Whig and Republican orator. He served first as a representative in 1843, was Judge of Probate and State Attorney for many years, and Speaker of the House in 1865. Except for his declination upon the platform of the Republican State Convention at New Haven in February, 1861, he would have been nominated and elected the first war Governor of Connecticut.

From 1842 to 1860, two of the best managers, workers, and leaders of the Whig and Republican parties in New Haven, were Marcus Merriman and Stephen D. Pardee. Both served New Haven in the House, and the former was Senator from the Fourth District for several years. They canvassed and worked together from pure love for their party, and no men knew better how to get the last voter to the polls on Election Day. Their counsel in political or town affairs was always in demand.

Hon. William H. Russell was a Whig representative in 1846 and 1847. Upon the repeal of the Missouri compromise in 1854, he became active as one of the leaders of the movement which resulted in the organization of the Republican party.

Hon. Henry Dutton was Whig Senator from New Haven in 1849, representative in 1850, and was elected Governor by a combination of Whigs, Free Soilers, and Maine Law men in the General Assembly of 1854.

Hon. John S. Rice was for a few years an active young leader among the Whigs, and represented the Fourth District in the Senate of 1850. Hon. Griswold I. Gilbert, an old-fashioned, reliable Whig, was Senator in 1852.

In 1853, New Haven, for the first time in many years, elected a politically divided delegation to the House. Hon. Charles B. Lines, an old Whig, afterward a leader in the Kansas colonization movement of 1856, was the senior representative, while the junior representative was Hon. Charles Ives, then a young Democratic lawyer and the active

leader of a set of young men in that party who opposed what they called the domination of the Register clique, which had for many years monopolized all the State and Federal patronage belonging to New Haven.

In 1854, Hon. Henry B. Harrison entered public life as Whig Senator from New Haven, and John Woodruff was junior Whig representative from New Haven. The career of these gentlemen in politics belongs to the following political era.

During the whole of this era of Whig ascendancy in local politics, it was difficult for a Jacksonian or Democrat to become prominent in public affairs. The dominant party took all the offices it could lay its hands on. Civil Service reform had not been dreamed of in those days, and the minority party accepting defeat as gracefully as possible, made no complaint about their exclusion from office, and waited patiently for their term to come around.

Before 1850, Judges of Probate and Justices of the Peace were elected annually by the General Assembly, and when the Democratic farmers of Windham and Litchfield Counties put their party in a majority, they religiously marched out of office all the Whig Judges of Probate and Justices in New Haven, and duly installed Democrats in their places. Among the prominent Democrats who received office in New Haven at their hands were Hon. Alfred Blackman and Hon. Frederick Crosswell.

Hon. James Gallagher began his political life in 1860, as a Democratic Messenger of the Senate, then in session in New Haven. In those days the party organs in Hartford and New Haven received from their several parties, when in power, the office of State Printer. The value of the office consisted in the fact that regular prices were charged the State, and the work was then sublet to a job office at a lower price. In 1850 and 1852, the fat contracts went to Messrs. Osborne & Baldwin as proprietors of the *Register*, and in 1854 the turn of the political wheel gave them to Babcock & Wildman, as owners of the then Whig *Palladium*.

The vote for Presidential Electors in New Haven from 1820, to and including 1852, was as follows:

1820. James Monroe	71
In this election no one else voted for. Cheshire cast 60 votes; Hartford, 61; Wallingford, 122 (largest in the State). Middlebury did not vote at all.	
1824. John Q. Adams	205
Jackson, An electoral ticket seems to have been run, the highest elector getting 16 votes, lowest, 1.	
Scattering	20
1828. Adams	415
Jackson	72
1832. Clay, Whig	677
Jackson, Dem	164
1836. Harrison, Whig	1,039
Van Buren, Dem	800
1840. Harrison, Whig	1,407
Van Buren, Dem	841
1844. Clay, Whig	1,735
Poll, Dem	1,207
Birney, Abolition	24
1848. Taylor, Whig	1,777

1848. Cass, Dem	1,213
Van Buren, Free Soil	215
1852. Scott, Whig	2,097
Pierce, Dem	1,875
Hall, Free Soil	96
State voted for Pierce.	

The vote for Governor from 1820 to 1854 was:

1820. Oliver Wolcott, Tol. and Rep	455
David Daggett, Federal	122
Nathaniel Smith	50
Scattering	5
1821. Oliver Wolcott	291
Scattering	4
1822. Oliver Wolcott	126

THE PERIOD SINCE 1854.

The repeal of the Missouri compromise in 1854 built up the Anti-Slavery party of Connecticut rapidly, although for three years the sentiments of the Anti-Slavery men were manifested in New Haven through the machinery of the American and Whig parties. The American, or Know-Nothing, party polled a large vote in New Haven in 1855 and 1856, but while it drew many Democrats into its fold, a powerful minority of the Whigs, led by Henry B. Harrison, James M. Woodward and others, refused to unite with the new party, and nominated candidates of its own for the Legislature and local offices. This division of the voters who were opposed to the Democratic party gave that party a plurality of the votes, and for the first time in many years the Democrats of New Haven, in 1855, elected both their candidates to the General Assembly. They were Messrs. Alfred Blackman and James E. English.

In the spring of 1856, a mass convention was called in Hartford to organize the Republican party in Connecticut. Messrs. Charles L. English, George H. Watrous, and Henry B. Harrison took part in this movement, and were active throughout

the State in the organization of the party which was destined for so many years thereafter to control the politics of Connecticut, although it has never been, with two or three exceptions during the war, in a majority in the town of New Haven itself. The carriage-making interest of New Haven was deeply interested in Southern trade. A number of other manufacturing industries of New Haven depended more or less upon Southern patronage. The anti-slavery feeling had never been strong in New Haven among its leading politicians of either party. Therefore, upon the organization of the Republican party, many of the old Whigs, including some of its best leaders, joined the Democratic party. The Republican party on the other hand received but few recruits from the Democrats. The increase of the Irish and German vote in New Haven, which has been rapid since 1854, increased the Democratic party in numbers more rapidly than the Republican.* The legislation of the Republican party upon the subject of temperance has from time to time driven a few voters out of that party and into the ranks of the Democratic organization.

During the war, a number of Democrats voted for the Republican candidates for State Officers, and some of the Democrats who then acted with the Republicans have continued with the party ever since. Between 1857 and 1860 a number of Germans joined the Republican party upon the anti-slavery issue, and they continued to act with them during the war and for a few years afterwards, but temperance legislation, so called, has sent many of them back into the ranks of the Democratic party. In 1866, Hon. James F. Babcock, who was then Collector of the Port, left the Republican party with a few followers, and they united their fortunes with the Democratic party on the reconstruction or "Johnson" issues as they were called. In 1872, when the nomination of Horace Greeley was indorsed by the Democratic Convention at Baltimore, a large number of Democrats in New Haven, including quite a number of Irish voters, refused to vote for Mr. Greeley, and voted for the Republican candidate, General Grant. A few of the Democrats who then joined the Republicans continued to remain with that party, but most of the recruits of that campaign returned to the Democratic party before the next presidential election.

The Liberal-Republican organization of 1872 carried but few voters into the Democratic party. Most of the Republicans who voted for Mr. Greeley in 1872, came back to the Republican party before 1876, upon the issues of hard money and protection to American industry. Upon the latter issue a few Democrats in New Haven voted for Mr. Garfield in 1880. In 1884 a few Republicans in New Haven voted for Mr. Cleveland, or St. John the Prohibition candidate for the presidency; and about an equal number of Irishmen and working men voted for Mr. Blaine upon the issue of protection to American interests.

*The existence and power of the Know-Nothing party, from 1854 to 1856, drove nearly all Catholics and others of foreign birth into the Democratic party.

A Greenback party was organized in New Haven in 1876, and for several years it polled quite a number of votes, but it passed out of existence as a factor of political strength in 1885. There has been a Prohibition party in existence in New Haven since 1872, and it has usually polled about one hundred votes. On several occasions in the past twenty years there has been a labor, or working men's, party, polling about as many votes in New Haven as the Prohibition party. Upon occasions affecting national politics, the voters of New Haven have generally united with either the Republican or Democratic party, and have adhered steadily in most cases to the party of their first choice. But few leading men of either party have ever changed their political affiliations. The Democratic party has steadily increased its majorities in New Haven for many years, for the reasons above given. In local and municipal politics many Democrats and Republicans frequently vote independently of their natural party affiliations; therefore on some occasions the Republicans have had control of the municipal government of New Haven; but whenever the Democrats have been united, or have made good nominations, they have had control of the local government. A majority of the Wards are controlled by members of the Democratic party, and for this reason the Common Council is usually Democratic.

The Republican newspapers of New Haven at the present time are the *Palladium*, owned and controlled by a corporation consisting of many stockholders, and the *Journal and Courier*, owned and controlled by Messrs. Carrington, Pratt, and a few others. The Democratic organs are the *New Haven Union*, controlled by Alexander Troup, the Collector of Internal Revenue of the District of Connecticut, and the *New Haven Register*, owned by a corporation, the stock of which is controlled by members of the family of the late Minott A. Osborne, who was editor and former proprietor.

New Haven has furnished between 1854 and 1886 many men for both political parties, who have been prominent and influential leaders of either the Republicans or Democrats.

Hon. James E. English and Charles R. Ingersoll have been elected Governors of Connecticut by the Democrats; and Hon. H. B. Bigelow and Henry B. Harrison have received the same high offices by the votes of the Republicans.

New Haven has furnished several other gentlemen who have been Congressmen, Lieutenant-Governors, Secretaries, Senators, Judges, Speakers of the House, Representatives, Postmasters, and Collectors of the Port. Most of them are still living and taking more or less interest in the welfare of the parties to which they belong.

In times of political excitement, for a few weeks good-natured, though sometimes heated, controversies are carried on, but with the settlement of the great slavery war and reconstruction issues which existed between 1854 and 1877, party passion and prejudice have almost disappeared.

There was a serious division in the Democratic party in 1860; a majority of the New Haven Dem-

ocrats voted for Breckenridge under the advice of the *New Haven Register*, but by an understanding among the leaders of both wings of the party, Hon. James E. English, then in Europe, was advised to stay there until after November, so that he might come home later, and not having voted for either Douglass or Breckenridge, would be an available candidate to unite on for Congressman. Having acted on this advice, Mr. English found the subsequent path of political promotion an easy one for several years.

Hon. Henry B. Harrison would have been nominated and elected Governor of Connecticut in 1866; but, at the request of friends of General Joseph R. Hawley, he declined to be a candidate at that time, and thereby postponed for eighteen years his election to that office.

For many years thereafter an hostility, at times very bitter, existed between the Republicans of New Haven and Hartford. Because of it General Joseph R. Hawley was defeated for the U. S. Senate in 1872; Hon. Henry B. Harrison was not nominated for Governor in 1873; Hon. Henry P. Haven, of New London, who was nominated by Hartford influence, was defeated before the people at the election in April, 1873; New Haven lost her position as a semi-capital of the State at the election of October, 1873; and the Republican party lost its control of the Legislature from 1874 until 1877.

Since 1877 the Republican party of New Haven and the State has been fairly free from sectional dissension. The exclusion of the Democratic party from Federal power and patronage, and generally from all State patronage, has kept it between 1861 and 1885 in a state of comparative harmony.

Until recently permanent political clubs were unknown in New Haven. The Republicans now have two, The Republican League, which is organized mainly for social purposes, and has a handsome club house on Chapel street, opposite Yale College, and the Young Men's Republican Club, which has its rooms in the Insurance Building opposite the lower part of the Green. The Democrats organized a political and social club a few years ago, known as the Jeffersonian Club, which has its rooms over the store of A. C. Wilcox & Co. on Chapel street.

The vote for Presidential Electors in New Haven from 1856 to 1884 was as follows:

1856.	Fremont, Rep	2,769
	Buchanan, Dem	2,591
	Fillmore, Am	248
1860.	Lincoln, Rep	3,140
	Breckenridge, Pro-Slavery Dem	1,681
	Douglass, Regular Dem	1,339
	Bell, American or Union	229
1864.	McClellan, Dem	3,720
	Lincoln, Rep	3,325
1868.	Seymour, Dem	5,505
	Grant, Rep	3,822
	Grant's majority in the State, 2,943.	
1872.	Greeley, Lib. Rep. and Dem	4,706
	Grant, Rep	4,651
	O'Connor, Straight Dem	42
	Prohibition	5

A fraudulent Grant ticket, upon which the names of the

Republican electors were all spelled incorrectly, but which were intended for Grant, had 13 votes.

1876.	Tilden, Dem.	6,669
	Hayes, Rep.	4,794
	Cooper.	411
	Prohibition	10
1880.	Hancock, Dem.	7,915
	Garfield, Rep.	5,721
	Greenback	107
	Prohibition	8
1884.	Cleveland, Dem.	8,872
	Blaine, Rep.	6,298
	Butler	190
	St. John.	105

The vote for Governor since 1854 has been:

1855.	Samuel Ingham, Dem.	2,046
	William T. Minor, American.	1,743
	Henry Dutton, Whig	652
1856.	Samuel Ingham, Dem.	2,309
	William T. Minor, American	1,712
	Gideon Weller, Rep.	399
	John A. Rockwell, Whig.	216
	Benjamin Silliman	1
1857.	Samuel Ingham, Dem.	2,720
	Alexander Holley	2,402

Mr. Holley was supported by the Union of Americans, Republicans and Whigs who had voted for Fremont in 1856.

1858.	James T. Pratt, Dem.	2,492
	William A. Buckingham, Rep.	2,361
	Austin Baldwin, Am.	40

CHAPTER XXXIII.

COMMERCE—FOREIGN AND DOMESTIC.

THE New Haven Colony in its earliest days had some special advantages for commercial enterprises. The port was safe, accessible and ample, as well as convenient for the vessels of that age. The foremost men were persons of large estates who had been trained in England to commercial pursuits. Theophilus Eaton was not only the Governor of the Colony by the choice of the people, and its foremost man in wealth, abilities and manifold experiences, but he had been a prosperous merchant of London, and held in high

esteem in that great city. He had also resided on the Continent as the deputy of the Fellowship of Eastland Merchants, and had always and everywhere acquitted himself honorably in affairs entrusted to him, and in every enterprise which he had taken in hand.

Doubtless he had in some respects no equal in the place; but there were other men of good abilities. Indeed the character of the company was such, in virtue and wealth, that the utmost efforts were made in Boston to induce it to remain within

the jurisdiction of Massachusetts Bay. Hutchinson said of them:

Their chief view was trade; and, to be better accommodated, they built on small house-lots near the sea, and fairer and more commodious houses than those in the other colonies. They built vessels for foreign voyages, and set up trading houses upon lands which they purchased at Delaware Bay for the sake of the beaver.

The Virginians had previously invited the Puritans of New England to occupy lands at Delaware; but the invitation had not been accepted. Very soon, however, after the planters of New Haven had made a settlement at that place, a company of its colonists under the leadership of Captain George Lamberton, embarked for Delaware Bay to establish stations at which furs could be purchased of the Indians who annually followed the Delaware and the Susquehannah Rivers from their sources to the ocean. Lamberton took with him a Pequot Indian to be his interpreter, and thus he was able to buy for £60 all the land from Cape May to the mouth of the Delaware River on the east side of the bay. He also established posts for trade at several of the many convenient places, and made preparation for a large commerce with the Indian traders. Three years later, in 1641, as the owner of the *Cock*, the first vessel recorded as owned in New Haven, he sailed in that vessel for the bay, and took with him about twenty New Haven people who desired to settle in the new colony. When the company reached New York, the Dutch Governor there ordered them to return, or to promise allegiance to the Dutch, who claimed the lands about the bay as belonging to the Dutch West India Company. They promised all due allegiance should they settle on Dutch soil, and went on their voyage. One of the company was Captain Nathaniel Turner, who had leave of the New Haven Court to go to Delaware and reside there "for his owne advantage and the publique good in settling the affayres thereof."

Within two years after Captain Turner's arrival, the Dutch sent two armed vessels to drive the English settlers from the shores of the Delaware.

The Swedes claimed the land on the western side of the bay, and were also hostile to the New Haven men. They had prejudiced the Indians against them, and had seized Lamberton, and imprisoned and fined him.

The New Haven people were sadly disappointed in the expectations of trade; but they were not disposed to defend their purchase by force. They surrendered their property to the Dutch, who burned their storehouses, but allowed them to carry their goods to New Haven. This enterprise resulted in the loss of some £1,000, an amount which the colony was not well able to lose in those early days.

Lamberton and others made subsequent voyages to the Delaware, but it does not appear that any posts were established after the destruction made by the Dutch in 1643. Our colony claimed "divers pieces of land on both sides of the Delaware Bay" until 1664. Mr. Eaton and Mr. Grogson, the Commissioners of the New Haven Colony, at the meeting of the Commissioners of the United

Colonies of New England, complained of the wrongs done to Lamberton and his company, and asked for redress. The New England Commissioners authorized Lamberton to go to the bay, and gave him authority to determine the case with the Swedes; but his mission seems to have been fruitless.

The commercial enterprise of those early days is indicated by the great number of petitions laid before the New Haven Court in regard to laws and regulations pertaining to the commerce of the place. As early as 1639, Lamberton was sailing for trade to Virginia, and Goodman Tapp was bringing cattle from Massachusetts Bay. The next year a law was passed forbidding masters of ships from throwing ballast into the harbor, and it was ordered that "shipwrights be excused from military duty." Brother Leeke also received "liberty to draw wines for them that work at the shipp." In 1644 "come Richard Malbon, John Evance and George Lamberton to inform the Courte, that having seriously considered the damages which the towne doth in many ways suffer from the flattes which hinder vessels from coming near the towne, they will undertake (upon conditions named) to builde a Wharfe, to which at least Botes may come to discharge their cargoes." They were authorized to build a wharf on the present site of the City Market.

As early as 1641, the Court ordered, "that Comodytes well boughte in England for ready money shall be sold here not above 3d. on the shilling for profit and adventure above what they cost with chardges, when solde by retayle; when solde by wholesayle lesse profit may suffice. But Commodityes of a perishing nature subject to waste and damage fall not under the former rate; yet the rates be so ordered that neither buyer or seller suffer losse." In the same year, it was ordered: "whoever shall cut any trees where spruce masts grow, without leave from the Governor, shall pay twenty shillings for every such default." Laws were also made to regulate the lighterage of goods to and from the vessels at anchor in the harbor, and particular attention was given to the cutting and hewing of timber for ship-building. In fine, the early records of the town abound with entries relating to its commercial interests, and before the place was named New Haven, the Court had made a considerable body of laws to regulate the commerce of the port.

This commerce was foreign as well as coastwise. Soon after the founding of the colony, vessels sailed to England, the Barbadoes, the Bermudas, and the Azores, as well as to Boston, Salem, Connecticut, New Netherlands, Delaware Bay and Virginia. The latter was, even then, comparatively an old colony; and there was an extensive trade with it. In 1640, George Spencer, John Proute (not *the* John Proute), and Henry Brasier endeavored to steal Lamberton's vessel, the *Cock*, the evening before she was to sail for Virginia. They intended to take her to Jamestown; but the godly colony of New Haven had another mind, and gave these bad fellows a public whipping and put them in irons. There

was no general disposition to make the place comfortable for thieves.

The first decades were marked by commercial enterprise, but not by great prosperity. The leaders of the colony were accustomed to the life of the great cities of England, and they lived too expensively for their new conditions. As Hubbard says:

They built some shipping and sent abroad their provisions into foreign parts, and purchased lands at Delaware and other places to set up trading-houses for beaver, yet all would not help; they sank apace, and their stock wasted, so that in five or six years they were very near the bottom. Yet being not willing to give over, they did, as it were, gather together all their remaining strength to the building and loading out one ship for England.

This ship, known as "the Great Shippe," has for nearly two and a half centuries been a theme for story and romance. Her burden was perhaps one hundred tons. She was built in Rhode Island, purchased by the "New Haven Merchants' Company," brought here, and, by the united efforts of the people, loaded for England. She sailed for that country in the cold tempestuous winter of 1645. It does not appear that she was known by any other name than "the Great Shippe." The colonists were very generally interested in the venture. The appraisement of several estates mentions the sum in "the Shippe" as £50, £30 or £20; and in each instance a large part of the estate was in this vessel.

Governor Eaton, Stephen Goodyear and Richard Malbon were directors of the company of merchants that fitted her out. The brothers George and Lawrence Ward had made a suit of blocks for her. Payment had been delayed, and on the 2d of November, 1647, they sued the company. The loading of the ship was estimated to be worth £5,000. This included the plate, of which a large quantity was put on board, several hundred West India hides, thousands of feet of planks, great store of beaver, and some corn and peas in bulk. She and her cargo included a large part of the property of the town—probably one-fifth of the whole, possibly one-fourth; for there was a woful shrinkage of estates in those days. Governor Eaton's £3,000 in 1643, had become £1,440 in 1658. Mr. Goodyear's £1,000 declined to £804. Francis Brewster's £1,000 in four years, from 1643 to 1647, went down to £605. This decrease does not include the value of some 250 acres of land owned by each, and not reckoned in the former valuation as it was in the latter.

"The Great Shippe" sailed away and no tidings ever came from her. Gradually the people felt not discouragement so much as despair. The sea had swallowed far more than their property. Seventy of their fellow townsmen were gone. Many of them were eminent both in the Church and in all civil affairs. Among them were Mr. Gregson, Captain Turner, and George Lamberton, the unfortunate commander of the ship, whose virtue, intelligence, wealth and enterprise made him one of the most prominent persons in the community.

The loss of this vessel gave rise to the "Phantom Ship," supposed to have been seen off our harbor in the air one day in June of the next year. This phantom ship was supposed by the superstitious

to have been sent by Providence to make certainly known the loss of the "Great Shippe" and all on board.

This loss was almost an end of foreign commerce on the part of the first generation. Another attempt was made to found a settlement and establish a permanent trade on Delaware Bay; but this suffered the same fate as the former one, and from the same causes.

In 1656, Cromwell offered land in Jamaica to New Englanders who would settle there; but the people of New Haven declined the offer.

During those years of adversity, there was one man here who well merits the title which has been given him, "The Father of New England Commerce." The fifth name subscribed to the Mayflower compact, November 11, 1620, is Isaacke Allerton. On that roll he is next after Brewster and next before Miles Standish. He was a man of eminent parts and financial skill. His early years had been given to commercial pursuits in England.

Miles Standish returned in 1626 to the Plymouth Colony from London, where he had resided for some time as the agent of the colony. Mr. Allerton was then the factor of the London merchants, entrusted with their colonial interests. His fellow colonists requested him to proceed to London as their agent. He did so in the autumn of the same year. His principal business was to settle with the London company to which the colony was heavily bonded. The colonists feared the merchants might claim a voice in the jurisdiction, and they wished to make such an arrangement as would certainly preclude the company from any civil power in the colony. Mr. Allerton was absent from Plymouth on this agency for seven months. He paid £300 of the colony's debt, and engaged the merchants to agree to relinquish all their interests in Plymouth for £1,800. It was with no small pains and trouble that he made this arrangement, and he received the thanks of the colonists for his successful management of the business. The next year he returned to London, and took with him enough beaver to satisfy some engagements made during his previous visit, and also nine bonds of £200 each, for which the merchants canceled their claims on the colony. He was not merely the agent in this important transaction; he was also one of the nine Plymouth men who made themselves personally responsible for £200 each, and who were known as the "Undertakers."

He returned to the colony in 1628, and brought with him the conveyances of the company, and also a patent for a trading station on the Kennebec River. Three months later he sailed once more for London to obtain a patent for Plymouth and to facilitate the removal of the Leyden church to the colony. He soon returned; in the main unsuccessful. But the same vessel that brought him over, carried him back to London; and when he returned the next time, many of the Leyden brethren came with him. But the colony did not seem satisfied with the result of his efforts, and ceased to employ his services. The charter which he had obtained for Plymouth was deemed less favorable than

the patent of Massachusetts. He was also accused of being "too lavish of money." He considered himself unfairly used, and left the colony, sailing in 1631 for England. There, hiring the ship on which he had just crossed the sea, he filled her with goods, sailed for the Kennebec and Penobscot, where he established trading posts; but almost as soon as he left the latter place, the French came and killed his agents and clerks, burnt his buildings, and carried away all his possessions. He was not a man to be cast down. He removed to Salem, and in 1633 was engaged in the fisheries. He fished at Marblehead and had not less than eight boats employed. He was also engaged in mercantile pursuits, and was a shipowner. In the memorable tempest of August, 1635, his ship was lost on Cape Ann. Among the twenty persons drowned were the Rev. Mr. Avery, his wife, and six small children, who were emigrating to Salem.

In 1636, he went in his barque to Penobscot on a trading adventure. On his return he was cast away on an island, where his vessel, as Winthrop says, "beat out her keel, and so lay ten days; yet he got help from Pemaquid, and mended her, and brought her home."

Subsequently he went to the New Netherlands, where he resided for some time; but in 1646 he made his home in New Haven. He had suffered many reverses, but he had not ceased to be a man of means, vigor and enterprise. He became forthwith a commercial leader here, and remained, until his death, very prominent in the maritime affairs of our town. He built by the creek his famous mansion, the "house of the four porticos." It stood at the junction of Fair and Union streets. His warehouse was opposite his residence and stood, as warehouses generally did at that time, on the bank of the creek, over the bed of which now pass the trains of the consolidated roads. It was accessible by such small vessels as were at that time and long afterward comprised in the sea-going fleet of New Haven. He sent his vessels from this port to Massachusetts Bay, Virginia, Delaware Bay, and after to "the Barbadoes." With the latter he had a considerable interest, and as late as 1655, he and Ensign Bryan, of Milford, the owner of the great brig, complained to the New Haven Court, "that by reason of bad biskit and flower they have had from James Rogers at Milford they have suffered much damage, and likewise the place lyes under reproach at Virgenia and Berbados, so as when other men from other places can have a ready market for their goods, that from hence lyes by, and will not sell, or if it doe, it is for little above halfe so much as others sell for." The finding of the Court was, that "if after this warning, James Rogers his flower or bread prove bad, he must expect that the damage will fall upon him, unless it may be proved that the defectiveness of it came by some other meanes."

The Dutch Governor of New Netherlands requested Mr. Allerton and John Underhill, the famous Indian fighter, to raise here, by authority of the Court, one hundred soldiers to be led by Captain Underhill against the Indians. The Court

did no more than determine to consider the matter during the spring of the next year.

Mr. Allerton resided in New Haven until his death in 1659. After thirty-nine years of incessant labor, tireless zeal, and indomitable perseverance, his end was the sad one common to the most of the New Haven pioneers; he died insolvent. His creditors were many, his debtors few. His will was proven October 19, 1659. The inventory was small. So greatly had property fallen in value, that his famous house, his barns, and two acres of land were appraised at £75 only. He came to New Haven in the days of its adversity; and here, for thirteen years, he endeavored right manfully to do his part in retrieving the diminished fortunes of the town. His body was laid to rest in the old burying ground on the Green, not far from the site of the Centre Church.

Perhaps the most prominent man in the maritime interests of New Haven in those years, except Mr. Allerton, was John Evance. He was one of the earliest settlers, and a signer of the Quinnipiac Compact of June 4, 1639. For eighteen years he was one of the most enterprising and energetic of the New Haven planters. He had a large estate, and as late as 1649 paid a trade tax on £550. His grant of land was where the Battell Chapel now stands, at the southwest corner of Elm and College streets. He was often chosen a deputy of the town, and was always engaged in commerce. The place was indebted to him for many valuable plans and undertakings. For example, he was one of the first to propose the building of a wharf, in order to facilitate the landing of goods from sea-going vessels. He owned at different times several vessels which he sent to various places that were in commercial relation with New Haven. He began one of the most important of the early cases of litigation. One of his vessels had been cast away, and he sued the master, John Charles, for carelessly allowing her to be wrecked. She was homeward bound from the Azores, and was wrecked off Guilford Point, and with her "certayne pipes of Madeira wyne," and other goods—the whole valued at £100. Mr. Evance "acquaynted the Courte that at the first hearing of the said losse, he apprehended it as an afflicting providence of God immediatlye sent for his exercise." But after questioning his captain, he thought it best to invoke human arbitration. The suit was long and tedious. It was settled by Captain Charles paying to Mr. Evance "three score and seaven pownds and ordinary Court charges." In 1649, Mr. Evance had another lawsuit—this time with the old Dutch merchant, William Westerhousen—about one of Mr. Evance's vessels which had got into trouble at the Manhadoes.

Neither Mr. Allerton nor Mr. Evance had any pecuniary interest in "the Greate Shippe." Probably their practiced eyes saw such imperfections in her construction or lading as to convince them that the adventure would be fatal. The ship was "walty sided" and perhaps the cargo was so badly stowed as to render her "tender" and unseaworthy.

Mr. Evance remained here until 1654, when he

became disheartened and returned to London. His fate was no exception to the fate of most of the colonists. His houses, lands and all his interest in different ships were attached by Mr. Van Goodenhausen. For nearly twenty years he lived a busy, active life here, and then went home to England a needy man. He was seen in London five years later, but there is no sure record of him after 1661. The next year an English ship, the *Glorious Restoration*, sailed from London for St. Christopher's with settlers. The name of one of them was J. Evance, and it is not improbable that this man was our New Haven merchant, who, with his old-time energy and enterprise, was resolved to exert himself in that fertile island of the Caribbean, and there seek the success which he had well merited and nobly striven for, but failed to gain, in New England.

Several other merchants living here in those years must be at least briefly mentioned.

Nicholas Auger, besides practicing medicine, maintained an extensive trade with Boston and Plymouth, and left an estate when he died, in 1677, appraised at £1,638.

Stephen Goodyear was a West India merchant, and among the ships that he owned was the famous *Zwoll*, the cause of a tedious pen-and-ink warfare between Governor Eaton and Governor Stuyvesant, of New Netherlands.

John Hodson, the Barbadoes trader, the owner of the *Speedwell*, left when he died, in 1690, an estate of nearly £2,200 sterling, the largest, if I mistake not, which was settled in the colony till as late a period as 1701. He left to the First Church of New Haven a legacy of £5, "with which to buy plate," a piece of which (probably the only piece presented), with the name of the giver thereon inscribed, is still used and greatly prized by this church. His remains lie in the crypt of the church.

Ephraim How, the owner of the *Hopewell*, which he often sent to Delaware and Virginia, died October 30, 1680. He left an estate of £352.

Nathan Whelpleys, a Barbados merchant, while visiting that island in command of his barque *Laurel*, died and was buried there in 1680.

Henry Rutherford, the Virginia and Barbados merchant, whose quaint little warehouse stood in Fleet street, was the owner and occupant of the only structure which has come down to us from the first settlers.

Benjamin Ling, who owned the *Beaver Ponds*, was a merchant. He died in June, 1670, leaving an estate of £939. His house stood at the corner of College and Grove streets.

Two valorous Knickerbockers, Samuel Van Goodenhausen and William Westerhausen, came from the Manhadoes and dwelt here many years. They maintained during the time an extensive commerce with foreign ports.

With the passing away of the first generation of merchants and ship-owners, the foreign commerce of New Haven nearly or quite ceased for a long period. Now and then a vessel passed to and fro between New Haven and Barbados or the Azores.

The arrival of the *Polly*, in 1697, gave Cotton Mather the materials out of which he constructed the wonderful story found on page 254 in the second volume of his "*Magnalia*." Had he lived in these days he would have thought of Munchausen before writing it. But there is an account of one voyage of a New Haven ship in those old times that may be retold here.

In October, 1653, Captain Carman sailed from our port in his ship of 180 tons, laden with clapboards, bound for the Canary Islands, and "being earnestly commended to the Lord's protection by the Church of New Haven." On nearing Las Palmas, he was met in sight of the city by a *Sallee rover* of 300 tons and 26 pieces of ordnance, and a force of 200 men. Captain Carman had but twenty men and seven pieces. But he fought the Turks three hours, being unable to use his muskets because they "were unserviceable from rust." The author who describes the battle says that

The Turk lay cross his hawse, so as he was forced to shoot through his own hoodings and by these shots killed many Turks. Then the Turk lay by his side and boarded him with one hundred soldiers and cut all his ropes; but his shot having killed the captain of the Turkish ship and broken his tiller, the Turk took in his own ensign and fell off from him, but in such haste as he left about fifty of his men aboard him. Then the New Haven men came up and fought with those fifty hand to hand, and slew so many of them as the rest leaped overboard. The master had many wounds on his head and body, and divers of his men were wounded, yet but one slain; so with difficulty he got to the island where he was very courteously entertained and supplied with whatsoever he wanted.

The Turkish account of the engagement having never been received, we must accept Captain Carman's report as untraversed.

After the earliest generation of the maritime men of New Haven had lost most of their fortunes and ended their lives, the foreign commerce of the port nearly ceased. The vessels employed were few and small. Indeed the sea-going vessels in that remote age seem to us in these days almost incredibly small. In 1642, Mr. Richard Malbon went from New Haven to Windsor, and bought a horse for one of his friends in Barbados. He engaged the owner of a New Haven vessel to carry the horse to that island. But when he brought his horse to the ship, she was not large enough for the purpose. In 1660, Mr. Mould built at his ship-yard, in New London, three vessels for foreign commerce. They were severally of twelve, seventeen and twenty tons burden. The largest of these, the *Endeavor*, made several voyage to Barbados, and was sold there, April 10, 1666, for 2,000 weight of sugar. In 1669, Captain John Proute, of County Devon, England, came to this country in his large ship of seventy tons, the *America*. He sold her in New London to Mr. Richard Lord and John Blackheath, of Stratford, for £230. He then came to New Haven and took a grant of land. His house stood nearly opposite the street which now bears his name. His remains and those of his wife lie in the Centre Church crypt.

The vision of New Haven as an opulent and prosperous mart, deriving support and wealth from

trades with foreign countries, faded away. The place was compelled to turn to agriculture for sustenance. This eventually proved in some degree successful. The surplus products of the soil were sent for the most part to Boston and Salem. Several pinnaces and ketches carried grain and beaver to those places, and brought back such foreign articles as the people here could afford to purchase. But at one time, in 1740, "the whole navigation of New Haven consisted of two coasters and one West India vessel." Five years later, the ketch *Speedwell* left this port for the Azores. The smallness of the commerce of that period is manifested by the fact that her cargo, which included "sixteen quarts of rum for the master," amounted to but £9 4s. 6d. New Haven then contained about 200 buildings and 1,200 inhabitants.

The decay reached its lowest point before the end of the French power in America. After the fall of Quebec and the cession of Canada to Great Britain in 1763, commerce somewhat revived; and the very next year, the brig *Derby*, of Derby, a vessel of forty tons, came here from Dublin, bringing a cargo of twenty tons of coals, and also thirty-eight Irish servants. This is the first record of the arrival of Irish emigrants in our town, and, I think, of coals.

The same year saw a diminutive brigantine, named the *Fortune*, sail for Martinique. She was owned and commanded by one who was at the time respected and trusted by his fellow townsmen, but who some years thereafter became known to all Americans as the traitor, Benedict Arnold. His name often appears in the Custom House records of those days. Adam Babcock and Benedict Arnold owned three vessels known as sea-going ships: *Fortune*, forty tons; *Charming Sally*, thirty tons; *Three Brothers*, twenty-eight tons. They were sailing, until the Revolution, to the French and English islands of the West Indies. Arnold's store was, in July, 1763, on Chapel street, "south of College Green," afterward near the corner of George and Church streets, and still later in front of the "Arnold house" in Water street.

At that time, New Haven vessels were sometimes sent to England and France. The McAulays sent their little schooners to Lisbon with wheat, to return with cargoes of salt and wine. There were some thirty foreign voyages a year.

The country near New Haven raised in those days large quantities of flax. The fiber was used in making linen at home, and the seed was exported to Europe. This seed was used largely as a medium of exchange.* Many advertisements in the *Journal* contain a statement that "cash or flax-seed is received in payment for goods." Captain Peter Bon-tecou, in his barque *Hawke*, forty tons, made several voyages to Cork, Ireland, with New Haven flax-seed for his cargoes. Others did the same. They returned by the West Indies, bringing thence their tropical products.

This route home has been known for nearly three centuries as the Southern Passage; and until

recently it was generally followed by ships bound westward from Europe.

The long depression seemed to be ending in the decade previous to the beginning of the Revolutionary War. The population and wealth of the town increased. New mercantile houses were established; larger and more costly vessels were used; exports, that did not exceed a few thousands of dollars in 1750, rose to the value of \$142,000 for the year ending May 1, 1774. These exports that year included 150,000 lbs. of flax-seed, 15,000 bushels wheat, 20,000 rye, 33,000 Indian corn, 2,000 oxen, 1,400 horses. The exports and imports were then nearly equal in value.

When the war broke out, commerce became extremely hazardous. In December, 1776, the brig *Liberty* sailed from this port and fortunately reached Martinique, where her master received almost a fabulous sum for her cargo. He returned in safety, and his success caused three other vessels to be fitted out for a similar voyage. But an English frigate captured them, and all were condemned.

Many of the vessels of the town were taken up the Quinnipiac, the Housatonic, and elsewhere, and there dismantled and laid up.

The war caused great privation. In 1779, President Stiles notified the students of Yale College, "that on account of the great difficulty in procuring bread and flour, the vacation would be extended a fortnight longer." Jacobs & Israel, the distillers, gave notice to the citizens that "they were prepared to turn all of their Corn Stalk Juice into Rum on shares or otherwise." That accommodating firm also offered to "distill any cider which families might have on hand."

During the Revolution, the commerce of New Haven, for the time then being, ceased.

The West India Islands had depended for an hundred and fifty years upon the American colonies for their supply of food. But they were compelled, by the Revolutionary War, to seek it at great cost in Canada and Europe. The people of those islands generally were in distress on this account for seven weary years. Our country, for the same reason, was destitute of all imported goods. The return of peace, therefore, forthwith restored commerce. New Haven so promptly entered into this exchange of commodities, that the departures and arrivals at our ports during the decade from 1783 to 1793 averaged seventy a year. The population of the place had risen, in 1787, to 3,820, and the registered shipping of the district was 7,250 tons. During these ten years many new commercial houses were organized, and many vessels were built in the three ship-yards of the town, and for the first time in its history New Haven was the proud owner of a full-rigged ship of one hundred tons. Commerce had become so important that a bank was necessary. Accordingly the New Haven Bank was organized, in 1792, with a capital of \$80,000; and soon after, the New Haven Marine Insurance Company, with a capital of \$50,000. The same causes produced, a little later, the New Haven Chamber of Commerce, with Mr. Elias

* *Connecticut Gazette*, July 29, 1763.

Shipman, President; and William Powell, Secretary. It held its weekly sessions in Ebenezer Parmalee's "front room on the first floor," for the use of which the Chamber voted to pay him eight shillings each night, he to furnish good candle light and good fire.

In 1790, there was need of a larger wharf, and the Directors resolved to petition the General Assembly to authorize "the setting up of a lottery to raise £3,000; the money, if received, to be used in repairing and extending the wharf." The Directors probably saw prospective dividends resulting from their action in this matter, and they directed Mr. Lyman, the tavern-keeper, "to increase hereafter at their meetings the quantity of his sling and toddy."

The commercial prospects of New Haven were exceedingly bright; but in 1793 the baleful effects of the French Revolution began to be felt. Two-thirds of the New Haven commerce derived its life from the West India Islands, and their waters were soon filled with the war vessels of the contending powers. The French were very destructive to New Haven vessels. From their seizures and confiscations arose those interests which have been known for over three-quarters of a century as "the French Spoliation Claims." For the destruction made by the French, our Government demanded compensation. The French made a counter claim, and charged us with disregarding the alliance between the two nations. We could not maintain the alliance without war with Great Britain; and this was strenuously opposed by President Washington. Finally a settlement was made by an "offset." France released us from the obligations of the treaty, and the Government of the United States promised to pay its citizens for the damage the French had done them. Our Government has never paid its citizens. The matter presents "a most shameful neglect of a sacred obligation."

The respect then shown to the American flag was very much less than it receives to-day. No place suffered more than New Haven in proportion to the capital invested in foreign trade. Nearly all the commerce of our port was with the islands of the Caribbean, and nine-tenths of it with the colonies of the contending powers. The slightest suspicion that an American vessel contained any English or French property made her seizure inevitable. She was sent to some port of the belligerents for adjudication, and adjudication generally meant condemnation. Within a few months after the outbreak of hostilities many New Haven vessels had been seized, condemned, and sold. In April, 1794, there were in the harbors of Antigua, Saint Christopher, and Barbados one hundred and fifty-two American vessels awaiting the decision of the British Courts of Admiralty. Eleven of these were New Haven vessels. There were, at the same time, in the harbors of Martinique and Guadaloupe one hundred and two American vessels awaiting the decision of the French Marine Court, and eight of them were New Haven brigantines. Great indignation and sorrow filled our town in May, 1794, when a small vessel from the West Indies brought

intelligence of the seizure of six New Haven brigs there, namely, the *Cygnets*, *Sally*, *William*, *Neutrality*, *James*, and *Anna*. These were filled with exceedingly valuable cargoes, and had been seized on their way to English West India ports by the French, and sent to Guadaloupe for trial. They were so effectually tried that only one was released. The others were condemned and sold.

The British and French cruisers in the Atlantic were so numerous, that many a neutral ship was boarded several times on a voyage to and from ports in the Caribbean. The New Haven brig *Anne*, for example, was boarded twice by French and thrice by British war vessels on her passage home from the Danish island of Santa Cruz. A French officer ordered his men to carry off nearly everything eatable on board of her, and when the captain asked what he and his people were to do for food, he was told by the French officer to "eat pine shavings," and was also informed that this juicy and nutritious diet "was proper food for Yankees." Fortunately for the vessel she was from a neutral port and afforded no pretext for seizure.

Captain Gad Peck, a veteran shipmaster and ship-owner of New Haven, was not so fortunate. He was captured three times while commanding as many different vessels. He owned one quarter of the ship *Mohawk*, built in 1793 at our Oliver street ship-yard. The other owners were mainly New Haven merchants. Soon after it became known here that the British had captured *Martinique*, the owners of the *Mohawk* loaded her with flour, and, under the command of Captain Peck, she was headed for that island. When near the end of the passage a large French privateer came in sight, gave chase, and captured her. A prize crew of a lieutenant and twelve seamen were put on board and ordered to carry her into Guadaloupe, about five days' sail from the place of her capture. The following night Captain Peck managed to converse with each of his crew, and it was arranged that the next evening they would retake the ship or lose their lives in the effort. Accordingly at eight o'clock, soon after the French watch had been sent below, Captain Peck (while conversing as well as he was able with the Frenchman in command) said: "I think" (or probably I guess) "I'll go below and turn in." The French lieutenant bade him a courteous "good night," and into the cabin went our New Haven captain. Knocking down the sentry who was stationed inside of the door, and grasping a broad-sword belonging to the officer, he gave the signal agreed upon between himself and crew, rushed upon deck, and seized the Prize-Master, who saw over his head his own sword in the hands of a desperate man, and so yielded at once. In the same moment the New Haven crew had overpowered the six men composing the French watch, as well as secured the hatches to prevent the other six from coming on deck, and forthwith the *Mohawk* was again under the command of her original master. The voyage to Martinique was abandoned, and putting her on the starboard tack, the ship was headed for St. Eustatius, which island was reached the fifth day after the recapture.

The news of Captain Peck's courage and achievement soon reached America, and gained for him much renown; and when he returned home, bringing his fine ship in safety into our port, and gave his fellow-townsmen a true account of the adventure, their admiration found expression in the old Anglo-Saxon style by giving him a "public dinner." A few weeks later he sailed again in the *Mohawk*, bound for a French island; but was captured by a British frigate (on suspicion of his having on board French property), and sent into Tortola, where an Admiralty Court was occasionally held. The cargo was confiscated, but the ship released. It may be that he saved his ship by having "a friend at court."

So many war vessels of the belligerents in the West India waters made commerce between America and the islands of the combatants too hazardous, and there was a necessity for a neutral port where our vessels could safely discharge their cargoes, and be themselves safe from capture.

The demand throughout the West Indies for American cereals was great in times of peace, and became, in those years of war, enormous. The body of consumers was vastly increased by the accession of the navies and armies of European powers. Over fifty thousand soldiers were stationed in the British islands for many years, and full as many in the French colonies. During the military and naval operations of the English against Saint Domingo, from 1794 to 1798, not fewer than twenty thousand British soldiers were buried. At different times during the war, Jarvis, Hood, Saint Vincent, Cochrane, famous hunters of Frenchmen, were with their fleets pursuing their enemy through the nooks and hiding-places of the West India waters. Nelson, with his powerful squadron of seventy-fours, was there only four months previous to his death at Trafalgar. And the French in those days were not far behind their foes, either in the number of ships or of men. Villeneuve was in Martinique with a splendid fleet of forty-five men-of-war. Most of these carried eighty guns each. Twelve thousand French soldiers, in addition to the seamen, were in the fleet wherever it sailed; and cruising there also was the veteran French Admiral Missiasay, with his flying squadron of ten fifty-gun frigates and 5,000 troops, the latter under the command of Count La Grange.

All these men had to be fed. The natural source of food to supply them was the United States; and hundreds of American vessels bent their course thither, running all risks of capture and confiscation in order to obtain the high prices paid for breadstuffs in the islands. American provisions were imported into Jamaica in 1800 and 1801 to the value of £105,881 for the use of the troops only, and to the value of £115,692 for the use of the navy; and far greater was the value of American provisions purchased for the army and navy at the headquarters of the Windward Islands in Barbados. The prices there were almost fabulous.

The New Haven vessels had their share in the transportation of these provisions, and large exportations were made, during the first years of the

war, from our port. The shipping of our district in 1800 registered more than 11,000 tons. Ships were unceasingly built to take the place of the captured.

At the commencement of the present century, New Haven had a considerable commerce with European ports. Our vessels imported costly cargoes of wines and brandy from Marseilles. They also brought ship-loads of rich French goods from Bordeaux. One vessel, the *Esther*, brought a cargo of claret wine and silks which paid a duty of nearly \$9,000. They brought hither from Cadiz several cargoes of wine, opium, oil, etc., and from London myriads of articles of British manufacture. Our ships at that time brought direct from England nearly everything that our city required from abroad. The maritime interests of the place rapidly advanced from 1800 to 1804. During these years we imported 781,620 pounds of tea; 518,000 pounds of coffee; 5,805,000 pounds of sugar; 1,596,938 gallons of rum; 197,681 gallons of wine; 38,600 gallons of gin; and 81,000 gallons of brandy. No wonder that the flip-bowls seen here and there in our ancient houses are so enormously large.

This enlargement of our commerce soon ceased. In November, 1806, Bonaparte issued an order of this kind: The British Islands are in a state of siege; all commerce or correspondence with them is forbidden. No ship coming from any English port or colony will be allowed to enter any port. All trade in English goods is prohibited. Any ship seeking by false declarations to evade this order is to be confiscated with her cargo the same as if British property.

England of course was not backward in making reprisals, and an order in Council was issued, January 7, 1807, forbidding neutral vessels to enter any port belonging to France or to her allies or under her control. Every neutral vessel violating this order is liable to seizure of ship and cargo. Still more destructive to neutral commerce was a second order in Council issued November 11, 1807. It had respect to all harbors and places of France and of her allies in Europe and the colonies, as well as of every country with which Great Britain was at war, or from which the British flag was excluded. It placed them all under the same restrictions as if blockaded by a British fleet. The response of Bonaparte was his Milan decree, that any vessel of whatever nation, that had been searched by a British ship, that had been sent on a voyage to a British port, or that had ever paid any duty to the British government, should be regarded as denationalized and treated as British. He supplemented this by the Fontainebleau decree, which ordered the destruction of all British property by burning or otherwise.

Then began the intolerable searching of American ships by British and French vessels-of-war. It continued till the close of our later and, we trust, last war with Great Britain.

The hostile cruisers captured American vessels almost within sight of Sandy Hook light-house and the shores of Cape Cod. Several large ships with

valuable cargoes from British East India ports, after having sailed half round the globe in safety, were captured by insignificant French letters-of-marque which ranged up and down our coast, boarding our ships and seizing those that had British clearances.

Our Government could not protect the commerce of the country nor properly resent the insults inflicted upon our flag. The navy had been meanly reduced to fifteen ships, carrying 366 guns only, the two largest vessels, the Constitution and the Constellation, having a battery of forty-four guns each, while the merchant marine measured 876,912 tons. At the beginning of this century it was the custom of nearly all our sea-going merchantmen to carry an armament of one to twenty guns each. But in 1805 Congress passed an act whereby armed vessels were forbidden to leave the ports of the United States, unless by special permission, under penalty of forfeiture. The Government sought to maintain peace by abandoning the right of the people to carry on even lawful trade with foreign nations.

In those years of severe restriction, our New Haven foreign trade was mainly with Saint Eustatius, one of the West India Islands belonging to the Dutch. Many of the curious and interesting articles of glass and pottery now owned by representatives of our old families, we are told on inquiry, "came from Statia." Half the fleet of our port was sometimes seen in the spacious harbor of that island. A venerable citizen of New Haven informed me, a few years since, when he was in his ninetieth year, that he counted one day, near the beginning of this century, thirty New Haven vessels moored together in that fine harbor. It was there that the American flag received its first salute from a foreign nation. The place was so important for only ten to fifteen years, and while it was regarded as a neutral port. In 1809, a British fleet under Admiral Cochrane, with a powerful body of troops under Sir George Beckwith, seized the island, and it was held by the British Government until the treaty of Paris in 1814, when it was restored to the Dutch, who have retained it ever since.

During those troublous times there was granted to each New Haven vessel sent into the Caribbean, a Municipal Letter, of which the following is a specimen. It was printed in English, French, and Dutch, and appended to the regular Custom House clearance. It would be deemed to-day as useless as it is obsequious. Thus:

Most Serene, Most Puissant, High, Noble, Illustrious, Honorable, Venerable, Wise and Prudent, Lords, Emperours, Kings, Republics, Princes, Dukes, Earls, Barons, Lords, Burgomasters, Schepens, Counselors, as also Judges, Officers, Justiciaries, and Regents of all the good Cities and Places, whether Ecclesiastical or Secular, who shall see these Patents or hear them read.

W., Samuel Bishop, Mayor, make known, that the Master of the Catherine, of 84 tons burthen, which he at present navigates, is of the U. S. of America, and that no subject of the present belligerent Powers has any part of or portion therein, directly or indirectly; and as we wish to see the said Master prosper in his lawful affairs, our prayer is to all the before named, and to each of them separately, where the said Master shall arrive with his vessel, they may be pleased

to receive the said Master with goodness, and treat him in a kind, becoming manner, permitting him upon the usual tolls and expenses, in passing and repassing, to pass, navigate and frequent the Ports, Places and Territories, to the end to transact his business, where, and in what manner, he shall judge proper.

In which we shall be willingly indebted.

(Signed) SAMUEL BISHOP, Mayor.

The clearance to which the above is appended is signed by George Washington and Edward Randolph, and bears date February 3, 1796. This style of sea-letter was used till 1812.

THE SEALING FLEET.

In the period of transition from the last to the present century, a prominent part of the maritime interests of New Haven was the sealers. The fleet was composed of fine, stanch vessels. They were large for that day, and full-rigged ships. None better sailed from American ports. Their commanders were the peers of any seamen on the ocean. They were manned by American sailors, most of them natives of our own town or county, who had shares in the ventures, and knew that their own individual advantage depended upon the success of their toil. Nearly every one looked hopefully forward to the day when he would command a ship or own a "snug" farm near New Haven. All were proud of their beautiful ships, which were as good as could be obtained, generally new, models of symmetry, having lines and dimensions that caused them to attract attention in whatever quarter of the world they were seen. There were not more than twenty vessels in the fleet. The names, dimensions and armaments of the most famous were:

	Tons.	Guns.
Neptune, ship	350	20
Oneida, "	223	16
Hope, "	200	12
Sally, "	236	16
Betsy, "	265	20
Huron, "	230	20
Augusta, "	280	20
Triumph, "	305	20
Zephyr, "	330	12
Polly, brig	210	6

Each of these sailed from New Haven, circum-navigated the globe, and returned to our harbor in safety. Each carried a crew of about forty men and boys, and also a surgeon, supercargo, carpenter, blacksmith and cooper. Each had an armament of six-pound guns, muskets, cutlasses, boarding-pikes, etc. These ships made voyages of twenty to thirty months. So great was the skill of their masters and crews, that not a vessel was lost, and but one suffered from an accident.

After leaving our port and the Sound, they sailed through the Atlantic to the Falkland Islands. There they remained several days, or longer if necessary, and men and vessels were prepared for the severe weather likely to be experienced in passing Cape Horn. As soon as they were safely around that stormy point they were headed for the Saint Felix Islands, the Galapagos, or even as far north as Nootka Sound. In the earlier days of the New

Haven sealing, they rarely sailed north of the Saint Felix group.

The seals were taken in this way: The men detailed for the purpose watched near the sandy beach till the seals at the proper time of the tide had left the water and crawled up to the dry sand. This the animals did in some places by scores and even hundreds. Then the men ran between them and the lower edge of the beach and dispatched them by a blow on the head. The skins of 2,142, by actual count, were taken from those that were killed by the men of the New Haven ship *Hope*, on the island of Juan Fernandez, at one tide.

As soon as the animals were killed, their skins were taken off and sent to the ship. These, after "breaming" (that is, removing the fat, which was used for fuel), were salted and packed in the hold of the vessel. After a large number of skins had been taken the ships sometimes sailed to the main land, where the pelts were sun-dried on the beach. There was, on the coast of Patagonia, a tract of land nearly two miles long, used by New Haven captains to dry the seal-skins taken in the Atlantic. It was pleasantly called, in those days, "the New Haven Green."

When the ships were laden, they sailed by way of the Sandwich Islands for Canton. Here the skins were sold through the American factories, and cargoes of tea and silks were taken on board, and with great joy the homeward voyage began, which was to end within Montauk Point.

There was much romance about those South Sea ships, which were "bound around the world." Many young men in the town were lured to enroll themselves in the companies that manned them. They did this to increase their worldly store and to see foreign lands; to be able to say to their friends at home that they had been "round the Horn," and to "the place where Captain Cook was murdered." Such a voyage, ninety years ago, was something to boast of in New Haven. Every ship that left our port for the Pacific carried representatives of the most respected families in the place. Those days shine in the history of American ships and American seamen.

The most eminent of the commanders of New Haven's East India fleet was Captain Daniel Greene. He was born in Boston, and came to our town at an early age. He was soon employed on a vessel sailing to the West Indies, and was successful from the first. Before he became of age, he commanded one of the largest ships sailing from our district. In his thirtieth year he took command of the ship *Neptune*, sailed for China, and made the most profitable voyage as yet recorded in New Haven.

On his return from Canton in the *Neptune*, he brought with him several curious Chinese paintings on glass. They were generally of a patriotic or Masonic type, and so captivated the eyes of many of his fellow-townsmen as to cause several persons to request him, should he return to China, to bring them duplicates. Some, however, wished alterations in the colors and figures, and so perplexed the Captain that he was obliged to call in a

friend, who was an artist, and also a deacon in the church, to consult with him about his commissions. After the artist had carefully inspected several of the paintings, and given his opinion as to the posing, coloring, and other particulars of those to be ordered, the Captain quietly presented to the Deacon's view two very elaborate pictures of a decidedly Oriental type, saying, "Deacon, what suggestion as to the color of these?" The pure-minded Deacon, more accustomed to criticize Amos Doolittle's patriotic engravings, was of course shocked. He closed his eyes, raised his hands in horror, and exclaimed, "How would I paint them? Black! Yes, black, Captain Greene! as black as black can be."

After the sealing voyages were discontinued, Captain Greene sailed often to the West Indies. While in command of the ship *Draper* he was overtaken, after a long chase, and captured by a French frigate. His vessel and cargo were confiscated and sold at one of the French islands.

The Captain was a rich man, and during the War of 1812-14, when our commerce was paralyzed, he invested extensively in the lands of the Western Reserve, intending to remain there, and pass his declining years in that part of New Connecticut. But he did what has so many times been disastrously done by ship-masters who have for a while retired from sea life, he undertook to make "one voyage more," which he said should be his last; and having made it, and returned to New Haven, he would, he said, take his family to Ohio (New Connecticut). He sailed from our port soon after the blockade was raised, embarking from a little wharf that stood in front of his house in Water street. His vessel, called the *Grace*, after a member of his family, was owned by himself. His eldest son was his first officer, and the Spanish Main was their destination. A few days after he sailed the entire coast of New England was swept by a violent gale, and as no tidings of Captain Greene were ever received, it is supposed that his ship foundered during the tempest. A monument erected to the memory of the father and the son, is to be seen in the old burying ground.

Other commanders of the sealing ships were Caleb Brintnall, of the *Oneida*, the *Triumph*, and the *Zephyr*; John Hurlbut, of the *Oneida*, on her second voyage to China; William Howell, of the *Betsy* and the *Draper*; Gilbert Totten, of the splendid ship *Constellation*; Amos Townsend, of the ships *Frances Ann* and *Clarissa*; Nathaniel Storer, of the ship *Sally*; James Ray, of the *Huron* and the *Hope*. All these were famous sea captains in their day.

Many New Haven merchants were interested in these voyages. The most prominent was Ebenezer Townsend. He was for more than half a century engaged in commercial undertakings from our port. Born here in 1742, he became early interested in foreign commerce, and was for many years the most extensively active merchant in the city. His ships were the largest, his cargoes the most valuable; and for many years, as a ship-owner, he was called "the fortunate man." He had been so suc-

cessful in his enterprises, that when one of his friends remonstrated with him for risking so much property as he did in sending his ship *Neptune*, in 1796, to the South Seas, he replied, "If all should be lost I shall have plenty left." He sent out the first of the New Haven ships that sailed into the Pacific. Daniel Greene was her captain.

In 1801 and 1802, Mr. Townsend sent his ships *Frances Ann* and *Clarissa* to the Spice Islands in the Indian Ocean, and they brought back valuable cargoes, which were unloaded in our city, stored in the cellar of his house on East Water street (previously the Broome house, and subsequently the Hoadley house), and in due time shipped to New York. The *Frances Ann* was so long on her voyage that Mr. Townsend had abandoned all hope of ever hearing of her again, but late in the spring of 1803 a strange ship—she had been purchased in New York and had never been in our port—was seen sailing up our harbor, causing much speculation as to her character. She anchored midway between Long Wharf and Tomlinson's Bridge, and thereupon Captain Townsend with his supercargo was rowed in a small boat from the ship to the Broome house, and these officers reported to the owner, Mr. Ebenezer Townsend, the safe arrival of his vessel from Batavia and Paulo Pinang, with a cargo of pepper valued at over one hundred thousand dollars, after a voyage of one hundred and ninety-five days.

Mr. Townsend had a pecuniary interest in many of the sealing ships besides the *Neptune*. He not only sent ships to hunt for the fur seals, whose skins were to be taken to Canton, but also others to bring the skins of hair seals to New Haven. One of his vessels, the *Sally*, came from the Pacific early in 1803 with 48,000 skins, which were sold to the tanners of the town and vicinity.

He imported many and valuable cargoes from the West Indies and from Europe, and for several years the duties on goods brought in his ships far exceeded in value those paid by any other three commercial houses in the city, "the Derby Fishing Company" alone excepted.

He died at his residence in New Haven at the age of 82 years, after a long life of activity and enterprise. He sleeps in the old cemetery.

Other owners of the sealing ships, or their cargoes, were Thomas Atwater, Henry Dennison, Elias Shipman, Thaddeus Beecher, Henry Daggett, Ward Atwater, the Cowleses, of Farmington; Thomas Painter, of West Haven; Ebenezer Peck, Enos Monson, Phelps & Sanford, Kneeland Townsend, and Elihu Mix, who died at Honolulu in 1804 on board the New Haven ship *Triumph*, of which he was part owner and supercargo.

Memorable days in the history of New Haven were those on which the first sealers left our port for their long and perilous voyages, as well as those on which they returned home after their protracted absence. Sometimes the business of the place was almost wholly suspended, and a large part of the people gathered at the wharf to see the departure of the ships; to give their friends a good "send-off" and afterwards a "welcome home."

The most famous of all those voyages was that of the *Neptune*. She was throughout a New Haven vessel, built at the Olive street ship-yard, measuring 350 tons, a "Great Eastern" for that day. She had an armament of twenty twelve-pounders, and a crew of forty-five young, active, sturdy New Haven County men, who generally belonged to respectable families of the town and vicinity. One of them, Mr. Thomas Howell, had been graduated at Yale College but a few months before the ship sailed. He was a classmate of the late President Day and of Stephen Twining. Captain Greene's first officer was Mr. Leverett Griswold; Mr. Driggs, of Middletown, was surgeon; and Mr. Ebenezer Townsend, Jr., supercargo.

Amidst the cheering of the citizens and the firing of cannon the sails of the *Neptune* were sheeted home, and with anchor weighed the ship sailed down the harbor, through the Sound, and was soon in the open sea, where a course was laid for the Falkland Islands, which were reached in due time. She remained there two weeks, and then steered for Cape Horn, which was soon doubled, and, for the first time, the Pacific was furrowed by the keel of a New Haven ship. Good fortune was found at the seal islands in collecting skins; and at Juan Fernandez several men were left, Thomas Howell being one, to collect and dry skins to fill another ship which the enterprising owner of the *Neptune* intended to send out the next year.

Having obtained her cargo, the *Neptune* sailed to the Sandwich Islands, and thence to Canton, where the great price of three and one-half dollars each was received for the 80,000 skins which the ship contained. Three months were required to discharge and reload the vessel. Then she was placed upon the homeward course for New Haven, bearing 3,000 chests of tea; 54,000 pieces of nankeens, costing \$24,000; a large quantity of silks, and 547 boxes of China-ware. She reached her port in safety on the 14th of July, 1799, after a passage of six months and two days from Canton.

The result of the voyage was most satisfactory, the profits astonishing even the shrewd projector himself—for Mr. Townsend received for his share one hundred thousand dollars, a vast sum in those days; the supercargo, son of the owner of the ship, received fifty thousand dollars; and all others interested had proportionate amounts. There were a considerable number who could say, "My ship has come in." Never was a vessel so heartily welcomed here as was the *Neptune* after her voyage of nearly thirty months.

A few days after her arrival, Mr. Green, the editor of the *Journal*, made the following report:

Last Thursday arrived the ship *Neptune*, Captain Daniel Greene, master, in six months from Canton.

This ship is owned in New Haven and Hartford, and is richly laden with silks, teas, and nankeens. We do not recollect to have observed more general joy diffused among our citizens than on the return of this ship, with the captain and his crew, after an absence of two years and eight months.

We join in congratulations to the owners, who are by this event receiving the just reward of honest enterprise; to friends and parents, whose hearts are gladdened at the return of friends and sons from a long, tedious and hazardous

voyage; and to our citizens at large, on this first arrival of so valuable an Indianman.

While we witness the general joy, we sincerely sympathize with the friends of Mr. Leverett Griswold, of this city, mate of the ship, who died on the homeward passage, a young man of very promising talents, aged twenty-three years.

The same newspaper published, a few days later, the following communication, written doubtless by Abraham Bishop, the Collector of the Port, and given to the public a few months before the presidential election of 1800. We should now call it a "campaign document."

Mr. Editor.—The ship Neptune, lately arrived from Canton, pays to the revenue of the United States about \$75,000 in duties.

This sum is at least \$20,000 more than the civil list tax of the whole State of Connecticut for any one year within the last ten years.

These duties arise on teas, silks and nankeens.

No man is obliged to buy either of these articles, and, of course, no man is compelled to pay any part of this sum.

Now, I beg to ask the farmers of our neighborhood, if they have any just reason to oppose a Government which obtains its revenues from luxuries? On reflection, is it not a fact of importance, that a single ship should pay more taxes than the whole taxable property of Connecticut, which by our grand levy appears to be about six millions of dollars?

A. B.

In the autumn of 1799 the Neptune sailed again on a sealing voyage and returned in safety June 29, 1801. She brought a cargo which paid \$35,000 duties; but the voyage was not a pecuniary profit, owing to the low price of the seal skins in Canton. The price of \$3.50 each in 1798 was far the highest ever paid to a New Haven ship. On the second voyage of the Neptune her 77,000 skins were sold for less than one dollar each.

The first voyage of the Neptune caused several ships to be purchased and fitted out for the same purpose. The Oneida, commanded by Caleb Brintnall, sailed in October, 1799. She made the voyage and returned to this port June 17, 1801, bringing a cargo that paid duties to the amount of \$27,540. Soon after the departure of the Oneida, the Betsy sailed, under the command of Captain William Howell. She was owned by Ebenezer Townsend and Captain Daniel Greene. They had purchased her in New York. She made the voyage in about two years, and brought home a cargo of tea and silks which paid a duty of \$44,135.74, the third largest ever paid in our district.

I may say here that the largest amount of duty ever paid by a New Haven vessel on one cargo was that of the brig Ann. She arrived from Liverpool soon after the close of the war in 1814, bringing a cargo of hardware only, consigned to some fifty merchants residing in every part of the State. The duty amounted to \$87,430.78. The next largest was that of the Neptune on her first sealing voyage, \$75,000. The third was paid by the Betsy, in 1801, namely, more than \$44,000.

Several other ships were sent to the Pacific about the same time, and for the same purpose. They all returned in safety. This fact is highly creditable to the commanders; for they had only imperfect charts, and nautical instruments not far in advance of Drake's astrolabe. Yet they found their way through almost unknown seas around the world.

The magnitude of the trade at that time between New Haven and China may be indicated by the fact that, in 1800, three ships, the Huron, the Hope and the Draper, paid into the depleted purse of Uncle Sam over \$60,000 in duties. Our good Uncle gained more by the several China adventures than did any one else, except those who were interested in the first voyage of the Neptune.

Another of these sealers was the Sally, of 236 tons and armed with twenty-four pounders, commanded by Nathaniel Storer. She took 45,000 fur seals and 8,350 hair seals. She found the Chinese market full of seal skins, and received only 87½ cents each. This was a great disappointment, for \$3.50 each had been expected. The master was obliged to make drafts at ruinous premiums on the owners in New Haven, and also on the Cowleses in Farmington, who were part owners. It is needless to say that the voyage was wholly unsuccessful.

Many houses and individuals had shares in these ships. The merchants of New Haven were not the only persons engaged in the enterprise. Hartford, Wethersfield, Middletown, East Haddam, Farmington, Derby, Litchfield, Milford, Branford, Stratford, were largely interested in several of the earlier ships; so too were New London and Providence. Thirty-six merchants in different parts of the State were owners of the cargo of tea and silks brought home in 1801 by the Sally. There were eleven owners of the cargo of the Betsy. The case was similar with other cargoes.

This trade continued vigorously until 1806, and at intervals until the War of 1812; but it was not, on the whole, remunerative. So many vessels were engaged in it from Salem, Providence, and Boston, as well as New Haven, as to fill the Canton market with seal-skins and reduce the price to a very low figure, and very soon these New England sealers nearly exterminated the seals. Only two or three of the New Haven ships made a second voyage.

The last voyage of this kind was made in the Zephyr, soon after the War of 1812. She was a beautiful ship of 330 tons, built at Middletown, whence she came to New Haven as soon as she was launched, to be fitted out for a sealer. She was commanded by that veteran navigator, Caleb Brintnall, who made more voyages to the Pacific than any other New Haven ship-master of his day. Interested in her were several New Haven and Providence merchants, who had determined to make one more attempt at sealing in the Pacific. She carried twelve twelve-pounders, two large swivel guns, muskets, pikes, etc. She had a crew of thirty-seven men. They were young men of Connecticut. Most of them had seen service on some privateer or other. They had shares in the venture, and were resolved that there should be no lack of hard work, care and watchfulness to make the voyage prosperous.

The vessel was thoroughly equipped when she sailed from our port early in the morning of October 25, 1815, with many citizens at the pier-head to see her departure.

She was a rapid sailer. When off Cape Saint

Roque she was chased by a swift French man-of-war, but she made fourteen knots an hour by the log with wind abeam, and ran the Frenchman out of sight.

Having entered the Pacific, the commander was greatly disappointed at finding no seals, though he visited all the islands where in earlier years they were so abundant. He resolved to find them, and sailed into the Northern Pacific, carefully searching the Galapagos, the Gulf of California, Guadaloupe, and other islands. His search was vain. He then consulted his officers, and thereupon determined to find seals, as he said, if he had to search the Pacific from Cape Horn to the North Pole. He steered for Nootka Sound, then almost an unknown region—to New Haven navigators at least.

Only a few days later the *Zephyr* encountered a tempest whose severity exceeded anything ever experienced by those on board. After an unsuccessful effort to make headway against the gale, the ship was placed before it, and for nearly twenty-four hours the fury of the storm increased. Throughout the night and the following day the sea ran so high and the wind blew so violently that it was perilous for the sailors to attempt to reach the yards. Sails were blown into ribbons. The sea poured into the cabin through the doors and broken dead-lights. The men were all drenched, and it was impossible to keep a fire in the galleys. During the second night the gale continued to increase, and many of the crew gave themselves up as lost. To lighten the ship, several of her guns, spars and casks were with great difficulty and danger thrown overboard. The vessel was under bare poles, and no one could any longer live on deck unless lashed there. Thus, in that almost unknown sea, this New Haven vessel lay reeling, plunging, and half submerged in the volumes of water that filled and swept the decks. Morning came at last, but with it no abatement of the tempest. The wind now veered to the north, caught the ship at an unfortunate moment, and practically dismasted her. In that dismal plight she remained until the following day. The storm then abated; the sea fell; the sun came forth; the wreck was partially cleared; the fires were relighted in the galleys; jury masts were rigged; old sails were bent upon them; and in this forlorn condition the voyage to the North was abandoned, and the *Zephyr* was headed for the Sandwich Islands. It was seventy-two days after the disaster, and thirteen and a half months after leaving New Haven, that she brought her discouraged and exhausted company to drop anchor in Kealakekua Bay, where Captain Cook had been murdered not many years before.

The ship was there refitted, and became once more the showy craft that had attracted so much attention while she was lying in our harbor. But she had now been absent nearly eighteen months at great expense and had earned not a dollar. The captain was desirous of retrieving the disastrous voyage, and made for this purpose what he considered a very advantageous arrangement with the King of the Sandwich Islands. The latter, a partially clothed savage, hired the *Zephyr* to cruise

around his islands for one year, her master to rank as admiral, and for this service he agreed to give a very handsome consideration. The contract was signed, and for twelve months the *Zephyr* was constantly cruising around the Islands. There were bright expectations on board, for my venerable friend, to whom I am indebted for these details, and who was a lad on board of the *Zephyr*, informed me that the commander anticipated a sum large enough to mend a broken voyage, "but which," my friend added, "never was mended."

The Hawaiian chief, at the time of Captain Brintnall's arrival, was fearing an attack from the warriors of a neighboring island. The reward promised to the captain of the *Zephyr* was sufficient sandal-wood to load the ship. This was a commodity of great value in China. The quantity received was six and a half tons! The savage violated his contract and paid almost nothing to Captain Brintnall for his arduous services throughout a whole year. In this breach of faith the king pursued a losing policy, for many of the American shipmasters who touched at the islands refrained for several years from making the customary presents to him, being offended at his bad faith in his dealings with the captain of the *Zephyr*.

When it became evident that no recompense was to be obtained from the king, the ship sailed for Canton, though she had no funds wherewith to purchase a cargo for New Haven. Consequently a freight was taken for a European port. Thence she sailed for Providence. She reached this latter place after a perilous passage, and an absence of three years from America.

The voyage was a signal failure, a very large sum of money having been lost in the venture. The seamen received little or nothing for their long and dangerous cruise. My respected informant told me that when his account was submitted to him he found himself indebted to the ship five dollars, but he was so desirous to reach home that he "argued not" (the debt, however, was forgiven him), but with his bag on his back he started on foot, and made good time in reaching New Haven. A few weeks thereafter he was again afloat. He has since, as owner and master of his ship, carried the American ensign at his mast-head into most of the principal ports of the world, and has done honor to his country, his State, and his native city, a worthy specimen of a New Haven shipmaster.

With this voyage of the *Zephyr* ended all commercial intercourse between our city and China. Several of the ships which had been employed in that interest fell into the hands of the French and English cruisers in West Indian waters, some were sold in New York, and the *Zephyr* was eventually employed as a whaler, and was seen at New Bedford in a good state of preservation not many years since.

Many pieces of blue and white china, as well as the plain white, having the initials of the original owners, to be found in some of the old houses of New Haven County, were brought here by the officers and men who navigated the vessels known as the old "New Haven China ships."

As related to the capture of seals, though somewhat later, there was another maritime interest of New Haven to which I may here briefly allude. In 1820, a number of merchants interested in foreign commerce formed a company, though not incorporated, to prosecute whaling in the North Pacific. Two ships were purchased, the *Henry* and the *Thames*. They were fitted and sent out in 1822, and preparations were made to build other ships for the same purpose. Large quantities of ship-timber were brought from the adjacent country and deposited at Tomlinson's Wharf, the site since occupied by Mr. Benedict's coal-yards, at the foot of Brewery street. The owners waited the return of their two ships before building others; and, sooner than expected, these vessels appeared in our harbor, filled with cargoes of oil and bone. But unfortunately for the enterprise, prices had fallen so low (to a point almost never reached before or since) that no profit was made. It became known that large fleets of whalers were fitting out at New London, New Bedford, and Stonington. The New Haven Company "feared that no whales would be left in the Pacific," abandoned the enterprise and sold the ships.

It was the New Haven whaler *Thames*, Captain Crosby, that carried, on her way to the North Pacific, the second band of missionaries who left America for the Sandwich Islands. These pioneers of the Christian civilization of the Hawaiian kingdom took with them three natives of those islands who had been educated here. They embarked from Tomlinson's Wharf, December 19, 1822, and after a safe and pleasant voyage reached their destination the next spring. The king, Kamehameha II, wrote the following welcome:

CAPTAIN CROSBY. Love to you. This is my communication to you. You have done well in bringing hither the new teachers. You shall pay nothing on account of the harbor—nothing at all. Grateful affection to you.

LIHOLIHO IOLANI.

Perhaps the day of the sailing of "the *Greata Shippe*," in 1645, was the only time in which our city has ever beheld such a manifestation of warm affection and kindly feeling as our people witnessed at the departure of these missionaries, who were leaving their country to toil for many years, and perhaps for life, in educating the inhabitants of those far off isles of the sea. They were not sent away with benedictions only. The sum of one thousand three hundred and fifty-four dollars was given them for their use after landing; and abundant supplies of provisions and other necessities were put in the ship for their relief and comfort during the long and dangerous voyage. The establishment of this Christian mission in the Sandwich Islands is most intimately related to the foreign commerce of New Haven. It was Captain Brintnall who brought Henry Obookiah, in 1808, from the harbor of Kealakekua, where Captain James Cook was killed in 1779. Henry was a bright youth, and soon learned the object of Yale College, and was found one day sitting on the doorstep of one of its buildings weeping because he was not able to acquire the knowledge there

imparted. The next year Samuel J. Mills wrote from New Haven to Gordon Hall, and, in view of Obookiah's case, suggested that missionaries should be sent to those islands. Henry's friend and teacher, Mr. Edwin W. Dwight, of New Haven, became the principal of a school for the instruction of Hawaiian youths and others of heathen birth. Five of the ten earliest pupils in his school at Cornwall were boys that had been brought from the Sandwich Islands. Subsequently the death and published memoir of Obookiah created a more general interest in those islands. Then came the offer of Hiram Bingham and Asa Thurston, students of theology, to commence a Christian mission there. Thurston was a graduate of Yale, famous for his athletic qualities and achievements, known to be, as Bingham also proved himself to be, well fitted to begin the work of turning the savage islanders into a Christian nation. So they and other Americans, with Hopu, Kanui, and Hanuri, three educated Hawaiians, were sent to the Pacific for this purpose in the autumn of 1819. Both Hopu and Kanui were brought to New Haven by Captain Brintnall at the same time that he brought Obookiah. These young men were natives of different islands of the group, and were indebted to the commerce of New Haven for the most romantic and interesting parts of their voyage of life, from which issued not a few influences and events of importance.

Retracing our steps to 1807, we find that the exports and imports of our district had been yearly increasing in value. For several years about that time the duties averaged \$150,000 annually, and every year full one hundred foreign-bound vessels sailed from our port. The value of trade increased, in spite of the heavy losses by seizure and confiscation of vessels and cargoes.

This increase of trade caused improvements in the city, which then contained about 6,000 souls. New streets were opened and old ones widened and straightened. A contract was signed to make Long Wharf solid and continuous to the end. The Green was inclosed by a "neat wooden fence." Many new brick buildings were erected, the side-walks of the principal streets were paved, and on every hand were seen evidences of increasing wealth and culture.

The foreign commerce of the United States was suddenly destroyed by an act of Congress of December 22, 1807, establishing an embargo, and the consequent instructions given by President Jefferson, January 7, 1808, to the officers of the revenue and the navy. Thus all foreign commerce was utterly prohibited, and all coastwise trade greatly restricted and embarrassed.

The chief object of the embargo was to punish Great Britain for searching American vessels and impressing American seamen. This had been done to such an extent, that in September, 1808, there were 3,218 American seamen forcibly detained in the British navy. These were more than twice as many as the 1,425 employed at the same time in the American navy.

The makers of the embargo hoped that it would cause great distress in the British West India Islands, whose food came mainly from the United States, and that this distress would compel the British government to accede to the American demand, "that American vessels should forever be exempt from search by British cruisers." The hope was disappointed. The islands suffered, but this did not do away with the search. The islanders did something to supply their wants. All American vessels in those regions were seized and forced to land their cargoes. The number of these may be inferred from the fact that thirty-one American vessels laden with flour and grain were lying in the Bay of Barbados when the news of our embargo was received there. They were all compelled to discharge their cargoes. Those islanders gave notice at once to all our people that cargoes of provisions could be landed there free of all cost to the vessels taking them, and these provisions might be sold for the owners. Premiums were offered to those ship-masters who should bring the largest cargoes of bread-stuffs. In a word, nothing was left undone to induce American merchants to send supplies to the West Indies. Commanders of British naval vessels were ordered by their government not to interrupt American vessels laden with provisions, cattle or lumber, bound for any British port, and custom-house officers were required to overlook the fact should clearances and registers of American vessels be irregular.

These great and manifold inducements made not a few ship-owners eager to obtain the fabulous prices of the West Indies for American cereals. In the early days of the embargo many vessels from Northern ports succeeded in getting to sea. Two brigantines from our city eluded President Jefferson's gun-boats, and sailed to the West Indies. They sold their cargoes of flour at St. Christopher's for \$54 per barrel, and made 550 per cent. profit. These two cases were New Haven's only ventures. The foreign commerce of the country was practically dead, and the coastwise navigation most dreadfully crippled. This was of course penury and starvation to many thousands of people, and the indignation of New York and New England was unspeakable, for in July, 1808, there were 666 American vessels shut up in New York to rest in idleness; in Boston, 310; in Baltimore, 335; in Philadelphia, 190; in Portland, 187; in Newburyport, 160; and in New Haven, 78.

The embargo soon caused great distress in our city. "Month after month passed away and not a sail was allowed to be unfurled in our lately cheerful and busy harbor. Not a ship was to be seen discharging her cargo at our wharves. The stores and warehouses of our merchants were well nigh deserted and empty. Their merchandise was valueless. The cheerful voice of the sailor and the hammer of the shipwright were to be heard no more. Their figures, as they scowled upon the wharves, or wandered listlessly along the streets, told too plainly that their occupation was at an end."

The case was no better in some other places. In Salem, with a population of 9,560 persons, 1,200

were daily fed at the public soup-house. The same thing was done in Portland as well as in our own town.

There were few citizens of New Haven in 1807 who were not either directly or indirectly dependent upon foreign commerce. About one hundred shipwrights were living in the place. Eighty-two vessels were engaged in trade with foreign lands. Thirty-two commercial houses in foreign trade were on Long Wharf and State street. It is no wonder, in view of the suffering caused by it, that the embargo was frequently called in the New Haven vernacular "the dambargo;" and it is not surprising that some of our merchants, having little or no business, held in constrained and depressing idleness, fell into evil ways. But an increasing use of stimulants only caused a loss of ability to withstand the depression.

The general indignation found utterance in a town meeting, held August 20, 1808, of which Elizur Goodrich was the moderator. It was unanimously voted that Elias Shipman, Noah Webster, David Daggett, Jonathan Ingersoll and Thomas Painter, Esquires, be a committee to prepare an address to President Jefferson, praying for a modification or suspension of the embargo laws. This committee prepared a long and earnest appeal, which clearly set forth the evils of the embargo, and entreated the President to use the power vested in him by Congress for the purpose, and immediately suspend the several laws imposing an embargo. The President replied on the 10th of September, saying, that no one knew better than himself the inconvenience caused by the embargo, but that the Legislature alone could prescribe the course to be pursued.

The consequence was, that our ship-owners dismantled their vessels and laid them up to await the advent of more propitious times. Many of our seamen went to the British Provinces and remained there until the embargo ceased. Others, who had families, remained and subsisted on the public charities.

Governor Trumbull, the General Assembly of the State, and Mr. Hillhouse, our representative in Congress, all exerted themselves to the utmost to effect a repeal of the injurious and obnoxious Acts of the National Legislature.

Early in 1809, the President proclaimed the embargo at an end, but announced that an act of non-intercourse would take effect on the 20th of May, by which British and French vessels would be shut out of American ports, and the laws of the embargo were to be observed until that day.

By the 10th of June the regulations of the new policy permitted a partial restoration of our commerce, and vessels that had been a long time "laid up," were loosed from their moorings, taken to the wharves and outfitted for sea. The four rope-walks of the town were busy again. The numerous mechanical trades which are so intimately allied to navigation found employment once more. The farmers of the adjoining towns brought their staples, which were readily purchased. In a word, the wheels of industry moved. In one month after

they were set free thirty-three vessels had been re-fitted, loaded, and sent to the Dutch and Swedish islands of the Caribbean, whence fast-sailing British and French schooners carried goods designed for the Windward Islands. Only a few months after our ships were released the American ensign was flying from the gaffs of New Haven vessels in the ports of Saint Petersburg, Cronstadt, Hamburg, Lisbon, Cadiz, Bordeaux, Liverpool, London, Cork, Madagascar, along the Spanish Main, and in the far distant ports of Paulo Penang, Batavia and Canton. Some of these vessels were carrying freight for New York merchants, but far the greater part were making their voyages under the direction of their New Haven owners.

But the non-intercourse and non-importation acts caused great bitterness of feeling throughout New England. Though different from the embargo, they were galling shackles upon the limbs of commerce. They would not permit an American vessel to sail for a British West India colony, nor a British vessel to bring the produce of the islands to an American port. Great Britain of course retaliated, and American ships could not receive cargoes of the produce of British islands or colonies in any of those places, unless they had come there laden with the produce of the United States. It was not until May, 1810, that these oppressive acts ceased to be enforced.

As soon as they were once more free, New Haven ships were sent to the Windward Islands. There was great eagerness to see which of the numerous vessels in our harbor could be first made ready to proceed on a voyage. The ship *Julius Cæsar* was the fortunate vessel, followed three hours later by the bark *Maria*, Captain James Goodrich.

For the next two years our commerce with all the British West Indies was extensive, and generally successful. Many ship-owners, tempted by the enormously high prices paid for American produce in the blockaded ports of the French and the Dutch West Indies, endeavored under cover of night to run through the blockade. They succeeded in a few instances, but they often paid a heavy penalty, losing their vessels and cargoes by capture and confiscation. This was the fate of the fine new brigs, *Mercury*, *Julia*, and *Argo*, of this port, all of which were captured the same day by the same frigate, sent to Jamaica, and confiscated, to the great loss of their owners.

The autumn of 1810 brought the delightful news that the French Government had revoked the Berlin and Milan decrees, which had caused the loss of many New Haven vessels. This repeal increased our foreign commerce. Our merchants became owners of vessels of larger dimensions than those of earlier days. Many new ships were built here, and others were purchased elsewhere and brought to our port for registry.

The "Derby Fishing Company" was organized January 15, 1807, with a capital of \$50,000. This was soon increased to \$200,000, the increase being allotted in shares of \$25 each. The stock was owned in New Haven and Derby. Several New Haven men were directors, Mr. Ebenezer Town-

send being the most prominent. The Company fished on the Newfoundland Banks, took the fish to Europe and the West Indies, and brought home the products of those countries. Several of its vessels sailed regularly to Lisbon and to ports in the Mediterranean, returning to New Haven with cargoes of wine, oil and salt. The Company used the latter in preparing its fish.

The duties which it paid for several years were equal to those paid by the three largest houses of the port. Among its handsome vessels were the *Victor*, *Naugatuck* (which disappeared at sea), *Charles*, *Housatonic*, *Lark*, *Sally*, *Patriot*, *Derby*, and *Keziah*. This latter ship, in 1810, brought sixty Irish emigrants to New Haven direct from Belfast.

After a few years of prosperity the tide ebbed. Several of the ships were lost at sea, others were seized and sold by the British and the French, goods were sold to men who could not pay for them, and in the summer of 1815 the Company failed. During its first years its Directors voted its President a salary of \$1,500 a year. Their vote made it, the last year, six and a quarter cents!

On the 4th of April, 1812, President Madison laid an embargo on all vessels for ninety days, under a penalty of twenty thousand dollars for each vessel that sailed to any foreign port. Soon after came rumors that war between the United States and Great Britain was probable. Our merchants were among the earliest to order their ships to return home with such cargoes as they could obtain in the ports where they chanced to be. One ninety-ton brig brought from Saint Martin's gin and sugar only. Several New Haven vessels brought from West India ports exceedingly valuable cargoes.

The declaration of war was made by the President, June 19, 1812. The Governors of Pennsylvania, New York, and most of the New England States issued proclamations and appointed days of fasting and prayer. A few of our ship-owners ventured to send their vessels to the French West Indies; but commerce generally ceased. Several of the smaller vessels were taken up Dragon River as far as North Haven for safety, and there dismantled.

There were more than six hundred seamen then living in New Haven. Some of them entered the navy; some manned privateers, fitted out here and elsewhere; and others formed themselves into a company known as the "Ring-Bolt Guard," which did good service in assisting to build the rude fortifications on Beacon Hill. A few had charge of the Block House at the extreme end of the pier, and some were on the gun-boats that patrolled the lower part of our harbor at night to prevent the patriotic citizens of our town from carrying supplies to the British squadron blockading the Sound at its entrance.

As soon as the war began, the cruisers and privateers of both nations swarmed on our coast. In the first three months of it the British seized one hundred and eighty-five vessels. They sent 109 to Halifax and Bermuda, burned 22 at sea, lost 7 at sea, released 33, and had 14 retaken by Americans. Only four of all these were New Haven vessels.

During the same three months our countrymen captured precisely the same number of British vessels (185). Of these 116 were sent into American ports; some of them were exceedingly valuable prizes.

Several privateers sailed from New Haven, but they generally came home poorer than they went out. Among these privateers were the *Quinnipiac*, *Saucy Talk*, *Teazer*, *Wasp* and *Actress*. The *Actress* was commanded by John Lumsden, captured by the *Spartan*, and sent to Halifax. The *Holkar* came here from New York under command of Captain Rowland, in order to enlist sixty men to complete her crew of one hundred and sixty. These were soon selected and shipped from New Haven and the adjoining towns. This privateer made many captures, but none of great value. From one she set free two hundred convict women bound to Botany Bay. She was at length captured by the *Romulus* and sent to St. Helena. The *Sabine* was manned in large part by New Haven sailors, and did good service. She captured the *Countess of Harcourt* in the British Channel, off Dover—one of the most valuable prizes captured during the war. A part of the crew of the *Sabine* rowed in a whale boat all the way from Charleston, S. C., to New York.

Soon after the war began, the British government gave notice that neutral vessels might enter certain blockaded ports of the United States. New Haven was one of these ports, and for several months Spanish, Swedish, Portuguese, Norwegian and even Russian vessels crowded into our harbor. They all came from the West Indies, except a few from Lisbon. Many of them were British and some American vessels in disguise. This so-called neutral trade was so extensive, that in one day, July 10, 1813, sixteen foreign ships entered and twenty cleared at this port.

This trade soon attracted the attention of President Madison, and on the 20th of July he sent to Congress a confidential message recommending an embargo. The House approved of it by a vote of eighty to fifty. It failed in the Senate. The vote was sixteen to eighteen.

This attempt to destroy all trade with foreign countries roused New England, and caused the celebrated "Hartford Convention," which met on the 15th of December, 1814. Its aims were formerly supposed by some persons to be treasonable, or at least unpatriotic. But this charge was not brought against Isaac Hull, a New Haven County man, whose exploits, as commander of the *Constitution*, have never ceased to be the subject of history and song. Some of the choicest treasures of the New Haven Colony Historical Society are various articles that were formerly the personal property of the famous commodore.

Many interesting events sprang from the war and the blockade, and the movements of privateers and other vessels in those perilous times. Such, for example, was the capture of the New Haven packet *Susan*, Captain John Miles, by the British brig *Dispatch*, and the fruitless attempt to recover her by the *Eagle*, Captain Lee.

There was much suffering in New Haven, especially during the winter of 1814-15, on the part of many of those who had been dependent on the sea for their livelihood; but relief came on the 13th of February, 1815, with the welcome news that a treaty of peace between Great Britain and the United States had been signed at Ghent on the 24th of December, 1814, and that it had been ratified on the 30th of the same month by the Prince Regent. The treaty was extremely gratifying in America and most unpopular in Great Britain. Within an hour after the news reached New Haven the church bells were rung; cannon were soon fired on the Green; at night the illumination of the city was complete—there was not a house without its candle at every window—and the rejoicings extended in many ways for nearly a week.

The return of peace was a priceless benefit to the people generally; but it caused so sudden a depreciation of prices that many commercial houses were swept away by the rapid ebb. Tea fell a dollar a pound in one day, sugar from twenty-six and a half to twelve cents a pound, tin from \$80 to \$25 per box, and specie from twenty-two per cent. to two per cent. premium. United States six per cent. stocks rose from seventy-six to eighty-eight per cent., and bank shares throughout the country in similar measure.

Many of our New Haven merchants had considerable stocks of imported goods; but nearly all maintained their credit, and speedily made preparations for renewing their relations with foreign ports.

There was a recurrence of the activity which followed the repeal of the embargo and non-intercourse acts. Ships were brought from their moorings. Twenty-four sea-going vessels were taken to the wharf in one day, and many of them were quickly sent on voyages to various ports of Europe, the West Indies, and the Southern States of our own country.

Various restrictions, hindrances, discriminations and needless burdens to commerce were maintained by the Governments of Great Britain and the United States for several years after the war. Indeed these unwise hostilities did not cease until the latter part of the year 1830. But commerce in the main resumed its way.

Before closing this chapter, it may be proper to recall the names of the men who were engaged in the foreign commerce of New Haven during those troublous times, and employed more than one hundred ships, whose keels furrowed every sea on their peaceful missions, and furnished the means of livelihood to many hundreds of American seamen and their families. Prominent among these merchants and shipowners of our city were

Elnathan Atwater.	Kidston & Bishop.
Ward Atwater.	Samuel Langdon.
Walter Buddington.	Birdseye Norton.
John C. Bush.	Aaron N. Ogden.
Bradley & Mulford.	Thomas Painter.

From this period (1815) till the present, the foreign commerce of New Haven has steadily in-

creased, and the capital now invested in ships and trade with foreign countries is greater than at any time in the history of our city. Much of the commerce is transacted through New York, but the capital is owned and kept here.

Among the merchants who have been engaged in foreign commerce since the war with England in 1815, are the following, most of whom have been interested with the various West India Islands and South America.

Armstrong Brothers.
P. P. Avery & Son.
Henry Beecher.
J. A. Bishop.
Timothy Bishop.
James Clark.
Joseph N. Clarke.
Eben H. Collins.
Samuel Collis.
Henry Daggett.
Lockwood DeForest.
Shipman & Dennison.
R. M. Everitt.
Jehiel Forbes.
Samuel Forbes.
N. H. Gaston.
James Goodrich.
Ammi Harrison.
Justus Harrison.
Abram Heaton.
James Henry.
Simeon Hoadley.
Elias Hotchkiss.
Ezra Hotchkiss.
Russell Hotchkiss.
William S. Hotchkiss.
Hotchkiss Brothers.
Hull & Foote.
Frederick Hunt.
James Hunt.

Samuel Palmer.
Ebenezer Peck.
Gad Peck.
Peck Brothers.
Anthony Perit.
Frank G. Phipps.
Enos A. Prescott.
Harry Prescott.
Prescott & Sherman.
Elihu Sanford.
William Sheffield.
N. F. Thompson.
Isaac Tomlinson.
Gilbert Totten.
Theron Towner.
Caleb A. Townsend.
Ebenezer Townsend.
William Townsend.
Wm. & Wm. B. Townsend.
Henry Trowbridge.
Stephen Trowbridge.
H. Trowbridge's Sons.
H. Trowbridge's Sons & Dwight.
Smith Tuttle.

Thomas & Henry Ward.
Noah Wheedon.
Chauncey Whittlesey.
Thomas Woodward.

The coastwise commerce consists chiefly in bringing lumber and other building materials from Maine and from the Western and Southern States, and, since the change from wood to anthracite for the production of heat, in conveying to our wharves

the coal with which we warm our dwellings and drive the machines in our shops.

The lumber interest of New Haven is of great magnitude, and to prosecute it requires a large amount of capital. The timber is brought here from our own and Dominion ports, and occupation is given to a large fleet of vessels. Many houses are engaged in the trade, some of whom have for many years been importing all descriptions of lumber.

Of all the articles of domestic commerce, no one item is as great in value, and none gives so much employment to vessels as coal; and though the rates of freight are low, still large and expensive vessels are constantly built to bring the immense quantity required for consumption in and about New Haven.

Not many years ago, a cargo of 150 tons of coal was called a good sized shipment. Now one can see cargoes of 1,500 tons discharging from the ships at the various docks about our water front. The total importation of this article is not far from a million tons yearly.

Other importations are, rags in large quantities from Egypt; salt from Spain and the West Indies; plaster from Nova Scotia; iron, hardware, carriage-makers' materials, and other commodities from England.

As before stated, the commerce of our port is in a very satisfactory condition, and will doubtless continue to increase. The Government is doing a great work in deepening the harbor channel, and in the splendid system of breakwaters which are now in course of construction near the mouth of the harbor; and the thanks of our people are due in a great measure to the unceasing efforts of our enterprising townsman, Charles H. Townshend, who, having seen the splendid results brought about in European harbors by this system of breakwater, has done good service by interesting the Government authorities in the New Haven harbor.

BIOGRAPHIES.

THOMAS RUTHERFORD TROWBRIDGE

bears the names of two of the primitive settlers of New Haven Colony—Thomas Trowbridge and Henry Rutherford. Born in this city on July 17, 1810, he completed his education at Partridge's Military Academy at Middletown, Conn., and then entered the counting-house of his father, the late Henry Trowbridge.

From that period (1826) till the present (1886), over sixty years, Mr. Trowbridge has been, with the exception of occasional absences in the West Indies and elsewhere, always at his office in the unpretentious hereditary counting-room of "The Trowbridges on Long Wharf." He is emphatically a merchant, of far-seeing and wide views, and though large and important interests in other directions demand much of his time, he still prosecutes extensive commerce with the various West India Islands in company with his sons and grandsons.

Mr. Trowbridge has often been obliged to decline positions of high trust in his State and City, contenting himself with his own affairs and the numerous family trusts which he has guarded for many years.

His record during the War of the Rebellion is an enviable one. He was a friend of the soldier and of the soldiers' families, always ready to respond to the constant calls upon his purse and sympathies.

It was at his suggestion that the Mechanics' Bank (of which he has been a valued Director for many years) tendered the use of \$50,000 to Governor Buckingham when the days were dark and the Union in danger.

HENRY TROWBRIDGE.

was the second son of Henry and Harriet (Hayes) Trowbridge, and was born in New Haven April 22, 1816.

Thos. A. Pindle

Henry Bowditch

E. H. Pemberton

During his minority he entered his fathers' counting-house, and on becoming of age was admitted as a partner in the house of H. Trowbridge, Son & Dwight, a house largely and prosperously engaged in the West India trade.

On the dissolution of that firm, by the withdrawal of Mr. Dwight in 1847, he became a member of the house of H. Trowbridge & Sons, who succeeded to the business of the older firm, and, in 1849, on the death of his father, he and his three brothers established the firm of H. Trowbridge's Sons. He continued an active partner in this firm until his death, May 28, 1883.

His well-earned reputation for sagacity, integrity and practical efficiency, led him to various positions of trust and distinction in social life. For forty-five years he was a director (fifteen of which he was vice-president) of the New Haven Bank, and both in the Town and City of New Haven he was called, from time to time, to places of active and more or less responsible service.

He united himself with the First Church in New Haven, May 31, 1840, by a public profession of his religious faith, and continued a loyal and active member of this church till his death.

In more private life he was gentle and quiet in manners, sympathetic and genial in his companionship, and eminently domestic in his preferences and habits.

He was twice married. His first wife was Miss Mary W. Southgate, a granddaughter of Noah Webster. The children of this marriage were five daughters, and one son who died in early boyhood. His second wife was Miss Sarah C. Hull, daughter of Edward Hull, Jr., of Brooklyn, N. Y. Of her three children, but one (a son) survived his father. In memory of the other two, a son and daughter, he founded the Reference Library in the Theological Department of Yale College, a hint for which he obtained from observing a somewhat similar institution in England.

This tribute of parental affection well illustrates the general tone and tenor of his life, and attests his habits of quick and appreciative observation, his practical forecasting judgment, his elevated taste, and his Christian beneficence. It has thus most undesignedly, yet most fitly, become a lasting monument of his personal character and worth.

EZEKIEL HAYES TROWBRIDGE.

Among the representative and successful business men of New Haven, none better deserves a notice than Ezekiel Hayes Trowbridge.

He was the third son of Henry and Harriet (Hayes) Trowbridge, and was born in New Haven April 21, 1818, and has always resided in that city.

At an early age he entered the counting-house of his father, who was engaged in the West India trade, and there received his first ideas of business, and was by him instructed in those high principles of integrity, honor, and thoroughness of execution which have ever characterized him. He learned that to be successful as a merchant it was neces-

sary to master thoroughly the details, as well as the general principles, of business, and has always had before him the motto, that "Whatever is worth doing is worth doing well," and has acted up to this principle.

At the age of nineteen he was sent to the West Indies to familiarize himself with that part of the business, taking with him a full power of attorney from the house to transact important matters intrusted to him. On arriving at his majority he was admitted as a partner into the firm of H. Trowbridge, Sons & Dwight, afterwards H. Trowbridge & Sons; and, on the death of his father, in 1849, the firm of H. Trowbridge's Sons was formed by his three brothers, Thomas R., Henry, Winston J., and himself.

An active member of the firm, he pursued the business, an eminently successful one, with all the ardor and energy which a man of strong constitution, great determination, hopeful temperament, and a mature judgment could do. He remained an active partner until May 1, 1885, when, owing to the death of his brother Henry two years previously, and to the multiplicity of his private affairs requiring his personal attention, he, with his only surviving son, E. Hayes Trowbridge, Jr., retired from the business.

Although devoting himself with untiring energy and ability to the best interests of the firm, he has been called into many positions of trust, being largely interested in railroads, banks, and other corporations.

In 1855, he, with others, organized the Elm City Bank of this city, now the Second National, and has been and still is, an active and influential Director in that most successful institution. He is a Director in the New York, New Haven and Hartford Railroad Company, which position he has held for the past twenty years, and by his far-sighted judgment has been of great service to that large corporation, as well as to the other organizations comprising its system, in each of which he still remains a director. He is Vice-President of the Shore Line Railroad Company, and holds official positions in other corporations, where his business sagacity and wise counsel have been beneficial to their successful advancement.

In the execution of all these important public and private trusts his ardent zeal for success has always been regulated and controlled by his most scrupulous regard for honest and honorable management.

Mr. Trowbridge married, June, 23, 1840, Sarah A., daughter of Zelotes and Eliza Atwater Day of this city, of good New England ancestry. They have had five children.

He is a loyal member of the First Congregational Church, which he joined in 1842, and is a liberal contributor to charitable objects.

In politics he has always been a Whig and Republican, never seeking or holding political office, and was a staunch supporter of the Government by act and pecuniary aid during the Rebellion.

Mr. Trowbridge is a man of domestic tastes, social in his disposition, positive in his character,

warm in his friendships, careful and considerate in his dealings, and successful financially.

ELIHU LEONARD MIX,

the son of Elihu and Nancy (Attwater) Mix, was born in New Haven on the 14th of May, 1807, and was baptized in the Centre Church as Leonard Mix.

In the following winter, on January 16, 1808, Mr. Elihu Mix died suddenly at the Sandwich Islands, while he was the supercargo and part owner of the New Haven sealing ship *Triumph*. It is supposed that he was poisoned in revenge for the interest that he had taken in bringing two natives to this country to be educated. These men, Henry Obookiah and Thomas Hooper, came, however, to the United States in the ship *Triumph*, were trained in our schools, and the latter, Thomas Hooper, returned to the Sandwich Islands with the first missionaries in 1819. Henry Obookiah died while a member of the Mission School at Cornwall, Conn.

After his father's unfortunate fate, the boy Leonard received the additional name of Elihu, in commemoration of the parent thus suddenly taken from him. He obtained an education at the Hopkins Grammar School, and at the Lutheran Academy at Nazareth, Penn.

When fifteen years of age he began his long mercantile career in the capacity of a clerk in New Haven, but after three years he removed to New York and entered the employ of Eli Hart & Co. This firm was largely interested in the Western commission business and controlled a large trade in flour. When the Erie Canal was completed in 1826, they established the line of tow-boats or barges on the Hudson River which superseded the large Albany sloops. One of the elaborate ceremonies that signaled the final opening of the Erie Canal, was the bringing of a barrel of Lake Erie water from Buffalo to New York, and the mingling of that water with the briny waves of old ocean. This barrel of water was carried from New York City to Sandy Hook on board the ship *Hamlet*, of which Mr. Mix's brother was commander and part owner. As one of the assistants in these solemn festivities, Mr. Mix received an appropriate medal, neatly inclosed in a cedar box, and this interesting token is still in his possession.

In June, 1825, soon after entering the service of Eli Hart & Co., Mr. Mix was transacting some business for his employer at the Mechanics' Bank in Wall street, and was paid, by mistake, one thousand dollars too much. This sum he promptly returned, and, in acknowledgment of his unwavering integrity, the cashier of the bank, Archibald Craig, gave him a gold medal suitably inscribed—a valuable testimonial to an act of rectitude. Soon after the power of attorney for his employer was given him, which he retained until he went into business on his own account. Mr. Hart became his firm friend and always assisted him greatly.

While he was still a clerk for E. Hart & Co. the New York "flour riot" of 1830 occurred. That

firm was holding a large quantity of flour for the millers of Rochester, when the mob, angered by the effort to raise its price, broke into their storehouse situated in Washington street, near Cortlandt, and rolled hundreds of barrels out into the street. There they were broken open and the flour carried away. The tumult was quelled only when the military were ordered out, but the city was obliged to pay for the loss sustained.

May 5, 1829, Mr. Mix married Miss Ann Maria Barney, daughter of Captain William Barney, of this city. Captain Barney was in business in Peru, and therefore when Mr. Mix became interested in foreign commerce his attention was naturally called to South America. Close application to his increasing and prosperous business so impaired his health that he was constrained to seek the benefit of a sea voyage for himself. Purchasing and freighting the bark *Express*, he sailed for the Pacific. The captain disliking to double the Horn, deemed it advisable to pass through the Straits of Magellan. When off Port Famine, in the Straits, they observed the flag of Chili flying on shore, and stopped to exchange civilities with the commander of the post. It was a penal settlement which had just been established by the Chilian government, and the *Express* was the first foreign vessel to discover its existence. The passage through the Straits was slow and perilous. Finally, at the Western entrance, near Cape Monday, they anchored for the night. At midnight a terrible gale arose, and on the next morning, April 30, 1844, the ship parted both anchors and drifted upon the rocky shore. In a narrow passage between two rocks she stuck fast, and there she left her timbers. Mr. Mix and his men escaped to shore; built a house under the shelter of the rocks; secured the provisions and cargo from the wreck and prepared to spend the winter. The Chilian commander at Port Famine, on information of the misfortune, sent six soldiers to Mr. Mix as a guard against Indians, with the advice to shoot any natives who came near. This summary policy Mr. Mix refused to adopt, but when the Fuegians stole the axes and tools with which he was building a boat, he chased them to their village and captured a number of their women, in return for whom the Indians were glad to surrender the missing property. After several months Mr. Mix was taken on board a Chilian transport, and was eventually landed at Valparaiso, from whence he made his way to Lima. Mr. Pickett, the U. S. Minister to Peru, made him the bearer of despatches to the United States Government, and Mr. Mix returned home *via* Panama.

Landing at Savannah he proceeded to Washington and delivered his despatches to Hon. John C. Calhoun, and then returned to New York. He reached home on the last day of the year 1844, and was welcomed as one restored from the dead. Subsequently Mr. Mix re-engaged in business in New York City in the Western trade, and steadily followed his vocation with honor and success through a period of twenty-five years. In 1868 he retired finally from business, having obtained a well-earned competence, and maintaining through all

Clinton L. May

Rich^d. M. Everitt.

his life that which is better than riches, a good name.

In 1864 he made a summer residence of the Stone Cottage at Westville, the ancestral property of his wife, having been built in the last century. When he threw business cares entirely aside he determined to make this his permanent home, and there he has since remained, a venerable citizen, honored by the community, still watching with all interest the unexampled growth of our national industries, which he knew in their infancy, and which he has labored all his life long to promote.

In 1830 Mr. Mix became an attendant at St. Thomas' Church in New York, where Dr. Hawks was the rector, and upon Mr. Mix's return from South America he was elected a vestryman. For fifteen years, until he removed from the city, he shared in the continual prosperity of that church and contributed thereto; and when its new and costly edifice, at Fifth avenue and Fifty-third street, was consecrated in 1883, Mr. Mix was present, the only surviving member of the old St. Thomas' Vestry. Both before and after the removal of the church from its old to its new home, Mr. Mix was the Treasurer of the Church Society. He was also for fifteen years one of the Wardens and Vestrymen of St. James' Church at Westville, but finally returned with his family to worship at Trinity Church, where, in former years, both his wife and himself had been confirmed.

Mrs. Mix died at her home in Westville, December 1, 1881. For fifty-two years she had walked side by side with her husband, and had borne him ten children, of whom four died in infancy, and one, Elihu, Jr., attained to man's estate, and died at Lambayeque, Peru, where he was the United States Consul.

Mr. Mix was for many years a Director in the Hanover Fire Insurance Company of New York, one of the companies which bore the brunt of the losses by the great fires of Boston and Chicago. In many other corporate enterprises he has taken an active interest. He has also been able to travel for pleasure, as well as for business, and while in Europe with his family was admitted to an audience with Pope Pius IX, and was particularly pleased with the benignant bearing of His Holiness.

He has now in his possession a most interesting relic of colonial times, a silver quart tankard, which has long borne the name of "The Attwater Tankard." It has been handed down as an heirloom from generation to generation, and is, by custom, always retained by the eldest of the family. Thus Mr. Mix inherits it from his grandfather, Thomas Attwater. In his boyhood days the Attwater tankard was always brought out at Thanksgiving and Christmas time, filled with flip, and passed around from mouth to mouth. Family tradition has sought to derive the origin of this tankard from a mysterious treasure-trove of silver concealed in a keg of nails. The nails were supposed to have been bought in Boston in the latter part of the seventeenth century, and used in the erection of the Attwater homestead in Fleet, now State, street, where the Attwater Block now stands. It is certain that,

at a later day, a member of the same family, Mr. Jeremiah Attwater, did find a sum of silver money in the middle of a keg of nails, and gave a portion of it by will, in 1732, to procure a baptismal font for the Centre Church.

Mr. Mix's mercantile career has been a most eventful one. He is a survivor of the old-time race of traders who sent the United States merchant marine into every sea, and covered two oceans with the stars and stripes. His commercial interests were not only local, but international. His dealings, whether at home or abroad, have been scrupulously exact and prompt. Quickly observant and steadily persistent, he has accomplished well his life-work, and has been wise enough to devote his later years to the rest and relaxation which he has richly deserved.

RICHARD MANSFIELD EVERIT

is descended on his father's side from one of the earliest settlers of Long Island, in the defense of which his grandfather was engaged in the War of the Revolution, and was taken prisoner. On his mother's side he is descended from Richard Mansfield, who came to New Haven in 1639, and was a man of prominence in the colony.

The subject of this record was born April 9, 1824, on what is now Grand street, a short distance east of the Barnesville or Mill River Bridge, on the property which for several generations was owned by his maternal ancestors, from whom, in marrying into the family, his father purchased it. Like nearly all the New Haven boys of the time, he attended the Lancasterian School, under John E. Lovell, until about twelve years of age, when for a while he was a pupil of S. A. Thomas, on the corner of Wooster and Olive streets, but completed his school education at the Fair Haven Academy, an excellent institution, under Joshua Pearl.

He prepared for college, but being taken sick at the time for entering, he was prevented from so doing, and instead entered upon a business career. On February 1, 1841, he began as a clerk, under the late Charles H. Oaks, at the corner of George and State streets, with whom he remained nearly five years, during the last of which he was sent to the West Indies for the first time. On his return he was employed by the brothers Nathan, Wyllis, and Henry E. Peck, and acted as their agent for three years, when, in connection with J. A. Bishop, he made his first venture on his own account. Altogether he passed seven winters in succession in the islands, where then, as now, nearly all the foreign trade of New Haven was concentrated.

Early in 1851 he became associated with Russell, Henry O., and Edward Hotchkiss, who succeeded their father on Long Wharf, and embarked in a little schooner of 98 tons for Brazil, to see what could be done there in the way of business. At Para, on the Amazon, then a place little known to Americans, he remained eighteen months, and fully established a trade there, which was the means of introducing into that region for the first time many articles of American growth and production that

before were wholly unknown. The spirit of mercantile enterprise and sagacity thus illustrated is most admirable.

Soon after returning from Brazil, he became a partner in the house, under the firm name of Hotchkiss Brothers & Co., which continued until 1860, when, desiring a larger field for commercial operations than New Haven afforded, and for other reasons, he went to New York, where with Charles P. Burdett, who was engaged in a like business, and whose partner had just died, he formed a co-partnership under the name of Burdett & Everit, which lasted for nine years, during which their business not only with Brazil, but with the West Indies and Europe, was constantly increasing, and became large and profitable.

In 1869, in the full tide of prosperity, Mr. Everit, at the early age of 45, retired from business, solely in consequence of impaired health. He returned to his native city, New Haven, and made for himself a beautiful home, a fine residence with ample and handsomely laid out grounds. This is on a level plateau, on the east side of Whitney avenue (No. 281), only half a mile distant and in full and grand view of the precipitous front of East Rock, the park itself extending nearly to his grounds. With health greatly restored, Mr. Everit lives to enjoy the esteem and respect in a marked degree of all those with whom he has been associated in his business life; and not only this, but he is ever a pleasant thought in the minds of many for his numerous acts of kindness and charity.

His parents were Richard, born in New York, December 23, 1772, died in New Haven, March 4, 1863, and Sarah (Mansfield) Everit, born April 4, 1791, died July 23, 1875. Their children are Richard M. (the subject of this record), William Lyon, and Mary Mercein, wife of John H. Coley, now of Emporia, Kan.

On February 5, 1861, he then being in his thirty-sixth year, Mr. Everit married Miss Mary Talman Lawrence, daughter of Watson E., of New York, and Augusta Maria (Nicoll) Lawrence, of New Haven. They have four children living: Richard Lawrence, Arthur Mansfield, Annie Coley, and Edward Hotchkiss.

HARRY PRESCOTT

is a native of New Haven, and was born February 13, 1811, the son of Enos A. and Mary (Carrington) Prescott. His father throughout his life was a shipping merchant on Long Wharf.

Harry attended school under Leonard A. Daggett, in the Glebe Building, and was then sent to the Military Academy at Middletown, under Captain Allen Partridge. In 1827 he went into his father's business on Long Wharf, where he has continued to the present day.

Mr. Prescott entered the shipping trade the same time as Thomas R. Trowbridge, and they alone survive of the Long Wharf merchants of that day.

The shipping business of New Haven is now carried on with ports in Europe, South America, the Gulf of Mexico—as New Orleans and Galveston—and the West Indies. There is also at the same time an extensive coasting and domestic trade. The Cuban freights are in sugar and molasses, brought us in return for coal and cooerage mostly carried out. Lumber and cotton enter into the Gulf trade, with ice, coal and railroad iron. In sickly seasons northern ports are alone called at.

The New Haven trading craft are sailing vessels, mostly three-masted schooners. Mr. Prescott is interested in some nine of them.

While the foreign trade of New Haven with the West Indies has fallen off as compared with early days, having been transferred to New York, the domestic and coasting traffic has increased, and the tonnage of the port is greater than ever before.

In connection with his business he has visited most of the trading ports of our coast, and traveled extensively through the British provinces.

He married, in 1832, Mary Ann P. Wilcox, daughter of Alvan Wilcox, of New Haven. They have one child, Minnie O., the wife of Dennis Beach, residing in New York. Mrs. Prescott died in May, 1880, after a married life of forty-eight years.

Mr. Prescott has always been a man of quiet, domestic habits, fond of his own fireside, and content with its happy retirement. No man to-day has been longer and more intimately identified with the shipping business of New Haven.

CHAPTER XXXIV.

TRAFFIC—WHOLESALE AND RETAIL.

AS one looks back upon the history of trade in New Haven, he cannot fail to observe that there has been in some respects great improvement in its morals. President Dwight testifies that in his day it was conducted in a manner fair and honorable. "A trick in trade," he says, "is rarely heard of, and when mentioned, awakens alike surprise and indignation." But though merchants may have been as honest in Dr. Dwight's generation, and in the generations which preceded him, as they now are, one is astonished to see with what unconsciousness of wrong they sold intoxicants, lottery tickets, and

human beings. Reform had indeed commenced before Dr. Dwight came to the presidency of the College in 1795. His predecessor, before his election to the presidential chair, had been the pastor of a church in Newport, Rhode Island, and when invited to send a venture in one of the vessels trading between that flourishing sea-port and the coast of Africa, had bought and sent out a barrel of rum. He was to receive in return whatever his friend the supercargo should chance to acquire in barter. When the ship returned, the supercargo brought to his reverend pastor a negro boy as the avails of

Amy Prescott
H

his venture. It does not appear, though perhaps it might appear if we could question the negro boy, that any person discovered any wrong in the transaction. The supercargo was accustomed to the slave trade, and the clergyman knew that his parishioners were engaged in it. Mr. Stiles' first thought that any wrong had been done, came into his mind one day when going into his kitchen and hearing Newport, for so he called this new member of his household, sobbing, he inquired what was the cause of his grief, and learned that the boy was thinking of his mother. From that hour Stiles was a converted man, repenting of his own participation in the wrong, and laboring for the abolition of the slave trade. After his removal to New Haven, he co-operated with other gentlemen like-minded in establishing "The Connecticut Society for the Promotion of Freedom and the Relief of Persons Unlawfully Held in Bondage," and was the first president of that society.

A little digression may perhaps be allowed here to give a few remarks about this boy, whom Stiles named Newport. He came with his master to New Haven and remained here till his death, surviving Dr. Stiles many years. One of the anecdotes which President Day, who graduated at the next Commencement after the death of President Stiles, used to relate was, that in his Freshman year he was one day walking behind President Stiles, and heard him tell a gentleman with whom he was walking, that he wished he were as sure of heaven for himself as he was for Newport. But Newport, though so saintly in his character, and so responsive to a mother's love, had in him a well of fun which sometimes bubbled on the Lord's day. Many years after Mr. Day had heard Newport commended by Dr. Stiles, and after he had himself become one of the dignitaries of the College, he was on his way to the almshouse on a Sunday afternoon, probably to conduct a service of worship with the inmates, when he was overtaken by Dr. Skinner, the constable, who had a lock-up at the almshouse. As the two walked together they must needs go by Newport's house, who seeing them approach went out to the gate, and as they were passing, said to the constable in a stage whisper, "Whom are you taking to the lock-up now?"

New Haven never imported slaves from the coast of Africa, but the files of the *Connecticut Journal* show that the sale of negroes was as common as the sale of other domestic animals. A few examples of the many advertisements of such merchandise may be seen in our chapter on the Periodical Press.

The mention of Dr. Stiles' venture, by means of which he became a slaveholder, suggests that a change has taken place in public sentiment in regard to the traffic in intoxicants as well as in regard to the slave trade. No conscientious person would now send a barrel of rum to the coast of Africa to be bartered for any kind of merchandise, however legitimate the possession of it might be if legitimately acquired.

A similar change has taken place in regard to lotteries. At the beginning of the present century

the most respected men in New Haven bought and sold lottery tickets. A very common way of promoting a public work was by procuring authority from the Legislature to issue a scheme for collecting money and distributing, by a wheel of chance, some portion of the sum collected, to a few of the contributors. Thus bridges, wharves, churches and academies were erected. Lotteries helped to build the Long Wharf. Two schemes were granted to the Episcopal Academy in Cheshire, and that there might be no sectarian exclusiveness, a gentleman who was a member of the oldest Congregational Church in New Haven, and not long afterward an officer in the same church, served as one of the managers. On the record book of the First Ecclesiastical Society is this memorandum:

NEW HAVEN, January 28, 1791.

The number (5514) of a ticket in Boston State Lottery, given to the First Society by Mr. Charles Chauncey, Mr. James Hillhouse, Doctor Leverett Hubbard, Mr. James Rice, and Thomas Howell. The above ticket drew eight dollars, which netted seven; which seven is put into the Wharf Lottery stock, and [is] with Mr. James Rice, Nos. 10401 and 10402.

A great change has taken place also in the mode in which traffic is carried on, by reason of the constantly increasing subdivision of traders into classes, each confining itself to a narrow line of goods and relinquishing to other classes everything out of its line. Within a few years there has indeed been a reaction toward the methods pursued a century ago, and necessarily continued by the country merchant of to-day. A few large shops, whose staple is dry goods, have added books, crockery, tin-ware and miscellanies to their stock, so that one is reminded of a sign-board which in the second decade of this century astonished the children who passed through Chapel street with the announcement: "Almost everything bought and sold here."

Another change in the methods of traffic consists in the more frequent employment of middle-men or brokers. The writer has found but a single instance in which a broker offers his services in the *Connecticut Journal* before the beginning of the nineteenth century. The issue of December, 1784, contains the following advertisement:

William Carter, Broker and Auctioneer, has removed to the store of Mr. Stephen Allen [Alling?] near the head of the Long Wharf in Fleet street in New Haven, where any person wanting to purchase houses or lands, and any person wanting to sell the same, or wanting to buy, sell or charter vessels, or any kind of commodity bought or sold, or any kind of business transacted in New York, may apply and have their names and the business they want transacted, entered in a book kept for that purpose; and they may be assured no pains and attention will be wanting to complete their wishes as soon as possible. Several houses, lands and convenient places for building in this city are now offered for sale; the terms may be known by applying at said store. Likewise any kind of goods will be received and sold at vendue. The sales in future will be on Monday and Thursday of every week.

NEW HAVEN, 29th November, 1784.

It is not known that Mr. Carter's venture was successful, or that he became a permanent resident in New Haven. More likely he was incited by the activity attending upon the close of hostilities with Great Britain to hope for New Haven, as others did,

a rapidity of growth too great to become real. We do not hear anything further of brokers during the eighteenth century; and during the first quarter of the present century sales and exchanges of property were usually effected, if at all, without the mediation of a third party.

At present there are in New Haven two classes of middle-men, who may properly be called brokers, viz., dealers in real estate and dealers in stocks and bonds. Sales of merchandise seldom or never take place in our city otherwise than by direct traffic between the buyer and the seller, and other forms of brokerage well known in the greater marts of trade have not appeared among us. Often the line is not as sharply drawn between one kind of brokerage and another as in a larger city, the same dealer negotiating a loan to be secured by mortgage, or undertaking to sell, as his instructions may require.

One of the earliest brokers in New Haven was Joel Walter, who had an office in the Glebe Building, his residence being on the corner of Temple and Crown streets, in the house afterward occupied by Amasa Porter. It is believed that he was engaged in this business as early as 1820. Nearly contemporary with him was a man named Turner, sometimes called Dr. Turner. He is described by a correspondent as a tall, large man, using a cane like a setting-pole. He lived in College street, and was intimate with Hanover Barney, William Hillhouse, and Mr. Gilbert, of Hamden Plains. Robert McNutt, a native of Ireland and a book agent, living in Hughes lane and afterward in Olive street, is said to have done some curbstone brokerage. Elihu Monson, an auctioneer, is also mentioned as a negotiator. The three last mentioned were, so far as the writer has ascertained, peripatetic brokers, displaying no sign-board or advertisement of their business.

Lucius Atwater, a man with one leg amputated, had a broker's office in Church street in a one-story building, where Alfred Walker afterward had a large repository of furniture, and retired from that business into brokerage, and where Massena Clark still has an office for brokerage. Mr. Atwater was also a dealer in lottery tickets.

About 1825, Henry Eld commenced business as a broker, and followed it to the end of his life. His residence was at Cedar Hill, in a cottage standing near an extensive grove of pine trees, which have now disappeared before the woodman's axe. His place of business was in Church street. Contemporary with him was Jonathan Hiller, who, coming to New Haven as a journeyman carriage-maker, afterward engaged in the book trade and then in brokerage. He resided in College street and had an office in Chapel street.

Samuel Wadsworth, a bookbinder and bookseller on the south side of Chapel street, gradually worked his way into brokerage. After he left the book trade, his office was in Dwight Building, now Boardman Building, corner of Chapel and State streets. As wealth increased and bank facilities were more freely offered, loans and purchases and sales of real estate were more and more effected through brok-

ers, whose ranks were recruited by elderly men retiring from more active and exhausting pursuits to the comparative quiet and ease of a sedentary life.

With these preliminary remarks on the changes of method which have taken place, we proceed to sketch the present condition of traffic in New Haven, both wholesale and retail.

AGRICULTURAL TOOLS AND SUPPLIES.

The agricultural warehouse of Robert B. Bradley & Co., 406 and 408 State street, and 77, 79 and 81 Court street, was founded by the present proprietor, Robert B. Bradley, in 1858. The premises consist of a four-story brick building, 40 by 115 feet in dimensions, with an annex in the rear. The stock of agricultural and horticultural implements embraces the best and most improved tools for farmers and gardeners. This firm has the exclusive sale of a number of patented agricultural implements, and in the extent of its trade is the most extensive establishment of its kind in the city.

BUILDERS' SUPPLIES.

The Morgan Humiston Company was organized in 1881 with a capital stock of \$10,000, and succeeded to the business established by the firm of Bowman & Co., in 1870. This Company deals, at wholesale and retail, in doors, sashes, blinds, moldings, paints and window-glass, occupying the premises 146 and 148 State street, consisting of a four-story brick building 25 by 75 feet in dimensions. Their goods are manufactured in the southern part of the State of New Hampshire. Frederick J. Morgan is President of the Company. The business of the house extends all over the State.

CARPETS.

The largest and oldest carpet-house in New Haven is that of H. B. Armstrong & Co. This business was founded in 1842 by the Foster Brothers, and was continued by them until 1877, when the present firm succeeded to the plant, since which time the facilities of the house have been largely increased. The premises consist of two buildings, one on Chapel street, 40 by 165 feet, and one on Orange street 50 by 400 feet, each having four floors. H. B. Armstrong, the sole proprietor of this house, is a native and life-long resident of New Haven.

The business of the firm of H. W. Foster & Co., dealers in carpets and matings, was established in 1847 by Marble & Foster. In 1877, H. W. Foster succeeded to the business, and conducted it alone until S. R. Hemingway became a partner, under the present firm name. This store is located at 72 Orange street.

H. B. Perry, dealer in carpets, oil-cloth and paper-hangings, 914 Chapel street, began business in 1870, as successor of Sherman Smith, who started in a similar line in 1860.

COAL.

Anthracite coal was first introduced into this city in 1827, by Harrison & Reynolds, who were the agents for its sale. Much ridicule was cast upon the agents who had the sale of it. It was not believed it would burn. It was first used in the Tontine Hotel and burned in grates.* It was several years after this date before coal began to be very extensively used. At the present time there are numerous firms and individuals engaged in the coal traffic.

About the middle of this century, the firm of T. Benedict & Co. were the largest dealers. They were the predecessors of the present firm of Benedict, Pardee & Co. The latter firm was organized in 1870. They deal in coal wholly by the cargo, and represent one of the largest coal jobbing houses in New England. The individual members of the firm are H. H. Benedict, F. W. Pardee and G. E. Maltby, all of whom are residents of New Haven and closely identified with its commercial prosperity.

Alonzo A. Townsend first embarked in the coal trade in 1866, as a member of the firm of E. E. Downs & Co. For a number of years William A. Briggs was associated with him, under the firm name of Townsend & Briggs. For about a year Mr. Townsend has conducted the business alone. His trade is mostly confined to supplying private families with coal and wood. His office is located at 114 Church street; yard, 145 Long Wharf.

The firm of Benedict & Co., composed of George W. L. Benedict, Frank W. Benedict, and George T. Bradley, represents one of the substantial coal and wood firms in the city. Their office is located at 80 Church street; yard, 112 Water street.

The firm of F. A. & D. R. Alling, wholesale and retail merchants, was formed in 1877, and succeeded to the business established in 1866 by Case & Alling. Their yards are located on East street, and consist of store-houses, shed, and wharf, covering an area of 200 by 125 feet.

In 1864, the present coal and wood business of Enos S. Kimberly was established by the firm of Kimberly & Goodrich, who were succeeded by the present proprietor in 1881.

DRUGS.

Drug stores did not exist as a separate and distinct branch of trade before the era of the American Revolution. Benedict Arnold was a druggist in New Haven, and his sign is still displayed in the rooms of the Historical Society. But he also kept a general assortment of West India goods, and occasionally made a voyage to the islands to replenish his stock. His store was at one time on Chapel street, fronting the Green; at another time near the corner of George and Church streets; and still later on East Water street.

From an early period there was a drug store in Chapel street, a little east of College street. Before

the Revolution it was kept by Dr. Leverett Hubbard. He was succeeded by Dr. David Atwater, who was killed at the battle of Cumpo Hill, in 1777, fighting as a volunteer. Dr. John Goodrich then conducted the business till, in 1793, he sold out to Dr. Joseph Darling, who continued it for a quarter of a century or more. In 1812, Dr. Darling erected, in place of the old building in which his predecessors had sold drugs, the substantial brick building in which are now the quarters of the University Club. Dr. Samuel Darling, a brother of Joseph, had a drug store in State street, nearly opposite Cherry street. Dr. Obadiah Hotchkiss started a drug store in Chapel street, nearly opposite Miles' Tavern. Advertisements of drugs for sale near or at the same place by Dr. Hezekiah Beardsley are extant, and probably Dr. Beardsley preceded Dr. Hotchkiss at the same stand. The business was continued after Dr. Hotchkiss' death by his son, Lewis Hotchkiss.

An organized effort to secure uniformity in the manner of putting up prescriptions was made in New Haven in 1821, by a number of physicians, who formed a company and opened what has been from that time to the present known as Apothecaries' Hall. They employed Isaac Beers, a son of Deacon Nathan Beers, to manage the business. Apothecaries' Hall was controlled by the physicians who instituted it for a dozen years or more, when it was sold to Samuel Noyes, who conducted it for himself till 1880, when E. A. Gesner became the proprietor. Apothecaries' Hall was first located a few doors from its present place, but was afterward removed to Exchange Building. In 1861 it was again removed, and settled in its present place.

Mr. Gesner, the present proprietor of Apothecaries' Hall, began the drug business as clerk for J. H. Klock, with whom he remained twelve years, after which he commenced business for himself in partnership with Klock. This partnership continued for five years, when he sold his interest to his partner and bought a drug store under the Elliot House, which had been begun by Alfred Daggett. Here Mr. Gesner remained for three years, when he purchased Apothecaries' Hall.

Among the early druggists were M. A. Durand, Lucius K. Dow, Augustus Lines, Alonzo Wood, Booth & Bromham, and Luman Cowles. Probably the oldest living druggist not now engaged in the business is David Smith. The oldest druggist at present carrying on the business is James Olmstead, who commenced in 1843, on the corner of York and Broadway.

The drug store of J. H. Klock, corner of Chapel and Church, represents one of the oldest pharmacies in the city. Here S. E. Gorham carried on business for several years, with whom Mr. Klock commenced as clerk in 1849. Mr. Gorham sold out to Wilkins & Eager, of whom Mr. Klock afterwards purchased.

The pharmacy of C. B. Whittlesey was established by D. H. Ely in 1840. George N. Seagrave succeeded to Mr. Ely in 1841, and C. B. Whittlesey to D. H. Ely in 1845. Under Dr. Whittlesey's management a wholesale department was added,

* Mr. Joseph L. Deming states that his mother, the widow of Oliver Deming, was one of the first to try the stone coal.

while the retail business was largely developed. Since his death, in 1778, the business has been conducted by his family.

The house of Cowles & Leete was established in March, 1849, the names of the partners being Luman Cowles and Charles S. Leete. Mr. Cowles died in December, 1872, and Mr. Leete has since, with the exception of very brief partnerships, conducted the business alone. Both wholesale and retail departments are included.

In 1885 a wholesale drug business was commenced in State street by Francis & Hewitt, which in 1886 passed into the hands of Mr. Hewitt, under the firm name of E. Hewitt and Co.

W. A. Spalding has carried on the drug business at 89 Church street since 1874. He has been engaged in this business for twenty years, first at Pittsfield, Mass., and then at Waterbury, from which place he removed to New Haven.

Henry S. Higby opened a pharmacy in 1881, at the corner of Chapel and York streets, removing from Milford, where he had been in the same business for fourteen years.

In 1875, C. B. Storer opened a drug store at 10 Park street, and in 1878 removed to his present place, 99 Dixwell avenue. Mr. Storer is a native of New Haven, and served an apprenticeship with Dr. V. M. Dow. He is a member of the Connecticut Pharmaceutical Society.

Willis Benedict has been established for several years as a druggist at 303 Congress avenue, corner of Howard avenue. He is a native of New Haven and served his country for three years as a soldier in the war for the preservation of the Union.

Henry M. Bishop commenced the drug business in 1860, on the corner of State and Bradley streets, where he remained until 1874, when he removed to his present location, 890 State street.

William L. Everit, Jr., commenced the drug business on the corner of Orange and Grove streets in 1883. He had previously been employed as clerk in drug stores in this city for eight years. Mr. Everit is a member of the New Haven Pharmaceutical Society. He was born in Akron, Ohio, and came to New Haven in 1865, where he has since resided.

DRY GOODS.

A. C. Wilcox is the oldest dealer in dry goods in the city. The firm of which he is the senior member was established by him in 1835.

The dry goods house of Bolton & Neely, represents one of the largest concerns in this line of trade in the city. It was established by Edward Malley in 1852, and conducted by him until 1882, when William Neely became a partner, under the firm name of E. Malley & Co., and continued as such until 1883, when the business was purchased by Samuel Bolton and William Neely, and has since been conducted under the present firm name. Mr. Bolton came from New York in 1880, and opened a new dry goods store as a member of the firm of Brown, Bolton & Co. He disposed of his interest to the present firm of F. M. Brown & Co. previous to his connection with Bolton & Neely.

The dry goods house of F. M. Brown & Co. was established in 1880, and is now composed of F. M. Brown and D. S. Gamble. They carry a larger assortment of silks and dress goods than any other retail store in the State.

The dry goods house of Monson & Carpenter was founded in 1852, and has been continued at the same location, 764 and 768 Chapel street, ever since. The original proprietors were Leonard Winship and Samuel E. Barney, under the firm name of Winship & Barney. They were succeeded in 1865 by Charles Monson and Daniel L. Carpenter, under the present firm name of Monson & Carpenter, which remained unchanged, when, in 1884, Charles M. Walker became a member of the firm. A specialty of their trade is dress goods and silks. Messrs. Monson & Carpenter have been identified with the dry goods trade since 1853, the former having been employed for a number of years by the firm of Winship & Barney, and the latter by R. & J. M. Rice.

The firm of J. N. Adam & Co., jobbers and retailers of dry goods, commenced business in this city in 1874, in stores 886 and 888 Chapel street. They were succeeded June 1, 1886, by Stephen A. Howe and John G. Stetson, under the firm name of Howe & Stetson.

Willis Hemingway, dry goods merchant and merchant tailor, commenced as clerk for R. Rowe & Co. in 1834. They conducted a similar business on the corner of Grand and South Quinpiac streets. At the same location Mr. Hemingway commenced business for himself in 1841, and has continued it ever since. He is now at the head of the oldest mercantile house on Grand street.

CROCKERY AND GLASS-WARE.

In 1851, E. S. Minor opened a crockery and glass-ware store in New Haven, which he continued until 1878, when he was succeeded by his son, Alfred W. Minor, who is still engaged in the business at 51 Church street. His establishment is one of the largest in the city.

The wholesale crockery store of Charles G. Kimberly, 232 and 234 State street, was founded in 1876. His store comprises a commodious building containing five floors and a basement, 25 by 80 feet in dimensions. A number of traveling salesmen are employed, representing the interest of the house, the trade of which extends throughout this and adjoining States.

George W. Robinson, importer and jobber of crockery, glass and china-ware, 90 Church street, established his present business in 1876. A specialty of his trade is hotel and restaurant outfits.

FISH.

The firm of A. Foot & Co., dealers in fish, 353 State street, composed of A. Foot, Lozelle Foot, and A. Kelsey Jones, was founded in 1857 by A. Foot. In 1867 the firm was formed as at present constituted. They are the largest dealers in fish, clams, oysters and lobsters in the city.

Elford and Elliott Bradley, under the firm name of Bradley Brothers, have carried on the meat, fish and vegetable business since 1865. They were located for fourteen years a few doors above their present place, 24 Grand street, and for a short time on the opposite side of the street. In 1880 they moved to their present location. They also sell milk, keeping their own cows for the purpose, raise most of their vegetables, and slaughter their own beef.

FLOUR, FEED AND GRAIN.

Among the large dealers in flour, feed, hay and grain, is the firm of D. B. Crittenden & Co., 156 and 158 State street, and 110 Congress avenue. This house was established in 1854 by D. B. Crittenden. In 1879, Abner Hendee became a partner, under the present firm name. Their main warehouse is located on State street. The Congress avenue store is more especially devoted to retail trade.

The firm of N. W. Merwin & Co., wholesale flour, feed, and grain merchants, was formed in 1859. It is composed of N. W. Merwin and J. T. Fitch. They occupy a four-story building, 60 by 40 feet in dimensions, at 178 and 180 State street, and 1, 3 and 5, George street. Both members of this firm are life-long residents of New Haven, and closely allied with the growth and prosperity of the city. Their trade extends throughout the State.

The wholesale flour dealers, S. D. Miller & Co., commenced business in 1862. At present the firm is located at 15 Custom House square. They carry a full stock of the best brands, including wheat, rye, Graham and corn flour, and oat and cornmeal. Their trade extends throughout the State, and is also largely local. Mr. Miller has been a resident of New Haven for nearly forty years.

Edward Boyhan, dealer in grain, flour and feed, 521 to 525 Grand street, established his present business at 529 Grand street in 1868. In 1885 he erected his present building. Besides flour, feed and grain, hay and straw are dealt in. Mr. Boyhan was born in Ireland, and emigrated to this country in 1849, since which date he has resided in New Haven, where he has built up a successful business.

The firm of Smith & Fowler, flour, grain and feed dealers, composed of F. M. Smith and W. S. Fowler, was formed in 1880. They conduct their business at 361 Congress avenue.

FRUIT.

Henry R. Loomis has been engaged in the wholesale fruit business in this city since 1874. At present he is located at 134 Olive street. He deals in foreign and domestic fruits and vegetables. Mr. Loomis was born in Hartford in 1842, and has resided in New Haven since 1844. During the Rebellion he served with Company E, 165th New York Volunteers, in the second battalion of Duryea's Zouaves. Since the war he has been conspicuously identified with the State Militia, and at present is Lieutenant-Colonel of the Second Regiment, Connecticut National Guard.

J. D. Bradley has been for the last ten years one of the largest retail fruit dealers in the city. He is located at 930 Chapel street.

GROCERIES.

The wholesale grocery house of J. D. Dewell & Co., located at 235 to 239 State street, was established in 1850, near the present house, by Nathan T. and Cornelius S. Bushnell, under the firm name of Bushnell & Co. Cornelius S. Bushnell afterward retired, when J. D. Dewell became a partner, under the firm name of Bushnell & Dewell. The present firm came in possession in 1877. Four entire floors and a basement, each 60 by 90 feet in dimensions, are occupied as salesrooms and warehouse. A general line of staple and fancy groceries are dealt in, a specialty being made of flour and salt. Their trade extends over this and adjoining States. Sixteen employees, including seven traveling salesmen, are required in the transaction of their business. The individual members of the firm are J. D. Dewell and F. C. Bushnell, long identified with the commercial interests of the city.

The firm of Yale, Bryan & Co., now one of the oldest wholesale grocery houses in the State, is located at 105 to 111 State street. It commenced business in the fall of 1857, under the firm name of Stout, Yale & Co., at No. 55 State street, opposite the old passenger depot, the individual members of the firm being Jerome L. Stout, Edward P. Yale, and Lucius R. Finch. Within two years Mr. Finch sold his interest in the business to Mr. Edward Bryan, the firm name remaining the same. Soon after they moved into the new Sheffield Block, 153 and 155 State street, where Mr. Stout retired from the firm at the end of two years, and they changed the title to Yale & Bryan. They built up a large trade at this stand, and continued in the same store for a term of about twenty years, and then moved into the new building, owned and built by the firm, where they are now doing a very large trade, under the firm name of Yale, Bryan & Co., the individual members being E. P. Yale, Edward Bryan, R. J. Miner, and S. H. Read. The different branches of their business are now divided among the four partners, and with special railroad facilities, steam engine, elevators, etc., they are able to compete with any Eastern house in the same line. Their trade lies principally in Connecticut and Massachusetts. They are the sole agents for several of the largest flouring mills in the West, and make a specialty of coffees, teas, and canned goods, corn, salt, molasses, etc.

Among the largest wholesale grocery houses in New Haven is that of Stoddard, Kimberly & Co., 306 to 312 State street, established in 1825 by Ezekiel Gilbert. He was succeeded by his son, Lucius Gilbert. In 1865, E. G. Stoddard, of the present firm, became associated with Mr. Gilbert as a partner, under the firm name of Lucius Gilbert & Co. This partnership continued for three years, when Mr. Stoddard purchased the entire business and managed it alone until 1875, when C. P. Merwin became a partner, under the firm name of E. G.

Stoddard & Co. Three years later A. H. Kimberly, of the present firm, became a partner. Mr. Merwin retired in 1882, and in 1884 the firm as at present constituted was formed, composed of E. G. Stoddard, A. H. Kimberly, and C. B. Stoddard. Their large premises, consisting of a four-story building, 40 by 100 feet in dimensions, are wholly devoted to their business. They sell a general line of groceries, a specialty being made of flour and molasses, the latter commodity being imported from Porto Rico. Several thousand hogsheads are annually sold. Their yearly sale of flour amounts to from fifty to sixty thousand barrels. Four traveling salesmen are employed, their journeys being confined mostly to this State, but large quantities of molasses are also sold in the States of New York and Massachusetts.

The second oldest wholesale and retail grocery house in New Haven, still conducted by the original proprietors, is that of Johnson & Brother, who established at their present location, 411 and 413 State street, corner of Court, in 1861. They occupy the first floor, cellar and basement of the building referred to, which is 100 by 24 feet in dimensions. Flour is largely dealt in and forms an important element in this trade, while the stock of fancy and staple groceries in their variety and quality is excelled by no other house in the city.

The firm of Amos F. Barnes & Co., wholesale grocers, 293 and 295 State street, was established in 1841, under the firm name of Finch & Barnes. From 1855 to 1869, Amos F. Barnes conducted the business alone, under his own name. At the latter date his son, Thomas Attwater Barnes, became a partner, under the present firm name. The business is conducted in the same store it was commenced in in 1841.

The wholesale grocery, tobacco and wine store of M. Zunder & Son, 249 and 251 State street, was established by the senior partner in 1852, on Church street. The firm is now composed of Mr. Zunder and his son, Albert. For the last eighteen years Mr. Zunder has been a member of the Board of Education. He is also President of the National Savings Bank.

The firm of Gilbert & Thompson, fancy grocers, 918 Chapel street, succeeded to a similar business established by the firm of William T. Bradley & Co. at the same location in 1859. In 1868 they sold out to Beach Brothers, who, in 1870, disposed of this business to the present firm, composed of John Gilbert and Frederick B. Thompson. Mr. Gilbert was a clerk in the firm of William T. Bradley & Co. from 1861 to 1868, and from the latter date to 1870 was bookkeeper for F. A. Gilbert. Mr. Thompson for seven years previous to the formation of the firm of Gilbert & Thompson, was employed by the firm of Spencer & Canfield. Both of the members of the firm of Gilbert & Thompson have had practical experience in their line of trade, and are energetic and successful business men. Their trade is confined to fancy groceries, wines, and cigars.

In 1876, Lewis D. Chidsey and W. P. Stone commenced the grocery business at 1 Church street,

under the firm name of Lewis D. Chidsey & Co., which continued until the death of Mr. Stone. For two years after, Mr. Chidsey's brother was a partner, but the business is now conducted solely by Lewis D. Chidsey, the original firm name being retained.

Robert A. Hollinger, dealer in groceries, provisions, wines, ales and liquors, commenced business at 258 Davenport avenue in 1877. From 1869 to 1873 he carried on the liquor business. Mr. Hollinger was born in the City of New York, and came to New Haven when a boy. He served for over three years in the late Civil War in Company K, 13th Regiment Connecticut Volunteers, and is now a member of the G. A. R. In 1884 he was elected Alderman.

Bernard Reilly has been engaged in the flour, feed and grocery business in New Haven since 1849. His store is located at 171 Congress avenue. Mr. Reilly settled in New Haven in 1835. He has done considerable contract work, having built a portion of the Air Line Railroad, and opened and graded a number of streets. Since this notice was first written, Mr. Reilly has passed into the unseen world.

One of the oldest grocers in the city is Patrick Creegan, who has been engaged in the grocery, meat and provision business at 140 Carlisle street since 1851. Mr. Creegan emigrated from Ireland in 1848 and located in New Haven.

William Greary established a grocery and provision store at 858 State street in 1866, and has continued the same business ever since.

James B. Smith, wholesale grocer and commission merchant, 285 and 287 State street, has followed his present business in New Haven since 1864. He does a general commission business, besides handling groceries and flour at wholesale. His premises consist of a store, 35 by 90 feet in dimensions, of which he occupies three entire floors. Mr. Smith is a native of New Haven, where he began his successful business career.

Charles Shelton was for many years engaged in the wholesale grocery trade at the head of Long Wharf, beginning business in 1840. He held the office of United States Surveyor of the Port of New Haven during the terms of Presidents Pierce and Buchanan.

The grocery and meat market of Nelson W. Allyn, 199 Exchange street, was established in 1877 at 100 Poplar street.

The present grocery firm of A. L. Chamberlain & Co., 24 and 26 Grand street, was established by A. L. Chamberlain in 1856. In 1860 Joseph L. Deming became a partner, under the present firm name.

HARDWARE.

The oldest hardware store in New Haven is that of John E. Bassett & Co., which, being founded in 1784, has been continuous from that time. Although many changes have occurred in the status of the firm, at no time has it entirely changed its *personnel*. In 1855 the present firm name was adopted, and John E. Bassett is now sole pro-

prietor. He has been connected with it all his life. The premises consist of two stores, 22 by 100 feet and 24 by 100 feet in dimensions respectively. The first is located at 754 Chapel street, and the other at 318 and 320 State street.

The hardware store of N. T. Bushnell & Co., 712 Chapel street, was started in 1872 by Matthewman & Co., who conducted it until 1879, when the present firm succeeded to the business. The individual members of the firm are N. T. Bushnell and Edward A. Todd.

The house of C. S. Mersick & Co., importers and dealers in iron, steel and hardware, was founded over fifty years ago, and after various changes in the *personnel* of the firm, the present one succeeded to the business in 1875. They occupy a four-story brick structure, 45 by 100 feet in dimensions, at 286 to 292 State street. Their large trade extends throughout the New England States, and is represented by several traveling salesmen. They make a specialty of manufacturers' supplies. The individual members of the firm are C. S. Mersick and L. H. English, both natives of New Haven.

The firm of Wooster A. Ensign & Son is one of the oldest hardware houses in the city. It was founded in 1847 by Wooster A. Ensign, the senior member of the firm, on Chapel street, from whence he moved to the present location in 1876. A general line of hardware is dealt in, a specialty being made of manufacturers' supplies. Mr. Ensign's son, Wooster P., became a partner, under the present firm name, in 1874.

The hardware store of F. S. Bradley & Co., 410 to 414 State street, was established in 1866. A general line of hardware and manufacturers' supplies are dealt in. The members of the firm are Franklin S. Bradley and Oscar Dikeman. The former is President of the Yale National Bank. Arrangements have recently been made for the removal of the business to 294-302 State street.

LUMBER.

The firm of W. A. Beckley & Co., lumber dealers, was founded in 1860, and from that date until 1864 consisted of W. A. Beckley and Nathan H. Sanford; and it now comprises W. A. Beckley, one of the original founders, and his brother Elihu. All kinds of hard and soft lumber are dealt in. The firm has remained at the same location, 167 Water street, since its formation.

In 1867, A. C. Halsted and Samuel Alling became partners in the lumber business, and located at 109 Water street. A few years later Mr. Alling died, when Henry and Charles Alling became partners with Mr. Halsted. In 1883, the firm of Halsted, Alling & Harmount was formed, which continued until the death of Mr. Alling in 1885, when the present firm of Halsted & Harmount was formed, consisting of A. C. Halsted and A. G. Harmount. Lumber of all kinds is sold at wholesale and retail, although a specialty is made of hard woods. A business of about \$100,000 is annually transacted.

Among the most extensive wholesale lumber dealers in this city is the firm of White, Clarkson & Co., established in 1879. The trade of this firm extends throughout New England and New York, and as far south as Philadelphia, Baltimore and Washington. The individual members of the firm are Charles A. White, W. D. Clarkson, James N. Willard, Jr., and D. H. Wellman. Their office is located in Room 20 of the New York, New Haven and Hartford Railroad Depot.

Danforth O. Lombard has been timber agent for the New York, New Haven and Hartford Railroad Company since 1883. He occupies a room in the Union depot. Mr. Lombard enlisted in the 21st Regiment Connecticut Volunteers in 1863, and served for three years in the War of the Rebellion.

MASON-BUILDERS' MATERIALS.

One of the largest dealers in mason materials in New Haven is E. G. Chatfield, located at 90 to 94 State street. Mr. Chatfield commenced business in 1870 in partnership with M. S. Munn, under the firm name of Munn & Chatfield, on State street near the corner of Fair. They afterward removed to the old Quinnipiac Bank Building. In 1874 Mr. Chatfield purchased his partner's interest in the business and has since carried it on alone. In 1883 he built the three-story brick building, 70 by 35 feet in dimensions, now occupied by him at the place designated. Mr. Chatfield deals in mason-builders' and foundry and rolling-mill supplies. He is also interested in the manufacture of fire-bricks, but most of those dealt in are imported by him, as is true of most of the cement sold. A trade is transacted embracing the whole of the New England States. Mr. Chatfield is a native of New Haven and a greater part of his life has resided here.

MEAT.

The transportation of Chicago-dressed beef has of late years grown to immense proportions. The largest wholesale dealers in this beef in this city are Lee & Hoyt, established in 1869. They occupy a three-story building, 30 by 60 feet in dimensions, at 3 Custom House square, which affords accommodation for ice-houses and the storage of a large stock. Several wagons are required in distributing beef to the trade in the city and vicinity. The individual members of the firm are James H. Lee and Nehemiah H. Hoyt, Jr., both of whom are long residents of New Haven.

Samuel H. Barnes has been engaged in butchering in this city since 1874. He occupies a stall No. 1 City Market. Mr. Barnes was born in this city in 1845. His parents moved to Oyster Point when he was two and a half years old, at which time the house occupied by the family was the only one on the Point. Mr. Barnes has been a member of the City Council three times.

The firm of F. S. Andrew & Co., wholesale and retail dealers in meats and provisions, was established in 1868. Office and stalls, 8 to 38, City market; packing-house corner of Crescent and

Henry streets. The individual members of the firm are F. S. Andrew and Benjamin A. Booth.

MUSICAL INSTRUMENTS.

The firm of B. Shoninger & Co., manufacturers of pianos and organs will be referred to in the chapter on Productive Arts. They have a store in this city, established in 1860, devoted to the sale of their own manufactured goods, besides being the State agents of the Weber, Emerson, and Wheelock pianos. They were first located on Church Street, but for the last thirty years have carried on business at 801 Chapel street. Branch stores of this firm are located at Bridgeport, Waterbury, South Norwalk, Ansonia, and Winsted. They represent the oldest established business in this line in the city. The individual members of the firm are M. Sonnenberg, Simon B. and Joseph Shoninger. Mr. Sonnenberg has had the entire charge of the New Haven store since 1866. He was born in Germany and came to America in 1858, since which, with the exception of a few years in the State of Michigan he has resided in New Haven. He has been a successful business man and is a highly esteemed citizen.

C. M. Loomis for the last twenty-one years has conducted a music store in New Haven, devoted to the sale of music and musical instruments of all kinds. In 1865 he purchased the music store of Dudley & Coops, located next to Apothecaries' Hall on Chapel street. In 1872 he removed to his present location, 54 Orange street. He has the agency for the Chickering & Sons and Mathushek pianos. Branch stores have been established by him at Meriden, Bridgeport, and Danbury. Mr. Loomis was born in New York State in 1829, and when a young man came to New Haven, where he worked at carriage-building until 1861, when he was one of the first to enlist in the 6th Regiment of Connecticut Volunteers and remained with the army of the Potomac until Lee's surrender. Several musical publications owe their existence to his munificence, among which is *Loomis' Musical Journal*, an advocate of the highest style of music as an art, which has accomplished much in the improvement of musical taste in New Haven.

The piano-forte ware-rooms of M. Steinert & Son, 777 Chapel street, were established by M. Steinert about twenty years ago. The firm is general agent for Steinway & Son, Ernest Gobler, Bach, and other well-known piano makers. A varied stock of organs is also carried. Branch houses of the firm have been established in Providence, Hartford, and Bridgeport.

PAINTS, OILS AND GLASS.

Early in the present century, Gardner Morse and Charles Peterson, under the firm name of Morse & Peterson, were engaged in the paint, oil and glass business on Chapel street, and continued there until 1868, when the business was conducted by G. F. Peterson. At this time the store was removed to 241 and 243 State street, now occupied

by Spencer & Matthew, who succeeded Mr. Peterson in 1871. This is one of the oldest houses in this line of business in the city, and both a wholesale and retail trade is done. The stock consists of paints, oils and glass, a specialty being made of manufacturers' supplies, including lubricating oils and acids. In the latter articles they have the largest trade of any house in the city. The entire building, located as above stated, is devoted to the requirements of their business. The individual members of the firm are Francis E. Spencer and Charles M. Matthews.

The wholesale and retail paint, oil, glass and painters' supply house of D. S. Glenney & Son, 270 and 272 State street, was founded in 1835 by Peterson & Glenney, who were succeeded by D. S. Glenney in 1843. In 1873, his son, D. S. Glenney, Jr., became a partner under the present firm name. The trade of this house has grown to extensive proportions, and extends through Western Massachusetts and Connecticut. Mr. Glenney, Sr., is a native of Milford, Conn., where he was born in 1819. He has resided in New Haven since 1835, and has become closely identified with the industrial interests of the city.

PAPER.

The New Haven Paper Company, consisting of J. L. and G. A. Matthews, was organized in 1872, and was located at No. 68 Orange street. The Company not only deal in paper, but are closely allied to several prominent paper-mills in the country. All kinds of book, news, and job paper are extensively handled. Their present location is at 375 and 377 State street.

H. J. Atwater & Co., 960 Grand street, are dealers in writing and wrapping-papers. The house was founded by the late Mr. Henry J. Atwater, and since his death the business has been conducted under the old firm name.

F. S. Bradley & Co. have a paper warehouse at 294 and 296 State street, adjoining the hardware store of the same firm.

PRINTERS' SUPPLIES.

The Elm City printers' warehouse of G. D. R. Hubbard was founded in 1876 by H. P. Hubbard. In 1882 the present proprietor purchased the business. Every article used in a printing-office, including type, ink and presses, is sold. Mr. Hubbard also manufactures roller composition, card-cutters, and bronzing-pads. Business was commenced on Centre street, and after several changes removed to present quarters, second floor of No. 379 State street.

STOVES AND FURNACES.

The stove and furnace store of S. E. Dibble, 639 Grand avenue, was founded by E. B. Dibble at the same location in 1852. E. B. Dibble died in 1865, when S. E. Dibble purchased the business, and has since conducted it. He has largely added

to the extent of the business since he has been proprietor. The building has been enlarged, and he now occupies the entire premises, which consist of three stories. Originally the business was confined to dealing in stoves, but under Mr. Dibble's management not only these, but ranges, furnaces, tin, copper and sheet-iron ware are dealt in, while plumbing and gas-fitting forms an important branch of his work and gives employment to from fifteen to twenty men. Mr. Dibble was born in Newtown, Conn., in 1842, and came to New Haven in 1863.

The firm of E. Arnold & Co., 236 to 240 State street, dealers in stoves, furnaces, ranges, and galvanized cornices, was formed in 1846, and has been located on the same street ever since. They are also engaged in tin-roofing, plumbing, and gas-fitting. The individual members of the firm are E. and George J. Arnold.

The following firms are also dealers in stoves:

Beardsley & Story, Crane and Franklin Stove Company and S. W. Lounsbury on Chapel street; A. H. Buckingham, Clerkin & McDonald, Herman Hoffmeister, T. P. Rourke, Nelson S. Johnson, and C. E. Bray on Grand avenue; S. Galpin, John R. Garloch, and John B. Ray on State street; Geo. W. Hazel & Co., Henry Hendricks and Adolph Hoffmeister on Church street; and a few others in various parts of the city.

TEA, COFFEE, AND SPICES.

The wholesale tea, coffee and spice house of Bennett & Sloan, 280 and 282 State street, was established in 1864 by Samuel Benjamin and Robert Peck, under the firm name of Benjamin & Peck. In 1865 A. H. Kellam became a partner. Shortly after Mr. Peck died, when the firm became Benjamin & Kellam, afterwards A. H. Kellam & Co. In 1877 P. S. Bennett purchased the business, and for a short time conducted it alone. A. P. Sloan became a partner in 1878, when the present firm was formed. Their premises in this city consist of a brick building 22 by 100 feet in dimensions, four stories high, with a basement. In the rear of the main building a smaller one is devoted to the use of the coffee and spice-mills, which are operated by steam power. In 1881 a branch store was opened in New York, at 44 Broadway and 82 Thomas street, since which date the bulk of their business has been centered in that city, and it is now regarded as their commercial headquarters. The firm also have a packing establishment at Guilford, Conn., devoted to canning fruits and vegetables. This was established in 1881. The staff of the firm consists of about thirty-five employees, together with six travelers. Teas, coffees, spices, grocers' supplies, and cigars are the principal goods dealt in. They sell more of the latter commodity than any similar concern in the State, aggregating \$400,000 annually from their house here, while the combined sales of both establishments reach \$1,000,000. Both of the members of this firm have had long experience in the business, and have been successful in building up a trade

excelled by no other similar concern in the State.

The wholesale tea, coffee and spice house of Alexander Emery, 29 and 31 Crown street, was established about the middle of the present century by George Steele and Samuel Halliwell, under the firm name of Steele & Halliwell, whose store at that time was located at 147 State street. In 1872 the firm of Steele & Emery, consisting of Joseph H. Steele and Alexander Emery, was formed, and succeeded to the business. In 1877 they removed to their present location. Mr. Steele retired in January, 1886, since which time Mr. Emery has conducted the business. Teas, coffees, spices, and fancy groceries form the principal articles sold. Mr. Emery also manufactures the Czar Baking Powder. Four traveling salesmen are employed by this house, the trade of which extends over a wide territory.

Augur & Tuttle, wholesale dealers in teas, coffees, and spices, 245 and 247 State street, began business in 1876. The trade of the house is entirely wholesale, and is mainly confined to this State. The individual members of the firm are John P. Augur and W. P. Tuttle, both long residents of this city.

The wholesale tea, coffee, and spice house of Coburn & Co., was established in 1850 by A. O. Coburn & Co., whom the present firm succeeded. The members of the firm are William F. Coburn and Riley R. Palmeter.

WALL-PAPER.

For several years the most extensive dealer in wall-paper in the city has been F. A. Gilbert, located at 853 Chapel street, who succeeded to the business he conducts in 1868, it having been founded by Franklin Andrews in 1847. While these pages are passing through the press, Mr. Gilbert is making arrangements to give his attention wholly to electric lighting, in which from the first he has been interested. Other dealers in wall-paper are H. B. Armstrong, E. R. Jeffcott & Co., and Horace B. Perry on Chapel street; Hills & Stone, L. H. Beardsley on State street; Platt & Thompson, on Orange street; and Jeffcott & Bradley, Grand avenue.

WINES AND LIQUORS

For a number of years Hugh J. Reynolds was salesman for the firm of A. Heller & Brothers, of New York, wholesale liquor dealers. In 1881 he commenced business for himself at 152 and 154 Crown street. He carries on a wholesale trade in wines, liquors, and cigars, and is the sole agent for the New England States of A. Heller & Brothers. He makes a specialty of Hungarian and Tokay wines. Mr. Reynolds is a native of Ireland, and has resided in New Haven since 1857.

Patrick McKenna, wholesale liquor dealer, established his present business at 301 Wallace street in 1863, but is now located at 438 East street and 164 Franklin street. Mr. McKenna was born in Ireland and came to America in 1852. He obtained

employment in New York City as a grocer's clerk, and a few years later had charge of a wholesale liquor store until 1863, when he came to New Haven. Mr. McKenna has been successful in business and is now largely interested in real estate.

Julius Tyler was engaged in the wholesale liquor trade from 1858 until a short time ago, when he disposed of his interest in the firm of Tyler & Hine to his partner, who now conducts it. Mr. Tyler founded this house, and continued in the business associated with different partners until 1879, when

Charles W. Hine became one of the members of the firm.

James E. McGann, retail liquor dealer, corner of Congress avenue and Hill street, commenced business in 1883. He is closely identified with politics in New Haven, and in 1883 was elected Alderman for a term of two years. In 1885 he was defeated by a small majority for the office of City Clerk.

Edward Tobin, 177 Meadow street, makes a specialty of liquor dealers' supplies in the way of glass-ware. He is also a large dealer in bottles.

BIOGRAPHIES.

HENRY W. BENEDICT

was born in New Haven August 16, 1820, and died November 25, 1877, being instantly killed in a railroad accident on the line of the New Jersey Central Railroad Company. His father was Truman Benedict, who was born April 19, 1798, and died April 14, 1880. His grandfather was John Benedict, born in West Haven in 1766. Both of these gentlemen were highly esteemed for their honesty and Christian character.

The subject of this sketch will be remembered by our elderly citizens as a clerk, when but a small boy, for his father, who conducted a grocery business at the corner of Water and Brewery streets, where he commenced the sale of coal as early as 1833.

In the year 1840, Mr. Benedict became associated with his father as a partner, under the firm name of T. Benedict & Son, and until the time of his death was engaged in the sale of coal, the firm name being changed in 1857 to H. W. Benedict & Co., when his father retired from active business.

About the year 1843, Mr. Benedict commenced the importation of Newcastle coal, but it was then only used for blacksmith purposes. A few years later the firm imported coal in large quantities, and supplied a number of gas corporations in New England and New York. Foreign gas coal was gradually displaced by American coal, so that at the time of his death Mr. Benedict was engaged in the sale of these coals, now marketed by his successors, Messrs. Benedict & Downs.

Mr. Benedict's business was not confined to coal. He was for years an active Director of the Waterbury and Bridgeport Gas Companies, and the Yale National Bank, of New Haven, and was prominent in many business enterprises. He was largely engaged for a quarter of a century in the coastwise vessel trade, and will long be remembered by many seafaring men for his uniform kindness and generosity.

Mr. Benedict had no political aspirations, but was for some time a member of the Common Council. He was especially active in the introduction of steam fire-engines into the city, being

one of the first to call the attention of the Council to their necessity.

He was an active temperance worker, and often upon the platform advocated its cause, and was highly esteemed for his benevolence and unselfishness.

From his early life until its sudden termination, Mr. Benedict was a consistent Christian, and will not soon be forgotten by a large acquaintance, both in and out of the city, who loved him and sincerely mourned his death.

AMOS F. BARNES.

Amos Foot Barnes, the subject of this sketch, was born in Watertown, Litchfield County, Conn., April 1, 1818. At the age of eleven, being desirous of securing a better education than was afforded by the schools of his native town, he availed himself of Hartford's educational advantages. He commenced his studies at the old Stone School-house, and for seven successive winters he was constant in his attendance.

The summer months of each year were devoted to labor at home upon the farm of his father, the late Captain Merritt Woodruff Barnes, who was throughout his life an honored resident of Watertown. In 1836, having arrived at the age of eighteen, he became desirous of entering upon a mercantile life, and accordingly applied for and obtained a situation as clerk in the grocery store of Harry Ives, which was situated in Broadway, then one of the principal business centers of the city.

On May 6, 1841, he was married (by the Rev. Dr. Leonard Bacon) to Miss Nancy Richards Attwater, of New Haven, and in the following August entered into business on his own account at his present location, now 293 and 295 State street, as a member of the firm of Finch & Barnes, wholesale grocers.

By prompt and careful attention to the wants of their customers, the new firm soon established a successful business. The firm dissolved partnership in 1855, and Mr. Barnes assumed sole charge, retaining the old stand. He continued the business under his own name until 1869, when he associated with him his son, Thomas Attwater

Amos A. Barnes

H. W. Benedict

John E. Passett
Co

James S. Dewell

Barnes, the only survivor of seven children, the firm name becoming Amos F. Barnes & Son, which it still continues. The name has become a familiar one to the business world of New Haven and other cities, and it is everywhere recognized as the representative of integrity, probity, and credit.

Politics and political honors have had little attraction for Mr. Barnes, but nevertheless he has always possessed firm convictions as to his duties in this respect. His public services have consisted of two terms as Councilman, in 1855-56, and of six years' service, at two different times, as a member of the Board of Education.

When the bill establishing a national banking system became law, Mr. Barnes was one of five gentlemen who organized the First National Bank, in which he has been a Director from the beginning. He has also been for many years one of the Trustees of the Connecticut Savings Bank.

Since his residence in this city, Mr. Barnes has been a constant attendant at the Centre Church, and has at various times served the Ecclesiastical Society of that church in positions of honor and trust.

JAMES D. DEWELL.

New Haven has cherished the ideas of trade and commerce ever since the days when Davenport and Eaton led thither their company of London merchants.

The history of the city's growth has been the history of its commercial prosperity. Prominent among the New Haven business houses to-day is the firm of J. D. Dewell & Co. Mr. Dewell's father was undoubtedly of Scotch descent. In early life he emigrated from Dutchess County, N. Y., to Norfolk, Conn., where he engaged in the manufacture of scythes. He married Mary Humphrey; and to them was born at Norfolk, September, 3, 1837, a son, James Dudley Dewell, the subject of the present sketch.

On account of reverses in his father's business, young Dewell was obliged to content himself with a very limited common school education, and at an early age he entered actively into the struggle for existence. In the spring of 1858, while he was yet but twenty years of age, he left the Norfolk hills and came to New Haven, resolved to enter upon a mercantile career. He found employment with Bushnell & Co., wholesale grocers, who were located on the northwest corner of State and Crown streets. Two years later, in 1860, he became a member of the firm.

On the 2d of July of the same year he married Miss Mary Elizabeth Keyes, of Norfolk. Five children live to bless the union. After Mr. Dewell was admitted to a share in the councils of Bushnell & Co., his energy and ability aided greatly in extending the business. In 1864 the firm name was changed to Bushnell & Dewell, but subsequently it was again altered to J. D. Dewell & Co., in which form it has now for many years been familiar to the mercantile world.

As one of New Haven's successful business men, Mr. Dewell has desired to bind his own good for-

tunes closely with those of the community around him. No sincere effort for public improvement or for social amelioration has failed to enlist his warm interest and generous co-operation.

JOHN E. BASSETT,

of the firm of John E. Bassett & Co., dealers in manufacturers' supplies and general hardware, 754 Chapel street, and 318 and 320 State street, was born in Hamden, Conn., March 31, 1830, a son of David and Mary A. (Jarvis) Bassett. At the age of nine he removed with his father's family to New Haven, which has since been his home. Before this he had attended school in Hamden. He continued his studies in the public schools of New Haven and finished them, when between fifteen and sixteen years old, at the Lancasterian School, then under the management of Mr. John E. Lovell.

Not long afterward he entered the hardware store of Mr. E. B. M. Hughes, as a clerk, thus beginning a career with that establishment which has been unbroken to the present time, marking him as having been longer in one place on Chapel street than any other man now in business there. That was in 1846, and Mr. Bassett looks back over the sunshine and shadows of nearly forty years' association with the spot formerly known as 236 Chapel street, but now as 754, during more than thirty years of which period he has been a proprietor in the enterprise.

The establishment for many years known as that of John E. Bassett & Co., is without doubt one of the oldest of its kind in New England which has had a continuous existence. Its history is specially interesting, and was given fully and in attractive form in a pamphlet issued by the firm in 1884 (at which time the house entered upon its second century), under the title of "Y^e Historie of an Old Hardware Store," which has had quite a large circulation, and from which we glean the following important facts:

In 1784, Titus Street, then a young man, opened a small general store at the corner of Chapel and State streets, beginning business with the usual assortment of a country store, "in the corner of the big lot where now Street's building stands, in the structure which was his residence as well * * * and displayed perseverance and enterprise beyond the comprehension of the conservative merchants, his competitors," and "in spite of melancholy prophecy, Mr. Street flourished and must have attained mercantile distinction, since he counted among his customers such distinguished names as James Hillhouse, Jonathan Ingersoll, Pierpont Edwards, Rev. Ezra Stiles, President of Yale College, David Daggett, and others. He continued business alone until 1792, when, taking as partner Mr. Samuel Hughes, together they conducted the business under the firm name of Street & Hughes, until 1802, from which time, until 1821, a period of nineteen years, owing to the unsettled condition of mercantile affairs incident to the War of 1812, making it exceedingly difficult to collect money, they deemed it prudent to dissolve and re-form at inter-

vals, as a means of facilitating settlements. Under such conditions the style of the firm was successively Street, Hughes & Co., Street, Sherman & Co., Hughes, Sherman & Co., and Hughes & Sherman, Mr. William Sherman representing an interest in the firm during the years in which the changes occurred."

Mr. Street retired from active business in 1821 and died in 1841. "He was a descendant of the Rev. Samuel Street, the first settled Congregational minister in Wallingford, and his father, also named Samuel, resided there. * * * Titus Street is remembered as a tall old gentleman of courtly manners, fastidious in dress, and was considered at the close of his business career as one of the three wealthy men in the city; the others being Mr. Eli Whitney and Mr. William Leffingwell."

Mr. Samuel Hughes, who was first clerk and then partner with Mr. Street, continuing the business after the latter's retirement, had a career which marked him as a self-made man, since "beginning * * * in obscurity he * * * during his life created two fortunes, one of which was lost in ill-paying investments." He has been described as "a born merchant." At his death, in 1838, his large fortune and business were the inheritance of his son, E. B. M. Hughes, who, since the retirement of Mr. Street, in 1821, had been associated with his father as partner. The son was a quiet, unobtrusive man, shrewd and enterprising, but not given to large ambition, successful in business and ranked one of the wealthiest men of his day. From the death of his father, he conducted his business alone, until 1855, at which time, with the admission of Mr. John E. Bassett to the firm, its style became as at present, Mr. Hughes remaining as senior until his death in 1864. In 1865, Mr. H. N. Jarvis became associated with Mr. Bassett as partner, remaining as such during three years, when he removed to Denver, Colo., where he has since lived, engaged in farming operations.

It will be noted that since the foundation of this business, in 1784, it has never been sold out, a surviving partner always carrying it forward. The small wooden building in which it had its origin is but a memory now, but its successor, a little above, by repeated additions and enlargements, now extends from 754 Chapel street to 318 and 320 State street, thus appropriately encircling its birthplace. Mr. Bassett, as the head of this business, has succeeded in making its name a synonym throughout New England for enterprise, integrity and magnitude in the hardware trade. He takes great pleasure in speaking of the antiquity of his house, and in showing to curious visitors the little old safe, which was the only one in use in the store until the death of Mr. E. B. M. Hughes, and the quaint old ledger and blotter in which Titus Street kept the record of his daily mercantile transactions.

The success of Mr. Bassett illustrates the advantage of thoroughly learning one business and sticking to it, as well as of continuing associations which have proved to be advantageous, and yielding to no temptation to form new alliances, which, at best, must be uncertain in their outcome. In short

it may be said that his motto has been, practically, to deserve the public esteem, exert himself to the utmost for tried friends, and to "let well enough alone."

Exceptionally genial in address, he has many and warm personal friends among the leading business men of New Haven and other cities. He is a Democrat, but not a politician; an attendant upon the services of the Episcopal Church; and a citizen of public spirit and progressive ideas.

He was married to Sarah B. Pratt, of Greenport, L. I., in June, 1860, and has a son and three daughters.

Mr. Bassett has not interested himself largely in enterprises outside of his own trade, but has been connected in one way or another with a few first-class concerns, notably with the New Haven and Centreville Horse Railroad Company as one of its incorporators, and as its Treasurer and President.

WOOSTER A. ENSIGN.

Through the greater part of this century the name of Ensign has been honorably famous in the business history of New Haven. Thomas Ensign was a young man when he came here from Hartford and formed a partnership with Jeremiah Barnet. Barnet & Ensign were engaged for more than forty years in the manufacture of morocco leather, and were located upon George street, which was then popularly known as Leather lane. Wooster A. Ensign, a son of Thomas and Esther Ensign, was born June 11, 1823, in the house then standing on what is now the corner of George and Dow streets. He is therefore entitled to rank among the town-born, a distinction which once carried with it a certain pre-eminence, and which is still highly prized.

Mr. Ensign attended the famous Lancasterian School, then under the charge of that renowned educator, John E. Lovell. At the age of fifteen he left school and entered upon the more arduous discipline of actual business life. He was first employed in the hardware store of English & Mix, situated on State street, near Chapel. He remained with this firm just nine years. On May 1, 1847, he began business for himself on Chapel street, as a dealer in iron and steel goods, and obtained the success which his industry and integrity deserved and insured. After twenty-nine years of honorable and successful activity, he built, in 1876, the spacious store at 53 Orange street, where he has since remained.

The perpetuation of his business name into still another generation is assured, for he has associated with himself his eldest son, under the firm name of Wooster A. Ensign & Son. His only remaining son is also employed.

Mr. Ensign married, on June 24, 1846, Miss Charlotte A., daughter of Roger Sherman Prescott, of New Haven, by whom he has three children.

For about twenty-five years he has been a Director in the City Bank, and is also a Director in the Maryland Steamboat Company, of Baltimore. He

Walter H. Ensign

Charles C. Smith.

holds the offices of Vice-President and Director in the New Haven Watch Company.

Mr. Ensign is fairly entitled to a first place among New Haven's prominent men of business. His mercantile career is rounded out with nearly half a century of busy life. Very few merchants who are still in business were his contemporaries in 1847, when he laid the foundations of his present prosperity. The beginnings were small; the business to-day has branched out in every direction, and very many large manufacturers are represented by the firm. This flattering success is Mr. Ensign's life-work and achievement.

HON. CHARLES L. ENGLISH

is descended from Benjamin English, who removed from Salem, Mass., to New Haven, early in the last century. He was born August 5, 1814, the son of James English and Nancy, daughter of Samuel Griswold, of New Haven. Of the father's family, consisting of six sons and three daughters, all save one have married and resided in New Haven. His great grandfather, Benjamin English, was killed in his own house during an invasion of Connecticut by the British troops under General Tryon in 1779.

Mr. English was educated at the public schools of the city, his father being actively identified as trustee with the first school established on the Lancasterian system, and taught by John E. Lovell, who is now living at the advanced age of ninety-two. He also attended two private schools, one kept by Mr. Merwin in the Glebe Building, and the other by Mr. Jarman in Orange street, who taught navigation, then a practical matter for New Haven youth, when the city was devoted to commerce, and the young men of vigor and enterprise became sea-captains.

Upon leaving school, Mr. English was apprenticed for three years to Knevals, Townsend & Hull, merchant tailors. The confinement proving prejudicial to his health he left them, and then for a time recontinued his studies with General James N. Palmer, a man of great force and intellectual vigor, from whom he derived a taste for history and the natural sciences, which he has cultivated through life.

In 1831, he entered the grocery business with the firm of Harry Ives & Co., as clerk, Mr. Ives being the only active partner, and Elam Hull, a wealthy proprietor, furnishing the capital.

Three years later, while yet a minor, having passed his twentieth year, he was set up in business for himself by Mr. Hull, and, continuing in the same store, had full charge of the firm, trading under the name of Charles L. English & Co. They were located on Broadway, which was then one of the most important mercantile centers in the city. There was no railroad at that time, and traffic came in from the north, brought by country teams. The introduction of steam travel carried trade afterward down to a lower part of the city.

He continued in this business, associated with his brother, George D. English, until 1842. That

year he left it and went into the lumber business with another brother, James E. English, on Water street, where he continued two years. There was then an amicable and fraternal dissolution of the partnership, and to serve the family interest, Mr. English purchased a property and established a lumber-yard on the same street. After a few years John P. Tuttle came in as partner, and the firm became English & Tuttle, afterward English & Holt, upon the entrance of Albert S. Holt.

About this time a new business was established by Calvin Gallup & Co. Charles L. English furnished the capital and attended to the sales and finances of the concern. They dealt in hardware at wholesale. The operations were with Canada, Ohio, and extensively with Indiana, where the lumber was produced. They shipped largely of black walnut to San Francisco, one-third going by all rail route and two-thirds by water from New York *via* Cape Horn. They were the first to make all rail shipments of lumber to the Pacific Coast. Mr. English remained in this business until 1876, and it is still carried on by his son, under the same firm name, English & Holt.

In 1877 he was elected President of Yale National Bank. The confinement did not agree with his health, accustomed as he was to an active outdoor life, and, after one year had expired, he decided, much to the regret of the Directors and Stockholders, to resign the position, while still continuing one of the Directors.

At this time he visited for his health the Hot Springs of Arkansas, but without gaining special benefit.

Mr. English married Minerva J., daughter of Asa Bronson, of Waterbury. Their two children died in childhood. After her death he married her sister, Sarah W., who died without issue. He then married Harriet D., daughter of Philemon Holt, Esq., of East Haven. They have one son, Edwin H. and one daughter, Julia A. living; Charles L. died in early manhood, and another son died in infancy.

Mr. English has been identified from early life with the public affairs of the city. In 1837 the Fire Department of New Haven was organized under a Board of Fire Wardens and Engineers, and in July of that year Mr. English was appointed Fire Warden. In 1840, upon the resignation of Charles Robinson, Esq., he was elected Secretary of the Board. The bills for the Department were audited and approved by this Board, and then went to the Common Council. Of that Board, consisting of nineteen members, he alone survives at the present day. Mr. English served also as a member of the Common Council.

At the organization of the New Haven and Derby Railroad, Mr. English was chosen a Director, and in 1875 was elected Vice-President, and has continued in that office to this day.

He has always taken an active interest in politics. In 1856 he left the Democratic party and served as Chairman of the first Republican Convention in the State, and was soon after a delegate from that convention to the National Convention which nomi-

nated Fremont. He there served on the Committee on Platforms and Resolutions. He was also a member of the Republican State Central Committee in 1856, and the same year was sent to the State Legislature to represent New Haven. He took a prominent part there and was Chairman of the Republican Legislative Caucus, and also Chairman of the House Committee on State Prison.

There was at that time, 1856, a three-fold division in politics and a breaking up of old party lines. The Know-Nothings claimed America for Americans, with prejudice to foreigners. The Democrats were in sympathy with the South. The Republicans, made up of Whigs, Free Soilers, and some Democrats, were the new party struggling up into power, and making ready to settle the one great political question of slavery.

Mr. English was radically opposed to carrying slavery into the territories, and was one of the signers of the famous remonstrance sent at this time, by Dr. Nathaniel Taylor and others, to President Buchanan, calling the executive attention to the difficulties in Kansas.

Through these exciting times Mr. English was in the front of the fight in building up the new party. He was one of the founders of Republicanism in Connecticut, and still remains identified with that party.

He has several times been the nominee for the State Senatorship, and was nominated and received the full party vote for Lieutenant-Governor in 1874.

Mr. English was early in life a member of the Young Men's Institute, which he joined in 1840, and has served on its Committees. He was elected a Life Member and Director of the Historical Society at its first meeting, and has kept up an active interest in this institution. He has been, since 1835, a member of the Chamber of Commerce, which is one of the oldest institutions of its kind, dating back to 1800.

Mr. English has been a Vestryman of St. Paul's Church through a long course of years, and many times a delegate to the Diocesan Convention.

WILLIAM ATWATER,

son of Jared and Eunice (Dickerman) Atwater, was born at Cedar Hill, in the town of Hamden, Conn., June 17, 1805. He was the tenth in a family of twelve children. In his eighth year his father died.

At the age of sixteen he came to New Haven to learn the joiner's trade of his brother Elihu. After attaining his majority, he carried on the building business in New Haven for about ten years; then, buying a farm in Hamden, he removed there and remained about eighteen years. Returning to New Haven he entered into mercantile business with his sons, under the firm name of H. J. Atwater & Co., the partners being Henry J., William J., and William Atwater.

From time to time he has made purchases of real estate, until he is quite an extensive owner.

He has erected many fine residences and business structures in different parts of the city.

Mr. Atwater married Eliza, a daughter of Joel and Eunice Ford, of Hamden, May 21, 1828. His two well-known sons, Henry J. and William J. Atwater, and his daughter, Mrs. H. D. Clark, of New Haven, were born of this marriage. Mrs. Atwater died April 7, 1878, and April 15, 1879, Mr. Atwater married for his second wife Mrs. Mary C. Hemingway, of Fair Haven East.

In religion Mr. Atwater is a Congregationalist. He and his first wife united with the Chapel street Congregational Church soon after the erection of its house of worship. Removing to Hamden they joined the Whitneyville Congregational Church, under the pastorate of the Rev. Austin Putnam. Returning to the city they identified themselves with the Third Congregational Church of New Haven. In 1878 Mr. Atwater joined the Humphrey street Congregational Church while it was yet a mission and its house of worship merely a chapel, under the impression that he could do more practical good as a worker in that new field. To the building up and sustentation of this church, Mr. Atwater has contributed largely.

He is a Republican politically, and ever since the organization of that party has cast his vote and used his influence in favor of its principles. Before its organization he voted with the Free-Soil party; commencing to do so when there was only one other man in the town of Hamden equally advanced in anti-slavery principles.

He owes the success he has won in life to his own industry, skill and good character; and he is held in high esteem by a wide circle of acquaintances. His public spirit has led him to contribute his full share toward the general improvement and progress of the communities in which he has lived. His life has been upright, busy, and useful to himself, his family, and his fellow men.

FRANCIS DONNELLY.

This well-known citizen and business man was born in Ireland, November 1, 1816, and came to America in 1836, locating in New Haven, where he soon found employment and began to lay the foundation of the permanent success which he has so worthily attained.

After two years passed as an employee in the wholesale grocery of John Nicholson, during which he had been familiarizing himself with the trade, in 1843 he embarked in the grocery business on his own account, on the site of the City Hotel, at the corner of Union and Wooster streets, and in that trade he continued, with augmenting fortune, for eighteen years.

Later, in company with Mr. John Nicholson, he entered real estate speculation, in which he was successful for fifteen years, operating at different times in conjunction with Messrs. John E. Wylie, of New York, Charles A. Warner, John A. Dibble, H. S. English, John S. Farren, and others. In connection with some of the above-named gentlemen he owned considerable property on Ferry street thirty

William Abwater

Augustus C. Briggs

years ago and later. Many houses were built and numerous lots sold. Under his supervision Ferry street was straightened and graded, and bordered with most of the trees which now render it so attractive. Though practically out of speculation in that line, Mr. Donnelly owns considerable real estate at this time in Fair Haven and other parts of the city.

Mr. Donnelly purchased the East Haven brown-stone quarries in 1879, and has since quarried and furnished stone very extensively for building in New Haven and elsewhere. Among conspicuous edifices built of this stone are several of the College buildings of the sightly and artistic Yale group.

Politically Mr. Donnelly was formerly a Democrat, but his ardent adherence to the cause of the North at the outbreak of the rebellion made him an outspoken and practically helpful "war man." He now ranks himself as an Independent, with freedom to support such men and measures as promise to enhance the public good. He has served his fellow citizens as Alderman, Ward Commissioner, a Member of the Board of Relief, and in other official capacities. He is a Trustee of St. Francis' Roman Catholic Church and of St. Francis' Orphan Asylum.

He was married in 1844 to Alice Gallagher, of New Haven, and has had eight sons and four daughters, of whom four sons and three daughters are living.

AUGUSTUS C. WILCOX,

the son of Curtis and Martha (Hull) Wilcox, was born in Madison, August 22, 1812. His mother died in 1816, and of a family of six children he alone survives. His father was a merchant in Madison, and Augustus, as a child, was accustomed to the routine of such country business as he carried on.

He attended school through his boyhood at the Lee Academy, then under the charge of Major Samuel Robinson.

At the death of his father, Mr. Wilcox came to New Haven, and entered the store of William Thompson as clerk, and continued with the firm of Smith & Graves. He next entered the service of Washington Yale. In 1836 the firm of Yale & Wilcox was established, which afterwards became and is now (1886) Wilcox & Co.

At the age of seventeen, in a company of one hundred and ten converts, he united with the Congregational Church in Madison, then under the pastorate of the Rev. Samuel N. Shepard. Upon removing to New Haven he took a letter to the Centre Church, but afterward resumed membership with the Madison Church.

Mr. Wilcox married, June 20, 1837, Catherine Amelia Cruttenden, of Madison, who died in 1881. He has one adopted daughter.

In politics, Mr. Wilcox has maintained the principles of Jefferson. He represented his native town in the Lower House of the Legislature in 1872, and in 1873 was Senator for the Sixth Sena-

torial District. While in the Senate, he was Chairman of the Banking Committee, a position he was fully qualified for by his business knowledge.

In city politics he has been a member of the Common Council and of the Board of Selectmen of the town. He was one of the committee for building the City Hall, and to many public and private charities he has been a substantial and generous benefactor.

DANIEL L. CARPENTER,

of the dry goods firm of Monson & Carpenter, was born in Bennington, Vt., July 20, 1829, a son of Richard and Betsey (Austin) Carpenter.

John Austin, his mother's father, saw active service in the Revolutionary War and died at a very advanced age, highly respected by an extensive acquaintance. Mr. Carpenter's father was a tailor by trade and successful as a business man, though his means were so limited that he could do little in the way of giving his son anything like a financial start in life.

Bright and studious, Mr. Carpenter graduated from the old Bennington Seminary at the age of fifteen, and soon after became a clerk in the store of Reuben Rice, of New Haven. Later he was for a time in the employ of T. P. Merwin & Co. He advanced rapidly in a knowledge of the requirements of the dry goods trade, and in 1865 began business for himself as a member of the firm of Monson & Carpenter, which then succeeded to the business of the old house of Winship & Barney at 246 (old number) Chapel street. On the same ground the house has continued enlarging the business, which was begun with two clerks, more than four-fold, until it now occupies 764-768 (new numbers) Chapel street, giving employment to thirty-five clerks in its wholesale and retail departments, reaching a large annual aggregate. The firm of Monson & Carpenter unquestionably has the distinction of being the oldest dry goods firm in New Haven, when the number of their successive years of business is considered.

Mr. Carpenter was married in 1880 to Miss Carrie O. Hall, of New Haven, a step-daughter of Mr. George H. Scranton.

A Democrat in politics, he was for eight years chairman of the Democratic Congressional Committee, and during a considerable period was active as a politician, though he never sought or accepted office of any kind, preferring to devote all his energies and time to the development of his own important business.

He has ever been liberal and enterprising in the support and advancement of all worthy public objects, and ever to be safely counted on as a helpful promoter of the best interests of the city.

With his family he is an attendant upon the services of Trinity Church.

He was for seven years a Sergeant in the New Haven Grays, and for a time a Lieutenant in the Veteran Grays. He has been for twenty years a Mason and a member of Hiram Lodge No. 1, the oldest lodge in the State.

CHARLES MONSON,

senior member of the firm of Monson & Carpenter, was born in Litchfield, Conn., February 14, 1836. His father was William Monson.

He began his business life as a clerk with the firm of Winship & Barney, which was succeeded by that of Monson & Carpenter.

He is a Republican politically.

In October, 1875, he married Miss Hubbell, of Philadelphia.

CHARLES SHELTON

is a native of Cheshire. He was born in 1818, the son of Charles and Lucinda (Cornwall) Shelton.

His mother was the daughter of Dr. Thomas T. Cornwall, of Cheshire; and his grandmother was the daughter of the Rev. John Foote, of Cheshire, sister of Governor Foote, whose son was Admiral Andrew H. Foote. His grandmother was a famous student and prepared for college, but upon being urged to enter refused on account of her sex. She studied Hebrew with President Stiles as an inmate of his house, and a complimentary diploma was given her by Yale College, which is deposited in the Historical Society's rooms. His father was a physician, a graduate of Yale College, and studied medicine with Dr. Cornwall, whose daughter he married, and practiced at Cheshire. His grandmother, on the father's side, was a daughter of the Rev. Christopher Newton, of Huntington.

Charles Shelton was educated at the Cheshire Academy. He became clerk to his uncle, in a country store in Cheshire, at the age of fifteen. After three or four years there he studied medicine in his father's office for six months, till his father died. Being thus thrown suddenly upon his own resources he gave up the idea of becoming a doctor and went South, and engaged in mercantile business during the next ten years. He then returned to his native town and was a country merchant for six years.

He was appointed Postmaster for one term, then Town Clerk and Town Treasurer, being also Treasurer of the Special Town Deposit Fund for Cheshire.

He sold out the store interest in 1842, and coming to New Haven went into the wholesale grocery business with his brother William at the head of Long Wharf. His health failing after a few years, he left the business upon the advice of his physician.

He was then appointed surveyor of the Port under President Pierce, and held the post also during Buchanan's administration. He then took up the business of brokerage and the settling of estates. He was also assessor of New Haven for a number of years.

In 1875 Mr. Shelton purchased a farm in West Haven, and has since spent his summers upon it.

He married Caroline M. Casilear, of New York City. His brother, who has been for two years Mayor of New Haven, married another sister in the same family.

Mr. Shelton, acting as conservator, trustee, and executor of estates, continues to lead, as from the outset, an active and useful life.

ALEXANDER FOOTE.

The first of the family of Foote in America of whom there is any record extant, seems to have been Nathaniel Foote, from Colchester, England. He married Elizabeth Deming and died in 1664. His son, Robert, born in 1627, went first to Wallingford and then to Branford. He died, aged fifty-two years, in 1681.

Elihu Foote, grandfather of Alexander Foote, was of the sixth generation in America. He was a resident in Northford. He married Lucy Williams, daughter of Rev. Warham Williams, the first settled Congregational minister in Northford, who was a lineal descendant of the Deerfield Williamses; they had two daughters and two sons, named in the order of their nativity, Edwin, Delia, Warham Williams and Anna.

Warham Williams Foote was married, in 1822, to Lucinda Harrison. He was a respected farmer of Northford. His children numbered thirteen, nine of them being sons. Of the latter, Alexander Foote was born February 9, 1824, in the house in Northford which had been built by his grandfather, and in which his father had been born.

Drawing his life-blood from the Footes, Williamses, Harrisons, Houghs and Inghams, it will be seen by any reader acquainted with the good old Connecticut stock, that his origin should be a matter of pride to him, for surely no more honorable names are known than those above mentioned.

Mr. Foote's educational advantages were good for the time and locality, and he improved them in a very creditable manner. He gained the rudiments of his education in the common school, and later for a time attended a select school. So far had he advanced, that in the fall of 1842 he taught a term of school in his own neighborhood with such success, that he was prevailed upon to undertake a second term the following year. After that, feeling the need of more extensive knowledge in some important branches than he possessed, he entered as a student, for a term, an old time well-known educational institution at Munson, Mass. The following winter he taught a school at Greenwich, Mass., teaching later at Woodwardtown and North Haven during the winter months, working diligently during the summer, and for a time had charge of a farm in Waterbury.

February 28, 1853, he married Miss Sarah A. Kelsey, a native of Madison, Conn. They have four children: Carlton Alexander, born January 9, 1859; Nettie M., born January 8, 1861; Mary K., born September 27, 1863; and Myron Philo, born November 21, 1865.

Mr. Foote early identified himself with the Congregational Church, and, with his family, later connected himself with the Church of the Ascension, and more recently with Trinity Church.

In politics he was formerly a Whig, and since the formation of the Republican party has been a

A. Foote

Charles Shelton

JOHN STARR GRIFFING

member of that organization. He has never taken any active part in politics, and has repeatedly refused to yield to the solicitations of his friends to become a candidate for positions of public trust and responsibility. He has, however, consented to act as Grand Juror and Constable in Northford, and has served as a member of the Board of Selectmen of the Town of New Haven. He was at one time a candidate for the office of Alderman of that city.

It is owing to his long and prominent connection with the fish and oyster trade that Mr. Foote is best and most widely known. In partnership with Mr. Eber H. Kelsey, he entered this trade in 1854, and they began business with the fish market May 28, 1857. November 13, 1861, Mr. Foote succeeded the firm of Kelsey & Foote. In 1867, the firm of A. Foote & Co. was formed, and has existed to this day, the present members being Alexander Foote, his brother Lazelle, and his nephew A. Kelsey Jones. The trade of this house has long been very extensive, placing it high on the list of the leading business houses of the City of New Haven. Mr. Foote was one of the organizers of the Long Wharf Fish Company in 1862, and has since been one of its proprietors.

Rev. Warham Williams, from whom Mr. Foote is descended, was one of the most interesting personages in the history of Connecticut. He was a son of Rev. Dr. Stephen Williams, pastor of the Congregational Church in Long Meadow, Mass., and a descendant of Robert Williams, one of the first settlers of Roxbury. His further history is much of it a part of the history of the establishment and maintenance of religious worship in this part of the State, and his many descendants have been numbered among the most prominent and respected of their generations.

JOHN STARR GRIFFING.

The family of Griffing has been prominently and honorably connected with the local history of Guilford for nearly a century and a half. Originally from Southold on Long Island, one of the confederated settlements that constituted the Colony of New Haven, the marriage into a Guilford family of a grandson of Jasper Griffing, the first of that name who emigrated to America, seems to have been the occasion of transferring the name of Griffing into Connecticut.

Jasper Griffing, of Guilford, the grandson of the first settler, and grandfather of the subject of this notice, seems to have led rather an eventful life. When quite a young man he was impressed, in New York Harbor, into the English fleet, then lying there under the command of Commodore Warren. The influence of friends procured the promise of his release and return by a pilot-boat when the fleet reached Sandy Hook. In those days, when the English navy was largely and almost necessarily manned by impressment, it was much easier to make a promise of this kind than to remember to fulfill it, and young Griffing soon found himself a sailor on the West India station.

Swimming ashore with two other deserters, they found refuge in an American merchantman, where they were soon discovered and arrested. Tried for desertion, he and his companions were convicted and sentenced to be hung. In this unexpected emergency, he sent a written statement of his case to Sir Peter Warren, remonstrating against the injustice of his sentence. Fortunately for him his statement was corroborated by an American Lieutenant then on the flag-ship, and having sworn to be loyal to his sovereign and serve him faithfully in future, his life was spared, while his fellow deserters were swung from the yard-arm. A few weeks afterwards, young Griffing sat on the main-top truck of Warren's ship when it entered the harbor of Louisburg under the fire of the French. Escaping in disguise from further naval service, he finally reached Guilford, where he soon afterwards was married, and ultimately became one of its wealthiest citizens.

In the last year of the colonial history of Connecticut, he became, by purchase, the owner of the famous "old stone house," still standing in excellent preservation, in Guilford, and in the possession of one of his descendants, Mrs. Sarah B. Cone, of Stockbridge, Mass. This house, probably the oldest building in the United States, was erected by Rev. Henry Whitfield in 1640, and is cared for with reverent pride by its present owner.

Captain Joel Griffing, the son of Jasper, and father of John S. Griffing, was a successful merchant and a public-spirited citizen in his native town, where John, being the youngest but one of eleven children, was born, August 8, 1815. With the best elementary education that an intelligent community, always priding itself upon the excellence of its schools, could provide, he came to New Haven when sixteen years of age and became a clerk in the store of Mr. Jonathan Nicholson. When he attained his majority he entered into partnership with his older brother, Jasper, under the firm name of J. & J. S. Griffing, carrying on an extensive trade in building materials. After the death of his brother, in 1846, he became the senior member of a new firm, Griffing & Law, who ultimately transferred their business to the late Mr. Nelson Hotchkiss.

During the years of his mercantile life Mr. Griffing had become interested in a number of private corporations, in one of which, the Swedish Iron Company, of Milwaukee, one of the largest manufacturing establishments in the West, he was a prominent Director, and which ultimately demanded his undivided attention.

In addition however to the care of his personal interests, he discharged a number of public trusts with ability and conscientious fidelity. He was one of the original Directors of the Merchants' Bank of New Haven, and became its Vice-President when reorganized as a National Bank, and continued in that office till his death, July 31, 1869. He was also for several years President of the Mutual Security Insurance Company of New Haven. As a member of the Board of Education he rendered valuable service to the public schools of New Haven during the years he remained in office.

Mr. Griffing was united in marriage August 26, 1844, to Mary Matilda Coley, daughter of John H. Coley, a graduate of Yale College, and for many years a prominent merchant of New Haven. His widow and four of their seven children survive him, one of them being the wife of Mr. Herbert H. Bancroft, the able and exhaustive historian of the Pacific Coast.

In estimating the character of individuals, entire justice is not always done to hereditary traits and tendencies. How far the self-reliant temper and personal courtesy of manner, eminently characteristic of Mr. Griffing, was the result of an hereditary tendency, it may be difficult to say. The original Welsh settler we know to have been a man of enterprise. Of his son, the first of the name of Griffing born on American soil, it is on contemporary record that he was "a man of most agreeable conversation and greatly beloved."

Slightly reserved in manner, never obtruding himself upon the notice of others, with a high appreciation of whatever was becoming in character or morals, and gifted with an acute discernment of all unfounded pretensions, Mr. Griffing secured the general respect of the community by the integrity of his business methods; the personal regard of his intimate friends by his genial disposition; and the affectionate attachment of his domestic circle, by his devotion to that pleasant home, to which his apparently uncompleted life has been a prolonged sorrow.

Mr. and Mrs. Griffing were among the guests who were invited to visit the Pacific Coast by the Directors of the Union Pacific Railroad on the completion of that great undertaking. Near the junction of this road with that leading to Salt Lake City, Mr. Griffing left the train and walked, under a hot sun, to Ogden, a distance of nearly two miles, in the expectation of finding letters from his home. He was much exhausted by his exposure, and five days after, having reached Chicago, was attacked with brain fever and died in that city on the 31st of July, 1869, having nearly completed the fifty-fourth year of his life.

WILLIAM AUGUSTUS BECKLEY

was born at Cedar Hill, Hamden, Conn., October 16, 1827. He was the oldest son of Silas and Amelia (Atwater) Beckley.

The first twelve years of his life were spent at Cedar Hill and Whitneyville. While living with his parents there, he attended John E. Lovell's Lancasterian School for three years. He afterward lived with his parents on two different farms in Orange, Conn., attending school for two seasons at Amos Smith's, New Haven.

When seventeen years old, he left school to learn the carpenter and joiner trade of Russell Alling, where he lived until he was twenty-one, receiving as compensation \$30 a year for the first year, with an advance of \$5 a year until he had finished his time. He then spent one and a half years in Twinsburg, Ohio, where he attended school one winter at Rev. Samuel Bissell's Seminary.

Returning to New Haven, where he has lived ever since, he married Cordelia Wheeler on November 12, 1851.

Mr. Beckley carried on the building business for twelve years, erecting over three hundred buildings in New Haven and vicinity. In the year 1860 he went into the lumber trade with Nathan H. Sanford, the firm name being Sanford & Beckley. After four and a half years he bought his partner out, and shortly after associated with himself his brother, Elihu A. Beckley, the firm name being W. A. Beckley & Co. He has been in business on the same corner for over a quarter of a century.

GEORGE H. FORD.

To the citizens of New Haven who appreciate the beautiful in art, there has been for many years a charm about the southeast corner of Chapel and State streets. The spacious windows which reveal, to all who pass by, beautiful statuary, bronzes, delicate porcelains, and other costly products of artistic skill, have become so familiar to the public, that only if the display were forever removed would the daily pleasure and instruction derived from it be correctly measured. For this collection of the rare and dainty wares of cunning workmen, New Haven is indebted mainly to the tact, taste, and energy of George H. Ford.

Mr. Ford is a descendant of Thomas and John Ford, who were among the original settlers of the town of Milford, Conn. In that town he was born in 1848.

In 1864, Mr. Everard Benjamin, who since 1831 had conducted the business of a watchmaker and jeweler, needed the services of an assistant who would reside in his family and work in his store. The position was offered to Mr. Ford, who soon developed a remarkable aptitude for the work before him. His progressive spirit and vigorous application rendered him indispensable to the business. Five years from the date of his first employment, being twenty-one years old, he was admitted into partnership, and the firm name became Benjamin & Ford.

His advent into the firm was immediately signalized by the remodeling and enlargement of the store. The course of prosperity was marred, in 1873, by a fire which destroyed their entire stock. In the same year occurred the death of Mr. Benjamin. Mr. Ford then became sole proprietor, but retained the old firm name until the completion of the first half century of the house in 1881.

Fifty years ago the establishment could exhibit a few thousand dollars' worth of Yankee clocks, watches, silver spoons, and plain gold rings. Now it is filled with the choicest of diamonds, precious stones, gems, gold and silver ware, and articles that have been imported from France, Germany, Spain, Austria, England, China, Japan, and other countries. This collection itself is a witness to Mr. Ford's cultured artistic sense and judicious discrimination in selection. He visits Europe annually, gathering objects of art

Wm. A. Beckley

WILLIAM A REYNOLDS

and fully familiarizing himself with the beautiful masterpieces of the Old World. The fruit of his labor and painstaking examination is an accumulation of treasures which is conceded to be without a rival anywhere in New England outside of Boston.

In 1881, Mr. Ford was appointed by Governor Bigelow, Commissary-General of the State, and served upon the Governor's staff throughout his two years' term of office. For five years he has been Chairman of the Donation Committee for the New Haven Orphan Asylum. He holds the position of Director in the New Haven Chamber of Commerce, also that of Director in the Young Men's Institute, and for ten years has served as a Director in the Grilley Company.

Mr. Ford married, in 1871, Miss Lewis, a daughter of the late Hon. John Calhoun Lewis, of Plymouth, who was at the time of his death (1849) Speaker of the House of Representatives.

WILLIAM A. REYNOLDS,

formerly and for a long time known in New Haven business and social circles, was born in Wallingford, Conn., April 1, 1800, a son of Hezekiah and Martha (Davenport) Reynolds. His mother was a direct descendant of John Davenport.

He came to New Haven at the age of sixteen years, and began his active business career as a clerk in a store. Later in life he became and continued prominent as a dealer in real estate, of which he handled large amounts in the city and vicinity.

Mr. Reynolds was married December 25, 1831, to Jane D. Lynde, of New Haven, a daughter of John Hart Lynde, a lawyer once conspicuous in his professional, social and family relations. The residence on Elm street in which he lived so long, and which is still the family mansion, was bought by him about forty years ago. It originally belonged to John Davenport, the first of that family in America.

Mr. Reynolds died in November, 1874, leaving a widow, two sons, and two daughters, all of whom are living.

He was Democratic in his political affiliations, though in no sense an active politician; yet his position was such that he was at times chosen as a member of the Common Council, and otherwise to assist in the development, progress and government of the City of New Haven, in which he took a lively interest.

He was, during the latter portion of his life, identified with St. Paul's Church.

For many years he was a Director in the New Haven Bank, and the founder of the New Haven Historical Society, its first meeting being held at his residence. He was also one of the founders of the Chamber of Commerce in this city.

JOHN W. BISHOP.

The first representative of the family of Mr. John W. Bishop in New Haven of whom any record can be found, was Mr. Bishop's grandfather, Lent

Bishop by name, and a carriage-maker by trade, who had a shop at one time on Whitney avenue, and at a later period at the corner of Grove and State streets. His homestead was a little west of the latter location on Grove street. He was an industrious, enterprising man, respected widely for his upright character. His wife was Lucinda Barnes. They had twelve children, nine of whom died in infancy. The survivors were Abel, Lent L., and Samuel S. Bishop.

Abel Bishop, father of John W. Bishop, was born in 1801, became a carriage-smith, and worked at that trade during his early life. Though not a highly educated man, he had a logical mind, and was gifted with rare oratorical powers. His sympathies with humanity were so broad and so deep, his impulse to help his fellow-men at any cost to himself so strong, that he was practically unfit for a business life. He was an honorable and generous man, and his chief fault (if it could be so called) was that he was too unselfish in his thoughts and sympathies. The historic agitation of the temperance question at the time of the great Washingtonian movement, drew Mr. Bishop's attention to that subject. Here, certainly, was scope for his sympathies; before him was a field for labor. Whenever he spoke publicly on the temperance question he aroused wonderful enthusiasm, and he was induced to cast aside all other affairs and become a professional advocate of the cause. Into this work he threw all of his energies and more strength than he could afford, as was shown by the result, for he exhausted his physical powers and died in 1843, at the age of forty-two, leaving a widow and six children. His wife was Mary C. Burns, of Milford, Conn.

John W. Bishop was born September 25, 1823. His educational advantages were limited, and when a mere lad he entered actively upon the struggle for existence. From ten to twelve he was working in a paint shop, doing a little of everything, and, in the aggregate, much more than such a boy ought to do. He passed the time until he was fourteen as assistant in a store. From fourteen to sixteen he was toiling on a farm, working early and late, and doing more than the work of an average man. Those were days of bitter trial such as few have known.

But it was neither as a painter, as a merchant, nor as a farmer that Mr. Bishop was destined to make his mark in the world. He was possessed of remarkable native mechanical genius, and his apprenticeship, at the age of sixteen, to John Douglas offered him his first opportunity to develop it. His instructor was a man of note in his time, a recognized mechanical expert, consulted by inventors and mechanics of reputation as well as by scientists upon intricate questions of mechanics. Under such a master, Mr. Bishop may be said to have graduated at the age of twenty-one, a mechanic of extraordinary skill and inventive powers.

He opened a shop on Orange street, and began manufacturing machinery, pumps and steam fixtures. His business prospered, and in about four years he removed it to Union street, and thence,

about four years later, to State street. In 1860 he erected the Bishop Building on State street, and continued manufacturing until 1863, when he retired. He had began life as a worker, and intent on his business and thinking little of his physical being, he worked so much beyond his endurance, that at thirty he was obliged to relinquish active pursuits for a time and travel in the West to regain his health. Returning partially restored, he again gave personal attention to his business until a second giving way of his physical powers compelled his retirement at the date mentioned.

He has been interested in some manufacturing enterprises at different times in a pecuniary way, and has done much to befriend young and worthy mechanics who were struggling for a foothold in life. Several such he has assisted to embark in business for themselves. Among other enterprises, he has been identified with the Grilley Company, manufacturers of cap-screws, picture-knobs, and harness-trimmings, founders of the Grilley Screw Capping Company, widely and favorably known as a successful manufacturing house. As a member of the firm of Larkins & Bishop, he was interested in the manufacture and sale of lumber, and he represents a large amount of real estate in Connecticut and elsewhere.

Some years ago, Mr. Bishop's attention was drawn to the inadequate and uncertain means for the extinguishment of fire in popular use, and he is the inventor of numerous devices for the protection of property against serious damage by fire, known as the "automatic system," which cover a larger field than all others combined, and meet the approval of underwriters and the favor of the public. The inventive genius necessary to the conception and perfection of these contrivances, and their practical application to the uses for which they were designed, is something as noteworthy as that of men whose reputation is world wide; and it is predicted that the practical utility of his inventions will in good time place Mr. Bishop's name high on the roll of America's inventors.

To him also must be given the credit of having been the first to direct public attention to the paramount advantages of East Rock as a place of public resort, and its availability as a city park. He was the owner of considerable real estate embraced within the present limits of, and adjacent to the park, and in 1870 he made a proposition to the City of New Haven to give one hundred acres as a nucleus to what is now being made one of the handsomest pleasure grounds in America. A survey of this offered tract demonstrated that it afforded space for miles of beautiful drives. The acceptance on the part of the city authorities of Mr. Bishop's proffer promised to be so tardy, that at the expiration of six months it was withdrawn, and for some time thereafter he held the property at \$45,000, until, in 1880, at the solicitation of influential friends, who assured him that the work of constructing the park he had so long desired to see should be speedily begun, he transferred to the city some fifty acres of the tract he originally offered, which when East Rock Park is fully improved, must,

from its location and peculiar natural advantages, be one of its most attractive portions.

September 7, 1845, Mr. Bishop married Mary C. Brown, of New Haven. They have had three sons and five daughters. Their sons are all dead.

He began his political life as an old-time Democrat, but united with the Republican party in 1860, and has acted with that organization ever since.

Mr. Bishop has been a member of the Baptist Church since he was seventeen, having early taken a stand for Christianity, morality, and temperance. He was one of the constituent members and incorporators of Calvary Baptist Church, and contributed toward the erection of its house of worship.

Among the self-made men of New Haven, Mr. Bishop may proudly take his position, and among its progressive public-spirited citizens as well. He has fought a stern fight against many reverses, asking no favors to aid and no sympathy to cheer him. He has met misfortune manfully, and his life would have been a success had it won him no other reward than the respect of his fellows.

DANIEL SACKETT GLENNEY

was born in Milford, Conn., September 29, 1819, the son of Captain Daniel Glenney, who was for a long time in the West India trade, and later master of a packet running between Milford and New York. His mother was Amy, daughter of Abraham Clark, a prosperous farmer of Milford.

On November 7, 1835, he entered as a clerk with Charles Peterson, who carried on the oil, paint and glass business on the north side of Chapel street, second door east from Orange street. The corner was noted at that day as the Saunders' corner, where an eccentric, but upright, merchant, Philip Saunders, had his store, with a public hall, "Saunders' Hall," on the second story.

In the fall of 1839, Mr. Glenney went south to Augusta and Columbus, Ga., and the next summer returned to the store of Mr. Peterson. In January, 1843, he was taken in as partner, the firm name being Peterson & Glenney. Later the business was entirely conducted by Mr. Glenney under his own name, although for some years the other retained an interest.

In the fall of 1839, Mr. Glenney was married to Miss Adeline L. Richards, of West Haven. She died in the ensuing summer, leaving a daughter of the same name, now Mrs. George W. Harper, of Alexandria, Va. In the fall of 1843, Mr. Glenney was again married, to his second wife, Mehitabel, daughter of Thomas Macumber, of New Haven. Of six children by this marriage only one survives, Daniel Sackett Glenney, Jr. He was born May 6, 1854, was educated at Russell's Collegiate and Commercial Institute, and, on graduating, entered into business with his father.

More than a quarter of a century since, Mr. Glenney built the store 270-272 State street, which he has occupied from that to the present time.

He has served in various public capacities; has been Vestryman of St. Paul's Church, was two

J. W. Bishop

Honorer Arnold

years a member of the Board of Aldermen and President of its Board of Finance. He was President and Treasurer of the Mansfield Elastic Frog Company, and on its going into liquidation was appointed Assignee and Trustee to wind up its affairs.

Mr. Glenney is of light, spare, symmetrical frame; height, 5 feet 6 inches; weight, 125 pounds; his features are cleanly cut. His eyes are black, and his hair, once the same, is now white as newly-fallen snow. His temperament is calm, his speech mild, and he meets one with a quiet smile. When a young man, in parading with the Grays, of which he was a member, he was prostrated by a sunstroke. The right side of his body was entirely paralyzed; although his case seemed hopeless, his recovery was complete.

EBENEZER ARNOLD.

The late Ebenezer Arnold was a son of Captain Ebenezer Arnold, of Middletown Conn., and was the fifth in direct line bearing this name. He was born May 25, 1817.

His educational advantages were somewhat limited and scanty, though he obtained a rudimentary knowledge of the branches then taught in the schools of his native place ere he applied himself to the acquisition of a knowledge of the stove trade, entering an establishment in Middletown with that object in view. This was the beginning of his long connection with a business in which he rose to be one of the most prominent merchants in New Haven.

Mr. Arnold came to New Haven in 1846, and became a partner with the Derby Brothers. This connection was severed five years later, and during the two succeeding years he was associated with

Lyman Treadway. Thereafter, for a few years, and until 1856, he conducted a large and increasing business alone. During this year he formed a co-partnership with his brother-in-law, Mr. W. H. Sears, under the firm name of E. Arnold & Co., locating at his well-known stand at the corner of State and Crown streets. Here his business assumed larger proportions than it had before attained.

In 1869, his son, George S. Arnold, was admitted to a partnership in the enterprise, the style of the firm remaining unchanged, as indeed it has since, in spite of later changes, the trade name of E. Arnold & Co. being as familiar in New Haven of to-day as it ever was during Mr. Ebenezer Arnold's life and active connection with the business, which has long been recognized as one of the most extensive of its kind in the State. Mr. Arnold retired from business in 1872 on account of ill-health, and Mr. Sears withdrew in 1879, since when Mr. George S. Arnold has been sole proprietor.

Mr. Arnold was a self-made man. Striking out bravely in the battle of life at an early age, his sterling qualities and genial, friendly disposition won him at the same time friends and success. During his long business career his integrity was never called in question, and his word was more highly regarded than many another merchant's bond. His devotion was divided only by his business and his home.

A Republican, he was not active in politics and took no interest in public affairs, except as a close observer of men and measures, and an intelligent, public-spirited citizen.

He was married, in 1846, to Anna Eliza Sears, of Middletown, Conn., and died May 26, 1876, leaving a widow, a son, George S., and two daughters.

CHAPTER XXXV.

THE PRODUCTIVE ARTS.

WITHIN ten years after the arrival of the English planters at New Haven, there were in the settlement, sawyers, carpenters, ship-carpenters, joiners, thatchers, chimney-sweepers, brick-makers, brick-layers, plasterers, tanners, shoemakers, saddlers, weavers, tailors, hatters, blacksmiths, gunsmiths, cutlers, nailers, millers, bakers, coopers and potters. To these classes of artisans should be added the most numerous class of all, some of whom were to be found in every home, the spinsters, who made woollen and linen thread to be woven into cloth.

Iron-works were projected as early as 1655. John Winthrop, interested in mining, and Stephen Goodyear, interested in every enterprise which promised to be advantageous to New Haven, united in setting up a bloomery and forge at the outlet of Saltonstall Lake. The people of New Haven favored the undertaking by contributing labor in

building a dam and by conceding the privilege of cutting on the common land all the wood needed for making charcoal. They hoped that the works would bring trade, and that Winthrop would fix his residence in New Haven. The ore was transported from North Haven, where it was found in bogs, partly by boats down the Quinnipiac and up Farm River, and partly by carts. After two or three years, Goodyear having died and Winthrop having ceased to think of New Haven as a place of residence, the works were leased to Captain Clark and Mr. Payne, of Boston. Iron continued to be made for some years; but the institution did not fulfill the hopes of its projectors or of the public.

With the exception of the workmen at the iron-works, and the miller who ground the wheat, the rye and the maize into meal, the New Haven artisans of the seventeenth century wrought almost exclusively with the hand. Even the sawing of a log

into boards was accomplished without the aid of any other power than that of the top-man, who stood above the log, and the pit-man, who stood in an excavation beneath it.

Etymologically, to manufacture should signify to make by hand; but in common parlance it means to make with the aid of machinery and of power extrinsic to man. To avoid the ambiguity which might result from the use of the word manufacture, we use the phrase "productive arts" as the title of this chapter, and include under it those arts in which the producer works with his hands only, and those in which the workman makes use of machinery and is aided by the forces of nature.

To the first planters of New Haven, their grist-mill was a very important institution. It was at Whitneyville, and the lane through which grists were carried to mill, sometimes on horseback and sometimes on an ox-cart, they called Mill Lane. Their posterity have changed the name to Orange street, and might have changed it again to Central avenue if its breadth had been equal to its beauty.

For more than a century the artisans of New Haven worked almost exclusively with their hands. When the hostilities of the revolution commenced, there was a call for powder; and as the manufacture of powder required the use of machinery, a powder-mill was set up in Westville. Barber's "History" states that there were two mills in that suburb, one in the upper and the other in the lower part of the village. The business was carried on by Isaac Doolittle, Jeremiah Atwater and Elijah Thompson. It ought perhaps to be mentioned in this connection, that about a year before the manufacture of powder was commenced, Mr. Doolittle, who was a brass-founder and a maker of brass-wheeled clocks, had added to the arts practiced in the town that of casting bells. Thus gradually did the sphere of business enlarge, and, as it grew, included not only more establishments, but such as required more laborers and more capital under one management than the people had been accustomed to see. The war stimulated domestic manufactures. In May, 1775, Samuel Huggins advertises that he has entered into the business of making bayonets; and in July, 1776, the *Connecticut Journal*, apologizing for the necessity of printing only a half sheet, says: "There is now a paper-mill erecting in this town and we expect after a few weeks to be supplied with such a quantity as to publish the *Journal* regularly on a uniform sized paper."

Captain Ezekiel Hayes, in whose loins was a future President of the United States, was a manufacturer of axes and scythes in what had been called Queen street, and was afterwards denominated Congress street, and finally State street. An advertisement which he put into the *Journal* exposes to view the difficulty he experienced in prosecuting his business under the regulations by means of which the civil authority attempted to make bills of credit as good as gold.

TO BE SOLD AT PUBLIC VENDUE.

The House and Blacksmith's Shop of the subscriber, situated in New Haven, upon the great road from the Hayscales to the Long Wharf. The house is almost new, two stories

high and two stacks of chimneys, but partly finished. The vendue will be on the first day of June next (except sold at private sale before) on the premises, and may be entered on immediately, as the subscriber is then going to move out of town.

N. B.—If any person chooseth to purchase at private sale, they may know the terms by applying to me, and have immediate possession.

The subscriber begs leave to inform the public that he is under the necessity of removing to his house in Branford, in order to prosecute his usual business of making axes and scythes, the authority of this town having stated those articles at a less price than the materials out of which they are manufactured, cost. As foreign steel, the only kind that is fit for my business, is not stated, I am obliged to give higher for it than the regulated prices of other articles. The public therefore must either allow me 75 per cent. on my work and the first cost of my stock, or I must infallibly heave up my trade.

I am, the public's humble servant,

EZEKIEL HAYES.

New Haven, April 28, 1775.

This advertisement, whether so intended or not, seems to have resulted in the continuance of Captain Hayes at New Haven.

During the revolutionary struggle there was residing at New Haven a very ingenious mechanic named Abel Buell. He was a native of Killingworth, and in that town learned of Ebenezer Chittenden the trade of a silversmith. While yet resident in his native town he used his ingenuity feloniously, altering a Connecticut bill of credit from five shillings to five pounds. For this he was punished by branding on the forehead with the letter C, cutting off the right ear, imprisonment in the Norwich jail, and confiscation of estate. In view of his youth and mitigating circumstances, he was soon released on bond. At first he was bound to live in and not to leave Killingworth. In 1766, his petition "to trade and deal without penalty" and to go where he pleased was granted, a bond being required of £200 for good behavior. In October, 1769, Buell again addressed the Legislature, stating that he had discovered the art of type-founding, and asking encouragement in the form of a lottery or in some other way, that he might erect a foundry and prosecute the business. To prove the value of the discovery, and as a specimen of his abilities, his memorial was "impressed with types of his own manufacture." The Assembly, in accordance with the report of a committee, voted to loan him £100 for seven years, he "to set up and pursue within one year the art of letter-founding in this colony." After twelve months £100 more were to be loaned for seven years. Buell then removed to New Haven and employed for his foundry the Sandemanian meeting-house in Gregson street, where he had fifteen or twenty boys making types. The attempt was a failure, and in August, 1777, "said Buell having wholly failed to set up and practice the art of type-founding, and become insolvent and absconded," the Assembly voted to accept from Mrs. Aletta Buell "the one hundred pounds which she had procured with the utmost difficulty," and to discharge the £200 bond held by the State.

But this was not the end of Buell. In 1785, several gentlemen applied for and obtained from the General Assembly liberty to establish a mint

for making copper coins, or coppers, as they were called. Among them were Samuel Bishop, James Hillhouse, and John Goodrich, of New Haven. They alleged that there was a great and very prevalent scarcity of small coins in the State, in consequence of which "great inconveniences are severely felt, particularly by the laboring class, who are the stay and staff of any community." Abel Buell was one of this "Company for Coining Coppers," and invented a machine by means of which he was able to coin one hundred and twenty coppers in a minute. In the course of two years there had been inspected by a committee appointed by the State, and consisting of Roger Sherman, James Wadsworth, David Austin, Ebenezer Chittenden, and Isaac Beers, 28,944 avoirdupois pounds of coined coppers, whose value amounted to £3,908 6s. 8d. Of this amount the State received one-twentieth part. The coppers had on one side a man's head with the circumscription AUCTORI CONNECT, and on the other side the emblem of Liberty holding an olive branch in her hand with inscription INDE ET LIB : 1785.

Afterward the "New Haven Mint" was employed to make copper coins for Congress. In 1787, the Board of Treasury was authorized to contract with James Jarvis for three hundred tons of copper coin of the Federal standard, to be manufactured at his own expense, he "to allow to the United States on the amount of coin contracted for, not less than fifteen per cent." The devices on this coin, as fixed July 6, 1787, were on one side, thirteen circles linked together, a small circle in the middle with the words UNITED STATES around it, and in the center, WE ARE ONE ; and on the other side, a dial with the hours expressed on the face of it, a meridian seen above, on one side of which is to be the word FUGIO, and on the other the year in figures, 1787; below the dial the words, MIND YOUR OWN BUSINESS. Jarvis removed from New York to New Haven, and availed himself of the ingenuity and experience of Buell, and of the plant which the company for coining coppers had already established. The mint was on East Water street, near Sargent's Foundry, where, as Dr. Bronson informs us in his essay on Connecticut Currency read to the New Haven Colony Historical Society and published in the first volume of the Society's Papers, "the boys were wont to find coppers," forty years before the writing of his paper. The New Haven Colony Historical Society has a map of the home-lot bought by Captain Daniel Greene in 1795. On that map is marked "Copper Store." The copper store is on the north side of Water street, and adjoins the west end of the dwelling-house.

In 1789, Buell went to Europe, ostensibly, it is said, to purchase copper for coining, but really to obtain a knowledge of the machinery used in making cotton-cloth. When he returned he brought with him a Scotchman named William McIntosh. Buell, McIntosh, and some New York capitalists, erected a large building at Westville, and com-

menced the manufacture of cotton cloth. The enterprise was thought so important that the General Assembly granted a subsidy of \$3,000. It is said to have been "one of the first" cotton-mills in America. For a few years it produced large quantities of cotton-cloth, but for some reason its machinery was changed so as to produce woolen-cloth instead. Afterward the same building was used as a paper-mill. It was consumed by fire in 1837, but the site is again occupied by a paper-mill.

Barber, in his "History and Antiquities of New Haven," says that calico printing was carried on at the cotton-mill in Westville; but printing on cloth antedated the weaving of cotton in New Haven at least ten years. In 1780, appeared an advertisement of Amos Doolittle & Co., in which they say:

It has been a general complaint that the calicoes and linens printed in America are liable to fade. The subscribers having been at unwearied pains, labor, and fatigue in making experiments with several colors for these two years past, can now assure the public that they have found out colors that are handsome and durable. We would recommend to those who are desirous of wearing their own manufacture, and who spin and make cloth for that purpose, that they may have it printed in a variety of figures that will be handsome and durable, either for curtains, gowns, handkerchiefs, etc., by the people's most obedient, humble servants.

They subjoin that clean old linen, that is not too much worn, will do very well for printing. Mr. Doolittle seems to have retired from this business before long; for, about a year later, his partners advertise that:

Calico printing, which was formerly carried on by Doolittle and Company, at John Mix's, is now removed to the house of Kiersted Mansfield, opposite to the Rev. Mr. Edwards; where cloth will be taken in for that purpose, and also at the house of John Mix, Junior, opposite the market in New Haven.

In October, 1790, John Mix, Junior, who had probably relinquished the business of printing cloth, and was now a tavern-keeper in Court street,

informs the public that he has at considerable expense, erected a factory for making buttons, adjoining the City Assembly Room, Court street, New Haven; where gentlemen, merchants and others, may be supplied with hard metal buttons, both plain and figured, of different sorts and sizes, as cheap or cheaper than they can be imported, of the same goodness and quality.

His advertisement seems to have awakened the emulation of his neighbor, Captain Phineas Bradley, who in the next issue of the *Journal*,

informs the public that he was the first inventor of the white hard metal button in this country, and that he carries on that business in an extensive manner at his shop in Court street, New Haven, where all persons may be supplied with any quantity on the shortest notice, and as cheap as can be purchased in New York, or any other place on the continent, of equal goodness. As there have been many buttons of an inferior quality, something resembling the genuine ones, hawked about the country, as he is informed, in his name, he informs the public that those of his make in future will have the initial letters of his name on the bulge of the eye.

After the lapse of another week, Mr. Mix publishes his rejoinder. He

informs the public that he carries on the manufacturing of the white hard-metal buttons in a larger and more extensive manner than any one in the State. He has made at his factory more than one thousand gross of buttons, which he has disposed of to individuals upon terms that have been

pleasing and satisfactory to them, and to the public in general, and have been invariably offered for sale in his name, and his name only, without one exception to the contrary; and for the most part for months back, with few exceptions, there has been a hand-bill put on each gross, and for the future, to save any evil surmises or informations, every gross will be accompanied with a hand-bill signed by him. And as he is daily improving and enlarging his works, and has lately furnished himself with a number of elegant and fashionable stamps, for the purpose of stamping buttons, which are most approved of, he therefore flatters himself he shall be able to supply all those gentlemen who please to favor him with their custom, with GENUINE BUT-TONS, equal in goodness and on as good terms as any made in the State of Connecticut. Cash given for old copper, pewter and block-tin. Five or six active lads of the age of 16 or 18 years may find constant employ by applying at said factory.

N. B.—Mr. Martin Bull of Farmington, made the first white hard-metal buttons in this State, and the subscriber was the first proposer of making said buttons in New Haven. Mr. Samuel Dennison, and the subscriber, in partnership, cast the first white hard-metal buttons in New Haven, in moulds that were solely the property and belonging to the partnership of the subscriber and said Dennison. Mr. Amos Doolittle was the first that made the skeleton rim button in New Haven.

JOHN MIX, JUNIOR.

In 1785, the Connecticut Silk Society was established, having for its object the promotion of silk manufacture throughout the State. Mulberry orchards were planted in New Haven and other towns in the vicinity, and considerable silk was produced for sewing and knitting. President Stiles was zealous in this movement, having brought with him to New Haven, from Newport, an interest in the production of silk. Dr. Aspinwall, of Mansfield, was a co-laborer with Stiles. He had a large mulberry orchard at Mansfield and another at New Haven. About fifty families in New Haven were engaged in the care of silk-worms in 1790; while in Mansfield the business had acquired such permanence that it has never been abandoned. The family of President Stiles had fabrics woven in England of silk of their own raising. In 1788 the President himself appeared at Commencement in a gown of this domestic silk.

The General Assembly of Connecticut, at its May session in 1790, granted a lottery for the purpose of aiding the manufacture of glass in New Haven. The lottery was drawn in two schemes or classes, under the management of Jonas Prentice and Peter DeWitt, but the writer, after inquiring of some of the oldest inhabitants, has not found any tradition that glass was once manufactured in New Haven. There was a pottery in East Water street at the beginning of the present century, where glazed jars and jugs were made, and the conjecture that the attempt to manufacture glassware resulted in this humble establishment is well worthy of consideration.

Among the advertisements of the *Connecticut Journal*, in 1790, is that of Jotham Fenton, optician, manufacturer of telescopes, microscopes, etc. "He may be seen at his house in Grove street, facing College street."

Some time in the latter part of the eighteenth century, a brewery was established in Brewery street by Messrs. Bakewell. Their ale was considered by many as the best in the market. The

building was destroyed by fire in 1806, and the business came to an end.

Passing now into the nineteenth century, we take notice of the manufacture of woolen-cloth at Seymour, or, as the place was then called, Humphreysville, by Colonel David Humphreys, who resided during the later years of his life at New Haven. For this reason his mill was, in some sense, a New Haven institution, though located outside of the town. President Madison took care to be provided for his inauguration, in 1809, with a coat made of the cloth manufactured by Humphreys, as President Jefferson had taken care to be similarly provided for a New Year festival in the last year of his presidency.

The correspondence between President Jefferson and Abraham Bishop, Collector of the Port of New Haven, in regard to the cloth for the President's New Year coat, is preserved in the archives of the New Haven Colony Historical Society, in the original papers, which are interesting, among other reasons, because they illustrate the change in the method of purchasing at a distance which has resulted from the establishment of Express companies.

WASHINGTON, Nov. 13, 08.

SIR,—Not knowing whether Colonel Humphreys would be at present at or in the neighborhood of New Haven, or in Boston, I take the liberty of addressing a request to yourself. Homespun is become the spirit of the times. I think it an useful one, and therefore that it is a duty to encourage it by example. The best fine cloth made in the U. S. is, I am told, at the manufacture of Col^o. Humphreys in your neighborhood. Could I get the favor of you to procure me there as much of his best as would make me a coat? I should prefer a deep blue, but if not to be had, then a black. Some person coming on in the stage can perhaps be found who would do me the favor of taking charge of it. The amount shall be remitted you the moment you shall be so kind as to notify it to me; or paid to any member of the legislature here, whom yourself or Colonel Humphreys' agent shall indicate. Having so little acquaintance in or near New Haven, I hope you will pardon the liberty I take in proposing this trouble to you; toward which the general motive will perhaps avail something.

I salute you with esteem and respect.

TH. JEFFERSON.

MR. ABRAHAM BISHOP.

NEW HAVEN, Nov. 30, 1808.

SIR,—Since the receipt of your favor of 13th inst., I have waited for the return of Col. Humphreys from Philadelphia, upon the suggestion of his agent that the Col. would be ambitious to select, personally, such cloth, as might do justice to his factory and your expectations.

The Colonel returned this evening and says that four weeks at least will be necessary for furnishing a piece of superior quality, which is in hand.

As soon as it shall be received, I will have the satisfaction of forwarding it according to your request.

I have the honor to be,

with the greatest respect,

SIR, yr ob^t servt,

ABR^m. BISHOP.

PRESIDENT JEFFERSON.

WASHINGTON, Dec. 8, 08.

SIR,—Your favor of Nov. 30 is duly received, and I thank you for your kind attention to the little commission respecting the cloth.

I shall be glad to receive it whenever it can come, but a great desideratum will be lost if not received in time to be made up for our new-year's-day exhibition, when we expect

W. L. B. & C.

Cornelius Pinpoint.

every one will endeavor to be in homespun, and I should be sorry to be marked as being in default. I would sacrifice much in the quality to this circumstance of time; however I leave it to the kindness of Col^o. Humphreys and yourself. I presume that if put into a very light box, no larger than to hold the cloth closely pressed in, and addressed to me, it may come safely by the stage, or even by the mail, if that be necessary to save our distance.

Accept my salutation and assurances of esteem and respect.

MR. BISHOP.

TH. JEFFERSON.

N. H., 14 DEC., 1808.

SIR,—According to y^r request under date of 8 inst., you will receive by the mail which conveys this 5½ yds. narrow superf. cloth, from Col. Humphreys' factory, being of ¾th merino wool, price \$4.50 per yard. Mr. E. Bacon of the House of Rep. will do me the favor to receive from you the amount expressed in the enclosed receipt. The Col. laments that it is not in his power to furnish you at this time with cloth of a superior quality.

I have the honor to be,

With gt. resp.,

Sir,

Y. mo. ob. serv.,

ABRM. BISHOP.

PRE. JEFFERSON.

WASHINGTON, Jan. 20, '09.

SIR,—This is the first moment I have been able to make the acknowledgment of the receipt of the cloth you were so kind as to procure me, in good condition. The cost was paid to Mr. Bacon according to your permission, and I pray you to accept my thanks for the trouble of this commission, with the assurances of my esteem and respect.

THO. JEFFERSON.

MR. BISHOP.

J. Humphreys, Jr., Rec^t for President Jefferson's cloth, pd. 1808.

PRESIDENT JEFFERSON, *Dr.*

To 5½ yds. cloth, *Bot. of Col. Humphreys*, at \$4.50 \$24.75

Rec^d payment in full of Abraham Bishop, Esq., for Col. Humphreys. JOHN HUMPHREYS, JUN^r.

NEW HAVEN, Dec. 26th, 1808.

Having brought the history of the productive arts in New Haven into the present century, we mention two large manufacturing establishments which were once in existence, but have now ceased to be, and then proceed to a survey of the several industries in which the artisans of New Haven are at present engaged.

One was a carpet factory, located at first in Water street and afterward in a long, narrow wooden building, in East street, near the place where that street is now intersected by St. John street. Several weavers came from Scotland, and carpets of excellent quality were produced; but the enterprise was relinquished, because its carpets could not compete in the market with inferior, but equally well-appearing goods. The other was an ax factory on the site where the L. Candee Company now make india-rubber goods. The building was of East Haven sandstone, 50 by 100 feet in size, one story high, open to the lofty roof, which was surmounted with three large ventilators. It contained three forges of four blasts each, for twelve forgers and twelve strikers; large grind-stones and emery-wheels, and a steam engine for blowing the forge fires. One year after commencing work, the axes took the first prize at the Fair of the American Institute in New York. In another chapter we have mentioned the visit of President Jackson to this

establishment in 1833, and the cheers with which the workmen received him. In a communication received since that account was written, Mr. A. W. Harrison, a son of the principal proprietor of the ax factory, states that President Jackson was presented "with a dozen of the axes, in a velvet-lined box of old hickory wood, which he gracefully acknowledged." Until the time of the President's visit, the factory had been a success, but it could not endure the financial storm which followed the removal of the public deposits from the United States Bank in the autumn of that year.

In canvassing the industries which at present occupy the artisans of New Haven, we shall arrange the artisans alphabetically, so that the reader may easily turn to those of which he is in quest.

AGRICULTURAL IMPLEMENT MAKERS.

The firm of C. Pierpont & Co., manufacturers of fodder and ensilage cutters, was established in 1865. The four-story frame building, at the corner of Crown and Park streets, occupied by the works, is 40 by 100 feet in dimensions. A 50-horse power engine drives the machinery, and about twenty-five persons are employed. The firm also manufacture rubber-bucket pumps, well-curbs, and a money-drawer secured with an alarm and combination lock. Dwight W. Baldwin is Superintendent of this establishment.

CORNELIUS PIERPONT

was born in Litchfield, Conn., August 15, 1829, a son of James N. and Sila (Harrison) Pierpont.

His early years were passed on his father's farm, and his education was obtained in the public schools of his native town. His father dying while he was yet a mere lad, he was thrown measurably on his own resources. After leaving home he taught school a short time, and in 1854 established himself in the grocery trade in Broadway, New Haven. He did business on that street continuously for thirty years, retiring in 1884. During the earlier years of his mercantile career, when it was customary for grocers to retail liquor with their other goods, Mr. Pierpont, from the decided stand he took against that custom, was known as "the temperance grocer."

The house of C. Pierpont & Co., manufacturers of fodder and ensilage cutters, pumps, money-drawers, well-curbs, etc., was established in 1866, with Mr. Pierpont at its head. Its trade has extended not only over every State in the Union and the Canadian provinces, but has reached Mexico, South America, Europe, Australia, and other remote countries.

Mr. Pierpont is a progressive, public-spirited citizen, who takes a lively interest in the growth and development of New Haven's important interests, with many of which he has from time to time been identified. His prominent connection with the New Haven and Centreville Horse Railroad Company is well known, and has done much to advance the standing and business of that line.

ARCHITECTS.

Previous to the opening of the present century there was little pretension to skill in architectural design or architectural drawing, and what was attempted in that line was usually by carpenters. Utility without ornamentation was the end sought.

Ithiel Town came to reside in New Haven in 1810, and was its first professional architect. He was a progressive man, and in his work designed a wooden truss-bridge, which found favor in various parts of New England and yielded him a considerable royalty. Mr. Town made the drawings for Trinity Episcopal Church and for the Centre Church in 1813, both erected during the war. He also designed the State House in 1828, and plans of his drawing are in existence for a building for the Eagle Bank at the corner of Church and Chapel streets, dated 1825. The elevation had much the appearance of the State House on the Green. This new building was in course of erection when the bank failed. The materials which had been put together were removed and the present Exchange Building erected upon the foundation. Mr. Town died in 1844, aged sixty years.

Sidney M. Stone was the next professional architect, and began work in 1833. He designed the College street Church, Wooster place Baptist Church (afterwards burned, but not essentially remodeled when rebuilt), the Third Congregational Church on Church street, now the First Presbyterian Church, the Orphan Asylum, and the residence of the late Pelatiah Perit on Hillhouse avenue.

Henry Austin began business in 1837, and has since continued as the father of architects. Nearly all of the present architects of the city have served time under his teaching, and he has left the marks of his skill in almost every street in the city. Among the first of Mr. Austin's works was Mitchell's Building on Chapel street. Among the more prominent buildings of the city designed by him during the forty-five years he has been in business, are the College Library, City Hall, Yale, Tradesman's, Mechanics', and Merchants' Banks, the New Haven Savings Bank (one of the finest banking-rooms in the country), Eaton School, Trinity Home on George street, New Haven House, Entrance to the City Burial Ground, and the Register Building on Chapel street. Among the more notable private residences of the city designed by Mr. Austin are those of O. B. North, Willis Bristol, H. M. Welch and Nelson Hotchkiss, on Chapel street, and the Sheffield residence on Hillhouse avenue. In 1881, Mr. Austin admitted his son, Fred. D. Austin, to the firm, the title being Henry Austin & Son.

D. R. Brown worked eighteen years with Henry Austin, and began business in 1865. From 1880 to 1884 C. H. Stillson was associated with him. Mr. Brown designed the County Court House on Church street, the Glebe Building, Church of the Messiah, Church of the Redeemer, and the Armory on Meadow street.

R. G. Russell was with Mr. Austin for several years, beginning business himself in 1862. Among

the more prominent buildings designed by him are the Police Building on Court street, Calvary Baptist Church, Howard avenue Church, and the Davenport Church.

RUFUS G. RUSSELL.

Among the few citizens of New Haven whose talents have been exerted in behalf of the beautiful as well as of the useful, the name of Rufus Gustavus Russell stands pre-eminent.

He was born September 5, 1823, in that portion of Waterbury which was afterwards set off to form the town of Prospect. His father, Ransom R. Russell, was in early life a farmer and school-teacher, but afterwards engaged in manufacturing. His family comprised four sons and one daughter. The second son is the one whose life-story is here narrated.

During the first twelve years of his life he attended the public schools of the neighborhood, and worked on the land and in the factory. When fourteen, he made the first trial of his fortune in the busy world outside. Coming to New Haven he obtained a situation in A. H. Maltby's book store in the old Glebe Building. Tiring of this after a year, he returned home and resumed his former labors.

In 1839, he attended through a winter's term at the Episcopal Academy of Cheshire, which was then under the direction of Rev. Dr. E. E. Beardsley, now of this city. He was a quiet, studious youth, and the bent of his mind towards books and reading was strongly marked. Even in his boyhood he had gathered together a library. Again he left home and went to Binghamton, where he applied himself to learn the carpenter's trade. After a few years spent in acquiring the desired knowledge, he came back to New Haven and was engaged by Charles Thompson to work upon the College Library building.

In 1845 he married Miss Elizabeth Sanford, a native of Woodbridge, by whom he has had three children. One died in youth and two are still living—a son, the Rev. B. G. Russell, now in Vermont; and a daughter, the wife of Mr. Oscar Dikeman, of New Haven. Soon after his marriage, Mr. Russell became a resident of Naugatuck, Conn., where for some years he was occupied in manufacturing and in the practice of his trade.

So early as when he lived in Binghamton, Mr. Russell's mind had received, from suggestions in a letter by his father, a strong impulse towards the study of architecture. From that time on the purpose of becoming an architect shaped itself more and more clearly, and was the controlling idea of his life. To that end his studies were directed, and although other occupations were for a time necessary, they were always regarded as temporary pursuits. In 1852, he moved from Naugatuck to New Haven, and entered upon the preliminaries of his chosen profession, working at building, wood-carving, and as an amateur architect. Several months of the year 1856 were devoted to traveling through the West as far as Jefferson City, but the broad Western country failed to attract Mr. Russell.

He returned home well-contented to abide in New Haven.

In the following year he entered the office of Henry Austin, the architect, and was the assistant of that gentleman for nearly seven years. At the expiration of that time he opened an office for himself in the Street Building, but soon removed to his present quarters, at 852 Chapel street.

Mr. Russell cast his first presidential vote for Henry Clay, and joined the Republican party in the beginning of its career. He has served the community in a number of important municipal offices. In 1867-68, he was elected to the Board of Councilmen, and in the following year was an Alderman. He was Chairman of the Committee on Squares and Lamps, and was a member of the Sewer Committee. Afterwards, having moved into another ward, Mr. Russell was again chosen Councilman for one year (1872), and in the ensuing year he was once more an Alderman, thus concluding five years of honorable and meritorious public service. Mr. Russell has been a prominent member of the Sons of Temperance, both in Naugatuck and New Haven. In each place he held the dignity of Worthy Patriarch, and was for several years Deputy G. W. P. He is a member of Hiram Lodge of Masons, and has also been influential in the Good Templar organization.

The products of Mr. Russell's labor and skill are scattered widely through the land, and appeal to the eye of every beholder. He has studied to build practical, sensible structures, that would continually deserve and retain favor. The ornate and gaudy style of building, which first surprises and then wearies the eye, he has avoided. His success witnesses how thoroughly he has carried out his intentions. His ideas appear to the world clothed in the most substantial of forms.

A great many church edifices have been designed by him, prominent among which are the Calvary Baptist, the Davenport and the Howard Avenue Congregational in New Haven; the Garfield Memorial and the Unitarian in Washington, D. C.; the Unitarian in Buffalo, N. Y.; the Methodist and the Baptist in Meriden, Conn.; and the Congregational in Wallingford, Conn.

Numerous other public buildings are memorials of his handiwork, among them the Police Building, the Gas Company's building, the Elliott House, the Woolsey School, and the Second National Bank in this city; the noted Morgan School at Clinton, Conn.; and the High School at Middletown. The private dwellings which he has planned are to be seen at every turn in this city, and similar products of his industry abound in town and city elsewhere.

L. W. Robinson, also a pupil of Mr. Austin, has designed the Welch Training School, the Townsend Building at the corner of Orange and Crown streets, and a number of school buildings.

Other architects of the city, more recently established, are H. W. Lindsley, J. D. Roberts, John Galwey, C. H. Stilson, George C. A. Brown, and the firm of Allen & Tyler.

AMMONIA MANUFACTURERS.

The ammonia works of Edward H. Wardell, 349 Chapel street, were started in 1877. It is the only concern of the kind in the State. Formerly the making of muriate and sulphate of ammonia constituted the principal product. At present concentrated ammonia forms the chief article of manufacture. This is made from the ammoniacal liquor extracted from coal. The products of these works are sold principally to the Solvay Process Company of Syracuse, N. Y., and are used by them in making soda ash. David J. Gilmartin has been manager of these works since they were started. He was formerly employed for several years in the same business in the City of New York.

ARMORERS.

Eli Whitney, the inventor of the cotton-gin, having relinquished all hope of emolument from that invention, turned his attention to the manufacture of fire-arms. Having, in 1798, made a contract with the United States for 10,000 stand of arms, he purchased a tract of land at the place now called Whitneyville, two miles from the center of New Haven, and erected a gun-factory, with a row of cottages for his workmen. The premises have been used from that time to this for the manufacture of arms. The present company—the Whitney Arms Company—was organized in 1864. Its officers are Eli Whitney, the son of the inventor of the cotton-gin, President and Treasurer; and Eli Whitney, Jr., Assistant Treasurer and Secretary. The plant, under the west shadow of East Rock, consists of a tract of several acres. An engine of 125 horse-power drives the machinery. About two hundred operatives are employed. The arms manufactured here have the peculiarity invented and introduced by the elder Whitney, of making all parts alike, so as to be interchangeable. This plan was adopted by the United States Government in the early years of this century, by Great Britain in 1855, and later by other European nations. The trade of the Company is world-wide.

The establishment of the Winchester Repeating Arms Company is one of the largest of its kind in the world. The original Company was a stock company, organized by a special act of the Legislature in May, 1866. The *personnel* of the Company were O. F. Winchester, E. A. Mitchell, John English, J. A. Bishop and Morris Tyler. The name of the original organization was the Henry Arms Company, but was changed to the Winchester Repeating Arms Company the following year. O. F. Winchester was the first president, holding that position until his death in 1880. Governor Winchester was succeeded by W. W. Converse, who now holds that position. The Company first began operations in Union street, but moved to Bridgeport, and occupied a part of the premises of the Wheeler and Wilson Company. The present buildings were erected for the most part in the summer and fall of 1870, and were occupied by the Company in January, 1871. They now employ over six hundred hands, and the

buildings cover about five acres of floor room. The Company have executed a large number of orders for some of the prominent nations of Continental Europe. During the Turkish war both the Russian and Turkish Governments were heavily supplied with arms and ammunition from this Company. Connected with this establishment are William Mason, Master-Mechanic; R. M. Russell, M. C. Reade, George L. Sanford, John B. Haines and Frank Jewell, Contractors.

The Strong Fire-arms Company was organized in February, 1884, being previously known as the Strong Cartridge Company, organized in January, 1881, and located in Artisan street. The Cartridge Company was burned out in 1883, when it was re-organized under the present title, and removed to Park street. The Company's interest in the cartridge business was sold to the Combination, consisting of the Winchester Repeating Arms Company, of this city; the United States Cartridge Company, of Lowell, Mass., and the Union Cartridge Company, of Bridgeport. A specialty is made of the manufacture of Dickerman's hammerless shotgun and rifle, and breech- and muzzle-loading yacht and field cannon. The officers of the Company are, H. H. Strong, President; H. D. Bristol, Secretary and Treasurer; and A. Dickerman, Superintendent.

The Marlin Fire-arms Company, incorporated with a capital of \$200,000, is a comparatively new establishment. The plant, situated on the corner of Willow and Nicoll streets, consists of substantial brick buildings. Officers are, Charles Daly, President; J. M. Marlin, Treasurer; C. F. Demmer, Secretary.

The Kelsey Cartridge Company was organized in 1882, and commenced the manufacture of metallic cartridges at 22 Artisan street, but in 1885 removed to West Haven. While here, conical, brass shot-shells and paper-shells were made; and special attention was given to the manufacture of cartridge-shells for target practice. Forty-five men were employed. George R. Kelsey, of West Haven, is largely interested in this Company, where the work is now successfully carried on.

GEORGE R. KELSEY.

The subject of this sketch was born May 15, 1820, in Upper Middletown, now Cromwell, Conn. His father's name was Zebulon, whose ancestors in a direct line, for three generations, were named Israel. They were natives of that place, and were hardy and vigorous people. His mother was Sally, daughter of Daniel Edwards, of Cromwell. Of her children, who grew to adult years, there were five sons and one daughter.

When he was ten years of age his parents removed to Ohio, and with their boy's help cleared up many acres of heavy timber land for farming purposes. He remained with his parents eleven years, and during that time learned the carpenter's and joiner's trade.

He returned to Middletown in 1842, and soon after his attention was called to the demand for

clothing and suspender buckles, which, previous to this date, were all imported from England, France, and Germany.

Mr. Kelsey began their manufacture in 1843, in a small way, at Middletown, with comparatively no capital, and performed all the work by hand. Other parties attempted the business about the same time, but yielded to the strong foreign competition, leaving the field to Mr. Kelsey. He struggled with persistent energy for ten years to establish the business, and during that time met with reverses which would have crushed less resolute men, being twice burned out. But by perseverance the business was re-established, and by the introduction of new machinery and patented improvements in buckles, he succeeded in producing a stock of such excellent quality that it entirely broke down importation. The field being thus cleared of foreign rivals, capitalists in this country became the new competitors.

The following, taken from the lives of the Manufacturers of Connecticut, shows the high confidence reposed in Mr. Kelsey during a period of misfortune and depression.

In the fall of 1847, Mr. Kelsey, then of Middletown, lost all his stock, tools and machinery by fire, which reduced him to poverty. Having no insurance he at once proposed to his creditors to close up the business, as his accounts receivable were barely sufficient to pay his indebtedness. He frankly told them that there were parties in Watertown and Waterbury who had just engaged in the same business, with sufficient capital to compete successfully. To this his creditors replied: "Go on, try again; we will furnish you material; pay when you can."

With such encouragement he bent his whole energies to the re-establishment of his business, and in about four months' time, was manufacturing again in the town of Cromwell, where he continued successfully until 1852, when competition rapidly increased, and so many embarking in the business made it unprofitable, and broke down nearly all who were engaged in it.

Of these only two or three succeeded. With them Mr. Kelsey united, with a view to mutual protection; first with the Waterbury Buckle Company, in 1855, of which he accepted the presidency, and soon after took the direct management of the West Haven Buckle Company, and has held his interest in these two companies to the present time. Both have built up a business and reputation worthy of American manufacturers.

With a nominal capital of \$17,000 the West Haven Company, under his management for twenty-seven years, has paid dividends to its stockholders of over \$750,000; while the Waterbury Company, during the same time, has also paid large dividends to its stockholders.

The American Buckle and Cartridge Company, recently organized in West Haven, is a plant of Mr. Kelsey's, and is under his direct management, assisted by his two sons. With the increased wants which the progress of the times has created, buckles have become a convenient and indispensable article. Although now applied to a great variety of uses, their manufacture is comparatively recent.

Buckles were introduced into England in the reign of Charles the Second, and took the place of strings for a variety of purposes. They soon became fashionable, attained enormous size, and

George Halsey

were made largely of silver, sometimes set with diamonds and other precious stones. In the latter half of the last century, buckle-making became an important industry of Birmingham, England. Not less than four thousand people were employed in the work, and about two and a half million buckles were produced annually. When the trade was at its height, fickle fashion changed, and in 1791 the buckle-makers were obliged to petition the Prince of Wales for sympathy, on the ground that the introduction of shoestrings had nearly ruined their trade.

Foreign buckles have now almost ceased to be an article of importation, and their manufacture has become an important American industry. Much ingenuity is shown in the almost endless varieties which are produced to meet the demands of trade. Different materials are worked, chiefly brass and steel, and many are for plating with gold, silver, and nickel.

In the course of his business career, Mr. Kelsey has taken out ten patents for improvements in buckles and the machinery for their manufacture.

The history of a great business enterprise enters largely into the biography of the proprietor who has made the business successful. It is observed that when great difficulties have been overcome, the strong and excellent elements of human character and its noble traits are brought out.

Mr. Kelsey, in the course of a long and laborious business career, has shown himself to be, in a marked degree, sagacious, energetic, upright, and faithful in all the relations of active life. Nor has he confined his attention to the immediate field of business interests. The village of West Haven is pleasantly located, and affords excellent facilities for carrying on industries, and has resources capable of development, making it a desirable place of residence.

Soon after settling in this village, Mr. Kelsey became interested in its public welfare, and has been largely identified with the enterprise and spirit of the place. In 1858 he represented the town of Orange, in which West Haven is a borough, in the General Assembly. For several years he was First Selectman and Town Agent for Orange. He has not, however, devoted himself permanently to politics, preferring the more congenial occupation of his own business, and being interested in the development and improvement of West Haven village and vicinity.

He was instrumental in inaugurating and building the horse railroad, leading from New Haven through West Haven, to Savin Rock. He also furnished largely the means to accomplish this enterprise, which has greatly benefited the village, bringing it rapidly forward, and making it the most pleasant and attractive suburb of New Haven. In his desire to make the horse railroad a success he purchased Savin Rock and largely of its surroundings. He then built the Sea View House and several dwelling-houses, and succeeded in making it a successful and well-known watering place, visited by people from almost every State in the Union.

Mr. Kelsey is a zealous working member of the Congregational Church and Society; has been on the Standing Committee, and had charge of the salary fund for more than twenty years.

He has not only struggled through depression and reverses in business, but has survived a long and dangerous prostration of health, from which his indomitable courage and will have raised him up to prosecute anew the varied labors of an active and successful life.

Mr. Kelsey married, in 1845, Virginia W., daughter of Captain Doty L. Wright, of Clinton, Conn. They have two daughters, Harriet V., the wife of Frank W. Kimberley, and Georgia W.; and two sons, Israel A. and Horatio G., who are associated with their father in business.

The Ideal Manufacturing Company, 187 St. John street, was organized in 1885. This Company make a specialty of cartridge-reloading implements. John H. Barlow, Manager, was for thirteen years a contractor for the Winchester Repeating Arms Company. All of the implements made by the Ideal Manufacturing Company are secured by patents obtained by Mr. Barlow. Their superiority has been recognized wherever tested. Eight men are employed in their manufacture.

BAKERS.

Fifty years ago James and John Graham established a cracker bakery on York street, where is now the bakery of S. S. Thompson. The shop afterwards changed proprietorship, being known as Graham & Peck's until 1852, when the New Haven Baking Company was formed by Matthew A. Smith, William A. Ives, and some of the workmen. In 1862 the bakery was moved to State street, where it now is, having greatly enlarged the production of crackers and fancy cake. Upon the death of Matthew A. Smith, his brother Sylvester took charge of the business, became President of the Company, and has continued in that position till the present time. The other officers are, C. C. Smith, Treasurer, and T. J. Lawton, Secretary. The Company occupy the large store at 118 and 126 State street, running to the rear about three hundred feet. About forty-five hands are employed, including drivers and packers. A 30-horse power engine furnishes the propelling power. The capacity of the bakery is 15,000 barrels of flour per annum.

S. S. Thompson & Co. succeeded to the stand occupied by the New Haven Baking Company, at 99 York street, in 1877. The members of the firm are S. S. Thompson and Carlos Smith.

Philander Ferry established a bakery in 1860, and has been located at different times on State and Chapel streets before locating on Church street, near the Post Office, where he is at present. Mr. Ferry is one of the oldest, as well as one of the most extensive, bakers in the city.

In June, 1844, Amos Munson began the making of Connecticut pies in Wall street, which were sold in New York in a depot opened by Mr. Munson at the corner of Nassau and Beekman streets. The

product of the factory in this city was drawn from day to day from the steamboat to the depot in New York in a hand-cart. In four years the trade in these pies had so increased as to warrant the building of a factory in New York. During the fourth year of the manufacture of pies in New Haven the freights upon the steamboat amounted to \$1,300. In addition to the New York factory, Mr. Munson continued the baking of pies on Wall street until 1873, when he removed to his present location on Exchange street, at the corner of James street. The present style of the firm is S. M. Munson & Co. The bakery in this city consists of a building 63 by 47 feet, with large additions. There is a capital of \$75,000 invested in the business, which employs three double and three single teams in delivering pies to the several railroad stations and the dealers of the city. Pies are sent to most of the large cities of the State, and the larger towns of Massachusetts. The bakery in New York is still continued on East 21st street. William H. Preston, of this city, is bookkeeper for this firm.

AMOS MUNSON.

The New Englander is known the world over as an eater of pies. To an expatriated Yankee the mere sound of the name recalls fond memories of luncheon in the hayfield; of barn floors heaped with golden vegetables; of apple-barrels standing in a row; of the Saturday cookings; and of "mother's" matchless culinary skill. The reign of the pie has not been unchallenged and unopposed, but the New England institutions have conquered the country during its century of existence, and in the front rank has marched New England pie. New Haven has preserved the New England type with uncommon fidelity, and hence the part it has taken in the production and popularization of the savory Yankee dessert is most fitting.

In New Haven, the first manufactory of pies for public sale was established, and this enterprise was the work of one of New Haven's own citizens, a native of the town and a descendant of one of New Haven's earliest families, the late Mr. Amos Munson. The Munsons enjoy a frequent and honorable mention in the history of New Haven. The records show that on the 3d of October, 1665, after the junction of the two colonies, Thomas Munson was the foreman of the first jury that ever sat in New Haven. During the first part of this century also, Elisha Munson, Esq., was a very prominent municipal office-holder, and remained in public office throughout a generation, deserving and receiving the universal satisfaction and approbation of the community.

Amos Munson was born in New Haven in the closing year of the last century. As he grew to manhood, he learned the trade of a blacksmith, and worked for some time in the employ of James Brewster. As a mechanic he won approval and distinction, being esteemed one of the best filers in the country. But assiduous application ruined his health. He was a heavy man, and continual standing caused a sore to

form on his leg which became a permanent affliction. Being obliged to abandon his trade, he spent several years in the endeavor to recover his health, and for a portion of the time worked at farming. At that time his oldest son, Lucius, a keen-witted and energetic youth, was an office boy in New York, in the shop of Jedediah Morse, the father of American geography. In the same notable establishment, Mr. Amos Munson's brother, Henry, was a foreman. The boy Lucius was homesick for the sweets and goodies of mother's pantry, and was struck by the thought that if there were many others in New York like himself, the sale of the good old-fashioned pie would be remunerative. The idea approved itself to both his uncle and father, and the latter determined to make a trial of it. At that time there were no bakeries in New England devoted to the production of pies, and probably not in the country.

On the 10th of June, 1844, Mr. Munson started his factory in Wall street. It remained upon the same spot until 1874, when it was removed to the more commodious quarters now occupied by S. M. Munson & Co. During the first two months Mr. Munson's boys drew the pies in a little wagon down to the steamboat dock for the New York market, but after that time the increase and assured success of the undertaking justified the employment of a horse as the motive power. Almost the entire output of the bakery was sent to New York, for the only restaurants in New Haven then were small lunch-counters at the old railway station and at Tomlinson's bridge. Meantime, in the Metropolis, on the corner of Nassau and Beekman streets, there had been opened a small lunch-room called the Connecticut Pie Depot. The delicacy met with instant appreciation, and triumphantly indicated the foresight of Mr. Munson and his son. It established its sway over the mouths and purses of the multitude, so that all the bakers in New York began to produce Connecticut pies. This game was checked by the original proprietors, who changed the name of their product to Munson's Connecticut Pies.

Mr. Munson's brother was at first associated with him, under the name of A. Munson & Co.; but, after a short period, Mr. Munson took the control of the whole business, and conducted it in his own name. The rapid increase in the number of restaurants created a continually enlarging demand for pies. Within five years, Mr. Munson was running wagons in New Haven, and producing a thousand pies a day. The freight bills of the steamboat company had become so large that it seemed advisable to establish a manufactory in New York for the trade there. Accordingly, in the spring of 1849, he erected a building on Twenty-first street, near Third avenue, and the business has been conducted there from that time to this. Mr. Munson made his enterprise a complete success. He bore the risks of a pioneer in business; his carefulness and executive ability were exerted to the utmost, and he obtained the appropriate reward.

His latter years were spent in the enjoyment of a well-earned competence, and he saw the business

Amos Munson

W. H. Woodcut

which he had founded widely extended and universally recognized. Many of the most successful men in the same line, in this and other cities, learned their trade with him and trace their business origin to his house, among whom are H. H. Olds, of New Haven; Elisha Case, of Case, Martin & Co., Chicago; and J. E. Perry, of Providence. In 1874 he gave up the business in New Haven to his son Samuel, but retained control of the New York establishment until his death, in September, 1877.

Mr. Munson was twice married. His first wife was Miss Jones, of New Haven, by whom he had one daughter. She died, and, in 1825, he married Rebecca Dickerman, who was born in Westville in 1797, and who is yet living. To them were born four sons, Lucius, John, Charles, who now conducts the New York manufactory, and Samuel Merwin; also one daughter, Mary, who married Mr. Frisbie, of D. Frisbie & Co., an inventor and a manufacturer of hoisting apparatus.

Mr. Munson was a man of a remarkably cheerful temper, who loved dearly a good joke and a good friend. He was open-handed, and a generous contributor to the wants of the needy. But his disposition was quiet. He preferred retirement and shunned display. His patience was unbounded. He endured with resignation his final sickness, during which he lay partially helpless for ten months, dying slowly of inanition, and he left behind him a fragrant memory, and many sorrowing friends.

Much of the development and prosperity of Mr. Amos Munson's business has been due to his youngest son, Samuel Merwin Munson, who was eleven years old when the enterprise was begun. From that time on he has been engaged in it. He was his father's efficient coadjutor until (in 1868) he entered into partnership with H. H. Olds, with whom he continued until the fall of 1872. In the following spring he established himself in business, and in 1874 the full control of his father's New Haven enterprise passed into his hands. It has since been conducted under the firm-name of S. M. Munson & Co., and its good reputation and extent have increased with each year, agencies and wagon-routes being maintained in the principal cities.

In August, 1854, Mr. S. M. Munson married Miss Elizabeth Munson, of New Haven. They have had two children, both sons, of whom only one is now living.

H. H. Olds and wife began the manufacture of pies in a small way in East street, in 1859. They sought to create a demand by making a good article, and were successful, the rate of production at the close of the first year being from two to three hundred a day. As business increased, additions were made to the factory in the rear, and thence south to Chapel street. It now extends 200 feet north from the Chapel street front. From this humble beginning the establishment has grown till from eight to ten thousand pies a day are now turned out. The ovens have a capacity of baking 800 an hour. About seventy-five men are employed, and \$100,000 is invested in the business. Mr. Olds employs five

double teams delivering pies to the stores of the city, and three delivery teams to the various depots and express offices for shipment. A 12-horse engine furnishes the necessary power to carry forward the work.

HENRY H. OLDS

was born July 6, 1824, in the old Cutler residence (now the Adams House) on George street, at the head of Orange. His father was Homer Olds, a native of Southwick, Mass., and his mother was Clarissa Avery, a native of Wallingford, Conn.

About 1838, Mr. Olds, then a lad of fourteen, began active life as a farmer's boy, in the employ of Captain Samuel Thompson, at East Haven Cove. Thence he went to New York and became an errand boy for his Uncle, Erastus Beach, in that gentleman's livery office. There he remained two years and a half, when he returned to New Haven, where, during the succeeding two years, he worked at blacksmithing and boiler-making. After that he was employed for about two years running stationary engines. He later learned the molder's trade, and was employed in molding until 1851.

In that year Mr. Olds entered the pie-bakery of Amos Munson, and learned pie-making in all its branches. There he was employed eight years. In 1859 he established a pie-bakery at Providence, R. I., but not prospering there to his satisfaction, owing principally to local causes, he returned to New Haven before the close of that year and opened a pie-bakery on East street. In 1861 he built his present commodious and well equipped establishment on Chapel street. From the day of its beginning in New Haven, the business has been one of steady growth, and it now stands as the second of its kind in the United States, there being only one larger pie-bakery, which is located in New York. The superiority of his pies over any others to be obtained is conceded by consumers and the trade.

Mr. Olds was married July 6, 1855, to Elizabeth Campbell, who was born near Belfast, Ireland, the daughter of Irish Presbyterian parents of Scotch descent. She had been connected with some of the best pie bakeries in the country, and to her thorough knowledge of pie-making, and her personal supervision of his bakery, Mr. Olds attributes a good measure of his success.

Mr. Olds is a quiet, retiring man, of domestic temperament and strict business habits. He has avoided all connection with politics and public affairs.

Adherents of the Universalist faith in religion, Mr. and Mrs. Olds are attendants upon the services of the Church of the Holy Spirit at the corner of Davenport avenue and Ward street.

Amon Brown, West Haven, makes home-made bread, which is delivered in wagons marked A. Brown. His trade mark, A. B., was registered at Washington October, 22, 1878.

J. Deibel, caterer, 825 Chapel street, produces a great variety of cakes.

George H. Ives makes a fine quality of bakers'

supplies at his family bakery in State street, corner of Elm.

George Petrie, George street, has been long established and maintains a high reputation.

George Root & Son, 859 Grand street, do an extensive business and employ a number of wagons, which distribute the produce of their ovens.

BARYTES GRINDERS.

Burgess & Newton, manufacturers of barytes, Brewery street, are successors to the Stamford Manufacturing Company, who began this enterprise in 1852, and were succeeded by the present firm in 1880. The product of the factory is prepared from the crude sulphate of barytes, and is used by the manufacturers of paints and colors. The process consists of crushing, bleaching, and grinding to a fine powder. Burgess & Newton use only foreign ores, and their factory is the only one in the country in this respect. About twenty hands are employed, and the factory has a capacity of about 125 tons a week. George H. Burgess and F. A. Newton are the proprietors. In this connection we give a biographical sketch of Mr. John H. Leeds, who for many years was the representative in New Haven of the Stamford Manufacturing Company.

JOHN H. LEEDS.

The Leeds came from the City of Leeds, England, in which the family, centuries since, was an important one. In 1680, three brothers Leeds emigrated to New England, one of whom settled in Stamford, Conn. A descendant of the last was Joseph H. Leeds, a farmer, resident at the Leeds place in Darien, where his son, the subject of this sketch, John Harris Leeds, was born March 4, 1836.

It was not, as is said of many, an accident that determined the course of his life, but the prevention of an accident. The New York and New Haven Railroad had been opened but a few months and had but a single track. Just at dusk, June 24, 1849, John H. Leeds, then 13 years of age, chanced to be on its line, at a cross-road half way between Darien and Stamford, when he heard a train coming from the east. He knew there was also a train coming from the west, although it was hidden from sight by a deep cut and a sharp curve. All the horrors of a collision were inevitable unless he could prevent it. He would try. In an instant he sprang on to the track, and facing the New York bound train waved his hat to attract the attention of the engineer, and then bounded to one side, barely escaping being crushed as it went thundering by. As it passed him in its lightning speed he pointed to the west, and shouted to the engineer, "Another train is coming this way." The engineer at once reversed his engine, and whistled "down brakes," and then blew a long and loud alarm. The other train was still unseen, but its engineer was on the alert, and, hearing the signal, in turn reversed his engine and whistled "down brakes." But such was the speed of both trains and the

feebleness of the brakes then in use, that when the trains stopped they were only an engine's length apart. When the boy gave the warning they were rushing for each other at full speed. On board the two trains were five hundred people—men, women, and children. It is fearful to contemplate the horrors that were inevitable had not the lad been at that cross-road and done exactly the right thing. He certainly had not been born in vain, and the passengers thought so as they shuddered at their narrow escape. The railroad company, acting upon their sense of obligation, gave him a free pass over their road good for life, and also presented him with an elegant silver goblet with this inscription:

Presented by the President and Directors

OF

THE NEW YORK AND NEW HAVEN RAILROAD COMPANY

TO

JOHN H. LEEDS.

"Just as the twig is bent the tree's inclined."

Annexed is a copy of the letter from the Company accompanying the present, together with young Leeds' reply.

STAMFORD, August 15, 1849.

MY DEAR YOUNG FRIEND, --The President and Directors of the New York and New Haven Railroad Company, by a unanimous resolution, have assigned to me the pleasing task of presenting to you the accompanying Cup, as a slight testimonial of their approbation of your manly conduct in preventing a collision of their trains.

May the impulse which prompted you then continue to animate you, cheered with the pleasant recollection of having done unto others as you would they should do unto you.

Your Friend,

H. J. SANFORD, *Director.*

To Master JOHN H. LEEDS.

DARIEN, August 17, 1849.

MR. H. J. SANFORD,

SIR,—I acknowledge with feelings of gratitude and pleasure the receipt of the very handsome present from the New York and New Haven Railroad Company through your hands, but beg to disclaim any merit for an act which the impulse of the moment prompted and duty urged me to do.

Probably the lives of some of my fellow creatures were saved through my humble endeavors, and the consciousness of that is a sufficient reward.

Yours very respectfully,

JOHN HARRIS LEEDS.

The railroad company did not lose sight of the lad, for three years after he removed to New Haven and went into their service to learn to be a mechanical and constructing engineer, beginning as apprentice and going up through all departments. At one period he ran an engine on the road. He remained in their employ until 1860. At that date he engaged with the Stamford Manufacturing Company as their Superintendent and Consulting Engineer, taking charge of the mineral branch of their business, they being the oldest and largest manufacturers of chemical and dyeing extracts in the United States. He has continued with them to the present time.

Mr. Leeds ever has been, and now is, an exceedingly busy man. He has largely served the public in many and varied capacities, and how worthily is shown by the testimonials bestowed upon him

John H. Lucas

by his associates. The positions which he has held have been such, that while of invaluable service to the community, they have been generally with no recompense save in the consciousness of well doing. We enumerate some of them. He was Alderman in 1863-64, and was Assistant Judge of the City Court for two years, this officer being then selected by law from the Board of Aldermen. During the construction of the Derby Railroad, which occupied two years, he was its City Director. He was for many years a member of the Volunteer Fire Department. In 1862, when the Department was re-organized, he was one of the first Fire Commissioners under the new *regime*, and was President of that Board for about fifteen years. Steam fire-engines, fire-alarm telegraphs, and paid firemen were introduced under his presidency. One of the new steam fire-engines, by order of the Board, was named in his honor "John H. Leeds." When the imposing Firemen's Monument in Evergreen Cemetery was dedicated, he was appointed orator of the day. He was for several years President of the Board of Steam Engines and Boilers; Chairman of the Fire and Water Departments of the City for two years; and represented the city in making contracts for water supply.

In 1875, owing to increased business duties, and the claims of the Stamford Manufacturing Company, which required his services abroad, he withdrew from all public offices. Upon this the city passed and presented highly complimentary resolutions, signifying their sense of his eminent services. These were ordered to be engrossed and presented in a permanent framed memorial. The Fire Department also presented a magnificent and costly badge, a miniature steam fire-engine and fire apparatus, with the city coat of arms highly embellished with diamonds and rubies. Rarely has any citizen on his withdrawal from public service been so honored.

In 1879-80, he was sent to the Legislature as the city's first representative. His colleague, Colonel Dexter R. Wright, was chosen Speaker of the House. It was the first Legislature that met in the New State House. He was one of the Committee on Railroads, and one of the peculiarly important Committee on the Construction of the Dome of the State House.

Mr. Leeds was State Director of the Wethersfield Penitentiary for six years, from 1879 to 1885. He is now a Director of the Yale National Bank, the New Haven Savings Bank, the New Haven Water Company, and managing Director of the Stamford Manufacturing Company, in whose business he has passed most of his time for years in Europe and the Orient.

Mr. Leeds' first trip to Europe was in 1876, when he opened a barytes mine on the south coast of Ireland. Since then his time has been mostly spent in matters of a commercial and productive nature that are found only in the Orient, where he obtained many of the supplies of crude materials, such as dyes, drugs and chemicals, that are used by the Stamford Manufacturing Company.

He is a most extensive traveler, the nature of his

business requiring him to go to rarely visited places and among half civilized and rude people. Besides every country of Europe, he has visited Asia Minor, Syria, Northern Egypt, nearly every island of the Grecian Archipelago, all the cities of the Seven Churches of Asia, as well as Tarsus, Antioch, Aleppo, and the whole of Palestine.

In the two years, 1884-85, he passed over 80,000 miles, by steamship, railway, horse, canal and on foot.

His business transactions have been with all the tribes of the Orient, Turks, Greeks, Armenians, Bulgarians, Koords, Bedouins, Arabs and Egyptians. His experiences have impressed him with the conviction that as a body they are commercially and politically dishonest, morally corrupt; while religious fanaticism is the controlling element of their lives.

Mr. Leeds was married January 27, 1858, to Miss Frances A. Hine, of Milford.

Physically he is one of the largest and most powerful of men. He stands 6 feet 1½ inches, has heavy broad shoulders, a chest measurement of 46 inches, and weighs 250 pounds, but not accompanied with extraneous flesh. His eyes are light and his hair auburn. His health is vigorous and his constitution is one capable of long sustained and continuous labor. He is of a serious turn of mind, and being full of business, has little time for the lighter conversation and frivolities of life. This record shows that he has had a wide acquaintance with men, and a useful and honorable career, working with and upon those material forces that move civilization on its ascending pathway.

BIRD-CAGE MANUFACTURERS.

The firm of A. B. Hendryx & Co. are the only manufacturers of bird cages in the State, and produce at least three-fifths of all this class of goods in the world. The business was established in Ansonia, and moved to this city in June, 1879, and occupied the then vacant factory on Wall street, near Orange. The work has since been removed to Audubon street. About two hundred and fifty persons are employed, the firm manufacturing goods under about forty different patents. While the principal product is cages, of which the factory has a daily capacity of 150 dozen, a large variety of brass goods are made, with which manufacturers of other goods are supplied. Several tons of metal are used daily. The machinery, which comprises the best known for the purpose, is driven by a 40-horse power engine. The market for their goods is world-wide.

BOAT- AND SHIP-BUILDERS.

Ship-building was an important factor in the manufacturing interests of New Haven in the early period, when the London merchants who founded the city were still alive and active. So it was also before and after the Revolutionary war, and down to the War of 1812. Captain Charles H. Townshend, in the chapter he has written for this volume on the Harbor and Wharves, has given many interest-

ing particulars concerning the ancient ship-yards. We need not therefore go back further than 1820, when Birdsey Brooks commenced work as a boat-builder. His yard was located near the foot of Olive street. In 1844, E. H. Thatcher, who is at present engaged in boat-building at 38 Chestnut street, became a partner with Mr. Brooks, under the firm name of Thatcher & Brooks, and continued as such for twenty years, since which time Mr. Thatcher has carried on the business alone. Mr. Brooks died in 1874.

Among the earlier ship-builders who were largely engaged in the business were George W. Baldwin, Warren O. Nettleton, W. N. Gessner, and Post & Griswold. Mr. Baldwin has built ninety sailing vessels, but at present is not engaged in business for himself.

The most extensive ship-builder in New Haven at present is H. W. Hanscomb, who commenced the business in 1879, since which he has built ten sailing vessels, known as the Henry Sutton, Bessie C. Beach, Charles H. Mitchell, Abbey C. Stubbs, Jacob Reid, Horace P. Shares, John M. Brown, Thomas L. James, John H. Pingle, and Charles H. Valentine. These are all three-masted schooners, ranging from five to eleven hundred tons burden. His vessels are recognized as the fastest-sailing crafts along the coast. He employs at times seventy-five to one hundred men. At present Mr. Hanscomb's dock, River street, foot of Ferry, is used by John Doyle, who is constructing a three-masted schooner.

William A. Wright, foot of Meadow street, has been engaged in ship-building and repairing for the last ten years. At present his son, Victor E. Wright, is associated with his father, under the firm name of W. A. Wright & Son. Their business consists mainly in repairing. William A. Wright was born in Westbrook, Conn., 1832, and came to New Haven in 1839.

George M. Graves has been engaged in steam and sail-yacht building at Fair Haven since 1864. At present his business is principally confined to steam oyster-dredge building. He built the first one in New Haven. He employs most of the time from eight to ten men. Mr. Graves was born at Guilford, Conn., 1832.

Among the boat-builders of New Haven deserving of mention are William S. Barnes, 82 South Water; James McDonald, junction of Bridge and Water street; and John Keast, Chapel street, the latter of whom confines his business to the construction of racing-shells.

Alfred C. Manning has followed the business of ship-chandler and caulker at Fair Haven since 1862. He was born in Edenton, N. C., in 1812.

BOOK PUBLISHERS, PRINTERS, ELECTROTYPERS, AND BINDERS.

During the closing years of the last century and the opening years of the present, there were a number of printers in New Haven whose imprint appears upon books still in existence, but who could not be called publishers. Oftentimes an author issuing a work upon his own responsibility con-

tracted with a printer to do the work of bringing it out.

Josiah Meigs was one of the earliest publishers. He issued for a number of years the *New Haven Gazette and Connecticut Magazine*, the imprint stating that he was located "at the southwest corner of the Green, 'opposite' the market," where the Glebe Building now is.

George Bunce was an early publisher, a copy of "Scott's Lessons in Elocution" being in existence bearing the date of 1789.

In the early years of the present century, Increase Cook & Co. were prominent publishers in the State, issuing an edition of "Cicero's Orations," edited by Duncan, in 1811.

A few years later than this, Nathan Whiting published the *Religious Intelligencer*, and also some religious books, among which were "Life of Whitefield," "Life of Christ," and other subscription books.

About this time Sidney Babcock was located in Congress avenue, at what was then known as Sodom Hill. The establishment was known as Sidney's Press, and in earlier years his father, J. Babcock, was associated with him.

Durrie & Peck, who were the founders of the present house of Henry H. Peck, on Chapel street, near Church street, were established in 1818, and for many years were prominent publishers. The firm was located just south of the Glebe Building, on Church street. They published a large line of school books, among which were "Lovell's Readers," the author being John E. Lovell, of the Lancasterian School of this city, who is remembered by many of the prominent business men of New Haven to-day with respect and affection. These "Readers" had a large sale, not only here, but throughout the country, being republished in Philadelphia by Horace C. Peck. Durrie & Peck also published several subscription books which had an extensive sale. Among these were "The Family Book of History," by Olney, of Southington; "The Mariner's Chronicle," a book of marine stories; and Baxter's works, in two volumes, edited by Leonard Bacon. In 1824 they published the "Musical Cabinet," by Alling Brown, at that time chorister of Center Church; also the "Association Hymn Book," a compilation of hymns for the Congregational Churches of Connecticut, edited by a committee of the General Association. They continued in business until the death of Deacon Durrie, in 1857, when the firm was reorganized under the style of Peck, White & Peck, the partners being Henry Peck, William White and Lorenzo Peck. They continued the publication of the books issued by their predecessors. The old firm of Durrie & Peck moved about 1828 to the store now occupied by their successor.

In 1863, Horace C. Peck, who had been carrying on a publishing concern in Philadelphia, returned to his native town and purchased the business of Peck, White & Peck, which he conducted until 1867, when, on account of ill-health, he retired, and his son, Henry H. Peck, purchased the business, in which he still continues. Many of the books of the old list have passed out of use, but

such as have not are still published by the present house. Mr. Peck has also added several new works, and publishes the "Connecticut Almanac" annually.

Upon the dissolution of the firm of Peck, White & Peck, Mr. White was associated for several years with E. P. Judd in the book-selling business, but the firm did not publish.

Another publisher of some note in these early years was A. H. Maltby, who was located in the west end of the old Glebe Building in 1810. He published subscription and text-books. In 1822 "Jamieson's Grammar of Logic" was issued by him, and he was in business as late as 1843, when he published the first number of the *New Englander*. In 1830 Dr. Murdock's "Elements of Dogmatic History" appeared, and "Lindley Murray's Grammar" in 1824.

Isaac Beers began to sell books at the corner of College and Chapel streets soon after the peace of 1783, having been previously an inn-keeper at the same place. Mr. Beers took his nephew, Hezekiah Howe, into partnership, the firm being called Beers & Co. until 1806, when the name was changed to Beers & Howe. In 1809 it became Beers, Howe & Co., and so remained about a year. The older style of Beers & Howe was then resumed, and so continued until 1812, when Mr. Beers sold his part of the stock to Mr. De Lauzun De Forest, and the firm became Howe & De Forest. After several years under this name Mr. De Forest retired, and for a time the firm was Howe & Spalding. Still later, Mr. Edward C. Herrick, afterward Treasurer of Yale College, who had long been an employee of Mr. Howe, became a partner. After the death of General Howe, Mr. Herrick took Mr. Benjamin Noyes into partnership, under the style of Herrick & Noyes. After the retirement of Mr. Herrick, Mr. Noyes received his brother into the firm, the style being B. & W. Noyes. This house, during General Howe's connection with it, published Day's Algebra, and Olmsted's Natural Philosophy.

Other publishers of more or less importance, but not having a list of publications, were Sherman Converse, who published, in 1821, Dr. Morse's Universal Gazetteer; and W. Storer, who published, in 1824, a History of the American Revolution. Fragmentary publications are still in existence bearing the imprint of Whitmore & Buckingham, Hudson & Woodward, Oliver Steel, George Tuttle, G. B. Basset, Thomas H. Pease, and J. H. Benham. John W. Barber was a publisher to the extent of bringing out his "Historical Collections" of Connecticut and of other States, and also several books of religious emblems. Mr. Barber did his own engraving and his own writing, and made contracts with printers for the printing of his books.

The publishing business of the present time is confined to a narrow limit and to works unimportant in the realm of literature.

Price, Lee & Co. publish a line of Directories, embracing nearly all the cities of the State.

The International Advertising Agency, under the proprietorship of H. P. Hubbard, has recently pub-

lished a "World's Cyclopedia of Newspapers and Financial Institutions," in two volumes.

From the printing establishment of Tuttle, Morehouse & Taylor, on State street, books are issued, but under contracts with the authors. The firm do most of the college and city work. The latter includes the "Year Book," published annually.

Other printing establishments, which either by age or extent should be noticed, are the Stafford Printing Company, L. S. Punderson, formerly Punderson & Crisand, who makes a specialty of lithographic work; Hoggson & Robinson and O. A. Dorman. There are about thirty other establishments where printing is done, many having specialties in visiting and business cards, others confining themselves to commercial printing.

The more prominent printing houses have binderies attached to them as a part of the business. There are, however, several book and pamphlet binderies besides. These are Leopold Lall, on Crown street; A. C. Raymond, 16 Center street; and Henry H. Peck, on Chapel street.

The process of electrotyping was begun in 1867, but not until ten years later did the present proprietors, E. B. Sheldon & Co., succeed to the then established business. The plant occupies the third and fourth floor of the Stafford Building, on State street. About twenty hands are employed, and the machinery is driven by a 15-horse power engine. They are owners of some valuable patents, combining the most largely used processes for reproducing the type-setter's art. The firm consists of E. B. Sheldon, C. S. Butler, and E. H. Parkhurst.

BRASS-FOUNDERS.

Early in the present century there were several brass foundries in New Haven.

The writer remembers the establishment of Nehemiah Bradley in Artisan street. In the rear of the principal shop was a bell foundry, in which church bells of large size were cast. The casting of a bell attracted all the boys of the neighborhood, and the melting of the metal required so much time that notice of the casting was extensively circulated. Besides, Saturday, boys' day, was for some reason appointed for tapping the furnace. In the brass-foundry, castings were made almost every day. Andirons, handles for tongs and shovels, and knobs for door-latches were the principal products. All these articles were cast in halves, which were soldered together and afterwards trimmed by means of lathes.

When brass andirons and knobs went out of use, this industry declined for a time. But in 1861 Mr. James Graham established a brass-foundry in Wooster street, and the building has been enlarged from time to time as the business expanded. In 1880 James Richardson and C. E. Graham were admitted to the firm. They employ in active times about twenty-five men, and the range of work is from a casting weighing a fraction of an ounce to one weighing half a ton. The specialties of

the firm are their patent nickel-bronze centre car journal-bearings and rabbit miters. The trade extends throughout the United States, and the bearings have been adopted in Australia by the government.

In 1870 James Reynolds began the business of brass-founding at 41 and 43 Orange street, the building having been previously used as a bath-house. The productions of the foundry are all kinds of brass, bronze, composition, nickel, silver, white and soft metal castings. Mr. Reynolds is the owner and sole manufacturer of the famous Curtis fire-hose coupling, which is extensively used by fire departments throughout the country.

A. M. Hill conducts a brass-foundry at 573 Dixwell avenue, where a general line of foundry work is skillfully done.

A. M. Schappa conducted a brass-foundry and made light carriage iron-work at 169 East street for a short period. He is now principally employed by the firm of W. & E. T. Fitch, who conduct his former business.

The New Haven Car Trimming Company, 71 and 73 Goffe street, whose establishment is described among the specialties of carriage-making, includes brass-founding among the branches of its business. Although car trimming and carriage hardware receive much attention, they make all kinds of brass, bronze, and soft metal castings, including fire sets and fenders.

BREWERS.

In the old New Haven Colony a brew-house was an essential part of a homestead, and beer was on the table as regularly as bread. On the New Haven Town Records, under the date of December, 1662, we find that "Deacon Peck informed the town that they were much troubled to supply the elders with wheat and malt, and he feared there was want; therefore desired the town to consider of it. The deputy governor urged it that men would endeavor to make a present supply for them." At an earlier date than this, "liberty was given Mr. Stephen Goodyear to brew beer for this town, all others excluded without the like liberty and consent of the town."

This constant use of beer, however, seems to have given place to cider, as soon as the apple orchards had grown so as to supply it in sufficient quantity, and there is no evidence that beer was a common drink during the eighteenth century. In the latter part of that century a brewery was established in New Haven. The building was destroyed by fire in 1806, and the business not being resumed, there was no brewery in the city till after 1850. The building which was burned bequeathed to one of our streets its name, Brewery street.

Between 1850 and 1860 four breweries were established.

John Solly manufactured what he called "Home-brewed ale, as we made it at our old farm-house in Kent, England."

About the same time John J. Phelps commenced the manufacture of ale and porter at the corner of

Chapel and East streets, in the premises now occupied by the New Haven Brewing Company.

In 1852, Philip Fresenius, born in the village of Nider Wiessen, in Hesse Darmstadt, in 1825, came from New York, where he had been for some time employed as a brewer, to New Haven, and commenced brewing on his own account. His first brewery was situated on the same ground where his present large establishment is located. He commenced by carrying his beer to his customers in kegs strapped across his shoulders. In 1874 his business had grown to such proportions that his principal brewery, fronting on Congress street, was erected. The ice-house, 225 by 50 feet, was completed in 1878, the dwelling-house and saloon in 1881. In 1883, still further additions were made, and at present his structures occupy a superficial area of about 34,000 feet, with a frontage on Congress avenue of 150 feet. The brewery affords facilities for making 100,000 barrels of beer annually.

Another early brewer was Charles Nicholas, who began in the upper part of Oak street. For the last three years this brewery has been conducted by Joseph Weibel, and is now known as the Oak Brewery.

George A. Basserman commenced the brewing of lager, ale and porter in 1868, when he built what is known as Rock Brewery. It is located at the foot of East Rock, under which he has excavated a cellar, 200 feet deep, 24 feet wide, and 16 feet high, for storing his brewings. The average production of this brewery amounts to from 15,000 to 20,000 barrels a year. The brewery proper comprises a three-story building, partly of stone, 185 by 50 feet in dimensions, while the attached sheds and barns cover an area 688 by 50 feet. Mr. Basserman manufactures his own ice by machinery. A large park adjoins his brewery property, adjacent to East Rock Park, provided with a pavilion and accommodations for summer gatherings. Mr. Basserman was born in Germany in 1832, and came to New Haven in 1851. His handsome residence overlooks the valley of the Quinnipiac.

The New Haven Brewing Company is a joint stock company, incorporated in 1883, with a capital of \$30,000. Its officers are C. H. Osborne, President; George Russell, Vice-President; and W. E. Van Name, Secretary and Treasurer. Ale and porter are brewed. The production for 1885 amounted to 26,000 barrels, the larger portion of which was sold in New York, Hartford, and to supply local trade. The brewery is located on the corner of Chapel and East streets, in which, for many years, J. J. Phelps & Co. carried on a similar business.

The malt-house of the New Haven Malt Co., 58 to 66 East street, is the only one in the State. This Company was incorporated in 1885, with a capital of \$12,000. Last year, 64,000 bushels of barley were manufactured into malt. All of the barley used is bought in Canada direct from the farmers. The officers of the company are M. C. Moran, President; William Chapman, Vice-Pres-

RESIDENCE OF GEORGE A. BASSERMAN.

H. P. Shares

ident; Joseph Devlin, Secretary; and C. H. Osborne, Treasurer.

The establishment of William Hull & Son, brewers of ale and porter, 14 Whiting street, was established in 1870 by William Hull and his son, William H. Hull. In 1878, William H. Hull succeeded to the business, but retained the old firm name. Mr. Hull brews ale and porter, a specialty being made of stock ale and porter. From year to year he has made additions to his facilities to meet the demand of an ever increasing trade. The production for 1885 amounted to 10,000 barrels.

At the Quinnipiac Brewery of Schleippmann & Spittler, on Ferry, River and East Pearl streets, lager, ales and porter are brewed.

There are a few small establishments for the production of weiss beer.

BRICK-MAKERS.

In 1876, J. R. Crossman commenced to make fire-brick at 17 Kossuth street. In 1880, the New Haven Fire Brick Company was formed, composed of J. R. Crossman and H. M. Howard. This company continue the business started by Mr. Crossman. New Jersey clay is used in making these bricks, of which 300,000 are annually made, necessitating the employment of ten men. This is the only brick manufactory in New Haven. At the same location an earthenware factory was conducted for many years.

Building bricks are made in large quantities in North Haven, a few miles north of the city. Of those who are engaged in this manufacture, the following have offices in the city: William E. Davis & Co., 961 Grand street; Quinnipiac Brick Company, 78 Church street; Horace P. Shares, 90-94 State street; F. L. Stiles & Son, 306 State street.

HORACE P. SHARES.

Brick-making is an ancient art in New Haven. Some of the earliest settlers engaged in their manufacture, and the town records for 1640 tell of "a way over the river between the brick-kills." In 1651, John Benham asked the town to appropriate for his benefit "twenty shillings to pay for looking for Clay to make Bricks when the plantation began." From that time to this the manufacture of bricks in the Quinnipiac Valley has never wholly ceased, and within the present generation it has become one of the great industries of that region. The citizen of New Haven who has been most successful in improving and developing the business is Mr. Horace Putnam Shares. He was born in Hamden, Conn., May 8, 1836, the son of Daniel W. and Jennette (Bassett) Shares, both of whom are now living. Mr. D. W. Shares is known as the inventor of several valuable agricultural implements.

Young Shares received a common school education, and after a period of travel into different parts of the country, came home and married, on the 2d of October, 1854, Miss Ives, daughter of Mr. Alfred Ives, of North Haven. The young couple settled at first upon a farm, but, after a year or two, Mr.

Shares engaged with his father-in-law in the manufacture of bricks. About 1859 he took charge of the yards of the Warner, Mansfield & Stiles Brick Company at North Haven Center, and retained that position until 1863. At this time Mr. Shares was "prospecting" in the Quinnipiac meadows, and he discovered large deposits of clay hitherto unknown. Availing himself for a few years of his father's financial aid, he established himself in business with a yard of his own, to which, in 1868, he added the lower yard of the Warner, Mansfield & Stiles Brick Company, and he has since operated the two.

At that time also Mr. Loyal Ives became a silent partner in the ownership of the newly purchased yard. Mr. Shares employs through the season from seventy-five to one hundred men, and has never had trouble with them. When he entered the business, thirty years ago, one million bricks was considered a large total production for one year; the two yards now produce about nine millions annually, while the total yearly production of all the North Haven yards is about thirty millions. This great expansion has been largely due to improvements in manufacture which Mr. Shares was the first to introduce into this vicinity. He has traveled into other sections of the country to watch the process of brick-making in vogue there; has taken pains to observe what the various industrial expositions could teach upon the subject; and the new ideas thus obtained he has had the sagacity to appreciate and the enterprise to adopt.

He was the first to import, in 1875-76, the Philadelphia repress system, by means of which the best of pressed brick is made here. The residence of Mr. Anderson, on Orange street, of Mr. H. P. Frost, and of Mr. C. S. Leete, on Chapel street, are examples of this product of Mr. Shares' yards. Four years later, Mr. Shares was also the first to make use of the pallet or frame system of drying bricks. He established the plan at a considerable cost, but it was so successful that all the other manufacturers here soon followed his example. In 1885, he found at the New Orleans Exposition some Western inventions, a pug-mill and sander, both of which he made use of in his own yards immediately after his return home. They are labor-saving and time-shortening machines, and the first successful ones of the kind in this region. The pug-mill receives the clay, tempers it, and passes it directly to the brick-machine; the sander is a revolving cylinder which picks up the moulds and sands them. Of the pallet brick which is produced by the aid of the machinery in Mr. Shares' yards, a fine example may be seen in the house of Mr. E. S. Wheeler on Hill-house avenue.

As this biography shows, Mr. Shares has been diligent in business, yet he has found time to travel extensively in this country, in Mexico and in the West India Islands. He is a constant worker in Church and Sunday-school, and has been for many years a Sunday-school Superintendent. Deserving charities have never appealed to him in vain. But he does not love notoriety, and carefully obeys the Scripture rule to hide from the one hand what the other doeth.

Into his home six children have been born, all of whom are living.

BRIDGE BUILDERS.

Ithiel Towne was the earliest professional bridge-builder in the city. He came here in 1812, and built the Center Church and Trinity Church. By profession an architect, he designed a wooden truss-bridge, which came to be extensively used throughout New England and some other parts of the country. This bridge was known as Towne's patent, and the inventor for many years had a royalty upon these bridges. One of them is now in existence at Whitneyville, and one or two have recently been removed from over the Merrimac River in Massachusetts. There are now no establishments in the city which confine themselves exclusively to bridge-building, but several of the firms contracting for heavy work include that; and short spans of iron bridges are made by the Yale Safe and Iron Works, and by A. A. Ball & Son.

William E. Alling, contractor, 152 Putnam street, has for several years been engaged in building docks and all kinds of wood bridge work.

The firm of R. Redfield & Sons (Edward R. & Charles S.) build bridges, docks, dams and railroads.

ROBERT REDFIELD

was born in Derby, Conn., November 20, 1832, the son of Sylvester and Clarissa (Bronson) Redfield. His mother was the daughter of Harvey Bronson, of Derby. His father was a native of Clinton, his family being among the first settlers of that town. He died in 1841, when Robert removed to Orange, attended the district school, and worked on a farm with Elizur Bradley until sixteen years of age. About that time, gold being discovered in California, he was taken with the gold fever and went among the first emigrants to that State. He saw hard times, for years living in the mountains and working in the gold mines. Returning in 1851 to Connecticut, he took up the occupation of a stonemason.

Mr. Redfield married, October 3, 1852, Betsey, daughter of Caleb S. Stone, of Danbury, and settling in that town, carried on his business as a mason until 1870.

He began after 1857 to make contracts as a master builder and mason. In 1860 he took the contract for the reservoir in Danbury borough, and in 1861 made his first engagement in railroad work—the earth-work, masonry, and bridge-work on the branch road from Danbury to Brookfield. About this time he bought lots and built several houses in Danbury, and was engaged in contract work on stone buildings in and around that town.

Mr. Redfield took as partner, in 1868, Ebenezer Whittlesey, of Danbury. That year the firm made a contract on the Boston, Hartford and Erie Railroad, now the New England road, and built the mason work until forced to stop, in 1869, by the

financial failure of the road. In 1870 they took a contract at Yonkers to build an avenue with three 50-foot stone arches in it, with retaining or approach walls each side about four hundred feet, on each side of the arch. This was said by the engineers at that time to be one of the finest pieces of bridge mason work in Westchester county. It occupied nearly twenty two months, employed one hundred and forty men, and cost \$140,000.

Returning to Danbury in the fall of 1872, the firm took a contract on the Shebaug road, from Bethel to Hawleyville, for the bridge mason work, which lasted through the winters of 1871–72, and employed one hundred workmen. In 1872 they built the stone church of St. James' Episcopal Society of Danbury.

In the fall he went to Bound Brook, N. J., on a contract for the Perth Amboy Railroad, and was so engaged from September to May, 1873, and employed over two hundred men.

Mr. Redfield was next engaged upon the Fourth avenue underground improvements in New York City, and built eleven blocks, from 56th to 68th streets, called the beam tunnel. Beams were laid along the wall and arches were sprung from side to side between the outer and inner walls. This occupied from May, 1873, to October, 1875, and employed from two to four hundred men. It is one of the most extensive and important works of masonry of late years in New York City.

In 1875, Mr. Redfield dissolved partnership with Mr. Whittlesey, and came to New Haven. He bought a farm in Orange and built a house, with other buildings, at an outlay of \$15,000.

In the fall of 1875 he built the Lehigh and Wilkesbarre Coal Dock in New Haven. In 1876 built two bridges in Branford and the stone arch bridge in Clinton; also a suspension bridge at Zoar, Conn., on the Housatonic River. The same year Mr. Redfield bought a quarry, situated in New Haven and employed there, in quarrying stone, some ninety men.

He went in 1877 to Stafford Springs, and worked all the summer with a large force of men in rebuilding the dam, washed away by the remarkable freshets of that year. In 1878 he was engaged on the New York, New Haven, and Hartford Railroad on bridges, and every year since has done more or less bridge work for this road. He also built a reservoir for Ansonia in the town of Seymour, employing three hundred men on the various works.

In 1879 he built a large bridge over the Farmington River for the Northampton Railroad, and also a reservoir for the borough of Shelton in Huntington, and three bridges on a branch road for the New Haven and Northampton Company.

In 1880, Mr. Redfield was engaged on the New York and New Haven Railroad, building arches and bridges. In 1881 he went to the Danbury and New England road, and took a contract to build the masonry on the road through the town of Danbury. He built all the masonry of seventeen bridges (seven of these being stone arches) on the Northampton road, employing about five hundred workmen on all the roads.

Robert Redfield

A difficult work was done in 1882 in tunneling through under the New York, New Haven and Hartford road, at an angle of forty-three degrees, to build abutments for the extension, on a lower grade, of the Danbury and Norwalk road. All this time forty or more trains were passing overhead daily, and none were stopped or made to slacken speed. In other cases Mr. Redfield has undertaken perilous and difficult works, entering foundations where others had failed, and once, working alongside, he coped successfully with the Raritan River. On building the extension of the Northampton road in Massachusetts, he carried up stone from his New Haven quarry. At this time he built on the shore line at Westbrook a stone arch with a span of forty-five feet.

In 1883, Mr. Redfield took in his two sons as partners. This year they did a good deal of stonework in the City of New Haven, including the West Chapel Street Bridge, with quite large abutments, and the Lamberton Street Bridge, piers and abutments; erected a stone arch on the Shore Line Railway at Saltonstall Lake; also a drawbridge for the town highway of South Norwalk, the masonry for the abutments being laid in twenty feet of water.

In 1884 they were engaged for the New York and New Haven road, and built a drawbridge for the town of Westport for the highway bridge, carrying stone from Mr. Redfield's own quarry; also the Grand street bridge for New Haven; and several railway bridges for the New York, New Haven and Hartford road.

In 1885, the firm built a railroad bridge for the Northampton Company; and mason work for the New Haven sewer; and the Tomlinson Bridge, where the masonry stands in thirty feet of water, and removed the old structure there.

This outline shows how busily Mr. Redfield has been occupied for the last thirty years, and proves his skill and success in carrying through some of the most responsible and difficult public works in his profession. His reputation for substantial and durable work is such that often no inspector has been called to pronounce upon it, and, when this has occurred, it has been rather for form's sake. He has the characteristics of a firm and ready manager of men.

He is now (1886) building the reservoir for the borough of West Haven at a cost of near \$10,000.

Mr. Redfield has had five children; of these there survive two sons, who are associated in business with him, Edward R. and C. S. Redfield, and one daughter, Dora B. Redfield.

BROOM MAKERS.

The only broom manufactory in New Haven is that of Charles Mix & Son, 10 Hill street, which was established about seven years ago on Oak street. Employment is furnished to four men.

BRUSH MANUFACTURERS.

The American Brush Company was organized in 1868. Removing to East Haven, its buildings at

the outlet of Lake Saltonstall were destroyed by fire. In 1878 it resumed operations at Westville, and continued in the business till 1883. During the latter part of the time the brushes were made by the Diamond Match Company. Finally the business was sold out and removed to Southington.

CANDLE MAKERS.

The manufacture of candles can almost be said to be extinct in New Haven. But up to the introduction of the various burning fluids in 1840, it was quite an important industry, and formed one of the leading articles of the West India trade. About the beginning of the present century, Elam Hull and Robert Brown were the leading candle manufacturers in New Haven. Hull occupied the soap factory of W. H. Beecher & Co., 278 Elm street, the head of which firm, in 1868, with Dexter Alden as partner, succeeded Mr. Hull. The latter partnership continued until 1877. Mr. Alden has recently died. W. H. Beecher & Co. now carry on the manufacture of candles, but in a limited way, and are the only manufacturers in the city.

CARMEN.

Probably the oldest carman in New Haven is Edward McGowan, who has followed this business for thirty-six consecutive years. He makes a specialty of moving heavy machinery, such as engines, boilers and safes.

N. Boughton has been engaged in doing general carting in this city since 1860. He employs five teams. His principal business is carting rubber goods for L. Candee & Co.

CARPENTERS.

On Mr. Joseph Brown's map of New Haven as it was in 1724, is the name of Henry Caner, housewright. Mr. Caner was an Englishman, who first appeared in Boston in connection with the enlargement of King's Chapel about 1713. He was induced to move to New Haven in 1717, to superintend the erection of the College Hall and Rector's House, which the Trustees had voted to build, with the advice of Governor Saltonstall and Deputy Governor Gold "concerning the architectonick part of the buildings." Whether Governor Saltonstall, Deputy Governor Gold, Mr. Caner the housewright, or Rector Cutler, who was not to live in the Rector's house, deserves most credit for "the architectonick part," does not appear. Jointly they produced a hall, satisfactory not only to themselves, but to all the friends of the Collegiate School who wished to have it located at New Haven. A few days after the frame was put up, the Trustees wrote to Mr. Jeremiah Dummer, who had procured for them the generous patronage of Governor Elihu Yale.

We are in hopes of having shortly perfected a splendid Collegiate House, which was raised on the 8th instant. We behold its fair aspect in the Market Place of New Haven, mounted in an eminent place thereof, in length ten rods, in breadth twenty-one feet, and nearly thirty feet upright; a

spacious hall and an equally spacious library, all in a little time to be splendidly completed.

The Rector's house, on the site where the College Street Church now is, stood about twenty feet back from the street. It was 44½ feet in front, by 38 feet in depth, and had two stories with an attic. It was built by Mr. Caner, in 1722, for £600. But the contract price is stated in the depreciated currency of the colony. President Clap informs us that the house and land cost in all £260 sterling, the land having been bought of the First Church in New Haven for £43. The President's house would more nearly have satisfied the taste of the moderns than would the College Hall. In planning it, the builders had the advantage of comparing their plans with those of many similar edifices; but the projectors of the College Hall worked in an untried field.

The first Court House, County House, or State House, as it was variously called, was built between 1717 and 1722; and though there is no record that Mr. Caner built it, the probability that he did amounts almost to certainty.

Mr. Caner, who was a widower when he came to New Haven, married Abigail, the widow of Jonathan Cutler. He had two sons, one by his first wife and one by his second, who graduated at Yale College and became Episcopal Clergymen. He died in 1731. On the map of 1748 is the name of Widow Carver. The Editor of this volume is so sure that this is a typographical error, that in making a copy of the map he has taken the liberty of changing the name to Caner.

The map of 1748 shows names and residences of two joiners, Josiah Thompson and James Tallmadge. Josiah Thompson, corner of Meadow street and Congress avenue, was not only a joiner, but the son of a joiner. His father, William Thompson, died in 1741. At the time when the map was drawn by General Wadsworth, Josiah Thompson was fifty-nine years of age.

It is not easy to fill the gap between 1748 and 1790, when Elisha Dickerman became of age. Josiah Thompson had a son, or grandson, by the name of Benjamin, who learned the joiner's trade of Hezekiah Augur, and having married one of his

The Rector's or President's House.

(By permission of the Publishers of "The Yale Book.")

daughters, altered the shop in which he learned his trade into a dwelling-house, lived there till his death, and bequeathed it to his son, Minott, who still resides in it at 31 Whalley avenue.

Benjamin Thompson was a baby in the cradle when the British invaded New Haven on the 5th of July, 1779. Some soldiers came to the house and ordered his mother to get dinner for them. She went into the cellar to make preparation, when one of them took up a book from the mantel-shelf and finding it to be the Book of Common Prayer of the Church of England, said to his comrades, when Mrs. Thompson reappeared, "These are not rebels; let us get our dinner somewhere else," and they all went away.

Hezekiah Augur, of whom Benjamin Thompson learned his trade, was partly contemporary, though about twenty years older than Elisha Dickerman. He died in 1818 at the age of sixty-eight years.

It is the opinion of a gentleman who was born in 1802, and has himself been a builder in New Haven, that for some years before Ithiel Towne began to build in New Haven, Elisha Dickerman

monopolized all the best jobs in the city, and was even so obliged to spend much of his time building fences and repairing decays.

President Dwight, in his survey of business in New Haven in 1811, which was about the time when Mr. Towne came here, reports the number of carpenters and joiners as fifty. This includes all persons working at the craft as apprentices, journeymen, and masters. A large majority of the fifty must have belonged to the two classes first named; and of the master workmen, probably only one or two were competent to make any working drawing however rude, or to undertake the erection of an ordinary dwelling-house.

Ithiel Towne came to New Haven, uniting in himself the qualifications of an architect and a practical builder. He built the Joseph Darling house, now occupied by the University Club; the house on the corner of College and Wall streets, owned and occupied by Alfred Walker; Centre Church, Trinity Church, and perhaps a few less conspicuous buildings, and then gave himself exclusively to the business of an architect.

Elihu Atwater, having learned his trade of his uncle, Elisha Dickerman, and spent a year in "New Connecticut" working as a journeyman, returned to New Haven in 1809, and commenced business for himself; but for several years had no opportunity to contract to build any house of more than average cost. His first considerable venture was a substantial brick house for Amaziah Lucas on Chapel street, a little east of St. Paul's Church. Long before the death of the contractor it was demolished to give place for the palatial residence now occupied by Mr. O. B. North. Another house built by Mr. Atwater, which had a similar fate, was erected in Elm street a little west of St. Thomas' Church for William W. Woolsey. It was demolished to give place to the Sheffield Block, in which is the club-house called "The Cloister." Other residences erected by Mr. Atwater were for Russell Hotchkiss, on Meadowstreet; Lewis Hotchkiss, on Temple street, and for Rev. Thomas F. Davies and Cleveland J. Salter, both on York street. He also built Street Building and other blocks of stores. His last contract was for the re-erection of the Brewster & Collis Carriage Factory in East street, fronting Wooster. It having been destroyed by fire, Mr. Atwater contracted to rebuild it in ninety days and fulfilled his agreement to the letter. The phoenix which symbolized its reappearance is still visible, though few understand its significance.

Asahel Tuttle was one of the principal builders in the city in 1812, when he built the old Glebe Building for Hon. David Daggett, who had obtained from Trinity Church a long lease of the land.

David Hoadley came here from Waterbury in 1813 to build the North Church, having underbid Mr. Towne. He also built the De Forest house, now owned by Mr. Sargent; the Nathan Smith house, since occupied as a young ladies' school by the Misses Edwards and their successors, Misses Orton and Nichols; the Dexter House, now occupied by offices, under the name of Law Chambers; and, at a later date, the Tontine Hotel.

Timothy Alling was contemporary with Elihu Atwater, Asahel Tuttle and David Hoadley. He built a house for himself in High street, afterward owned and occupied by Professor Denison Olmsted, and still later by Lucius Gilbert. He built on the opposite side of the street a house for Isaac Beers, of Apothecaries' Hall, which is still, more than half a century after Mr. Beers' decease, the residence of his widow.

Nahum Hayward built for James A. Hillhouse the mansion still standing in Sachem's wood, and for the Hon. Ralph I. Ingersoll the house on the corner of Elm and Temple streets, now occupied by ex-Governor Charles R. Ingersoll; the Salisbury house, the Stephen Whitney house, the house now occupied by Miss H. E. Peck in College street, and the First Baptist Church, now the New Haven Opera House, were also the work of Mr. Hayward. He removed the Coffee House from the site of the Tontine Hotel to the place where it now stands in Church street, between Wall and Grove. There he resided in the building before it became the home

of the Rev. Dr. Bacon. Though not strictly in the line of carpentry, it is thought worthy of record that he set the iron fence which incloses the Green.

A little later than Mr. Hayward were Sidney M. Stone, Atwater Treat, Ira Atwater, Nelson Hotchkiss and Charles Thompson.

Mr. Stone soon ceased to take contracts, and devoted himself to the business of an architect in distinction from a builder, furnishing drawings and specifications, and superintending the work in behalf of the owner. But before he had given himself to this specialty he had built St. Paul's Chapel as a Chapel of Ease for Trinity Church; the Doric edifice, which was the nucleus of the Hospital; the Solomon Collis house in Wooster street, now occupied by ex-Mayor Lewis; the Gerard Hallock house and the house of the Rev. Dr. Croswell in Crown street, since enlarged and now owned and occupied by the Hon. Caleb B. Bowers.

Atwater Treat built Alumni Hall, East Divinity Hall, West Divinity Hall, the Reference Library, which is between the two divinity halls, the Exchange Building, President Woolsey's house in Church street, the William Johnson house in York square, the Caleb S. Maltby house in Howe street, and the Art Gallery.

Ira Atwater built many churches in country towns, including New Milford, Old Milford, New Britain, Meriden and Guilford. He built the Chapel street Church, the College Chapel which preceded the Battell Chapel, and North College.

Nelson Hotchkiss commenced business in partnership with Ira Atwater. They built the Collins house in Hillhouse avenue and a double English basement house on the corner of York and Library streets. Mr. Hotchkiss afterward forming a partnership with Charles Thompson, they removed to Trenton, N. J., and remained there fifteen months. During that time they built a church and seven houses. Mr. Hotchkiss, not long after his return from Trenton, became a partner with William Lewis in a planing mill in Water street.

Charles Thompson, after his separation from Mr. Hotchkiss, built a block of stores on State street and a block of houses on Elm street, in both cases for Mr. Sheffield. He also superintended the erection of the College Library Building, the workmen being paid by the day. He formed a partnership with H. B. Oatman in 1852, which continued till 1867. They rebuilt and enlarged the Ithiel Towne mansion for Mr. Sheffield in Hillhouse avenue, reconstructed the old Medical College into Sheffield Hall for the Scientific School; erected the Sheffield Building on Chapel street, and the Wilcoxon house on West Chapel street, now the residence of Mrs. E. C. Scranton. Since then, either in company with Mr. Oatman or alone, Mr. Thompson has built North Sheffield Hall, Trinity Church Home, Chapel and Parish School, with the four dwelling houses attached to the institution, and Battell Chapel.

James E. English learned his trade of Atwater Treat, and having during his apprenticeship acquired skill in architectural drawing, began to take contracts as soon as he was of age. He built a house in Wooster place for the Rev. Stephen Jew-

itt, now owned by the family of the late B. Manville. Mr. English soon retired from building, and established himself as a dealer in lumber.

Leonard Pardee built the Foote house on Whitney avenue; the house of E. C. Reed on the same avenue, but nearer to the town; the Du Bois house on Howard avenue; a house for Dr. Wells on Whitney avenue; and the Government Building for the Post Office, the Custom House, and the Federal Courts. Mr. Pardee left the business to become the proprietor of a planing-mill.

Tuttle & Augur built the Merchants' Bank, the residence of Henry E. Peck in Meadow street, and others.

James McQueen built the Elliot House and many private residences. His son, John B. McQueen, is a member of the firm of Smith & McQueen, who have recently built a house in Church street, next north of the residence of Justus S. Hotchkiss.

Chauncey Wells, who died at an early age, built a double house on Chapel street, fronting Wooster place, and a block of six houses on the corner of George and High streets.

Nicholas Countryman built the South Congregational Church, now the Church of the Sacred Heart; the Howard Avenue Church; St. Thomas' Church; St. John's R. C. Church; the City Hall; the block of stores on State street, which contains J. D. Dewell's immense stock of groceries; and the residences of Pelatiah Perit, Massena Clark, and F. S. Bradley.

Charles A. Osborn built a cottage for Everard Benjamin in the upper part of Orange street; a similar cottage for George Gabriel in Dwight street; Mitchell's Building in Chapel street; the fine residence of Mr. O. B. North on the same street, a little east of St. Pauls Church; and the mansion of Lieutenant-Governor Winchester on Prospect street. Mr. Osborn died in the midst of his days.

Joseph B. Baldwin built the church in Court street, now owned and occupied by Mishkan Israel as a Hebrew synagogue; the residence of Judge Miller, in Howe street, for Wyllys Warner; and the residence of Charles L. English on the corner of Dwight and Chapel streets.

Lyon & Brown built Brewster Building on the corner of State and Chapel streets, now, by reason of a change of proprietors, called Simpson Building; the residences of Willis Bristol and Judge Charles A. Ingersoll; and the Mechanics' Bank. Mr. Lyon removed to Bridgeport.

William Doolittle built for Messrs. Anderson & Ailing the twin houses in Orange street between Humphrey and Edwards streets.

Chauncey A. Dickerman, succeeding his father as College joiner, afterward became a builder. He built the brick block opposite his residence in York street and in the rear of Calvary Baptist Church.

George Merriman learned his trade of Charles Thompson. He built the College street Church and the residence of Thomas R. Trowbridge on Elm street. He removed to one of the Southern States.

Of builders who have passed away we may have omitted some names, partly from imperfection of memory and partly for want of space; but our list includes, we think, all the prominent housewrights from the beginning of the nineteenth century to the present time.

Wilson Booth and Robert Treat Merwin have retired from business, the former by reason of old age, and the latter by reason of ill health.

Mr. Booth built two houses in Crown street for Oliver Bryan; the S. I. Baldwin house on the corner of Crown and College streets; the house on the opposite corner, now owned and occupied by Dr. Hubbard; and the house of the late Philemon Hoadley.

Robert Treat Merwin began operations in 1837. During this long period he has been one of the most active builders in the city. He built the Church of the Redeemer; Yale National Bank; Masonic Temple; Second National Bank; Connecticut Savings Bank; Young Men's Institute; Webster, Wooster and Skinner Schools; besides a great number of private and public buildings. For many years James H. Leeds was foreman for Mr. Merwin. He is now engaged in business for himself, with office and shop on Water street.

Henry W. Clark has built many residences in the southwest part of the city.

Beach Burwell has built a house in York street for Samuel Blackman; a house for Gaius F. Warner in Chapel street, now occupied by the Republican League; and several carriage factories.

William P. Dickerman built the edifice recently vacated by the Third Congregational Church; the residences of E. H. Trowbridge and his son, E. Hayes Trowbridge; the Trinity M. E. Church; the L. Candee Factory; the store of Yale & Bryan; the First Church Home for Aged Women; the station house of the consolidated railroad; and the freight depot at the steamboat dock.

George Rockwell, who had been foreman to Charles A. Osborn, became his successor. He has built the mansion of Congressman Mitchell on Townsend avenue, the old house of Mr. R. J. Maine, which preceded it, being hardly worthy of mention in a history of the present edifice; the Charles Farnam house on Hillhouse avenue; that of J. M. Davies on Prospect street; the house of Enos S. Kimberly on Orange street; and the house of Mr. E. Heaton on York street.

Elihu Larkin has built the house of the late Mr. R. S. Fellows; Sargent's first large factory; a block of houses on Whalley avenue; the First Methodist Church; Calvary Baptist Church; a Church in Waterbury; Durfee Dormitory and Farnam Dormitory.

James A. Church has built the Sloane Laboratory, and is now at work on Lawrance Dormitory.

Clark & Thompson, a firm consisting of Spencer A. Clark and F. R. Thompson, have built a house for the late Mr. Edwin Hotchkiss on the corner of Chapel and Howe streets; Mrs. Hadley's house on the corner of Whitney avenue and Trumbull street; and are now bringing toward completion Dwight Hall on the College Campus.

David H Clark

Hubbell & Merwin have built Atwater block at the junction of Grand and St. John streets, and several residences in various parts of the city. Their shop is furnished with machinery by the aid of which they do a large amount of jobbing.

A. N. Clark has built the Dormitory for the Nurses at the Hospital, and many private residences.

Edward P. Brett came into Artisan street as an apprentice in 1855, and established himself in business in the same street in 1863. He had charge of the wood-work on the first buildings erected by the Winchester Arms Company, and also of the large addition built one year later. He does a large amount of shop-work by machinery, especially in manufacturing wooden boxes.

Charles E. Brown was for many years a partner with Mr. Brett. The partnership was dissolved in 1880, and each has a shop of his own, both of them on Artisan street. Mr. Brown, either in partnership with Mr. Brett or alone, has erected the original buildings of the Winchester Repeating Arms Company; five large buildings for the L. Candee Company; and buildings for Sargent & Co., Peck Brothers & Co., the New Haven Gas Light Company; besides numerous dwelling-houses and stores.

Lucerne I. Thomas was born in New Haven in 1850. Attended the Washington and Webster schools. Commenced business in 1874, his first contract being for a dwelling-house for Town Clerk Shuster. He does all his own designing and drawing. Besides being an enterprising and successful builder, he has shown genius in military affairs, and has, by successive promotions, risen from the ranks of the National Blues to be the Captain of that ancient organization.

Warren Robinson commenced building in New Haven in 1851. He built the Methodist Church in Dixwell avenue; reconstructed Skiff's Opera House; built the hotel, formerly called the Madison House, now the Sheldon House, in State street, and many private residences.

James A. Thorpe commenced business on Exchange street in 1875, and has since then built sixty houses; thirty-one of the sixty were for S. R. Blatchley & Sons, real estate agents.

As the population of the city increases, the number of master-carpenters multiplies. Among those who are now pressing toward the front rank are Martin Allen, W. A. Beard, James F. Beebe, J. M. Bradley, A. H. Cargill, David H. Clark, James A. Fogarty, G. W. Hazard, James Hodson, William H. Hubbard, Samuel Johnson, W. A. Lincoln, Charles D. Loveland, Thomas F. Lowe, E. A. Prince, Andrew C. Smith, and Miles L. Smith.

DAVID H. CLARK

is a native of Stratford, Conn., where he was born July 24, 1850. His father died when he was two years old, and at the age of nine he removed to Oranoke, a village in the north of Stratford, and set out to work his own way in the world, upon the usual terms to many a self-made man, of board, clothes, and schooling.

In the quiet hamlet of Oranoke there was no chance to go astray, and the natural surroundings seem to have instilled their own faithful character into his; for he learned there the principle, which he has endeavored to maintain through life, of fulfilling every engagement.

After six years, he engaged for a term of two years with the widow of Thaddeus Curtis, receiving eighty dollars per year and winter schooling. At the age of fifteen he had the full charge of the farm for the Widow Curtis. He could mow an acre of grass before breakfast, and cradle and do well all manner of farm-work. In the spring of 1867 his value had so increased to Mrs. Curtis, that he was able to engage with her for the summer on the more favorable terms of \$1.50 a day and board.

In the fall of 1867, he spent a short time with his uncle, Philo Birdsey, of Oranoke, and took at a venture his uncle's interest in the shad fishery on the Housatonic River, which was then a somewhat lucrative source of gain. The profits of the fishery he turned to his education, and bought a scholarship in the Bryant & Stratton Business College, at Bridgeport. He obtained at this school a practical knowledge of book-keeping, banking, and commercial law, and learned the general order of business usage. At the close of the scholarship course he engaged with the Cartridge Company of Bridgeport for about a year, and then, thinking to advance himself in the knowledge of mechanical affairs, went into the employ of the Howe Sewing Machine Company. Here he could make on piece-work as much as three and four dollars per day. There came on a strike at the Howe works, and, influenced by the uncertainties of trade disturbances, he resolved to apply himself to some more stable business.

His Sunday-school teacher at the Methodist Church in East Bridgeport, Calvin P. Hall, was a practical carpenter and builder. He went to him and informed him. To his astonishment he was told to come with overalls, hammer and two-foot rule, and go to work for him at one o'clock that very afternoon. This he did, and worked out in the rain from noon till night. He remained with Mr. Hall two years, his wages having increased from \$9 per week at the outset, to \$15 per week at the close of that period.

A dissolution of partnership, in 1869, left an unfinished building in West Stratford; this Mr. Clark took up and completed. All work, as molding and the like, was then done by hand, and working through the day he would often continue his labor by candle-light into the night.

January 18, 1872, Mr. Clark married Emma F. Beers, of New Haven, by whom he has one son, born February 14, 1876.

In the spring following he removed to New Haven and took a situation with William J. Pratt, the builder. He then sub-contracted with Darrow & Hague, working with them through the spring and summer of 1873. In 1875 he was engaged with R. T. Merwin on the Second National Bank Building, and then, also with Mr. Merwin, on the building for Governor English on the corner of Church

and George Streets, working as a journeyman up to this time, 1876.

That same year, Mr. Clark associated himself with John H. Brown, under the firm name of Brown & Clark, carpenters and builders, who established themselves in the rear of 325 Grand street. Outgrowing this place in two years, they removed to the corner of St. John and Olive streets, on the Charles Osborne property. He continued with Mr. Brown until March 31, 1882, and during that period they erected the building on the corner of State and Court streets, and built residences for Judge S. A. York, W. W. Woodruff, and George E. Osborne; also the Quinnipiac Building on Chapel street, the Kensington Flat on Orange street; the English and Mersick Building; the Kellogg store, on the corner of Elm and State streets, and the Mount Carmel Public Building.

In 1882, owing to the failure of Mr. Brown's health, there was a dissolution of the partnership, and, assuming sole control, Mr. Clark erected the building for Governor English, occupied by Proctor, Gross & McGuire. Sometimes working on quicksand—now having to shore up and support one part of a building, perhaps full of running machinery, while demolishing and renewing the other part of it—so, under great difficulties, he has pushed forward the enlargements of the growing city, and has borne the numerous and vexing responsibilities of a large builder in a flourishing town.

Mr. Clark has had long business relations with and has put up numerous buildings for Governor James E. English, among them a block of ten houses on Wooster and Warren streets; also a block of four the same year for Lyman M. Law; a new building for the New Haven Clock Company; and rebuilt, after the fire, for this Company, three large buildings in the burnt district, and residences on Howe street. In 1885 he erected the Ferry street Church, donated by Hiram Camp to the Cedar Hill Union Mission Society, and a four-story building on Church street, near George.

Reviewing his business career since 1876, Mr. Clark finds that he has added 140 buildings to the growth of the city, at a cost of \$420,000, and has been identified with many of the largest building enterprises of New Haven. He employs from thirty to fifty men in the various departments.

Starting at the outset with no facilities, and hampered by the disabilities of the methods of twenty-five years ago, Mr. Clark now commands the fullest facilities for making houses complete without going farther than his own doors for all the necessary equipments. He thus combines dispatch with economy of labor, and maintains the independence, which has been, all through his life, a characteristic of the man. Mr. Clark's career, if somewhat uncommonly prosperous, is an excellent illustration of the success that attends faithful effort, when combined with the skillful direction of one's fortune at the turning point of life.

THOMAS F. LOWE

is one of the most enterprising and progressive of New Haven's many competent carpenter-builders,

and, though yet a comparatively young man, has done more than his part in contributing to the city's visible growth. Especially is this true of Fair Haven, where he has his residence, and where evidences of his enterprise are to be seen on every hand.

Mr. Lowe learned his trade in Waterbury, and later was employed in Bridgeport, until he took up his residence in New Haven in 1872. In 1874 he embarked in business for himself, and since that time has erected many elegant residences and large factory buildings and business blocks, his operations having included the building of the residences of Mr. H. P. Frost on Chapel street, and Mrs. John Mansfield on Center street (Annex); the rebuilding of E. Malley's store; and the erection of a large five-story addition to B. Manville & Co.'s carriage-factory on Wooster street. He has purchased many lots, notably in Fair Haven, and built comfortable houses on them upon speculation, which he has sold to home-seekers to his own and the city's benefit. He began business with shops on Exchange street, and in 1882 removed to his present location, 229 Lloyd street. His increasing business demands the employment of upwards of twenty men, who find in him an employer at once liberal and considerate.

Mr. Lowe's distinguishing characteristics are enterprise and integrity. He is in every sense a worthy and useful citizen, standing deservedly high in the esteem of all classes of his fellow-townsmen. Of him it may be truly said that he is, in the usual acceptance of the term, a self-made man, who with work as his watchword and honesty as his guide, has been quick to see or make and ready to grasp his opportunities.

Though too busy to mingle much in political life, he takes a deep interest in the growth and prosperity of New Haven, and since taking up his residence within its borders has manfully and with a liberal hand contributed to the establishment and maintenance of worthy objects designed to enhance the public welfare. He is frank of speech and affable of manner, and readily wins friends among all classes of men, and his most prominent characteristics have gained him the respect and confidence of the entire business community.

With the introduction of machinery, carpentry, like other work, is subdivided into specialties, such as sawing, planing, making doors, sashes, blinds, and stairs.

The sash, door and blind factory of the Thomas Alling Company, 136 East Water street, was founded about forty years ago by Ira Atwater. It was afterwards sold to Leonard Pardee, who conducted it until 1865, when George and Thomas Alling and William Converse purchased it, and for one year business was carried on under the firm name of G. & T. Alling & Co. At the expiration of that time Hiram Painter and J. Gibbs Smith became members of the firm, the title of which remained the same. In 1883 the firm was composed of Thomas Alling, J. Gibbs Smith, and Albert Alling. The business was then consolidated

with that of George Alling & Son, now conducted under the name of The George Alling's Sons' Company. This union continued until 1885. In February, 1886, a stock company was formed, under the title of the Thomas Alling Company, composed of Thomas Alling, J. Gibbs Smith, and E. J. Alling. The executive officers are Thomas Alling, President, and J. Gibbs Smith, Secretary and Treasurer. Their factory is one of the largest in the State. The work executed consists of doors, sashes, blinds, wood-turning and scroll-sawing. Employment is furnished to sixty-five men.

The planing, wood-turning, and scroll-sawing mill of the George Alling Sons' Company, 100 East Water street, is the successor of the business established by George Alling & Son. The premises of the Company have a frontage on Water street of 280 feet, and run back 600 feet to the harbor. The main building is of brick, two stories high, 222 by 200 feet in dimensions. There are several sheds for storage purposes, in which large supplies of lumber are kept, as well as what is used for manufacturing purposes, amounting to from five to six million feet annually. In the manufacturing department an engine of 150-horse power is the motor. About seventy-five men are employed. A large business is done in planing, resawing, general wood-work, such as fitting up stores and furnishing the interior wood-work for buildings of all kinds. The principal work, however, consists in manufacturing window frames, bases, jambs and casings, which are sold throughout the State. Their stock of lumber is the largest in variety of any yard in the city, a leading specialty being made of Southern pine flooring and North Carolina pine. The annual turn-out of the establishment amounts to about \$400,000. George Alling, the founder of this business, died in 1883. The officers of the Company are Charles E. Alling, President; George A. Alling, Treasurer; and E. H. Barnum, Secretary.

GEORGE ALLING.

The late George Alling was born in New Haven October 15, 1820, and died January 26, 1883. His parents were Thomas and Lydia (Johnson) Alling, the former having been a prosperous farmer. He had four brothers and one sister. His education was finished in the old Lancasterian School, which is so pleasantly remembered by many prominent gentlemen of New Haven. As a practical preparation for his life struggle he mastered the joiners' trade, after a thorough apprenticeship, and worked at it until he engaged in business as a contractor and builder.

In 1846, he formed a partnership with his brother, Thomas Alling, which existed until 1848, when he sold his interest to the latter and entered into partnership with Isaac Anderson, opening a coal and lumber-yard on Water street, and a branch office in New Boston, Conn., under the management of Henry P. Alling. Their business became quite extensive. In 1856, Mr. Alling severed his relations with Mr. Anderson and went to Davenport,

Ia., and entered into the lumber business on an extensive scale, about the same time building a large sawing and planing-mill in Florence, Neb. This business proved very successful, and Mr. Alling continued it till 1860, when he disposed of his interest in the West and returned to New Haven.

He now again formed a partnership with his brother, Thomas Alling, in the lumber business, on Water street, the firm being known as George Alling & Co. They did a very large business for several years, during which Mr. Alling was, for a time, installed also in the lumber trade in Chicago, Ill.; and, during the war, with Montgomery Armstrong in the carriage business, under the firm name of M. Armstrong & Co. The latter firm had large contracts to furnish ambulances, etc., to the United States Government, and for several years did considerable exporting business, having a large repository at Melbourne, Australia.

In 1866, the firm of George Alling & Co. purchased the sash, door and blind business of Leonard Pardee & Co., and, under the style of G. & T. Alling & Co., continued it very successfully until 1883, when Mr. Alling, having purchased the business of the Lewis & Beecher Co., retired from the firm of G. & T. Alling & Co., and thereafter, until his death, was connected with his son, George A. Alling, under the firm name of George Alling & Son, in the lumber and milling business, on Water street, succeeding the Lewis & Beecher Co. at their old place of business.

Charles E. Alling, the eldest son of George Alling, who had for some years been interested in the business of G. & T. Alling & Co., after his father's death sold his share in that concern, and, with his brothers, George A. and Arthur N. Alling, organized a joint-stock company, under the name of the George Alling's Sons' Co., to continue the business. This firm rank with the leading business houses of New Haven, having a large planing and saw-mill, and wood-turning and scroll-sawing establishment, and being extensive wholesale and retail lumber merchants and manufacturers of moldings and building materials.

Mr. Alling was married May 20, 1845, to Miss Mary E. Alversen, of New Haven, who survived him only about a year. Their three sons, Charles E., George A. and Arthur N. Alling, members of the George Alling's Sons' Co., are well known and highly respected.

Mr. Alling was genial and companionable, and during his long and busy career made many steadfast friends. He was public-spirited, helpful and charitable.

A Republican politically, he was too thorough-going a business man to take part in politics, nor did his tastes induce him to do so, though he was induced to become a member of the Common Council of the City of New Haven, and held other official positions.

From time to time he was in some manner identified with different business and commercial enterprises, and his advice was sought by many, his judgment being implicitly relied on. At the time of his death he was a Director in the Mechanics'

Bank. He was a man of sterling integrity, just, enterprising, and deservedly successful.

For many years a prominent member of the First Baptist Church, he was devoted to all its interests and contributed liberally toward its maintenance and extension.

The New Haven Steam Saw-Mill Company is a joint stock organization, and was formed in 1854 with a capital of \$50,000. The premises are located near the crossing of Chapel and East streets, on the bank of Mill River. The mill is 80 by 100 feet, with ample room for the floating of logs. A 250-horse power engine furnishes the motive power. The Company have a side track, connecting with all the railroads leaving the city. Their trade has a wide range throughout this State, New England, and New York.

C. B. Curtis, 88 Winchester avenue, began the manufacture of doors, sashes, blinds and moldings in 1869. His trade is both local and also extends throughout the State.

The Porter Stair Company was founded by the late H. F. Porter, in 1833, the business increasing in amount as the taste for artistic wood-work was gradually developed. The production of the factory consists not only of stairs and their several parts, but hard-wood mantels, cabinet trimmings, wainscoting and doors. The ground occupied covers an area of 640 by 250 feet on Grand street, near the Barnsville Bridge, upon which is a factory, a two-story frame mill, 100 by 100 feet, in which five distinct branches are carried on. About seventy men are employed. A 50-horse power engine drives the machinery. The officers of the Company are E. L. Goodale, President; William T. Porter, Secretary and Treasurer; and William T. Porter, Samuel Johnson, and E. L. Goodale, Directors. Capital stock, \$80,000.

CARPET WEAVERS.

At the present time the only work in this branch of the industrial arts is done by the old-fashioned hand-loom, working up the refuse rags of the economical house-wife into what is known as "rag carpet." There are four of these looms now in operation, the owners taking the material and weaving it at so much per yard.

In 1830, Philips Galpin began the manufacture of ingrain carpets. He was joined in 1833 by Hon. J. B. Robertson, under the firm name of Galpin & Robertson, and a new factory was built, where the business was carried on for some years with a considerable degree of success, but finally proved a failure. Mr. Robertson retired in 1849, and the manufacture was continued for a short time by Daniel Mitchell, who was for many years foreman for Galpin & Robertson. Mr. Mitchell finally gave up, since which time there has been no attempt at carpet weaving, excepting of the character mentioned above.

CARRIAGE-BUILDING AND ITS BRANCHES.

From the early years of the present century, carriage-building has been an important element in the industrial pursuits of New Haven. There have

been periods in its history in this city when more persons were engaged in it, when the amount of capital invested in it was greater, and its product more valuable than any other two branches of the industrial arts. The last twenty-five years, however, have seen a great change in the methods of manufacture, the business being divided into numerous collateral branches, each of which, though distinct in itself, is yet dependent upon the others. Thus we find manufacturers of axles, bodies and hardware, which are again subdivided into such articles as springs, wheels, steps, tops, poles, and trimmings. This division of the work, by its natural tendency to produce skilled workmen for every part, has also tended to system, superior workmanship, beauty of finish, and cheapness; and has thus created for New Haven carriages an enviable reputation throughout the world.

The earliest coach-maker in New Haven of whom we have any record, was John Cook. He began business in 1794, in a small shop in the rear of Chapel street, where Orange street now is, and near the present site of the furniture establishment of the Bowditch & Prudden Company.

The elliptical steel spring, now invariably attached to the axle of a carriage, was invented by a citizen of New Haven soon after the beginning of the present century—Captain Jonathan Mix, who resided at the corner of College and Elm streets, where East Divinity Hall now stands. He was one of the forty heroes who started at once for Cambridge when the news of the massacre at Lexington reached New Haven. He obtained a patent, February, 1807, for "a spring of elliptical form, placed parallel to the axle, to which it was screwed in the center."

After 1800, there were several small shops in New Haven where carriages were made, some of them devoted entirely to blacksmith-work, and others to the wood-work. The productions of these early craftsmen were rude and unpretentious, and did not, up to 1810, aggregate an annual sale of over \$30,000, which included road wagons then in general use.

In 1809, James Brewster chanced to be traveling from Boston to New York, and was detained in New Haven by an accident to the stage-coach. While waiting for the necessary repairs to be made, Mr. Brewster visited Cook's carriage shop, and, after interviewing the proprietor, was impressed with the availability of New Haven as a carriage-building center. In 1810 he put his opinions into practical form by starting a factory at the corner of Elm and High streets, on the lot where the photograph gallery now is.* At that time the carriage journeymen received their wages in trade, and as they were very generally of drinking habits, the work was inferior and unsatisfactory. The advent of Mr. Brewster began a new era in carriage-building in New Haven so real and marked, that he has well been called the father of the trade. He sought to raise the standard of workmanship by calling the best workmen to

* President Dwight, of Yale College, in a statistical account of New Haven, published in 1811, states that there were at that time seven carriage manufactories. This number must have included blacksmiths' shops which did some carriage-work.

New Haven, by paying good wages in cash, and seeking in many other ways to raise them to a greater sense of responsibility and to a higher grade of mental and moral culture. The progress of this establishment will be noticed in its proper place, and this brief mention of Mr. Brewster's early work is for the purpose of giving a glimpse at the beginning of this great industry.

Another epoch in the history of carriage-building in New Haven dates from the introduction of steam machinery into the trade by George T. Newhall in 1855. While visiting Providence, R. I., he became impressed with the fact that steam was used for many purposes as power, and that it could be utilized with advantage in carriage-building. Acting upon this idea, he purchased a small engine, and placed it with the requisite machinery in his factory at Newhallville. His experiment, for such it was, was looked upon with incredulity, and his creditors became anxiously filled with the idea that he was doomed to insolvency, or the retreat for the insane. The success of the enterprise was, however, soon apparent, and Mr. Newhall continued the business in this way, followed gradually by other manufacturers in the city, until at the breaking out of the war nearly every factory had steam power and machinery. The growing use of power, and the inventive genius of the time, have created many improvements and possibilities, but the credit of its introduction belongs to Mr. Newhall.

The brightest period of carriage-building in New Haven was from 1840 to the breaking out of the war in 1861. During this time New Haven carriage-makers had established a large trade throughout the Southern States. The war not only obliterated this trade, but caused very serious losses to the manufacturers in the obligations then due and maturing. Since that time a number of large firms have passed out of the carriage business, and their factories are either used to-day for other purposes, or are standing idle, while other establishments have been enlarged and expanded on every side.

Richard Stone's factory, on Chapel street, near Day street, is now used for dwellings, as is also Dickerman's factory, at the corner of George and York streets; Newhall's factory, at Newhallville, and Grinnell's, on Garden street, have been burned. Ingram's, and more recently James Cooper's, on Garden street, are practically unoccupied. Dibble's establishment, on Park street, is used for the manufacture of oleomargarine, and Blackman's and Randell's, on the same street is occupied by Newman's corset factory. David Wilcoxson's building, on Park street, is used for manufacturing fire-arms and wire-work. The shop of Stevens & Gilbert, on Temple street, has been supplanted by the Electric Light Company.

Hubbell, Strout & Hooker were pioneers in carriage-building, in Park street, putting up, in 1821, the factory for forty-five years past occupied by J. J. Osborn. An old house then standing upon the site was moved to the corner of Webster street and Dixwell avenue, where it still stands.

Of the more ancient factories that have passed away and not been alluded to, were Parker's, near

West Bridge; Zelotes Day's, in York street, burned about thirty-five years ago; and a factory standing where Olmstead's drug store now is, at the corner of York street and Broadway, occupied at times by James Brewster, James Bradley, and Moses Perkins; and that of Isaac Mix & Son, where the New Haven clock shop now is.

There is a lack of reliable statistics to show the progress of the carriage business from the early days of Brewster to the present time. The census of 1880 returns the number of establishments engaged in the manufacture of carriages, wagons and materials at 43; the amount of capital invested, \$1,309,599; number of persons employed, 1,204; amount paid for wages annually, \$679,128; value of material used, \$954,501; value of manufactured products, \$2,005,829.

The following is an historical statement of houses now engaged in the manufacture of carriages and attendant branches in the city.

William H. Bradley & Co., carriage manufacturers. This house was established by James Brewster in 1827. In the introduction to this section allusion has been made to the impetus which James Brewster gave to the carriage business of the city. He started on the lot at the corner of Elm and High streets, and was afterwards located at the corner of York street and Broadway; later, at the old stand of John Cook, in Orange street; and still later in East street, fronting Wooster street, in the building now occupied by W. & E. T. Fitch, where the business remained until 1850, when it was removed to its present location on Chapel street. Soon after the establishment of Mr. Brewster in this city, he opened a repository in New York under the care of John R. Lawrence, the firm name there being Brewster & Lawrence. In 1830, Solomon Collis was admitted as a partner in the New Haven house, the firm being Brewster & Collis, the firm of Brewster & Lawrence remaining the same in New York. It was during the next ten years that the great reputation of this firm for the manufacture of fine carriages was established. In 1837, Mr. Brewster retired, Messrs. Collis and Lawrence conducting the business, under the title of Collis & Lawrence in New Haven, and Lawrence & Collis in New York. This arrangement continued until 1850, when Mr. Collis sold his interest here to William H. Bradley, and in New York to Mr. Lawrence. The latter associated with him S. A. Dearborn, and his son, John Lawrence, the firm being known in New York as John R. Lawrence & Co., and in New Haven as Lawrence & Bradley. In 1857, William B. Pardee became a member of the firm, it being then known as Lawrence, Bradley & Pardee. Mr. Pardee remained until 1872, when he retired, and the firm has since been known as William H. Bradley & Co. The premises on Chapel street consist of a three-story building, 40 by 180 feet, divided into the several departments necessary to carry on the work. The house, from its establishment by the honored Mr. Brewster to the present time, has occupied a prominent place in the carriage business of New Haven.

JAMES BREWSTER,

the carriage manufacturer, was born in Preston, Conn., August 6, 1788, and died in New Haven, November 22, 1866.

He was of the seventh generation in direct descent from Elder William Brewster, one of the Pilgrim Fathers, who came over from England in the Mayflower, and landed at Plymouth in 1620. His father, who died when he was quite young, had eight children—five sons and three daughters—of whom the subject of our sketch was the second. His mother lived to the advanced age of ninety-two years, and died September 24, 1854.

The early death of his father, leaving the family with but limited means, made it necessary for James to follow a trade; and, after a district-school education, he was apprenticed, in 1804, to Colonel Charles Chapman, of Northampton, Mass., to learn the trade of carriage-making. On attaining his majority, he was offered an interest in his employer's business; but this he refused, preferring to go into business by himself. Circumstances led him to New Haven, where, in 1810, he commenced in a small one-story shop, then standing on the lot at the corner of Elm and High streets. His skill as a mechanic soon secured him a large patronage, and his undertaking proved quite successful.

At that time few carriages were in use, one-horse wagons being generally employed. Even Governor Strong, of Massachusetts, rode into Boston on election day in a one-horse wagon. Mr. Brewster undertook the improvement of the styles, and soon became known as the manufacturer of "Brewster wagons," which then came into general use. He made a specialty of the better class of vehicles, and was the first maker in the United States to send a paneled carriage to the South. In time he established a very large business in the improved forms of buggies, phaetons, victorias, coaches, and similar modern vehicles.

Mr. Brewster early adopted the custom of paying his workmen every Saturday evening in cash, instead of continuing the old practice of giving orders for goods. His great respect for religion compelled him to realize his responsibility to those in his employ. Drinking habits prevailed among the journeymen to an unfortunate extent, and he strongly advocated temperance. Before there were any associations formed for the suppression of intemperance he took a strong position against the habitual use of intoxicating drinks, and especially against the customary use of it in the shops, where it was allowed by the common consent of both employer and employee. He prohibited its use in his own shop, and by his efforts inaugurated a great reformation among the mechanics of the city.

In many ways he endeavored to educate his employees. He organized an association called the Young Mechanics' Institute, and rented a room in the Glebe Building in which they held their meetings. Here he frequently delivered evening addresses to his workmen on moral and practical subjects. Later he erected a public hall for lectures, and called it Franklin Hall. He then instituted a course

of scientific lectures by such men as Professors Olmsted, Shepard, and Silliman, of Yale College. These lectures cost him \$5,000 annually, and were of great benefit to all who heard them. His efforts in behalf of the mechanic attracted to New Haven a superior class of workmen.

In 1827, Mr. Brewster opened a branch of his business on Broad street, New York, near the present Stock Exchange, associating with himself Mr. John Lawrence as his partner, under the firm name of Brewster & Lawrence, which firm continued for some years.

In 1833 he became interested in railroad building, and with a number of citizens of New Haven obtained a charter for the construction of a railroad between New Haven and Hartford. The interest which the enterprise awakened in the public mind was so great, that when the survey was completed, and the books were opened in New York to receive subscriptions to the stock of the road, six million dollars were subscribed in one day—six times the amount needed. The great fire in New York, which occurred in 1835, made it impossible to collect a large portion of the funds subscribed, and Mr. Brewster gave up a fine business in order to devote his entire energies to the building of the road, giving his time and services for four years to the accomplishment of this enterprise. He was elected President of the Company, and gave, without remuneration, such land belonging to him over which the road passed. The rails with which this road was built were imported from England at an expense of \$250,000, and for this large sum Mr. Brewster became responsible, as the importer would not deliver them without.

Resigning the presidency of the Railroad Company after four years of faithful service, he resumed his chosen occupation, and, in 1838, again established a carriage business, associating with him his son, James B. Brewster, who afterward became the head of the New York house, now known as J. B. Brewster & Co., of 25th street.

By honesty, industry, and faithful devotion to his business, Mr. Brewster accumulated a handsome competency, much of which he used in his endeavor to make others happy. He was closely identified with many of the interests of New Haven. The suffering poor, and the orphan children found a warm place in the affections of his heart. This was attested in his improvement of the Almshouse, and by his munificent gift of an Orphan Asylum to the city, which stands as a worthy monument to his generosity and his sympathy for the unfortunate.

He was a lover of the beautiful in Nature and Art, and was the possessor of several valuable historical paintings, executed for him by distinguished artists. Among these were the "Landing of the Pilgrims at Plymouth," now in the possession of his oldest son, James B. Brewster; "Founding of the New Haven Colony;" and "Washington Parting with his Mother to Assume the Duties of President of the United States," with others of like interest and value.

For many years Mr. Brewster was accustomed to keep an extended diary, and to the ordinary

Wm. Brewster

W. J. Morton

events of each day he would add his "Moral Reflections." In his sixty-eighth year he wrote his Autobiography, a volume of marvelous beauty and excellence, never given to the public, but kept as a souvenir by the family, for whose benefit it was written. It also contains his Lecture before the Young Mechanics' Institute. The entire volume is in writing, elegantly executed.

In 1825, Mr. Brewster joined the Church of the United Society in New Haven, under the pastoral care of Rev. Samuel Merwin, of which he remained a faithful member until his death. His religious character was exemplified in his daily life, not only in his family, but in his business transactions with his fellow man. He was honored and beloved by all who knew him, and in his death was greatly lamented. His body reposes in the old New Haven Cemetery.

In 1810, Mr. Brewster was married to Miss Mary Hequembourg, of Hartford, Conn., a lady of French descent. To them were born six children, one of whom died quite young. The surviving children are Mrs. Mary Pease, of New Haven; Mrs. Rebecca D. Cone, of Hartford; James B. Brewster, of New York; Rev. Joseph Brewster, of Mount Carmel, Conn., and Henry Brewster, of New York. Mrs. Brewster died March 18, 1868.

James B. Brewster, the oldest son, now in his seventieth year, and in vigorous health, is the head of the house of J. B. Brewster & Co., of 25th street, New York. Henry Brewster, the youngest, is the senior member of the firm of Brewster & Co., also of New York, the two leading carriage manufacturers of the United States.

Charles P. Hubbell and Horace Morton began to build carriages in 1839, in a shop in Brewery street, which had before been occupied by Stevens & Francis. The business increased and was in every way successful till the commencement of the war, when it declined, and remained in such a depressed condition that the proprietors, who had already acquired a competence, chose to relinquish it, which they did, in 1867, selling out to Norton & Co.

H. J. MORTON.

This gentleman is a native of Hatfield, Mass. He was born in 1815, and is a lineal descendant of some of the early settlers of that State. His boyhood was passed on a farm, and his education was obtained in the common schools of the time and place. In 1830 he came to New Haven, and entered the shop of his uncle, Zelotes Day, to learn carriage-making. Upon arriving at his majority he spent one season in Charleston, S. C., and on his return to New Haven began the manufacture of carriages.

By close attention to business, and scrupulously keeping all his financial engagements, he soon acquired a credit which was as useful to him as ready money to the same extent would have been. In 1840, Mr. C. P. Hubbell, Mr. Morton's brother-in-law, became associated with him in business, at

which time the afterwards well-known firm of Hubbell & Morton was formed. There was no dissolution of this partnership until 1871, when Mr. Hubbell died. At that time the firm enjoyed the distinction of being the oldest carriage manufacturing house in New Haven.

The business of Messrs. Hubbell & Morton had been very extensive. Before the rebellion they had carriage repositories in Savannah, Ga., and Mobile, Ala., in which they carried a large stock to supply their Southern trade, most of which was lost to them during the war, their stock in Savannah having been confiscated by the Government of the Confederate States of America, receipt being given the firm promising payment three years after the recognition of the Confederacy as an independent government.

Mr. Morton is not a politician, and has never willingly permitted the use of his name for political purposes. Indeed he is too independent in his views to be a party man. But he has been prevailed upon to serve the city on several occasions, notably in the Board of Engineers of the old Fire Department, and in the Common Council. He has been solicited many times to accept other important trusts, but has declined to do so. He has been for many years a Director in the Merchants' Bank, and one of the Trustees of the Connecticut Savings Bank.

Since the death of Mr. Hubbell, Mr. Morton has not been actively engaged in business, but has busied himself in settling up the affairs of the firm, and caring for some trusts that have been confided to him.

He married Miss Elizabeth Barnett in 1840. They have had two children. Their only son they lost by death. Their daughter is the wife of Mr. H. A. Warner, of New Haven.

Henry Hale is, at the present writing, the oldest man in the carriage business here, having begun in 1846, near what is now Fitch's factory on East street. Mr. Hale had associated with him at that time Frederick B. McMahon. A year later the firm moved to where Hooker's carriage factory now is, and there remained until 1850, when S. E. Waterbury entered into partnership under the style of Hale & Waterbury, and they moved to the rear of the present factory of Henry Hale & Co. In 1864 the factory was entirely destroyed by fire, when Mr. Waterbury's interest was bought by Mr. Hale, and two young men, Andrew J. Hull and J. H. Moore, were taken as partners, the firm being known as Henry Hale & Co. After the fire of 1864 the present factory was built, having a frontage of 76 feet on Franklin street, four stories high, with an L 86 feet long and 30 feet wide. In February, 1879, this new building was partially burned, but in the repairs no essential changes were made. In 1880, Mr. Moore was released from the partnership, and Samuel K. Page admitted to the firm, which composition it still retains. The factory has a capacity of sixty hands, and no machinery is used. The firm manufacture a large line of coaches and family carriages.

HENRY HALE.

Robert Hale, the ancestor of the Hale family in America, was of the family of that name in the County of Kent, England, where it existed as early as the days of Edward the Third. The name was originally spelled with a final *s*, which was dropped.

Robert Hale was born in 1610; emigrated to America in 1632; and settled at Charlestown, Mass., where he founded and became Deacon of the first Congregational Church. He died July 19, 1659. His descendants have been numerous in successive generations, and many of them have been distinguished in various walks of business and professional life, notably in the pulpit of the Congregational Church.

Of this family, so old and so honorable, Mr. Henry Hale, who is unquestionably the oldest carriage-builder now in active life in New Haven, is one of the most conspicuous present representatives. His great-grandfather was a Congregational minister of Ashford, Conn., where John Hale, his son, and grandfather of Henry Hale, was born, and lived the useful and honorable life of a farmer. Mr. Hale's father, Frederick Hale, was also a farmer, and it was as a farmer's boy that Mr. Hale began his active life. His mother was Abigail (Warner) Hale. They were married in 1807, and had seven children, of whom Henry was the third. He was born in Otsego County, N. Y., April 23, 1813.

All of the toils, sufferings and privations incident to life on the then frontier of New York State, he learned from hard daily experience, and remembers it only too well. Yet it is with a feeling of just pride that he reverts to the fact that from this humble, this seemingly undesirable, beginning he has risen to be recognized as one of the foremost business men and successful manufacturers of his city and time. He removed to North Haven in 1835, and in 1840 came to New Haven, where he was destined to make his record upon the municipal growth and progress, and in adding to his own material prosperity, to enhance that of thousands around him; for so entangled are men with each other in all of the relations of business and commercial life, so dependent each one upon all the others, that the advancement of one must be the gain of all.

Mr. Hale found employment, until 1846, in the carriage factory of his elder brother, Warner E. Hale, then and later well known to the carriage trade centering in New Haven. In the year last mentioned, with a partner, under the firm name of Hale & McMahon, he began the manufacture of carriages on a somewhat extensive scale. In 1850, the interest of Mr. McMahon was purchased by Mr. S. E. Waterbury, and the business was continued by Hale & Waterbury until 1860, when Mr. Hale succeeded to the entire proprietorship and management, and organized the firm of Henry Hale & Co., which has since existed and transacted a large and generally increasing business. They make a specialty of fine work in all its branches.

Though always devoted more particularly to his own important business interests, Mr. Hale has constantly taken a helpful and intelligent interest in the public prosperity, both municipal and national, and while never inclined to mingle in politics, and never seeking any official elevation, he has generally contributed his portion to the development and establishment of New Haven's beneficial and charitable interests. As a steadfast friend and helper of the working classes, his position is too well known to require comment in this connection.

Mr. Hale has been twice married. First, in 1840, to Miss Ellen A. Barnes, daughter of Deacon Bayard Barnes, of North Haven, who died April 17, 1869; and the second time, October 31, 1870, to Mrs. Elizabeth A. Barnes, formerly a Miss Hemingway. He has had three children, two sons and a daughter, only the last mentioned of whom is living. His two sons were exceptionally bright and promising young men, and in their untimely death Mr. Hale met one of the severest afflictions of his life.

A self-made man in the best and truest sense, Mr. Hale enjoys the respect of a wide circle of friends and business associates, and can look back upon a long life well spent, and see in it little to regret.

J. H. Moore & Co., corner of James and River streets, make a specialty of fine light two-seat carriages. The firm is a comparatively new one, being only established since 1881. The factory of the firm consists of a three-story building, 75 by 85 feet, with an iron-working department in the rear. Twenty-five persons are employed in the different departments. The members of the firm are J. H. Moore and Stephen Shiner.

The carriage factory of M. Armstrong & Co., 433 Chapel street, was established in 1859 by M. Armstrong, George Alling and Thomas Alling, under the present firm name. They were located for the first five years on Temple street, opposite St. Mary's Church, after which they removed to the lower end of Temple street, where the business was carried on until 1882, when the present commodious building was erected. The firm remained unchanged until 1867, when George and Thomas Alling retired, from which time Mr. Armstrong has conducted the business alone, but still retains the original title. Mr. Armstrong confines his work to what is known as heavy carriage-building, making four and six-seat rockaways cabriolets, victorias, phaetons, coupés, landaus, and landaulets. This trade is largely centered in New York City, furnishing nearly all the leading hotels with carriages. He has also a considerable export trade. This house has one of the best arranged carriage factories in the city. The buildings are of brick, with six floors devoted entirely to manufacturing. Employment is furnished to forty men. Mr. Armstrong has been engaged for forty-seven years in carriage-building. He was born in New York City in 1822, and came to New Haven in 1842, where he has since resided. He represented the Third Ward as Councilman and Al-

Samy Hale

J. J. Esbom

derman for several years. His two sons, Edward M. & Elmer L., are prominently identified with the management of their father's business, and to them no little credit is due for the high standing of the house.

The firm of Cullom & Spock, 108 Franklin street, was founded, in 1867, by Miller & Cullom. Mr. Miller retired in 1874, when P. Cullom took a partner, W. H. Spock, under the title of Cullom & Spock. This house make a specialty of light carriages, and employ in good times twenty-five men. The factory on Franklin street is four stories high, 86 by 160 feet in dimensions.

Charles T. Townsend manufactures carriage bodies exclusively, at 246 Dixwell avenue. He employs twenty-five hands, his factory covering an area of 75 by 150 feet, and the machinery is operated by an engine of 15-horse power. Mr. Townsend began business about thirty years ago, and since 1870 has confined himself to his present specialty.

Mention has already been made of George T. Newhall's introduction of steam and machinery into the manufacture of carriages. He began carriage-building in what was then known as Gaston's barytes factory at Newhallville, in 1851. As business increased the factory was enlarged, until at the breaking out of the war it was said to be one of the largest in the world. The main building was 235 feet long and 35 feet wide, three stories high; and there was still another building, 150 feet long and 45 feet wide. Mr. Newhall manufactured horse-cars in this second building. The factory was complete in itself, his aim being to concentrate in one proprietorship all the different parts of carriage manufacture. The introduction of power was a success, but having a large trade South, the war caused very large losses and almost a complete revolution in the business. Mr. Newhall continued carriage-making until 1871, when he retired, and became agent for a large publishing house in New York. He remained in this employ for eight years, when he returned and formed the G. T. Newhall Carriage Company, now located in Blackman's old factory on Park street. Mr. Newhall has connected with him, as partner, David Carrington. The specialty of the firm is the manufacture of cheap, low-priced carriages, the proprietors claiming that New Haven can successfully compete with Western cities in this line. After Mr. Newhall's retirement in 1871, the factory at Newhallville remained idle for some time. Afterward it was occupied by the New Haven Car Trimming Company, who used it until June 18, 1882, when the building was burned.

The house of J. J. Osborn & Co., 132 and 134 Park street, was founded, in the early days of carriage-building in New Haven, by Hubbell & Hooker, in 1827. The firm was succeeded by Hooker & Osborn, and later by J. J. Osborn, the present proprietor. The factory on Park street is a three-story wooden building, 75 by 200 feet in dimensions. The work is divided into four departments: iron, wood-working, trimming and painting. Twenty-five hands are employed, the production cover-

ing a large variety of styles and a general line of phaetons, rockaways, road wagons, and pleasure carriages.

JOHN JOEL OSBORN

was born in the town of New Haven, Conn., on the 18th of December, 1817. He is a direct descendant, in the eighth generation, of Thomas Osborn, who settled in New Haven in 1638, and the youngest of six children of Jacob Osborn, who was a farmer and manufacturer of woolen goods. His grandfather was Captain Medad Osborn, who served in the War of Independence.

At the age of eight he had the double misfortune to lose his father and his health. He was confined to the house for the next seven years. Upon his recovery he was sent to the then well-known school at Wilbraham, Mass.

In 1833, young Osborn returned from school. At that time New Haven was becoming a center for the carriage business in the United States. The two leading firms in the city were James Brewster and Isaac Mix & Sons. Upon the advice of his brother, Robert H. Osborn, a lawyer, he became an apprentice to the latter firm, who were doing business on St. John street, the present site of the New Haven Clock Shop.

During the panic of 1837, Mix & Sons failed. Mr. Osborn then found employment in a carriage factory in Milford, and in 1839 he bought out his employer.

In 1840 he closed up his business in Milford, and formed a copartnership with Henry Hooker, of New Haven, under the firm name of Hooker & Osborn.

In 1841 he went to Richmond, Va., to establish a branch house. Soon after, another branch was established in New Orleans, La. From 1841 to 1852, Mr. Osborn lived in Richmond and succeeded in building up a large and successful business, notwithstanding the Southern prejudice against Northern carriages.

In 1852 he lost the use of his right leg, and was compelled to use a crutch and cane the rest of his life.

On July 1, 1855, he bought out Mr. Hooker's interest in the factories in New Haven and Richmond, and formed a copartnership, in 1856, with John B. Adriance, which lasted until 1879, when he retired from business and devoted himself to the care of his property.

On June 27, 1853, he was married to Charlotte A. Gilbert, of Seymour, the fifth daughter of Ezekiel Gilbert, a retired New Haven merchant,

and a descendant of Judge Matthew Gilbert, one of the early settlers of New Haven Colony. They have had six children, five of whom are now living: the Rev. Robert G., John J., Jr., Frederick A., Virginia, and Selden Y.

During his early life, Mr. Osborn showed those traits of character which have since marked his business career. Promptness to meet obligations, caution, strict attention to business, good common sense, and an indomitable will, have all combined to earn for him an enviable reputation as a successful business man. He is a large owner of real estate in this city, and his advice on questions of investment is sought by many.

Mr. Osborn has had but little to do with social gayeties; to his own hearth he has been faithfully wedded, and those who find him there know well his kindly welcome and lively spirit.

Among the important and widely-known carriage manufacturers of New Haven, The Brockett & Tuttle Company occupy a place in the front rank. The attention of this Company is given exclusively to the production of light carriages of a superior character, that command prices second only to those made by the world-famous Brewsters of New York. The manufactory buildings occupied by the Company are located on Goffe street. They were erected in 1840 by Atwater & King, who conducted extensive operations as carriage-makers, and dealt very largely with the people of the Southern States, one of their repositories being located at Savannah, Ga. In 1862, Atwater & King sold their manufactory and business to John B. Brockett, who had for many years been associated with his father (Charles Brockett) in the manufacture of springs and axles at Mount Carmel, and who had, moreover, long been identified with the carriage trade in the Northern and Western market, already having an extensive repository at Davenport, Ia. Mr. Brockett associated with him Milo D. Tuttle, a thoroughly practical carriage manufacturer of many years' experience, and in the year last named the firm of Brockett & Tuttle entered with ambition and vigorous enterprise upon the prosecution of the work before them. It involved a determination on the part of the new firm to link their name only with carriages of the finest and best workmanship. That determination they steadily and unfalteringly adhered to, and as a result the Brockett & Tuttle carriage straightway rose into national fame, and with respect to style and quality ranked second to none in America. For a period of eighteen years an uninterrupted career of business

prosperity was enjoyed, and, as time advanced, broadened and strengthened the reputation of their work wherever a proper appreciation of merit existed. At the end of that time the firm was dissolved, by the death of Mr. Brockett in 1880. Then the Brockett & Tuttle Company was incorporated, Milo D. Tuttle being chosen President, and Charles B. Brown, Secretary and Treasurer. Mr. Brown had been for many years closely allied to the practical part of carriage manufacture, and for a period of fifteen years with the firm of Brockett & Tuttle; and to his new position as a member of the corporation, brought the useful factors of extended experience and thorough knowledge of the details of the business. The Company continues to-day under the management that founded it, and since its incorporation has constantly and materially extended the volume of its operations. Not only are the Brockett & Tuttle Company's carriages known in every important community in this land, but in foreign countries they have obtained liberal favor—the exporting of vehicles to Europe being a very important element in the company's business. The increasing demands of a continually growing trade have called for the increase of the Company's manufacturing facilities from time to time, until now the premises have a frontage of 250 feet and a depth of 400 feet. There is also a fine repository, 200 by 40 feet. Upwards of one hundred skilled workmen are employed in the various departments. In addition to the main store there are extensive branches in New York City (at Broadway, Fifty-first street and Seventh avenue), in the City of Hartford, Conn., and in Providence, R. I.

JOHN B. BROCKETT.

John Bristol Brockett was born at Mount Carmel, Conn., January 7, 1829, and died October 31, 1880. His father, Charles Brockett, long a well-known manufacturer, and a prominent citizen and trusted official, was born at Mount Carmel in 1801, and survived his son, dying at a ripe old age only a few years since. His wife was Amelia Bristol, a native of Cheshire, who died many years ago. Of their children, John B. was the first born. Their oldest daughter married Dr. E. D. Gaylord, a leading dentist of Boston, and their youngest daughter married Mr. D. S. Stone, of the publishing house of Cowperthwaite & Co., Philadelphia. Mr. Brockett was at one time a member of the Board of County Commissioners of New Haven County, and a Director in the New Haven County Bank. He also served as a Selectman of Hamden. An able and successful business man, he achieved an enviable reputation as a manufacturer of carriage-springs and axles, and accumulated quite a fortune.

John B. Brockett's first connection with the carriage trade, with which his name came to be so conspicuously identified, was with his father, in the manufacture of springs and axles, at Mount Carmel. This branch of the business however was not satis-

J. B. Brockwell

Milo D. Tuttle

factory to his energetic and liberal nature, and he soon stepped upon a broader and more extensive plane, establishing carriage repositories at various points in the North and West, drawing from the manufacturers of New Haven to supply his large trade. In 1862 he began the manufacture of carriages in New Haven on his own account, and about a year later the firm of Brockett & Tuttle was formed, which, since Mr. Brockett's death, has given place to the Brockett & Tuttle Company. The history of this establishment is given elsewhere in this volume, and any comment upon its success and magnitude, to which Mr. Brockett so signally contributed, would be superfluous here.

Failing health compelled Mr. Brockett, in 1872, to relinquish his direct and personal attention to his business, and to seek rest and recreation in the West, whence he returned in 1875, considerably improved physically but still unable to confine himself closely. About three years before his death he removed to Milford, where he passed the remainder of his life in comparative retirement.

Possessed of a genial and helpful nature, it has been truly said of Mr. Brockett that he was ever ready with kind words for all. A man of strict integrity, superior judgment, and sterling Christian character, he was an able helper and counselor in all the relations of life, and lived and died dear to the hearts of all who knew him.

He was for years, and until his death, a member of the Calvary Baptist Church of New Haven, toward all the interests of which he was a generous contributor.

He was married, April 22, 1850, to Mary Augusta, daughter of Abiud Tuttle, and sister of Milo D. Tuttle, long his partner. To them were born three daughters, who, with his wife, survive him.

He was of a retiring disposition, preferring the quiet of home life to the strife of public affairs, in which he never took any conspicuous part.

MILO D. TUTTLE.

one of the leading carriage manufacturers of New Haven, is a descendant of William and Elizabeth Tuttle, who came to America in 1635. He was born in New Haven, October 3, 1839, a son of Abiud and Elizabeth (Smith) Tuttle. His father, who was born in 1803, and died in 1881, lived and kept a livery stable for about thirty years on the site of the Yale Theological Seminary. Of his nine children, eight, including Milo D., were born there.

In 1852, at the age of thirteen, Mr. Tuttle left school and became a clerk in the store of D. S. Cooper, on State street, in which capacity he served that old house five years. In 1857, he entered the service of Pardee, Miner & Wier, carriage manufacturers, remaining with that firm seven years, during which time he gained a practical knowledge of carriage manufacture under the conditions then governing it. In 1864, he became a partner in the carriage manufacturing house of Brockett & Dorman, at which time the style of that firm was changed to Brockett, Dorman & Tuttle. In 1866,

Messrs. Brockett and Tuttle bought the interest of their partner, Mr. Dorman, in the business, and since that date the house has been known as that of Brockett & Tuttle.

In 1880, the firm was incorporated as a stock company, with Milo D. Tuttle as President, and Charles B. Brown as Secretary and Treasurer. This successful enterprise, which is elsewhere referred to more in detail, is one of magnitude and high commercial standing, and has done much to promote the world-wide reputation of New Haven as a carriage-building place of the first importance.

To the building up of this large business, Mr. Tuttle has devoted all of the energies of the best years of his life, and his standing in the carriage-trade, both at home and abroad, is deservedly high. He has taken a helpful interest in all things calculated to enhance the public good, particularly identifying himself with religious and charitable objects.

In 1858 he united with the First Baptist Church, of which he was a prominent and useful member until the organization of Calvary Baptist Church, when he identified himself with the latter by the presentation of a letter from the former, and he has since been zealous and generous in furthering all of its various interests.

The house of Henry Hooker & Co., the most extensive carriage manufacturing establishment in the city, was founded in 1830 by G. & D. Cook, on the corner of Grove and State streets. The business was carried on until 1861, when the style of the firm was changed to that of Hooker, Candee & Co., comprising Henry Hooker, James Brewster, Edwin Marble, and Leonard Candee. They continued together until January 14, 1868, when a joint stock company was formed and still continues. The factory is a three-story brick-building with basement, extending from Grove to Wall streets, fronting on State street, and back to the Northampton Railroad track. About three hundred men are employed, and the factory is equipped with the best and most modern machinery for accomplishing the work. The Company have made several creditable exhibitions of their work at foreign expositions. The establishment has a large foreign trade as well as in this country, embracing New York, Chicago, Philadelphia, and Boston. The officers of the Company are Edwin Marble, President; Frank H. Hooker, Treasurer; W. H. Atwood, Secretary; N. Albert Hooker is Buyer; George H. Dayton, General Superintendent; and John B. Adiance, Traveling Salesman.

HENRY HOOKER

is entitled to the credit of having done as much as any one man to improve the American carriage and make it known throughout the civilized world. The house of which he was the founder, more than half a century ago, was during his life, and has since continued to be, the leading one of its kind in New Haven, and one of the best known in the country.

Mr. Hooker was born in the parish of Kensington and town of Berlin, Conn., September 20, 1809,

a direct descendant in the seventh generation of the Rev. Thomas Hooker, the first minister of Hartford and founder of Connecticut Colony.

Mr. Hooker's father was a well-to-do farmer, known and respected in the parish of Kensington. During Henry's boyhood he worked with his father in the summer months, assisting him in farming, and in winter he attended district school. At an early age he was apprenticed, to learn carriage-painting and finishing, to Norman Warner, of Kensington, who was at that time one of the largest builders of carriages in this country. After the expiration of his apprenticeship he went to Savannah, Ga., where he worked at his trade a short time. Returning to New Haven, he formed a partnership with Mr. Hubbell, under the style of Hubbell & Hooker. This firm was shortly afterwards succeeded by Hooker & Wilcoxson. A few years later Hooker & Osborn succeeded to the business, and the house was so known until about 1855, when Mr. Hooker opened a carriage repository in New Orleans, La., under the style of J. A. Lum & Co., entering a little later into partnership with Blackman & Randall. This firm existed until about 1861.

In January, 1863, Mr. Hooker, together with Edwin Marble, James Brewster, and Leverett Candee, bought out the firm of G. & D. Cook & Co., of New Haven, Conn., assuming the style of Hooker, Candee & Co., which was not changed until the death of Mr. Candee in 1865, when the firm name was made Henry Hooker & Co.

In 1868, the firm was incorporated into a joint stock concern, with a capital of \$200,000, under the same title, and Mr. Hooker was elected President, an office which he held with great success, and greatly to the satisfaction of his associates, until his death, in October, 1873, when he was succeeded by Mr. Edwin Marble, the present incumbent.

For many years Mr. Hooker was one of the Directors of the Tradesmen's National Bank, a Director of the Winchester Arms Company, and also a Vestryman of Trinity Church.

Through Mr. Hooker's exertions, the firm of Henry Hooker & Co. did an extensive business in the South to the time of his death. Soon after that event, his son, Frank Henry Hooker, who had been in New Orleans about ten years as a partner in the firm of J. A. Lum & Co., became a member of the main house in New Haven, and was elected Treasurer and one of the Directors of Henry Hooker & Co., and his younger son, Norman Albert Hooker resigned a position he had for some time held at the factory in New Haven, and, going to New Orleans, became a partner in the house of J. A. Lum & Co., remaining as such for five years, when he disposed of his interest and accepted a position as a member of Henry Hooker & Co.

The name of Henry Hooker is known and honored wherever the fame of American carriage-making has gone. Few men have done more in the promotion of a single branch of American industry than he as a pioneer in carriage-making. His intimate knowledge of the business, thorough work-

manship, and inventive skill, were no doubt largely due to his early training. Commencing when the business was in its infancy, by a concentration of energies in one direction, aided by persevering industry, he was enabled to obtain a high standard of excellence. The results of his earnest efforts were a great incentive to others, and thus his exertions and influence did much towards bringing the American carriage to its present high degree of perfection. He was also ever ready to adopt the improvements of others, and was eager to test the merits of new inventions. The high reputation of his productions showed how well he kept up with the progressive spirit of the age.

The present officers of the concern of Henry Hooker & Co. are as follows: Edwin Marble, President; F. H. Hooker, Treasurer; and W. H. Atwood, Secretary. The manufacturing establishment of this Company is one of the largest in the country. The buildings are brick, five stories high, and cover an area of 375 by 200 feet, yet the Company find them too small for their growing business, and another of several additions and extensions is contemplated.

The productions of this house comprise all kinds of fine light family and pleasure carriages, and special kinds for foreign countries; they are distributed throughout the United States, and largely exported to all parts of the world. The Company has an agency in London, England, and large shipments are made to South Africa, New Zealand and Australia. Only the best class of goods are made, and new and artistic styles are constantly being introduced. On the whole, this is one of those great business institutions which testify to American energy and enterprise, and there is no reason to believe that it has as yet attained its maximum success and dimensions.

Mr. Hooker was married, in the year 1840, to Miss Charlotte Lum. His two sons, Frank H. and N. Albert Hooker, now his successors in the house of Henry Hooker & Co., were the issue of that marriage.

Henry Hooker was a man of a generous, trustful, and noble nature. His life was devoted mainly to the attainment of honorable success in his business, and the care and quiet enjoyment of the society of his family and friends. He took a lively interest in public affairs in general, but had no taste for public position, and shrunk from all party solicitation and notoriety. His heart was in his home, in kindly sympathy with an open hand ever ready to help the unfortunate, and bestow substantial aid and comfort to the poor and the afflicted.

The firm of Cruttenden & Co., 8 to 18 Wooster street, the individual members being G. O. Cruttenden and E. Killam, was organized in 1859. Their specialties are the heavier grades of family carriages. They employ about one hundred men, and have a large and commodious factory of brick, four stories high, 40 by 175 feet in dimensions.

O. N. Kean and Henry Lines began the manufacture of carriages, under the firm name of Kean & Lines, in 1858, in East Water street, then known

Henry Hooker

as "The Dyke." In 1860 the firm moved to their present location, near the foot of Chapel street. Previous to the war they had an extensive Southern trade, which embraced a large line of light and heavy carriages. Since the war the firm has confined itself to heavy work, such as coaches, landaus, and victorias, turning out about one hundred and fifty a year. Sixty men are generally employed.

The firm of Seabrook & Smith was organized in 1867, the individual members being H. C. Seabrook and L. T. Smith. Mr. Smith is the inventor of the leather-covered nut now extensively used by carriage-builders throughout the country. The premises on Park street, Nos. 128 and 130, consist of a five-story building, 66 by 116 feet in area, which is equipped with all the latest improved tools and machinery, and employs about thirty hands. The product of the factory comprises many kinds of light carriages, such as road wagons, phaetons, rock-aways, beach wagons, etc.

The house of A. T. Demarest was founded in 1873. It is one of the largest houses for the manufacture of carriages in the city, employing at times two hundred men. The factory and its necessary buildings cover an area of three acres, and upwards of five hundred different styles of vehicles are produced. The firm have an extensive repository in New York, where their several lines of goods are exhibited and sold. For many years the firm was composed of A. T. & C. B. Demarest. The latter died in 1885.

F. Kirchoff began business at 63 Foote street in 1865. His trade is the production of the heavier classes of buggies, wagons and trucks. The factory on Foote street consists of a brick building, 45 by 65 feet, and a one-story store-house, 40 by 60 feet. The factory is well equipped with the requisite machinery for the work. About fifteen hands are employed. Mr. Kirchoff is a native of Germany, where he learned the trade of carriage-building. He has been a resident of New Haven about thirty years.

J. F. Goodrich commenced manufacturing carriages on State street in 1860, and shortly after removed to Franklin street, where his factory was destroyed by the extensive fire of 1863, after which he removed to his present location, 6 Wooster street. In 1873, Albert W. Adams became associated with Mr. Goodrich, under the present firm name of J. F. Goodrich & Co. At the same date an additional factory was built at 26, 28 and 30 East street, which was enlarged in 1881. It is a four-story brick building, 100 by 45 feet, with an L, 30 by 90 feet in dimensions. The factory on Wooster street is 100 by 175 feet in dimensions, with three L's. This firm make a specialty of light carriage-work, employing about one hundred men. Their repository in New York City, located at 622 & 624 Broadway, is under the management of Mr. Adams.

The Boston Buck-board Company was organized as a stock company in 1879, and commenced operations as makers of buck-board wagons; they now make all styles of fine light carriages, furnishing work for seventy-five mechanics. Their factory

is located at 155 to 163 East street, and is of brick, four-stories high, 400 by 125 feet in dimensions. It was built many years ago by Brewster & Co., carriage manufacturers, and afterwards used by a plating company. The executive officers of the company are John Johnson, President; W. K. Simpson, Treasurer; and F. E. Simpson, Vice-President—all Boston men.

The carriage manufactory of the Henry Killam Company was founded in 1848 by Henry Killam & Co. A few years ago the firm organized a stock company, under the present name. The chief executive officers are Henry Killam, President; Francis Potter, Secretary; John Murphy, Treasurer; the first two named constituting the original firm. The premises at 47 Chestnut street consist of a brick structure covering an area of 150 by 110 feet, and having five floors and a basement, equipped with the necessary machinery, driven by a 25-horse power engine. Eighty to one hundred workmen are employed. The production of this concern comprises a general line of fine heavy carriages, including victorias, coupes, landaus, phaetons, rock-aways, cabriolets, etc. Their trade extends into every State in the Union, principally however in New England, New York, and the West.

James Pendergast commenced the manufacture of hand-made carriage steps, step-covers, and coach-couplings at 66 Wallace street in 1870. He also makes anti-rattling whiffletree couplings and detachable steps, on which he holds patents. He employs six men.

E. H. Close and M. J. Scanlon, under the firm name of Close & Scanlon, started a carriage factory at 142 and 144 Chapel street in 1879. They dissolved in 1882, when Mr. Scanlon formed a partnership with James F. Hayes, under the firm name of M. J. Scanlon & Co., and commenced business at 87 Lloyd street. In 1883 they removed to their present factory, corner of Lloyd and James streets. They manufacture all sorts of light carriages and business wagons. Twelve men are employed.

William Johnston commenced the manufacture of carriage wood-work at 71 Hamilton street in 1880. He makes a specialty of light and heavy bodies, ironing and finishing them ready for painting. Most of his work is done for carriage manufacturers outside of New Haven. He employs, on an average, twenty men.

Kean & Lines commenced business in 1858. They build coaches, coupés, broughams, landaus, landaulets, victorias, T-carts, and hearses. Their factory is 200 feet on Chapel street and 90 feet on Wallace street, with numerous other buildings for minor purposes of the work. The Company have a sales-room and repository in Chicago. Among the improvements made upon carriages is an automatic spring and rod attachment for raising and lowering tops on landaulets.

The firm of B. Manville & Co., carriage manufacturers, was established in Water street in 1859 by Manville, Bradley & Kay. In 1865 it was changed to the title of B. Manville & Co., and the business was removed to their present location, 32 to 44 Wooster street. The factory consists of a

four-story building, 148 by 140 feet in dimensions. One hundred workmen are employed. Their productions include all kinds of family carriages, coupés, landaus, coaches, and landaulets. Half of their productions are sold in New York, while the trade of the house extends to all parts of the country. The individual members of the firm are Henry L. and Joseph B. Manville. B. Manville, one of the founders of the concern, died in 1877.

BURRITT MANVILLE

was born in New Milford, Conn., April 1, 1814. After receiving a common school education, he learned the trade of a cooper, and, while still a young man, started a cooper's shop in his own name, carrying it on successfully for many years, and finding a ready market for his product among the West India traders and shippers located in New Haven.

In 1856, he relinquished this business and removed to New Haven, where he obtained employment in a carriage factory, and worked at that trade until 1859, at which time he associated with him, as partners, Mr. Charles Bradley and Mr. John Kay, under the firm name of Manville, Bradley & Kay, and established a new carriage-shop on Water street. After a short period he purchased the interests of both his partners, and conducted the business alone in his own name. It was successful, and rapidly increased, and before long it outgrew the facilities of the Water street factory. In 1865 he removed to larger quarters at the corner of Wooster and Wallace streets, where he associated with him Mr. Hugh Galbraith, under the firm name of B. Manville & Co., which connection expired by limitation on January 1, 1872, at which time, though without change of title, a new co-partnership was formed, consisting of B. Manville, Miles A. Goodrich (who was foreman of the body-shop), and the senior's two sons, Henry L. and Joseph B. Manville.

In January, 1875, Mr. Goodrich died, but the business has been continued without change of title until the present time, it being still conducted by the remaining partners, Henry L. and Joseph B. Manville. Such, in brief, is the history of the old and honored house of which he was the founder.

The specialties of his business included the medium and heavier classes of carriages, such as rockaways, victorias, cabriolets, coupés, broughams, landaulets, landaus and coaches, all of high grade; and his working force ranged from sixty-five to one hundred men. The greater part of the carriages were usually disposed of through other builders and dealers, and his dealings from one house, William H. Bradley, of New Haven, are said to have aggregated \$45,000 in a single year. Being widely distributed, his trade was less liable to be affected by fluctuations of the market than that of most carriage-builders; and, with comparatively few exceptions, his undertakings were crowned with success. His reputation in the trade was of the most enviable character.

On the 19th of November, 1872, he enrolled his name as one of the founders of the Carriage Builders' National Association, of which he was a prominent and active member during the remainder of his life.

Mr. Manville married Augusta Hinman, November 6, 1836.

He was a Republican, politically, but by no means active as a politician.

Long a professing Christian, and an adherent to the Congregational form of worship, he was for many years a prominent member of the Church of the Redeemer. He was eminently liberal, charitable, and public-spirited, contributing his full share toward all general improvements and worthy objects calculated to promote the public welfare.

A self-made man in the best acceptance of the term, and a thorough mechanic, he ever acted on the maxim that "whatever is worth doing at all, is worth doing well." He was characterized by energy and enterprise, and the heartiness with which he lent a helping hand to his employees and to younger men in the business, won him many lifelong friends, the spirit of whose good-will is well expressed in the following resolutions, adopted by his employees just after his decease, which occurred very suddenly and unexpectedly on Saturday, March 22, 1884, as the result of heart disease:

Whereas, We are called upon to mourn the sad death of our late employer, Burritt Manville, who has been so suddenly called from our midst; therefore be it

Resolved, That we, the employees have lost a valuable chieftain, whom we all loved and respected, and one who, in the progressive developments of the carriage trade, has stood at all times in the front rank;

Resolved, That, by his strict integrity he has greatly endeared himself to all of us with whom he has been connected in our daily work;

Resolved, That the employees attend his funeral in a body; and

Resolved, That expressions of the deepest sympathy are due and are hereby tendered to the family of the deceased for their irreparable loss following their late affliction, and that a copy of these resolutions be engrossed and sent to the press for publication.

THEODORE THOMPSON,
FRED. F. McCULLY,
JOHN HARTY.

NEW HAVEN, March 24, 1884.

The New Haven Carriage Company was organized as a stock concern in November, 1885. Business is carried on in the carriage-shop formerly occupied by S. M. Weir, at 440 Elm street. He conducted a large carriage manufactory at this location for thirty-three years. The executive officers of the Company are George Holcomb, President; George E. Spare, Secretary; and H. S. Holcomb, Treasurer. A specialty is made of fine carriage-work, employment being furnished to fifty-seven men. The premises of this Company cover an area of 700 by 80 feet in dimensions, upon which are erected four large buildings, two of them three stories high.

The firm of Dann Brothers began business in this city in February, 1858, in what was known as the old Rock Rose Building, corner of State and Wall streets. The firm was the first to engage in the manufacture of a general line of carriage-work, supplying carriage-makers in all parts of the country with the

B Marville

Geo. H. & V. Conely

several parts of carriages. The business extended to all parts of the United States. In 1859, the firm erected a brick factory fronting on State street, equipped with a steam engine and all necessary machinery. The firm consisted of three brothers, John, William, and Isaac Dann. In these early years Mr. John Dann invented a folding chair, which soon came into general use. In 1864, a joint stock company was formed, which is noticed elsewhere as the New Haven Folding Chair Company. Four years later, John and William sold their interest in the Chair Company, and, resuming the former firm name, erected their present factory on Franklin street, and supplied it with a steam engine and necessary machinery. The art of bending wood received the especial attention of the firm, and if they did not originate, they improved upon the principle by protecting the outer curve by a metallic strap. The methods of the Company found favor with the trade, and their business, which had before been local, extended not only to other parts of this country, but also to foreign lands.

Frederick Howshield has a carriage wood-work factory at 196 Bassett street, and is a skillful mechanic of several years experience in his line of business.

Frank Fowler began the manufacture of carriage-poles, as a distinct department of carriage manufacture, in 1865. The production of the factory at 60 Garden street is largely under patents claimed by Mr. Fowler. The proprietor is the inventor of a tricycle, and during the past few years some attention has been given to their manufacture.

Henry B. Platt, 668 State street, makes a specialty of business wagons. The stand is an old one, having been occupied previously by Charles Wedeg. Mr. Platt started in 1879, and besides the manufacture of business wagons, gives especial attention to repairing.

Alson B. & Theron A. Todd commenced the manufacture of carriage-springs at 86 Winchester avenue about sixteen years ago. In 1885 the concern was sold to W. R. Petrie, who now conducts the business. He employs eight men.

The firm of Holcomb Brothers & Co., manufacturers of carriage wood-work, 111 River street, consisting of George F. and H. S. Holcomb and H. B. Bigelow, was organized in 1870. The factory is a four-story building having an area of 100 by 137 feet, with other buildings for store-houses. Employment is given in times of business activity to one hundred persons. The machinery is operated by an engine of 40-horse power, with a bank of boilers of 85-horse power. The house has a large trade, extending throughout the United States, the products being wood-work for all descriptions of carriages and wagons.

MAYOR HOLCOMB.

The City of New Haven has almost invariably honored itself in its Mayors. One of the purest and ablest men of his time directed the beginning of its urban career, and in his steps have followed a long line of efficient, capable, and conscientious

officers. In the choice of the present incumbent of the mayoralty, New Haven adhered faithfully to its best traditions, and entrusted the municipal executive to a citizen in every way worthy to wear the mantle of his most revered predecessors.

George F. Holcomb was born in the neighboring town of Branford on the 8th of February, 1835. His paternal and maternal ancestors belonged to families of long standing in the State of Connecticut. His father and mother were both natives of Branford, and are still living at the ripe ages of seventy-nine and seventy-six years respectively.

At an early age Mr. Holcomb was employed in the shop of his father, who was a manufacturer of carriage wood-work. When he reached the age of eighteen, he was admitted to a share in the business, and the firm took the name of F. A. Holcomb & Son. Afterwards, when another brother was associated, the firm title name became F. A. Holcomb & Sons. The enterprise proved so successful that increased facilities were demanded, and, in July, 1872, they removed to New Haven. Subsequently the senior Holcomb transferred his interest to a third son, and the firm, which was known as F. A. Holcomb's Sons, was still further enlarged by the accession of Hon. H. B. Bigelow. Since that time the house has borne the title of Holcomb Brothers & Co.

The business was adapted to the new environment, conducted upon an extended scale, and with proportional success. It became by far the largest establishment of the kind in the city, and one of the largest in the country. Its goods and reputation are favorably known throughout the Union, and its wares have even been exported to foreign lands. The firm has earned and obtained a phenomenal success, securely based upon painstaking fidelity, cautious energy, and untarnished honor.

The City of New Haven rightly judged that such qualities, exhibited in the shop and counting-room, were needed in the public councils and in the City Hall, and Mr. Holcomb was chosen Alderman from the Fifth Ward for 1878-79. He held the office of President of the Board of Aldermen when he was appointed Fire Commissioner by Mayor Bigelow. This office he retained about two years, until it was made vacant in accordance with the provisions of the Charter of 1881. In 1883 he was again summoned to public life, as a member of the Board of Public Works, from which post he was called by vote of the city in December, 1884, to fill the Mayor's chair for the term of two years ensuing. Mr. Holcomb's party affiliations have always been clearly defined, but his political opponents are quick to acknowledge his merit and to rejoice in his advancement. The community, without regard to party, recognizes in Mayor Holcomb a good and trustworthy citizen. He brings to his official responsibilities the same clear-headed judgment and honest purpose that have distinguished him in all his undertakings.

In the industrial world, Mr. Holcomb belongs to the best type of New Haven's younger business men. The rapid growth and prosperity of his enterprise have been largely due to his happy combi-

nation of perseverance, vigor and foresight. He has been at once conservative and progressive, able to wait with prudence as well as to act with energy.

Besides the Presidency of the New Haven Carriage Company, he has taken a more or less active part in various other public and private enterprises.

Personally, Mayor Holcomb is a genial, companionable man, with quiet tact and kindly sympathy, keenly observant, and readily appreciative.

He married the daughter of Thaddeus Beach, of the firm of Russell & Beach, of Chester, Conn. They have had four children, of whom two survive, a daughter and a son.

The A. A. Dart Company make a specialty of springs and connecting irons for Salader's triple-spring road wagon, at 112 Park street. The products of the factory are largely used in the West, although the trade extends throughout the country. The Company was organized in 1877. The officers are C. Alfred Smith, President, and C. Pierpont, Secretary and Treasurer. About twenty men are employed.

The house of Goodyear & Ives, manufacturers of carriage-axles, at 881 State street, was founded by L. F. Goodyear in 1852, George E. Ives coming into the business as a partner in 1875. The establishment is an extensive one in its line, covering an area of 15,000 square feet and employing about forty persons. A steam engine of 75-horse power supplies the motive power to run the machinery. Besides all kinds of carriage-axles, the firm make a specialty of manufacturing Steel's Patent Sand-box Axles.

Manville, Dudley & Co., manufacturers of fine light carriages, at 244 and 246 Grand street, was organized in 1878, and is therefore one of the younger houses in the trade. The members of the firm are L. S. Manville, W. F. Dudley, and T. F. Lamb. The firm employ about fifty persons. Each of the three departments of the manufactory is superintended by a member of the firm. The buildings are extensive, the main factory being four stories high, of brick, having an area of 350 by 60 feet, with several additions of good size.

The manufacture of carriage wheels by machinery in New Haven was begun by Henry Stowe in 1844. Mr. Stowe, a native of New Haven, began making wheels in Saybrook, Conn., in 1836, where he remained six years. He then went to Berlin, and continued in the same business for two years, and then came to New Haven. Mr. Stowe began by turning spokes, with Blanchard's spoke machine, in the yard of Cornwell & Cowles, after which he made wheels in a small way in Zelotes Day's yard, on York street, near the present site of the wheel shop. He had been established there but three months when his shop was burned. The following year, 1846, Mr. Stowe formed a partnership with Joseph Smith and John Umberfield, and a two-story wooden factory standing end to the street, was erected on York, near Ashmun street. The busi-

ness was conducted in Mr. Stowe's name. There was at that time a great prejudice against machine-made wheels, and the new enterprise was impeded by many obstacles. The title of the firm from 1844 to 1853 changed frequently. In 1848, Zelotes Day became a partner, under the title of Day & Stowe. At the close of 1849, Mr. Day retired, and Dennis Carrington became a partner, and Stowe & Carrington carried on the business until 1853, when a union was made with the American Spoke Company, then doing business in Centreville; and, with other new stockholders, the New Haven Wheel Company was formed. The Stockholders at this time were Chandler Cowles, Henry Ives, Lucius G. Peck, L. B. Judson, Dennis Carrington, John W. Dwight, C. Durand, Alfred Goodyear, John T. Fenn, P. H. Bartholomew, Henry Stowe, William Fenn, William Cornwell, and Henry B. Harrison. Chandler Cowles was elected President, and L. G. Peck, Secretary. Mr. Peck served in this capacity only one month, when Henry G. Lewis was chosen in his place, and held the office until 1865, when he was chosen President, which position he still occupies. The new company added a three-story brick building, running to the west from the original shop, and otherwise largely increased the capacity of the factory. In 1861 the two-story brick building on Ashmun street was erected. It is 119 feet long by 25 feet wide. From 1853 to 1865 the list of stockholders was constantly changing, there being at the latter date no less than twenty-seven individuals interested in the fortunes of the Company. The Civil War seriously affected the Company's Southern trade, but with the advent of peace it took on new life and vigor by reorganization, and the interests of many of the old stockholders were purchased by new parties, the corporation consisting at the close of 1865 of Henry G. Lewis, William Lewis, Edward E. Bradley, William H. Bradley, Frederick Ives, and Samuel A. Stevens. The present officers are Henry G. Lewis, President; Edward E. Bradley, Secretary and Treasurer; Henry G. Lewis, E. E. Bradley, and Willis E. Miller, Directors, the latter representing the interest of the late Frederick Ives. In 1872 the Company bought largely in real estate, and in 1873 erected a three-story brick factory, with a frontage of 120 feet on York street. In September, 1874, a large portion, including the original building erected by Mr. Stowe, was burned, causing a loss of \$129,000. In 1875 the present factory was occupied. Mr. Stowe had disposed of his interest in 1866, and began the manufacture of wheels in connection with the New Haven Steam Saw-mill. At the time of the fire on York street, the New Haven Wheel Company purchased Mr. Stowe's good-will and premises, and were thus enabled to fill their orders and carry on the business. The present buildings are the factory above described; a three-story brick building in the rear, 40 by 100 feet; a third erection, 25 by 80 feet; besides numerous smaller buildings required for storage and the minor processes of the work. The factory has a capacity of turning out 600 sets of wheels a week, and a force of two hundred men is employed.

Edward E. Bradley

HON. EDWARD E. BRADLEY

was born in New Haven January 5, 1845, the son of Isaac and Abigail Knowles (Hervey) Bradley, daughter of William Frederick and Anna Hervey, and granddaughter of Rev. Dr. Ebenezer Dibblee, a noted Episcopal divine of Stamford one hundred years ago.

Isaac Bradley was the son of Lewis, who was the son of Isaac, and the name has been known for many generations among the business men of New Haven and vicinity.

Mr. Bradley's father was engaged in the carriage manufacture on the corner of Church and Wall streets, removing later to Trumbull street, where he continued in business till 1854, when he retired to a small farm purchased for him by his oldest son. He died, after a few days' illness, in November, 1858, at the age of sixty-three. His mother is still living in New Haven, at the ripe age of eighty-four.

Edward E. Bradley was educated at the public and private schools of West Haven, and in 1859 attended, for a year, Robbins' Commercial School on State street, New Haven.

In 1860 he entered, as shipping-clerk, the employ of the New Haven Wheel Company, corner of York and Grove streets. Four months later he was put in charge of the books, which he kept until 1865, when he resigned in order to accept a position with Lawrence, Bradley & Pardee, then the largest carriage manufacturers in the State. He remained with this firm but a short time, when John English, of English, Atwater & Sons, hardware merchants, bought out his partners, and made Mr. Bradley a proposition, which, upon the advice of his brother, the senior member of the firm, he accepted. His health failing within five months, he was compelled to relinquish all business for three months, when, being restored, he again, in 1865, entered into business with the New Haven Wheel Company. The next year he was elected Secretary and Treasurer, succeeding Hon. Henry G. Lewis, who was then chosen President.

The wheel business was started on its present location, in 1845, by Henry Stow; a year or two later he was succeeded by Smith, Umberfield & Stow, whose successors have been Theodore D. Reed, Zelotes Day, Carrington & Stow, and the New Haven Wheel Company, which was organized as a joint stock corporation June 4, 1853, with a capital stock of \$60,000. Chandler Cowles was its first President, and Lucius G. Peck, a lawyer, its first Secretary. A year later the latter was succeeded by Henry G. Lewis, also a lawyer. Matters dragged somewhat with the Company for quite a number of years. Among the causes for this was the prejudice in the public mind against machine-made wheels as compared with hand-made; the business panic of 1857, and the Civil War, 1861-65, were also great obstacles.

In 1865-66 the stock of the Company was all bought up by William H. and Edward E. Bradley, William and Henry G. Lewis, and Frederick Ives. More land was bought, new buildings were erected, and the business greatly enlarged. The result was,

that from the small beginnings of a few sets per week in 1845, perhaps fifty in 1853, and one hundred in 1865, the capacity of the concern had run up to some four hundred by 1874, when, in September of that year, two-thirds of the works were destroyed by fire, about \$130,000 worth of property burning up in four or five hours. Ninety days later, three-quarters of a million of bricks had been laid, and the present buildings were the result; in sixty days more the new engine and machinery were in, so that in five months from the destruction of the old works the new ones were running. The capacity was now six hundred sets of wheels per week, besides quantities of wheel parts and other carriage wood-work.

The goods of the Company are sold not only throughout the United States but in foreign parts; Europe, Australia, Canada, Mexico, the West Indies, and South America being constant buyers. The works occupy a frontage of over five hundred feet on York, Grove and Ashmun streets.

In 1861, Mr. Bradley joined the famous military company, the New Haven Grays, and quickly rose, through all the grades of command, to the Captaincy in 1865, and held the position till he was elected, June, 1868, Lieutenant-Colonel of the Second Connecticut Regiment. During his captaincy the semi-centennial of the regiment occurred, which was celebrated September 13, 1866, with festivities and social attention from the city, and a large attendance of ex-members from all parts of the United States. He is, at the present time, President of the Grays' Association, which includes all active and ex-members.

In 1867 he went to Europe, and traveled extensively upon the Continent.

He was elected, in 1869, Colonel of the Second Connecticut Regiment. In this position Mr. Bradley was devoted and faithful, and was especially efficient in devising legal measures for the general improvement of the State service, fostering and maintaining the excellent military spirit that remained after the war.

While in command, Colonel Bradley, under the orders of Adjutant-General Merwin, was engaged in the capture, April 30, 1870, of a gang of New York roughs, who had come to Charles Island, off Milford, to hold a prize fight. This adventure of our citizen soldiery is related with great *eclat* in the papers of the day, and the adroit manner in which an ugly body of men, some one hundred strong, was captured, reflects credit upon the ready tactics of the officers. After an exciting chase over walls and fences, and across swamps and through water to the island, the whole posse were taken and brought on board cars to New Haven, where they were dealt with by legal measures.

In 1871, Colonel Bradley resigned the colonelcy, on account of the pressure of business duties, having served ten years in military matters. In all those positions, which require efficiency and tact, he has shown high executive ability and skill, and as a man in contact with men, has gained a rare popularity.

During these years Colonel Bradley was the re-

cipient of frequent testimonials of esteem from the men of his command, and many ovations were tendered him on interesting occasions by the various associations with which he was connected.

Colonel Bradley married, April 26, 1871, Mary, only child of Nathaniel and Mary Kimberley, of West Haven. They have three children, Edith M., Bertha K., and Mabel L.

Under the governorship of Hon. R. D. Hubbard, in 1877 and 1878, Colonel Bradley was appointed Paymaster-General, with rank of Brigadier, when by his promptness in the performance of his duties he gave great satisfaction to our State soldiery.

In 1884, General Bradley bore an active and efficient part in the ordering of exercises at the centennial celebration of the City of New Haven, July 3d and 4th, and commanded, as one of the Marshals of the day, the Ninth Division, which included the Governor and Staff, with invited guests of the day.

He has been repeatedly a member of the Board of Burgesses for the Borough of West Haven, and member of the Union School District Committee for Orange; Vestryman for years of St. Paul's Church, and Treasurer of its Missionary and Benevolent Society; and also, later, Vestryman and Clerk of the Parish of Christ Church, West Haven. He has been further active in many social movements of New Haven, and interested in church music, serving as a member of various musical committees; has also been a Director and Treasurer of the Fort Bascom Cattle-raising Company of New Haven, having ranches in New Mexico.

In 1882, General Bradley was elected to represent Orange in the Legislature, the town being a Republican stronghold and no Democrat having been elected for nearly a generation previous. During this session, he served as a member of the Standing Committee on Banks. Again, in 1883, he was re-elected, and served as House Chairman of the joint Standing Committee on Roads and Bridges, and as Clerk of the Committee on Cities and Boroughs. He introduced the biennial sessions amendment and ably advocated its final adoption before the House. He was also prominent in the debates on general legislative matters, and especially on those reported from his committees, and on legislation regarding the shell fisheries of the coast towns. He presided over the House at the closing hours of the session, and was chosen to make the farewell address to the Speaker, which he did in a graceful and eloquent manner.

In the fall of 1885, General Bradley was unanimously nominated upon the first ballot of the Democratic Convention for the Senatorship of the Seventh District, and was elected, though in a Republican district.

In the Senate he has borne a leading part, and has been especially active in legislation regarding Education and Sanitary laws; and as Chairman of the joint Select Committee on New Counties and County Seats, was prominently engaged in the most exciting controversy of the session, the struggle between Bridgeport and Norwalk for the possession of the county seat of Fairfield County. His able

arguments in that matter were successful in securing the adoption by the Senate of the report of his committee in favor of Bridgeport.

Thus, while having barely reached the years of middle life, General Bradley has served in the highest positions of public trust; has discharged faithfully the most responsible duties of a citizen; and, by his generous qualities and courteous bearing among men, has won their confidence and esteem.

The carriage hardware manufacturing house of C. Cowles & Co., 47 and 49 Orange street, represents not only one of the oldest firms in the business, but in the variety and extent of their manufacture is not excelled by any house in this country. It was established in 1838 by William Cornwell and Chandler Cowles, under the firm name of Cornwell & Cowles, who commenced business on York street in this city. A few years later they moved to Church street, opposite the Post Office, and were consolidated with Lewis B. Judson, who was in the same business, under the firm name of Judson, Cornwell & Cowles. After a short time Mr. Judson withdrew, and for a few years the firm was known as Cornwell & Cowles, when Mr. Cornwell retired, after which the business was carried on under the firm name of C. Cowles. In 1855 the house was incorporated under the style of C. Cowles & Co., there being three stockholders, Chandler Cowles, John N. Babcock, and Ruel P. Cowles. Chandler Cowles died in 1865, and John N. Babcock retired in 1876, Ruel P. Cowles succeeding him in the presidency, a position he has since occupied. This company manufacture every article in the hardware line of which a carriage is composed, from the simplest iron trimming to the most expensive nickel and gold-plated goods used on the highest finished coach. A specialty is made of carriage lamps, of which they make a larger variety than any house in this country, averaging over a thousand pairs a month. Trimmings for baby carriages form another important part of this work, in which they are unexcelled by any other concern in the United States. They not only own and have had patented much valuable machinery for use in their factory, but are the inventors and patentees of a number of important improvements in machinery for making their varied line of goods. In their sales-rooms a large stock of carriage furniture, besides their manufactured ware, is dealt in, including carriage leather and every article embraced in carriage manufacturing. The premises of the Company cover three sides of a hollow oblong square, 200 by 90 feet in area. The buildings are of brick, five stories in height. The mechanical equipment alone cost \$45,000, and is operated by a 70-horse power engine. Employment is furnished to one hundred and fifty operatives. Their trade may be said to be world wide, extending all over the United States, Canada, South America, British Provinces, and largely to Australia and the Sandwich Islands. Two to three traveling salesmen are employed. R. P. Cowles, the President of the Company, is an old resident of New

Yours truly
E. S. Greeley

Haven and for the last forty years has been connected with it, and for over thirty years as a member. To Mr. Cowles' energy and business tact can be attributed the high standing of the house among the manufacturing interests of this country. The other executive officers are F. L. Cowles, Secretary, and T. T. Welles, Treasurer.

RUEL P. COWLES

was born in Berlin, Conn., in August, 1829, and has been a resident of New Haven since 1845. He connected himself with the old house of C. Cowles & Co., which was founded in 1838, and on his twenty-first birthday, in 1850, began business on his own account. In 1855, the house was incorporated as a joint stock company, in which he was one of three Stockholders having charge of the manufacturing department. Of this house, which has become well known in the coach-trimming trade, Mr. Cowles has been active in the management for thirty years, during which he served as Vice-President, Secretary and Treasurer, until elected to the Presidency of the Company in 1877.

Mr. Cowles was married in 1855, and his two sons, Frederick L. and Louis C., are associated with him in business.

His well known business ability and his high reputation for integrity, have made him sought as the recipient of various trusts, both commercial and municipal. He has been a Director in the Mechanics' Bank for several years, and from time to time has been identified with other interests. He was connected with the Fire Department of the City of New Haven for seven years, and was a member of the Common Council in 1858-59. He was one of the three patriotic citizens who, in 1862, recruited a company for service in suppressing the rebellion. This company, of which Mr. Cowles was elected Captain, was afterwards known as Company H of the Twenty-Seventh Connecticut Volunteers, a regiment which, with other service, participated in the battles of Fredericksburg, Chancellorsville, and Gettysburg.

For about fifteen years, Mr. Cowles was Superintendent of the Sunday-school of the College street Congregational Church, in which he has been a Deacon since 1867. He has been a helpful member of the Young Men's Institute for many years, and was for a long period its Secretary and later its President. An active temperance man, he has been for about thirty-five years a member of the Sons of Temperance, of which he has passed through the subordinate and grand divisions, now being a member of the National Division. He was for a long time a member of the Governor's Horse Guards, and after being Major-Commanding about four years, resigned.

Mr. Cowles' standing in the business community is deservedly high, and his name in the carriage trade is widely and favorably known. As a citizen he is liberal and progressive.

The New Haven Car Trimming Company is a combination of two companies, the original begin-

ning business in 1873 on Wooster street, over what was then Graham & Corey's foundry. The members of the original company were James Graham, David Corey, and E. S. Greeley, with R. E. Goodrich as Superintendent. The enterprise proved a success, and more room being required, the Company removed to Bishop's Building on State street in 1876. In 1880, G. F. Moore and R. E. Goodrich began the manufacture of clock cases and builders' hardware in Court street. Soon after, the two companies in which Mr. Goodrich was interested, united, under the name of the New Haven Car Trimming Company. The business of the combined companies outgrew the accommodations on Court and State streets, and the factory was removed to George Newhall's building in Newhallville. This was burned June 18, 1882, entailing a loss on the Company of \$20,000 above the insurance. They renewed business in the factory occupied by R. O. Dorman for several years as a carriage factory, 71 and 73 Goffe street, now owned by the Brockett & Tuttle Company. The present organization comprises E. S. Greeley, President; G. F. Moore, Secretary and Treasurer; R. E. Goodrich, Superintendent; David Corey, Frank Hooker, James Graham, of New Haven; and L. S. Tillotson, of New York, Directors. The factory on Goffe street is well equipped with the necessary machinery to do the work required, and employs one hundred and twenty-five men. The Company manufacture as specialties car trimmings of all descriptions, carriage and coach-lamps, and marbled iron clock cases. Of the latter they make some seventy-five different styles, which equal in appearance the finest French cases.

E. S. GREELEY.

Macaulay's eulogy of Cromwell's soldiers for the readiness with which they turned from military supremacy and renown to the comparative obscurity of industrial pursuits, applies also with full force to the veterans of our Civil War. A million of men dropped sword or gun, and were transformed, almost upon the instant, into peaceable, diligent civilians. It would indeed seem to be enough for one man's life-work to have served his country bravely and successfully through a terrible war. But our workingmen, who fought in the cause of free labor, so soon as that cause triumphed, resumed again the practice of trade and art, laboring to enrich the country that they had saved. The republic to-day is proud of its veteran soldiers in both sections—proud of their privations, fidelity, and successes; proud of their scars and honorable infirmities; but above all, proud of their subsequent record as citizens in every walk of life. To some, abounding in well-directed energy, it has been granted to duplicate the success in the field of war with a corresponding achievement in the strife

of business, and it has been the fortune of one of New Haven's artisan-soldiers to attain the highest eminence in each of his careers—to wear in one the epaulets of a General, and to become in the other an undisputed leader of industrial development.

Edwin Seneca Greeley was born at Nashua, N. H., May 20, 1832. His ancestors belonged to the North of Ireland stock that settled in and around the town of Londonderry, N. H. His grandfather, Colonel Joseph Greeley, was a soldier of the Revolution, and own cousin to the father of the late Horace Greeley. His son, Seneca Greeley, is yet living, at the ripe age of ninety-two. His wife, the mother of the subject of this memoir, was Priscilla Fields, a daughter of Isaac Fields, who was prominent among the early settlers of Merrimac, N. H. Mrs. Greeley walked side by side with her husband through his long pilgrimage until the 7th of October, 1885, when she died, aged ninety-three. She possessed strong convictions and equally strong sympathies; won for herself a large circle of friends; was an efficient church member; and especially devoted to her family. Of her ten children five survived her. When Edwin was about twelve years old, business reverses fell upon the family, the farm was relinquished, and he himself was forced to seek daily labor.

For the greater part of three years he worked in a cotton factory. He had already developed an inclination for mechanical pursuits, and it became the height of his boyish ambition to build a locomotive. In pursuance of this laudable purpose he chose the trade of a machinist, and, by the aid of his father, secured a position in Manchester. But as his work there was upon cotton machinery and did not allow him to study the uses of steam, he became dissatisfied, and, with the advice and consent of his employer, he started for Schenectady, N. Y., where new locomotive shops had just been built. After he had succeeded in convincing the Superintendent that he was not a runaway apprentice, he obtained a situation in the new works, and finished learning his trade there. Subsequently he was employed in the Rogers Locomotive Works at Paterson, N. J.

It so happened at one time that, having a few days' vacation, Mr. Greeley turned his steps toward the neighboring metropolis. Meeting in New York his friend Peter Dennis, a conductor on the New York and New Haven Railroad, he received and accepted an invitation to ride up to New Haven and see the town. He strolled through the little city, and, when he reached the Green, was so charmed by the beautiful scene that he sat down under the trees and could scarcely induce himself to leave the place. It seemed to him the most attractive spot that he had ever seen. Returning to the station, he told his friend Dennis that he had decided to live in New Haven. The railway company was then preparing to begin the construction of engines, and needed a man of Mr. Greeley's ability and education.

Through Mr. Dennis's introductions he obtained an offer of employment, and after a short time he was released by Mr. Rogers, of Paterson, with a

very complimentary letter of recommendation. This was in 1854. Mr. Greeley came at once to New Haven and has been a resident ever since. He remained in the employ of the New York and New Haven Railroad Company until the war broke out, and helped to erect the first locomotive ever built in this city.

In the year 1856 he was married to Miss Elizabeth Corey, of Taunton, Mass.

Mr. Greeley became a member of the Young Men's Institute, and began to take an active part in the animated political discussions of that time. He warmly opposed the extension of slavery, and, in conjunction with R. S. Pickett, stumped the county in 1856 for John C. Fremont. He performed similar labors in the campaign of 1860, and aided in organizing the second Wideawake Club in Connecticut, of which Cyrus Northrop was President and Mr. Greeley himself the Vice-President.

When hostilities in the South had actually begun, the duty of enlistment seemed urgent, but his only child had just been buried, and it seemed difficult to leave the bereaved wife and mother. Mr. Greeley had already in boyhood acquired some knowledge of military service. In Nashua he had been for three years a member of the Union Artillery, a somewhat noted battalion, composed of boys under sixteen years of age, and while in Manchester he had organized and commanded a military company of young men. He now pleaded with his family and friends the obligation that rested upon him to serve his country, and finally brought them to his way of thinking.

Failing of enlistment in the Grays (2d Regiment) on account of their crowded ranks, he devoted the leisure time at noon and night to drilling a squad at the railway shop. When the news of the first battle of Bull's Run came, Mr. Greeley felt that he could wait no longer. He secured sixty men to enlist with himself for three years' service, and began to look about for a commander. The information came that E. D. S. Goodyear, of North Haven, had held the command of a crack military company in Newark. Mr. and Mrs. Greeley drove over to see him at night, roused him from sleep, and, after some persuasion, convinced both him and his wife that his time to volunteer had come. The next day Goodyear, the Captain, and Greeley, the First Lieutenant, were at work gathering a band of about one hundred men, who offered their services to the State, and were assigned to the 11th Regiment. A few days before the time of marching, Captain T. W. Cahill and his company left the 10th Regiment to form a nucleus for the 9th Regiment. The Tenth was a New Haven County Regiment, and at the solicitation of its commander, Colonel Russell, Captain Goodyear's company was transferred to it from the Eleventh. Meanwhile the family of Thomas R. Trowbridge, who was a particular friend of Lieutenant Greeley, had been making a flag for the regiment to which the Lieutenant's company should belong. These colors were now, therefore, presented to the 10th Connecticut Volunteers; they were carried through the war and brought home at its close.

October 2 and 3, 1861, the Tenth Connecticut Volunteers were mustered into the United States service, and on the 22d of October, Lieutenant Greeley's company was mustered in. The regiment was almost immediately ordered South under sealed instructions, for participation in what is now known as Burnside's expedition. Its first acquaintance with the horrors of war was made in the battle of Roanoke Island, February 8, 1862, wherein it stood in the thickest of the fight and helped to capture, by a charge, the rebel works and most of the garrison. After this battle Captain Goodyear was taken sick, and Lieutenant Greeley commanded the company in the battle of Newbern (March 14th). Shortly after he was made a Captain in place of Pardee, promoted.

In December, 1862, Captain Greeley marched with his regiment upon the famous Goldsboro' expedition; participating in the battle of Kingston (in which, in less than thirty minutes, the Tenth lost 106 officers and men). His next engagements were Whitehall and Goldsboro', both severe, in which the Tenth took a prominent part. In 1863, the Tenth was sent to aid in the siege of Charleston. Captain Greeley was, almost at the outset, promoted to be Major, and, owing to the absence or disability of superior officers, commanded the regiment throughout most of the year. The fighting was almost continuous for four months, and was of the most bloody and perilous sort. The Tenth was actively engaged in the battles of Seabrook Island (March 28th), James Island (second, July 16th), in the assaults on Forts Wagner and Gregg (July 18th), and in the ensuing siege of the City of Charleston, July 18th to October 25th.

During the course of this siege, General Gilmore devised a desperate plan for the capture of Fort Sumter. The fort was washed on all sides by the waters of the harbor. It was proposed to surround it by night, with men in boats, who should, at a given signal, speed to the fort and simultaneously scale its sloping walls. It was decided that only a small force could be used to advantage, and that the regiments selected must be the best among the troops, and commanded by officers of tried skill and bravery. The 10th Connecticut Volunteers, 285 men, commanded by Major E. S. Greeley, and the 24th Massachusetts Regiment, 325 men, which had been brigaded together since the beginning of the war, and had never yet been beaten, were selected. Sheltered by friendly darkness, the two regiments had just surrounded the fort, when bright light and rattling shot and shell broke forth from Sumter and the surrounding forts, and it was discovered that the officers of the navy, anxious to anticipate Gilmore's men, had already tried his plan and failed. There was nothing left for the two regiments but to withdraw as best they might, and, strange to say, they were able to do it without any considerable damage. That there had been such friendly rivalry between the land and naval forces was the cause of profound regret to the gallant New Englanders, who had hoped to win imperishable renown by the capture of Fort Sumter.

The Tenth did not usually escape from critical

situations with such immunity. It had been reduced in numbers from about nine hundred men to 175 effectives and 7 officers, and it was ordered to St. Augustine to recruit. Major Greeley was near to death's door with a chronic disease, inasmuch that his pallid appearance excited even the sympathies of the rebel ladies of St. Augustine. One of them, a relative of a prominent rebel general, sent him remedies which fortunately and speedily cured him of his ailment.

In the spring of 1864, Major Greeley was ordered North with his veterans, whose term of service was just expiring. About three hundred men re-enlisted, and, after a six weeks furlough, the veterans joined the regiment which, coming up from the South, was attached to General Butler's Army of the James, and was assigned to the Tenth Corps under General Gilmore.

On the first night at Bermuda Hundred, it was Major Greeley's duty to establish the picket-line. He had just stationed the reserves, when he heard the noise of a galloping cavalcade. He rushed forth to cry "Halt!" and, after great exertions, managed to check the onward career of General B. F. Butler and staff, who, with a vague idea of going to the front, were hastening to immediate and certain captivity as fast as hoofs could carry them.

During the month of May, the Tenth was engaged in arduous and well-nigh continuous action, notably in a successful expedition against the line of the Petersburg and Weldon Railroad (May 7th), and in vigorous operations against Richmond from the south side, in the neighborhood of Deury's Bluff. After four days of marching and fighting, Major Greeley's regiment acted as rear-guard for the retiring Union forces, and received the highest praise from the commanding officer for its behavior under all circumstances and in all its positions.

Major Greeley won especial encomiums for a gallant and successful exploit at Bermuda Hundred on the night of June 15, 1864. He had charge of the picket-line on the right. It soon appeared that large bodies of troops were in motion in front of him. At first an attack was feared, but he was quickly convinced that the noise betokened a withdrawal of troops. All night long he pleaded for liberty to attack, but his superiors could not believe that his surmise was correct. Near morning he received permission to advance, provided he would assume the entire responsibility for the movement. After a personal reconnoissance, Major Greeley advanced with his picket-line only, and at once captured the whole main line of the enemy's earth-works, with 3 commissioned officers, 26 privates, 30 stands of small arms, and a battery of 15 guns. His conjectures were thus completely sustained, and an important advantage was easily gained. The rebels came in force, and after a severe battle recaptured the lost ground, but were driven back when they attacked our works.

During the two months following, the regiment continually participated in the gradual advance upon Richmond, its base having been changed from Bermuda Hundred to Deep Bottom. On the 26th

of August it marched to a position in front of Petersburg. Its picket-line held the advanced trenches at the left of the entrance of the famous mine under Cemetery Hill. For about a month Major Greeley and his men were on duty constantly, and not an hour passed in which they were not under fire. A rifle ball embedded itself in the cot on which Major Greeley was sleeping, and at another time a fragment of shell fastened itself into his tent-pole. On the 29th of August he was commissioned Lieutenant-Colonel, vice Leggett, resigned, who had been disabled in the assault on Fort Wagner a year before.

The month of September was occupied by frequent engagements, and on the 3d of October, 162 veterans went North to be mustered out, their term of service having expired. On the 8th the Tenth was again successfully opposed to the enemy, and on the 13th it was ordered to lead the charge of another brigade against the strongest part of the rebel intrenchments before Richmond. It was a forlorn hope. The Tenth brought into action only 125 men; there was but a single line officer present; the regiment was unacquainted with the brigade with which it was to act; but neither officers nor men wavered or questioned. They formed in an almost impenetrable thicket, and at the word of command, pushed forward as best they might. The regimental commanders (Colonel Otis, Lieutenant-Colonel Greeley, and Major Camp), could neither see each other nor the brigade that was supposed to be following. Soon, grape, canister, and bullets mowed down their ranks, but there was no turning back until the enemy's works came into view. These were found to be defended by a force sufficient to keep a division at bay, and the supporting brigade was nowhere in sight. The Tenth had made that charge alone. Within a few yards of the enemy's stronghold, Major Camp laid down his life. Colonel Otis and Lieutenant-Colonel Greeley, each carrying one of the colors, led the shattered remnant of a regiment from the field in good order with faces to the foe. Nearly one-half of the men who led that charge had fallen.

On the 18th of October, Colonel Otis was mustered out, and Lieutenant-Colonel Greeley was promoted to the vacancy. The regiment was now reduced to two line officers and 150 men present for duty. In November the regiment was among the troops ordered to New York to quell an anticipated election-day riot, but fortunately the active services of the soldiers were not needed. As soon as Colonel Greeley returned to the front, he set about recruiting and reorganizing his regiment. He obtained an assignment of nearly five hundred men, about forty being volunteers and the rest substitutes. While some of these were good men, many of them were professional bounty-jumpers from New York and Canada, who expected to desert at the first opportunity.

Out of such unpromising material Colonel Greeley created as good soldiers as any in the service. He was ably seconded by the remaining veterans of the old Tenth, out of whom he made 24 commissioned and 100 non-commissioned officers.

Officers' schools were established under his personal tuition, non-commissioned officers were put under a special drill, a rigid discipline was maintained, and the most stringent measures were adopted to prevent and punish desertion. The result was, that before the close of winter the Tenth rivaled again the best fame of its earlier days, and in competitive inspections was usually reported best in order, discipline and drill.

In March, 1865, during the quiet weeks that were expected before the spring campaign would open, Colonel Greeley, wearied by incessant care, came North on leave of absence. But before the leave of absence expired, General Grant began his final strategic moves. Colonel Greeley, full of chagrin at his misfortune in being absent, started promptly to the front. But confusion reigned in the transportation department, and ere he could reach the scene of action, Fort Gregg, the key to the rebel position, fell before a charge of the Tenth, which thus displayed the fruits of his patient training. Petersburg had been captured, and the two armies were racing towards the mountains. Colonel Greeley begged for an order allowing him to go to the front, and was finally placed in command of a large body of men from many regiments, who were to be led to the army. Before he could join in the fray, he heard the news of Lee's surrender. Coming back to Richmond with his own regiment, he was assigned to the command of a brigade, and was breveted Brigadier-General for gallant and meritorious services. The commission is dated March 3, 1865.

The Tenth Regiment, on account of its splendid record and soldierly excellence, was among those selected by General E. O. C. Ord to be retained in the regular army, but the soldiers were anxious to go home. General Greeley applied for permission to muster out the regiment, and consent was obtained by personal effort.

September 2, 1865, the General and his brave men were received at Hartford by the local military and escorted to the State House, where they were publicly welcomed with speeches and banquets. Two days afterwards the Tenth Connecticut Volunteers had disappeared into civilian life.

A peculiarly pleasing event awaited General Greeley upon his return to New Haven. At the time of his departure for the war he was presented with a sword by Mr. Thomas R. Trowbridge. This weapon he carried through scores of engagements, until, from St. Augustine, he sent it, with many other trophies and mementos, by ship to New Haven. But the vessel foundered off Charleston, and General Greeley mourned, especially for the loss of his sword. Meanwhile, through the labors of the United States Wrecking Service, the sword had happened, curiously enough, to again come into the hands of Mr. Trowbridge. The latter invited General Greeley to call upon him on a certain evening. Finding a small company assembled, the General was disposed to withdraw, but was constrained to stay. After a short time, Mr. Trowbridge produced and offered to the astounded sol-

dier the sword, till then supposed to be lying at the bottom of the sea. General Greeley is a brave man, but the sudden recovery of his valued treasure unmanned him, and no rebel ever beat a hastier retreat than he did. For him this event was a grateful finishing touch to his career as a soldier.

He had already determined that if peace again prevailed, he would engage in mercantile and manufacturing pursuits. Chance now gave him an introduction to Mr. L. G. Tillotson, of New York, a practical telegrapher, who had recently retired from the railway and telegraph supply trade, but who wished to re-enter the business in conjunction with some one who could furnish a personal knowledge of railway materials. That man was E. S. Greeley. A partnership was formed, and business began November 1, 1865. From that time the house of L. G. Tillotson & Co. was known as manufacturers and importers of railway and telegraph supplies, and it became the oldest and most extensive concern of the kind. In January, 1885, upon the death of Mr. Tillotson, his interest was sold to General Greeley, who has continued the business under the firm name of E. S. Greeley & Co. At the beginning, their capital was small and their facilities were limited. To-day, they have undoubtedly a larger assortment of railway and telegraph supplies than any similar establishment in the United States, and their trade extends all over the civilized world. They have accomplished much in developing the science of electricity by personal efforts, and by judicious encouragement of those engaged in experiment and investigation. In this way they have acquired the latest and most modern electrical appliances, the greater proportion of which they manufacture.

Mr. Greeley himself has taken an active interest in electric lighting, and assisted in organizing the New Haven Electric Light Company. He also organized the very successful New Haven Car Trimmings Company, and was its President until July, 1885. He is a director in various other manufacturing companies and in banks. He is an active member of the G. A. R. and of the Military Order of the Loyal Legion. Political honor he has steadfastly avoided, but has served the municipality for one term as Alderman from the Eighth Ward.

With the Church of the Redeemer he is prominently associated, and it is due to his exertions that a debt of \$35,000 resting upon that Church and Society was raised in fifteen days. For some years he has been Chairman of the Ecclesiastical Committee of that Church, and was especially engaged in Sunday-school work. For two years he held the Chairmanship of the New Haven County Sunday-school Association.

General Greeley uses his wealth with a generous hand. He is a liberal benefactor of the deserving poor, and of needy institutions, and has aided particularly the Orphan Asylum, the Young Men's Christian Association, and Tillotson College, at Austin, Texas.

His usefulness has been shown to be manifold. His military success was not greater than his economic good fortune, and in every task to which he

has addressed himself he has shown the same quiet, masterful energy. But with advancing years and honors he has yet remained the good citizen and the genial, neighborly man, and he yet wears the same youthful, sprightly look that caused General Ord to describe him as "that boy-Colonel of the 10th Connecticut Volunteers." He has reared in our city an elegant home, where, with his wife, he gives kindly welcome to his hosts of friends. One child, a daughter, is living with her parents. General Greeley cannot be prouder of his eventful and successful life than are his fellow-citizens, and in accordance with the modest but pregnant phrase of old Rome, "He has deserved well of his country."

Charles E. Thompson & Co., 129-131 Union street, make specialties of coach-lamps, coach-handles, whip-sockets, hub and nut caps, and shaft tips. The firm was established in 1868, and at the present time employs fifteen hands. E. E. Stevens is a partner in the concern.

Coorsen & Morris also manufacture coach-lamps in the rear of 81 Day street.

The firm of W. & E. T. Fitch was founded in 1848, and commenced business at Westville, but for many years has been located at 151 East street. William Fitch died in 1877, but the firm name has remained the same. It is now composed of E. T. Fitch and his son, John B. Fitch. They make carriage springs, malleable-iron castings, curry combs and harness hardware. Employment is furnished to over one hundred men.

The firm of English & Mersick, manufacturers and dealers in coach and carriage hardware and trimmings, is one of the oldest in the city. It was organized by James G. English and Edwin F. Mersick in 1860, and did business for nineteen years on Chapel street. In 1879 a new brick building, four stories high, was completed, forming 70, 72 and 74 Crown street, to which the firm moved, and where they still continue. About twenty-five hands are employed in the manufacture of various patented articles, some of which are covered by patents belonging to the firm, and others are manufactured upon a royalty.

The Coach Lace Manufacturing Company on Wooster street, near East street, was established in 1840 by John Pearson, who came from New York. Mr. Pearson sold the business, in 1843, to Laban Pardee. Upon his death he was succeeded by his son, Charles Pardee, who continued till 1883, when he disposed of the business to the present proprietor, John H. Booth. The factory produces only hand work, employing twenty looms, some of which have been in use since the business was first started. The work produced shows a great advance in the fineness of the goods and the more artistic blending of colors than in the earlier productions. Tassels, cords, fringe and gimp are made, and the market for these goods is practically unlimited.

In March, 1879, William P. Reade and Joseph Phillips began the manufacture of carriage and upholstery buttons in English Block, with an entrance at 76 Union street, under the firm name of Phillips

& Reade. January 1, 1881, Mr. Phillips retired, and Mr. Reade has since continued the business alone. The product of the factory is a large line of cloth and leather-covered buttons of every possible style, shape and material. They are made by most ingenious machinery, which was invented by Mr. Reade on purpose to save the time formerly taken in their manufacture. The establishment employs from fifteen to twenty persons, and the market extends over the United States.

Moses Seward, the senior member of the firm of M. Seward & Son, came from Durham, Conn., to New Haven in the summer of 1836, and began work as a carriage blacksmith for Isaac T. Mix & Son, then located on the site now occupied by the New Haven Clock Company. In 1844, Mr. Seward began, in a limited way, the manufacture of carriage hardware in a small shop then owned by George F. Smith, late city missionary, on the site now occupied by the New Haven Manufacturing Company, on Whitney avenue. Mr. Smith worked for Mr. Seward a short time while located there. In 1848, Mr. Seward built a small factory on his present location on Bristol street, and a good business was gradually developed, a large trade being opened with the South. The breaking out of the war, in 1861, caused heavy losses, and a necessary curtailment of this particular trade. During the war the factory was employed in making gun-forgings for contractors. In 1866 the factory was burned, but was rebuilt the following year, and has from time to time been enlarged to its present dimensions. In 1871, Mr. Seward admitted his son, Frank, to partnership, under the firm name of M. Seward & Son. The factory is a two-story brick building fronting on Bristol street, extending southward 225 feet, to which are added wings extending east and west. At the beginning of Mr. Seward's enterprise, goods of this class were forged by hand; now nearly all of the work is accomplished by drop-hammers and other machinery. The firm use some of the heaviest drop-hammers in the United States. A special feature of the work done here is axle clips, some two hundred different styles being made, aggregating over one hundred tons a year. The firm employ about thirty men.

Soon after the opening of the railroad from New York to New Haven in 1842, a car shop was established in this city by the New York and New Haven Railroad Company. Work was commenced in a limited way, confined to merely repairing the rolling stock of the road. In 1870 the building of cars and locomotives was begun, and from this date the works have rapidly grown to their present large proportions. After the consolidation of the New York and New Haven road with the Hartford road, the amount of work done was necessarily largely increased. Over eight hundred men are employed in building and repairing locomotives and cars. The buildings, located a short distance south of the Union Depot buildings, are of brick, one-story high. The works are under the management of John Henney, Superintendent of the motive power of the New York, New Haven and Hartford Railroad. James Denver is master car-builder.

CIGAR MANUFACTURERS.

The manufacture of cigars in New Haven is carried on by a large number of men. The trade is usually local.

Lewis Osterweis is the most extensive manufacturer. We present a biographical sketch of him on this page.

Goodrich Lauber, recently retired, carried on this business for several years at 184 Chestnut street.

The present manufacturers deserving of mention are Curran Brothers, 4 Hill street; James Gallagher, Jr., 750 Chapel street; C. A. Moeller, 156 and 158 Crown street; G. W. Loomis, 729 State street; and Louis Steinert, 393 State street.

LEWIS OSTERWEIS

was born at Horb-am-Main, Bavaria, Germany, November 24, 1836. He came to America in 1853, and learned cigar-making in New York. In 1856 he went West, and established a cigar manufactory at Fort Madison, Iowa. Returning to the East, he located in New Haven in 1858, and has ever since been closely identified with the manufacturing prosperity of the community, enjoying a consideration and a high place in the public esteem, of which he is justly worthy.

His manufactory in this city was established in 1860, by the firm of Osterweis & Co. In the fall of the same year this firm was succeeded by Lewis Osterweis, and in 1863 by Osterweis & Oppenheimer.

In 1876, upon the death of Mr. Joseph Oppenheimer, Mr. Osterweis again became the sole proprietor. The premises occupied consist of two floors and the basement of the brick building, 93 Church street. Every convenience is at hand for the manufacture and storage of goods, and the successful prosecution of the business, which from a comparatively small beginning has been built up, until to-day the trade of the house extends throughout New York, New England, and the West, and involves the sale of an enormous number of cigars annually, beside large quantities of leaf tobacco. Many cigar-makers are employed in this establishment, and the greatest care is taken to secure uniformity in all the brands, a precaution which has given a reputation to Mr. Osterweis' goods that occasions a steadily increasing demand for them wherever they have been introduced.

Mr. Osterweis was married, May 10, 1860, to Miss Caroline Oppenheimer, a native of Germany,

Lewis Q. Loomis

James E. English.

but then and for some years previous a resident of New Haven. They have had four children, Rachel, the first born, died in infancy. The others are named Sophie, Max L., and Gustave.

CLOCK-MAKERS.

Isaac Doolittle, the great grandfather of ex-Governor James E. English, made brass clocks, by hand, in a little shop located where Dr. Henry Bronson now lives, 1198 Chapel street, towards the close of the last century. The works were made for the old-style long cases, reaching from floor to ceiling; these were made by Sherman Blair, being a separate part of the business. Several of these clocks made by Mr. Doolittle are still in existence. Nathaniel Jocelyn, father of the late Nathaniel S. Jocelyn, the portrait painter, also manufactured a similar style of clock at the corner of Crown and State streets at the same time. As clocks had not then come into general use, the demand was limited, and the product of these two clock-makers was small, and, in comparison with the product of New Haven to-day, could hardly be mentioned.

In 1842, Chauncey Jerome came from Bristol and purchased the carriage factory of Isaac Mix & Son, who had just failed, occupying the site of the present factory of the New Haven Clock Company. Mr. Jerome formed what was afterwards known as The Jerome Manufacturing Company, and carried on the business of clock-making until 1855, when the Company failed.

In 1854, the New Haven Clock Company was formed, for the purpose of making cases, and erected a small two-story building on the north side of Hamilton street. Upon the failure of the Jerome Manufacturing Company, in 1855, James E. English, H. M. Welch, John Woodruff, Hiram Camp, and six others, most of them employees of the New Haven Clock Company, purchased the personal and company property of that concern from the assignees, at a valuation of \$20,000. Mr. English, who had been a lumber merchant, took charge of the factory, and conducted the business for eleven years. During this time he visited Europe twice, and established on a firm basis the commercial relations between the Company and its foreign customers. In 1866, Edward Stevens, a son-in-law of Chauncey Jerome, then living in Liverpool, was induced to take the superintendency of the factory in this city, and remained in that position until his death, in 1884. Mr. Stevens was followed, as Secretary and Treasurer of the Company, by F. E. Morgan, who still holds the position. Hiram Camp was elected President in 1855, and has been each year re-elected. There are few industries in the city that have expanded so rapidly and successfully as that of the New Haven Clock Company,

it being now one of the largest of its kind in the world, employing six hundred men, and manufacturing a great number of different styles of clocks. The Company have established houses in Liverpool, China, Japan, and other distant parts of the world, with sales-rooms in New York and Chicago. Fully one-half of the products are exported to foreign countries. The proprietors who formed the original company in 1855 are still members of the present one. Alfred D. Tyrrill is Superintendent; D. S. Tyrrill, Assistant Superintendent; William U. Wellman, Book-keeper. Much of the work is done under contract. Prominently identified with the concern, either as contractors or foremen of separate departments, are the following: John S. Sanford, Frank D. Welch, Andrew Allen, Joseph L. Moulthrop, Anson G. Philips, George A. Smith, J. H. Flagg, O. P. Ives, S. W. Knowles, H. M. Huntington, and C. T. Hunt.

JAMES E. ENGLISH,

Governor of Connecticut, Senator of the United States.

From the days of Benjamin Franklin, down to the present day, it has been much the fashion to speak of a man who has achieved conspicuous success in life without having had the benefit of what is called a liberal education, as being a self-made man. Especially is this true in our own country, whose Democratic institutions present to men conscious of superior abilities, both the incentive and the means by which they may attain the distinction to which their merits entitle them. Yet, in an important sense, every man who becomes specially prominent in public or professional life must be essentially a self-made man. In the make-up of character, much is doubtless due to heredity, much to natural endowment, and much to opportunities favorable to intelligence and culture. Still it is true that no man whose memory the world will not willingly let die has ever existed who has not been mainly indebted to laborious self-exertion, to habitual self-control, to persistent self-denial for that which makes the story of his life worth the telling.

James E. English, the subject of this notice, more than any other person who has been a citizen of New Haven—unless we except Roger Sherman—is commonly regarded as pre-eminently a self-made man. As such, his history possesses something more than a personal value.

It was Mr. English's good fortune to have inherited, from a long line of Puritan ancestors, that social peculiarity of early New England life by which every man felt himself to be essentially the equal of all his associates. Descended from forefathers, both paternally and maternally, none of whom indeed were eminent, yet some of them of local distinction, and all of them of good repute, he found little in these respects to stimulate his vanity, and nothing of which to be ashamed. His father, James English, was greatly respected for his personal worth, and discharged several public trusts, especially in regard to the schools of New Haven, with intelligence and fidelity. His grandfather was for several years in command of vessels

engaged in the West India trade. His great-grandfather was pierced and killed by a British bayonet when the enemy invaded New Haven during the War of the Revolution. His mother, Nancy Griswold, a woman of singular sagacity and shrewdness of character, belonged to a family much distinguished in Connecticut history, and which has given two Governors to the State.

The subject of this notice was born in New Haven March 13, 1812. In his boyish days no special traits of character are remembered by his associates, except a certain amount of self-reliant independence. This was exhibited at quite an early age. Casually overhearing an inquiry from a neighboring farmer where he could find a boy to live with him, his persistent importunity at last overcame the reluctance of his parents, and at the rather immature age of eleven years, young English began that career of intelligent self-reliance which has been his most marked characteristic, and which has never failed him in his long course, from driving cows in Bethlehem to his seat in the Senate of the United States at Washington.

When he left home, his father gave the farmer some money, and said to him, "When you get tired of the boy, send him home." At the end of two and a half years, in which time he had attended the district school of the village for eight months, the prospect of his being sent home growing no brighter; his father, realizing the necessity of a better education for his son, brought him home and placed him for two years in a private school of considerable repute.

In his sixteenth year he became an apprentice to the late Atwater Treat, to learn the trade of a carpenter and joiner. He began his first work under Mr. Treat June 27, 1827, on the old Lancasterian School-house, and on the spot now occupied by the Hillhouse High School, deservedly standing at the head of that system of free public schools in Connecticut, for the establishment of which Mr. English did so much in later years when Governor of the State.

His apprenticeship terminated on his twenty-first birthday. He was regarded during these years by his associates and the community at large as being a modest, upright, and self-reliant young man, likely to be successful in his business, but nothing more. During the years of his apprenticeship no such expensive functionary as an architect was known in New Haven. The joiner generally, with the possible help of "Benjamin's Architect," and what little could be learned of mensuration from Pike's or Daboll's arithmetic, drew his own plans and made out his own contracts. With a natural taste for drawing, young English, when in his eighteenth year, began its regular study so far as it related to his business as a joiner. He also practiced on the preparation of contracts, and probably at the close of his apprenticeship had become more familiar with the technicalities of architecture than any master builder in New Haven. Possessed of these advantages, he never worked as a journeyman, but became at once a contractor.

Several houses designed or erected by him in

a style more elaborate and ornamental than was then common in New Haven, bear creditable testimony to his architectural taste. At the age of twenty-three he found that he was richer by \$3,000 than he was two years before, and happily conceiving that there was something in him more than was necessary to make a successful joiner, he quitted his trade forever.

Declining, with habitual self-reliance, an offer from a citizen of wealth to invest \$20,000 against Mr. English's personal services, he then engaged largely in the lumber trade, and remained in this business during a period of general financial embarrassment, when commercial enterprises of every kind were subject to great fluctuations. The condition of the country at this time was such that business men, familiar only with the ordinary routine of trade, found it always difficult and often impossible to avoid commercial disaster. When the crash of 1837 fell upon the country, and when, with the suspension of specie payment, business confidence was destroyed and trade was paralyzed, Mr. English's little capital was all invested in his lumber business.

The slow recovery of the country from these disasters was peculiarly favorable to men of Mr. English's habit of mind. Habitually looking beyond a present emergency, and with a head that was rarely affected by the contagion of speculation; never sanguine and never despondent, he saw for several succeeding years that if he was to be a successful dealer in lumber, he must be something more than a lumber dealer. Buying and building vessels, shipping clocks to Philadelphia, and returning coal and general merchandise to New Haven and other ports, became the means by which his success in his own special business was retained and secured.

After twenty years in the lumber business, an indebtedness of several thousand dollars, due him for lumber by the Jerome Clock Company, then greatly embarrassed, turned his attention to the possibilities of that manufacture under provident and judicious management. On the failure of the Jerome Company, Mr. English, associating with himself Harmanus M. Welch, late Mayor of New Haven, and now President of the First National Bank, who for several years had been his partner in the lumber business, and Mr. Hiram Camp, purchased the clock property, and in a few years made the New Haven Clock Company not only a success, but much the largest clock manufactory in the world.

In addition to the Clock Company, Mr. English has been largely interested in a number of manufacturing and commercial industries in this and other States. Of late years he has made such large investments in real estate, that he has become the owner of more stores and dwellings in New Haven than any other citizen.

Not a dollar of his large fortune has come from speculation. Business sagacity has made it all. He once said to the writer of this notice, "Men often come to me with projects they are confident will yield a profit of thirty or forty per cent., and I listen to them patiently and think of something else. But when a man comes and says I want to submit

to you a plan by which a permanent profit of eight or ten per cent. can be made, and he can show me how, by special facilities in the purchase of material, in cost of transportation, or a better adaptation of labor, the business has a promising look, I give such a man my best attention. If I have been successful as a business man, it is because I have been content with reasonable profits, for I know that enormous gains soon invite ruinous competition."

While Mr. English has been eminently successful in the accumulation of property, it must be gratifying to him to remember that the temptations which proved fatal to so many, arising from an early knowledge of changes in the financial policy of the Government during the war, greatly affecting commercial values, did not induce him to depart from the line of rigid integrity. Confidential information of the intention of the Government to levy a heavy tax on whisky presented an opportunity for fabulous profits, of which some men of high station and loud profession availed themselves, but which Mr. English felt to be improper in a legislator whose vote helped to impose a public burden.

In dismissing this reference to his pecuniary success, it is not improper to refer to the fact, made known to those who were the almoners of his bounty, that no part of his present wealth is made up of his salary during his official life in Washington, but that the whole amount, and much more, was given to relieve the distress and alleviate the sufferings caused by the war.

The public trusts to which Mr. English has been called, beginning in 1836, and terminating in 1877, are as follows: Selectman, 1836-48; Common Councilman, 1848-49; Member of the State Legislature, 1855-56; State Senator, 1856-69 and 70-71; Member of Congress, 1861-65; Governor, 1867-71; United States Senator, 1875-77.

The municipal trusts of his early manhood were those imposed upon him by the general conviction of his fellow-citizens, irrespective of party, that their interests might safely be confided to his recognized integrity, capacity, and public spirit.

Although Mr. English ever remained faithful to the conviction of a life-time, that only by adherence to the principles and policy of genuine Jeffersonian Democracy could the State reach the full proportions of a free and prosperous community, yet his services in both branches of the Legislature were generally marked by attention to the business rather than to the political aspects of the legislation in which he was called to act. When subsequently he became Governor of the State, the practical cast of his mind was conspicuously manifested in the emphasis which he gave in his messages to the cause of free public school education, and in the advocacy of which he was ultimately successful.

But that which specially and honorably marks Mr. English's public career, is the course he pursued while a representative in Congress. His term of service, extending from 1861 to 1865, covers that period in our history during which slavery ceased to disgrace the nation, and the consti-

tutional amendment prohibiting involuntary servitude became the supreme law of the land. Mr. English went to Washington a pronounced War Democrat, believing that the great national exigency demanded every sacrifice to prevent our great republic from being divided into perpetually contending and contemptible fragments.

While, as a Democrat, he fully recognized the constitutional right of the Southern States to the possession of their slaves, he also felt that slavery was a monstrous injustice, and therefore had no regret when, as a war measure, he found himself at liberty to record alike his abhorrence of slavery and his sense of justice towards the owners of slaves in the District of Columbia, by voting for the bill which united the emancipation of the slave with compensation to the master.

Long before the close of the war it became evident to all thoughtful observers that the question of general emancipation must be met sooner or later, and Mr. English made up his mind to take the hazard and incur the odium of voting with his political opponents whenever, in his view, it became a political necessity. More than a year before the final passage of the bill providing for the necessary constitutional amendment, the position of Mr. English was well understood in Washington. When the bill was first introduced in the House by Mr. Ashley, of Ohio, he was assured of Mr. English's support in case it was needed. But when it was found that the Administration party were not united on the measure, Mr. Ashley advised Mr. English not to vote in its favor as it was sure not to pass. With a very practical conviction of the folly of striking when there is a certainty that nothing will be hit, Mr. English acted upon this advice, but with the emphatic assurance to Mr. Ashley that whenever it was necessary he might rely upon his vote. When informed a year later that the bill would be put to vote the next day, Mr. English was in New Haven in attendance upon his sick wife. Traveling all night, he reached Washington in time to listen to a part of the exciting debate, and to hear his name called among the first of the ten War Democrats who, as it was hoped, would vote for the bill and whose votes were necessary for its passage. When his ringing "Yes!" was heard in the crowded gathering there was general applause. To a New Haven friend who was in Washington a day or two afterward he said, "I suppose I am politically ruined, but that day was the happiest day of my life."

Mr. English's position at this time was a very exceptional one. The number of War Democrats in Congress was small, and most of them were very timid. But there never was any doubt from the first where Mr. English stood, or how he would vote when the final crisis came.

While thousands of men in our country have been examples of conspicuous success in business, in political life, and in generous benefactions, few have had the opportunity, and fewer still the sagacity and the courage to appreciate a great political emergency, when duty calls for a sacrifice of the ties which ordinarily bind a man in public life to

act in harmony with the party to which he is attached. It is sometimes a great thing to have the courage of one's convictions; and the favorable mention of his name at one time as a candidate for the Presidency of the United States, was an honorable recognition of the public appreciation of his vote as having been dictated by conscience and duty.

It is always a matter of delicacy to speak of the liberality of the living, but the interval between the donation of \$10,000 made many years ago to the Law Library of Yale College, and the recent donation of more than \$20,000 to the English Drive in East Rock Park, has been filled with numerous generous bequests to public objects and with innumerable private charities.

In the full maturity of a vigorous old age, Governor English passes along our streets with active steps and as kindly unassuming manner as marked him when he first entered upon his eventful public career.

HON. HIRAM CAMP.

Hiram Camp, President of the New Haven Clock Company, was born April 9, 1811, at Plymouth, Conn. His father, Samuel Camp, and his grandfather, who bore the same name, were substantial New England yeomen of the stalwart, unconquerable Puritan stock, to which the country and the world are so largely indebted.

Samuel Camp, Sr., was a soldier in the Revolutionary War, was well acquainted with General Washington and the Marquis de LaFayette, and rendered efficient service to the cause of his country at Crown Point, Ticonderoga, and Staten Island. Four of his brothers, John, Benajah, Job, and Ephraim, also served in the patriot armies. John Camp became a Congregational minister and Samuel Camp a deacon in the same order of the Christian Church. The latter settled in Plymouth and in his old age was maintained by his son, Samuel Camp, Jr., the father of Hiram Camp, who also supported his wife's parents.

The pressure of onerous responsibility thus resting on the shoulders of the younger Samuel, made it necessary that all the members of his family should aid in sustaining it. The home farm was poor and the soil rocky. The good old deacon, when past the age of effective agricultural labor, employed his declining energies most usefully in visiting every family in the town, at least once in the course of each year, to converse with its members on religious topics and to pray with and for them. His son followed in the same path, and was intensely interested in religious affairs. He had committed not less than half the contents of the Bible to memory, and was always ready to speak of the things pertaining to the kingdom of God. The influence of such example and such teaching upon his children was benign and powerful. He literally obeyed the injunction of the Almighty to the Israelitish people, and through them to all people, to speak of his precepts and promises to their children, when lying down, rising up, and walking by the way.

Young Camp's abilities were utilized while he was yet of very tender years. At the age of four he was tied on a horse used in plowing, and on one occasion, while thus doing his part, he slipped from the back of the horse and dangled against the animal's legs as it ran about the field frightened at the strange occurrence. It will be seen that the child almost miraculously escaped a violent death. Who shall say that he was not providentially spared to accomplish his destined mission in mature life. The value of opportunity to individuals resides largely in their own disposition to improve it. The youth eagerly seized the opportunity presented, and then proceeded to make further opportunities for himself. He appropriated such advantages as the common schools of the time and locality afforded, and the preparation for business life he thus made may be regarded, if not as complete, at least as better than none. He had a natural taste for mechanical pursuits, and besought his father's permission to work with his uncle, Chauncey Jerome, in the manufacture of clocks. It was finally determined that he might do so upon attaining the age of eighteen. He made the journey of ten miles across the country on foot, carrying all his worldly goods tied up in a cotton handkerchief. Mr. Jerome received his nephew with kindness, and ere long put him in charge of all of his works. The business association then formed continued for more than twenty years. At that period clock manufacturing was in its infancy, and, prior to 1815, little had been done toward its establishment in this country. From that time to 1829 it grew slowly, by the aid of machinery that was small in quantity and poor in quality. Since then vast improvements have been effected, to which Mr. Camp has largely contributed.

In 1842 or 1843, Mr. Jerome removed part of his works—that involved in the manufacture of cases—to New Haven. In 1845 his movement-shop was burned to the ground and much of his machinery destroyed. Measures were at once taken to rebuild it, not in Bristol, Conn., but in New Haven. Mr. Camp had then been for sixteen years in Mr. Jerome's employ, and his services were imperatively required to superintend the erection and fitting up of the factory in New Haven. His presence at Bristol was no less imperatively required by the serious illness of Mrs. Camp. The two places were over thirty miles apart. No railroad then existed to reduce the time of the journey to an hour. The intervening distance must be traversed by private conveyance. Herculean strength of constitution enabled the devoted husband to sleep at home, take his breakfast and supper there, and yet be in New Haven for eleven hours daily, from 7 A.M. to 6 P.M., throughout the summer of 1845.

Mr. Camp is the inventor, as well as the manufacturer, of most of the different kinds of clocks made at the present time. One of his most curious inventions is a clock which beats time to music, and whose movements can be regulated at will. It was designed for the use of schools in marking time for gymnastic, calisthenic and military exer-

Hiram Camp

cises. In 1851 he entered into business on his own account, erected a building, and began the manufacture of clock-movements. This enterprise he prosecuted alone until 1853, when he organized a joint-stock association, under the title of the New Haven Clock Company, with a capital fixed at \$20,000, and officered as follows: Hiram Camp, President; James E. English, Treasurer; and John Woodruff, Secretary. In 1856 the New Haven Clock Company increased its capital and productive capacity by purchasing the business and machinery of the Jerome Clock Manufacturing Company. Its organization was slightly changed at the same time, James E. English becoming Secretary as well as Treasurer. He was afterwards succeeded in the former office by the late Edward Stevens, of New Haven, and the capital stock was simultaneously increased to \$200,000. Through all these changes Mr. Camp has retained the presidency of the Company and the general management of its manufacturing department. More clocks have been made under his supervision than under that of any other man, and his management of an establishment making the largest number of clocks in the world, extends backward from the present date through a period of more than half a century.

Mr. Camp's energies have not been confined wholly within the limits of manufacture and trade. In deference to the wishes of the people he has filled several public offices, such as member of the City Council, Selectman of the town, Chief Engineer of the Civic Fire Department, and member of the State Legislature. He concerns himself deeply in the education and evangelization of his fellow beings. He supports two Sunday School missionaries in Nebraska and a city missionary in another State. He founded the Mount Hermon Boys' School at Gill, Mass., which was under the auspices of the great evangelist, D. C. Moody; and co-operated with him in establishing the Northfield seminary for young ladies. Toward the maintenance of both of these institutions, Mr. Camp is a constant and generous contributor, and he is officially connected with one as President and with the other as Trustee. To employ a simile which has reference to his practical life-work, he knows that each human being has his place in the world mechanism—whether it correspond to that of wheel, fusee, escapement, or merely tooth or peg—and aims, through the instrumentality of his missionary agents, and the help of the Divine Spirit, to fit each for his place in the great whole, so that humanity in its entirety may move in perfect accord and concord with the great Author of Nature and the Giver of All Grace.

Herrick & Cowell, manufacturers of special machinery, make some very excellent clock machinery, which is fully noticed under the title of this firm.

Clock cases are manufactured by the New Haven Car Trimming Company, 71 and 73 Goffe street; E. B. Bradley, 107 George street; John S. Gibbons, 506 and 508 Grand street; and John Hausen, 80, Water street.

CONFECTIONERS.

The house of B. H. Douglass & Sons was established in 1832, under the name of Douglass & Dawson. There were several important changes in the firm, B. H. Douglass remaining all the time at the head. In 1869, J. F. Douglass and B. H. Douglass, Jr., were made partners, and since that time the firm has been continued under its present style. Business is carried on in the five-story brick building, 253 and 257 State street, 35 by 70 feet. The capacity of the factory is two and a half tons of confectionery a day, including most of the varieties offered for sale. About fifty hands are engaged in the various departments. Four traveling salesmen are employed and two wagons are used in the city delivery.

A number of the confectionery stores in this city make candy, but in limited quantities.

COOPERS.

The large proportions of the oyster trade at New Haven has developed a considerable business in the making of oyster tubs. The principal coopers are William S. Robinson, previously referred to; J. W. Merwin, 109 South Water street; Andrew McLean, 81 Water street; and A. McNeil, 318 Water street.

CORSETS.

New Haven ranks first in the United States, if not in the world, in the quantity and quality of its corset manufacture. At the present time about three thousand operatives, including men, women and children, are employed in this branch. The early history of this industry in this country, which forms such an important element in the manufacturing interests of New Haven, is inseparably connected with our city.

In 1860, McAllister & Smith, both bank officers in this city, made some preparations toward the manufacture of corsets, but shortly after, and before they had really begun operations, Isaac Straus bought out their interest and commenced corset-making, being the pioneer maker in this country. At this time the corsets used in this State were made abroad. They were all woven, while Mr. Straus made sewed corsets, the first of this kind ever made. He commenced operations in the Street Building. The success of the venture was soon assured, and at the end of a few months, needing larger quarters, he hired a factory on Union street, now called Railroad Block. Here he remained until 1866, when he built a factory on Oak street, at which time the firm of Isaac Straus & Co. was formed, composed of Isaac Straus, Abraham Straus, Max Adler, and Joseph Myer. At this time the business had grown to large proportions. Two hundred operatives were employed in the factory, while work was furnished to over three hundred families outside. The firm, as formed in 1866, remained unchanged until 1873, when Isaac Straus and Joseph Myer sold out their interest, and the firm of Jacob Straus & Co. con-

tinued the business for three years, when the firm of Mayer, Straus & Co. was formed, composed of Alexander Mayer, Abraham Straus, and Max Adler. In 1878 the firm moved to their present location, 41 Court street, now known as the Columbia Works, and in extent of proportions and number of persons employed is the largest establishment in this line in the city. From twelve to fifteen hundred hands are employed, the motive power being furnished by a 75-horse power engine. The trade of the house, which has ware-rooms in New York, is world wide. The building in this city is five stories high, with an area of 8,000 square feet. The members of the present firm are A. Straus, Max Adler, and S. I. Mayer. Mr. Adler has charge of the business in this city.

MAX ADLER.

This well-known resident of New Haven, who has been not inaptly referred to as the chief promoter of corset manufacture, was born in Berkunstadt, Bavaria, Germany, October 14, 1840, a son of Sigismund Adler. The latter, who was proprietor of a weaving establishment, and a manufacturer of bed-tickings, met with some financial reverses, and, in the hope of bettering his fortune, came to America in 1841, locating in New York, where he remained two years. In 1843, he removed to New Haven, and was engaged in the manufacture of umbrellas until his death in 1871.

Max Adler enjoyed but limited educational advantages as compared with those of the present time, yet he obtained a good practical education, and his love of knowledge has since impelled him to read so extensively, that he is regarded as a well informed man upon all subjects of general interest. He first attended the Washington street School, studying in English in the forenoon and devoting the afternoon to the German and Hebrew languages. Later he was a student at John E. Lovell's Lancasterian School, concluding his studies at the Webster School in George street, where he was a classmate with Rev. John E. Smith, deceased; H. H. Bunnell, Hon. Lynde Harrison, and others who have become equally well known. His business career was begun while he was yet a mere boy. At the age of ten we find him running upon errands for the late Smith Merwin, the tailor, a position in which he remained until he was thirteen, attending school from 9 to 12 A.M. and from 2 to 4 P.M. At the age of thirteen he became cash boy in the fancy-goods store of Julius Waterman, on Chapel street. He rose to be successively cashier and book-keeper, and when Mr. Waterman removed to New York to engage in the wholesale trade, Mr. Adler remained as manager of his New Haven store until 1858, when the business was closed out. At this time William Freedman, Mr. Waterman's partner, removed to New York, and embarked in the wholesale cloak trade, at the same time opening a retail dry-goods store in Grand street, of which Mr. Adler was placed in charge and which he managed during the succeeding two years, until its removal to New Haven, early in 1860.

The business, still owned by Mr. Freedman, and managed by Mr. Adler, was located at the corner of Church and Chapel streets. It grew to be so extensive within a year, that, in 1861, Mr. Adler hired the store now occupied by Wallace B. Fenn, on Chapel street, altered the front and improved it, giving it an attractive appearance, and, as the representative of Mr. Freedman, continued the business on a more extensive scale until 1862.

During the year last mentioned, a proposition was made to Mr. Adler by Isaac Strouse to take the management of his dry goods store on Chapel street. Its terms were so advantageous, that Mr. Adler accepted it. When Mr. Strouse purchased the corset manufacturing business then located at the corner of State and Chapel streets, which had been established in 1861 by J. H. Smith & Co., with the purpose of increasing the business, he asked Mr. Adler to become a partner in the firm of I. Strouse & Co. The factory was removed to Railroad Block, in Union street, where the manufacture of corsets and corset steels was carried on until 1867, when a factory was built on Oak street, at the corner of West, and the business removed there.

In 1871, Messrs. Max Adler and A. Strouse, of New Haven, and S. L. Jacobs and R. Mayer, of New York, succeeded I. Strouse & Co., under the firm name of Jacobs, Strouse & Co. Mr. Jacobs retired in July, 1877, and the firm name was changed to Mayer, Strouse & Co., the business being removed to the old Winchester Shirt factory on Court street. It has been so known and located to the present time. The firm is now composed of Messrs. A. Strouse, Max Adler, and S. I. Mayer. Mr. Adler has entire supervision of the manufacturing department, assisted, of course, by competent foremen.

His long and successful connection with this branch of manufacture has caused him to be regarded as the father of the corset business. His name is known throughout this country and in Europe to all who have a knowledge of corset manufacture. Upon all intricate questions concerning the business, he is consulted by inquiring manufacturers in all directions. He is Secretary of the Corset Makers' Association of the United States, and as a representative of his guild he has done much to aid the business by influencing reductions of the tariff and otherwise, having frequently appeared before Congressional committees at Washington to advocate changes which he deemed likely to benefit the corset trade in this country. Mr. Adler represents an industry which has sprung into its present importance within a comparatively short time. It seems only a brief period since ill fitting, badly-made corsets caused such as were on sale to be shunned by all persons possessing a modicum of good taste.

Mr. Adler's house manufacture corsets and corset clasps of all kinds, and in this line acknowledge no superiors. Their trade, which has steadily increased from the outset, now extends throughout the United States and Canada, and large quantities of their goods are exported to Australia and

Max Adler

Geo W Harmon

other foreign countries. The factory of this firm is one of the largest constructive establishments in the city, covering an area of no less than 8,000 square feet, the buildings being five stories high with finished basement. These works are of necessity subdivided into different departments. The mechanical equipments embrace the most complete outfit of labor-saving machinery, including sewing machines by the hundred, to operate which an engine of 45-horse power is brought into requisition. Ten to fifteen hundred operatives are employed, all of whom are expert corset-makers. These facts are well calculated to convey some idea of the importance of this concern, and the magnitude of the trade of which it is the headquarters. Messrs. Strouse and Mayer are residents of New York and manage the New York warerooms.

Aside from his regular business, Mr. Adler is interested in several mining companies, and is a Director of the Metzger Rubber Company. Politically he is a Democrat.

With his family, he is identified with the Congregation Mishkan Israel Church, and of this church he has been trustee for ten years past. He is a member of the Board of Visitors of the Connecticut State Hospital, a member of the Board of Associated Charities of New Haven, and for more than five years has been Secretary of the Hebrew Benevolent Society.

He was married October 21, 1866, to Esther Mayer, and has three children. His handsome residence on Wooster square was built in 1879-80, and his summer residence, a sea-shore cottage at Savin Rock, in 1875.

Shortly after the formation of the firm of Mayer, Straus & Co., Isaac Straus again engaged in the manufacture of corsets, as manager of the American Corset Works of Lewis Schule & Co., a New York firm. Work was commenced in a building near the first factory erected by Mr. Straus. A short time afterward they removed to their present factory, 22, 24 and 26 Franklin street. Here three hundred operatives are employed, and two hundred dozen corsets are made daily.

Isaac Straus, whose name is inseparably connected with the early growth and development of corset-making in America, was born in Bavaria, Germany, in 1829. He emigrated to America in 1846, and came to New Haven in 1847, where he was engaged as a clothier and operator in dry goods, making ladies' cloaks until he embarked in the corset manufacture. Abraham Straus and Max Adler, of the firm of Mayer, Straus & Co., were both employes of Isaac Straus in the early days of this industry, the former as traveling salesman and the latter as book-keeper.

The principal business of Foy, Harmon & Chadwick has been the manufacture of Madame Foy's corset and skirt supporter, although the firm has from time to time added other goods in the same line. The business was started in Worcester, Mass., in 1861, by Mrs. Lavinia H. Foy (wife of James H. Foy), the inventor and patentee. The corset was suggested to Mrs. Foy by apparent de-

fects of the old forms. She continued the manufacture in a small way until there was sufficient encouragement to establish the business upon a larger scale, when Mr. Foy became interested in it. Soon after the business was removed to Boston, where it was carried on until 1869. At that time George M. Harmon and Charles A. Baldwin assumed an interest, and it was removed to New Haven. Mr. Baldwin retired in 1873, and the firm was then known as Foy & Harmon. From 1880 to 1885 it was Foy, Harmon & Co. In 1885, Charles M. Chadwick, of Brooklyn, N. Y., was admitted into partnership, the style being Foy, Harmon & Chadwick. About two hundred hands are employed, and the turn out is one hundred dozen corsets per day. The premises are at the corner of George and Church streets, occupying three stories of the spacious brick building. An 8-horse engine furnishes the necessary power to run the sewing machines. H. H. Chittenden is Superintendent of the concern.

GEORGE M. HARMON.

Measured by public and private expressions of good-will and esteem, George Morris Harmon is one of the most universally popular men in New Haven. A vigorous and successful politician, he is able to make and preserve warm friendships without regard to partisan affiliations. As a rising business man, he has known how to attain fortune with honor, and prominence with equanimity. As a citizen he has lived a quiet life, but, as these lines will show, he has never failed in his care for the public weal.

Mr. Harmon was born at North Brookfield, Mass., in the year 1836. Through his mother, a daughter of the Rev. Henry Jenks, of Hudson, N. Y., he is a lineal descendant of Roger Williams. He attended the common schools of North Brookfield until he was about sixteen years old, when his father died, and the young man was forced to seek employment. For a short time he was a clerk in the City of Worcester. Afterwards, going to Pennsylvania for a visit, he was induced to stay there and teach school for a year and a half. While he was thus engaged, his mother was married a second time, and came to New Haven to live. Her son, on his return to the North, visited her in her new home, and liked the town so well, that, aided by her influence, he became in his twentieth year, a permanent resident of the City of Elms.

He obtained work in various shirt manufactories, and was in the employ of the well-known firm of Winchester & Davies when the war began. Mr. Harmon was a firm supporter of the Union, and tried hard to enlist in the ranks of the Grays, but was crowded out. Subsequently he volunteered in the Fourth Connecticut Infantry, afterwards the First Heavy Artillery, the first regiment that went from the State for a three years' term of service.

On the 10th of May, 1861, he married Miss Mary A. Baldwin, of New Haven, and on the 23d of that month, the soldier-bridegroom was mustered in as a Second-Lieutenant and departed for the battle-field.

Lieutenant Harmon was engaged in the siege of Yorktown, in the actions at Hanover Court House, Gaines' Mills, on the Chickahominy, at Golden Hill, and at Malvern Hill. He was promoted to a Captaincy, and about five months before the war closed, when the regiment was out of active service, he resigned his commission December 7, 1863, and returned to New Haven. Immediately thereafter, at the request of Governor Buckingham, he acted as assistant to Colonel Benjamin S. Pardee in raising a colored regiment. Mr. Harmon's military experience was more fortunate than that of a majority of our brave soldiers. He went through the war without receiving a single hurt, without seeing a day of hospital service, and with an increase of thirty pounds in his weight—a remarkable record.

Captain Harmon re-entered the employ of Winchester & Davies, but after a few years established himself alone in the business of corset manufacturing, on the corner of George and Day streets. Afterwards he associated Mr. Charles A. Baldwin with him, and moved his manufactory into Church street, where it has been located ever since. The firm was later increased by the addition of Mr. James H. Foy, of New Haven, and the corporate name has now become Foy, Harmon & Chadwick, Mr. Baldwin having retired.

The success of this house has been steady and assured from the outset, a continual testimony to the foresight, integrity, and honorable reputation of Mr. Harmon and his colleagues. By adhering closely to safe, conservative lines, and not branching out beyond what prudence would dictate, they have achieved a solid business prosperity, and are now sending their wares to every State in the Union.

In 1879, Mr. Harmon started a commission house in New York, associating with him S. Waldo Banning, and C. M. Chadwick, son of the late Hon. Daniel Chadwick, of Lyme. The new firm, which is now known as Banning, Conover & Co., is to-day one of the leading notion and commission houses in the metropolis.

Four years ago, Mr. Harmon also organized a company for preparing corset cloths for manufacturing purposes. This firm, comprising in addition Mr. Foy, of the New Haven house, and Mr. R. A. Tuttle, of Boston, under the name of R. A. Tuttle & Co., is now selling three-fifths of all the corset material that is offered throughout the whole of the country.

Although Mr. Harmon is still in middle life, he has already had a long and honorable experience in political affairs. His reputation, unlike that of so many public men, rests upon a substantial basis of enduring good works. In this municipality he served as Police Commissioner from July, 1873, to October, 1874, and as Alderman in the years 1879-80. It was he who, while holding the latter office, offered and promoted in the City Council a resolution appointing a committee to go to Washington and solicit an appropriation for the construction of a breakwater in New Haven harbor. That committee, of which Mr. Harmon

was very properly a member, successfully accomplished its errand.

For several years he was the Chairman of the Republican State Central Committee, and his administration was a brilliant success. While under his leadership his party never lost a battle. Throughout Governor Bigelow's term he filled the office of Adjutant-General of the State, and it was due mainly to his exertions and to his influence that the Legislature appropriated \$200,000 for furnishing the Connecticut National Guard with suitable armories in all parts of the State.

General Harmon makes hosts of friends, because he always shows himself friendly. His nature is warm, with pleasant sympathy, and he is as liberal as he is genial. Five children have gladdened his home—four boys and a daughter. The first-born child, a son, is no longer living. Beloved at home and respected abroad, General Harmon is a citizen whom New Haven is proud of and justly delights to honor.

Charles W. Foster & Co. started in the corset business in 1876, making a specialty of those under the patent of Mr. Foster, which are known as the Foster Patent Universal Fitting Corset. The factory, at 19 Crown street contains three floors, 21 by 70, and seventy-five persons are required to carry on the work.

Isaac Newman & Co. began the manufacture of corsets at 106 and 112 Park street in 1873, under the firm style of I. Newman & Co. Their factory consists of a three-story brick building with a frontage on Park street of 100 feet. In the rear is another five-story building, 48 by 60 feet in area. This firm employ about four hundred hands and two hundred and fifty sewing machines, which are driven by an engine of 50-horse power. The factory is divided into ten departments, and has a capacity of three hundred dozen corsets a day.

DYERS.

The Elm City Dye-works, one of the largest concerns of the kind in this State, was founded by Thomas Forsyth and Henry Fisher, in 1868, under the firm name of Forsyth & Fisher. They commenced in a building, still standing, on the corner of Elm and Orchard streets. Here they remained for about a year and a half, when they removed to a building erected by them a short distance below the present works. In 1870 a steam laundry was added, the first in the State to do laundry work by machinery. In 1876, Mr. Fisher died, since which time Mr. Forsyth has conducted the business alone. In 1882, his business had so increased that the facilities of his former factory was unequal to the demands of his trade, and necessitated the erection of his present substantial brick buildings, corner of State and Lawrence streets, covering nearly an acre of ground. In the dyeing department the work consists principally of dyeing new goods for rubber-shoe manufacturers, doing most of the work of this kind for the following large rubber factories: The L. Candee & Co., of this city; Good-

Thomas Daryth

year Metallic Rubber Shoe Company and the Good-year Manufacturing Company, of Naugatuck, Conn.; Para Rubber Shoe Company, South Framingham, Mass.; Franklin Rubber Company, Franklin, Mass.; Union Rubber Company, of New York; L. B. Smith Rubber Company, New York; New Brunswick Company, New Brunswick, N. J.; Lycoming Company, Williamsport, Pa.; Myers Rubber Company, New Brunswick, N. J.; Boston Rubber Shoe Company, Boston, Mass.; and the Woonsocket Rubber Company, Woonsocket, R. I. Besides this work, which yearly amounts to many thousands of yards of cloth, an extensive business is done in dyeing faded or soiled cloth, curtains, clothing, and domestic apparel of all kinds. His trade extends all over the United States. All the latest and best improved machinery is used, and the most skillful operatives are employed. The laundry department has a capacity for washing and laundering 500 shirts, 17,000 collars and cuffs, and 10,000 pieces of unstarched goods per day. In this department, as in the dyeing branch, only the best machinery is used. An average of sixty men and women are employed. About a year ago a steam carpet-beating machine was added, which without half the damage to cloth by the old method of hand-beating, also cleans it more effectually. By this machine 20,000 yards of carpet can be cleaned daily. All the water used at these works is drawn by steam power from eleven driven wells. From these sources 900,000 gallons of water are obtained every twenty-four hours. Mr. Forsyth has lately begun to manufacture his own gas for lighting the factory and producing the heat for his ironing machines. It is called naphtha gas and is produced from coal oil. Mr. Forsyth's extensive business has been the outgrowth of his individual efforts and long experience. His biography, printed below, contains a personal sketch of his busy and energetic career, in which he has been successful in building up the largest business of the kind in the State. In the management of his works he is ably assisted by his two sons, William H. and Leslie W. Forsyth. Besides the general office at the works, two other offices are used, located at 645 and 878 Chapel street. The latter has been occupied for this purpose since 1864.

THOMAS FORSYTH

is a native of Paisley, Scotland. He was born March 26, 1830. His parents were Thomas Gordon and Mary (McCunell) Forsyth. Though highly respected by all who knew them, they were poor in the world's riches and, as may be imagined, young Forsyth, like hundreds of others who have made their mark in the world, had but meager educational advantages. But he was a great reader, even as a lad, and had an innate love of knowledge that impelled him at a very early age to become familiar with the history and poetry of his native land.

At the age of eleven, Mr. Forsyth entered an establishment in Paisley to learn the dyeing trade, but for the time being relinquished that intention

a year later, and regularly apprenticed himself for five years to learn weaving, thus identifying himself for a period with the manufacture of the celebrated Paisley shawls. After the expiration of his apprenticeship, he worked a year as a journeyman weaver. About this time (1848) his enthusiasm in the cause of Liberty involved him to some extent in the Chartist movement, and in August of that year he took part in a memorable demonstration at Paisley at which many able Repealer and Chartist speakers were present and boldly denounced the English Government. Some of the latter, as well as some of the local participants in the affair, were either arrested and imprisoned or fled the country, and having some fear that he was not safe at Paisley, young Forsyth decided to emigrate to America.

He sailed from Glasgow on the 11th of the following November, bound for New York. A storm occurred soon after the vessel set sail, and it was driven back to Greenock, many of the passengers, young Forsyth among them, losing all their possessions. The vessel laid up there for three weeks, then again set sail for New York, where it anchored January 29, 1849. Young Forsyth went ashore and walked up Broadway some distance, when he made the discovery that he had in his possession no money except a solitary English half-penny. Surely he was ill-prepared financially to begin life in a strange land. He could not make provision even for a night's lodging, and he returned to the vessel as his only asylum till he should decide what to do next. A fellow-townsmen, who had come out to America some time before, and had done well, came aboard and inquired if there were any passengers from Paisley. Mr. Forsyth responded and soon found in him one of those friends in need who are truly friends indeed. Provided with sufficient funds for his immediate necessities, Mr. Forsyth proceeded to Springfield, Mass., where he supposed some relatives were living. He arrived at midnight on Sunday, again moneyless and among strangers, and half-waist deep in the snow, only to find that his friends had removed to Cambridgeport, Mass. Finding a place to stay for a time, he communicated with his relatives, who gladly sent him funds to come on where they were.

It was about six weeks before he found any employment. At Malden was living John Cochrane, a young man with whom Mr. Forsyth had worked in Paisley, during the year he had devoted to gaining a practical knowledge of the dyer's trade, and who was there carrying on a small business in the same line. He saw in Mr. Forsyth a valuable assistant and at length gave him work. For three months Mr. Forsyth labored hard and faithfully. At the end of that time Cochrane failed, not having paid him any wages worth mentioning, and the young man found himself again out of employment and penniless, and this time in debt for three month's board. This was surely discouraging enough, but the worst was yet to come, for it was three months more before he obtained a situation with Barrett Brothers (the founders of the dyeing establishment at Somerville, Mass., known by

their name), then located at Malden, and doing the largest business of the kind in the States. In their works, Mr. Forsyth soon made himself square with the world, and devoted himself with diligence to thoroughly mastering dyeing in all its branches. He remained for most of the time during the succeeding eighteen years in their employment, and it was greatly to their regret that, in 1867, he went to Saccarappa, Me., in company with Abial Foster, to establish dye-works on his own account, though twice during this period he temporarily left their employment (once to go West to engage in farming, and again with the purpose of joining John Brown and his men in Kansas, to aid in their memorable warfare for the principles underlying the abolition of slavery), but both times sickness prevented his carrying out his intentions, and after weeks of suffering far from friends, he returned to Malden to resume his labor in the dye-works.

Again Mr. Forsyth was taken ill in 1867, and, under advice of physicians, he relinquished his interest with Mr. Foster, and for a short time gave up all business cares. The following year, in company with Mr. Henry Fisher, he came to New Haven and established dye-works under the firm name of Forsyth & Fisher. The business was successful, and the copartnership was terminated only by the death of Mr. Fisher in September, 1876, after which time Mr. Forsyth continued the business as its sole proprietor and manager, until relieved in part by the aid of his sons.

At the time of Mr. Fisher's death the business was comparatively small. Under Mr. Forsyth's energetic and sagacious management it has been advanced to a position second to that of no other of its kind in New England, taking rank with the leading dyeing establishments of the United States. In illustration, it will be necessary only to state that Mr. Forsyth, though doing all classes of work in his line, makes a specialty of coloring cloth for lining rubber boots and shoes, doing all such work for nine of the largest rubber companies in the Union, and that in 1885 he colored and sent out, all over New England, over 4,000,000 yards of cloth fifty-two inches wide. His works constitute one of the most conspicuous manufacturing establishments on State street. His offices are located at 878 and 645 Chapel street, and his agencies are to be found in almost every important town throughout New England. Fine laundry work is a feature of his business, and this branch has developed so rapidly and remarkably, that it would alone make a business of importance.

Mr. Forsyth drew his first political inspiration in the Whig and Abolition school, which his native Scotsman's love for liberty peculiarly qualified him to receive, and it is a matter of some pride to him that he was a Republican before the organization of the Republican party. He has steadfastly kept out of politics as much as possible, though many times solicited to accept public trusts. During the memorable Black Ballot campaign, he was a candidate for Alderman, and, had he not declined the honor, would doubtless have been installed in office.

He was reared in the Presbyterian faith, and attends worship at the First Congregational Church of Fair Haven.

In 1860, at St. John, New Brunswick, he married Miss Agnes White. They have three sons, William H., Leslie W., and Thomas Gordon, who are connected with their father's business, and a daughter. Mr. Forsyth's standing in business circles is deservedly high. He is known no less for his high sense of honor than for his enterprise. He is public-spirited and liberal-minded, and more than cheerfully contributes his full share toward the general prosperity.

ENGRAVERS ON STEEL, COPPER, WOOD AND STONE.

After Amos Doolittle had returned from his military excursion with the Governor's Guards to Massachusetts, in 1775, he engraved on copper a series of sketches of what was called the Battle of Lexington. This was the first engraving done in the city, and the four pictures of the series are claimed to be the earliest historical sketches made in the country. Mr. Doolittle continued in business until his death in 1838. Among the earliest engravers upon wood was S. S. Jocelyn. John W. Barber, the historian, served his apprenticeship with him from 1821 to 1823, when he began business, and had associated with him his brother, Edmund, a portion of the time. About 1830, the firm of Daggett, Hinman & Gorham made engravings upon steel and copper.

Lockwood Sanford, the present engraver on wood in Mitchell's Building on Chapel street, served his apprenticeship with Edmund Barber, and, in 1843, formed a partnership with him, occupying a room in the Exchange Building. This partnership continued until 1847, when it was dissolved, Mr. Barber going to California, and Mr. Sanford moving to Mitchell's Building. In the following year C. D. Hayes became associated with Mr. G. W. Barber, and located at the old stand of Barber & Sanford in the Exchange Building. The partnership continued for two years, when each pursued the business by himself.

Frederick Gorham was at one time established here as a letter engraver, doing his own printing. Augustus Lines and D. S. Punderson also pursued the engraving business in Mitchell's Building, the latter making a specialty of copper and steel work.

Besides Mr. Sanford, already noticed, the present wood engravers of the city are Hopson & Sherman, established in 1872; Theodore Rapp, Jr., established in 1877; and H. W. Burns in 1873. James A. Duncan, who makes a specialty of engraving wedding and business cards, was established in 1861.

The only engraving on stone done in the city is executed at the establishments of L. S. Punderson, 12 Centre street, and O. A. Dorman, 696 Chapel street. Mr. Punderson is one of the older engravers of the city, and established the lithographic work in 1850.

FOOD PRESERVATIVE MANUFACTURERS.

From the earliest period endeavors have been made to preserve animal and vegetable substances from decay and putrefaction. The Humiston Preservative Company, of this city, claim to have discovered an agent which they manufacture, called "Rex Magnus," a liquid compound, which solves this perplexing problem. This Company was organized in Boston, in 1883, with a capital of \$125,000, as the Humiston Food Preservative Company, since changed to the Humiston Preservative Company. In 1884 the factory was removed to New Haven, where they commenced the manufacturing on State street, but at the end of the year removed to their present location, 139 Park street. The special field of usefulness of "Rex Magnus" is the preservation of food in large or small quantities, which it keeps pure and healthful. The various brands of this article are named "Viandine," for preserving meats, fish and game; "Ocean Wave," for preserving oysters, clams, and lobsters; "Pearl," for preserving cream; "Snow-flake," for preserving milk and butter; and "Queen," for preserving eggs. These food preservatives have been adopted by many hotels, hotel cars and shippers of meat, milk and vegetables. Professor R. F. Humiston is the inventor and one of the proprietors. The executive officers are Nathaniel Easterbrook, Jr., President and Treasurer, and H. D. Humiston, Secretary.

FURNITURE MANUFACTURERS.

In the *Connecticut Journal*, under date of New Haven, December 8, 1800, "Josiah Deming informs the public that he is now carrying on the cabinet business, opposite the Church, next door south of Scott's Barber Shop, where any kind of Cabinet Furniture may be made expeditiously, with taste and elegance, all orders punctually attended to, and all favors gratefully acknowledged by the public's most obedient."

Oliver Deming was established in the same business in State street, between Court and Chapel streets, even earlier than the date given above, and continued there until his death in 1825. Josiah Deming, at a date later than that of his advertisement cited above, was in partnership with Oliver Deming in State street. James English was a cabinet maker in Chapel street, between South College and the Art Building.

He must have begun soon after, if not before, the beginning of the nineteenth century. William Haughton, in State street, lower down than Oliver Deming, was in part contemporary with these. Of him Sherman Blair learned his trade, who began business about 1810 or 1812. Contemporary with Mr. Blair was the firm of Stillman & Bliss. Many of the heirlooms, whose history is unknown to their present possessors, were produced in their shop in Orange street in the second decade of the present century. Seth Bliss, the junior partner, retired from the firm, in 1822, to study theology; was ordained to the Christian min-

istry in 1825, and died at a very advanced age in the service of the American Tract Society.

The Hon. Charles B. Lines, of Wabauensee, Kansas, has kindly sent to the writer a letter in which he relates his recollections of the business as it was from 1821 to 1856.

He says:

In 1821, at the age of fourteen, I engaged with Mr. Sherman Blair to learn "the art, trade, and mystery" of cabinet-making; not to enter upon the work, however, until the spring of 1822. In the meantime I enlisted in the United States Revenue Service on board the revenue cutter Captain Lee, headquarters at New Haven, for one year. At the end of the year I commenced learning my trade as agreed. Mr. Blair was at that time rather the leading man in the business. Stillman was alone, his partner having retired from the business to preach the Gospel. Besides Blair and Stillman, Oliver Deming on State street, and James English on Chapel street, just west of the College, were in the furniture business. On Chapel street was William Daggett, his shop being between College and Temple streets, and near Howe's book store. Captain Chauncy Treat also did a small business on Chapel street for a short time.

At the age of twenty I left Mr. Blair and was employed for a short time by Stillman and then by James English, after which I could get no work. I called on Treat and he offered to take me in as a partner. I had no money, and yet was restless out of work. It occurred to me that Judge Daggett, who had spoken very kindly to me at my grandmother's, where I had met him occasionally might be interested in my case, and I called upon him. After taking an inventory, and ascertaining that it would require only \$175 to pay for one-half of the entire stock, tools, and everything, Mr. Daggett said that he had no money, but very kindly drew a note for the amount, and when we had both signed it, he sent me to Dr. Aeneas Monson, then the President of the New Haven Bank, who let me have the money. The next day the firm of Treat & Lines was organized and its colors flung to the breeze, with a capital of \$350.

Charles Nicoll, a crockery merchant and Captain of the Grays, in which company I was an enlisted soldier, was my first customer. He called and ordered a sideboard, which I made for him. For it he paid me \$60. William McCrackan also ordered one; and I made and sold two others, all which I made myself, and received the money, \$240. This was quite an encouraging start. Very soon Mr. Treat wished to go out of business, and beset me to buy him out. I went to James Brewster, and he signed a note with me at the New Haven Bank for \$500, and I became sole proprietor, for the time being, and moved into State street, into a building belonging to Dr. Lewis, near Dan Cooper. Not long after this, C. C. Clinton became my partner for a while. I cannot say how long, but think not more than a year or two. My business was constantly increasing. At length Mr. McCrackan put up a building for us in Orange street, where the business increased still more rapidly. I bought out Mr. Clinton, and after running the establishment alone for a while, associated with me Mr. A. C. Chamberlain, and subsequently Samuel M. Smith, who still lives in New Haven.

During the continuance of my partnership with Mr. Smith we had a good trade and were prosperous. About this time there was quite a revolution in the mode of conducting the business, a large part of the furniture being manufactured by power; and we bought instead of making. Now, as I understand, dealers in furniture purchase almost all that they sell. In my day the furniture dealers in New Haven were generally prosperous, and no one had a better field than myself, but I was not as some others were, supremely devoted to making money.

Mr. Lines here details some of the activities—religious, philanthropic, political, military and horticultural—in which he was engaged. He was especially active in temperance societies, and he thus relates the consequences of such activity to him in his business.

About this time my manufactory was destroyed by fire, under circumstances very damaging to me. But Mr. Mc-

Crackan put up a better building, and I was soon under way again, and did a much larger business than ever before. The general judgment of the people was that my factory was burned by emissaries of the liquor interest. I never had any doubt about that.

During all the time I was in the business I was employed largely in the vocation of an undertaker, being frequently called upon to supervise the "laying out" and interment of the dead. Among distinguished citizens for whom I performed these services, the following at this moment occur to me: Noah Webster, Professor Kingsley, Samuel St. John, Dyer White, Judge Daggett, Judge Bristol, Judge Baldwin, William Leffingwell, besides many others.

Did time and room permit, I could narrate many interesting incidents in my business life in New Haven; but I must conclude, and will do so by relating a fact which shows the warmth of personal friendship with which I was regarded. I have already referred to my start in business. I never had a relative in my early business experience who could be of much service to me financially, and yet I was under the necessity of seeking aid frequently. Once, soon after building a house, I needed \$2,000, and was advised to apply to Captain Simeon Hoadley, and was at the same time informed that he required first class personal security. I went to him with four notes of \$500 each, indorsed one by Roger S. Baldwin, one by Dennis Kimberly, one by Dr. Jonathan Knight, and one by Captain Benjamin Beecher, Captain Hoadley opened his eyes wide. "That security," said he, "could not be improved. How did you get it?"

Mr. Lines emigrated to Kansas in 1856, when it was yet doubtful whether it would be a Free or a Slave State, to assist in determining that question in the interest of freedom. He and other citizens of New Haven, of like mind with himself, went together for mutual aid and protection, and commenced on virgin soil a new settlement, which they called Wabaunsee. Here Mr. Lines still resides in the midst of his children and children's children. Here we leave him, to return to those in New Haven who have succeeded him in the business of making furniture.

The firm of Sherman Blair, of whom Mr. Lines learned the "art, trade, and mystery" of cabinet-making, is still perpetuated by his sons, R. & J. M. Blair.

At the present time very little furniture manufacturing is done in New Haven, it being entirely confined to local custom work. Much of that sold here is made in the State of Michigan, although a large amount of chamber furniture is received from Boston, and much parlor furniture from New York. At one time the Bowditch-Prudden Company was more exclusively engaged in furniture manufacturing than any house in New Haven, but now do little work in this line.

Besides the firm of R. & J. M. Blair, the oldest houses are those represented by the Bowditch-Prudden Company, 72 Orange street, and A. C. Chamberlain & Sons, Orange, corner of Crown street.

Dann Brothers began the manufacture of a simple folding chair in 1862, in State street. The demand for such a chair grew out of the war. About that time English & Mersick became interested in an improvement on the Dann Brothers' patent, and began, through Golightly & Twitchell, manufacturing folding chairs in Park street. The interests in the two patents became complicated, leading to some lawsuits, when the businesses were united in 1864, the premises enlarged, and the

manufacture of chairs became established upon a more permanent foundation. From time to time improvements have been made in the style and luxuriousness of the article made, until the list numbers over one hundred different varieties, from the unpretentious camp-stool to the easy chair for the parlor or drawing-room. The New Haven Folding Chair Company was incorporated by a special Act of the Legislature in 1881, and has remained since its organization at 548 to 552 State street. While the folding chair has been in the past a specialty, the Company are now engaged in manufacturing office and dining chairs, devoting much attention to the invalid rolling and reclining chair, an invention of their own. This chair has been adopted by the Government for all hospital and naval stations, for which a large number have been furnished. About one hundred men are employed. The officers of the Company are Isaac N. Dann, President; Edwin F. Mersick, Secretary and Treasurer; and E. Kelsey, Superintendent.

The firm of Farren Brothers, manufacturers of spring beds, was organized in 1876, the members being Willis H. and R. B. Farren. The original plant was in Fair Haven, but was removed to Atwater's Block, in 1880, where it is at present located. The patent under which the firm manufacture is not the proprietors' invention, but they control the trade of New England. They began by making about fifty beds a month, but have since increased to an average of eight hundred. Sixty thousand beds have been made altogether. About fifty hands are employed.

B. B. Savage, 9 Long Wharf, manufacturer of mattresses, bedding and slat springs, began business in 1883. Most of his goods are sold outside of New Haven. He employs nine hands.

The manufacture of rattan goods in New Haven is comparatively a new enterprise, the New Haven Rattan Company, which was organized in April, 1882, being the first to engage in it. This trade has for the most part been controlled by a few individuals in the past, and the Company found great difficulty in obtaining good workmen. This and other obstacles, however, have been overcome, and the business has turned out a success. About one hundred and twenty-five hands are employed. The cane used in the work is imported from Singapore. The products of the factory are rattan for chair bottoms and backs, and rattan and reed furniture of all descriptions. The officers of the Company are I. N. Dann, President; E. F. Mersick, Secretary and Treasurer. Business is carried on in the building occupied by the New Haven Folding Chair Company on State street.

Henry W. Crawford began the manufacture of furniture at 101 and 103 Grand street in 1856, and has continued the business at the same place ever since. He came to New Haven in 1849, when seventeen years of age.

E. H. Vetter, 67 to 71 Union street, manufactures parlor suits and lounges to order, makes furniture, and does repairing of all kinds.

The New Haven Window Shade Company was organized in 1877. Its production is a patent

window shade, known as "The Excelsior," made of heavy Manilla card-board. Messrs. A. J. and J. B. Smith are the *personnel* of the Company.

HARDWARE MANUFACTURERS.

As long ago as 1848, Gaius F. Warner removed from the Naugatuck Valley to New Haven, and established here a foundry for casting malleable iron. His successors are still producing castings in such variety that we cannot particularize, further than to say that their catalogue comprises builders', carriage-makers' and saddlers' trimmings.

Not only are the G. F. Warner Company engaged in the manufacture of hardware, but many other establishments have entered into the business. Of these the most extensive is that of Sargent & Co.

A distinguished writer has said that the growth and development of any large manufacturing interest is generally due to the personal energy, patience, and forethought of one man. Especially true is this of the large manufactory of Sargent & Co., in which the energetic spirit of its founder, J. B. Sargent, is manifest. Under his supervision the works have grown from a comparatively humble beginning to their present importance among the manufacturing interests of New Haven. In 1858, Mr. Sargent purchased the business of the Peck & Walter Manufacturing Company in New Britain, and commenced the manufacture of builders' hardware. A short time after, Mr. Sargent's brother, George H., became a partner, under the firm name of Sargent & Co. Here business was continued for six years, when May 1, 1864, it was removed to this city, and the building bounded by Water, Wallace and Hamilton streets was erected. At this time only one hundred and sixty workmen were employed. In July, 1864, a stock company was formed, consisting of J. B. Sargent, his brothers, George H. and Edward, and eight former employees. J. B. Sargent was made President, a position he has ever since held. Starting with a production of a comparatively limited line of goods, and correspondingly restricted facilities, each year since has added to the extent of both, until at the present time, the products of this establishment, both in quantity and quality, are not excelled by any house in the country. Their premises cover sixteen acres of floor room, where are employed over seventeen hundred operators, the daily production averaging thirty-five tons of finished hardware. The effect of this establishment upon the commercial welfare of this city is best realized by the statement of the fact that the daily pay roll amounts to more than \$3,300, or, in round numbers, \$1,000,000 yearly, the substantial benefit of which accrues to the city. The business is divided into forty separate departments, each presided over by a Superintendent, who has the general supervision of his department. This house has twenty traveling salesmen, and their trade may be said to extend over the world. The general warehouses are located at 37 Chambers street, New York, from which most of the goods are sold. This branch of the business is under the charge and management of George H. Sargent. The present

officers are Joseph B. Sargent, President and Treasurer; Piermont Bradford, Superintendent; C. L. Baldwin, Secretary and Buyer of General Supplies; Henry B. Sargent, Assistant Superintendent; George L. Sargent, Assistant Treasurer; Edward R. Sargent, Superintendent Coffin Hardware Department; Russell Sargent, Superintendent Lock Department. The last four members of the Company, with Joseph D. Sargent, traveling salesman, are sons of Joseph B. Sargent. Superintendent Bradford has been connected with this business since 1850, and his long experience and knowledge of the requirements of the trade, and personal energy, has in no small degree contributed to the present high standing of this establishment in the commercial community. Mr. Sargent, the founder of this concern, was born in 1822. The secret of his success has been energy, business ability of a high order, and fair and honorable dealing. Among the oldest employees of the Company deserving of mention are John Ruff, contractor, and J. F. W. Brockschier, both of whom have been with the house since 1853. R. F. Burchell, foreman in the north iron foundry, was connected with the works in New Britain. A. H. Stelle is a contractor.

The family represented by O. B. North of this city, may justly be considered the pioneers in the manufacture of saddlery and carriage hardware in this country. The grandfather of Mr. North was engaged in this business in New Britain as early as 1812, which was continued by his son, the father of Mr. North, at the same place. For the last fifty years has the head of the present Company of O. B. North & Co. been engaged in this branch of manufacture formerly in New Britain, but for the last twenty-three years in this city. When the house was founded, American manufactures were in their infancy, and the products of European workshops monopolized the home market. The establishment of what may be termed a new branch of industry, against such opposition, required skill and business energy of a high order. These traits of character Mr. North possessed in an eminent degree, and from a comparatively small concern the house has become one of the most extensive in this country devoted to this line of goods. The products of this Company consist of saddlery and carriage hardware, malleable-iron castings and patent carriage tops, in the manufacture of which three hundred men are employed, the annual products amounting to \$300,000. The factory at 65 Franklin street is one of the largest of its kind in the country, containing 125,000 square feet of floor surface. The capital stock is \$100,000. The executive officers are O. B. North, President, and William B. North, Treasurer and Secretary. A. N. Sperry is a contractor in these works.

About twenty years ago, W. A. Clark commenced the manufacture of hardware specialties at Westville. Among the articles of his manufacture which became well known to the trade, was an expansion bit, known as Clark's patent expansive bit. W. A. Clark died in 1879, when the business was continued by his son, F. E. Clark. In 1880 the firm of R. H. Brown & Co. (L. A. Platt), was formed, and

purchased the manufacturing plant of Mr. Clark, and continued the business at Westville until 1883, when they erected their present building, corner of Ashmun and Munson streets, consisting of a one-story brick building, 225 by 40 feet, with an annex 100 by 40 feet. A specialty is made of the Clark bits and new Reid chuck; a general line of mechanics' hardware is also made. About seventy-five men are employed. Mr. Brown is an experienced practical mechanic, and for a number of years was a contractor in the Winchester Repeating Arms Company's Works.

The firm of Hobart B. Ives & Co. (F. F. Andrews), 187 St. John street, formed in 1885, is the successor to the business commenced by Hobart B. Ives in 1876. They manufacture hardware specialties, their main work being sash locks and door bolts. Thirty work-people are employed.

William Schoolhorn & Co., who are mentioned among the workers in iron as manufacturers of the star outlery, should also come under the head of hardware, such as hinges and locks, which are mostly secured by patents, and expansive bits and augers.

The American Buckle and Cartridge Company, of West Haven, was formed in 1885, by consolidation of the West Haven Buckle Company and the Kelsey Cartridge Company, the latter concern being referred to under Armors. The New Haven Buckle Company owed its origin to the business established in 1853 by William R. Shelton, S. S. Hawthorn, George W. Tuttle, and others, who began the manufacture of buckles at West Haven with machinery designed by S. S. Hawthorn. About 1856, George R. Kelsey, one of the pioneer buckle manufacturers in this country, became connected with the New Haven Company, and soon became its Manager and Treasurer, a position he held until July, 1885, when a serious illness prevented his taking an active share in its management. Mr. Kelsey commenced the manufacture of buckles in Middletown, Conn., with the American Buckle Company. Their works were destroyed by fire in 1856. At that time the Waterbury and West Haven Buckle Company was struggling for existence. Mr. Kelsey became its President, but while he retained an interest in this company, he became as before stated, more especially identified with the West Haven Company, and it is almost entirely to his management that the prosperity of the concern is due. The premises cover an area of over one hundred thousand square feet, upon which have been erected at various times numerous brick and frame buildings. The work consists of vest, pant-aloon, suspender, shoulder brace, shirt, truss, trunk, and skate buckles, upon which a large number of improvements have been introduced. Over one hundred operatives are employed. The capital stock of the American Buckle and Cartridge Company is \$45,000, the largest stockholder being George R. Kelsey.

The Yale Castor Company, 958 Grand street, was organized in 1883, with a capital of \$22,000, with C. Spencer, President; S. Osborn, Vice-President; and H. B. Schenck, Secretary and Treasurer.

They manufacture the Yale castor, gem store truck, and hardware specialties. About fifteen men and boys are employed.

The Grilley Company is a stock company organized in 1866, with Leonard Pardee as President. The present President is William Hillhouse. The products of this concern consist of brass, nickel-plated, and silver screws, bolts, and coffin hardware. The factory is located at 76 Court street.

The Ellis Manufacturing Company, 356 Congress avenue, make all kinds of metal machinery, presses, and light hardware. This Company was formed in 1877. Frederick L. Ellis is President, the other members being William F. Norman and James M. Ellis. From twelve to fifteen men are employed.

The firm of A. S. Henn & Co., 54 Court street, was formed in 1882, and commenced business at the present location, 54 Court street. They make a general line of metal pattern work, light hardware, tinning, japanning, and bronzing.

The American Needle and Fish Hook Company was incorporated with a capital of \$100,000, and are doing a prosperous business in the line of goods which the name of the Company indicates. The plant at No. 11 Artisan street is well supplied with the requisite machinery to carry on the work. The officers are William R. Shelton, President; James M. Mason, Secretary and Treasurer; William R. Shelton, J. P. Tuttle, James M. Shelton, Thomas Wallace, Jr., Ansonia; Caleb B. Knevals, New York, Directors.

A. H. Smith began the manufacture of sewing-machine needles in this city in 1882, in the Quin-nipiac Building. In 1885 he removed to his present location, 81 Day street. For seventeen years previously he was a member of the firm of Smith Brothers, engaged in a similar business at Mount Carmel. Mr. Smith manufactures all kinds of sewing-machine needles, both for family and manufacturers' use, and makes a specialty of needles for leather. He employs twelve men.

HOUSE MOVERS.

The art of removing buildings from one site to another has made great progress within the last fifty years. Before that time wooden screws were used in lifting the building, which necessarily suffered more or less from the unequally distributed effect of the screws. The wonder is that with such apparatus buildings were not shaken to pieces while on their journey from an old to a new site. Yet the Coffee House, which preceded the Tontine Hotel, traveled safely to the place where it now stands on Church street, between Wall and Grove streets, and many other large buildings passed by transmigration, even in the first half of the present century, to new sites and changed surroundings.

Kelley Smith was one of the early house-movers in New Haven. The oldest inhabitant can remember the timbers, screws and windlasses, which, when not in use, were piled on his lot at the corner of Greene and Franklin streets.

THE GREAT BRIDGE OF THE CITY OF NEW YORK

NEW YORK, 1883

Garwood M. Baldwin came to New Haven from Woodbridge in 1859, and, using the best apparatus, soon became famous as a house-mover. He has moved and raised nearly fifteen hundred buildings, including eleven large and some smaller brick ones. The first brick house ever moved in New Haven was the one on the corner of State and Elm streets, built by Henry Huggins, and afterward known as the Dr. Foote house. It was forty feet square, and Mr. Baldwin received for moving it westward to the place where it now stands, in the rear of the Todd building, \$1,500. The second brick house removed belonged to Yale College, and the cost was \$2,500. The third, corner of Congress avenue and Commerce street, four-stories high, forty by sixty feet, belonging to R. M. Burwell, was moved at an expense of \$3,000. The fourth, on Meadow street, four-stories high, forty by sixty feet, cost \$1,800.

Frederic E. Baldwin, 27 County street, commenced business in New Haven as a house-mover in 1871. He moved the Dr. Knight house from the site of the County Court House to the corner of Orchard and Martin streets in 1871. The same year he moved the Candee house from the corner of State and Elm to George street, between Orchard and Day streets. The next large building which he removed was the Twining house. It went from the site of West Divinity Hall to County street in 1873. In July, 1884, he raised Starr's Block at the junction of Congress avenue and Washington street so that another story was built under it. In the spring of 1885, at the widening of Meadow street, he moved the brick house at the corner of Water and Meadow streets, known as the Trowbridge house, and also another Trowbridge house.

Other house-movers are C. S. Baldwin, 27 Daggett street, and James K. Smith, 12 Crescent street.

INDIA RUBBER WORKERS.

L. CANDEE & CO.

No city in the world is more closely associated with the earlier efforts to utilize the gum of the rubber tree than the city of New Haven. Here Charles Goodyear, who discovered the most important secret in rubber manufacturing, was born in 1800. Here in 1830 he commenced his experiments which have resulted in a series of inventions among the most valuable in the present century. The story of Mr. Goodyear's long years of toil, suffering, discouragements, and ultimate triumphs, has been so often written as to be familiar to the readers of history.

One of the first persons to see the future possibilities of Mr. Goodyear's discoveries, was Leverett Candee, one of the founders of the L. Candee Rubber Factory of this city. He was born at Oxford, Conn., June 20, 1795, and came to New Haven when fifteen years of age, and entered the employ of Captain Gad Peck, a merchant engaged in foreign trade, as a clerk. For a number of years he was engaged in the dry goods trade with James E. P. Dean and William Cutler, under the firm name of Candee, Dean & Cutler, successors of the old firm of

Root & Atwater. In 1833 he retired from the firm and went to New York, where for two years he followed the commission business. In 1835 he returned to New Haven and became a partner in the firm of Candee, Lester & Page, commission merchants. A few years after he engaged in paper manufacturing at Westville, under the firm name of Candee, Page & Lester, subsequently Candee & Page. This venture was not a success, and in 1842 the business was closed up and the firm dissolved, Mr. Candee having lost his entire fortune, accumulated by years of toil.

Shortly after his paper-mill was closed, he commenced the manufacture of elastic suspenders in a carpet factory on East street. During this same year (1842) Charles Goodyear gave him a temporary license to use his vulcanized process in the manufacture of rubber shoes. This he resolved to undertake, but not having the necessary capital to commence operations, he enlisted the aid of Henry and Lucius Hotchkiss, at that time lumber merchants in this city, who loaned him the sum of \$3,000. He immediately began operations and was the first person in the world to manufacture rubber over-shoes under the Goodyear patent.

September 5, 1843, the firm of L. Candee & Co. was formed, consisting of Leverett Candee and Henry and Lucius Hotchkiss, the latter two furnishing the entire capital, \$6,000, and becoming special partners, while Mr. Candee was to assume the entire management of the works as general partner. Operations in this new and untried branch of industry were commenced, in a necessarily limited way, at Hamden, about six miles from New Haven. The products of their works were at first received with many doubts and suspicions of their utility, and it was a long time before the public would be convinced of the value of what have become well-nigh indispensable articles. The first shoes made were of the buskin style, and the first sales were made by H. S. Downs, who is still remembered by the older wholesale shoe dealers. Their goods were first shown for sale in Hartford, Springfield, Worcester, and Boston, at which points they were carried from store to store in baskets, and were only received by the retail dealers to be sold on commission. Many of the more important secrets connected with their manufacture was not then known, and the trade looked with suspicion upon the crude samples of this rubber factory. One of the greatest obstacles to their sale was the fact of their becoming discolored when exposed for any length of time to the atmospheric changes, a difficulty only overcome by the outlay of much money and repeated experiments, which finally resulted in the invention of an elastic varnish which had its origin in the Candee factory.

In 1844, the firm was reorganized by the admission of Abram Heaton, who contributed \$3,000 to the capital, making it at this time \$9,000. Mr. Heaton remained in the firm until 1847, when his interest was purchased by Henry Hotchkiss.

A new impetus was given to their business in 1848 by the decisions in favor of the validity of the Goodyear patent, from which date the firm rapidly

increased in business, capital, facilities, and resources. Their goods met with favor and found a ready sale year by year; their number of employees was increased; and their manufacturing plant at Hamden was several times enlarged to supply the demands of their trade. In 1850, the Hamden factory became unequal to their fast-growing business, so during this year the site of their present building on Green, East and Wallace streets was purchased, on which at that time an old factory was located, which had previously been used by a New Haven company in the manufacture of screws. Here a branch factory was established in addition to the business carried on at Hamden. In 1859, additional buildings were erected on the New Haven site, at which date the Hamden factory was abandoned, and the whole business concentrated in this city.

In 1852, so rapid had been the growth of the business, that a joint stock company was formed, with a capital of \$200,000—in 1869 increased to \$300,000—under the present corporate title of L. Candee & Co. The four original subscribers to the stock were Leverett Candee, Henry and Lucius Hotchkiss, and Timothy Lester, who were also the first Directors. The first executive officers were L. Candee, President, and C. T. Candee, Secretary. From this time until 1863, there was no change in the officers of the Company, with the exception of the year 1859, when Isaac Hawthorn was made President; L. Candee, Treasurer; and C. T. Candee, Secretary. In 1863, Leverett Candee resigned his office and sold his interest to Henry Hotchkiss.

Mr. Candee died on May 23, 1865, the best monument to whose memory is the manufacturing establishment which still bears his name, and which he was conspicuously instrumental in founding.

After Mr. Candee's retirement in 1863, Henry Hotchkiss was made President and Treasurer, and Henry L. Hotchkiss, Secretary. From this date to the time of Henry Hotchkiss' death in 1871, the only change made was in 1869, when Henry L. Hotchkiss was made Secretary and Treasurer.

Henry Hotchkiss was born in New Haven April 29, 1801, and died in this city (where he had continuously resided) December 14, 1871. He deservedly held a conspicuous place among the business men of this city, the manufacturing interests of which his energy and natural ability did so much to develop. For more than half a century he was closely identified with the growth and prosperity of his native city.

At the next annual meeting of the Directors after the death of Henry Hotchkiss, his son, Henry L., was elected President and Treasurer, a position he has most ably filled up to the present time. Under Mr. Hotchkiss' management the high character of the works has not only been maintained, but year by year has added to the extent of their trade, and the superior quality of their products—results in no small measure due to Mr. Hotchkiss' personal supervision, and a through knowledge of every detail of the business, gained by long identification with rubber manufacturing.

At the time of the election of Mr. Hotchkiss as President and Treasurer, Pierpont B. Foster was

elected Secretary. He was succeeded, in 1874, by Charles L. Johnson, the present Secretary, who has held the same position ever since.

In November, 1877, when the works had grown to large proportions, the Company experienced a heavy loss by the entire destruction of their property by fire. Not a last, pattern, or tool was saved. This occurred in the busiest season of the year, but it was this disaster which best illustrates the enterprise and energy of the managers. Immediately after this fire the unoccupied factory of the Odorless Rubber Company, at Middletown, twenty-six miles distant, was leased, and arrangements made with the New York and Boston Railway to run two special trains between Middletown and New Haven for the accommodation of their employees, numbering several hundred. The new factory was put in order, lasts made, patterns cut; tools and machinery purchased and set up, and goods produced and delivered on orders three weeks after the fire.

In the meanwhile active preparations were undertaken toward the erection of their present buildings. Considerable adjoining property was purchased, and within eight months the factory was completed and occupied, containing new and improved machinery, with double the capacity of the one destroyed. It has since been enlarged by the addition of several large buildings, and now consists of twelve substantial brick buildings, separated by passages or roadways to prevent the spread of fires. That on Wallace street, having an L running to the east, is three stories high, and is about 400 by 58 feet. The first floor is the grinding-room, containing about 100 grinders, calenders, and other machinery, arranged in two duplicate divisions, each driven by its own power, so that any derangement to engines or machinery in any one section need not cause a stoppage of the whole factory. The second and third stories are devoted to cloth and rubber cutting.

The next largest building is that on Greene street, running from Wallace to East street, 304 by 55 feet in dimensions, three stories high, with a basement. In the basement the crude rubber is received, weighed, cut, and cleaned. The first floor, excepting a space reserved for the Company's office, is devoted to the making of Arctics and contains over three hundred tables. The second floor is the boot-room, containing two hundred tables, and the third floor the shoe-room, with five hundred tables.

On East street is a three-story building, 170 by 40 feet, the first floor of which constitutes the shipping room, and the second and third floor is allotted to packing.

These buildings inclose a quadrangular space occupied by other brick buildings, separated by 25-foot roadways. The building nearest Wallace street is the engine-house, 110 by feet, containing two Corliss engines of about 1,400-horse power. East of this is the boiler-house, 90 by 75 feet, containing twenty boilers, with a total of 1,700-horse power. Adjoining the boiler-house is the coal yard, with capacity for holding 1,500 tons. Between this and the East street building are the heaters, thirteen in number, capable of vulcanizing 24,000 pairs of boots and shoes in one heat.

This large factory—one of the largest in the world devoted to rubber manufacture—covering about three acres of land, was planned with much deliberation, aided by long experience in the needs and requirements of the business. The machinery used embodies all the latest and most approved appliances. The rooms are lofty, well-lighted, thoroughly ventilated, and provided with the best means of guarding against fire.

The products of this factory consist of an endless variety of rubber boots, shoes, sandals, and the well known Arctic rubbers. In their manufacture about fifteen hundred hands are employed. The daily capacity of the works average 20,000 pairs of boots and shoes per day; or, 1,000 cases of assorted kind, the yearly production amounting to several millions of dollars. Two to three million pounds of raw material is consumed annually, most of which comes from the celebrated rubber district of Para, Brazil. They are also extensive importers of rubber gum from Africa, Central America, and Eastern India.

This Company sells its own goods directly from the factory, without the intervention of agencies, thus bringing the buyer in immediate contact with it, a method which experience has proven to be wise and profitable. At one time they exported largely, but of late years their immense trade has been confined almost entirely to the United States.

An uninterrupted course of prosperity has been experienced by the Candee Company, mainly due to the good judgment and fair and honorable methods of its managers. All that was good and most desirable in the Goodyear process of manufacture has been retained, while various improvements, many of which had their origin in this factory, have been added. This institution has been of immeasurable benefit to New Haven, forming as it does an important element in the manufacturing interests of the city and employing such a large number of hands. No one branch of manufacture has caused New Haven to be better known abroad, while the extent of the works, unequaled by any similar concern, and the recognized superiority of their goods by the commercial world, excite just local pride.

The Metzger Rubber Company, with a factory corner of Court and Union streets, was organized in 1882, with a capital of \$50,000. Rubber clothing and cloth are the manufactures. About fifty operatives are employed. The annual turnout amounts to \$150,000. The officers of the Company are C. J. Metzger, President and Treasurer, and Max Adler, Secretary.

The Seamless Rubber Company, organized in 1877, continue the business conducted for several years by Hine & Longden. The products of this factory consist of a variety of soft rubber goods, a specialty being made of druggists' rubber sundries. Sixty hands are employed. The factory, 55 Daggett street, consists of a two-story brick building, with basement and attic, 40 by 80 feet in dimensions. The executive officers are Joseph Banigan,

President, and Sherman F. Foote, Secretary and Treasurer. The capital stock is \$50,000.

The Gasket Rubber Company commenced the manufacture of small rubber articles at 153 St. John street in 1872. The business was afterwards sold to A. C. Andrews, who conducted it several years, but recently discontinued. He was connected with the Goodyear Rubber Company for twenty years, and is thoroughly conversant with the almost endless uses to which this valuable product has been applied.

ICE CUTTERS.

The cutting and storing of ice in winter for summer consumption has grown to enormous proportions in this country. It is a business which may be said to have been developed within the last fifty years. The first person to cut ice to any extent for public sale in New Haven was John Anthony, who began, in 1840, taking his ice out of the old canal. During the summer of that year he furnished ice to steamboats and a few private families, but did not peddle regularly.

In 1843, H. L. Scranton embarked in the business, building an ice-house in the pines. During the summer he peddled for a part of the season. This same year George Thompson and Samuel Perry began to cut ice out of Saltonstall Lake. During the ensuing year Perry bought out Scranton's interests. Thompson continued for several years.

Before the canal was closed, ice was obtained from that source and from Saltonstall Lake.

In 1848 an ice company was formed, consisting of George H. Townsend and others, for the purpose of shipping ice. An ice-house was built near Red Rock, and another at Saltonstall Lake. This company failed to make a success of the undertaking, and finally sold out to Mr. Townsend. The latter also purchased the interest of Thompson & Hemingway, and for a number of years following, George H. Townsend and Samuel Perry were the only men engaged in the ice business in New Haven.

In 1849, E. J. Munsell became a partner with Mr. Perry, and remained as such for three years. In 1852 no ice formed in this vicinity more than five inches thick, and during this year all that was used was obtained from Springfield, Mass.

The business established by Townsend & Perry resulted, in 1866, in the formation of the New Haven Ice Company, which is incorporated, with a capital of \$75,000. About twenty-five thousand tons of ice are housed annually by this Company, and during the summer about twenty wagons are employed in delivering it. The officers are John L. Treat, President, and F. F. Bishop, Secretary and Treasurer. Most of the ice sold by this Company is obtained from Saltonstall and Whitney Lakes and from spring water ponds.

The other ice dealers doing business in New Haven are Hemingway Ice Company, Spring Brook Ice Company, Crystal Ice Company, Mix & Brother, Burton Dickerman, Enos Dickerman, and John Parker & Co.

IRON-WORKERS.

Though New Haven does not aspire to be a competitor with Pittsburgh in the manufacture of iron, yet it has more men and a larger amount of money in the various departments of this industry than one who had not looked into the matter would be apt to estimate.

Classifying the products of the iron-workers into the following sections, we will speak of each in turn. The manufacturers of hardware have been put into a class by themselves, as hardware is not all of iron.

- I. Castings.
- II. Forgings.
- III. Rolled iron.
- IV. Steam engines.
- V. Machinery and tools.
- VI. Safes and vaults.
- VII. Architectural iron-work.
- VIII. Cutlery.
- IX. Files.
- X. Staples, bolts, nuts, screws, and nails.
- XI. Wire and wire-work.

I. CASTINGS.

About fifty years ago, Kilbourn & Smith had an iron-foundry on Whitney avenue, on the site now occupied by the New Haven Manufacturing Company. The junior partner, George F. Smith, when he retired from this business, during the time of depression which followed the panic of 1837, became a city missionary, and is more widely known by means of ministrations, both spiritual and temporal, in this capacity, than as an ironmonger.

John McLagon established a foundry on Audubon street in 1848, and conducted the business till 1881, when Fred. B. Farnsworth was admitted into partnership with him, under the firm name of McLagon Foundry Company. They employ fifty men, and carry on the business of casting and blacksmithing in its several details. The establishment is equipped with the best modern appliances for the work.

The iron foundry of S. H. Barnum, 10 and 12 Whitney avenue, is one of the oldest in the city. It was first occupied by Cyprian Wilcox, in 1832. Since then the following have carried on a similar business at this place: Henry Wilcox, H. B. Bigelow, Twiss, Pratt & Hayes, Bigelow Manufacturing Company, W. T. Scranton & Co., and D. P. Calhoun & Co. In 1875 the firm of Barnum & Root was formed, composed of S. H. Barnum and Charles F. Root, and continued together for ten years. Since then Mr. Barnum has conducted the business alone. Gray iron castings and general foundry work constitute the main trade of this establishment, in which about fifty men are employed. Mr. Barnum has resided in New Haven ever since 1847.

The iron-foundry and pattern works of E. Stannard & Son, 30 to 38 Artisan street, was established in 1864 by E. Stannard & Co., on Grand street. The present works were built in 1865, and cover an

area of 90 by 130 feet. The present firm was organized in 1880, by the admission of L. H. Stannard. The products consist of a general line of foundry work. Patterns and jobbing of every description in iron are executed. This trade is largely local among the manufacturers of the city and vicinity. Employment is furnished to forty men. Mr. Stannard, Sr., has resided in New Haven nearly fifty years.

E. STANNARD.

Essi Stannard, founder of the house of E. Stannard & Son, iron-founders, and long prominent in manufacturing and commercial circles in New Haven, was born in Clinton, Conn., September 5, 1829. His parents were Linus and Harriet (Kelsey) Stannard.

Mr. Stannard's boyhood was passed on his father's farm in Clinton, and the basis of his practical education was obtained in the common schools then in vogue. At the age of sixteen he was apprenticed, to learn the iron-founder's trade, to Russell & Beach, of Chester, Conn. His apprenticeship expired five years later, when he was twenty-one years old, and thereafter he worked steadily at his chosen trade until he established himself in business on his own account.

In the fall of 1840 he came to New Haven, and was for a time employed by Smith & Munson, a well-remembered firm, which has since given place to another equally well-known. Later he was employed, for about a year, in a foundry located in one of the Hudson River towns. Returning to New Haven, he entered the establishment of Cyprian Wilcox, once prominent as judge, manufacturer, citizen and supporter of the Congregational Church, where he remained almost continuously until 1864, during a period of fifteen to twenty years.

In the year last mentioned, Messrs. E. Stannard & Co. established the Stannard foundry, and conducted the business until 1880, when the present firm was organized by the admission of Mr. L. H. Stannard to an interest in the enterprise. The premises of this firm (at 30 to 38 Artisan street) cover an area of 90 by 130 feet, upon which are erected four two-story brick buildings. These are divided into two general departments, a foundry and a pattern shop. The products of the establishment consist of a general line of foundry work, and the firm also make to order all kinds of patterns, and execute jobbing of all kinds in their line. The trade of the house is largely local among the manufacturers of the city and vicinity, but at the same time is somewhat extensive throughout the State. The members of the firm are both thoroughly experienced in all the details of the business and well acquainted with the trade. They stand deservedly high in mercantile circles, and possess the esteem of all with whom their business brings them in contact.

Mr. Stannard is a quiet, unassuming, progressive man of business. While he takes a deep interest in the prosperity of the city, he manifests it in a disinterested way, taking no active part in political

Epi Stannard

contests or public broils. A liberal employer of labor, he has always enjoyed the respect and confidence of his employees.

Of the Congregational faith, he was formerly a member of the Old Third, and is now a member of the Dwight Place Church.

He was married, June 1, 1847, to Naomi Barnes, of New Haven. They have one son, L. H. Stannard, and one daughter, Mrs. D. J. Bristol.

The G. F. Warner Manufacturing Company was founded by the late Gaius F. Warner, in 1848, then occupying a portion of the site on East street where the Company is now located. In 1850 a stock company was formed, under the style of G. F. Warner & Co. This was replaced, in 1879, by the present corporation. The product of the factory consists of all descriptions of malleable and gray iron castings, with a general line of carriage-makers' clamps and stove knobs. The premises cover an area of 200 by 150 feet. About fifty hands are employed, a 30-horse power engine furnishing the necessary power. The officers are Charles S. Leete, President; E. E. Durant, Secretary; and H. Stevens, Treasurer. F. W. Sperry is a foreman in these works.

II. FORGINGS.

Wrought-iron boilers are forged by Bigelow & Company, 92 to 102 River street; F. C. & A. E. Rowland, 413 to 417 Chapel street; and the Automatic Safety Boiler and Engine Company, in the Masonic Temple, Chapel, corner Union street.

Heavy forging by machinery is done by George Maltby & Son, in the rear of McLagon's Foundry, corner of Whitney avenue and Audubon street; A. A. Ball & Son, Audubon street; Beecher & Peck, Lloyd, corner of River street; Charles D. Hall, 90 Brewery street; and Robert Wilson, 99 Temple street.

The hand-forgers, or blacksmiths, in the city are

Alling, Andrew H.,	Mooney, John,
Argall, Joseph,	Mulligan, T. R.,
Bates, R. G.,	Myers, L.,
Brannagan, James F.,	O'Brien, C. M.,
Brown, James,	Palmer & Bishop,
Connelly & Bohan,	Palmer, N. M.,
Harris, Spencer B.,	Savage, Alden, Jr.,
Haven, Joseph T.,	Simpson, John N.,
Johnson, Lyman H.,	Sullivan, Dennis J. & Son,
McDermott, Patrick,	Tynan, John.
McGuire, H. & M.,	

The above-named make a specialty of horse-shoeing.

Other blacksmiths are

Ball, A. A. & Son,	Jilson, E. F.,
Beach & Laden,	Lichtenstein, C.,
Beecher & Peck,	Maltby, George & Son,
Burns, J. W.,	Morris', Isbell, Sons,
Bush, John A.,	Munz, John G.,
Condon, John,	Seibold, William,
Fitzgerald, James,	Shiner, S. & Son,
Gesner, G. A.,	Smedley Brothers & Co.,
Gesner, S.,	Spargo Brothers,
Hall, Charles D.,	Wallbridge, King,
Hanly, William,	Weiss, Jacob,
Hogan, John,	Williams, John R.,
Hull, Silas,	Wilson, Robert.

Of these Charles D. Hall makes a specialty of ironing vessels and oyster-dredges.

III. ROLLED IRON.

The New Haven Rolling Mill Company was organized in 1871. Their works are situated on Mill River, between Grand and Chapel streets. From scrap iron they manufacture a high grade of refined and charcoal iron to be made into bolts and screws. About one hundred and fifty men are employed. Their business is of considerable importance to the land-owners of North Branford and the surrounding district, from which they receive about a thousand bushels of charcoal per day. The officers are H. M. Welch, President; P. N. Welch, Treasurer; E. S. Wheeler, Secretary; and C. S. Poronto, Superintendent.

IV. STEAM ENGINES.

John W. Bishop, now a dealer in real estate, began the manufacture of steam engines in New Haven in 1845. He is the inventor of an automatic fire extinguisher and of various devices for steam engines. Several years ago Mr. Bishop retired from manufacturing and devoted himself exclusively to real estate.

The Bigelow Company, F. C. & A. E. Rowland, and the Automatic Safety Boiler and Engine Company manufacture steam engines as well as boilers. D. Frisbie & Co., Ashmun, corner of Gregory street; F. D. Buttricks, 25 Whitney avenue; Sanford, Clark & Lacey, South Front street; and M. W. Twiss, 25 Whitney avenue, are engine-builders. Several of these firms have specialties. The engines built by the Bigelow Company are noted for their superior finish, and some of them are of great power.

H. B. Bigelow began the manufacture of steam engines in a limited way on Temple street, where Barnum & Root are now located, in 1860. He continued the business alone for nearly a year, when Henry Elson became a partner, under the firm name of H. B. Bigelow & Co. During the later years of the Civil War, they manufactured some fire-arms, continuing with it the boiler and engine-making. In 1869 they moved to River street, known locally as Grape-vine Point, where a new frame factory, 100 by 50 feet, had been built. In June, 1873, it was burned, with a large part of the machinery and implements. It was rebuilt during the year on a large scale, and new machinery of the most improved character put in. In 1878, George S. Barnum was received into the firm, the style still remaining H. B. Bigelow & Co. In 1883 a stock company was formed, under the style of the Bigelow Company, with a capital of \$60,000. About one hundred men are employed. The premises cover about three acres of land, upon which a brick addition was put up, 300 by 100 feet, in 1884. The old frame factory faces River street, with a frontage of 200 feet. Store-houses are located on the north side of the street. While the Company manufacture stationary steam engines, their special work is boiler-

making. They have a wide reputation, and their trade extends throughout the United States, Canada, and foreign countries. The present officers are H. B. Bigelow, President; Henry Elsen, Vice-President; George S. Barnum, Treasurer; and Frank L. Bigelow, Secretary. Frank H. Elsen is Superintendent; George W. Bigelow, Machinist and Contractor; and Charles H. Barrett, Foreman.

The Rowlands not only make horizontal engines of all sizes, but specialties are the Rowland vertical and yacht engines, adapted for use in stores, factories, printing offices, running elevators, work on farms or plantations, and steam launches. About forty men are employed. The plant of this firm was occupied from 1864 to 1872 by M. & T. Sault, engineers and machinists, and from 1872 to 1877 by the Yale Iron-works.

Frisbie & Co. make a specialty of hoisting engines. The firm consists of D. Frisbie, William H. Frisbie, S. H. Barnum, James B. Scranton, and C. F. Root. Their office and sales-room are in Philadelphia, under the charge of D. Frisbie. William Frisbie is manager of the works. The firm began work in 1870 at Grape-vine Point, and has reached its present fine accommodations after several removals.

Both the engine-builders at 25 Whitney avenue make vertical and yacht engines. Each makes a specialty of the Twiss automatic, cut-off engine, whose general design is of the Corliss type, without so much complication.

Sanford, Clark & Lacey, South Front street, produce marine and stationary engines.

V. MACHINERY AND TOOLS.

Some of the principal machinists of New Haven are John Adt & Son, River street; The Barnes Tool Company, Grand street; Beecher & Peck, Lloyd street; M. Beers, Whitney avenue; R. H. Brown & Co., Ashmun street; F. D. Butricks, Whitney avenue; F. Caffrey & Co., Artisan street; F. C. Cannon, rear of 45 Orange street; Fiskett & Bishop, Grand street; D. Frisbie & Co., Ashmun street; G. M. Griswold, St. John street; Herrick & Cowell, Artisan street; Hoggson & Pettis, Court street; George D. Lambert, Artisan street; J. P. Lavigne, Artisan street; Charles F. McGill, River street; The National Manufacturing Company, Whitney avenue; F. P. Pflegar, Crown street; Wallace Porter, Artisan street; F. C. & A. E. Rowland, Chapel street; Sanford, Clark & Lacey, South Front street; H. E. Smith, Artisan street; Henry G. Thompson & Son, Elm street; Nelson W. Twiss, Whitney avenue; Van Winkle & Schmitt, East street. Some of these firms confine themselves to specialties, others are ready to build any machines which may be ordered.

John Adt & Son make a specialty of tools and machines for wire-working and hardware manufacturing, including automatic wire-straightening and cutting machines, automatic barbed-staple machines, cold-roll pointing machine, automatic shear-point staple machine, elastic blow riveting machine, automatic wire-forming machine, semi-

automatic butt and hardware drilling machine, adjustable drilling and counter-sinking machine, and many other appliances. All the machines manufactured by this firm have been invented or improved by Mr. Adt, and he holds thirty-five distinct patents. He commenced business in Artisan street in 1871, and removed to River street in 1882. His son, George W., became a partner in 1883.

The Barnes Tool Company make saw machines, pipe-cutters, and a general line of plumbers' tools, some of which are protected by patents. Twelve men are employed. This business is the continuation of that established by E. F. & G. C. Barnes in Fair Haven. S. C. Strickland was also for a time one of the proprietors. It came under the management of the present owner, E. F. Barnes, in 1883.

Beecher & Peck are manufacturers of drop presses and dies for the manufacture of hardware, cutlery, gun parts, spoons, forks, silver-ware, lamps, lanterns, tin-ware, and so forth.

The house of Beecher & Peck was founded by Milo Peck in 1850. With the progress of manufactures throughout the country, and the increasing use of steam for driving heavy machinery, this business increased in volume and improved in the character of the work produced. One of the most important patents they hold is Peck's patent drop press. They make more than one hundred different patterns of drop hammers, ranging from 25 to 2,500 pounds in weight. The present members are Henry M. Beecher and George W. Peck.

The firm of F. Caffrey & Co., consists of Francis Caffrey and Squire Robinson. They do a general line of machinists' work, make dies, punches, and especially a hand wire-cutting machine invented by Squire Robinson.

F. C. Cannon commenced the manufacture of fine tools, shafting, special machinery, and wrought-steel pulleys, in 1884, in the rear of 45 Orange street. He employs seven hands.

D. Frisbie & Co. make a specialty of elevators and other hoisting apparatus in connection with their hoisting engines.

George M. Griswold commenced the manufacture of special machinery, dies, and tools in St. John street in 1876. He is the patentee of several articles in his line, of which he is the sole manufacturer, and employs fifteen skilled mechanics.

Herrick & Cowell are manufacturers of special machinery, drill presses, and hand lathes. Their establishment is equipped with the latest improved machinery and tools, and they own several valuable patents. Among them are their noted lever and spindle drills, of which they make several sizes, hollow spindle hand lathes, power presses, and machinery for electrotyping, and making clocks, forks and spoons. Fifteen skilled mechanics are employed in this shop.

Hoggson & Pettis, or rather the firm which bears that name, commenced business with the making of stencils and stamps, but have enlarged it till it now has a wide scope.

Mr. S. J. Hoggson had a small shop in Union street as long ago as 1849. In 1882 a stock com-

pany was formed under the title of the Hoggson & Pettis Manufacturing Company, and, in 1883, their three-story factory on Court street fronting Artisan was erected. The business in which Mr. Hoggson first started is still pursued, but the Company have so added to its scope that they may be said to do all kinds of work in making dies for cutting, forming, trimming, and pressing sheet metal. Their field includes also dies for cutting boots, shoes, cloth, leather, paper and rubber goods. The enameling of paper, a process secured by patents owned by the Company, is another branch of their work. In the manufacture of organ stops, knobs and stems, they are perhaps more extensively engaged than any other firm in the world. The manufacture of the Sweetland chuck has lately been added. The officers are S. J. Hoggson, President; George C. Pettis, Treasurer; and W. J. Hoggson, Secretary.

G. D. Lambert, who has occupied his present place of business since 1866, employs six men in making patterns and special machinery.

In 1877, H. B. Ostrum, who had secured a patent on a box-nailing machine, commenced the manufacture of these machines, which are especially adapted for the use of manufacturers of cigar and other light boxes. Mr. Ostrum died in 1884, since which time his son, Henry W., has carried on the business at 39 Artisan street. From forty to fifty machines are made yearly.

The machine-shop of Frank P. Pflgar, 74 Crown street, was established in 1864 by the present proprietor and William Schoolhorn, in the Stafford building on State street. They remained together for four years, when Mr. Pflgar commenced business alone at 18 Audubon street. Since then he has moved to three different locations. Mr. Pflgar makes a specialty of special tools and light hardware, and does a general line of metal machinery work. He employs eighty-five mechanics.

Wallace Porter manufactures Porter's improved planer chuck.

Hobart E. Smith began the manufacture of shafts, pulleys and hangers in 1876. His factory in Artisan street is well equipped with the best inventions for his work. The split pulley, an invention of Mr. Smith's, is a specialty of this establishment.

Henry G. Thompson & Son make book-stitching machinery, flexible-backed saws, and malleable iron tool handles. This firm removed to New Haven from Milford in 1884. Most of their work is done under patents obtained by members of the firm. They employ thirty to forty operatives.

Nelson W. Twiss is the proprietor of a patented steam engine, which he manufactures.

Van Winkle & Schmidt make a specialty of printing presses.

In 1882, H. B. Bigelow, M. F. Tyler, George D. Martin, and A. G. Hornstein, formed a company, known as the Pipe-Bending Company, and continued operations one year, when it was re-organized as a stock company, with a capital of \$20,000, known as the National Pipe-Bending Company. This is the only concern of the kind in New Haven. Its work is confined to bending iron,

brass, and copper pipe, and the manufacture of the National feed-water heater. Eight mechanics are employed. The factory is located on River, near Lloyd street. The officers of the Company are Simeon J. Fox, President and Treasurer, and M. F. Tyler, Secretary.

The Wetmore Machine Company was established in 1868, under the firm name of A. R. Paine & Co., and in 1875 changed its style to that given above. The specialty of the company was the manufacture of the American submerged pump. They made also a book-sewing machine, and did a general business in making machines and tools. The firm passed out of existence in 1883.

The Yale Iron-works was a joint stock company, founded in 1868. The interest was purchased by William B. Pardee in 1874. A specialty was made of flour and grain mills of various sizes, adapted to a large range of demand. The firm of F. C. & A. E. Rowland have succeeded to the ownership of this establishment.

The Mansfield Elastic Frog Company was organized in 1865. The workshops are on Congress avenue, divided into forging, blacksmithing, grinding, polishing and finishing departments, in which about fifty skillful and experienced mechanics are employed. The Company produce three distinct classes of goods, viz.: edge tools, railroad appliances, and steel and iron forgings. It has a capital of \$125,000. The officers are Daniel S. Glenney, President, and W. F. Norman, Secretary and Manager.

W. L. Sweetland began the manufacture of a patent chuck of his own invention in 1880. It had a wide and favorable reputation among machinists. In 1883 the business was removed to Wallingford. About a year thereafter the factory was destroyed by fire. Mr. Sweetland, who had meanwhile formed a stock company, returned to New Haven, but the venture did not prove a success, and the Company failed in 1885. The chuck is now made by Hoggson & Pettis.

The New Haven Manufacturing Company was founded in 1850, and was incorporated two years later. It is therefore one of the oldest in its line of manufactures in New England. The line is machinists' tools, iron planers, engine lathes, drills, bolt and gear cutters. Nearly \$300,000 worth of goods are made annually. The factory is on Whitney avenue, near the junction of Church and Temple streets, the office being at No. 80 on the west side. The establishment employs one hundred men, the machinery being driven by an engine of 60-horse power. Most of the machinery is made under patents owned by the Company. Their trade extends over nearly every portion of the world. The officers are B. A. Brown, President; L. Moulthrop, Secretary; Alexander Thayer, Superintendent.

VI. SAFES AND VAULTS.

Messrs. S. C. Johnson & Co. commenced operation in the manufacture of iron-work for buildings, bridges, etc., in 1871, and continued the business till 1881, when the Yale Manufacturing

Company was incorporated and succeeded the old firm. The plant was divided into five general departments, viz.: the foundry, the forging, the blacksmithing, the bridge and general iron-working, and the safe department. In the latter, safes, vaults and vault doors were produced. They were the only house in that branch in Connecticut, though Thompson & Co. are large dealers in the same class of goods, which they manufacture elsewhere. At present the Yale Company has suspended operations.

The firm of Thompson & Co. was founded in 1855. They occupy for offices, sales-room and finishing apartments, a building on the corner of State and Wooster streets. Their safes are made under patents owned by them. The individual members are D. W. Thompson and E. E. Cone, the former of whom has been a resident of New Haven for the past forty years.

VII. ARCHITECTURAL IRON-WORK.

Within a few years the demand for iron-work in buildings has greatly increased. The foundries furnish trusses and joints of cast-iron, and a new department of smithing has been organized for the manufacture of railings, balconies, fire-escapes and stairways.

A. A. Ball & Son make all kinds of iron-work for public buildings, prisons, etc.

Their business was founded, in 1847, by Charles Ball, a brother of the present senior member of the firm. In 1860, A. A. Ball became a partner with his brother. This arrangement continued till the death of Charles Ball in 1864, when the works came under the management of Blakeman & Latham, who were succeeded by Ball, Johnson & Co. Later, D. B. Calhoun & Co., and still later, Barnum & Root were proprietors. In 1878, A. A. Ball became sole owner, having been either manager or part owner since 1860. At the same time the establishment, which had already changed quarters several times, was once more removed, to find a permanent place at 16 Audubon street. The factory consists of a brick building, 45 by 90 feet in dimensions, which is divided into the blacksmith and railing shops. It is equipped with an engine of 5-horse power, and machinery of the most improved patterns. The products comprise iron columns, crestring, grates, doors, stairs, shutters, balconies, fire-proof vaults, girders, illuminated tiles, all kinds of iron-work for prisons and public buildings, bridge and truss bolts, as well as all kinds of iron fences and railings. About fourteen men are employed. In 1882, Augustus A. Ball, Jr., became a partner in the concern, under the present firm name. Charles Ball was one of the pioneers in this line of business.

VIII. CUTLERY.

W. Rawson & Sons are manufacturers of fine pocket cutlery at 357 Whalley avenue. James Rawson, the founder of the establishment, was born in Sheffield, England, in the year 1817. He came to this country in 1843, and, returning to

England in 1844, brought over his father and three brothers. With them he established a manufactory of pocket cutlery in Birmingham, Conn., in 1846. In 1853 he removed to New Haven, where the business has been since then carried on. He was quick, intelligent, and persevering. By means of these qualities he eventually overcame the great prejudice against American cutlery, and gained a high reputation for his goods. He died December 1, 1883, since which time the business has been carried on by J. F. Rawson.

William Schoolhorn & Co. manufacture scissors, shears and other cutlery, as well as tools and hardware, at the corner of State and Wall street, in the Henry Hooker building. Frank W. Tiesing was a member of the firm from 1880 till his death in 1883. It was continued in the same firm name till 1884, when Mrs. Tiesing sold her interest to Julius Berbecker. Over seventy men are employed. Mr. Schoolhorn came from New York to Whitneyville in 1858, where he was employed by the Whitney Arms Company until 1863, when he established this business. The cutlery made is stamped with a star as their trade mark.

Besides the manufactories mentioned, there are two custom shops for miscellaneous cutlery. August A. Halfinger, 123 Union street, has been long established. Ernest Voos has recently commenced the business in Court street.

The Mansfield Elastic Frog Company, 356 Congress avenue, make some heavy edge-tools, such as axes, drawing-knives and chisels.

IX. FILES.

The Bee-hive File Works, at 191 Olive street, is the oldest file and rasp manufactory in the State, having been established by Benjamin Bromhead in 1831. Henry Chambers, the present proprietor, worked for Mr. Bromhead for many years, and purchased the business in 1864. Ten persons are employed. The files are all hand-made.

William Jepson is the proprietor of the Elm City File Works on State street.

Matthew Flannagan is the proprietor of the Champion File Works. He began at 352 State street in 1864, and removed to his present place, 181 Brewery street, in 1866. He manufactures files of every description, but makes a specialty of certain kinds used in carriage-making. Eight men are employed.

X. STAPLES, BOLTS, NUTS, SCREWS AND NAILS.

Reynolds & Co. make a specialty of manufacturing screws, bolts, nuts and washers. It is a joint stock organization with a capital of \$28,000, and was formed in 1867. The factory is on East street, and employs about twenty-five persons. The officers of the Company are Henry Reynolds, President; W. H. Reynolds, Secretary; James English, Treasurer.

HENRY REYNOLDS,

long conspicuous as a manufacturer and business man of New Haven, is a son of Stephen and Sybil

H. Reynolds

(Vinton) Reynolds, and was born in Southbridge, Mass., March 16, 1824. His father was a blacksmith, and, later, a manufacturer of scythes, hoes, and other such articles in demand among the people with whom he lived. He was an honest man and a reputable citizen.

But he was not wealthy, and Mr. Reynolds began his active life without capital or influential backing, equipped with such a rudimentary education as he was able to gain in the common schools of Southbridge and Wilbraham, to which place his father moved when he was nine years old. His natural bent was for mechanics, and he early set about acquiring a practical knowledge of mechanical engineering, finishing his apprenticeship with Otis Tufts, a once celebrated mechanical engineer, of Boston.

Later, Mr. Reynolds was employed by Mr. Tufts continuously, in one responsible position after another, till 1848. In February of that year he removed to Springfield, Mass., and connected himself with the American Machine Works, of which he was part proprietor and superintendent until 1861. Under his supervision were built all the engines ever constructed by the Company, including a large engine in the water-works of the City of Columbia, S. C., and another in the United States Branch Mint at New Orleans, La., Mr. Reynolds personally overseeing the erection of both these and many others.

The business of the American Machine Company was largely in the South, and at the outbreak of the Civil War, in common with many others, it was so seriously crippled that a change of base was deemed expedient, and the manufacture of fire-arms was begun.

In 1861, Mr. Reynolds disposed of his interest in the American Machine Company and removed to New Haven, and became interested in the Plants Manufacturing Company (a joint stock concern), and engaged in the manufacture for the Government of pistols and gun parts, making a specialty of the Reynolds, Plants & Hotchkiss revolver, of which two sizes were made. This business was continued till December 8, 1866, when the factory was burned. At that time the Company were turning out an average of sixty revolvers per day.

In May, 1867, the present business of Mr. Reynolds was established by Reynolds & Bigelow (Henry Reynolds and H. B. Bigelow), and it was soon sold to Reynolds & Company, a stock company, of which the following named gentlemen are the executive officers: Henry Reynolds, President and Manager; William H. Reynolds, Secretary; James English, Treasurer; and George F. Reynolds, Superintendent. The business was started with the design of manufacturing screws which should be standards of excellence, and the success of Mr. Reynolds and his associates in carrying out their intentions is attested by the popularity which their goods have attained, and the steady increase in their business, which has obliged them to make frequent large additions to their facilities. Started with one screw-machine, many are now in use, and the factory gives employment to 150 skilled men.

The premises comprise several brick buildings, having an aggregate floor surface of about forty thousand square feet. The factory is equipped with the latest improved machinery and tools, operated by a 75-horse power engine. The product of these works comprises all kinds of set, cap and machine screws, machine bolts, bridge and roof bolts, coach screws, nuts and washers. The Company also manufacture molding machines for metal castings in three different sizes, known respectively as the Eames, Reynolds, and Hammer machines. Though on the market only about fourteen years, there are over five thousand of them in use to-day in different parts of the country.

The great success of the enterprise above mentioned is attributable no less to the practical mechanical skill of Mr. Reynolds, than to the able business management of himself and associates. It is true of him (and of many manufacturers it cannot be said), that he is personally able to do quickly and skillfully any work required of any mechanic in his employ, for he learned his trade when men acquired the whole and did not content themselves with learning portions of it. It is a distinction which he enjoys, that he was the first in the United States to make steel and iron set and cap screws for the trade; and the first piano agraffe screws in America were made by him.

Mr. Reynolds was married to Martha A. Shearer, of Colerain, Mass., June 10, 1847. She died March 26, 1850. Some time later, Mr. Reynolds married Nancy H. Wheeler, of Springfield, Mass. He has two sons, William Henry, born in 1853, and George Francis, born in 1856.

Politically he is a Democrat, and has been one from his youth. While adhering firmly to the principles of that party in all questions of national import, he is liberal in his views, and in municipal offices is in favor of the election of the man who bids fair to be the best official.

He has been for many years a member of St. Thomas' Episcopal Church, upon the services of which he and his family are attendants.

He has long been prominent as a Mason, being a member of Hiram Lodge, No. 1; Franklin Chapter, No. 2; Harmony Council, No. 8; and New Haven Commandery, No. 2; also E. G. Storer Lodge of Perfection; Elm City Council Princes of Jerusalem; New Haven Chapter Rose Croix H-R-D-M; Lafayette Consistory, S. O. P. R. S. 32°.

Since taking up his residence in New Haven he has never consented to accept any position of public trust, but while living in Springfield he served his fellow-citizens as Alderman and Councilman, and in other capacities.

He is public-spirited, and has always done his full share in the upbuilding of the best interests of the community—charitable, educational and religious. He is a conspicuous example of New Haven's self-made men.

The Grilley Company, 76 Court street, manufacture round and flat head brass and silver patent capped gimlet screws, and nickel-plated screws.

The New Haven Staple Works were established

in 1871 by Messrs. S. S. Bushnell & Co. The product is patent wrought-iron staples, drawn from a continuous length of Welsh iron. Messrs. Bushnell & Co. continued the business as a firm until 1878, when S. S. Bushnell became sole proprietor.

The New Haven Horse-nail Company was organized in 1881, with Hon. H. B. Bigelow as President, and C. S. Mersick as Secretary and Treasurer. New buildings have been erected at Grape-vine Point, fitted with all necessary machinery. The specialty of the Company is the forging of nails from Norway iron. The capital is \$20,000.

About twenty-five years ago, Timothy Kennedy began the manufacture of bolts at Mount Carmel, and continued the business in a limited way until 1880, when the Mount Carmel Bolt Company was organized and purchased the concern. They enlarged the buildings and added the latest improved machinery and appliances for the manufacture of small bolts, rivets, screws, and nuts. Tile and stove bolts form an important part of their work. They are largely used by most of the stove manufacturers of the country. Nuts are made by machinery owned by the Company, and invented by Edward P. McLane, the Master Mechanic of the works. Their trade extends all over the United States and abroad. No concern in this country engaged in the same line, excels the Mount Carmel Bolt Company in the quantity of their manufactured goods. The factory comprises a compact brick building, covering half an acre of ground. The automatic machinery employed is driven by steam power, and work is furnished to thirty operatives. The capital stock is \$40,000. The executive officers are James Ives, President, a gentleman largely interested in various enterprises at Mount Carmel; Samuel J. Hayes, Treasurer; and Lyman H. Bassett, Secretary.

XI. WIRE AND WIRE-WORK.

E. S. Wheeler & Co., who do an extensive shipping and importing business in iron and other metals, and are largely interested in the New Haven Rolling Mill Company, are also stockholders in the New Haven Wire Company, whose extensive works, on the east side of the Quinnipiac River, have been in operation under their present ownership about five years. They employ about four hundred men, and the value of their turn-out is over \$1,000,000 per annum. The Company is specially chartered by the State Legislature, and is consequently enabled to do business in foreign countries to better advantage than if organized under a general law. They make iron and steel wire of all qualities; but largely a high grade for use in manufacturing throughout New England. The material used at present is chiefly of foreign importation, and the duties paid by these works into the New Haven Custom House form a large share of the entire receipts of the port of New Haven. The officers are E. S. Wheeler, President; S. A. Galpin, Secretary; B. E. Brown, Treasurer; and Thomas A. Nevins, Superintendent.

The Union Form Company, 129 to 131 Park street, takes its name from those adjustable figures of wire on which costumes are displayed. But they manufacture not only Knapp's adjustable figures and display forms, but a great variety of wire goods, such as office and counter railings, window-guards, riddles, screens, and fenders. It was organized in 1883 by Charles L. and William H. Knapp. In March, 1885, the Company purchased the business of the Connecticut Wire-works, organized in 1872 by Samuel Parker & Co. By the union of these companies the scope of the business has been much enlarged.

JAPAN AND VARNISH MANUFACTURERS.

The New Haven Japan and Varnish Company was organized January 20, 1881, the corporate members being John S. Fleury, Henry C. Shelton, and Carlos Smith. The Company soon after its organization built very finely equipped works on Kimberly avenue, on the banks of West River. The business has constantly increased. They manufacture fine varnishes, baking japans and lacquers, and have an extensive trade throughout the country. The officers are Carlos Smith, President; and John S. Fleury, Secretary, Treasurer, and Superintendent.

The varnish factory of Booth & Law was founded, in 1825, by Booth & Bromham for the purpose of prosecuting the drug and paint trade and varnish manufacturing. The firm was afterwards changed to N. Booth & Sons, and, in 1858, to Booth & Law, which now consists of Lyman M. Law, Walter B. Law, and George F. Andrews. They represent one of the oldest varnish manufacturing concerns in the country. Their factory is at the corner of Water and Olive streets, and besides the manufacture of varnish, they do an extensive trade in oils, glass and paints.

LEATHER-WORKERS.

The business of tanning and currying hides to leather, and the manufacture of boots and shoes, were formerly important industries in New Haven, but from various causes have now almost entirely ceased to exist. An old map of New Haven, published in 1748, giving the residence and occupation of the inhabitants of the town at that time, shows two tanners on George street above Church. They were David Gilbert and David Gilbert, Jr. The same map shows "Jo Todd" as a shoemaker at the corner of State and Chapel streets, and "Jo Mills" also on State street, about half-way from Chapel to George streets. The favorite, because the most advantageous, location for tanners in the earlier days, was in the vicinity of Lower George street, Congress avenue, and Factory street. The latter street was, until recent years, known as Morocco lane, and that section of George street boasted of a local sobriquet of "Leather lane," the whole section being known as "The Swamp." It was favorable for tanning, from the fact that a brook, or creek, affected by the tide, extended

from the harbor as far up as York street. The growth of the city caused this creek to be gradually filled up, so that now there are no traces of it. Along this brook, or creek, were clustered, with but one exception, the tanning and currying establishments of the city. We have already noticed that as early as 1748 the two Gilberts, father and son, were located on George street.

In the early years of the present century, Elijah Davis had a tannery at the corner of Broad and Oak streets. The vats were taken up and filled about forty years ago. Mr. Davis lived on the corner of George and College streets, and had his currying shop and office where Mrs. A. Arvine now lives, at 8 College street.

Isaac Gilbert & Sons, Elias and Levi, were located on George street, where, besides tanning and currying, they kept a general store for the sale of leather. Their bark-mill, the firm grinding its own bark, was at this place. Upon the death of the father and son Elias, Levi still continued the business, having associated with him at one time Sylvester Smith, now President of the new Haven Baking Company.

John Dwight, known familiarly as "Johnny Dwight," had a morocco tannery between State and Union streets, and between Chapel and Court streets, near what is now the Northampton Railroad track, it being then the bed of a creek, from whence he took water necessary for the work. Adjoining Mr. Dwight's tannery on the south was a small institution belonging to David Spencer.

Elijah Gilbert, a brother of Isaac, was at this time located on a small lane leading from the south side of George street, just west of Factory street. He was a "morocco man" in distinction from the tanners of hides.

Fitch & Gore were located, in 1817, on Congress avenue, near the corner of Commerce street. They failed about that time, and Thomas Ensign, who was then at work for them, formed a partnership with Jeremiah Barnett, under the firm name of Barnett & Ensign.

Samuel Mason & Son assumed the old stand of Fitch & Gore, and conducted the business for some years, until the death of Mr. Mason, Sr.

Barnett & Ensign, in 1818, began business in what is now Factory street, where they remained several years, when a small brick tannery was built on George street where Barnett's factory now is. This factory was burned in 1856, when the present building was put up. Barnett & Ensign dissolved partnership in 1839, and each began business for himself, Mr. Barnett remaining at the old stand, and Mr. Ensign building a factory at the corner of Factory and Commerce streets, still used as the warehouse of Thomas W. Ensign. The office used by Mr. Ensign on George street was opened in 1855. Thomas Horsfall was associated with Thomas Ensign for a number of years, after which Mr. Ensign's son, Thomas W., became a member of the firm. In recent years, however, this house have finished no skins, simply buying and selling hides.

Jeremiah Barnett continued at his old stand on George street, and his son, the present proprietor,

became associated with him in 1845. Mr. Barnett still continues to buy and sell hides, but does no finishing. Harris Eames began on George street, and upon the death of Mr. Eames, in 1883, Messrs. Coe & Brown assumed the business, and are now the only curriers in the city. The product of these tanneries of the earlier years was disposed of largely to manufacturers of boots and shoes in the surrounding towns. Matthew Brockett, of North Haven, recently deceased, made weekly trips to this city, returning with an ox-cart load of leather for the manufacturers in that section of the county.

Major B. Grannis was one of the earlier manufacturers of boots and shoes, and was succeeded by his sons Charles and George, the factory being on George street, near State. The Grannises, who were then among the largest manufacturers of shoes in the county, afterward removed to New York.

George K. Whiting and Albert S. Mix began manufacturing shoes in a building where the Connecticut Savings Bank now stands, on Church street, in 1838, under the firm name of Whiting & Mix. The firm remained at the above place for sixteen years, having opened a store at Macon, Ga., for which they manufactured goods. In 1854 the firm dissolved, and Mr. Whiting conducted the business in the Exchange Building on Chapel street, and from thence went to Broadway, where he manufactured shoes for six years.

Silas I. Baldwin conducted the business for many years at the corner of Crown and College streets, the place afterwards occupied by his residence. Bristol & Hall carried on the shoe business for a number of years where Fenn's shoe store on Chapel street now is. E. Chidsey; Charles and George Bradley, known by the firm name of Bradley Brothers; Samuel Crane; James Punderford; Elizur Gorham, and in more recent years, Morris Tyler, were among the prominent shoe manufacturers of the olden time. The business was then a large interest in New Haven, but now in comparison with what it once was, is nearly extinct.

J. L. Joyce & Co., and Charles E. Hull, now manufacture some kinds of shoes on State street; who, outside of the Candee Rubber Company, mentioned in another place, are the only firm left to continue this once large interest.

J. B. Baldwin continues the sale of leather and findings to the trade, and Messrs. Butler & Tyler are the only remaining wholesale dealers in boots and shoes.

HARNESSES.

On page 83 of this volume there appears a plan of Chapel street, from Church to State streets, in 1786, showing the residences and places of business in what is now the center of retail trade. Near the site of what is now known as the Old Register Building, G. Read had a residence and saddlery. Saddles at that time were a more important item among the productions of a leather-worker than harnesses. From Mr. Read, Charles Bostwick, the first of several generations of saddlers and harness-makers—a representative of the family still continuing in the

business—learned his trade towards the close of the last century.

Mr. Bostwick began business for himself in "a shop opposite the Church in New Haven." His advertisement is in the *Connecticut Journal* of November 6, 1794. He soon removed to a small building near where Wallace Fenn's shoe store now is, on the south side of Chapel street. Afterwards Charles Bostwick had associated with him, his son Charles, who conducted alone the business from 1823. The great fire of 1837 having destroyed the shop, the saddlery was removed to the north side of the street, and occupied the same place where the first Charles Bostwick learned the trade. Later, John, a son of the second Charles Bostwick, pursued the business until 1870. Leonard Bostwick, at the present time the largest harness-maker in the city, a cousin of John Bostwick, began business in 1879 on the corner of Crown and Orange streets, where he still continues. At the Bostwick house many of the saddlers and harness manufacturers of the past two generations learned their trade.

Sackett Gilbert & Co. were extensive manufacturers of riding saddles half a century ago, their place of business being on Crown street just above High street. Atwater & Bassett were manufacturers at one time on State street, corner of Wall, and did an extensive business. D. A. Benjamin, for years foreman for Sackett Gilbert & Co., was afterwards in business for himself. Thomas Cumming manufactured harness on Park street, and Cumming Brothers, in the Exchange Building, were well known men in the trade.

Owen Morris, now on Brewery street, is one of the oldest in the trade. At the present time there are thirty manufacturers of harness in the city, many of them employing but one hand at most. Those employing more than one are Theodore Blackman, 430 State street; George I. Cummings, 98 Orange street; Frank H. Cummings, 62 Orange street. Henry Smith makes a specialty of collars at 183 Brewery and John Brown at 75 George street.

In former times trunk-making was a branch of the harness and saddlery business, and a catalogue of the trunk-makers of fifty years ago would only repeat the names of the harness-makers. Most of the trunks of to-day are manufactured in large shops for the wholesale trade.

Crofut & Co., 719 Chapel street, have in their employ the only trunk-maker in the State, and the firm manufacture some special orders.

The increase in the use of machinery has occasioned the establishment of a new branch of the leather business, large quantities of belting being required. Messrs. H. Eames & Co. give special attention to the manufacture of belting.

Much leather is at the present time used in carriage trimming, as will be apparent in the report of the business of carriage-making.

J. L. Joyce & Co. commenced the manufacture of boots and shoes in 1857, on Church street. In 1861 the business was removed to 265 State street, where it was conducted for twenty-four years. The firm recently removed to the fourth floor of the

Quinnipiac Building on State street. Until the last two years a general line of men's, women's, and children's machine boots and shoes were made, but within the period stated the business has been entirely devoted to a fine grade of men's hand-sewed boots. About seventy-five men and women are employed. The individual members of the firm are J. L. Joyce and Charles E. Hall, the former of whom is the founder of the firm. Mr. Hall has been connected with the firm as partner for the last fourteen years, and previously as book-keeper.

LOCK MAKERS.

The manufacture of locks in the United States is conducted principally by companies in New England, and is an industry which has been developed within the last fifty years. The lock works of the Mallory-Wheeler Company of this city, one of the best known and largest in the world, was founded in 1834 by Asahel Pierpont and John G. Hotchkiss, who began the manufacture of locks and door-knobs on the corner of Greene and Chestnut streets, under the firm name of Pierpont & Hotchkiss. They may justly be regarded as the pioneers of the industry in this country. At this time American locks of any kind were hardly recognized as an article of hardware trade. The American market, with the exception of the most common hand-made goods, was dependent on foreign production.

In 1840, Burton Mallory, whose name grew to be so prominently identified with lock manufacturing in America, became connected with the firm of Pierpont & Hotchkiss as book-keeper, at which date only twenty-five men were employed, nor could it be said the products of the house extended beyond the local market.

Mr. Hotchkiss, who was the patentee of the mineral door-knob, now so generally and extensively used, died in 1843, when Mr. Mallory became a partner in the business, under the firm name of Pierpont, Mallory & Co. From this period began the rapid growth of the business, which eventually was not only without important American competition, but successfully competed with the large lock manufacturing establishments of Europe. In 1845, the shop on the corner of Greene and Chestnut streets was partially destroyed by fire, but such was the enterprise displayed by the firm that in four or five days manufacturing was resumed. Shortly after the fire the business had grown to such dimensions that removal to larger quarters was made necessary. At this time the firm bought a part of the property at the foot of Greene street, where the firm's works are now located. That part of the city was then known as the "Old Liberia," a name applied to a collection of shanties occupied by colored people. To this site one of their buildings at the old place, which had escaped the flames, was removed, and it is still used, being the large and slightly frame building formerly occupied for packing purposes. Other brick buildings were also erected, which are now known as the "old part." The firm soon after purchased considerable adjoining property, upon which buildings were erected as

W. Brewster

fast as needed to meet the demand of their fast-growing business. For a number of years preceding 1852, most of the goods of the firm of Pierpont & Mallory were sold by the firm of Davenport & Quincy, of New York. At the date mentioned Mr. Pierpont retired from business, his interest being purchased by Mr. Mallory and John A. Davenport, the latter of the New York firm of Davenport & Quincy, and for some time the business was conducted under the firm name of Davenport & Mallory. In the few succeeding years the firm was successively Davenport, Mallory & Lockwood, Davenport & Mallory, and Davenport, Mallory & Co. The firm remained the same until 1868, after the death of Mr. Davenport. Preceding the death of Mr. Davenport, there had been a large purchase of land on the west side of the railroad track. A foundry was erected adjoining the railroad, and a large shop for the manufacture of padlocks on East street. Up to this period the manufacture of door-knobs and locks had constituted the principal part of the work. The addition of the padlock department was a new feature, which soon developed into an important part of their manufactures, and has since grown to immense proportions. After the death of Mr. Davenport the firm became Mallory, Wheeler & Co., composed of Burton Mallory, John D. Wheeler, a grandson of Mr. Davenport, and Frederick B. Mallory, eldest son of Burton Mallory. In 1878, Burton Mallory died. For over a quarter of a century he had been the controlling spirit of the concern, and his name will ever be closely associated with the development of this important branch of American manufactures. Under his management he had seen the business grow from a small beginning, with limited resources, until it became known and respected all over the world for the excellence of its products and as the greatest lock factory in America. In 1871, he was the originator of the most remarkable catalogue ever issued as the advertising circular of a manufacturing house, a marvel of typography and engraving, costing \$60,000 for an edition of 2,000 copies. Mr. Mallory was born in Westville in 1816, and, preceding his connection with Pierpont & Hotchkiss, was a clerk in the New Haven Post Office. At the Paris Exposition of 1878, this firm was one of the most prominent exhibitors. Upward of five hundred different samples were exhibited—over four hundred locks and about fifty different styles of padlocks. This exhibit elicited much commendation from foreign manufacturers, as marvels of mechanical skill, accuracy of work, and internal mechanism. After a careful examination by the judges they were awarded a gold medal. At several other exhibitions awards have been received. At the Centennial, 1876, Philadelphia, their award was given for the following reasons: "Commended as very superior goods, fine in finish and tasteful in design." After the death of Mr. Mallory, his son, Frederick B., assumed his father's position as the head of the business, the title of the firm remaining the same. In 1884 the firm was reorganized as a stock company, and is now known as The Mallory-Wheeler Company. The present officers are

Frederick B. Mallory, President and Treasurer; Rukard B. Mallory, Vice-President; W. H. Andrews, Assistant-Treasurer; and Frederic G. Cooper, Secretary. The plant of this Company has from year to year been extended, in buildings and territory, and now occupies a large tract of land, desirably located, and well supplied with substantial brick buildings, fully equipped with machinery and every possible facility for the manufacture of their varied line of goods. Employment is furnished to about five hundred workmen. The extent of this business makes it an important factor in New Haven's prosperity, while the wide reputation of the works is a matter of just local pride.

JOHN ALFRED DAVENPORT,

although he had been at the time of his death resident in New Haven only a few years, is entitled to mention as being a descendant in the fifth degree from the Rev. John Davenport, the first pastor of the Centre Church.

He was the son of the Hon. John Davenport, of Stamford, and a grandson of the Hon. Abraham Davenport, who has distinguished mention in the records of the Colony of Connecticut in connection with the celebrated Dark Day.

Mr. Davenport was born on the 21st of January, 1783. After graduating from Yale College, in the Class of 1802, he removed to New York, where he entered into commercial pursuits in which he continued with varying success during his life.

Having in the course of business become interested in the manufacturing concern in New Haven now known as the Mallory-Wheeler Company, he removed here in 1852, where he resided until his death in 1864.

Mr. Davenport was active in all religious enterprises, and every good cause enlisted his interest and aid. He was a large contributor to the Church of Christ on Church street, of which the Rev. Doctor Cleaveland was pastor until his death.

He was a patriot as well as a philanthropist, and his entire sympathy was given to the cause of liberty in the late Civil War.

His mansion on Hillhouse avenue is still occupied by his daughter.

Four of his children still survive him, and his two sons are both clergymen.

The Barnes Manufacturing Company, 76 Court street, manufacture a fine assortment of door and drawer locks. Most of their goods are sold through the agency of Size, Gibson & Co., 100 Chambers street, New York. John H. Barnes is President of the Company.

MASON-BUILDERS.

Among the mason-builders of New Haven in the fore part of the present century who carried on the business extensively, were William Thompson, J. Horace Butler, and Isaac Thomson. Horace Butler built the Tontine Hotel. Isaac Thomson built the State House, Yale College Library, and numerous

other public and private buildings. The firm of Peck & Winship, composed of John Peck and James Winship, which at a later date was prominent, built the College Street Church, and for many years did a great part of the mason work of the city.

The firm of Smith & Sperry, mason-builders, was formed in 1846, and is probably the oldest firm in their line of work in the city. Some of the more important buildings erected by them are the Second Congregational Church, Fair Haven; Centre Church Chapel, Farnam College, Insurance Building, the White Building, including the Temple of Music; Durfee College, Kensington Building, Garfield Building, Sloan Observatory, and St. Paul's Church. The individual members of the firm are Willis M. Smith and N. D. Sperry.

HON. STEPHEN P. PERKINS.

This old and well-known builder and business man was born in Woodbridge, Conn., October 10, 1807, in an old mansion in which his grandfather began housekeeping and his father was born, long one of the landmarks connecting the old Woodbridge with the Woodbridge of a comparatively recent period. His boyhood was passed on the farm, and his education was gained in such common schools as were accessible to him. At the age of seventeen he was apprenticed to Horace Butler, then and formerly a leading builder of New Haven, to learn the builder's trade. Mr. Butler removed to New York, and young Perkins accompanied him thither, and completed under his instruction the acquisition of his trade.

Having finished his apprenticeship, he worked as a journeyman until he was twenty-five years old. He then embarked in business as a builder on his own account, in partnership with Mr. John Peck. They prospered and became well and favorably known. In 1841, Mr. Peck withdrew from the enterprise, and Mr. Perkins continued it alone until 1843, when he received Mr. Harpin Lum as a partner. The firm of Perkins & Lum was dissolved in 1845. In 1852, the firm of Perkins & Chatfield was organized, consisting of Mr. Perkins and Mr. Philo Chatfield. That the firm met with a liberal patronage is evidenced by the long list of prominent buildings mentioned below that were erected by them. In 1871, the firm was changed to Perkins, Chatfield & Co., Mr. George M. Grant being admitted to partnership. The successes of the old firm were continued, and many large and important buildings, notable objects in New Haven, were erected. In 1875, Mr. Perkins retired, and the firm of Chatfield & Grant continued the business until the retirement of Mr. Chatfield in 1886, since which time it has been conducted solely by Mr. Grant.

The gentlemen composing these successive firms have always been popular builders in New Haven, and in many ways have been prominently connected with the business and growth of the city. Much credit is to be ascribed to Mr. Perkins, as the founder and long senior member of the firms, for the success which they won.

The following is a list of the most important buildings erected by Perkins & Chatfield: Sheffield's bank building on Chapel street; Sheffield's block of stores on State street; County Jail; City Hall; Sheffield's block on Elm street; Mr. Sheffield's residence on Hillhouse avenue; Medical College; Eaton School-house on Jefferson street; Alumni Hall, corner of Elm and High streets, for Yale College; Art building for Yale College; Yale National Bank, corner of Chapel and State streets; Trinity Church House on George street; East Divinity Hall, corner of College and Elm streets; G. F. Warner's residence, now Republican League Club Rooms; Mayor Robertson's residence on Temple street; Massena Clark's residence on Whitney avenue; R. M. Everit's residence on Whitney avenue; Governor O. F. Winchester's residence on Prospect street; Mr. J. M. Davies' residence on Prospect street; Dawson & Douglass' store on State street; D. S. Glenney's store on State street; Buildings for L. Candee & Co., before fire; Yale College Society Building for Skull and Bones on High street; Yale College Society Building for Scroll and Key, corner College and Wall streets; and many other prominent buildings.

Among those erected by Perkins, Chatfield & Co., may be mentioned: Mayor William Fitch's residence on Church street; County Court House; North Sheffield Hall for Yale College; Police building on Court street; Second National Bank, corner Union and Chapel streets; Governor English's building, corner Church and George streets; Mayor H. M. Welch's residence on Chapel street; D. Cady Eaton's residence on Prospect street; West Divinity Hall on Elm street, for Yale College; Marquand Chapel on Elm street, for Yale College; Divinity Library Building for Yale College; Register Building on Chapel street; Hotel Converse on State street; Collins block on Chapel street; Trinity Church Rectory and Lecture-room, on Temple street; the steeple of Trinity Church; the Hospital; a portion of the Sargent factory; and many other buildings.

During his long life, except during a period of thirteen years, when he was a resident of New Haven, Mr. Perkins has lived on the old family homestead at Woodbridge.

He was married, in 1832, to Julia Ann Pettit, of Woodbridge, who died in 1874. In 1875 he married Mrs. Lizzie Williams, of Glastonbury, Conn. His first wife bore him a son, who died in 1859, aged twenty-six. By his second marriage he has a son, born in 1878.

Mr. Perkins has been a Republican since the organization of that party, and long before that time advocated the principles upon which it was founded. Though not active as a politician, his prominence has been such that he has from time to time been called upon to serve his fellow-citizens in public capacity, notably as a member of the State Legislature for the sessions of 1876-77.

He has been a member of the Congregational Church of Woodbridge since 1837.

His character as a man and his credit in business circles have been always rated high by all who knew him.

Stephen P. Perkins

W B Great

Philo Chetfield

PHILO CHATFIELD

was born in Oxford, New Haven County, Conn., September 22, 1816, a son of Chester and Clarissa (Buckingham) Chatfield. His father was a farmer, and he was early taught the value of time in the economy of life. He received his education in the public and private schools of Oxford and New Haven; and in his seventeenth year began the struggle of life as an apprentice to S. P. Perkins, of Woodbridge, to learn the mason's trade. At the age of twenty-one years he may be said to have graduated as an expert in the art of stone and brick construction.

He worked as a journeyman until 1841, when he began business on his own account as a building contractor in New Haven, which held out no false promise as a profitable field for the outlay of his capital and his energies, for, after more than fifty years' successful experience, he ranks as the leading, as well as the oldest, builder in New Haven in active business.

In all parts of the city are monuments to his enterprise and industry, and some of them are of a character well calculated to link his name with the history of the city and county and their leading institutions. During his long career he has been identified not only with the erection of numerous fine business blocks and private residences, but with the construction of the most important public buildings of the city and county, as well as with that of Alumni Hall, the buildings of the Sheffield Scientific Department, all of the buildings of the Theological Department, and other structures of Yale College.

In 1852, Mr. Chatfield formed a partnership with Mr. S. P. Perkins, and upon the latter's retirement, associated with himself Mr. George M. Grant, since which time the firm has been known as Chatfield & Grant.

It must be apparent that Mr. Chatfield has been in no slight degree identified with the growth and prosperity of the city, as well as with its general improvement and the extension of its visible limits. In no relation has he left a more lasting record perhaps than in his connection with the Board of Public Works, extending through several years, during which he was prominent among those instrumental in laying out and beginning the improvement of East Rock Park. He has also served the city as a member of the Common Council and Board of Aldermen, and as Police Commissioner.

He is a life Director of the Connecticut State Hospital, in which he has long taken a generous interest, and a Director in both the Merchants' National and the Connecticut Savings Banks. He is a Republican in politics.

During forty years past he has been connected with the old Chapel Street Congregational Society and Church (now Church of the Redeemer), and for some years has been Chairman of the Committee of the Society.

He was married March 25, 1841, to Mary E. Lines, of Woodbridge, and has one daughter, the wife of Enos S. Kimberly, of New Haven.

The firm of Perkins & Chatfield, and its direct successor, Chatfield & Grant, have been among the most prominent firms in the work of mason-building in the city for the past thirty-five years. Nearly every street bears evidence of their substantial work. The firm of Perkins & Chatfield was organized in 1852 by Stephen B. Perkins and Philo Chatfield. The firm continued in this style until 1871, when George M. Grant was admitted as partner, under the style of Perkins, Chatfield & Co. In 1875, Mr. Perkins retired, and the business was continued until March 1, 1886, by Messrs. Chatfield & Grant, when Mr. Chatfield retired from business. Among the prominent buildings which the firm erected under its several names, are the North Sheffield Hall; the residence of the late Mr. Sheffield on Hillhouse avenue; Peabody Museum; Battell Chapel; the Young Men's Christian Association Building at Yale College; the residence of John Anderson on Orange street, and also at Savin Rock; Hon. James E. English block, corner of George and Church streets; City Hall and County Court house; the County Jail on Whalley avenue; Yale College Library; and a number of residences, and buildings for business and private purposes.

Patrick Maher, mason-builder, commenced operations as a contractor in New Haven in 1851. He has constructed the mason work on the following buildings: St. Francis Church, Fair Haven; Washington School, Howard avenue; St. John's Parochial School, South street; Catholic Church, Naugatuck; and numerous private dwellings. Mr. Maher was born in Ireland in 1826, and came to America in 1839, and settled in New Haven in 1848. During the late Civil War he was Major of the 24th Connecticut Regiment and served for over a year. He was a member of the Board of Education from 1869 to 1882.

Among the other mason-builders deserving of mention are Bunnell & Sperry, composed of Lyman Bunnell and Lucius P. Sperry; A. D. Baldwin, G. A. & H. H. Baldwin; Bates & Townsend, composed of George N. Bates and William M. Townsend; Larkins & Langley, composed of Charles E. Langley and W. H. Larkins; L. V. Treat & Sons (F. N. & George M.); W. A. Kelly, T. D. Jones, Edward Hammiell, Lawrence O'Brien, and Arthur B. Treat.

ARTHUR B. TREAT

was born in Orange, April 6, 1853, the son of Isaac P. and Mary J. (Barnes) Treat. His mother was a daughter of Captain Merritt Barnes, of Watertown, Conn. His grandfather, Isaac Treat, was an influential and wealthy citizen of Orange, and the name has been known for generations among the leading families of that town.

Mr. Treat was educated in the district and high schools, and in 1869 entered Oberlin College and took the preparatory course. In 1870 he returned to Connecticut, and learned the mason and builder's trade, serving for three years as apprentice with Smith & Sperry. He then worked with them the following six years as a journeyman. During this

time he was engaged upon the Yale College buildings, and had a hand in the principal buildings erected in the city by this firm.

He married, September 27, 1876, Leona, daughter of John H. Weeks, of New Haven. They have three children living, Fanny and Florence B, and George A. A son, Arthur, died in infancy.

Mr. Treat had been early accustomed to exercise his judgment in business matters and to take responsibility, and when only fourteen years of age had undertaken a contract for supplying the Derby Railroad with stone, which he carried through with success. When, in 1878, there came on a period of business depression, Mr. Treat, then at the age of twenty-five, resolved to start in business for himself as a mason-builder. He associated with him, as partner, Hilliard B. Fenn, a fellow-apprentice of his at Smith & Sperry's, who died at the end of two months. Mr. Treat then continued the business in his own name.

Among his principal works have been a brick block for A. B. Dodge, the clothier; a large block of houses on East Chapel street for Burritt Manville, also his carriage factory on the corner of Wooster and Wallace streets; a block of houses, corner of Howard avenue and Portsea street, for G. W. Benedict; a nice brick dwelling-house for F. S. Bradley on West Chapel street; a large brick dwelling for Robert Brown on the Yale Observatory lot; a dwelling for George C. Pettis on High street; a large factory on Court street for the Hoggson & Pettis Manufacturing Company; a double brick block for James E. Kelly on Davenport avenue; a block of houses for Major T. Atwater Barnes on Bradley street, also a fine brick residence for him on the corner of Orange and Bradley streets; a large block for Jeremiah Wolcott and William A. Beard on Wooster street; a block for Mrs. Mary A. Treat on St. John street; a large block of houses on State street for Henry Kelsey; a nice brick residence for William A. Beard; the Gregory street School-house, of brick; the Humphrey street Church; factory for Herrick & Cowell on Artisan street; a block of houses for Mrs. Mary J. Cannon on College street; a double brick building for G. M. Baldwin, and a fine brick residence for Mrs. Ida L. Todd, both on Whalley avenue; and two brick houses on Leonard street for R. T. Merwin.

He is now putting up a large block of houses and stores for George E. Arnold on Crown street; also a block of stores and tenements on Grand street for Major Hendrick. He has built many others in various parts of the city, including a fine brick residence for W. M. Rowland and his own residence, both on Howard avenue.

Mr. Treat has also established his reputation in other places, and has often been called upon to build in neighboring towns. He undertook, early in his career, the very responsible contract for building the Crockett Varnish Works in Bridgeport; also the Bridgeport Hospital, where the contract for the mason-work amounted to about \$40,000, and he employed seventy men. This was a large and important work, and it required much nerve in a young builder to undertake and carry it

through successfully. He also erected Christ Church at Westport, the contract being for \$30,000; the graded school at Stratford; and, in the same town, a fine and costly residence on the Stirling estate.

To accommodate outside work, Mr. Treat took a partner in 1885, and the firm name at Bridgeport is A. B. Treat & Co. They are now building a block at Bridgeport for Nathaniel Wheeler; also a large residence for Charles D. Mills.

By prudence, good judgment, and energy, Mr. Treat has in a few years established a reputation as being one of the most reliable builders of the city. He is prompt in his movements, thorough in his work, and able to cope with all the difficulties of his trade at the present day. He is constantly occupied with new buildings in all parts of the city of New Haven and his record in all the relations of a responsible profession has been especially honorable and successful.

MATCH MANUFACTURERS.

Mr. Aaron Beecher began the manufacture of matches in New Haven in 1854. The business has been continued till the present time, and has extended till it operates manufactories and lumber mills in ten different States of the Union, New Haven still being its headquarters. Mr. Beecher's sons were taken into partnership with him, and the firm name was A. Beecher & Sons till 1870; when the Swift, Courtney & Beecher Company was organized. In 1881 the Diamond Match Company succeeded to the former name. Its capital is \$2,250,000. President, William H. Swift; Vice-President, Joseph Swift; Secretary, L. W. Beecher; Treasurer, O. C. Barber.

MEAT PACKERS.

The firm of Strong, Barnes, Hart & Co. was organized in 1872, the products of their establishment being live stock and dressed meats. The members of the firm are H. H. Strong, Herbert Barnes, F. H. Hart and Orrin Doolittle. The firm employ about twenty hands, and have a large and commodious factory, 135 by 250 feet in dimensions, on Long Wharf, with a steam engine of 52-horse power to drive the necessary machinery. The plant is divided into six different departments, insuring the best handling of the products of the factory.

HON. H. H. STRONG,

a well-known citizen of New Haven, and senior member of the firm of Strong, Barnes, Hart & Co., is a son of Alvah B. and Huldah M. (Tooley) Strong, and was born in Durham, Conn., May 24, 1832.

Reared in a farming community, his education was limited, and he began early in life to do his part in the labor which went on about him. He was a farmer's boy of all work between the ages of seven and sixteen years. After that he was a farm hand, working for the small wages then paid for

H. H. Strong

S. E. Merwin.

such work, until he was eighteen. During the succeeding three years, and until he was almost twenty-one years old, he was employed in Webb's Comb Factory in Meriden. From there, about the time of his majority, he removed to New Haven, where he found employment in Munson's pie bakery.

In 1854 he established a meat market on a small scale, in partnership with Mr. F. H. Hart, under the firm name of Hart & Strong. Their location was at the corner of Olive and Grand streets. In 1856, Mr. Hart withdrew from the enterprise, and removed temporarily to Kansas, and Mr. Strong, admitting Mr. G. Hall to partnership, removed the business, then known as that of Strong & Hall, to the City Market. In 1860, Mr. Strong bought the interest of Mr. Hall, and remained sole proprietor until 1862, when Mr. Hart, having returned to New Haven, obtained an interest in the business, and the style of the house became Strong & Hart. In August, 1872, the firm of Strong, Barnes, Hart & Co. was organized, the partners being H. H. Strong, Herbert Barnes, F. H. Hart, and Orrin Doolittle, and the business was removed to its present location, 65 and 67 Long Wharf.

Mr. Strong takes an active interest in public affairs, and is known commercially as an upright and reputable business man, and politically as a Republican. At different times he has been associated with various enterprises aside from that of his firm. The most notable of his present connections of this kind are with the Strong Fire-arms Company, of which he is President, and with the Mallett Cattle Company, of Texas, of which he is Secretary and Treasurer.

He has from time to time been called to hold various positions under the New Haven municipal government, and only recently was re-elected a member of the New Haven Board of Education. In 1877 he was elected a member of the Connecticut Legislature, to represent the town of East Haven. For years he was Captain of the Second Company of the Governor's Horse Guards, and about five years ago was commissioned Major.

He has long been identified with the Second Congregational Church of Fair Haven.

Mr. Strong was married October 10, 1855, to Sarah R. Johnson, of New Haven. The older of their two daughters is the wife of Mr. George M. Baldwin.

The pioneer pork-packing establishment in New Haven is the House of S. E. Merwin & Co., established in 1851 under the firm name of Smith, Todd & Merwin. A few years after the firm was Smith & Merwin, and shortly after it became S. E. Merwin & Co. This packing house, north of Grand street, on Railroad avenue, consists of a four-story building ninety feet square, where about seventy-five men are employed. The storing house, at the same location, is eighty feet square. Between forty and forty-five thousand hogs are annually packed by this firm. A specialty consists in the curing of hams, known by the brand of the Elm City Hams. Three smoking-houses are used, located at 354 to 356 State street, where 9,000 hams are cured weekly.

Another smoking-house has recently been built on Railroad avenue. S. E. Merwin, one of the founders of this firm, recently died, but the firm name remains the same. The individual members of the firm are S. E. Merwin, a son of the founder, F. C. Lum, and R. A. Beers.

GENERAL SAMUEL E. MERWIN.

The family names of a few of the first settlers on the shores of Long Island Sound have been, and probably for generations to come, will remain perpetuated by their connection with the topography of the coast. Eaton's Neck, Leete's Island, Crane's Bar, Merwin's Point, are familiar examples of this method of preserving the memory of men that were conspicuous in the early settlement of the New Haven Colony.

The oldest memorial of the dead in the ancient burial ground of Milford is a sandstone slab of no great dimensions, whose elaborate ornamentation in arabesque design has been defaced, and in places almost obliterated, by the ravages of time, which bears an inscription in memory of Miles Merwin, after whom Merwin's Point was named, who departed this life April 23, 1697. At the first settlement of Milford he was a youth under age, and his name does not appear in the earliest records of the town. In subsequent years he became a prominent man and one of the largest landowners in the place. Two years before his death he transferred, by deed, a portion of his real estate to his four sons. Subsequently he executed a deed, carefully prepared with all the technicalities of English conveyancing, creating an entail for the remainder of his estate through his son Miles, in the eldest male line of his posterity, but making provision for other children by a rent charge, which should ultimately amount to the sum of five hundred pounds sterling. Whether this entail continued in force down to the independence of the United States, when all entails ceased, is uncertain. The name of Miles Merwin, however, has never ceased to be a familiar name in Milford in every succeeding generation. A similar succession to the name of Samuel Merwin, continuing without a break for six generations to the subject of this notice, perpetuates the memory of another son of Miles Merwin, who was born August 21, 1656. When the town of New Milford, in Litchfield County, was first settled by colonists from Old Milford, the name of Samuel Merwin appears as one of the proprietors, having a large allotment of land in that part of the town which was subsequently incorporated as a part of the present town of Brookfield.

On these ancestral acres, Samuel E. Merwin was born August 23, 1830. His school education was the education afforded by the Connecticut district school of that day, supplemented by a year's instruction in a school of a higher grade in the neighboring village of Newtown. When in his sixteenth year, his father's removal to New Haven gave him a brief opportunity for completing his education under private instruction before he began his business life. After serving as a clerk for two years, he became connected, in the year 1850, with his father,

the late Samuel E. Merwin, in the wholesale business of a pork packer, which has been successfully pursued in the same place on State street for the past thirty-six years. Outside of a business life conducted with integrity and skill, he has been identified with a variety of important public and private trusts. For two years he was a Commissioner of Police; for nine years an active and efficient member of the Board of Education. In 1876 he represented the Fourth Senatorial District in the Legislature of Connecticut. He has also been the candidate of the Republican party for Congress and the Mayoralty.

As Chairman of the Town Committee to build the Soldiers' Monument; as a Director in the State Hospital; as a Trustee of the Orphan Asylum; as Agent to wind up the affairs of the Home Insurance Company and the Scranton Bank; as a Director in the Merchants' Bank, and Trustee in the New Haven Savings Bank; and as entrusted with the settlement of many estates, General Merwin has been long known to his fellow citizens as entitled to their entire confidence and respect.

General Merwin's connection with military matters has been even more conspicuous than his employments in civil life. Early in command of that organization in which every New Haven man takes pride, "The New Haven Grays," Captain Merwin became successively Lieutenant-Colonel and Colonel of the Second Regiment of the State Troops, and subsequently, for three years, under Governor Jewell, Adjutant-General of the State. Probably no man in Connecticut not in actual service was more efficient during the Civil War than General Merwin. In response to an invitation from Governor Buckingham, the Grays, then under his command, promptly volunteered to go to Gettysburg to repel the invasion of Pennsylvania. During the draft riots in New York, his company remained under arms for thirty days in immediate expectation of being ordered to aid in averting that appalling danger. Guarding conscript camps, burying, with appropriate honors, a multitude of officers and soldiers who had fallen in battle or died in hospitals from wounds or exposure, and receiving with proper military display the veterans returning from the war, become a part of his official duties while in command of the 2d Regiment.

While Adjutant-General of the State, he was directed by Governor Jewell to support the Sheriff of New Haven County in preventing a prize fight which had been arranged by a party of New York roughs to take place at Charles Island, opposite Milford. By the judicious arrangements of General Merwin the entire party was not only captured by the military companies of New Haven and safely lodged in New Haven jail, but our State has from that time been saved from any attempt of a like disgraceful nature.

While these pages are passing through the press (September, 1886), General Merwin, with his family, is absent on an extended European tour. His return will be welcomed by all his fellow citizens, without distinction of party, who appreciate the union of a liberal public spirit with a disposition singularly free from arrogance, pride, or pretense.

The most extensive packing-house in this city is that of Sperry & Barnes, founded fifteen years ago. This packing-house is located at 188 Long Wharf, where about three hundred men are employed. From March, 1885, to March, 1886, 200,650 hogs were killed and packed by this firm. The individual members of this firm are J. A. Sperry, E. H. Barnes, and Joseph Porter. Their office is located at 114 State street.

JOEL A. SPERRY.

Litchfield County has been generous to New Haven in gifts of brawn and brain, and the subject of this memoir is no exception to the general rule.

Joel Andrew Sperry first saw the light in Watertown, Litchfield County, Conn., on the 8th of July, 1827. His father, who followed the trade of a blacksmith, died while yet a young man. His mother however still lives, at the venerable age of eighty-one, to rejoice in the prosperity of her only son. After his father's death, Mr. Sperry resided in the town of Bethany, and worked on a farm until he reached the age of sixteen.

The laborious life of his boyhood disciplined his faculties and developed his character, but prevented him from obtaining any more than a limited common-school education. In 1843 he came to seek his fortune in New Haven, and was engaged as clerk by a retail provision dealer. A few years later, in September, 1853, he was ready to make his first venture in the wholesale provision trade. He formed a partnership with William Hull, and during the next ten years the firm conducted a lucrative business. Mr. Sperry's active qualities, energy, and motive power were conspicuous in the management of the undertaking, and secured its financial success.

It was during this period that he served two terms upon the Board of Aldermen (1860-61), and was especially instrumental in reorganizing the Police and Fire Departments. Afterwards he filled acceptably the office of Fire Commissioner, but resigned that position when he removed from the city.

In 1863 he relinquished his share of the business to his partner, Mr. Hull, and sought the larger facilities that the neighboring metropolis affords. Mr. Sperry remained in New York, in the provision trade, for five years, and enjoyed a well-deserved success. Withdrawing from business, he returned to New Haven in 1868, intending to spend the remainder of his life in leisure. But inviting business opportunities presented themselves to him, and in the spring of 1870 he began to prepare his present establishment on Long Wharf, associating with him Messrs. E. H. Barnes and Joseph Porter, under the firm-name of Sperry & Barnes. The conduct and development of the business, which is now one of the largest and most successful of New Haven's enterprises, have been largely due to the senior partner. His experience and connections in New York have been of great service in promoting the growth of the undertaking, and particularly in building up a foreign export trade.

It had been believed that a meat-export to Eu-

David Asperrey

E. Henry Barnes

rope was impossible. Sperry & Barnes were among the first to demonstrate its feasibility and to reap the rewards of foresight and energy. The firm is now sending its products across the ocean to England, and to the Continent also, despite hostile tariffs and Bismarckian decrees against American imports.

The uniform success which has attended Mr. Sperry, is to be ascribed to his remarkable executive ability and business sagacity. At the same time he has also won success by deserving it. In all transactions with his fellow-men he has endeavored to put in practice the strictest principles of integrity and honor.

Mr. Sperry married, June 24, 1856, Miss Anna Jane, daughter of D. S. Fowler, of East Haven, and has had three children—one son and two daughters.

E. HENRY BARNES.

Throughout the first half of the present century, one of the best known and most honored citizens of the neighboring town of North Haven was Deacon Byard Barnes. Born near the close of the last century, the youngest of seven children, he early walked before his fellows with such sterling worth and manly piety, that, when only thirty years of age, he was chosen Deacon of the church. Thereafter, through good and evil fortune, he lived the life of Christian faith, and died triumphantly, leaving to his children the legacy of an unstained, noble name and the memory of beautiful affection, and to all men the example of "a just man whose path was as the shining light, that shineth more and more unto the perfect day."

Deacon Barnes, who was descended from some of the earliest settlers of this locality, married, in 1824, a lady, whose family also has long been resident here, Miss Cleora Linsley, daughter of Deacon Munson Linsley, of Northford.

Such worthy strains of blood have united in the veins of the subject of this sketch, E. Henry Barnes, who was the seventh son of his father. He was born in North Haven January 17, 1838.

His early years were spent in labor upon the farm, and in the acquisition of a common school education. When twenty years of age he essayed his first step in the business world. On the 6th of October, 1858, he came to New Haven with no other capital than his good name and the firm purpose of maintaining it inviolate, a purpose which has never been dimmed.

For two years he was employed in the retail meat market of his elder brother. On September 1, 1860, he entered the employment of S. E. Merwin & Son, pork packers, and remained with that firm for nearly four years, excepting for a short time during the winter of 1861-62, when he was engaged in business in Meriden. In March, 1864, he became associated with his brother, Mr. Herbert Barnes, under the firm name of H. & E. Henry Barnes, wholesale butchers. He thus continued until October, 1870, when the firm of Sperry & Barnes was organized, consisting, besides Mr. Barnes, of

Joel A. Sperry and Joseph Porter. With the firm of Sperry & Barnes he has since been identified, and to its prosperity he has largely contributed.

Mr. Barnes has been actively influential in the Church of the Redeemer, both in its present location and in its former existence as the Chapel Street Church, and is now a member of the Society's Committee. In the work of freeing that church from debt he took a great interest and was largely instrumental in effecting it.

For political office he has never sought, and has refused every invitation to become a candidate for civil honors.

Mr. Barnes married, on Christmas Day, 1862, Miss Jennie E. Cargill, of Monroe, Conn., who was taken from him by death in 1869. They had two children, Jennie E., born October 17, 1865, died February, 1870; and Clara M., born November 8, 1867. On the 25th of May, 1870, Mr. Barnes took for his second wife, Miss Esther C. Post, of Hartford. On the 8th of November, 1872, a son was born, who received the name of his exemplary grandfather, Byard Barnes.

For many years the brothers Charles E. and Warren D. Judson were extensively engaged in the packing business, but at present are giving their attention solely to trade.

The following firms also carry on the packing business: F. S. Andrew & Co., and A. Seaman, 255 Congress avenue.

FRANK S. ANDREW,

head of the firm of F. S. Andrew & Co., and a prominent citizen of New Haven, is a son of Samuel and Salina (Smith) Andrew, and was born at Naugatuck, Conn., November 1, 1841. He gained his education in the schools of his native village, alternating, as seemed expedient, between school and work after he became old enough to employ a portion of his time to some advantage.

His first entrance upon the business arena was made when he was only twelve years of age. Then he became a clerk in the store of his brother, George S. Andrew, at Naugatuck. There he was employed, when not at school, until 1855, at which time he came to New Haven and became an errand boy in the store of B. Booth, the well known auctioneer, remaining in that capacity two years. In 1857 he returned to Naugatuck, and during the greater portion of the succeeding four years was book-keeper for H. Stevens & Co., carriage manufacturers. Later, he was for a time traveling through Massachusetts as the representative of a Philadelphia business house, after which he taught a district school during one term.

In 1862, Mr. Andrew opened a general store at Naugatuck, which he conducted successfully until 1867, when he disposed of it and again came to New Haven, this time to become a permanent resident. He was employed as a salesman by William Hull & Co., pork packers, until the fall of 1868, when he associated himself with Ansel Hurlburt, under the firm name of Andrew & Hurlburt, and

entered into business quite extensively as a pork packer and provision dealer. The increasing trade of this house demanded the erection, in 1872, of a large pork-packing house, which was destroyed by fire in 1883, and immediately rebuilt by the firm of F. S. Andrew & Co., Mr. Andrew having purchased Mr. Hurlburt's interest in the business in 1874. His partner is Mr. Benjamin A. Booth.

At the opening of the City Market, Mr. Andrew's firm took two stalls therein, and, as their business has increased, have added to their facilities until they now occupy some sixteen or eighteen stalls. F. S. Andrew & Co. unquestionably do the largest business in New Haven, both wholesale and retail, in fresh and smoked meats. They also handle immense quantities of Western beef, which is shipped to them in refrigerator cars. Their facilities for buying in this line are so exceptional, that they are enabled to bring Western beef to the New Haven market at a reduction of three or four cents per pound from prices which would otherwise have been maintained, thereby greatly benefiting housekeepers and consumers generally. The same applies, in no slight measure, to poultry and produce. They are men of push and venture, and do a large and increasing business, which places them among the leading houses of the city.

Mr. Andrew has been connected with many important business and commercial enterprises in New Haven, and in all things is regarded as a progressive and liberal-minded citizen, devoted to the best municipal and public interests. He was one of the Incorporators and is a Director in the New Haven Co-operative Loan Association. He is a Director in the New Haven Cattle Company, and a member of its executive committee. He is quite largely interested in real estate, and is the owner of bank, telephone, and other stocks. His high position in trade is indicated by his membership of the New York Produce, Mercantile, and Metal Exchanges.

He has been a life-long and earnest adherent to the principles of the Democratic party, and his place in the public esteem such that he has found it difficult to keep out of politics entirely, though greatly preferring to devote himself to his own personal affairs than to those of the public. For several years he was President of the Board of Selectmen of the Town of New Haven. In the year 1882, he was induced, reluctantly, to become the Democratic candidate for the mayoralty of the city, and, after a spirited session, was placed in nomination by the Young Democracy at the Democratic City Convention, and, after the succeeding election, was declared elected, a certificate of election as Mayor of New Haven being duly issued to him. His election was contested in the Courts, however, and after an exciting and memorable contest, the Court awarded a certificate of election to his opponent, though many leading citizens then thought, and are still of the opinion, that Mr. Andrew was unjustly deprived of an honor which of right belonged to him, because a majority of his fellow-citizens had sought to elevate him to the high position named. Since that time he has not permitted

himself to consider the acceptance of any public trust, his personal inclinations and the pressing demands of his business preventing him from so doing. He is regarded as a friendly, helpful, active, energetic, enterprising and public-spirited citizen, and his popularity in business and commercial circles and with the people of all classes is unequaled.

MEDICINE MANUFACTURERS.

The C. G. Clark Company, at the corner of Artisan and St. John streets, is a joint stock company, organized in 1868, with a capital of \$100,000. The company make a specialty of manufacturing Dr. Coe's Cough Balsam and Dyspepsia Cure, with some other curative compounds not so important or so well known. The officers of the Company are J. F. Henry, of New York, President, and DeWitt C. Waterhouse, Secretary and Treasurer.

Lewis & Co. commenced the manufacture of the Red Jacket Bitters at 96 State street in 1882. These bitters have reached a large sale, and are sold all over the United States. T. S. Foote, resident partner of William J. Sheehan, wholesale liquor dealer, is sole agent for these bitters.

The Reed Bitters Company was organized as a stock company in 1878, with a capital of \$20,000. They commenced the manufacture of the well-known Reed's Gilt Edge Tonic the same year, at their present location, 298 and 300 State street. Reed's Cock-tail Bitters, now made by this Company, were first manufactured in 1866 by the present head of this Company, G. W. M. Reed. In the manufacture of these two articles twenty men are employed. They are extensively sold in every State and Territory of the United States, and largely exported to foreign countries. This business is principally done through advertising, large sums of money being annually expended in this direction. Three traveling salesmen are employed. The officers of the Company are G. W. M. Reed, President; R. H. Reed, Treasurer. and James T. Mullen, Secretary.

MELODEON AND ORGAN BUILDING.

W. P. Gardner began the manufacture of melodeons and church organs in Peckham's Building on George street in 1840. After this Mr. Gardner moved to Bridgeport where he remained in the same business one year. Then he returned and bought the establishment of Henry Pilsher in Atwater Building in State street. He moved after this to the Osborn block, where B. H. Douglass & Sons' confectionery establishment now is, and later to Trowbridge's Building on State street. In 1860, Mr. Gardner purchased the property, 216 Wooster street, then known as Cherry street, where he has since remained. During recent years he has devoted himself to church organs exclusively. He built the organs for St. Mary's Roman Catholic Church on Hillhouse avenue, then on Church street; the George Street Methodist Church; the German Baptist Church on George street; and the Temple Street Congregational Church—all in New

Frank S. McQuinn

Bernard Thoninger

Haven; besides organs for other churches in Connecticut and at the South, the largest being for a Presbyterian church at Atlanta, Ga.

David Whiteker and William Frisbie began to manufacture organs in Orange street, near Court street, in 1847, and did business under "Carhart's Patent." The first productions of the firm were crude in comparison with the organ built to-day, being a four-octave melodeon, with straight, uncurved legs, which could be folded under. Soon after this H. N. Goodman purchased the interest of Mr. Whiteker, and the firm was known as Goodman & Frisbie. For the use of this new firm E. H. Leavenworth erected a small brick factory in Leavenworth court, where the business of organ or melodeon building was carried on. The firm again changed its name, Dr. Baldwin purchasing Mr. Frisbie's interest, and the style of the firm was Goodman & Baldwin. In 1856, John L. Treat and Nelson Lindsley purchased the business, under the firm name of Treat & Lindsley, which continued until 1864, when a Mr. Davis from Worcester, Mass., purchased Mr. Lindsley's interest, and the style of the firm was Treat & Davis. During the career of the firm of Treat & Lindsley the brick factory on Franklin street was built. About two months after the purchase of Mr. Lindsley's interest by Mr. Davis, the factory was burned. Mr. Davis's health failing, Nelson Lindsley again purchased an interest in the business, and the manufacture was conducted under the old firm name of Treat & Lindsley. In 1865, the entire business was sold to B. Shoninger & Co.

The B. Shoninger Organ Company must occupy a prominent place in any record of New Haven industrial pursuits, it being one of the largest in its line of products in the country, and the result of steady and healthy growth. Mr. Shoninger began the manufacture of melodeons in a small way in Woodbridge, in 1850, having a store for their sale on Chapel street. The sales of the store soon outran the capacity of the factory in Woodbridge, and a two-story wooden factory was erected on Kimberly avenue in 1863. This building, with its contents, was burned in 1865. Mr. Shoninger then purchased the factory which had been occupied by Treat & Lindsley, near the corner of Chapel and Chestnut streets, to which he made additions reaching to the Chapel street front. As the volume of business increased, additions were made to these original buildings, the last being made in 1881, when a fine front was erected, so that now the factory covers an area of 300 feet on Chestnut street and 130 feet on Chapel street. A feature of the improvements made in 1881 was the office, which is the finest in the city, being finished in polished mahogany, cherry, walnut and curled maple, relieved with delicate tracery of inlaid wood and rich hand carvings. The buildings are six stories high, divided into the several departments of the manufacture. The average number of men employed is over three hundred. An engine of 125-horse power carries the necessary machinery. During the development of the business of the Company for the past thirty-five years, great improvements have been

made in the construction, compass and action of their organs and pianos, the firm now holding over thirty patents of their own invention. B. Shoninger is still President of the Company, and his son, Simon B. Shoninger, is associated with him as Secretary.

BERNARD SHONINGER.

Like the majority of the prominent men of this progressive age, Bernard Shoninger is "the architect of his own fortune." Born in Bavaria, Germany, in 1828, he came to America in 1841, the possessor of nothing of visible value except his scanty baggage, and money to the amount of fourteen dollars and forty cents. His most reliable capital, however, consisted in his native integrity and enterprise, for the exercise and development of which the United States afforded an inviting field. Active and venturesome, Mr. Shoninger, casting about for a profitable channel into which to direct his business enterprise and sagacity, soon centered his attention upon the manufacture of organs and pianos, then in a somewhat unstable condition, and with scarcely a promise of its subsequent importance. In 1850 he founded the B. Shoninger Organ Company. The business of the concern, like many others now of magnitude and world-wide celebrity, was at first small and unimportant, except for its influence upon the future of its projector, and the immense trade in which it has become so conspicuous a factor.

Many obstacles presented themselves in the way of Mr. Shoninger's advancement, for organs and pianos were then popularly regarded as luxuries, available only to the wealthy, in which those of moderate means had not the remotest thought of investing. During the succeeding years, down to the present, the Shoninger Company has amply done its part in the development of the organ and piano manufacture and trade throughout our own country and the world at large. At the outset, Mr. Shoninger laid down for his guidance certain principles pertaining chiefly to the character of the goods manufactured, demanding the best material, the most skillful workmanship, and the finest finish, internally and externally. To the many practical inventions emanating from his own skill and experience, Mr. Shoninger has added every valuable improvement made by his compeers, and year by year the B. Shoninger Company has steadily advanced, crowning excellence with excellence, until their instruments are renowned throughout the civilized world.

Mr. Shoninger has taken position with the most distinguished of those well-known manufacturers who have made their way against countless difficulties to the highest commercial and social station. Honest, pushing and industrious, he has steadily kept in advance of the times, and with far-seeing sagacity has been fully prepared to grasp opportunities and battle with obstacles as they present themselves. It was his upright, unswerving enterprise that, during the earlier history of his house, advanced it to a position of prominence among

those of its kind in America, and it is owing no less to his ripe experience and able counsel, than to the sturdy business daring of his associates, that it is now classed with the leading musical instrument manufacturing firms of the world. A noted musical writer and critic has referred to Mr. Shoninger as "one of the most respected, and certainly one of the wealthiest manufacturers in the organ and piano trade," and this may be regarded as a concise summary of the merited personal results of his long years of hardworking application to one object, to the furtherance of which he has conscientiously devoted remarkable energy and perseverance, rare skill and judgment, and an unquestioned commercial integrity that has caused his name and word to be regarded as literally "as good as his bond."

Mr. Shoninger has seven children and ten grandchildren, and has been singularly favored, in that death has never visited his household. The acknowledged musical ability and culture of his two sons, Simon B. and Joseph Shoninger, render them peculiarly fitted to assist him in the difficult and purely technical department of construction and improvement, which both in the organ and piano, on the part of the Shoninger Company have been many. One of the most notable was the introduction of a bell and chime, upon which a patent was obtained in 1875. The Shoningers are quiet and conservative, and, though enterprising in the highest degree, eschew all boastful show and parade, depending upon the excellence of their instruments to win them customers wherever introduced. Together, they have brought their immense business to a wonderful degree of perfection.

For considerably more than a third of a century identified with the prosperity of New Haven, not alone as the head of his own great establishment, but by his incidental connection with other important enterprises, and as a real estate owner, Mr. Shoninger is recognized as a prominent and public-spirited citizen and one of the most liberal of employers. He is justly proud of the knowledge that he has always enjoyed the deepest respect and friendship of his employees. Many tokens of public and official approbation have been bestowed upon him, but of none of these is he so fond as of an expression of the good-will of his employees which some years ago accompanied the presentation of an appropriate gift, upon an occasion memorable in his business and individual history, when he was their entertainer. This testimonial, which reads like the spontaneous expression of grateful appreciation, bears the signatures of the employees of the B. Shoninger Company, many of whom have been so long identified with the business of the concern, that their tenure of association seems scarcely less permanent than that of its proprietors and managers. It is regarded by Mr. Shoninger as one of his dearest household treasures.

Mr. Shoninger is essentially liberal and helpful in all the relations of life—an honor to the city of his adoption, to the prosperity of which he has so generously contributed; the revered head of the great enterprise he has founded and managed with such signal ability, and respected by his fellow-

citizens and loved at his own fireside. Few men nearing the close of life's journey have greater cause for self-congratulation than he. He has been eminently successful; and so honorably and uprightly has he borne himself, that his reputation is untarnished before the world. His fight has been well fought and the victory nobly won.

For a number of years the Matthushek Piano Company manufactured pianos in New Haven, but a few years ago the works were removed to West Haven. H. S. Parmelee, of this city, is President and Treasurer of the Company.

MILL BUILDERS.

The Edward Harrison Mill Company was founded, in 1847, by Edward Harrison, the inventor of the high-speed system of grinding grain. Mr. Harrison was born in the town of Meriden, Conn., in 1817. In 1860 he removed his works, then in this city, to Westville. In 1873 he returned to New Haven, and built the factory now occupied by the present Company bearing his name. January, 1847, his first mill patent was granted him, which consisted of a vertical, conical stone, with a pulley so arranged as to drive a blast of cold air between the burs, to keep them and the meal cool. In 1854 he received a patent for a horizontal mill, which met with great success. He also invented a 20-inch vertical mill, which had a capacity of sixty bushels per hour, running at the high speed of 1,200 revolutions per minute. The success thus attained has resulted in the foundation of the high speed system of milling. Mr. Harrison died March 3, 1878. In 1882 the Company was incorporated. Leonard D. Harrison is President and Treasurer, and E. H. Cady, Secretary.

OLEOMARGARINE.

The Easterbrook Company, at 133 Park street, are the only manufacturers of Oleomargarine in Connecticut. The Company was established in 1873, by the H. R. Nash Company, and in 1874 passed into the hands of the present proprietors. The Company manufacture oleomargarine under the Mege patent. The enterprise has been very successful, and the quality of the article produced highly creditable in its line. The factory on Park street consists of a three-story brick building, having an area of 25 by 225 feet, and is equipped with suitable machinery, driven by an engine of 50-horse power. From sixty to seventy-five persons are employed. The trade in oleomargarine extends to all parts of the country, and large shipments are made to Europe.

OYSTER CULTURE.

Mr. Henry C. Rowe, who is himself one of the most extensive oyster-growers in the world, has favored us with some observations on the rise and progress of oyster culture in New Haven, with which we preface our report of the present condition of this industry.

The oyster fisheries of New Haven antedate our earliest records. From time immemorial the channel of the Quinnipiac River was a natural oyster-bed, and oysters grew in favorable localities in the Harbor, in West River, Stony River, and Oyster River.

The Indians were oyster-men centuries before John Davenport and his companions settled upon the Quinnipiac. Little we know of them, but we find on the banks of our rivers vast deposits of shells, layer upon layer, left by the Indians during successive generations. These deposits of shells, acres in extent, are found near the mouth of East Haven River, and twenty-five years ago there was a large bed of them on the east side of the Quinnipiac, on the slope of Red Rock, at the eastern end of the present Quinnipiac draw-bridge. During my boyhood, I found among these shells many arrow-heads, mostly of very hard quartz, some of which were quite sharp and perfect. These shell deposits are found in places which are sheltered from the cold westerly winds of winter, and where, very likely for that reason, the Indians built their wigwams.

In the vicinity of these shell beds, bones of the Indians were formerly found, some being of men six and one half feet high.*

We do not know what rude implements of oyster catching the Quinnipiaks used; whether they gathered them in their canoes, or, taking advantage of the very low tides caused by the westerly gales, walked or waded on the beds, gathering their supplies for days or weeks to come. They gathered them for their own use, and perhaps reached also the mercantile phase of the industry, by trading with neighboring tribes.

After the advent of the English, the oyster fishery was conducted for over one hundred and fifty years in much the same manner as by the Indians. So far as we know, planting did not begin till about 1800, although doubtless before that date oysters had become an article of traffic with the inhabitants of the inland towns.

In the early days of the business the oysters were all opened in the basements of the dwellings where they were stored, and in 1820, and later, there were few if any houses in Fair Haven that were not used for opening oysters. The oysters were put up in kegs and transported and sold in the inland towns.

Mr. Edmund Bradley, of East Haven, and Mr. Jacob Goodsell, father of Mr. James H. Goodsell, used to carry them into the country in their saddle-bags about 1815 or 1818.

Mr. James H. Goodsell tells me that when a boy he had an iron hook for a plaything, which his father had used for taking oysters out of the bung-holes of the kegs when measuring them out for his customers; and Captain George Hulst and Mr. Orrin Mallory remember when it was customary to use such a utensil. As the business increased the enterprising firms began running large spring wagons, drawn by two and four horses, and extended their trips to Hartford and Springfield, and afterwards into New York, Vermont, and Canada.

Messrs. Jesse Ludington, Lucius Maltby, F. W. Tuttle, William B. Goodyear, Captain Abijah Munson, Captain George Hulst, Orrin Mallory, and others who were born early in this century, have given me interesting accounts of the early oyster business.

The principal dealers in 1820 and 1830 were Deacon Harvey Rowe, Levi Rowe, Edmund Bradley, John Rowe, Street Hemingway, of Plymouth, and Oliver Mosely and Sturges Upson, who lived in Massachusetts, and drove down to get their oysters.

John Rowe's tavern was then the headquarters of the oyster trade. It stood where Todd's brick block now is, near the west end of the Grand street bridge. When the large oyster wagons arrived at the tavern a large part of the inhabitants of the village would hasten to them to make engagements for the sale of their oysters, and would rapidly unload the wagons of their empty kegs. Dozens of men would be seen, each carrying eight or ten empty kegs of one and two gallons capacity each, holding them by putting one finger in the bung-hole of each keg. On arrival home all hands proceeded to open as many oysters as would fill the kegs, which then, by means of wheelbarrows, were returned to John Rowe's tavern to reload the teams for their next trip. There, too, they received their pay, sometimes in coin, sometimes in bank bills, some of which were occasionally on broken banks. But oftener the consideration would be produce of various kinds which the oyster caravans had traded for in Massachusetts or beyond, such as butter, cheese, pork, brooms, "Vermont gray" cloth, etc., and it was not unusual for an oyster-man to appear in a new suit of gray cloth shortly after the fall oyster season commenced to render its returns. Some who lived on the east side of the river, I am told by Mr. Orrin Mallory, used to leave word with Mr. John Rowe at the tavern how many they would furnish when the next team arrived.

Mr. Ambrose Doolittle, the father of Hon. Tilton E. Doolittle, was at one time extensively in the business. In 1836 or 1837, a Mr. Peters, of Cooperstown, New York, inaugurated a comprehensive scheme to control the whole oyster business of Fair Haven. He engaged vast quantities of oysters, and in the fall of that year had 60,000 bushels afloat in Fair Haven at once. Unfortunately for him, the weather was unusually warm, and the oyster market declined so that he lost a great quantity of oysters and gave up the enterprise nearly bankrupt. In November of that year oysters could be bought in Fair Haven at almost any price. Mr. William B. Goodyear started for New York State with a load of 240 gallons, and the weather growing suddenly cold, he found a great demand, and sold his stock in Central New York at \$2 and \$2.50 per gallon.

A reliable and interesting picture of the oyster business is given by Rev. Stephen Dodd in his "East Haven Register," published in 1824. He says. "The fisheries of East Haven are excellent and valuable. In Quinnipiac River, oysters are taken in vast quantities, and those of superior

* Dodd's East Haven Register.

flavor in the Cove and Stoney River." "The trade in oysters is carried to a great extent. From sixty to an hundred thousand bushels are annually imported. These are opened, put up in small kegs, and dispersed all over the northern and western country quite into Canada. The amount of sales for this town and vicinity was estimated at twenty-five thousand dollars during the fall and winter season, and it sometimes probably exceeds that sum."

The rapidly increasing trade in oysters caused the importation from neighboring rivers to begin early in the present century. Mr. Jesse Ludington, who came to Fair Haven in 1810, tells me that it was about that time that the importation of oysters from the Housatonic River commenced, and I learn from him, and from Captain Edwin Thompson, who was born in 1809, Captain John R. Lanfair, who was born in 1806, and others of our oldest residents, that our vessels rapidly extended their cruises further and further from New Haven in their voyages to North River, Newark Bay, New Brunswick Flats; a few years later to Egg Harbor, Delaware Bay, and Chincoteague Inlet; and finally, about 1823, to Chesapeake Bay itself.

During all these years not only were oysters imported, but great quantities were yearly caught in the Quinnipiac River. In 1836 the yearly yield was estimated carefully at 12,000 bushels, and in 1846 at 30,000 bushels from the river and harbor.

There was a law during this period, and later, forbidding the taking of the native oysters through the summer and fall until November 1st. When the prohibition expired, at midnight of October 31st, and the law was "off," there was a grand scramble for the oysters. Mr. Ingersoll, in his report on Oyster Culture in the Tenth United States Census, gives a spirited account of this annual raid upon the bivalves, and the old residents pronounce it quite correct.

In anticipation of this date, great preparations were made in the towns along the shore, and even for twenty miles back from the seaside. Boats and rakes, and baskets and bags, having been put in order the day before, large numbers of wagons came towards the shore from the back country, bringing hundreds of men, with their utensils. Among these were not unfrequently seen boats, borne on the rigging of a hay cart, ready to be launched on the expected morning. It was a time of great excitement, and nowhere greater than along the Quinnipiac. On the day preceding, farmers flocked into Fair Haven from all the surrounding country, and brought boats and canoes of antique pattern and ruinous aspect. These rustics always met with a riotous welcome from the town boys, who hated rural competitors. They were very likely to find their boats, if not carefully watched, stolen and hidden before they had a chance to launch them, or even temporarily disabled. These things diversified the day and enlivened a community usually very peaceful, if not dull. As midnight approached, men dressed in oilskin, and carrying oars, paddles, rakes, and tongs, collected all along the shore, where a crowd of women and children assembled to see the fun. Every sort of craft was prepared for action. There were sharpies, square-enders, skiffs, and canoes, and they lined the whole margin of the river and harbor on each side in thick array. As the "witching hour" drew near, the men took their seats with much hilarity, and nerved their arms for a few moments' vigorous work. No eye could see the great face of the church clock on the hill, but lanterns glimmered upon a hundred watch dials, and then were set

down, as only a coveted minute remained. There was a hush in the merriment along the shore, an instant's calm, and then the great bell struck a deep toned peal. It was like an electric shock. Backs bent to oars, and paddles churned the water. From opposite banks navies of boats leaped out and advanced towards one another through the darkness, as though bent on mutual annihilation. The race was to the swift, and every stroke was the mightiest. Before the twelve blows upon the loud bell had ceased their reverberations, the oyster-beds had been reached, tongs were scraping the long rested bottom, and the season upon the Quinnipiac had begun. In a few hours the crowd upon some beds would be such that the boats were pressed close together. They were all compelled to move along as one, for none could resist the pressure of the multitude. The more thickly covered beds were quickly cleaned of their bivalves. The boats were full, the wagons were full, and many had secured what they called their "winter's stock" before the day was done, and thousands of bushels were packed away under blankets and secured in scores of cellars. Those living on the shore and regularly engaged in the trade, usually secured the cream of the crop. They knew just where to go first; they were better practiced in handling boats, rakes, etc.; they formed combinations to help one another. That first day was the great day, and often crowds of spectators gathered to witness the fun and the frequent quarrels or fights which occurred in the pushing and crowding. By the next day the rustic crowd had departed, but the oyster continued to be sought. A week of this sort of attack, however, usually sufficed so thoroughly to clean the bottom, that subsequent raking was of small account. Enough oysters always remained, however, to furnish spawn for another year, and the hard scraping prepared a favorable bottom, so that there was usually a fair supply the next season. It was not long, however, before the old-fashioned large oysters, "as big as a shoe horn," were all gone, and most of those caught were too small for market. Attention was therefore turned to the cultivation of oysters, and as the Chesapeake trade declined, this subject began to receive more and more earnest attention, and to arouse an unexpected opposition upon all sides.

Many pranks were played by the Fair Haven men upon their unwelcome competitors from the surrounding town, which were doubtless much more amusing to the perpetrators than to the victims. On one morning when the act was off, Hezekiah Bradley's canoe was found standing on end in an apple tree, up on the hill where the Shore Line railroad now runs, and it was a matter of much delay and labor before she again reached her appropriate element.

At another time a large fleet of visiting boats which were hauled out on the shore property on the east side of the river, now owned by the Townsend Brothers and Henry C. Rowe, were prevented from participating in the grand rush by the sudden disappearance of every rope and anchor in the fleet, and the owners of the boats on visiting the local stores to purchase new rope, found that their opponents had been there before them, and their money could not purchase any rope in Fair Haven.

As soon as the boats were loaded it was customary to shovel the oysters over in heaps on the shore, and I am told that at low water the heaps would appear as thick as hay-cocks, and it was difficult to launch a boat between them.

Mr. Orrin Mallory says he has seen the boats so thick in the river that he could have crossed the river stepping from boat to boat.

It may be desirable in this connection to "see ourselves as others see us," by quoting from the reports of those who have in past years examined

the industry. The following is an extract from the *New York Tribune*, of January 9, 1857. Describing Fair Haven and its methods, it says:

There are the openers, the washers, the measurers, the fillers, the packers, etc., each of which performs only the duties pertaining to its own division. At this season of the year [January], few of the oysters are "planted," but they are generally taken directly from the vessel to the openers. An expert at this branch will open 100 quarts per day, but the average is not perhaps over 65 quarts. The standard price is, I think, $2\frac{1}{2}$ cents per quart. This work gives employment to many hundreds of women and boys, and much of the work is done at private dwellings, by persons who cannot go into a general workshop. The oysters, as they come from the vessel, are heaped upon the middle of the room, the operators occupying the wall sides. Each person has before him a small desk or platform, some three feet in height, on which is placed, as occasion requires, about half a bushel of oysters, from which the opener takes his supply. On the stand is a small anvil, on which, with a hammer, the edge of the shell is broken. The operative is provided with a knife and hammer, both of which are held in the right hand; when the shell is broken then the hammer is dropped and the knife does its work. Two tubs or pails, of about three gallons capacity each, are placed within about three feet of the workman, into which he throws, with great dexterity and rapidity, the luscious morsel which is to tickle the palate of some dweller in the Far West. The object of placing these vessels of reception so far from the operator, is to prevent, as much as possible, the deposit of the original liquor with the oysters. * * * From the opening room the oysters are taken to the filling-room, and thence to the packing department. In the filling-room, on a platform are placed a dozen or more kegs or cans, with the bungs out. The oysters are first poured into a large hopper pierced with holes, in which they are thoroughly washed and drained, when they are ready to be deposited in packages. This is done by placing a funnel in the aperture of the keg by one person, while another "measures and pours." This operation is performed with great rapidity, two or three men being able to fill some 2,000 kegs in a day. After depositing the requisite number of "solid oysters," as they are termed, in each package, a pipe conveying fresh water is applied, and the vacant space filled with nature's beverage, the bungs placed and driven home, when it is ready to be shipped. In hot weather, the article adds, kegs are placed in boxes surrounded with broken ice. One firm used 150,000 kegs a year, costing about \$15,000. Eighty vessels were then employed in business, and about \$1,000,000 capital was invested.

In regard to the extent of the business, Mr. Ingersoll writes in 1880:

The trade rapidly grew into immense proportions. Just when it was at its zenith it is hard to say—probably about thirty years ago—and it was then very profitable. The Fair Haven establishments had branch houses in all the inland cities, as far as Chicago and St. Louis, and it was reported that the profit of a single house, from 1852 to 1856, amounted to \$25,000 a year. Levi Rowe & Co. alone, in 1856, are said to have employed 20 vessels and 100 openers, and to have sold 150,000 gallons of oysters, while companion houses shipped from 1,000 to 1,500 bushels per day throughout the season.

The legislation for the regulation of the oyster fishery has grown, like the industry itself, from a small beginning, to a long chapter in our statutes. As different phases of the industry have arisen and developed, new statutes have been required for its regulation, and some vigorous contests have taken place in determining the policy to be pursued.

In the revision of the Connecticut Statutes of 1821, but one oyster section appears. It provides that every town may make by-laws regulating the fisheries for oysters and clams in the waters belonging to and adjoining such town. The principal

use made of this power was to enact a provision for a "close season," fixing a period in each year during which no oysters should be taken. In 1830 the Legislature further provided that such by-laws shall be duly published, and for appeal by those prosecuted under them. Also that no town should issue permits to any one to take oysters during the time that such taking was forbidden by the by-law, and that no discrimination should be made, but that the by-laws should apply to all persons whatsoever. The same statute provided for incarceration in the workhouse of those who failed to pay their fines under this statute.

In 1842, the "close time" which had before been regulated by laws of each town, was fixed by statute from March 1 to November 21, unless dissented from by towns in town-meeting.

In 1845, a statute forbade all oystering in the night season, except by the owner of planted oysters upon his own ground; and the same year the legislation took a long stride forward in providing for the staking out of ground and planting of the same, with the consent of a committee appointed by the town for that purpose. The natural oyster-beds were exempted from such staking, and penalty was provided for trespass upon these beds. It had been common for many years to plant oysters temporarily to a considerable extent, but this formal authority for the practice was very necessary for the proper protection and regulation of the planting.

In 1848, non-residents were forbidden to take oysters in the waters of this State, and the act provided for seizure of boats and utensils used in such taking.

In 1855 another very important act was passed. The necessity of some written evidence of title to grounds was seen, and it was provided that applications and designations and transfers of ground should be in writing. But it was not till 1864 that the final step was taken that directed that designations and transfers should be recorded; that new designations might be taken out when the evidences of title were lost; and for the taxation of designated grounds.

In 1865, staking out grounds, except by the committee duly appointed, was prohibited.

After 1865, the growth of the business caused frequent changes in the statutes, and they are too numerous to mention here, except the more important.

Under these various statutes, grounds were staked out; and, later, designations were made in lawful form. A large extent of ground was staked out on the beach, and other tracts between the beach and the Long Wharf on the west side of the harbor, and from Crane's Bar nearly up to the Tomlinson's Bridge on the east side. These tracts were largely used for planting oysters from Chesapeake Bay, in April for fall use, but natives were also planted to a considerable extent.

About 1865 and 1866, the propagation of oysters was engaged in to some extent; and, under various statutes for the purpose, Morris Cove was granted to individuals—a single acre to each—and there being more applicants than there were acres, the ground

was apportioned by lot. The town of East Haven received \$10 per acre for the ground, but was put to considerable expense in the survey. The town of New Haven also granted a large territory in 1867, known as the "shoal ground," extending from near the fort buoy to the mouth of the harbor, and East Haven followed, in 1872, under the authority of an Act of the Legislature of 1871, by the designation of a tract of acre lots between Light-house Point and Morgan's Point and inclosed and partly protected by "Adam's Fall," "Old Head," and "Quixes," Reefs.

The utilization of the bottom of Long Island Sound, outside of the harbors, islands and reefs which had protected the early planters, was regarded as a hazardous experiment. Ingersoll writes, in 1880:

It will be understood by this, that the business of catching and cultivating native home-bred oysters at New Haven, had grown out of the old haphazard condition into a definite and profitable organization by the time the last decade began. It was not long before all the available in-shore bottom was occupied, and the lower river and harbor looked like a submerged forest, so thickly were planted the boundary stakes of the various beds. Encroachments naturally followed into deeper water, and this proceeded, until finally some adventurous spirits went below the light-house and invaded Long Island Sound. Who was the originator and pioneer in this bold move is disputed, and the honor is claimed by several. * * * At any rate Mr. H. C. Rowe first showed the courage of his opinions enough to take up some hundreds of acres outside, in water from 25 to 40 feet deep, and to begin there the cultivation of native oysters.

It would be impossible in the space assigned to this article to do more than to outline the methods of the business, the difficulties met, the risks incurred, and the means to combat them.

After a legal title has been secured, which was for many years very difficult to accomplish, the next step was to examine the bottom to ascertain its character, and whether the star-fish or periwinkles were at present on the ground. If so, to plant the ground would be useless, for, under the most favorable conditions they are liable to appear and destroy a bed of oysters at any time, and it would be almost certain loss to try to start a bed of oysters when these enemies were already present in any considerable force.

If the conditions are found favorable, the next step is to plant a quantity of parent oysters broadcast say; 30,000 or 40,000 bushels on a tract of 500 acres.

In the month of July every adult female oyster produces several million of eggs, and every male oyster a much greater number of the spermatozoa. These are discharged into the water of the Sound, and though their numbers are far beyond computation, or even imagination, yet they are so small, and there is such a vast body of water in the Sound, that but a very small percentage of the eggs come in contact with the milt and are impregnated. After floating in the water for several days, the little oysters, which go through many wonderful and interesting changes, as may be seen under the microscope, are ready to attach to some shell or stone, or other hard clean substance, and settle down to a quiet life.

Although but a small part of the eggs are impregnated, the number that reaches the attaching stage, and starts on the journey of life as perfect oysters, is vastly lessened by many adverse circumstances. A cold rain will kill all the embryos with which it comes in contact, and the minute oysters are the prey of many other kinds of microscopic life, especially of the infusoria. But of those that have escaped all the preceding dangers, but a small proportion are brought by the currents of water in contact with shells or other culch suitable for attachment.

The little oysters must have a hard and clean substance to "set" on, and as two-thirds of the bottom of the Sound is mud, and most of the remainder is almost free from shells, except where planted for the purpose, but a small proportion have been, under natural conditions, saved. But here the aid of the oyster culturist intervenes, and on the five hundred acres where he has planted thirty thousand bushels of parent oysters to furnish the embryos, he also plants two hundred and fifty thousand bushels of shells in July, just at the time when the little oysters are in need of a resting place. These shells, being freshly planted, have not yet accumulated the obstructive deposits of tunicates, barnacles, bryozoa, polyps, etc., and if the season is a favorable one, the oyster cultivator finds, on examining the shells in August, little specks, which the practiced eye can recognize as oysters, sometimes one or two on a shell, and sometimes crowded with hundreds.

These little oysters grow to the size of three-fourths of an inch in diameter during their first year, and those which survive their many enemies reach a marketable age at from four to six years.

During the whole period of growth they are subject to destruction by the star-fish, winkles, drills, and by the wave action of severe storms, which agitate the water to a great depth, and often bury acres of oysters and smother them under sand, mud, or sea-weed.

But the star-fish is probably the greatest enemy that the oyster cultivator has. They move about the Sound with the currents, sometimes singly, sometimes in squads, and sometimes in great armies like the locusts in Africa, destroying nearly every oyster in their path. An oyster-bed of one hundred thousand bushels has been examined and found in prosperous condition, and two weeks later not half of them remained alive. The only practicable remedy yet in use is to catch up both star-fish and oysters, and, after picking out the star-fish, to plant the oysters on ground where the star-fish do not abound. Several ingenious contrivances have been invented to catch the "stars" only, and some patented; but the difficulty in the way of complete success seems to be in separating the oysters from the star-fish by any mechanical contrivance.

Another enemy of oysters appeared in the spring of 1885, when a large quantity of young oysters was found to have been destroyed by it. The following letter from Professor A. E. Verrill, who is the highest authority on such matters, describes it:

NEW HAVEN, June 16, 1885.

Mr. H. C. ROWE.

DEAR SIR,—I have examined the samples of seed oysters submitted by you. The large masses of sandy tubes which cover the shells of the oysters, both living and dead, are made by a small worm, about an inch long, which was first described and figured by myself in 1872, in the first volume of the Reports of the United States Fish Commission. It is there named *sabellaria vulgaris*, the first part of the name referring to its using sand for its tube, while the latter part was given to it because of its common occurrence. This Latin or scientific name might be translated as the "common sand-tube builder." It is very common from Cape Cod to Cape Hatteras, building its tubes on stones and all sorts of shells as well as on oysters. It grows very rapidly, like other marine worms, and, when abundant, its tubes interlock and form rough crusts, often an inch or more in thickness. Such rough and porous crusts serve to catch the floating particles of mud and organic debris, which will subsequently putrefy and turn black in the interior part of the crusts, evolving sulphureted hydrogen and other poisonous and offensive substances. As these worms grow much faster than the seed oysters, they can easily bury them so deeply under the crust of tubes that the oysters will die, either for lack of a supply of pure water and food, or in consequence of the directly poisonous gases produced by the putrid substances in the crust. In other words the worms, by their rapid growth and the closeness of their crusts, may be said to "smother" the seed oysters. The large oysters seem to be capable of resisting their effects in most cases. Other creatures, with similar habits, have been known to produce the same effect on oyster-beds, but this is the first time that this particular kind of worm has been shown to be destructive to oyster-beds. I think, therefore, that you are deserving of a great deal of credit in calling attention to this new kind of pest.

Very respectfully yours, A. E. VERRILL.

The preceding are some of the dangers and obstacles which nature provided for the discouragement of oyster cultivators, but the prejudices, jealousies and mistaken views generally prevalent added much to their difficulties. Fifteen years ago very few were aware that oysters were cultivated like wheat or rye. Most people had an idea the oysters grew wild like blackberries and whortleberries; consequently they regarded the granting of oyster ground to individual oyster-growers as a robbery of the general public, and it was with much difficulty that legislation could be secured which would enable oyster-growers to prosecute their worthy enterprise. Blatant demagogues harangued town-meetings in some shore towns, and, getting elected to the Legislature, there announced themselves as the friends of the "poor man," and decried the pioneers in this industry as monopolists, when in fact the friends of the poor man were the originators of an industry which is to cause our waters to produce one hundred times as many oysters as in a wild state, and furnish labor and food to a hundred poor men where it did to one before.

This prejudice, which had to be overcome by the gradual increase of intelligence, accounts in a large degree for the fragmentary and partial method of our legislation.

In 1879, the growth of the industry seemed to require considerable modification of the legislation upon oyster-growing, and it was thought by some a commission should be created to give the subject careful consideration. Colonel I. W. Carpenter, of Norwich, who was then Chairman of the Commission of Fisheries, with the writer, prepared the following resolution, which was passed.

Whereas, The raising of oysters from the spawn in deep waters of the State, in Long Island Sound, has proved by experience to be a success; and

Whereas, There is an immense tract of available oyster-ground between the town boundaries and the southerly boundaries of the State, which cannot at present be used, because the State has granted no authority to designate it; and

Whereas, These grounds can be disposed of so as to bring a large sum into the treasury of the State; Therefore,

Resolved, by this assembly, That a commission, consisting of three persons, be appointed by the Governor to prepare a plan, and report to the next session of the General Assembly, for the gradual disposal of the grounds in the waters of this State which are suitable for the cultivation of oysters. Said commission shall examine all existing statutes relating to oyster-grounds and town-lines in the Sound; all customs and by-laws in different parts of the State; and such other matters as pertain to oyster-fisheries, so that the system devised shall be of general application, and enable the State to dispose of the franchise of the grounds to the best advantage.

The commission then appointed failed to carry out the purpose of those who had originated it, but reported a law to the next General Assembly, which created a commission having great and arbitrary powers over the industry, and authorized the leasing of all oyster grounds within the State at such rates and under such conditions as would have discouraged the industry. This proposed law also disregarded titles previously granted by authority of the State. The oyster-growers of New Haven and of the State at large protested against this bill and prevented its passage in the Legislature of 1880. In 1881, radical changes having been made in the bill, it was passed, and the Commission commenced its administration May 1, 1881. Between this date and June 30, 1885, the oyster-growers of the State paid the Commission for ground and surveying a little over \$50,000.

In the years 1882 and 1883, the amount each year was over \$15,000; but nearly all of the desirable ground is now granted, and the grants during seven months previous to the last report amounted to only \$700.

New Haven growers have been large purchasers of these lands, and have also paid a large proportion of the taxes laid by this Commission, which on oyster ground outside of the town jurisdictions amount as follows:

In 1883.....	\$3,681.47
" 1884.....	6,447.47
" 1885.....	7,890.72

These taxes have been paid by the growers under protest, as it has been claimed by the growers that many of the assessments were more than double what the grounds would sell for.

The expense of the Commission to the State since its commencement has been, according to its reports, about \$10,000 per year.

Residents of New Haven own more oyster-ground than those of any other town, and the following list of those owning over one hundred acres each in the State jurisdiction, outside of the rivers and harbors, is based on the tax list last compiled.

In addition to the cultivation in the open Sound, which is pursued by the cultivators named in the foregoing list, planting in the harbor is practiced by several hundred dealers, among whom the following are some of the most prominent:

N. A. Ludington,	J. E. Bishop & Co.,
A. B. Barnes,	G. W. Mallory,
S. Chipman & Co.,	Jeremiah Smith,
R. W. Law,	B. N. Rowe & Co.,
L. Gunn & Co.	

A number of our dealers have at various times shipped shell oysters to European markets and to California, among whom are Hoyt Brothers' Company, Jeremiah Smith & Son, and H. C. Rowe & Co. The two former are still largely interested in the foreign trade.

There is a large business in opened oysters at Fair Haven and at Oyster Point. They are shipped in tubs, holding from 3 to 20 gallons each, and supply the best trade in New England and some in New York and Canada.

The cheaper class of trade in the same territory is furnished by barreled oysters opened in Norfolk, Baltimore, and Crisfield.

Many hundred thousand bushels of the native oysters are sold yearly from New Haven to planters in Rhode Island, Massachusetts, New York and New Jersey. The New Haven seed and plants are noted for their thriftiness and vigor.

The first oysters ever sent to Washington Territory for planting in Puget Sound, were shipped by the writer in 1884.

In 1880, Mr. Ernest Ingersoll made a visit to New Haven, and gave the oyster business and culture a careful study, the results of which, as written out for the United States census, I have alluded to and quoted from.

In the summer of 1882, Lieutenant Francis S. Winslow, U. S. N., was sent to New Haven to continue his valuable studies of the embryology of the oyster. He was with the writer for nearly four weeks, and under the microscope we watched the interesting and wonderful operations of nature in reproducing the untold millions of minute oysters. On one pleasant afternoon, some eighty members of the Connecticut Academy of Arts and Sciences, participated in an excursion on the steamer Gordon Rowe, when fifteen millions of the young oysters, artificially impregnated, were planted in the Sound.

In spite of various drawbacks and discouraging circumstances, the culture of oysters is increasing, and the product is rapidly crowding out the inferior Southern stock, as I have elsewhere shown. If the industry can be protected from oppressive taxation, and the natural enemies of the oyster combated without so great expenditure as to make it unremunerative, the industry will hereafter help largely to make our city prosperous.

One hundred years ago the business was merely to reap the natural oysters which Providence furnished in our rivers. A traffic in them arose and grew to large proportions. Seventy-five years ago the importation from the South commenced and rapidly increased. Fifty years ago planting was practiced, but not propagating. Thirty years ago the importing, planting, opening, and shipping were at their height. Twenty years ago the propagation commenced, and but a dozen years since the oyster culture in the deep water of Long Island Sound was attempted. The pioneers in this enterprise risked their capital and labor in experiments, which were regarded as hazardous and even foolish, and succeeded, amid many losses and discouragements, in founding an agriculture or aqua-culture, wherein we are again in advance of all other cities in the United States. There are more acres of oyster ground owned by citizens of New Haven than of any other city in the world, and our oyster propagators are building up an industry which already enables us to export vast quantities to New York, New Jersey, Rhode Island, and Massachusetts, to the very men who sold us oysters but fifteen years ago. If good fortune attends our oyster interests, they will soon again be more valuable than in the stirring times of 1856. They will produce millions of bushels annually, employ thousands

Henry C. Rowe

of operatives, and furnish food for hundreds of thousands.

HENRY C. ROWE.

Few families can claim an earlier residence among the first settlers of New Haven than that of the Rowes. The records show that Matthew Rowe became a member of the colony on the 7th of March, 1644, less than six years after the first settlement occurred.

Levi Rowe, the grandfather, and Ruel Rowe, the father of the subject of this sketch, were among the prominent and respected citizens of Fair Haven, and participated in many efforts to promote the welfare of the village, not only in material prosperity, but in organizations for religious and temperance work. His mother was the daughter of Washington Gordon, of North Branford, and enjoyed the advantage of the training and example of a mother of truly Christian character and of rare energy, by which she did not fail to profit. She was a successful teacher before her marriage.

Henry C. was born in Fair Haven, April 23, 1851. The sudden death of his father in May, 1868, called him from school into business, at the age of seventeen years. Ruel Rowe was engaged in the shipment of oysters to Canada, New York, and the West, and his son continued this trade for one season, but Baltimore competition was crowding Fair Haven out of Western trade, and at the commencement of his second year he started a New England trade which was the nucleus of his present remarkable success.

Henry C. Rowe was one of the first to see the great advantage it would be to New Haven if the oysters shipped from there could be propagated in our own waters instead of being imported from the South, as was then done. There has been some controversy as to who was the pioneer in this new enterprise, which has already grown to such enormous proportions; but an examination of the East Haven records shows that it was Henry C. Rowe who took out the first grant of oyster ground in the deep water of the Sound, outside of the harbor, reefs and islands, on May 14, 1874.

The enterprise was at first deemed not only hazardous, but foolhardy. The general opinion was that no defensible title could be secured to the ground, and that if it was, the culture was impracticable for many reasons. No sooner had some of the obstacles been overcome, and some of the sea bottom of Long Island Sound been converted into a prospective oyster farm, than the objectors and cavilers forthwith proceeded to vent their prejudices by claiming that the right of property in oyster-ground was a wrong to the poor man. It was then generally supposed that oysters grew wild, like blackberries, and but few had the idea they could be cultivated or propagated, like wheat or rye.

The theory that all oysters in the water were common plunder was strong in the public mind, the Legislature, the Courts, and the Press. This prejudice caused much annoyance, and put many obstacles in the way of oyster cultivators, and

caused many contests in the Courts and the Legislature. The following extracts from a New Haven paper of August 24, 1875, illustrates the feeling then strong in the public mind.

Some two weeks ago we announced that the committee for the town of New Haven for staking out oyster grounds had granted to Henry C. Rowe and fifty-eight others, of East Haven, one hundred and twenty-eight acres for the purpose of planting oysters.

* * * * *

The poor oystermen who have depended on earning a living by catching native oysters in the channel have by these grants been deprived of their right to fish unless they go outside of Southwest Ledge, where the water is from fourteen to sixteen feet deep.

We are also informed that Mr. Rowe has between two and three hundred acres thus secured, besides the grant given him by the town of New Haven.

Thus, as early as 1875, Mr. Rowe, then owning but two or three hundred acres, was called a monopolist by those owning less. Two years later his accusers, owning the same that he did in 1875, still called him a monopolist when he owned more than a thousand acres; and a few years later, when they owned the latter amount, they found fault with him for owning ten thousand.

Some still complain because he owns more oyster-ground than any other man in the world.

The following are extracts from the reply of Mr. Rowe to the foregoing:

The article entitled "Monopoly of Oyster Grounds" is well calculated to give a wrong impression.

After referring to some palpable misstatements, he continued:

It is true I have bought up a large number of two-acre claims of other citizens, and it is also true that if I am successful in raising a crop of oysters it will result in furnishing employment to large numbers of laboring men, perhaps the very *poor men*, of whom the writer speaks so pathetically. Meanwhile I have laid out a considerable sum in attempting to start a crop of oysters on the ground, and have put down over fifteen thousand bushels of shells for that purpose beside seed. It is true, too, I hope to reap a crop after from three to six years, but may never realize one cent, as the oysters have to run a gauntlet of thieves, mud, starfish, winkles and drills; and besides that I have to undergo the attacks of envious persons, who regret that they had not had the enterprise to get ahead of me, and who, I have no doubt, would be glad to get every acre of my ground to-day if they were able.

The result of this public prejudice was that it was next to impossible for several years to make a successful prosecution of any oyster thief. The property is so situated, some of it miles from land, that it was difficult to watch it and detect a thief, and, when one was captured, judges and juries were slow to grasp the idea of property in cultivated oysters, and were ready to acquit him on any pretext, no matter how absurd or trivial.

Mr. Rowe was foremost in these prosecutions, and in securing, and endeavoring to vigorously enforce, such legislation as would protect this property. In the summer of 1879, a determined warfare was carried on between the oyster-growers and the depredators, and, after much watching, the theft of many hundred dollars' worth of oysters, some skillful captures and seizures, and some absurd judicial decisions, a successful prosecution was at length had, and Mr. Rowe and his asso-

ciates triumphed over the lawless depredators and their abettors.

As the experiments of Mr. Rowe and other pioneers in the industry proceeded and began to give some promise of success, others obtained courage to go into the enterprise, and desired to obtain land in the Sound. Some of them, not knowing the law providing for a written title, went out in the Sound and staked out ground, some of which was lawfully designated to Mr. Rowe and others. After a time they were called on to give up their squatters' possession in deference to a written title which they had not been aware of when they first took possession. This resulted in disappointment, ill-feeling, and contests in Courts. Another cause of trouble was the uncertainty of the boundaries of the three towns, New Haven, East Haven and Orange, in the Sound waters. One oyster-grower would take a title from East Haven and another from New Haven, and a third from Orange, a legal contest resulting as to which town had the right to make the grant. The famous case of *Rowe vs. Smith Brothers* resulted from this question, and after being twice tried in a lower Court and twice in the Supreme Court, resulted in a victory for Mr. Rowe.

These and other perplexing questions arising naturally out of a new and experimental industry caused quarrels and differences which have not yet all died out, especially as they have been fostered by a feeling of jealousy on the part of some toward the remarkable success of Mr. Rowe, and the magnitude of his business now and prospectively.

Much legislation was also required to secure the titles and regulate this young industry, and for many years few bills on oyster matters were passed in which Mr. Rowe's hand is not to be seen.

One of the most vigorous contests in the Legislature in which Mr. Rowe engaged was in 1880, when he secured the passage of a bill permitting him to dredge on his own ground with his steamer. He then owned the only oyster steamer in New Haven, and the other planters vigorously opposed its use. Through their influence, Mr. Rowe was opposed by the representatives from New Haven and East Haven, both in the House and before the Legislative Committee. Thirteen persons appeared before the Committee to oppose the provision, and Mr. Rowe only in its favor. After a lively contest the Committee passed it by a vote of 8 to 1, the Senate by 14 to 4, and the House by a two-third vote. It is worthy of remark that the same men who then opposed him bitterly, claiming the steam-dredges would destroy his own beds and his neighbors' too, are now employing and running steam-dredges.

Since 1881, when the State Oyster-growers' Association was formed, Mr. Rowe has been the leading representative of that Association before the Legislature and elsewhere.

Among other public matters in which he has endeavored to secure improvements, are the removal of the place for depositing dredged material in the Government work. It was in close proximity to several oyster-beds, and Mr. Rowe secured its re-

moval by the U. S. Government officers in 1878, and then got an act by the State Legislature compelling all private excavators to carry material to the same place. A few years later, he obtained another removal, as the increase of the area of the oyster grounds required it.

In 1882, Lieutenant Francis S. Winslow, U. S. Navy, with Mr. Rowe's assistance, carried on some interesting experiments in the artificial propagation of oysters. They were so far successful, that they deposited in one day, in the bottom of the Sound, fifteen million embryo oysters from the steamer Gordon Rowe, having on board the members of the Connecticut Academy of Science and other interested observers.

Mr. Rowe was one of the first to advocate the annexation of a part of the town of East Haven to New Haven, and was on the committee to secure the passage of an act providing for annexation. He circulated a petition in 1872 for the building of the Red Rock or Quinnipiac Bridge, and another in 1885 for a new bridge in place of Tomlinson's Bridge, the old structure which had so long been a hindrance and danger in the navigation of the river. Upon the petition of H. C. Rowe and others, the Legislature, in 1885, ordered the draw widened to eighty feet or more; and it is an interesting coincidence, that the General Assembly of 1842, upon the petition of his father, Ruel Rowe, ordered the draw widened to fifty-four feet, while twenty years before that, his grandfather, Levi Rowe, headed a movement to have the draw widened, the width then being but twenty-six feet.

In 1883, Mr. Rowe procured the passage of an Act by the Legislature to protect infant children from ill usage when in the care of other than their parents. In 1884 and 1885, he was Chairman of a Committee of the Thirteenth, Fourteenth, and Fifteenth Wards of New Haven to oppose the schemes of consolidation then before the Legislature, and was a member of a similar Committee from the Borough of Fair Haven East in 1886. But his principal work has been the origination and building up of the great deep water oyster cultivation, some idea of which may be had from the facts that he now controls over twelve thousand acres of ground; plants 400,000 bushels of shells yearly; and employs over one hundred hands, with a prospect of having twice as many within three years. This business, for the daring enterprise which conceived and established it, as well as for the magnitude to which it has grown, has attracted wide attention, and been the theme of many newspaper and magazine articles of much instructive interest. One of the prominent features of *Frank Leslie's Illustrated Newspaper* for December 13, 1878, was an illustrated article, which affords a good idea of the importance, as well as of some of the details, of Mr. Rowe's great business, which since then has developed almost beyond computation.

Politically, Mr. Rowe votes for the best man, and when both are good or both are bad, he votes for the Republican. He was an Abolitionist from his eighth year, when he first read Mrs. Stowe's great work, "Uncle Tom's Cabin."

He is a member of the Second Congregational Church of Fair Haven, and of the society's standing committee. He was one of the organizers, and at one time the president of the Second Church Association, a literary society devoted to debates, essays, music, and other means of social improvement. He is now president of the Salmagundi Club, consisting of twenty-five young people of Fair Haven, which was founded in 1883.

OYSTER GROWERS.

H. C. Rowe & Co. control more oyster ground than any other two firms in Connecticut, and plant upon them yearly more than any other four firms. They deal only in native oysters. They were the pioneers in the enterprise of propagating and cultivating oysters in the deep water of Long Island Sound, and the first to own and employ oyster steamers off New Haven. Their places of business are said to be more extensive and convenient than any others in the State.

J. E. Bishop, Sr., began the business of growing and packing oysters in 1857, at what is now 293 North Front street. In 1870 the present firm was organized, by the addition of C. E. Thompson and J. E. Bishop, Jr., as partners. This firm plant something over 300 acres in the Sound, using 30,000 bushels of seed; has kept abreast with the progress of the science of oyster-raising; and employs about forty hands, with a packing-house, 150 by 75 feet, on the Quinnipiac River.

R. W. Law, Oyster Point, beginning the oyster culture in 1849, has steadily increased his trade and his improved facilities, until he owns 600 acres of oyster ground in the Sound and harbor, and plants annually 40,000 bushels of shells. During the season forty persons are employed. A building and wharf, 60 by 120 feet, on South Water street, serves to carry on the business.

Tuttle & Wilson.—This house was founded in 1862, on South Front street, by A. P. Tuttle, in the business of growing and marketing oysters. In 1882, Mr. R. Wilson was admitted as a partner, under the above firm name. The firm employ fifteen hands, and plant about 12,000 bushels of seed annually.

S. Chipman & Co., established in 1867, plant about 25,000 bushels of seed annually, occupy upwards of 300 acres of oyster ground in the Sound, and employ about forty persons. The packing building at 313 North Front street is 95 by 100 feet. The individual members of the firm are S. and D. Chipman. The house has a large trade throughout New England and New York, and a branch house at Crisfield, Md.

I. E. & F. F. Brown began business in 1861, and keeping pace with the progress of oyster culture, now control about 1,000 acres of oyster land, and plant about 25,000 bushels of seed annually. A building, 50 by 100 feet, and wharf on the bank of the Quinnipiac, are used for opening and packing. Steam power is used for catching the oysters from the beds, and twenty-five hands are employed in the several departments of the work.

Barnes & Ludington, 117 to 123 South Front

street. This house is one of the oldest in the oyster trade, and for many years was known by the name of Barnes & Mallory. In 1881 the present firm, consisting of A. B. Barnes and N. A. Ludington, was formed. They have extensive oyster lands in the Sound, and plant annually about 50,000 bushels of seed. They occupy an area of 156 by 175 feet on Quinnipiac River, and employ about one hundred persons in the various departments of catching, opening, and packing. All the facilities of modern times are employed in the work.

The house of Jeremiah Smith & Son was founded in 1849, when oyster-growing was of far less importance as a factor in the business interest of the city than to-day. The original firm assumed the style of W. & J. Smith, and so continued until 1854, when Mr. Jeremiah Smith carried on the business alone. In 1879, Edward H. Smith was admitted to partnership. The firm is one of the most extensive in its line of business in the world, covering over 1,700 acres of oyster lands in the Sound, and annually depositing 100,000 bushels of shells for seeding purposes. Seventy-five men are employed; the firm owning a number of steam and sailing craft for the purposes of the work. They have a branch house at St. John's Shell-Fish Market, Liverpool, under the control of W. H. Smith.

Captain Caleb L. Ludington, cultivator of oysters at Fair Haven, commenced the business in 1860. He was instrumental in getting the law regarding cultivation of oysters in Long Island Sound passed the last year the Legislature sat in New Haven. He is assisted in his business by his two sons Amini and Luzerne. For a number of years previous to 1860, he was engaged in the coasting trade.

The manufacture of oyster-shell lime was begun in 1855 by H. A. Barnes & Co. Some years later the present firm of A. H. Barnes & Co., the individual members being H. A. Barnes and S. Hemingway, succeeded to the plant. They make a specialty of supplying gas companies with lime for the purpose of purifying gas.

William S. Robinson & Co., makers of oyster tubs, pails and kegs. The manufacture of oyster tubs and pails was originally founded by the Fair Haven Keg Company, in 1859. The original company was dissolved in 1874, when the business continued to be conducted by the above firm. The plant is situated at 17, 19 and 21 East Pearl street, and extends to South Front street. Forty persons are employed, the machinery being driven by a 60-horse power engine. The factory covers an area of 100 by 125 feet.

PAPER MAKERS.

The proprietors of the West Rock Paper Mill are so closely identified with the manufacturing interests of the city, that though the mill is a little beyond the city limits, a notice of it is proper among the industrial arts of New Haven.

The West Rock Paper Mill, taking its name from the cliff within whose shadow it stands, was

established in 1840 by Messrs. Joseph Parker and J. H. Herrick. The idea of the proprietors was to manufacture paper from the sweepings of cotton mills, until that time considered of little value. The work proved a success, but not until sixteen years later did the mill enter upon the career which was destined to be a distinct feature in the paper trade of the country—the manufacture of blotting-paper. In 1856, Mr. Parker conceived the idea of making blotting-paper, and since that time the entire energy of the mill has been devoted to its manufacture. In 1841 the original projectors were joined by F. S. Parker, under the firm name of J. F. Herrick & Co. This continued until 1846, when the partnership expired by limitation, and from that time the business was carried on by the Messrs. Parker, under the firm name of F. S. & J. Parker. In 1869, Joseph Parker, Jr., was admitted as a partner, and the firm was then known as F. S. & J. Parker & Co. Mr. F. S. Parker, the elder brother, died in 1871, and Mr. James Sinclair, for nearly fifteen years foreman, was admitted, and the firm title changed to Joseph Parker, Son & Co. This continued until the death of Mr. Sinclair in 1876, the present membership of the firm being Joseph Parker, Sr., Joseph Parker, Jr., and William H. Eaton, of Springfield, Mass., under the firm name of Joseph Parker & Son. Two grades of blotting-paper are made, known to the trade as "Treasury" and "Commercial," and both have a large sale throughout the country.

FREDERICK SHELDON PARKER

was born at Litchfield, South Farms (now Morris), Conn., in 1798. At the age of twelve years he entered the employ of Abijah Catlin, in Harwinton, Conn., where he remained until he was twenty-two years old. Soon after this he engaged in mercantile business with the late Sheldon C. Leavitt, in Bethlehem, Conn., remaining there two or three years. He then formed a copartnership with Roderick C. Steele, in Woodbury, Conn., from whence he removed to New Haven in 1828, where he entered the wholesale grocery business, in company with Winthrop B. Smith. At the expiration of this copartnership, Mr. Parker continued the business for some time on his own account, when he was joined by William S. Lockwood, of Norwalk, Conn., under the firm name of Lockwood & Parker, which copartnership continued for six or eight years, when the business was wound up, and both parties retired from business life.

Mr. Parker's experience in business, however, rendered his services of great value; and, in 1841, he was invited by his brother, Mr. Joseph Parker, and Mr. J. K. Herrick, to become a member of their firm, in the manufacture of paper at their mills in Westville, near New Haven, under the firm name of J. K. Herrick & Co. The business was continued until 1845, when Mr. Herrick retired, and the business was continued by F. S. & J. Parker, under that firm name until 1869, when Joseph Parker, Jr., became a member of the firm, and the firm name was changed to F. S. & J. Parker & Co.

In 1835, Mr. Parker was married to Miss Lucy Elizabeth Elton, by whom he had one son, Samuel Elton Parker, who lived but a few hours. His wife died August 25, 1836.

In 1851, he married Miss Martha Newton, daughter of William Newton, of Albany, N. Y. Two children were born to them, Frederick S. Parker, Jr., born July 26, 1852, and William N. Parker, born January 17, 1855. Mr. Parker died October 3, 1871, in his seventy-third year. His second wife died December 12, 1866.

They were both regular attendants at the First Congregational Church of New Haven during their residence in that city, and their bodies repose in the New Haven Cemetery.

Mr. Parker was actively identified with many of the interests of New Haven. His long residence there, together with his extensive business acquaintance, and his sterling qualities as a just and upright citizen, gave him a strong hold upon the affections of the people.

Upon his two sons he bestowed a liberal education. Both of them graduated from Yale College, and now occupy honored positions in the business circles of New York City. The eldest, Mr. Frederick S. Parker, is the junior member of the firm of Taylor & Parker, Attorneys and Counselors-at-Law, Potter Building, Park Row, New York; while the younger, Mr. William N. Parker, is the junior partner of the firm of Hazard & Parker, Bankers and Brokers, 25 Pine street, New York.

JOSEPH PARKER

was born July 19, 1810, at Litchfield South Farms, now the town of Morris, Connecticut. His father, Dr. Joseph Parker, was for forty-five years the physician of that quiet village. His mother was Sarah Moss, of Huntington. She married Mr. Jeremiah Blackman, and after his death became the second wife of Dr. Joseph Parker, who died in 1831, universally esteemed and lamented.

In his fourteenth year, Mr. Parker left his native village, and for five years was engaged in country stores at Bethlehem and Woodbury. In his nineteenth year he removed to New Haven, where he lived until he came of age.

In 1832 he went to New York City and engaged in the hardware business. The destruction of the United States Bank, and the financial crisis which followed, made his enterprise a failure. In 1840 he returned to New Haven, where he was instrumental in establishing the West Rock Paper Mill, with whose fortune his name has ever since been honorably identified.

Mr. Parker's mind was of an observant and creative turn, and he had already had some experience and success in invention.

Previous to 1840, little or no use had been found for the sweepings of cotton mills, known as cotton waste. Mr. Parker conceived the idea that this refuse would make good paper. With him, to decide was to act.

Paper had already been made in England from cotton waste. Accordingly he and his partner, Mr.

Wendell & P. H. H.

Joseph Parker

J. K. Herrick, a wholesale stationer of New York City, employed an Englishman, who professed to understand the business, to superintend the manufacture. The Englishman's attempt resulted in failure, and Mr. Parker himself planned and perfected the work.

To Mr. Joseph Parker, therefore, belongs the honor of manufacturing out of cotton waste the first sheet of fine and superfine book-paper ever produced in the United States. His idea had become a triumphant success. The outcome of this experiment was considered a great achievement by the paper-makers of those days, many of whom were not slow in availing themselves of his important discovery.

From the outset the products of the West Rock Paper Mill were noted for purity and excellence. Cotton waste was delivered at a cost of \$20 per gross ton. The book-papers into which it was transformed were pronounced by experts to be equal in quality to those made from foreign rags, which cost \$125 per ton. The prices of the two were soon equalized, and from that time the collecting, assorting and distributing the sweepings of cotton mills has been conducted by many large houses.

In 1841, Mr. Frederick S. Parker, elder brother of Mr. Joseph Parker, became associated with him in the business, which was carried on under the firm name of J. K. Herrick & Co. He was a man of sound sense and of excellent business capacity. Strict integrity and a sacred regard for his word were part and parcel of his character. His cautiousness and prudence were a valuable addition to the firm.

In 1845, Mr. Herrick retired, and the firm became F. S. & J. Parker. In 1869, Joseph Parker, Jr., was admitted to partnership, under the firm name of F. S. & J. Parker & Co. Mr. F. S. Parker died in 1871, and Mr. James Sinclair became a partner, the firm name becoming Joseph Parker, Son & Co. Mr. Sinclair died in 1876. At the present writing (1886), the firm consists of Joseph Parker, Sr., Joseph Parker, Jr., and William H. Eaton, late of Springfield, Mass.

In 1856, Mr. Parker saw at a stationer's in New York City, the first case of English blotting-board ever brought to this country. He happened to have with him some sample sheets of card-board made by him for a manufacturing company to market their goods upon. He requested that a comparison should be made between this and the foreign blotting-paper. It was done, and the West Rock card-board, made from cotton waste, was admitted to be the better absorbent. Our inventor returned home with an idea that proved to be of the greatest value, not only to himself, but to the ink-using world. Preparations were at once made to manufacture blotting-paper and bring it before the public.

From the first it was the aim and ambition of the firm to manufacture a pure, unadulterated article; a pure, properly prepared fiber having been found by test and experiment to possess a greater absorbent power than the adulterated foreign blot-

ting-paper. This product, in 1859, they denominated "Treasury Blotting." In 1868 they manufactured an article of a lower grade, which they called "Commercial." The success of these papers is a gratifying testimony to the sagacity, energy, and honest dealing of the inventor.

In the course of a few years, the superiority of the "Treasury Blotting-paper" reduced the importation of the English article to a minimum. The demand for the "Treasury" and "Commercial" became so great, that they gave up the manufacture of book-papers, and have run their mill exclusively for the production of "blotting" for many years. The fame of their "Treasury Blotting" is well known to all dealers and large consumers in this and foreign countries. Their papers are shipped to Europe, South America, and other lands. Many of the departments at Washington in sending proposals for stationery supplies, call for "Parker's Treasury Blotting."

Mr. Parker's life has been one of untiring activity. He is pre-eminently a man of affairs, and is possessed of a store of practical wisdom, and a mind fertile in expedients, prompt and bold in decision, and uncommonly quick in perception. Unswerving integrity, ready appreciation, and a fund of kindly humor have won for him the esteem and regard of all classes in the community.

Mr. Parker has been a generous giver to the charities of the day. The deserving poor have always found in him a faithful and generous friend. He will long be remembered by more than one to whom he extended a helping hand in the day of adversity.

He married, in 1835, Caroline, daughter of Hervey Mulford, Esq., of New Haven. Six children have been born to them: Joseph, Jr. (who is a member of the present firm), and five daughters, of whom three are deceased.

PAPER BOX MANUFACTURERS.

The first paper box manufacturers of any importance in New Haven were Daniel Gladding and his son, Henry Gladding, who began business in 1857. At this time but few workmen were employed, but the business has grown to such dimensions, that at present seven to eight hundred operatives find employment in this branch of manufacturing.

P. J. Cronan was employed by the Gladdings from 1857 to 1879. At the latter date he commenced business for himself on the corner of State and Court streets, where he remained until 1880, when he removed to his present location, corner of Wall and State streets. Mr. Cronan employs about seventy operatives, most of whom are girls. All grades and styles of boxes are made at this factory.

The paper box manufactory of Benton & Co. was founded in 1881 by the firm of Moore, Sprout & Nichols, in the Quinpiac Building. Their capacity at this time was limited compared to the extent of the present establishment. Only seven workmen were employed, producing 10,000 boxes per day. In 1883 the firm was changed to Benton,

Nichols & Co. In the spring of 1884 their business had so increased, that removal to larger quarters was necessary. At this time the building 84 to 94 Temple street was leased, affording three times the manufacturing room, with facilities for producing 40,000 boxes per day. Here the business was successfully continued until October, 1884, when the entire building was destroyed by fire. The firm then erected their present substantial brick building, 323 and 325 Congress avenue. Here 3,000 square feet of manufacturing room is afforded, while the cellar is constructed with special reference to storing stock, with capacity for two hundred tons of paper, over one hundred and twenty-five tons of every grade and color being constantly on hand. In April, 1885, Frederick H. Benton, of the firm of Benton, Nichols & Co., purchased Mr. Nichols' interest in the business and has since conducted it alone, under the firm name of Benton & Co. During the year 1885 over 13,000,000 boxes were manufactured by this factory. Employment is furnished to sixty operators, about half of whom are girls, and the rest men and boys. Mr. Benton makes any style, shape and grade of boxes which may be ordered, a specialty being folding boxes, protected by patents obtained by the proprietor. All kinds of colored and plain printing is done with Potter's improved cylinder presses. The sales of this factory extend all over this country, Canada and Europe, the bulk of the goods being sold direct to the manufacturers. Three salesmen are employed.

William Witte began the manufacture of paper boxes at 26 Artisan street, in 1884. In 1885 he removed to his present location, fourth story, 187 St. John street. He makes all kinds of paper boxes, and employs about thirty operatives, including men, women and children. For fifteen years preceding the date of his start in business for himself, he was employed by the New Haven Box Company.

The New Haven Paper Box Company, in Quinpiac Block, began business in 1863. W. G. L. Cooke was the projector, and with him was associated a number of gentlemen interested in manufactures. The business proved successful, and at once took a high place among the industries of the city. The Company employ about two hundred persons, and the factory is thoroughly equipped with the best machinery used in the production of the goods. The Company occupy two floors, having an area of 150 feet each. While the Company have a large local trade, their custom extends throughout New England and New York.

The firm of Munson & Co. make a specialty of patent folding boxes used for confectioners, druggists, and dry goods purposes. Being capable of being packed perfectly flat, they can be shipped to any distance cheaply. About fifty hands are employed. The firm consists of E. B. & H. S. Munson. The place of business of the firm is at 64, 66 and 68 Court street.

G. J. Moffatt began the manufacture of bags and envelopes in 1872 in Atwater's Block, and moved to his present place of business on the east side of

State street, opposite Elm street, in 1881. The business occupies four floors of this new building, having an area of 25,000 feet of floor room. The factory is divided into six departments, namely: Envelope making, paper-bag making, printing, book-binding, packing and shipping. A 16-horse power engine furnishes power for the several departments. Three or four salesmen are employed upon the road and about seventy persons are employed in the several departments. The trade of the house extends throughout the county. C. Buckingham is foreman in this factory.

G. J. MOFFATT

was born in Scotland February 19, 1839, and came to America in 1850. Up to the time of his establishment in this country, about twelve years of his life had been devoted to the envelope business, in which he became very proficient. He opened, and for a time managed, an extensive envelope factory at Washington, D. C. In April, 1871, he established a manufactory of paper bags in Port Chester, N. Y. His business increased so rapidly, that, early in 1872, he was obliged to seek more ample facilities, which he found at New Haven, where he located March 1st of the year mentioned.

About three years later, Mr. Moffatt added the manufacture of envelopes. A few years later he introduced the manufacture of blank books. The latter innovation necessitated the addition of a well-equipped printing-office. An increasing trade demanded more rapid production, and Mr. Moffatt saw the advisability of introducing special machinery of his own manufacture for making envelopes and paper bags, which he had invented, and upon which he holds valuable patents. At a subsequent date he added a wholesale stationery trade to his already large business, and at this time undoubtedly carries the most varied and extensive stationery stock in Connecticut. It is a matter of which he may be justly proud, that he has been identified with envelope manufacture since its earliest period, and has developed his large business literally from first principles, contributing not a little to the trade at large by his inventive genius and business enterprise. In March, 1882, Mr. Moffatt contracted with Governor English for the construction of his present large manufactory and store, 495 to 501 State street, which he has occupied since the following October.

Mr. Moffatt is essentially a man of affairs, quiet, unassuming, full of force and decision. He is domestic in his tastes and eschews all connection with politics or public life. As a citizen, he takes a helpful interest in all questions concerning the public welfare. In private and social life he is friendly and unobtrusive. In business circles he ranks with the most prominent manufacturers and dealers in his city and State, and in the envelope and paper-bag trade his name is widely and favorably known. His commercial integrity is unquestioned, and his relations are equally pleasant with the public and his employees.

L. J. M. Hall

PHOTOGRAPHERS.

In the development of the art of photography, citizens of New Haven have taken no mean part. Professor S. F. B. Morse, the inventor of telegraphy, as early as 1844, made a daguerreotype picture of a class of Yale students, and did much in perfecting the process then in use. Benjamin Silliman, Professor of Chemistry in Yale College, made some successful experiments in photography about the middle of the present century in connection with Wells Brothers, then leading photographers in New Haven. Professor Silliman was probably the first person to take pictures by electric light. The Wells Brothers were the first in New Haven, if not in the State, to make pictures on paper in a camera without a negative. This they did in 1853, but the process was so complicated and difficult as to be of no practical value. Samuel Hooker and Professor Hamilton, both of New Haven, but not practical photographers, were instrumental, by experiment and thoughtful study, in discovering a number of valuable secrets which have since been put in practical use.

Phineas Pardee, in 1843, was the first to open a photograph gallery in New Haven. He took pictures by the daguerreotype process. He located in the building where Major Moulthrop's gallery now is. A short time after, W. A. Tomlinson and Samuel Peck became partners with Mr. Pardee, under the firm name of Tomlinson, Pardee & Peck. In 1845, Mr. Pardee removed to New York, then to Poughkeepsie, next to Troy, and in 1849 to New Haven, where he has since remained. At the time of his removal to New Haven, he located in the old Marble Block (now Central) where he remained for twenty-six years, after which he removed to his present location, 746 Chapel street.

Major Moulthrop soon followed Mr. Pardee in the photograph business, opening a gallery in the Boardman Building in 1844. A short time after, he formed a partnership with a Mr. Hart, under the firm name of Moulthrop & Hart. They occupied the Brewster Building a while, after which Mr. Moulthrop retired from the partnership and opened his present gallery, 818 Chapel street, where he has since remained. Mr. Moulthrop was cotemporary with the Wells Brothers, both houses being considered the leading galleries for many years. In 1855 he began to make photographs by what is known as the wet process, but now uses what is known as the dry plate process, a method adopted by all leading photographers. Mr. Moulthrop makes a specialty of large pictures.

Samuel Peck opened a photograph gallery in 1844, where Ramsdell's gallery on Chapel street is now located. In 1849 he bought, at foreclosure sale, the photographic case manufactory of a Mr. Hall, situated at 81 Day street. Here in connection with the Scovill Manufacturing Company, which put in an equal amount of capital, he commenced to manufacture daguerreotype cases, under the firm name of S. Peck & Co. Under his able management the business grew rapidly, necessitating the erection of enlarged quarters. The superiority of his cases and photographic supplies were soon

recognized all over the country, a reputation which has since been maintained, although the requirements of the trade have almost entirely changed. Under Mr. Peck's management, 150 men were employed in making photographic supplies. In 1857, after a successful career, he sold his interest to the Scovill Manufacturing Company, which has since, in a limited way, under the old firm name carried on the business. The change in the mode of taking photographs has practically done away with daguerreotype cases, which constituted the principal portion of Mr. Peck's work. Mr. Peck died in 1879.

W. A. Beers has been continuously in the photographic business in New Haven since 1855, and during this long period has remained at his present location, 762 Chapel street, and probably represents the oldest business on the street which has not in some way undergone a change. Mr. Beers worked with the Wells Brothers and Mr. Moulthrop for about a year and a half. From 1855 to 1867 Sereno Mansfield was a partner with him, since which date he has conducted the business alone. He was one of the first photographers in the city to use the wet process. He now uses all the modern appliances to produce first-class work.

The firm of Bundy & Stoddard, 838 Chapel street, was formed in 1881. The senior member of the firm, J. K. Bundy, has been in this business over forty years, and in New Haven over twenty-five years. His long experience has made him a proficient master of his business.

Daniel P. Ramsdell, who occupies the same gallery where Samuel Peck began business, 817 Chapel street, began the photograph business in this city in 1862, and with the exception of one year has followed the business at the same location ever since. He was the first to introduce the small tintype picture called the "gem," made by the Wing duplicating camera, and was among the first to introduce the dry plate process in 1881. He does a general line of photographic work.

The photographic studio of O. N. Hull was opened at 823 Chapel street in 1863, and has been conducted by Mr. Hull at the same site ever since. Mr. Hull is a native of New Haven, where he was born in 1839.

G. C. Phelps commenced the business of photography in Hartford, Conn. In 1870 he removed to New Haven and opened a gallery on the corner of High and Elm streets. He afterwards removed to 851 Chapel street, and in 1885 to his present location, 942 Chapel street. Mr. Phelps is recognized as a fine photographer.

Frank A. Bowman, photographer, was born in New Haven in 1847, and has been engaged in the photographic business for the last twenty-three years. In 1877 he commenced business for himself at his present location, 1062 and 1064 Chapel street, where he has since successfully conducted it.

G. W. Pach & Brother, of New York, opened a branch photographic gallery in New Haven in 1877, at their present quarters, 1002 Chapel street. They are artists of well known ability, and produce work of acknowledged merit.

The following are also engaged in carrying on the photographic work in this city: George W. Babb, 1075 Chapel, corner High street; John M. Blake, 1 York square; Abraham M. DeSilva, High, corner Elm street; William Donnelly, 851 Chapel street; B. Franklin Guyer, 110 Church street; C. E. Hayes, 749 Chapel street; Charles Homan, 858 Chapel street; Carl W. F. Schulze, 69 Church street; J. D. Schumway, 902 Chapel street; J. J. Tierney, 775 Chapel street; and F. H. Woodin, 831 Chapel street.

PICTURE-FRAME MANUFACTURERS.

The firm of H. Kissinger & Co., 185 State street, is exclusively devoted to the manufacture of gilt walnut and colored picture frames and room moldings. Edward B. Bradley commenced this business in 1855, and at one time made all the picture frames manufactured in New Haven. At the present time William Dahlmeyer and Charles K. Cadwell are engaged in this business.

PLATERS.

The American Gun Implement Company occupy the premises 166 and 168 Brewery street, where the Fowler Plating Company once were. Joseph Woods, President; N. H. Botsford, Secretary; and Harry Stevens, Treasurer. The factory has an area of 30 by 120 feet, and employs about twenty-five men.

The New Haven Plating Company, 24 Artisan street, claim to be successors to the Fowler Plating Company, and are ready to execute all kinds of plating.

Charles S. Barbour, who formerly had a plating establishment in Auburn street, has retired from the business.

C. Cowles & Co., 47 and 49 Orange street, are platers in gold, silver and nickel. The Elm City Manufacturing Company, 74 Crown street, Edward Swift, manager, and Luther W. Whitehead, foreman, are doing a large business in nickel and silver plating.

The New Haven Car Trimming Company, 71-73 Goffe street, has the best of apparatus, and produces a great quantity of plated work.

PLUMBERS AND MANUFACTURERS OF PLUMBERS' MATERIALS.

A. & G. Edmondson, plumbers, at 2 Atwater Block, began business in 1877. The firm employ ten men, and make a specialty of heating apparatus.

H. Williams was one of the original founders of the house of J. I. & H. Williams, first established in New York. For the past twenty years Mr. H. Williams has been the sole proprietor, and the business of the house has been conducted in New Haven.

In 1855, J. Gold founded the business, which in 1867 passed into the control of the New Haven Steam Heating Company, which has since been

incorporated as a stock company with a capital of \$75,000. The present officers are George Blake-man, President; L. E. Osborn, Treasurer; George I. Scranton, Secretary. Their plant is located at 68 Court street, and consists of a four-story brick factory, 55 by 103 feet in dimensions, of which they occupy two entire floors. Here from twenty-five to thirty operatives find employment. The steam heaters manufactured by this company are extensively used, and highly indorsed for their general excellence.

The business of Peck Brothers & Co., manufacturers of plumbers' materials, brass and plated work for water, steam and gas, 72 and 74 Franklin street, was founded in 1860 under the style of E. Peck & Son. This firm commenced business not only on a much smaller scale, but, in comparison with the present, a very circumscribed field for operations. As the trade increased, however, with the growth of the demand, the resources of the firm were augmented, and in 1866 the present joint stock company was organized, with a capital of \$35,000, which was increased to \$80,000 a few years later, and the style was changed to the existing title, and since that time the house has not failed to maintain its position as one of the leading establishments engaged in this branch of manufacture in this country. To give an idea of the variety of goods manufactured and dealt in by this Company, it is only necessary to state that their lithographic catalogue for 1884 contained 575 pages devoted to illustrations and descriptions of their goods. The bulk of the trade, however, may be said to lie in the manufacture of brass, steam, water and gas goods. They are dealers in bath tubs, boilers, basins, iron sinks, force pumps, and plumbers' materials generally; in fact every appliance pertaining to the management of steam, gas, water, air, oil, and chemicals, is either manufactured or sold by this house. The manufacturing plant of the firm is located on Franklin street, extending back about two hundred and fifty feet. These premises contain three extensive buildings, besides stables, sheds, etc. The main building, which is occupied for finishing goods, for the offices, and for stock, is a handsome four-story brick structure with mansard roof, occupying an area of 260 by 35 feet. The foundry is 225 by 35 feet, one-story high, and the core building is two stories in height. A 100-horse power Harris-Corliss steam engine furnishes the motive power, assisted by two boilers, 66 by 19 feet and 48 by 16 feet respectively, built by H. B. Bigelow & Co., of this city, while a force of 300 mechanics and artificers are employed in prosecuting the work in its various departments. With such facilities, trade has extended throughout the entire United States, as well as part of South America and Mexico. This Company furnished much work for the Vanderbilt mansion on Fifth avenue, New York, and for the residences of President Hopkins, of the Union Pacific road, and for many other elegant houses in this country. The officers of the Company are H. F. Peck, President; J. M. Peck, Secretary and Treasurer. The present capital is \$300,000. George Fisher is a foreman in the works.

Henry J. Ford

HENRY FRANKLIN PECK

springs from a race of sturdy ancestors who have wrested strength and success from the somewhat harsh conditions of New England life, and who have held honorable places in the esteem of the communities wherein they have lived. His father, Elnathan Peck, belonged to a family which had been for several generations identified with the fortunes of the town of Milford, Conn. Mr. Elnathan Peck followed the trade of a carpenter, and in 1822 he went to New Britain to assist in building the church edifice of the First Congregational Society.

In that town he met and married Miss Mary Dewey, and the newly united couple established their home in New Britain. The eldest of their nine children was Henry F., who was born on the 31st of March, 1828. He obtained his education in the common schools of the locality, and in the New Britain Academy. While he was yet an infant, his father abandoned carpentering and began the manufacture of general hardware. Mr. Elnathan Peck was one of the pioneers in this branch of production in America. When seventeen years of age, the son was placed in the workshop of his father and commenced his acquaintance with a practical business life. The concern prospered, and increasing trade demanded an increase of facilities. A joint stock company was formed to conduct the manufacture. But although the pecuniary success of the enterprise was encouraging, there was a lack of harmony among the associated proprietors upon points of business policy, and the senior Peck left the company. His son, who occupied the post of shipping clerk, relinquished his position at the same time. The Western fever was then epidemic, and the young man fell a victim. He joined the vast host of his comrades who were marching across the Alleghanies, and engaged for two years in mercantile pursuits. Returning at length to his native town, he found employment in the grocery of his brother-in-law, with whom he remained until early in 1862.

Meanwhile, in June, 1851, he took unto himself a helpmeet, Miss Elizabeth Augusta Cornwell, daughter of Deacon Chauncey Cornwell, a man prominent in church and society of New Britain. By her he has had three children, including an only son, who is now employed in business with his father.

In 1859, Mr. Elnathan Peck began the manufacture of brass goods for plumbers, gas and steam-fitters. The establishment of the city water-works in New Haven seemed to promise improved conditions for the prosecution of this business, and therefore in February, 1862, the undertaking was transferred to this city. In the ensuing month, Mr. H. F. Peck also quitted New Britain, came to New Haven, and was associated with his father in manufacturing.

He had been profoundly interested in the issues underlying the war, and was a strong supporter of the Government. He felt it to be a duty to give the Union not only sympathy, but material, personal assistance, and, in September, 1862, under the call for nine months' men, enlisted in Company

H, of the 27th Connecticut Regiment. He participated with his regiment in the severe battles of Fredericksburg and Chancellorsville, and in the latter conflict was taken prisoner. He was paroled almost immediately, and went into parole camp at Annapolis, where he was obliged to enter the hospital. It was the only sickness that befell him during his term of service. Recovering, he was mustered out with the regiment, and at once devoted himself to his business vocation. His zealous labors may be measured by the resultant success.

In 1864, his brother, J. M. Peck, entered the firm, which then became E. Peck & Sons. After the death of the senior member, in December of the following year, a joint-stock company was organized to continue the business, with a capital of \$35,000. Mr. Peck was chosen President, and his brother became Treasurer; so it has remained until this day. The capital, however, has been increased from time to time, principally through surplus earnings, until it has reached the sum of \$300,000. The factory affords employment to about three hundred men.

Besides minor enterprises with which Mr. Peck is concerned, he is largely interested in extensive manufactories of brass and iron goods at Haydenville, Mass., and is the President of the New Haven Co-operative and Savings Fund and Loan Association, an organization especially intended to secure to working men a profitable disposition of their savings.

Mr. Peck has not shirked the duty of a good citizen in serving the community. For four years he took part in the city government, two years as a Councilman, and two as an Alderman. He was a member of the Board of Finance, and, in 1878, occupied the responsible post of President of the Board of Councilmen. His experience, energy, and public spirit have been particularly valuable upon the Board of Education, to which he was first elected in 1880. He is now in the midst of his second term. As a member of the Committee on Buildings, he has supervised the erection of some of the district's best schools buildings, including the Ferry street and Orchard street schools, and the Welch Training School.

In 1884 he accepted the Republican nomination for the mayoralty of the city. The rank which he holds in the estimation of his fellow citizens is demonstrated in the fact that he led the rest of his ticket by several hundred votes, although his Democratic competitor was one of the most popular leaders of that party.

As a member of the College Street Church, prominent positions in church and society have been bestowed upon him. He has kept the prosperity of the churches close at heart, and has been always ready to bear his part in every movement for the improvement of society. In the G. A. R. organization he has taken a deep interest, and, in 1884, was the Commander of Admiral Foote Post. Mr. Peck has now a high position in the confidence of the community as a man who labors sincerely and intelligently for the common welfare,

and invariably accords to the working classes that careful and considerate treatment to which they are entitled, and which they so much need.

T. W. Corbett began the plumbing business and making of galvanized cornice at 280 Elm street, in 1878, which he has continued at the same place ever since, doing all branches of cornice work. He made the cornices of nearly all the new buildings of Yale College, the State Armory, and numerous private residences. Particular attention is given to sanitary plumbing. Thirty men are employed. Stoves, ranges, and furnaces are dealt in. Mr. Corbett was born in Ireland in 1851, but came to America at an early age, and has since resided in New Haven.

POTTERS.

The first pottery in New Haven was in East Water street, near Olive street. Here stone-ware was made in the early years of this century.

S. L. Pewtress has been a manufacturer of clay goods for nineteen years. He came to New Haven from Worcester, Mass., but was born in the State of New York. Mr. Pewtress' pottery is at 71 Chatham street.

ROOFING.

C. W. Clark commenced the slate roofing business in New Haven in 1864. At this time there were but a few buildings in the city with slate roofs. Before coming to New Haven Mr. Clark followed the same business in the States of New York and Massachusetts. He laid the roofs on the City Hall, College buildings, nearly all of the churches, and many business and private buildings. He employs seven men, and is the only one engaged in this line in New Haven. He also deals in coal, with an office, 113 Long Wharf.

James E. Kelley first engaged in the roofing business in 1852, and has carried on the business ever since. He is sole agent in this vicinity for applying Warren's Felt, Cement and Gravel Roofing. He also makes a specialty of using Native Trinidad Asphaltum for roofing cellars and vaults. Most of the large manufacturing establishments in this city were roofed by Mr. Kelly. He employs on an average about six men.

RUFFLING.

The firm of Manville & Co., composed of Uri D. Manville and Leonard Winship, commenced the manufacture of ruffling and white trimming for ladies' wear at 424 State street, in 1879. The products of the firm are sold all over the United States. Thirty female operatives are engaged in the manufacture of these goods. Four traveling salesmen are employed.

Mr. Winship, of this firm, for fifteen years previous to 1861 was engaged in the dry goods business, which he relinquished at the date named to commence the manufacture of rufflings and lace trim-

mings by automatic machinery. He was the first person to embark in this enterprise in this country or Europe.

SAIL AND AWNING MAKERS.

John Hayden and John Hempsted were once sail-makers in New Haven. Many years ago they retired from business and are now dead. The only sail-makers in New Haven at present are Van Name & King, who commenced in 1861. They make sails for large coasting vessels, and employ, on an average, ten men. Besides sails, they make tents, awnings and covers. They have been located at different locations on Long Wharf ever since they commenced business, and for the last eight years at their present place, No. 205. The individual members of the firm are C. J. Van Name and W. M. King.

The New Haven Awning Company, 844 Chapel street, of which William McGrath is proprietor, was started in 1884. Work consists principally of awnings and tents, although sails for small vessels are made.

J. B. Cunningham, 847 Chapel street, makes a specialty of fancy window awnings. He also manufactures tents and canvas rigging for light sailing vessels.

SHIRT MANUFACTURERS.

In 1847, Mr. G. F. Winchester commenced the manufacture of shirts in a building on the west side of State street, where D. S. Cooper's grocery now is. He soon moved across the street into a large house, where the Rev. Mr. Garfield had formerly kept a school for young ladies. The business expanded so rapidly, that, in 1850, he erected a brick building in Court street. This, by successive additions to its area and height, became so large, that eight hundred persons were employed within it, and five thousand more in families throughout Connecticut, Western Massachusetts, and Long Island, the shirts being sent away to be finished by hand. In 1860 the yearly production was about forty-five thousand dozen, consuming about two million yards of muslin, five hundred thousand yards of linen, and twenty-five thousand dollars' worth of thread and buttons. Four hundred sewing machines were in use in the factory. While the production was at its maximum, Mr. John M. Davies was a partner with Mr. Winchester, under the firm name of Winchester & Davies, Mr. Davies having charge of the warehouse in New York, where sales were made. In 1865, Mr. Winchester retired from the firm to give his entire energies to the manufacture of his fire-arms, leaving his son, Mr. W. W. Winchester in the firm, who, three years later, sold out his interest and joined his father. The business was continued by Mr. John M. Davies and his sons until about 1875, when it was removed to New York, near their sales-room, the greater use of machinery having rendered unnecessary a location chosen originally for its convenience in distributing among families in the country the work to be finished by hand.

The most extensive shirt manufacturing establishment in New Haven at present is that of the Elm City Shirt Company, 417 State street. This Company, of which Stephen Mix is President and George P. Marvin, Secretary, commenced business in 1863. A fine grade of shirts is made. Employment is furnished to seventy-five female operatives.

The Paragon Shirt Manufacturing Company was formed in 1880, and commenced operations in the Insurance Building on Chapel street. Removed to present location, 746 Chapel street, in 1882. It was organized as a stock company in 1885, with a capital of \$3,000. A specialty is made of fine custom shirts. Employment is furnished to thirty women operatives. The officers of the Company are George O. Manchester, President; F. O. Manchester, Treasurer; and A. A. Beattie, Secretary.

SILK WORKERS.

The manufacture of silk thread is a comparatively new enterprise in New Haven. The earlier attempts in this line, from cocoons grown in this locality, have already been noticed. The enterprise as at present carried on by the Globe Silk Works, was started in 1880, under the copartnership of Leigh & White (Lewis Leigh and W. W. White). The object of the original proprietors was to manufacture a low grade of thread, from the wild silk or wild cocoon, that could be used in knitting or for the loom for manufacturing underwear. For this purpose a quantity of this wild silk was imported, and many experiments made to produce a thread for the above purpose, but these experiments did not prove a success, and the factory was then employed to "throw" and manufacture thread for other parties, in the way of a commission business. In 1881, the business was increased, and John M. Marvin was admitted to partnership, under the firm style of Leigh, White & Marvin. Mr. Marvin acted as silent partner. In October, 1881, Mr. Marvin purchased the interests of Messrs. Leigh and White, and soon after formed a partnership with Wilbur J. Smith, the title of the firm being J. M. Marvin & Co. The plant was at this time thoroughly refurnished and replenished with the latest and most improved machinery. Mr. Smith, on account of ill health, retired from the firm in October, 1886, after which William B. Pardee, formerly of the firm of William B. Bradley & Co., carriage-makers, became a partner in the business, the title of the factory being the "Globe Silk Works." The company ceased long ago to manufacture silk thread for others on commission, but now supply the trade direct. The company occupy the fourth floor of the west end of Hooker's carriage building, Nos. 578 to 590 State street, and employ a force of fifty hands.

SMELTERS.

The smelting works of Corey, Moore & Co., composed of David Corey, Charles S. Moore and J. Willis Downs, was started in 1882 at the present location, rear 43 Crown street. They do a general

line of smelting and melting of old and new metals. Four men are employed.

SOAP MAKERS.

The oldest soap factory in the city is that of Bradley & Ball, founded in 1789 by Robert Brown, on George street. He continued it until 1827, when his son Charles assumed management of the business and continued it until 1840, when his brother, A. L. Brown, became a partner, under the firm name of C. & A. L. Brown. A. L. Brown died in 1871, from which date, to 1876, Charles continued the business. At the latter date, Henry Mix purchased the business. In 1880 he sold the concern to the present firm of Bradley & Ball. The location of the factory has been changed several times. At present soft soap is manufactured at 14 Union street, where the office of the firm is located, and where they receive the articles for manufacturing soap. At the corner of Middletown avenue and North Front street, hard soap is manufactured. This firm furnishes employment to eight men. About 8,000 pounds of soap are made every week.

The soap factory of Franklin & Steed, 35 and 37 Silver street, was established by T. H. Fulton in 1855. During the latter years of Mr. Fulton's connection with this business, his son, W. H. Fulton, was a partner, under the firm name of T. H. Fulton & Son. January 1, 1886, T. H. Fulton & Son sold the business to the present proprietors, who are now conducting it. They manufacture several grades of soap, among which are Burwell's and Fulton's Superior Washing Soaps and Soapaline.

R. M. Burwell commenced the manufacture of soap at 246 Cedar street in 1852, and continued it until 1880, since which it has been conducted by Merritt W. Burwell. Laundry soap is the only grade manufactured at this establishment. Twenty thousand pounds are manufactured monthly, and sold to the wholesale trade in Massachusetts and Connecticut.

ROBERT MERRITT BURWELL.

Robert Merritt Burwell, a farmer's son, was born at Burwell's Farms March 31, 1814, the seventh in descent from John Burwell, one of the original settlers (1639) of Milford. His father's name was Robert; his mother's maiden name Abigail Polly Satterlee, a farmer's daughter. When eighteen years of age he left home, and for two years was a clerk in the drug store of L. K. Dow on Chapel street, near Yale College. From 1835 to 1841 he was a resident of New York, part of the time employed in a drug store; then lived six years in New Hartford, and nearly two in Waterbury, and next came to New Haven and engaged with Samuel Noyes of "Apothecaries' Hall." Experimenting while there successfully in the making of soap, Noyes started him in the business of its manufacture. He soon bought Mr. Noyes' interest, and the sale of "Burwell's Soap" became large and lucrative.

On the 1st of June, 1847, Mr. Burwell married Elizabeth, daughter of Asa Woodruff, a farmer, of

New Hartford. Her mother's name was Polly, *nee* Spencer. They have three children—Elizabeth R., Merritt W., and Robert N. In 1880 his son, Merritt Woodruff, succeeded him in the factory.

Mr. Burwell is now in his seventy-first year; he stands 5 feet 8 inches, weighs 170 pounds, and his figure is compact and solid. His success is largely due to persistence of purpose and habits of industry; for he was the oldest son of an old time Connecticut farmer, and had from youth up much thrown upon him.

He owns the beautiful mount "Round Hill," 300 feet high, containing 270 acres, just north of Allingtown. He calls his place Wellwood, from the last syllable of his own and the first syllable of his wife's maiden name. From the tower on the summit of his mansion, only 19 feet less high than East Rock, is a panoramic view of mountains, hills, woods and waters, of rare and almost unequaled extent and grandeur. It takes in toward the east and north the long stretching harbor and City of New Haven; the bold red faces of East and West Rock, while between the two, and miles beyond, peering in the blue distance, rises 730 feet in air, the exquisitely rounded cone of Mount Carmel. To the south is a vast stretch of Long Island and its intervening world of waters; and to the west, fifteen miles away, the spires of Bridgeport, that hive of industry, stand out, clear and distinct in the sunset sky; beyond a leafy sea, the crowns and hollows of a rolling, billowy woodland. The possession and beautifying of Wellwood is the great pleasure of Mr. Burwell's declining years.

W. H. Beecher & Co., referred to under Candle Manufacturers, make soap.

SODA WATER MANUFACTURERS.

For a number of years Phillip Farley carried on the manufacture of soda water, ginger ale, and bottling of mineral waters, at No. 67 Halleck street. He died recently, and the business has since been conducted by his wife.

STARCH MAKERS.

F. C. Hubinger & Brothers (Joseph E. and Nicholas W.) commenced the manufacture of patent starch at 516 to 520 State street. They take ordinary starch, and by a patent process improve it for the purpose for which it is used. They are now located at 11 Custom House square. Twelve persons are employed at this factory. They sell their goods to wholesale dealers.

STENOGRAPHERS.

William H. Brown, 22 Center street, practices the art of stenography.

J. F. Gaffey, Hoadley's Building, Church street, is also a professor of stenography.

STONE-CUTTERS.

For nearly a century the Ritter family have been prominent stone-cutters in New Haven. John Ritter, who died in 1802, was for thirty years in the business, and was succeeded by his son David, who died in 1842, having been in the business forty years or more. In the *Connecticut Journal* of September 23, 1800, is this advertisement:

The subscriber gives public information that he carries on extensively the stone-cutting business, and has for sale a neat assortment of Philadelphia and Watertown marbles and slates, which he will dispose of cheap.

Also stone-stoves and most kinds of building stone.

NEW HAVEN, GEORGE STREET, September 23, 1800.

David Ritter afterward removed from George street to the corner of St. John and Artisan streets, his house, shop and yard occupying the space between the Farmington canal and Artisan street. After the death of David Ritter, in 1842, the business was continued by his son, John, the yard being removed from the old stand near the canal to the neighborhood of the New Haven Burial Ground. John Ritter died in 1872, after being in the business forty-seven years. He was succeeded by his son, John C. Ritter, the last of these four generations of stone-cutters, whose death, in 1882, closed the record of the family's connection with the business of stone-cutting. The marble-yard of John Ritter and his son, John C. Ritter, was on High street, between Wall and Grove.

The oldest granite and marble yard in the city at present is that of Thomas Phillips & Son, established in 1845 at the present location, 143 High street. From 1845 to 1851, Treat Botsford was a partner of the senior member of the present firm. From the latter date Mr. Phillips conducted the business alone for several years, when his son, John H. Phillips became a partner. In 1877 a branch yard was opened on the corner of Winthrop and Sylvan avenues, opposite Evergreen Cemetery, which is still continued. Some of the finest monumental work in this city has been produced by this firm. Worthy of mention are the following monuments: The Odd Fellows', General George M. Harmon, D. S. Glenney, Frank Hooper, and Lieutenant-Governor Oliver F. Winchester, in Evergreen Cemetery; Eleazer T. Fitch, Ezekiel Trowbridge, Charles Good-year, and Commodore G. A. Hand, in Grove Street Cemetery; and the D. D. Mallory monument in Fair Haven. Besides monumental work, other work in granite, marble and stone is executed. Twenty men are employed. Much of the work is done by means of steam power.

The granite works of Edward S. W. Green, 149 High street, were established by his father, B. N. Green, in 1863. In 1870 the present proprietor became a partner of his father, under the firm name of B. N. Green & Son, which continued until the death of the former. The products of this yard consist of marble and granite monuments and grave-stones.

From 1854 to 1884, George A. Shubert was quite extensively engaged in preparing granite and freestone for building purposes. He was located on the corner of Grand and Jefferson streets.

Martin Kaehrle was foreman of Mr. Shubert's works for thirteen years. In 1869, with Declau O'Brien as partner, he commenced business for himself on Railroad avenue. The partnership of Kaehrle & O'Brien was dissolved in 1873, Mr. Kaehrle continuing the business on St. John street, till his death in 1878. Since his death his son, William Kaehrle, has conducted the business. Granite and freestone is taken in the rough and prepared for building purposes. Thirty men are employed. In 1884, Mr. Kaehrle removed to his present location, 6, 8, and 10 Hamilton street.

T. B. Robertson opened his steam granite and marble works, 750 Whalley avenue, about ten years ago, and has succeeded by skillful work in securing a large patronage.

Thomas Bowden opened marble and granite works on the corner of Meadow and Columbia streets in 1884. In 1885 he removed to his present location. He does a general line of monumental work.

The marble works of Jacob Andrea were opened in 1884 at the present location, 60 Sylvan avenue. Mr. Andrea worked for John C. Ritter, on High street, for sixteen years, six years of which he was draughtsman. Mr. Andrea has done some highly creditable work since he has been in business. Notable is the sarcophagus monument built for United States Minister Phelps at Burlington, Vt.

Joseph Cornish commenced his present business in 1884, in partnership with G. S. Barkentin, under the firm name of Cornish & Co., at 966 Chapel street. The partnership was dissolved a short time after, when Mr. Cornish removed to his present location, 117 High street, where he has since continued. He manufactures monuments and headstones, and cemetery work of all kinds.

The other marble and granite cutters deserving of mention are C. F. Balbier, 91 Ashmun street; John Maxwell & Son, Water, corner of Hill street; Edward O'Brien, 437 East street; Peter Small, 20 Jefferson street; R. G. Stokes, 87 Whalley avenue. Daniel Steele, No. 5 Sylvan avenue is agent of the Burdick & Smith Granite Company, whose works are located at Westerly, R. I.

SUSPENDER MANUFACTURERS.

Elm City Suspender Company was organized in 1882. This factory is located at 365 State street. An assorted line of suspenders, garters and shoulder braces are made. Henry Hertz is manager of this establishment. Work is furnished to six employees.

TAILORS.

Early in the present century the following persons were in business as merchant tailors in New Haven: Chatterton & Babcock, Thaddeus Austin, Samuel P. Davis, Rodney Burton, LeGrand Cannon, Bryan & Peck, and Hull & Townsend. At a later date we find the names of Townsend & Bishop, Scott, Bristol & Thompson, Yale & Burritt, Benjamin W. Stone, and James M. Mason. The latter two are probably the two ablest living tailors in

New Haven. Mr. Stone preceded Mr. Mason in business, beginning near the first quarter of this century. Mr. Mason served his apprenticeship with the firm of Bryan & Peck, who had a shop on the site now occupied by the New Haven Hotel. In 1837 he succeeded to the business of Bryan & Peck, and successfully carried on the business from that time to 1873, a period of forty-seven years, when he retired.

The most extensive merchant tailoring business in the city, if not in the State, is done by the firm of E. P. & B. R. Merwin, 68 Church and 60 Centre streets. Their present building was erected in 1872. The firm was founded in 1831. They also have a house in New York City, established in 1880. The amount of business done by this firm last year reached the sum of nearly a quarter of a million dollars. Employment is furnished to nearly one hundred and fifty operators. E. P. Merwin commenced business with the firm of Smith, Merwin & Co., in 1867, and is a gentleman of experience and ability in this line of business. Two traveling salesmen, three book-keepers and eight cutters are employed.

SMITH MERWIN,

the youngest of seven children, was born in the town of Brookfield, Conn., in the year 1809. Accustomed to labor, even throughout his youthful days, he enjoyed but little leisure, and attended school for a few winters only. But experience with hardship and necessity afforded him an education, evoking those qualities of self-reliance, perseverance, and conscientious honesty, which were the foundation of his manly character.

At the age of fourteen he came to New Haven on foot and alone, with a cash capital of twenty-five cents in his pocket, but rich in hope and honest purpose. He found employment on Chapel street, in the shop of Thaddeus Austin, with whom he remained until he reached his majority. From Mr. Austin he learned the initiatory or practical part of that trade or profession which was soon to be adopted by him as his own. In the spring of 1832 he founded the business which has been uninterruptedly carried on, steadily growing and increasing, until to-day, in the hands of his sons, Edward Payson and Berkley Rich, it has become what would have been the desire of his heart, a fine business, one of the largest, if not the largest, of its kind in this country. His affairs were conducted with untiring industry, and with scrupulous honesty and fidelity. He attached to himself not only patrons, but friends, and won that permanent honorable success which he so fully merited. His business sagacity and carefulness caused him to be sought for as counselor in many enterprises.

At the formation of the City Fire Insurance Company of New Haven, he was selected as one of its Directors, and so continued with the Company until, after many prosperous years, he retired from business. In the year 1855, when the New Haven Manufacturing Company had become nearly

bankrupt, with wonderful nerve he bought largely of its nearly valueless stock, becoming one of its Board of Directors, and had the great satisfaction of seeing it become one of the strongest and most profitable companies in the State. He continued as one of its Directors until his death. A similar position he also held in the Tradesmen's Bank from the time of its formation until his death. His naturally retiring disposition kept him from taking any active part in politics, yet his political views were always strong and clear in opposition to anything detrimental to the best interests of his country. His opposition to human slavery, and delight at the breaking of the bonds of the oppressed, were characteristics of his manly heart.

Mr. Merwin possessed a fervently religious nature, and all his powers and resources were prayerfully consecrated to the cause of the Master whom he loved. Early in the year 1838 he joined the First Congregational Church of New Haven. In the same year, in his parlors was formed the Chapel Street Church, now the Church of the Redeemer, in which he became a Deacon in 1843, and so continued for twenty-five years. As a Sabbath school teacher his memory is still cherished by many with loving remembrance. Afterwards a change of residence caused him to identify himself with the College Street Congregational Church.

In church and in society, in business and at home, he never belied the sacred vows that he had taken, but sincerely endeavored, so far as in him lay, to live a godly, righteous, and sober life. To this, those with whom he came in contact bore witness. One who was for more than ten years intimately associated with him in business said of him: "He was one of the purest minds I ever knew. I never knew him to utter a word or do an act, that, if publicly known, would not have been an honor to his memory. His whole life and soul seemed permeated with a deep sense of Christian duty and responsibility.

In 1832, Mr. Merwin married Miss Amelia P. Rich, of New Haven; by her he had six children, four sons and two daughters. One son died in childhood. The rest of his children, excepting one in New York, are now residents of New Haven.

In the latter years of Mr. Merwin's life a wearisome and subtle disease fastened itself upon him, making him an invalid and a sufferer, but during his long and painful illness not one word of murmuring or complaint was heard from his lips. That hope which had been the beacon and mainstay of his life, soothed and quieted him, until at last, on the 23d of January, 1873, his prayers were answered, and he passed quietly and peacefully into that "rest" for which he had hoped and labored and prayed.

William Franklin, of the present firm of William Franklin & Co., 40 Centre street, merchant tailors, commenced business in this city as partner in the firm of Mason & Franklin in 1845, which was continued for nine years, after which Mr. Franklin carried on the business alone until 1884, when the present firm was formed, consisting of William

Franklin, Charles T. Bennett, and Charles Foster. This is the oldest establishment of the kind in the city. Mr. Franklin was born in Preston, England, in 1821, and came to New Haven in 1831, where he has since resided. He commenced to learn the tailoring trade in 1835, with the firm of Babcock & Marvin.

TELEPHONISTS.

The first telephone exchange in New England was at New Haven. Its establishment was largely due to the sagacity of Mr. H. P. Frost. It still remains in active operation, though with multiplied and much extended wires.

HERRICK P. FROST.

The subject of this sketch, Herrick P. Frost, was born January 16, 1835, in the town of Wolcott, New Haven County, State of Connecticut. His father, Sylvester Frost, was a farmer of that town who married Philanda Tuttle, Herrick being the second of five children. He spent his boyhood and early youth on the farm, attending school in the winter months.

Having a somewhat natural turn for trade, at the age of seventeen he started out in business for himself. Procuring a team, with goods of various kinds, he traveled through four or five States, and was successful, not only in adding to his small capital, but in acquiring an experience of the ways of the world and in gaining confidence in himself.

After pursuing this business for several years, he came to New Haven in March, 1856, and after one or two business ventures he formed a partnership with Julius Tyler, Jr., in 1858, establishing the wholesale grocery house of Tyler & Frost, on State street. This business he prosecuted with great vigor and with a varied success for nearly twenty years, the partnership being dissolved in 1856.

At this time the great invention of the telephone was first brought to the notice of the world by its inventor, Professor Alexander Graham Bell. The attention of Mr. Frost was called to it, and after a careful examination of its merits he saw at once the practical usefulness of the invention. He accordingly associated himself with Mr. George W. Coy, an electrician and a former telegraph manager, and in January, 1877, the first telephone company ever formed for a general exchange business was organized in New Haven, under the name of the New Haven Telephone Company, and the first telephone exchange the world ever saw was established.

At this period the telephone was looked upon as a novel and amusing toy by the general public, and the establishment of this exchange, through which people in different parts of the city or in adjacent towns could be connected so that they could talk with each other as easily and as readily as if face to face, was a revelation, and the new enterprise attracted wide and general attention, and was soon the "talk of the town," the exchange being visited by schools, by students, by college and scientific professors, and by strangers from Chicago, St. Louis, Memphis, New Orleans, and many other cities.

Wm. F. Frost

D. Goffe Phelps

It was an agreeable surprise, not only to Mr. Frost and Mr. Coy, but to Professor Bell and those associated with him, that the business public were so quick to avail themselves of this first opportunity to use the telephone for business purposes. In less than three months after the New Haven Exchange was established it had one hundred and fifty subscribers, and within one year over four hundred stores, offices, and residences were communicated. New Haven, therefore, has the credit, through the foresight and enterprise of Mr. Frost, of being the first city to have a successful telephone business exchange. Since that time the business has grown with astonishing rapidity. In 1880, capitalists became interested in the further development of the system. The New Haven Company became merged into the Connecticut Telephone Company, the late Governor Marshall Jewell, of Hartford, becoming its President, and the Hon. Charles L. Mitchell and Morris F. Tyler, Esq., Directors. In 1884, the name of the Company was again changed to the Southern New England Telephone Company, and its capital increased to one million five hundred thousand dollars. Mr. Frost is still the General Manager of the Company, and at the present time, owing to his energy and successful management, the lines of this Company have been carried into nearly every town, hamlet, and school district throughout the State, and no territory in the world has so many telephones in use, in proportion to its population, as Connecticut.

Mr. Frost married, in 1858, Miss Amelia Mix, daughter of the late Ashbel Mix, a highly respected resident of Bristol, Conn. They have three children, two sons and a daughter.

Mr. Frost has been connected with the New Haven City government as member of the Council, and as Alderman, Police Commissioner, etc. He also served three years as Chairman of the City Board of Finance.

WATER-PIPE MANUFACTURERS.

The Connecticut Patent Water-pipe Company, whose office is at 78 and 80 Crown street, manufacture water-pipe and water-works' supplies at West Haven. Captain D. Goffe Phipps is at the head of this Company.

CAPTAIN DANIEL GOFFE PHIPPS.

Born in New Haven, June 20, 1821.

Late in the year 1760, his Majesty's frigate *Sutherland* was firing a salute in the harbor of Halifax on the occasion of the coronation of King George the Third. One of the English officers was Lieutenant Solomon Phipps, nephew of Sir John Rous, commander of the frigate, and belonging to that English family one of which was Sir William Phipps, Governor of the Massachusetts Colony in 1692-94. Lieutenant Phipps was standing on shore waiting for a boat to take him on board. By neglect of the gunner, one of the balls had not been drawn from its gun, as was the custom on entering port, and

this ball struck and instantly killed the Lieutenant. At the moment he had hold of the hand of his son, a lad nine years of age.

The last was the grandfather of the subject of this sketch. His name was Daniel Goffe Phipps, so called from the maiden name of his mother, Miss Abigail Goffe, a descendant of Thomas Goffe, a magistrate of the Massachusetts Colony in 1629. The boy, Daniel Goffe, was born in Boston, as appears on the town records, July 13, 1751, and early went to sea. In 1769 he came to New Haven in a Boston ship. He married here a sister of Ebenezer Townsend, who owned the *Neptune*, which made that famous sealing voyage of 1796-99. He became interested in the West India trade, and served throughout the Revolutionary War in the land and naval forces; was in the Connecticut frigate *Defence* when she captured the *Sirius*, a larger and more strongly manned vessel; was captain of a privateer and twice taken prisoner. He became the owner of a number of vessels, one of which he captured from the British and fitted out for the West India trade.

His son, Solomon, also followed the sea, becoming owner and captain of vessels in the West India trade, and later in life opening a nautical school in Meadow street, where he taught young men navigation, surveying, French, and drawing. He married Esther Peck a descendant of the Deacon Peck who came to New Haven with the Rev. John Davenport in 1638.

Their second son was Daniel Goffe Phipps, the subject of this sketch. His natural bent was toward the sea, coming as he did from a long line of sailors. So, at fifteen, he shipped before the mast on the barque *Condor* for the West Indies; then on the ship *Illinois* from New York to Trieste; thence to Smyrna, where for three months the vessel lay during the prevalence of the plague. On the passage home the ship was dismasted off the Western Islands, and after great suffering from the want of provisions and water, she arrived in Boston, April, 1838.

His uncle, Captain Elisha Peck, then executive officer of the Brooklyn Navy Yard, procured him an appointment as master's mate in the U. S. Navy, and he was ordered on board the *North Carolina*, 74 guns, lying off the Battery. He was soon ordered to the brig *Dolphin*, of 10 guns, which first cruised during the winter of 1839-40 on the coast, for distressed vessels. Later the *Dolphin* was sent to the Gulf of Mexico, where Mr. Phipps passed nearly two years. While at Pensacola he was greatly shocked on hearing of the hanging of Midshipman Spencer, son of the Secretary of War, for being suspected of intending mutiny on board the brig *Somers*. Spencer was but a lad of nineteen, and having been a messmate of Mr. Phipps, on board the *North Carolina*, he knew the young man well, and felt certain he was incapable of such a crime.

While cruising for pirates, in 1841, in the windward passage, Captain Phipps was in sight of Cape Nicola Mole when that town, with 3,000 inhabitants, was engulfed by the great earthquake of that year.

The rising and sinking sensation on board his vessel at the time was something rarely experienced by nautical men. On another occasion, while officer of the deck, he heard a faint cry over the ship's side. Looking over he saw one of the 'prentice boys in the act of drowning, and at once jumped overboard and rescued him. Eleven years after, in the middle of the night he was awakened by a voice at his bedside in Chagres, saying "You saved my life once, I come to you to save it again." "Who are you?" he rejoined, "I am boy Linn, of the Dolphin," and, placing a large sum of gold-dust on the bed, requested Captain Phipps to keep it until called for and immediately disappeared. The call for help this time was disregarded. The young man had stolen the gold and was afterwards arrested, condemned and sentenced to the chain-gang for life.

On the return of the Dolphin to Norfolk, Captain Phipps was transferred in order to the old frigate Constitution; the Pennsylvania, a line of battle ship of 120 guns; and lastly to the U. S. brig Truxton, then fitting out at the Philadelphia Navy Yard, under Commander Bruce, for the West Coast of Africa, to assist in suppressing the slave trade. He was on shore duty in the City of Philadelphia during the "Know Nothing" riots, taking an active part with the men under his command, aiding the city authorities in saving churches and convents from being burned and the people from being murdered.

The Truxton arrived at Monrovia in the early part of 1843, and Professor Silliman having applied to the Navy Department in behalf of the Connecticut Academy of Arts and Sciences for assistance in obtaining meteorological data in different parts of the world, Mr. Phipps was assigned to that duty on the coast, in addition to his ordinary duties. A singular coincidence occurred during the second cruise to the equator. Mr. Phipps' then acting sailing master, on the 4th of July, 1844, in working up the ship's position at noon, discovered that the latitude was $0^{\circ} 0' 0''$ and the longitude was $0^{\circ} 0' 0''$; the observations leading to that result were taken by Lieutenant Simon F. Blunt and Sailing Master Phipps, with a cloudless sky. It is not probable this had occurred before in the history of man, certainly not on the 4th of July.

Under the Ashburton treaty, the American and English vessels co-operated in the suppression of the slave trade. The English sloop of war Ardent and the brig Truxton united to capture two slavers, which lay 100 miles up the Rio Pongo at Gordon's barracoons.

Arriving at the mouth of the river, they sent up a boat expedition with 30 men from the American vessel and 50 from the English, and were successful in making the capture. Mr. Phipps, who had charge of the third cutter, was the first that boarded the prize, named the Spitfire, and the first person he saw had his back to him at the moment. He therefore struck him with the flat of his sword. The man whirled around and Phipps saw he was a mulatto. A second glance and each knew the other. His name was Jackson, and he was town born, had lived near Meadow street over the dike, and in

boyhood their mutual knowledge was gained. He was the cook of the slaver. The Spitfire was sent to the United States and sold. Phipps' share of the prize money was \$200. Showery, the captain, a New York man, was sent to Massachusetts State Prison for life, and died there. Gordon, the slave-dealer, was a cruel wretch, and his barbarities on the coast had reached the ears of the sailors, and they had determined to kill him. He eluded their search, to earn in later years the nefarious distinction of being the only man executed in the United States for being engaged in the slave trade, adjudged piracy by our laws. President Lincoln condemned him to death, by hanging, in New York during the rebellion.

The climate of the coast rivers is deadly, and all but two of the thirty sailors who went with Phipps up the Rio Pongo took the coast fever. On the return of the Truxton, in 1845, Mr. Phipps resigned, and took command of a vessel running between New Orleans and the Spanish Main, and during a voyage to St. Vincent encountered the great hurricane of September, 1846, and was in its vortex. The severity of that hurricane has been vividly described by Lieutenant-Colonel Reid, then Governor of Bermuda, in his work on the law of storms, making use of Captain Phipps' log book for that purpose. Few men live to relate the rough handling they got in the center of those great cyclones, where many vessels "never heard from" end their careers. On the night of the 18th of December, 1847, Captain Phipps was wrecked on the coast of Maine, and the cold was so severe on this occasion that seventeen persons froze to death before morning.

In December, 1848, on the news being received of the discovery of gold in California, he left New York on the steamer Crescent City for Chagres, and walked across the Isthmus to Panama, where many died at that time with the cholera. There he took charge of a Guayaquil coaster with forty passengers, and set sail for San Francisco. The want of provisions and water on that four months' passage up the Pacific Coast was a difficult problem to solve, there being no money on board, and the "moss trooper" method of supplying those wants was simply a triumph of the strong over the weak. The Mexican War was not over until that little vessel, the Tres Amigos, with its forty rifles entered the Bay of San Francisco, although the treaty of peace was signed some time before.

Captain Phipps spent two years in the gold mines on the forks of the American River, and was successful in his mining operations. He returned in 1851, crossing Central America on foot from Realejo on the Pacific to Lake Nicaragua. In a desperate affray with brigands near the old volcano of Massaya, he came near losing his gold-dust, and barely escaped with his life.

He soon after, in 1851, married, in St. Louis, Bishop Hawks officiating, Mary E. Hunt, daughter of Captain James Hunt, a prominent West India merchant of New Haven. In the fall of 1864 he ceased going to sea, and became identified with the New Haven Water Company; beginning soon after-

John C. Howard

ward the manufacture of hydraulic pipe and the profession of hydraulic engineering and building of water-works, his present business. A career embracing so many years of active life, both in the naval and merchant service, of course includes many interesting incidents, of which limited space forbids any mention. An outline only has been attempted in this article.

His only son, Edward Hunt Phipps, of the Yale Scientific School, is connected with him as a hydraulic and mechanical engineer and manufacturer. He has but one other living child, a daughter, Lina Mary Phipps.

Captain Phipps is 5 feet 9 inches in stature, of erect figure, with a wiry, muscular system, and has retained his excellent health through the rough experiences of twenty-seven years of nautical life.

We esteem it an appropriate ending of this chapter on the Productive Arts, to give a biographical sketch of a man who has taken an active interest in so many manufacturing companies, that we hardly know in what part of the chapter to place his biography—the Hon. Charles L. Mitchell, the representative in Congress at the present time of the district of which New Haven is a part.

HON. CHARLES L. MITCHELL.

Charles LeMoyne Mitchell was born at New Haven, Conn., August 6, 1844, and is the son of Edward A. Mitchell, who was for many years prominently identified with the manufacturing interests of Connecticut. Through his mother, Charles

L. Mitchell is a direct descendant of Thomas Fitch, Governor of Connecticut from 1754 to 1766.

Mr. Mitchell was educated at New Haven, and later spent three years in a journey around the world, visiting Europe, Asia and Africa. He is actively engaged in business, being a Director in the Winchester Repeating Arms Company, Meriden Britannia Company, Tradesmen's National Bank, and other important enterprises, and is always ready to assist in promoting new industries. His practical knowledge of business, and intelligent interest in scientific inventions connected with industrial progress, cause his counsel to be sought and valued by inventors.

Mr. Mitchell represented the town of East Haven in the Legislature of 1878. In the following year he was nominated by the Democrats as their candidate for the Eighth Senatorial District, and, though failing an election, received more than the party vote in the majority of the towns. In 1882 he was elected to represent the Second District of Connecticut in Congress, and was re-elected in 1884.

Mr. Mitchell is a generous patron of art, a buyer and reader of good books, and a skilled horticulturist.

He is a member of the Vestry of St. Paul's Episcopal Church, New Haven, and takes an active part in the support and management of the religious and benevolent institutions of the City and State.

By family training and inheritance, as well as by his own deliberate choice, a Democrat, Mr. Mitchell is nevertheless free from partisanship. He not only accepts, but heartily believes in political progress, and has always the courage of his convictions.

CHAPTER XXXVI.

SOCIETIES AND CLUBS.

AMERICAN LEGION OF HONOR, COMMERCIAL COUNCIL, No. 701.—Commander, Henry L. Hill; Vice-Commander, John Z. Mason; Past-Commander, Joseph H. Smith; Orator, G. W. Crane; Secretary, William H. Thomas; Collector, J. M. Bishop; Treasurer, F. L. Manwaring; Guide, Joseph E. White; Warden, E. H. White; Organist, Charles E. Granniss; Sentry, F. D. Cobb; Chaplain, Samuel H. Kirby.

The American Oriental Society was organized in Boston in 1842, for the cultivation of learning in the Asiatic, African and Polynesian languages. It was incorporated in 1843 by the Legislature of Massachusetts. Since 1855 it has kept its library in New Haven, which for this reason may be regarded as the home of the society. President, W. D. Whitney; Vice-Presidents, A. P. Peabody, E. E. Salisbury, W. H. Ward; Treasurer and Librarian, Addison Van Name; Corresponding Secretary, C. R. Lanman; Recording Secretary, C. H. Toy; Secretary of the Classical Section, W. W. Goodwin; Directors, A. I. Cothel, J. Avery, D. C. Gilman, M. Bloomfield, C. Short, J. H. Thayer, I. H. Hall.

The Arion Society was organized June 16, 1880, by thirty-one members of the Teutonia Männerchor. Its object is the practice and cultivation of singing. The society has now a membership of four hundred. The present officers are: President, F. W. Sternberg; Vice-President, C. Wirtz; Recording Secretary, E. Scherer; Corresponding Secretary, H. Heese; Financial Secretary, W. Emmerich; Treasurer, H. Kissinger; Trustees, E. Bechstedt, B. Richard, C. Kasten;

Librarian, J. Lauth; Musical Director, Prof. R. K. Wehner. Arion Hall, 3 Church Street.

Catholic Knights of America, Pioneer Branch, No. 453.—Meets first and third Thursday of each month at Room 39, Insurance Building. Spiritual Director, Rev. John Russell; President, Michael F. Campbell; Vice-President, James J. Carr; Recording Secretary, James E. Galvin; Financial Secretary, George E. Mitchell; Treasurer, B. E. Lynch; Sergeant-at-Arms, William E. Flynn; Sentinel, J. F. Murray; Medical Examiner, Dr. J. M. Reilly.

Chamber of Commerce.—President, James D. Dewell; Vice-Presidents, Samuel E. Merwin, Edwin S. Wheeler; Treasurer, Wilbur F. Day; Corresponding Secretary, T. Attwater Barnes; Recording Secretary, Charles W. Scranton; Directors, N. D. Sperry, Joel A. Sperry, John H. Leeds, Charles H. Townsend, George H. Ford.

Chosen Friends, New Haven Council, No. 1.—Meets second and fourth Monday evenings of each month at Lyon Building, 769 Chapel street. Past Chief Councilor, John H. Jones; Chief Councilor, William G. Cox; Vice-Councilor, Charles M. Manning; Secretary, Edward E. Tisdale; Assistant Secretary, L. F. Morse; Treasurer, Samuel H. Crane; Prelate, H. W. Loomis; Marshal, A. J. Downs; Warden, R. M. Sherman; Guard, Andrew Finken; Sentinel, J. I. Jacobus; Trustees, J. H. Jones, H. W. Loomis, J. I. Jacobus.

Connecticut Academy of Arts and Sciences.—President, A. E. Verrill; Vice-President, William H. Brewer; Correspond-

ing Secretary, A. Van Name; Recording Secretary, Leonard Waldo; Librarian, A. Van Name; Treasurer, H. C. Kingsley; Committee of Publication, H. A. Newton, Elias Loomis, G. J. Brush, E. S. Wheeler, A. E. Verrill, William D. Whitney, A. Van Name; Auditing Committee, A. E. Verrill, A. Van Name, H. A. Newton.

Connecticut Benefit Association.—Officers: President, D. M. Corthell; Secretary, F. H. Cogswell; Treasurer, Henry G. Newton; Medical Director, Rollin McNeil, M. D.; General Manager, R. M. Hooker; Directors, N. G. Osborn, G. F. Winch, L. E. Osborn, Charles K. Bush, William A. Wright. Office, 19 Exchange Building.

Connecticut Training School for Nurses. President, Mrs. Noah Porter; Vice-Presidents, Mrs. T. D. Woolsey, Mrs. H. Farnam, Mrs. Edwin Harwood, Mrs. D. C. Sanford, Mrs. Samuel Colt, Mrs. G. M. Bartholomew, Mrs. F. J. Kingsbury; Treasurer, Mr. Charles A. Sheldon; Corresponding Secretary, Mrs. Charles B. Richards; Recording Secretary, Mrs. E. H. Jenkins; Auditors, Mr. Wilbur F. Day, Mr. Arthur D. Osborn; Committee on Finance, Mr. Charles A. Sheldon, Mr. Jeremiah A. Bishop, Mr. Wilbur F. Day, ex-Governor James E. English, Mr. John B. Fitch; Executive Committee, Mrs. Noah Porter, Chairman.

ELKS.

New Haven Lodge of Benevolent and Protective Order of Elks, No. 25.—Lodge Room, 852 Chapel street, Elks Hall. Meeting night, Monday. Exalted Ruler, Frederick Quintard; Esteemed Leading Knight, H. C. Collins; Esteemed Loyal Knight, John McGilvray; Esteemed Lecturing Knight, James H. Kelley; Secretary, H. S. Beers; Treasurer, C. A. Pratt; Tyler, H. J. Nicholson; Inner Guard, John Doody; Chaplain, D. S. Thomas; Esquire, L. D. White; Organist, G. E. Eager; Trustees, J. D. Plunkett, William Neely, L. D. White; Stewards, Samuel Mann, Charles Zapp, Alexander Phillips.

ENGINEERS.

Brotherhood of Locomotive Engineers, New Haven Division, No. 77.—Chief Engineer, Henry Byington; First Assistant, E. O. B. Parish. Meets first Tuesday and third Thursday of each month in Engineers' Hall, State street, corner of Chapel.

Marine Engineers' Association, No. 36. Meets second and fourth Monday evenings at Stationary Engineers' Hall, 87 Church street. P. P., D. O. Chipman; President, M. D. Douglass; Vice-President, A. D. Bartlett; Recording Secretary, Frank A. Foster; Financial Secretary, F. A. Foster; Conductor, Charles Hughes; Doorkeeper, William Gardner; Chaplain, G. W. Dadmun.

New Haven Stationary Engineers' Association, No. 2.—Meets every Friday evening at 8 o'clock at Stationary Engineers' Hall, 87 Church street. President, Frank R. Baldwin; Vice-President, John I. Downes; Recording Secretary, W. H. Wakeman; Financial Secretary, George A. Thompson; Treasurer, F. A. Foster; Conductor, George A. Dole; Doorkeeper, Dwight C. Beach; Trustees, Saul Sanford, James Glacken, J. P. Ricketts.

Evergreen Cemetery Association.—Office, 92 Orange street. President, James D. Dewell; Secretary, Benjamin R. English; Treasurer, John P. Tuttle; Directors, James D. Dewell, John P. Tuttle, Edward C. Beecher, George Blakeman, Frederick H. Waldron; Superintendent, Harvey B. Dorman.

Firemen's Benevolent Association.—President, Albert C. Hendrick; Vice-President, Henry Tuttle; Treasurer, John L. Disbrow; Secretary, Charles B. Dyer.

The first meeting to form the association was held July 26, 1849. Organization completed by the election of the following officers: President, James T. Hemingway; Vice-President, George W. Jones; Secretary, Joseph Downs; Treasurer, Henry B. Smith.

FORESTERS.

I.—ANCIENT ORDER OF FORESTERS—CONNECTICUT STATE DISTRICT.

The District Court meets annually for the choice of officers and other business. This District comprises seventeen

Courts, of which three are in New Haven, viz.: Andrew Jackson Court; Court Metropolitan, and Quinnipiac Court, No. 6974. The officers of the District Court are: District Chief Ranger, James I. Hayes; District Secretary, P. H. O'Brien; District Treasurer, James Farrell.

Andrew Jackson Court, A. O. F.—Chief Ranger, John J. Ward; Sub-Chief Ranger, Lawrence Short; Financial Secretary, Peter J. McNeerney; Recording Secretary, James Mills; Treasurer, Peter Reynolds; S. W., D. Nottingham; J. W., John Nugent; S. B., Joseph Looain; J. B., M. O'Brien; Physician, E. L. Bissell.

Court Metropolitan A. O. F.—Chief Ranger, James J. McMahon; Sub-Chief Ranger, William O'Brien; Financial Secretary, John J. McMahon; Recording Secretary, Jeremiah Kennedy; Treasurer, M. R. Mooney; S. W., P. Gallagher; J. W., Philip Flood; S. B., James Nagle; J. B., P. McKiernan.

Quinnipiac Court, A. O. F., No. 6974.—Meets in Odd Fellows' Hall, corner of Grand avenue and East Pearl street, the first and third Tuesdays of each month. P. J. O'Connor, Chief Ranger; Patrick Groggin, Sub-Chief Ranger; John J. Doohan, Financial Secretary; Joseph Donlan, Recording Secretary; James P. Landers, Treasurer.

II.—UNITED ORDER FORESTERS.

Elm City Court No. 5933.—Chief Ranger, John Scholl; Sub-Chief Ranger, James Mallory; Recording Secretary, Isaac Hayes; Financial Secretary, George Loundes; Treasurer, William Gaffey; Senior Woodman, Jacob Koehler; Junior Woodman, L. Lowenthal; Senior Beadle, William Scholl; Junior Beadle, J. F. Donohue; Physician, Dr. Mailhouse; Commander, James H. Flag; Vice-Commander, T. O'Brien.

Knights of Sherwood Forest, Putnam Conclave, No. 14.—Past Commander, J. F. Healey; Commander, James H. Flag; Vice-Commander, P. O'Brien; Adjutant, P. F. McGuinniss; Recording Secretary, I. Hayes; Paymaster, William G. Butler; Master-at-Arms, Edward Ryder; First Lieutenant, James P. Wilson; Second Lieutenant, E. J. Windes; First Sergeant, A. Kurtz; Second Sergeant, F. Fealey; Surgeon, Dr. J. J. S. Doherty.

Free Sons of Israel, New Haven Lodge, No. 46.—President, Adolph Hirsch; Vice-President, Leopold Besser; Recording Secretary, Philip Goodhart; Financial Secretary, Moses Frank; Treasurer, David Ashman; Outside Tyler, Cerf Woolf; Conductor, Nathan Cohn; Inside Tyler, Solomon Pagter; Trustees, David Machol, Moses Briggs, Nathan Schuer.

Friendly Sons of St. Patrick.—Meets at 49 Church street, Hoadley Building. Regular meetings, first Tuesdays in February, May and October. President, Timothy J. Fox; Vice-President, James A. Fogarty; Secretary, Francis J. Taylor; Treasurer, R. M. Sheridan.

German Aid Society, Concordia No. 1.—President, S. Loewenbaum; Vice-President, J. Penn; Treasurer, Frederick Derschuck; Secretary, Henry Pfeil; Cashier, H. W. Schorer; Trustees, Charles Gerner, Frederick Doebel, Isaac Weil.

German and English School Society.—President, John Ruff; Vice-President, Louis Weckesser; Secretary, Otto A. G. Rausch; Treasurer, Gottfried Lehr; Hall Agent, John Macheleidt.

German Mutual Aid Society.—Instituted June 9, 1874. President, Zacharias Endriss; Vice-President, Wigan Schlein; Secretary, George J. Faulhaber; Treasurer, John Hegel.

GERMAN ORDER OF HARUGARI.

Frederick Hecker Lodge, No. 440.—Ex. B., August Taetsch; O. B., Heinrich Warneke; W. B., John Maier; Secretary, George Herpich; Treasurer, A. Schatz. Meeting first and third Thursdays each month in Turn Hall, corner of Court and Orange streets. Instituted June 3, 1881, with thirty-nine members. Present number, 106.

Freie Bruder Manie, No. 58.—O. G., George J. Faulhaber; W. G., Alois Pfeiffer; Secretary, G. M. Wohlfarth; Cashier, Heinrich Wessbecker; Treasurer, Christian Wirweiss; Trustees, Otto H. Wall, Martin Faitsch, and Alois Pfeiffer.

Pestalozzi Lodge, No. 340.—E. B., W. Schlein; O. B., Henry Fink; U. B., Alexander Hubalek; Secretary, August Knoll; Treasurer, George Soder.

GRAND ARMY OF THE REPUBLIC.

Department of Connecticut.—Commander, John T. Cray, Norwich; S. V. Commander, Henry E. Taintor, Hartford; J. V. Commander, Samuel B. Horne, Winsted; Medical Director, Herbert M. Bishop, Norwich; Chaplain, Rev. Edward Anderson, Norwalk; Assistant Adjutant-General, Amos D. Allen, Norwich; Assistant Quartermaster-General, William H. Pierpont, New Haven; Inspector, William F. Rogers, Meriden; Judge-Advocate, Samuel H. Seward, Putnam; Chief Mustering Officer, William B. Rudd, Lakeville; Council of Administration, Frederick E. Camp, Middletown; Alson J. Smith, Danbury; Fred L. Warren, Bridgeport; George M. White, New Haven.

Admiral Foote Post, No. 17.—Meets in Grand Army Hall every Saturday evening. Commander, Simeon J. Fox; S. V. Commander, James N. Coe; J. V. Commander, Lewis B. Brown; Adjutant, N. I. Strickland; Quartermaster, W. H. Stowe; Surgeon, Charles Rawling; Chaplain, William F. Smith; O. D., Edward E. Tisdale; O. G., John S. Duff; Sergeant-Major, John H. Shumway; Quartermaster-Sergeant, Lyman D. White; Commissary-Sergeant, Edward Wines; Sentinels, Joseph Cassell, William Shaw.

Henry C. Merwin Post, No. 52.—Commander, William Gleason; S. V. Commander, Thomas E. Twitchell; J. V. Commander, Timothy J. O'Donnell; Adjutant, George W. Bartlett; Quartermaster, Thomas Hughes; Surgeon, Robert G. Patterson; Chaplain, Ralph Wright; Officer of Day, Henry Winsor; Officer of Guard, Isaac Dorman; Sergeant-Major, William A. Welch; Quartermaster-Sergeant, Patrick Farrell.

Von Steinvwehr Post, No. 76.—Charles Weidig, Commander; J. Schleicher, S. V. Commander; Christopher Weiler, J. V. Commander; Jacob Schmidt, Sergeant; Balzer Brand, S. D.; Weigand Schlein, Chaplain; Conrad Hofacker, Quartermaster; L. Operschauser, Adjutant; Godfried Miller, Officer of the Guard; Louis Oeker, Sergeant-Major; Friedrich Dobeke, Quartermaster-Sergeant.

Admiral Foote Woman's Relief Corps, No. 3.—Auxiliary to the Grand Army of the Republic. President, Mrs. Francis M. Martin; S. V. President, Mrs. Louisa Goodrich; J. V. President, Mrs. Lizzie Arnold; Secretary, Mrs. Louisa Beach; Treasurer, Mrs. Hattie Buckingham; Chaplain, Mrs. Abigail Whitaker; Conductor, Mrs. Maggie Munson; Guard, Mrs. Josephine Parmalee.

Harugari Liedertafel.—The object of the association is the cultivation of singing. It was organized July 25, 1875, with seven members. At present it numbers 275. President, Barth Neufs; Vice-President, Alois Pfeiffer; Recording Secretary, Henry Koehler; Corresponding Secretary, August F. Kurtz; Treasurer, George Faulhaber; Collector, Ernest Flesche; Librarian, Stephen Erll. Harugari Hall, Lamar Block, Crown street. Business meeting, last Friday of each month.

Hebrew Benevolent Society.—President, M. Heller; Vice-President, B. Rogowski; Secretary, Max Adler; Treasurer, Louis H. Freedman; Trustees, M. Sonnenberg, S. Cahn, D. Grotta.

Hildesbund, Section 17.—President, Carl G. Engel; Vice-President, W. Eberle; Secretary, Leopold Schierholz; Treasurer, Rev. Charles H. Siebke.

Home for Aged and Destitute Women.—125 Wall street. President, H. C. Kingsley; Secretary and Treasurer, T. R. Trowbridge; Trustees, Ezekiel H. Trowbridge, Eli Whitney, Thomas R. Trowbridge, Alfred Walker, Henry C. Kingsley, Charles Thompson, T. Ketchum, Charles A. White; Matron, Mrs. H. A. Scranton.

Home for the Friendless.—Clinton avenue, corner of Pine street. President, Miss E. W. Davenport; Vice-President, Mrs. William Hillhouse; Treasurer, Mrs. Charles C. Foote; Corresponding Secretary, Mrs. Samuel Harris; Trustee, John C. Hollister; Advisory Committee, John C. Hollister, Dr. William B. De Forest, Amos F. Barnes, Charles Fabrique, Justus S. Hotchkiss, Charles E. Graves.

Horeb Lodge, I. O. B. B., No. 25.—President, Harry Asher; Vice-President, Isaac Ulman; Secretary, David

Strouse; Treasurer, Adolph Hirsch; In. G., Nathan Cohn; O. G., M. Greenbaum; Trustees, Max Adler, Paul Weil, N. Scheuer. Trustees meet at Courier Building every first and third Sunday evening in the month. One hundred and sixty-nine members.

Jeffersonian Club.—Lyon Building, 769 Chapel street. President, John H. Leeds; Vice-Presidents, Jonathan W. Pond, James Gallagher; Secretary, George S. Thomas; Treasurer, Jonathan W. Pond; Collector, Henry S. Cooper; Board of Managers, George M. Grant, Joseph C. Earle, Burton Mansfield, Ezra B. Dibble, Fred. G. Cooper, S. H. Wagner, A. H. Robertson, Frank S. Andrew, James P. Pigott, Hobart L. Hotchkiss, S. A. York, Julius Tyler.

KNIGHTS OF COLUMBUS.

San Salvador Council, No. 1.—Grand Knight, J. P. Galivan; Deputy Grand Knight, P. H. Corrigan; Recording Secretary, William Slattery; Financial Secretary, William M. Geary; Treasurer, William Keane; Warden, Alex. Bleto; Advocate, C. T. Driscoll; Lecturer, Daniel Colwell; Physician, M. C. O'Connor, M.D.; Trustees, J. T. Kerrigan, J. F. O'Brien, Peter Carberry. Regular meeting, first and third Thursday of each month. Council Hall, Wood's Building.

Santa Maria Council, No. 8.—Grand Knight, Peter Conroy; Deputy Grand Knight, W. F. Mulcahy; Recording Secretary, James G. McMahon; Financial Secretary, Thomas F. McGinness; Treasurer, Joseph F. Preston; Warden, F. A. Farrell.

K. O. F. Society.—Grand Master, M. Bernstein; President, M. Kleiner; Vice-President, H. C. Bretzfelder; Recording Secretary, S. J. Weil; Financial Secretary, B. Sugenheimer; Treasurer, G. Greenbaum; Inside Guard, B. Bernstein.

Knights of St. Patrick.—President, W. C. O'Connor, M. D.; Vice-President, James Reilly; Recording Secretary, Wm. M. Geary; Financial Secretary, James J. Kennedy; Treasurer, Patrick Cregan. Meets second Friday evening of each month in Wood's Building, Church Street. Organized March 10, 1878.

KNIGHTS OF HONOR.

Grand Lodge of Connecticut.—Grand Dictator, William H. Stannis, Meriden; Grand Vice-Dictator, Carlos Smith, New Haven; Grand Assistant Dictator, Irving H. Coe, Waterbury; Grand Reporter, Charles W. Skiff, Danbury; Grand Treasurer, James H. Kelsey, Middletown; Grand Chaplain, Rev. C. H. Bond, Middletown; Grand Guide, Frank P. Carter, Hartford; Grand Guardian, Lewis D. Chidsey, New Haven; Grand Sentinel, L. H. Sherman, Bridgeport; State Medical Examiner, W. D. Anderson, M. D., New Haven; Grand Trustees, John H. Barlow, Birmingham; Romanta Wells, New Haven; Henry A. Chamberlain, Middletown; Past Grand Dictator, E. B. Smith, Middletown.

Roger Sherman Lodge, No. 323.—Dictator, Fred. B. Farnsworth; Reporter, William H. Beecher; Financial Reporter, Elisha Hewitt; Treasurer, Samuel H. Crane. Meets second and fourth Wednesday evenings, 852 Chapel street, fourth floor.

Mercantile Lodge, No. 1352.—Dictator, Joseph B. Morse; Reporter, S. W. Churchill; Financial Reporter, L. H. Prindle; Treasurer, Carlos Smith. Meets first and third Wednesday evenings at Elks Hall, 852 Chapel street.

Woolsey Lodge, No. 1356.—Dictator, John B. Hubbell; Reporter, D. E. Merchant; Financial Reporter, F. H. Hemingway; Treasurer, K. B. Farren. Meets second and fourth Tuesday of each month at Odd Fellows Hall, Grand avenue, corner of East Pearl.

Steuben Lodge, No. 3053.—Dictator, Dr. William Sprenger; Reporter, William F. Stemberg; Financial Reporter, Charles R. Spiegel; Treasurer, Otto H. Wall.

KNIGHTS OF PYTHIAS.

Grand Lodge of Connecticut.—P. G. C., Willis B. Isbell, No. 11, Westville; G. C., Alson J. Smith, No. 30, Danbury; G. V. C., William B. Beebe, No. 40, Bridgeport; G. P.,

George M. Deming, No. 7, Hartford; G. M. of E., W. L. Morgan, No. 21, New Britain; G. K. R. S., Horace O. Case, No. 15, Hartford; G. M. at A., Joseph Roode, No. 34, Jewett City; G. I. G., Henry C. Long, No. 3, New Haven; G. O. G., Daniel H. Brown, No. 2, New Haven; Supreme Representatives, P. G. C., William H. Williams, Birmingham; P. G. C., William Soule, Jewett City.

Kathbone Lodge, No. 1.—Meets every Wednesday evening in Pythian Hall, Courier Building.

Ezel Lodge, No. 3.—Meets every Tuesday evening in Courier Building, State street.

Schiller Lodge, No. 5.—Meets Monday evenings, Turn Hall Building.

Edgewood Lodge, No. 11.—Meets at Pythian Hall, Westville, every Monday evening.

Union No. 32.—Meets every Thursday evening in Pythian Hall, Courier Building.

Knights of Pythias Benefit Association. Joseph K. Bundy, President. Organized December 7, 1885.

Ladies' Seamen's Friend Society.—92 Water street. President, Mrs. W. T. Booth; Vice-President, Mrs. Sarah M. Mix; Secretary, Mrs. W. H. Fairchild; Treasurer, Mrs. Luman Cowles; Executive Committee, Mrs. Leonard Winship, Mrs. F. W. Pardee; Finance Committee, Mrs. Luman Cowles, Mrs. F. W. Pardee, Mrs. J. A. Sperry.

MASONIC.

Grand Lodge of Connecticut.—Annual communication at New Haven, January 19, 1887. M. W. Henry H. Green, Danielsonville, G. M.; John W. Mix, Plantsville, D. G. M.; J. H. Swartwout, Stamford, G. S. W.; L. A. Dickinson, Hartford, G. J. W.; John G. Root, Hartford, G. T.; Joseph K. Wheeler, Hartford, G. Sec.; Clark W. Buckingham, New Haven, G. S. D.; Arthur H. Brewer, Norwich, G. J. D.; William W. Price, New Haven, G. M.; Rev. George R. Warner, Danielsonville, G. Chap.; Hugh Stirling, Bridgeport, G. S. S.; E. O. Goodwin, East Hartford, G. J. S.; Joseph Riley, New Haven, G. Tyler.

Hiram Lodge, No. 1, F. & A. M.—Instituted 1750. Stated communication every Thursday, at 7.30 P. M., July and August excepted. Third Thursday in July and second Thursday in August. Annual, last Thursday in December. Atherton L. Barnes, W. M.; Frank E. Stoddard, S. W.; William M. Frisbie, J. W.; George E. Frisbie, Treasurer; William A. Beers, Secretary; R. S. Woodruff, S. D.; G. M. Bush, J. D.; James E. Smith, S. S.; W. L. Peck, J. S.; D. R. Alling, Tyler.

Trumbull Lodge, No. 22, F. & A. M.—Instituted 1869. Stated communications second and fourth Tuesday evenings of each month, at 7.30 o'clock, except in July and August; those months, the fourth Tuesday evenings only. Annual communication, fourth Tuesday in December. H. C. Trecartin, W. M.; Francis Smith, S. W.; C. D. Newcomb, J. W.; E. S. Quintard, Treasurer; T. Parsons Dickerman, Secretary; Lyman D. White, S. D.; George S. Trecartin, J. D.; F. H. Sprague, S. S.; George Rathgeber, J. S.; L. D. Brown, Tyler.

Adelphi Lodge, No. 63, F. & A. M.—Fair Haven. Instituted 1823. Stated communications, first and third Tuesday in each month. Annual, last stated communication in December. Francis Ray, W. M.; Joseph Cunningham, S. W.; Joseph J. Dayton, J. W.; E. N. Holoday, Treasurer; Jason P. Thompson, Secretary; Robert C. Hart, S. D.; L. F. Humiston, J. D.; C. H. Hendrickson, S. S.; Evans Pratt, J. S.; Horace S. Barnes, Tyler.

Wooster Lodge, No. 70, F. & A. M.—Instituted 1851. Stated communications every Wednesday evening at 7.30 o'clock, except in July and August—those months, second Wednesday evening only. Annual, last stated in December, preceding the festival of St. John the Baptist. Samuel W. McEwen, W. M.; William H. Cox, S. W.; John P. Studley, J. W.; J. W. Pond, Treasurer; F. Stanley Bradley, Secretary; A. J. Harmount, S. D.; Robert W. Dyas, J. D.; John S. Lovejoy, S. S.; Robert Christie, J. S.; Joseph Riley, Tyler.

Olive Branch Lodge, No. 84, F. & A. M.—Westville. Instituted 1857. Stated communications, second and fourth Thursdays in each month, at 7.30 P. M. Annual communication, first stated in December. John Wilkinson, Jr., W. M.; Marshall E. Terrell, S. W.; A. B. Sinclair, J. W.;

Joseph D. Payne, Treasurer; E. L. Hitchcock, Secretary; James Mercer, S. D.; Loren Cheney, J. D.; Thomas Ridge, S. S.; James McClure, J. S.; Edward F. Baldwin, Tyler.

Connecticut Rock Lodge, No. 92, F. & A. M.—Instituted 1864. Stated communications, second and fourth Mondays of each month. Annual, fourth Monday in December. Henry Leimbecker, M. W.; Henry C. Fisher, S. W.; Frank Maurer, J. W.; William E. Stahl, Treasurer; Emanuel Baxbaum, Secretary; Alexander Kreh, S. D.; C. F. Bollman, J. D.; Christian Grohe, S. S.; August Knoll, J. S.; John Mayer, Tyler.

Grand Royal Arch Chapter of Connecticut.—James McCormick, Windsor, G. H. P.; Reuben H. Tucker, Ansonia, D. G. H. P.; J. E. Blakeslee, Thomaston, G. K.; John O. Rowland, New Haven, G. S.; George Lee, Hartford, G. Treasurer; J. K. Wheeler, Hartford, G. Secretary; G. L. Hewitt, Norwich, G. C. of H.; J. H. Swartout, Stamford, G. P. S.; C. H. Chesebro, Putnam, G. R. A. C.; Rev. Carrington, Miss Munson, Miss Kingsley, Miss Hotchkiss.

Quinnipiac Club.—Organized in 1871 as the Ours Club. Name changed December 5, 1877, to Quinnipiac Club. "The Shipman House" was leased the same year, and has since been occupied as the club house. N. D. Sperry, President; Charles L. Mitchell, First Vice-President; Henry Trowbridge, Second Vice-President; J. A. Bishop, Secretary; E. I. Foote, Treasurer; Trustees, James E. English, E. M. Reed.

Railroad Men's Reading Room Association.—207 Water street. President, Hon. George H. Watrous; Secretary and Treasurer, J. C. Ryan; General Committee, George H. Watrous, E. H. Trowbridge; Executive Committee, Walter J. Wheaton, Eben Garfield, J. C. Ryan, J. Maroney, and A. Francis; Manager, J. C. Ryan.

Ramblers' Bicycle Club.—President, George Humphreys; Secretary and Treasurer, E. E. Boyd; Captain, Richard Norman.

Royal Arcanum, Davenport Council, No. 700.—Past Regent, Eugene C. Hill; Regent, Wm. G. Gunning; Vice-Regent, Wm. A. Waterbury; Orator, Frank D. Grinnell; Secretary, John B. Judson; Collector, Frank S. Hamilton; Treasurer, George B. Jones; Guide, J. W. Jewett, M. D.; Warden, Frank R. Fisher; Trustees, W. A. Waterbury, W. S. Wells, James N. Coe. Meets first and third Mondays in Pythian Hall, Courier Building.

Republican League.—President, Thomas R. Trowbridge, Jr.; Vice-Presidents, Arthur D. Osborne, Tredwell Ketcham, James D. Dewell, Henry F. Peck, Samuel E. Merwin, Jr.; Secretary, A. H. Kellam; Treasurer, John A. Richardson; Trustees, Henry B. Harrison, Henry E. Pardee, Frank E. Spencer; Executive Committee, Lynde Harrison, E. S. Greeley, S. J. Fox, F. H. Hart, Charles H. Farnam, George B. Martin, H. B. Hubbard, Charles S. Mersick, J. P. C. Foster, Eli Whitney, Jr., W. P. Tuttle, George E. Maltby; Auditors, Edward C. Beecher, Benjamin E. Brown.

Society for the Prevention of Crime.—President, Rev. Noah Porter, D.D., LL.D.; Vice-President, Hon. Francis Wayland; Treasurer, Edward E. Mix; Board of Directors, the officers of the Society, S. G. Thorn, H. H. Benedict, J. A. Richardson, Rev. W. D. Mossman, Prof. F. R. Honey, Cornelius Pierpont, Hiram Camp, Charles E. Hart, S. H. Barnum; Agent, George R. Bill.

St. Boniface Benevolent Society.—President, Joseph Hauser; Vice-President, Jacob Butcher; Recording Secretary, Anton Grab; Corresponding Secretary, Frank Dahlmeyer; Treasurer, Charles Pallman; Trustees, Charles Hauser, Frank Schandler, and Ed. Heller.

St. Francis Orphan Asylum.—President, Rt. Rev. L. S. McMahon; Vice-President, Rev. P. Mulholland; Treasurer, Charles Atwater; Secretary, William M. Geary; Board of Managers, Rev. L. S. McMahon, Rev. J. Cooney, Rev. John Russell, Rev. Michael McKeon, Rev. Joseph Schale, Rev. P. Mulholland, C. T. Driscoll, Francis Donnelly, Alexander Emery, Patrick McKenna, P. Creggan, Charles Pallman, William M. Geary, James Reynolds, Patrick Maher, Frank Chandler, John Stars, Timothy J. Fox.

St. Ignatius T. A. B. Society.—President, Francis Carroll; Vice-President, Michael Healey; Recording Secretary, John J. Foley; Treasurer, Rev. M. J. Lynch; Marshal, Peter Weber. Meet first Sunday in each month in St. Francis Hall.

St. Vincent de Paul Conference of Sacred Heart.—President, Lawrence Curtis; Vice-President, Theodore Durkin; Secretary, Patrick Donnelly; Treasurer, Patrick Creggan; Librarian, Martin Kennedy; Wardrobe Keeper, Frank Hurley. Meets every Monday evening at 8 o'clock in Lecture-room of the church.

Swiss Society of New Haven.—Chartered in 1883. President, Dr. W. Springer; Vice-President, Samuel Buchter; Secretary, Ed. Stehle; Treasurer, Jacob Koella; Trustees, John Mettler, A. Ochsner. Meets first Wednesday in each month in Teutonia Hall.

TEMPERANCE SOCIETIES.

SONS OF TEMPERANCE.

Grand Division of Connecticut.—Grand Worthy Patriarch, Albert A. Baldwin, Milford; Grand Worthy Associate, Rosa Kuncella, Bridgeport; Grand Scribe, W. A. Baedor, Hartford; Grand Treasurer, R. H. Tucker, Ansonia; Grand Chaplain, Rev. Thomas E. Gilbert, West Haven; Grand Conductor, Edward L. Linsley, North Haven; Grand Sentinel, O. E. Raymond, South Norwalk.

SUBORDINATE DIVISIONS OF NEW HAVEN.

Harmony Division, No. 5.—Meets at G. A. R. Hall every Thursday evening. D. G. W. P., Charles E. Hart. Officers elected quarterly.

Crystal Wave, No. 7.—Meets in Temperance Hall, corner of State and Chapel streets, every Wednesday evening. D. G. W. P., W. W. Johnson. Officers elected quarterly.

Fair Haven Division, No. 36.—Meets Monday evenings in Sons of America Hall, 38 Grand avenue. D. G. W. P., William H. Richards. Officers elected quarterly.

Victoria Division, No. 47 (German).—Meets in Temple of Honor Hall, Room 28, Insurance Building. Meets Monday evening. D. G. W. P., Charles W. Dambacher. Officers elected quarterly.

GOOD TEMPLARS.

Howard Lodge, I. O. G. T., No. 63.—Meets every Tuesday evening.

Morning Watch Lodge, No. 63.—Meets every Wednesday evening.

Rescue Lodge, No. 32.—Meets at 75 Orange street Monday evening. Officers of all subordinate lodges elected quarterly.

JUVENILE TEMPLARS.

Elm City Juvenile Temple, No. 58.—Meets every Sunday at 3 P. M., in the hall of Y. M. C. A.

Silver Spray Juvenile Temple, No. 59.—Meets every Monday at 7.30 P. M., in the parlor of Howard Avenue M. E. Church.

Quinnipiac Juvenile Temple, No. 60.—Meets every Sunday at 2.30 P. M., P. S. A. Hall, 38 Grand avenue.

TEMPLARS OF HONOR AND TEMPERANCE.

Safety Temple of Honor, No. 2.—Meets Friday evenings, No. 27 Insurance Building. W. C. T., W. T. Pickett;

W. V. T., J. H. Jacobs; W. Treasurer, G. P. Otis; W. R., F. D. Ludington; W. A. R., F. Baker; W. F. R., G. G. Willis; W. U., G. C. Cameron; W. D. U., T. Hadden; W. Guard, R. S. Otis; W. S., C. D. Hall; W. Chaplain, Rev. J. W. Denton.

Anchor Temple of Honor, No. 27.—Meets Tuesday evenings at Central Hall, 38 Grand avenue. W. C. T., C. M. Jacobs; W. V. T., F. M. Bartlett; W. Recorder, D. P. Candee; W. A. Recorder, T. G. W. Jefferson; Financial Recorder, J. E. Reeves; Treasurer, J. E. Reeves; W. U., Thomas Hemstock; D. U., George Johnson; J. Guard, Frank Thrall; Sentinel, H. Bassett.

Excelsior Council, No. 8, Select Templars.—Meets first and second Wednesdays, at 27 Insurance Building. C. of C., J. W. Denton; S. of C., Sylvanus Butler; J. of C., C. D. Hall; Chaplain of C., J. W. Denton; R. of C., G. P. Otis; T. of C., M. Thomas; M. of C., F. Ludington; D. M. of C., A. J. DeLong; P. of C., C. Jacobs; W. of C., William Beach.

Elm City Temperance Club.—708 Chapel street. President, John A. Peckham; Secretary, George W. Smith.

CATHOLIC TEMPERANCE SOCIETIES.

St. Aloysius T. A. B. Society.—President, James P. Bree; Vice-President, Michael F. Smith; Recording Secretary, John H. Flanagan; Financial Secretary, William H. Church; Treasurer, Thomas O'Brien; Marshal, John White; Sergeant-at-Arms, Richard Nagel.

St. Francis T. A. B. Society.—President, James P. Sanders; Vice-President, William Weber; Recording Secretary, Henry Weber; Financial Secretary, Owen McMahon.

St. John's T. A. B. Society.—President, Patrick Donnelly; Vice-President, Andrew McPartland; Secretary, David O'Donnell; Treasurer, Edward McCabe; Marshal, Henry Dailey.

St. Mary's T. A. B. Society.—President, John McWheny; Vice-President, Thomas Callahan; Treasurer, Michael Turbert; Recording Secretary, Martin Flynn; Financial Secretary, Daniel Doody; Marshal, Antony Keegan; Sergeant-at-Arms, Daniel Cavanagh.

St. Patrick's T. A. B. Society No. 1.—President, Rev. John Russell; Vice-President, James Morrissey; Treasurer, Patrick Falsey; Secretary, Peter Clyne; Marshal, Michael Shane.

Temperance Society of the Sacred Heart.—President, Bernard Smyth; Vice-President, M. J. Ryan; Recording Secretary, Patrick Donnelly; Treasurer, James O'Brien; Marshal, Henry M. Dally.

Teutonia Männerchor.—President, Charles Schenk; Vice-President, Joseph Lang; Recording Secretary, John Weisberger; Corresponding Secretary, Henry C. Irving; Financial Secretary, Herman H. Scharf; Treasurer, Louis Weckesser; Cashier, Peter Bohn; Trustees, Frederick Brill, August Dunsing, William Fricks. The oldest German singing society in Connecticut.

Trades Council of New Haven.—Morris E. Ruther, Secretary. The object of the Trades Council is to organize all branches of honorable toil, with a view of elevating their material and intellectual status as working men and citizens. It consists of three delegates from each of the subordinate organizations represented. At its establishment in 1881 these subordinate organizations were: Cigar-makers' Union, 115 members; Cabinet-makers' Union, 50 members; Wood-carvers' Association, 30 members; Typographical Union, 85 members; Tailors' Union, 30 members; Stone-masons' Union, 45 members; Spring-grinders', 10 members. At the present time the Trades Council consists of Journeymen Tailors' Union, 80 members; Wood-carvers', 25; Typographical, 80; Piano-makers', 40; Cigar-makers', 50; Musical Protective, 45; Amalgamated Iron and Steel Workers', 150 workers; Stone-masons', 60; Socialistic Labor Party, German Branch, 75 members; Socialistic Labor Party, American branch, 25 members; Resolute Labor Club, Knights of Labor, 85 members; Industry Labor Club, Knights of Labor, 500 members; Nonpareil Labor Club, Knights of Labor, 100 members; Carriage-workers' Association, 150 members; Granite-cutters' Union, 35 members. The Trades Council also owns and controls a weekly newspaper, *The Workmen's Advocate*, which has a circulation of 2,500 copies.

Frank Stewart

Trinity Church Home.—303 George street, between College and High. President, Rev. Dr. Harwood; Vice-President, Andrew L. Kidston; Treasurer, Gardner Morse; Secretary, James M. Mason; Chaplain, Rev. H. M. Ladd; Almoners, Mrs. Frances Gorham, Mrs. Joseph E. Sheffield, Mrs. Charles E. Graves, Miss Elizabeth A. Eld, Miss Mary I. Linzee, Miss Caroline S. Edwards, Mrs. Mary E. McMaster, Miss Sara G. Hotchkiss, Miss M. M. Leffingwell, Mrs. William Beebe, Mrs. Timothy H. Bishop, Miss Mary L. Booth, Mrs. W. H. Law, Mrs. William W. Farnam, Miss Charlotte Upham, Mrs. Lizzie Ward, Mrs. J. W. Mansfield, Mrs. George St. John Sheffield; Matron, Mrs. Sarah W. Titus.

Trinity Parish School.—303 George street. President, Rev. Edwin Harwood; Vice-President, Gardner Morse; Secretary, William W. White; Treasurer, James M. Mason; Standing Committee, James M. Mason, Miss Sarah Morse, Mrs. T. Bishop, Miss Sarah M. Edwards, Miss Mary L. Booth, Miss Isaphene Hillhouse, Mrs. S. A. Bassett; Teachers, Anna R. Burwell, Mary J. Parmelee.

Typographical Union No. 47.—Organized 1860. President, T. F. Mulcahy; Vice-President, R. S. Kirshner; Treasurer, Asa A. Yale; Secretary, George A. Brostpl.

UNITED AMERICAN MECHANICS.

Pioneer Council, No. 1.—Meets every Thursday evening at 400 State street, Courier Building. Councilor, F. E. Stevens; Vice-Councilor, F. A. Allen; Recording Secretary, A. S. Welch; Assistant Secretary, C. H. Porter; Treasurer, S. E. Holt; Financial Secretary, E. J. Good; Inductor, J. G. King; Examiner, J. J. Hamer; Inside Protector, Charles Morris; Outside Protector, William Forbes; Trustees, F. E. Field, E. D. Warner, C. H. Standish.

Washington Council, No. 7.—Meets every Monday evening in G. A. R. Hall, Benedict Building. Councilor, Frank Brown; Vice-Councilor, James H. Griffin; Recording Secretary, A. D. Crane; Assistant Recording Secretary, Theodore C. Hasting; Financial Secretary, O. F. Jewell; Treasurer, W. O. Staples; Instructor, C. H. Mercer; Examiner, Willis S. Leggett; Inside Protector, C. M. Johnson; Outside Protector, E. M. Ufford; Trustees, Frank Brown, J. D. Bradley, G. F. Hutchings.

Garfield Council, No. 14.—Meets every Wednesday evening in G. A. R. Hall, Benedict Building. Councilor, George E. Parker; Vice-Councilor, James H. Griffin; Recording Secretary, Arthur M. French; Assistant Recording Secretary, C. E. Manning; Financial Secretary, A. L. Chandler; Treasurer, William Bradbury; Examiner, E. A. Gilbert; Inductor, G. M. Tyrrell; Inside Protector, H. E. Rice; Outside Protector, A. J. Blake.

Ancient Order of United Workmen, Momaugin Lodge, No. 1.—The first lodge in the State. Past-Master Workman, Robert A. Russell; Master Workman, George A. Butler; Foreman, Frank H. Chatfield; Overseer, Charles H. Smith; Recorder, Charles F. Curtiss; Financier, Willis Curtis, Jr.; Receiver, Samuel H. Crane; Guide, Willis F. Augur; Inside Watchman, John Hennessy. Meets in *Journal and Courier* Building on the second and fourth Wednesday evenings in each month.

United Workers.—President, Mrs. E. S. Wheeler; Vice-Presidents, Mrs. T. G. Bennett, Miss L. E. Prudden, Miss F. E. Walker; Treasurer, Mrs. A. E. Rowland; Recording Secretary, Miss Julia Miller; Corresponding Secretaries, Miss Scranton, Mrs. G. W. St. John Sheffield; Advisory Committee, Rev. E. E. Atwater, H. B. Bigelow, T. Hooker, E. S. Wheeler, Eli Whitney, Jr., T. G. Bennett.

Washington Union Brotherhood.—President, F. H. Harris; Vice-Presidents, F. W. J. Sizer, Louis Osterweis; Treasurer and Secretary, H. N. Oviatt; Executive Committee, John C. Miles, George E. Thompson, F. B. Byington, John C. Merrick, Hemingway Smith.

Woman's Board of Missions, New Haven Branch.—President, Mrs. Burdett Hart; First Vice-President, Miss Susan E. Daggett; Corresponding Secretary, Mrs. H. D. Hume; Home Secretaries, Mrs. W. H. Fairchild, Mrs. E. Blakeslee, Miss Lillian E. Prudden; Recording Secretary, Mrs. S. L. Cady; Treasurer, Miss Julia Twining.

Young Men's Catholic Literary Association.—President, Martin Conlan; Vice-President, William Welch; Treasurer,

Thomas Coffee; Recording Secretary, Joseph Cook; Financial Secretary, Edward Moriarty; Corresponding Secretary, James Wrinn; Sentinel, Charles Brennan. Meetings first and third Sunday afternoon of each month.

Young Men's Christian Association.—President, Simeon E. Baldwin; Vice-President, John M. Peck; Recording Secretary, H. E. Nettleton, Jr.; General Secretary, Henry O. Williams; Treasurer, C. E. P. Sanford; Directors, E. S. Swift, E. E. Mix, J. T. Manson, H. J. Prudden, H. P. Shares, S. H. Barnum, Theodore H. Sheldon, R. E. Barnum, A. J. Harmount, George P. Durham, D. R. Alling, P. E. Bowman.

Young Men's Institute.—Organized 1826. Incorporated 1840. 847 Chapel street. President, Charles E. Graves; Vice-President, C. C. Blatchley; Treasurer, John A. Richardson; Secretary, Robert E. Baldwin; Directors, Ellery Camp, Robert E. Baldwin; Joseph R. French, L. W. Robinson, Samuel T. Dutton, Henry E. Pardee, C. C. Blatchley, Joseph Parker, Jr., T. Attwater Barnes, Frederick B. Farnsworth, A. Heaton Robertson, Harmanus M. Welch, Ruel P. Cowles, Charles E. Graves, John A. Richardson, J. D. Dewell, E. P. Arvine; Librarian, Miss C. Lizzie Todd.

Young Men's Republican Club.—Organized November 13, 1884. President, James A. Howarth; Vice-Presidents, James Totham, F. A. Corbin; Secretary, Wade H. Thompson; Assistant Secretary, A. C. Benedict; Treasurer, L. W. Hall; Sergeant at-Arms, W. H. Johnston. Executive Committee: James A. Howarth, *ex officio*; Secretary, W. H. Thompson; Chairman, A. G. Snell; J. M. Bishop, J. Rice Winchell, W. W. Crampton, C. C. Ford, A. G. Snell, G. D. Watrous, John Z. Mason, G. M. Baldwin, M. E. Chatfield.

Young Women's Christian Association.—568 Chapel street. President, Mrs. H. B. Bigelow; Vice-Presidents, Mrs. J. D. Dana, Mrs. W. W. Low, Mrs. J. H. Foy, Mrs. T. W. T. Curtis, Mrs. H. D. Hume, Mrs. W. D. Whitney, Mrs. S. S. Fisher; Treasurer, Mrs. E. M. Reed; Recording Secretary, Miss L. R. Bliss; Corresponding Secretary, Mrs. E. M. Jerome; Auditor, George W. Curtis; Matron, Miss Helena Wilcox; Superintendent, Miss Helen Hull; Board of Trustees, Rev. Noah Porter, LL.D., Hon. Hobart B. Bigelow, Hon. Francis Wayland, Wilbur F. Day, Andrew W. De Forest, Franklin R. Bliss.

GENERAL FRANK D. SLOAT,

Supreme Dictator of the Knights of Honor, is of Holland-English descent, and was born at Fishkill, N. Y., September 28, 1835. His parents were Henry and Annis (Warren) Sloat. The first mentioned was the only son of Rev. John Sloat, a Methodist minister of some note in his time. He died about ten years ago. The latter is living at an advanced age.

The home of General Sloat has been in New Haven for more than a quarter of a century, except for about fifteen months, when he lived temporarily in Middletown, and his personal popularity affords him much influence in civic, society, and military affairs, not only at home, but throughout the State.

From childhood he has been dependent upon his own exertions for a livelihood. He obtained a common school education by attending school in the winter, and supporting himself by farm work in the summer. At the age of seventeen he became a clerk in a country store, and, like many other ambitious youths, came to New York to seek his fortune. In 1857 he became identified with the New York Steam-Heating Company. Two years later, when only twenty-four years old, he assumed the management of this company's manufactory in New Haven, and was occupying this position at the outbreak of the War of the Rebellion. He enlisted

in Company A, 27th Connecticut Volunteers, and left for the front with the rank of First Lieutenant. His regiment was engaged in the fiercest part of the battle of Fredericksburg, December 13, 1862. At Chancellorsville, he, together with his own company, of which he had been promoted Captain, were taken prisoners, and confined in Libby Prison.

While in the army he was the special correspondent of the *New Haven Palladium*, and the first his friends knew of his fate was in a terse dispatch sent his paper, which read: "We have met the enemy, and we are theirs, and are now reveling in Libby's embrace." All his reports were characterized by great fairness and consideration, and were eagerly read by New Haven people.

He returned from the war to learn that the Republican party had placed him in nomination for Town Clerk, a responsible and honorable position. He was loth to accept, but was prevailed upon to stand, being assured that there was little possibility of his election, as the town was strongly Democratic. Much to his surprise, however, he was elected. He attended to his duties in the same conscientious manner that has since been characteristic of the man, but declined a renomination. He was for five years a member and for two years President of the Board of Police Commissioners of the City of New Haven. His term of office expired in January, 1885, and he declined a re-election.

In 1867, General Sloat went to Wisconsin to take charge of large iron interests in which several New Haven capitalists were concerned, and for whom he was the confidential adviser. The property was advantageously disposed of under his management, and he returned to New Haven to accept the position of Treasurer, and afterwards President of the Victor Sewing Machine Company, whose headquarters were located in Middletown, Conn. During his brief residence in that city he was elected to the Common Council by a very handsome majority.

Since the war he has retained his connection with the Grays, the crack military company of New Haven, and is now in command of one of the veteran corps of that military organization. Perhaps no more graceful recognition of his services in the war could have been rendered him by the State, than in his receiving the command of the Centennial Legion Company of Connecticut, which took part in the historical ceremonies of 1876, at Philadelphia, together with the military organizations representing the thirteen original States.

General Sloat has been a Mason since his majority. He has occupied various offices in Masonic bodies, and is at present Eminent Commander of New Haven Commandery Knights Templar.

For years he has been a prominent member of the Grand Army of the Republic. In 1881 he was elected Commander of Admiral Foote Post, which, under his administration, was brought to the front rank as compared with other posts in the State, another evidence of his popularity as well as his executive ability. In 1884 he was chosen Commander of the Grand Army of the Republic, Department of Connecticut, a position which he has since filled with distinction.

General Sloat has had considerable experience in State affairs, having served as Paymaster-General on Governor Andrews' staff, and under Governor Bigelow's administration he was appointed and served as Quartermaster-General. At the last gubernatorial election in Connecticut, he was nominated by the Republicans for State Comptroller. The State went strongly Democratic, yet, what is something unique in Connecticut politics, General Sloat was the only Republican elected. He had a majority of 782, and a plurality of 2,436, and is now rendering efficient service to the State governed by Thomas M. Waller. This incident affords an ample illustration of the gentleman's worth, as well as the high regard and esteem he is held in the community where he is best known.

General Sloat has been a Knight of Honor almost since the date of its organization in Connecticut, and is one of its most prominent and active members. He was initiated into Roger Sherman Lodge, No. 323, November 24, 1876, less than four months after the lodge was instituted. The following month he was elected Vice-Dictator, to fill a vacancy caused by resignation, and in January, 1877, he became Dictator. At the formation of the Grand Lodge of Connecticut, August 24, 1877, he was elected Grand Vice-Dictator. On February 6, 1878, he was elected Grand Dictator; February 5, 1879, he was re-elected by a unanimous rising vote. On February 11, 1880, he was again re-elected, and in the same complimentary manner. At the next session of the Grand Lodge, held February 9, 1881, a unanimous rising vote once more attested his popularity in that body, but he decidedly declined to serve, not that he wished to shirk the responsibilities and duties as an officer of an organization that he considers second to none, but mainly out of consideration for others whom he desired to see advanced in the Order. February 5, 1879, he was elected Representative to the Supreme Lodge for two years, and on February 9, 1881, he was re-elected for two years longer. At the session of the Supreme Lodge, held in Baltimore, May, 1882, he was chosen Supreme Assistant Dictator; was re-elected at the session held at Galveston in May, 1883, when the Supreme Dictator and Supreme Vice-Dictator were also re-elected. At the Chicago session, in May, 1884, he was unanimously elected Supreme Dictator; and at the St. Louis session in 1885, he was unanimously re-elected.

The prominence of General Sloat in civil, as well as military, associations, has led to his being frequently called upon in public assemblies to take part in debate. This he has done thoughtfully and modestly, never treating those taking opposite views in discussion in any other manner than with the full respect and courtesy due from one gentleman to another. While not a florid speaker, his addresses have always been characterized by good, sound, common sense, and being delivered in a quiet unassuming manner, have always had their weight.

It is not always that the terms "amiable" and "popular" can be applied to public men without

the conveyance of a suspicion that they may be lacking in moral force. But these marked elements in the composition of the subject of this sketch were never found out of harmony with a keen sense of justice and moral responsibility, equal to every oc-

casion. Warm and sincere in his friendships, they have never been employed in a wrong direction.

General Sloat was married, in 1857, to Miss Lizzie A. Bristol, of Dover Plains, N. Y. They have two sons, born respectively in 1858 and 1866.

CHAPTER XXXVII.

MILITARY ORGANIZATIONS.

THE military history of New Haven began with the establishment of the original plantation in 1638. It may even be doubted if the settlement could ever have become securely planted but for the organization of all its arms-bearing inhabitants into a compact body for purposes of common defense.

Stern necessity combined with the sturdy common sense of the time to develop a plan of organization, which, through all the transitions from plantation to colonial, and finally to State government, has remained essentially the same to the present day, the many changes in the militia laws in the nearly two and a half centuries having been in the main merely changes of detail.

The theory that all able-bodied male citizens of suitable age are subject to call for military duty, is as fully recognized in the militia law of the State to-day as it was in the earliest days of the colony. The requirement of that time, that the entire number of military subjects should be actually in possession of arms, and all perform an equal amount of military service, was gradually relaxed as conditions permitted, with the result that in later years only a very small proportion of the enrolled militia have discharged their military duty to the State by actually bearing arms in military organizations.

The larger proportion, or inactive militia, have in time of peace been exempted from all military duty by the payment to the State of a small annual tax, to be applied to the support of the organized force.

No military records, distinctly as such, have been handed down to us from the early years of the colony. The military and civil authority were then so intimately blended that a separate history was possible to neither, and the rise and development of the militia is only incidentally indicated by here and there an entry in the general records of the colony.

On page 25, Volume II, Hoadley's New Haven Colonial Records, is afforded the following rather suggestive glimpse of the military regulations of that day.

At General Court the 25th of Nov., 1639, It was ordered: thatt every one that beares armes shall be compleatly furnished wth armes [viz.], a muskett, a sworde, bandalier, a rest, a pound of powder, 20 bullets fitted to their muskett, or 4 pound of pistoll shott or swan shott at least, and be ready to show them in the markett place upon Monday the 10th of this month before Captain Turner and Lieutenant Seely, under penalty of 20^s fine for every default or absence.

The entire male population between the ages of

sixteen and sixty, with marvelously few exceptions, were then in fact members of an active military organization, under command of legally appointed military officers, subject to rigid inspection as to arms and equipment, and under peremptory regulations and requirements promptly to perform military duty at the call of the appointed officers. The "Trained Band" thus early standing guard over the homes and firesides, and the single sanctuary of New Haven, was the battalion which eventually became the 2d Regiment of Connecticut Militia. And that the position of an officer of the militia at that day was no sinecure, is shown by a clause of the order of the General Court just quoted, in which Lieutenant Seely was ordered to "walk the woods" to confiscate all timber found "uncroscut and squared;" which indicates that other than strictly military duty was required of the "Trained Band" officers. The duty of the Captain is thus defined in an order dated July 7, 1640.

Mr. Turner was chosen Captain to have the command and ordering of all martiall affayres of this plantatioⁿ as setting and ordering of watches, exercising and training of souldiers, and whatsoever of like nature appertaining to his office: all w^{ch} he is to doe wth all faithfullness and diligence, and be ready at all times to do whatsoev^r service the occasions of the towne requires or may require.

It is ordered that ev^{ry} man that is appoynted to watch, whether M^{rs}. or servants, shall come every Lord's day to the meeting compleatly armed, and all others also are to bring their swords; no man exempted, save Mr. Eaton, or pastor, Mr. James, Mr. Samuel Eaton, and the two deacons.

An order passed one month later permitted Captain Turner to

have his lott of meadow and upland where he shall chuse itt for his owne conveniencie, thatt he may attend the service of the towne which his place requires.

Frequent inspections were held, and all persons failing promptly to report, or appearing with arms or equipments in faulty condition, were severely fined.

It was a standing order, as early as 1642, that when any alarm was given of the approach of an enemy, every soldier in town was to repair forthwith to the meeting-house unless the threatened danger might be in his immediate vicinity, in which case he was required without orders to strive as best he might for the common defense. The organization at that time seems to have been simply that of a military company under command of a Captain, with one Lieutenant, one "Ancient," (Second Lieutenant), four or more Sergeants, and a number of Corporals.

For convenience in ordering and maintaining the watches, each Sergeant was assigned to the command of a subdivision of the company termed a squadron.

In July, 1643, a new military enrollment was ordered by the General Court at New Haven to be at once taken in every plantation of the jurisdiction to be forwarded to the next meeting of the Commissioners of the Confederate Colonies at Boston. In October following, the jurisdiction of the New Haven General Court was enlarged by the admission of Milford, and it would seem that the subject of a regimental organization of the combined military force of New Haven, Milford, Guilford, and Stamford might soon thereafter have been effected. It must be confessed that the records are bare of any mention of such an organization at that date, but even had it existed, the omission could scarcely be a matter of surprise.

The source of military authority was the General Court itself. The Governor of the colony, without assuming or being specifically accorded the title, was in reality Captain General or Commander-in-Chief, as is the Governor of the State to-day, and whatever form of organization the bodies of militia of the several towns might find it convenient or necessary to adopt, might very naturally have been left to natural development without official aid, direction or even recognition, so long as there was no public necessity demanding either.

At a session of the General Court July 1, 1644, "trainings of the squadron" were ordered to be held every Saturday, and authority was granted to begin an artillery company and

to add to themselves such as out of the trayned band and others being free doe offer themselves to be of the Artillery, and to chuse their own officers and settle their own orders, so as they use the said liberty moderately, not intrenching upon the fundamental agreement of the Court.

Special efforts were put forth for the perfecting of the artillery organizations, and in March, 1645, orders were issued announcing its completion, appointing to command it Mr. Malbon as Captain; Lieutenant Seely, formerly of the "Trained Band," First Lieutenant; Francis Newman, Ensign; and four Sergeants.

The squadrons of the Trained Band were so much depleted by enlistments in the Artillery Company, that two squadrons were, by order of the Court, consolidated into one, with weekly drills, the sergeants alternating in command.

By the same general order,

It was left to the Governor and Captain Turner to order and appoynt the gen^l trainings so as may be most for the common good of the plantatio in respect of hay time and harvest.

At a General Court held at New Haven June 20, 1645, the Governor, with the rest of the Court and the Captain and Lieutenant, were formally authorized as a "Council of Warr" to have charge of sending forth some soldiers to strengthen Uncas in his struggle against the Narragansett Indians, and for the sending of more in the future if they should be needed. There is abundant evidence that military inspections were in those days more than mere

matters of form. At a single session of the General Court early in 1646, twenty-two citizen-soldiers were arraigned for defects in arms or equipment, and all were subjected to fines, ranging from sixpence to twenty shillings.

In May, 1648, the officers appointed for the artillery were: Robert Seely, Captain; William Andrew, Lieutenant; Henry Lendalle, Ensign; and as Sergeants, John Nash, William Fowler, Richard Beckly, and Mr. Chittendine, of Guilford.

That the "Train Band" had at this time a stand of colors, is shown by an entry in the records of a General Court held at New Haven on December 5, 1648, at which Captain Malbon appeared as a witness, and during his testimony alluded to the fact that the Company came to his house on training day for their colors.

Early in September, 1649, in consequence of hostile activity on the part of the Indians, extra precautions were taken for the public safety by the General Court, and provisions were made for "a going forth of men" against the savages. The regular watch was doubled, two squadrons of the Trained Band, instead of one, were ordered to attend "meetings on the Sabbath" with their arms; and an extra outfit for twenty men, including "cotton quilted coats, boxes for cartrages, and knapsacks," was provided at the town charge.

During such a period of alarm, martial law was supreme in the town, and on this occasion the sentinels were expressly required to shoot any person who at night might endeavor to escape after being challenged.

The year 1653 opened with a prospect of war between the confederated English colonies and the Dutch. Pending the negotiations with the Massachusetts Colony, the General Court of New Haven, in connection with the Connecticut Colony, began preparation for an aggressive war.

There were at that time four pieces of artillery in New Haven, two being located on the Green, and two in position commanding the harbor. Two of these guns were assigned as part of the armament of a frigate to be fitted up jointly by the two colonies to cruise along the coast between the Connecticut River and Stamford.

In March, 1653, Lieutenant John Nash was propounded to the Court and approved as the chief military officer of New Haven "for the present."

In June, 1654, the co-operation of the Massachusetts Colony having been obtained, active work began for the commencement of war against the Dutch. One hundred and thirty-three men were raised in the New Haven jurisdiction, of which number fifty men were from New Haven alone.

The officers appointed were Captain Seely, Lieutenant Nash, and Richard Baldwin, of Milford, Ensign. Just as the force were about to depart, news was received that peace had been declared between England and the United Provinces, and further warlike preparations were abandoned.

In May, 1656, what might be considered the beginning of a cavalry organization was effected in an order of the General Court at New Haven, that

Sixteen horses shall be provided and kept in the five towns

upon the maine in this jurisdiction, with suitable saddles, bridles, pistoles, and other furniture that is necessarie toward raising of a small troope for the service of the country.

Six of these were apportioned to New Haven, and the men assigned to that service were exempted from all other military duty.

There is no record of any special military activity until after the consolidation of New Haven with the Connecticut Colony, which was finally effected in May, 1665.

In July of that year, at the General Assembly held in Hartford, Captain John Nash, Lieutenant Thomas Munson, and Sergeants Nathaniel Merri-man, Samuel Whitehead, Roger Allyn and James Bishop, were confirmed as officers of the "Trained Band" at New Haven.

In October, 1667, the authorization which had previously been given by advice of the "Committee of the Militia to raise a Troope of Dragoons" in each of the counties of the colony, was revoked, and special permission to raise such a troop to the number of "about forty" was given to the Counties of New Haven, Fairfield and New London.

A serious war cloud threatened for a time following the occupation of New York by the Dutch in 1672, and in consequence a "Grand Committee," consisting of the Governor, Deputy Governor and his assistants, together with a number of military men, was informed by the General Court in August, 1673, to direct all military operations when the General Assembly was not in session. This Committee was afterward termed the Council of War.

It was determined to raise at once a force of five hundred dragoons to oppose the Dutch, and the number of fifty-one was allotted to the town of New Haven, the total number for the county being one hundred and twenty.

The New Haven contingent was officered by Major Robert Treat; Thomas Munson, Lieutenant; and Samuel Newton, Ensign. Upon the final organization of all the forces raised in the colony to proceed against the Dutch, Major Treat was made second in command, Major John Talcott, of Hartford, being Commander-in-Chief. Peace was declared between England and Holland in time to prevent any of these troops entering upon active service.

In 1675, a period of general organization on the part of the Indians against the colonies began, during which frequent calls were made upon New Haven for troops, both foot and horse, and for military supplies. On August 25, 1675, the Council of War "made choys of Major Robert Treat to goe out Commander-in-Chief of those forces that are to goe out in the next expedition agaynst the enemy." A special commission as Commander-in-Chief was delivered to the Major by the Council five days later, together with an elaborately prepared letter of instruction, in accordance with which he at once took the field against the Indians, being compelled by the general uprising to frequently divide his forces so as to operate simultaneously in defense of settlements in Connecticut, and in aid of the threatened settlements in Massachusetts and Rhode Island.

No rolls or records are preserved giving names of subordinate officers or soldiers in that Indian war. Reinforcements were soon called for by Major Treat, and on September 19, 1675, another contingent was forwarded to him by order of the Council, under command of Lieutenant Thomas Munson. The Commissioners of the United Colonies at Boston, on the 2d of November, 1675, made a formal declaration of war against the Narragansett Indians, and decreed that an army of one thousand men should at once take the field. Governor Winslow, of the Plymouth Colony, was made Commander-in-Chief, and Major Robert Treat was designated as second in command.

Those who were already in the service, and fit for duty, were continued in service and ordered to rendezvous at New London, and new quotas were levied to bring the army to the number required, the entire quota of New Haven being sixty-three men. These were under the immediate command of Captain Seely.* For the march from New Haven to New London it was ordered that every commissioned officer be provided with a horse for himself, and that every three soldiers should have a horse between them.

The troops were soon in active service and in the "Fort fight" at Narragansett, suffered severely. Connecticut had three hundred soldiers in that engagement, of whom eighty were killed or wounded. Of her five Captains, Seely, Marshall, and Gallup were killed, and Captain Mason died of his wounds.

Major Treat was compelled by the severity of his losses to return his command to Connecticut to recruit, and secure medical attendance for his wounded. The loss in Captain Seely's company alone in killed and wounded was twenty men. Unfortunately there is no record of their names, except that of Captain Seely himself.

At a court of election held at Hartford, May 11, 1676, Major Robert Treat was made Deputy Governor of Connecticut in recognition of his distinguished services as commander of the Connecticut troops in the King Philip War, and was succeeded in that command by Major John Talcott. The war was continued with relentless vigor until the Narragansetts were so nearly exterminated as to be brought under thorough subjection.

The war was a peculiarly hazardous and bloody one. Whole settlements were devastated and burned by the savages. Connecticut settlements were seriously threatened, and suffered to some extent from the common enemy, but without aid from other colonies they were so well defended by the "home force" that no allies were called upon to march or fight upon Connecticut soil. Connecticut blood flowed freely at "Bloody Brook" in Massachusetts, and at "Narragansett Fort" in Rhode Island, and at both, New Haven soldiers bore a conspicuous part, Connecticut thus early having not only the sagacity, but the courage to inaugurate the policy to which she has ever sturdily adhered, that whenever

* Nathaniel Seely, Captain in the expedition against the Narragansetts, was a son of Robert Seely, of New Haven, but was at the time of the expedition an inhabitant of Stratford.

fighting is inevitable, it shall be done as far as possible away from her own hearth-stones.

In 1680, an official report of the trained soldiers in the colony gave six hundred and twenty-three as the number in New Haven County.

In 1697, New Haven was called upon to furnish its quota of a force of one hundred and twenty men, to be raised from seven towns lying nearest New York, in answer to an urgent call from Governor Fletcher, who was anticipating an attack from a French fleet. The force was organized in two companies, the one in which was included the New Haven contingent being under command of Captain Ebenezer Johnson, of "Darbie," with Samuel Sherman, of New Haven, as Lieutenant.

In 1702, the General Court authorized the organization of a troop of horse in New Haven County.

In 1718, the Train Band in East Haven was officered by Allyn Ball, Captain, and Thomas Smith, Lieutenant. The Train Band of the North East Society was officered by Joseph Ives, Captain; John Grannis, Lieutenant; and Samuel Ives, Ensign.

No further commissions are recorded until 1720, when Samuel Smith was made Captain of the Train Band in West Haven; with Samuel Brown, Lieutenant; and Thomas Painter, Ensign. Two years later Abraham Dickerman, was made Captain of the First Company in New Haven. Later in the same year, Isaac Dickerman succeeded to the captaincy of the First Company, and Jonathan Mansfield was appointed Ensign.

In 1723, Thomas Smith took the captaincy of the East Haven Company, with Theophilus Allyn as Lieutenant, and John Russell, Ensign.

In 1739, the official return to the General Assembly showed six companies of the Second Regiment (Train Band) in New Haven, commanded as follows:

Captain Jonathan Alling	33
" Andrew Tuttle	98
" Samuel Smith	72
" Daniel Alling	93
" Samuel Candee	60
" John Santord	132
Total	588

The remaining companies were located in Milford, Guilford, Wallingford, Branford, Durham, Waterbury and Derby, and raised the aggregate of the regiment to 2,302 men.

In 1758, the Second Regiment was officered for its campaign in the French and Indian Wars, as follows: Nathan Whiting, Colonel; Samuel Coit, Lieutenant-Colonel; Joseph Spencer, Major. These Field Officers were also Captains of the first, second and third companies of the regiment. Joel Fitch was Adjutant, and Azel Fitch, Quartermaster. It consisted of twelve companies, and the remaining Captains were: David Baldwin, Fourth Company; Edward Wells, Fifth Company; Amos Hitchcock, Sixth Company; Eldad Lewis, Seventh Company; John Stanton, Eighth Company; James Wadsworth, Jr., Ninth Company; Ephraim Cook, Tenth Company; Joshua Barker, Eleventh Company; and Henry Champlain, Twelfth Company.

The regiment served under General Abercrombie, and suffered severely in the disastrous campaign against Fort Ticonderoga.

In the campaign of 1759 and 1760, the regiment was again in service, with Colonel Whiting in command, but with Major Spencer promoted to Lieutenant-Colonel, and David Baldwin, Major.

This period of service ended with the conquest of Canada in 1761, and during the campaign the Connecticut troops served with distinguished honor. Later in the same year another force of two thousand three hundred men was put in the field by Connecticut, one regiment (the Second) being commanded by Colonel Whiting, with James Smedley as Lieutenant-Colonel, and Daniel Baldwin, Major.

In 1764, in order to carry the war into the Indian country to "punish the savages who had been guilty of perfidious and cruel massacres," the General Court decided to raise a fighting force of two hundred and sixty-five able-bodied and effective men, "to put a speedy end to the great mischiefs occasioned by them." Israel Putnam, as Captain of the First Company, was made Major in command of the force, and the Second Company, raised in New Haven and vicinity, was commanded by Abram Foote as Captain, with James Arnold, First Lieutenant, and Josiah Stow, Second Lieutenant. No rolls or records are in existence showing the composition of this company, but while it was not one of the permanent companies of the Second Regiment, it is known to have drawn its members from those companies, and it was therefore the representative of the Second Regiment while in the field.

The very brief sketch thus far given must suffice to show the rise, or rather, growth, of the Second Regiment of Militia, which, from the earliest time to the present, has had no rival as the established military organization of New Haven.

Up to this time, and until ten years later, the armed troops of the colony were all in the service of "His Majesty." As the colonies increased in strength and became restive under the restraints in which they were held by the mother country, naturally military ardor and patriotism prompted the formation of "independent" companies, on the supposition that such would be a little nearer the people in sympathy, and under less restraint from abroad than were the regular militia organizations.

There is proof that such independent companies were formed in New Haven, but no satisfactory records of them are found, and probably few, if any, were fully armed or uniformed prior to 1774.

In 1771, the First Company of Governor's Guards (foot) was organized in Hartford under authority of the General Court. A similar organization was contemplated at the same time in New Haven, but not until three years later was the work seriously begun of organizing

THE SECOND COMPANY GOVERNOR'S GUARD OF NEW HAVEN.

The mere mention of the year 1774 is sufficient

to indicate, without comment, the spirit of resolute and determined patriotism which led to the formation of this company.

The steadily darkening cloud of popular indignation throughout the colonies against the mother country, and the unmistakable indications that the storm it portended must soon burst forth in open hostility, led the citizens of New Haven Colony to earnest consideration of means of defense and protection. The patriot, be he never so fearless, who stood ready if need came, to level his musket or draw his saber against the troops of the king, would naturally prefer to do so in an organization not sworn as a body to *defend* the king.

On December 28, 1774, sixty-five "gentlemen of influence and high respectability" met in New Haven and signed the following Articles of Agreement:

We, the subscribers, are desirous to encourage the military art in the town of New Haven, and in order to have a well disciplined company in said town, have agreed with Edward Burke to teach us the military exercise, for the consideration of three pounds of lawful money per month, till such time as we shall think ourselves expert therein. We then propose to form ourselves into a company, choose officers, and agree upon some uniform dress, such as a red coat, white vest, white breeches and stockings, black half-leggins, or any other dress that may then be thought proper. We also agree that we will endeavor to furnish ourselves with guns and bayonets, as near uniform as possible, and other accoutrements as may then be thought necessary; but no person shall be obliged to equip himself as above, by signing this agreement, if he desires dismissal before signing other articles. This agreement only obliges every signer to pay his proportional part of the expense of instruction, etc.

On the Thursday following, January 5, 1775, and weekly thereafter, business meetings of the company were held at the State House, and the work of perfecting the organization and outfit was pushed vigorously forward.

At the meeting February 2d, it was

Voted, That the dress of the Company be as follows, viz.: A scarlet coat of common length, the lapels, cuffs and collar of buff, and trimmed with plain silver-wash buttons, white linen vest, breeches and stockings; black half-leggins; a small, fashionable and narrow ruffled shirt.

Two weeks later the company, by vote, appointed Benedict Arnold, Jesse Leavenworth, and Hezekiah Sabin a committee "to make inquiry how a stand of arms can be procured in the best way." At the same meeting it was

Voted, That application be made to the General Assembly at their session in March next, by this company, to be established a distinct military company,

and a committee of four was appointed to draft the petition.

At the next meeting, held on March 1, 1775, the committee reported a form of petition drawn by its Chairman, Timothy Jones, Jr., which was adopted, and Pierpont Edwards, Esq., was appointed agent of the company to present the same to the General Assembly. That petition so tersely sets forth the motive which prompted the organization, that it is here given in full, as follows:

TO THE HONORABLE GENERAL ASSEMBLY OF THE COLONY OF CONNECTICUT, now sitting at New Haven, in New Haven County.

The memorial of us, the subscribers, inhabitants of New Haven, many of us independent of any military company,

Humbly sheweth, That your memorialists, anxious for the safety of our country, and desirous of contributing all in their power to the support of our just rights and liberties, have formed themselves into a military company; have hired a person to instruct them in the military art, which they are daily practicing; and have been at much expense in procuring a uniform dress, etc. Your memorialists, therefore, humbly pray your Honors to constitute them a distinct military company by the name of the Governor's Second Company of Guards, with power to choose their proper officers, to be commissioned by your Honors, and that they may be under the same regulations, and enjoy the same privileges and exemptions as the military company in Hartford, called the Governor's Guards, or under such regulations as to your Honors shall seem meet, and your memorialists, as in duty bound, shall ever pray.

NEW HAVEN, March 2, 1775.

The petition was presented to the General Assembly March 2, 1775, and the same day, having been made "special business," was duly considered and a charter granted, in which it was, as a preface to numerous other stipulations,

Resolved by this General Assembly, That the Memorialists be, and are hereby constituted a distinct military company, by the name of the Second Company of the Governor's Guards, consisting of sixty-four in number, rank and file, to attend upon and guard the Governor and General Assembly at all times as occasion may require, equipped with proper arms and uniformly dressed.

It was stipulated in the terms of the charter that "The Colonel of the Second Regiment of Militia in this Colony" should lead the company to a choice of commissioned officers, and on March 15th, Colonel Leverett Hubbard performed that duty at a meeting of the company, which elected the following officers: Benedict Arnold, Captain; Jesse Leavenworth, Lieutenant; Hezekiah Sabin, Ensign; Nathaniel Fitch, Samuel Greenough, Eliakim Hitchcock, Jeremiah Parmelee, Sergeants.

The company had, previous to this, secured their uniforms, and were industriously perfecting themselves in drill. At a meeting on April 13th it was,

Voted, That when the Second Regiment of this Colony have their general muster in May next, this Company attend the exercises of the day with said Regiment.

This simple incident of the record plainly indicates that, grimly determined and far-seeing as these patriots were, they had no premonition of the suddenness with which the storm of civil war was to burst upon the colonies, or of the fact that, in less than three weeks they themselves would be in the field of actual war instead of on the field of parade.

At the business meeting one week later, April 20th, it was voted, "That the clergy living in the Town of New Haven be invited to dine with this Company on the second day of May."

The next day the company hastily assembled at the call of the Captain. This was on Friday, April 21st. News had that day reached New Haven of the engagement between the militia and the British troops under Colonel Smith and Major Pitcairn at Lexington. The company could look nowhere for orders or authority to march to the aid of their countrymen. The proposition was made to march on Saturday morning, April 22d, for the scene of war, and fifty members of the company voted aye, thereby virtually enlisting again for this specific service.

That they realized fully the responsibility they thus assumed, and that, in the absence of other authority, they must be a law unto themselves, is shown by an "Agreement and Proclamation" subscribed to by each member of the company, which document is given in full in the chapter on the Revolutionary War, page 42.

Prior to departure the company was formed on the public square, where a large concourse had assembled, and the volunteers was addressed by the Rev. Jonathan Edwards. Then came an affecting parting scene, and all things were ready for the march—all save one. Captain Arnold had requested the town authorities to furnish the powder needed for his command from the public stores, and his request had not been complied with. He marched his company to the house where the Selectmen were sitting, and drawing them up in line in front of the building, informed the officials that if the keys to the powder-house were not delivered up to him in five minutes, he would order his company to break open the powder-house and help themselves. The threat had the desired effect; the keys were at once surrendered, the ammunition was obtained, and the company took up its line of march for Cambridge.

The following is quoted from foot-notes in the copy of the original record now in possession of the company:

They halted for the second night of the march at Wethersfield, where the inhabitants greeted them with every attention and entertained them with warm hospitality. On their arrival at Cambridge, they took up their quarters at a splendid mansion owned by Lieutenant-Governor Oliver, who had been compelled to flee on account of his attachment to the British cause. The "Guards" were the only company there complete in their uniform and equipment, and, owing to their soldierly appearance, were detailed to deliver to his countrymen, on board an English barge, the body of a British officer, taken prisoner at the battle of Lexington, and whose death was the result of wounds there received.

On this occasion one of the British officers, appointed to receive the body from them, expressed his surprise at seeing

an American company appear so well in every respect, complimenting them with the remark, that in their military movements and equipment they were not exceeded by any of his Majesty's troops.

While on the march to Cambridge, Captain Arnold conceived the idea of taking Ticonderoga and Crown Point, two fortified forts in the hands of the British troops, and commanding the line of communication between the colonies and Canada. He laid his plan before the Committee of Safety of Massachusetts, who at once recognized its feasibility; and Arnold, under a commission as Colonel, was authorized to raise and command a force for its execution. This commission terminated Captain Arnold's actual service with the Guards, though he nominally remained Captain until his formal resignation in May, 1877, at which time he had become a General in the patriot army.

When the company, under Lieutenant Sabin, returned to New Haven, after an absence of nearly a month, its ranks were seriously thinned, as twelve members at least had volunteered for other service, probably joining the expedition to Quebec.

Regular company meetings were resumed on May 19, 1775, and the recruiting of our members steadily progressed. The first escort duty of the company was performed in honor of General Washington, July 2, 1775. The future Father of his Country had just been elected Generalissimo by a unanimous vote of Congress, and at the date above named, arrived in New Haven, accompanied by General Lee, on his way to the American camp at Boston.

General Washington was received with the heartiest demonstrations of respect and confidence in every place through which he passed; and he left New Haven under a special escort composed of the Guards, under Lieutenant Sabin, a company of "Minute Men," and a body of Yale students.

The records of the company from this time indicate only occasional meetings for business, and meetings for drill receive no mention whatever. The partial lapse of the record should not be considered as indicating a corresponding lapse of duty, or inefficiency in its performance. The Guards were alert and held themselves in readiness for any sudden emergency.

That the company was then recognized by the highest authority as a force to be relied upon in time of need, is shown by the following order received by acting Captain Sabin at the date designated.

STATE OF CONNECTICUT.

BY THE CAPTAIN-GENERAL.

To the present Commanding Officer of the Governor's Guard at New Haven: greeting.

You are hereby directed to see that your said Guard is early armed and equipped, and held in readiness to march for the defense of said Town of New Haven and others on the sea coast. And you are further ordered, upon information of the approach or appearance of the enemy, at the request of the Selectmen of said New Haven, to muster, array and equip your Company in arms complete, and to lead them against such enemy, and do your utmost to defeat, repel, and destroy them.

Given under my hand in Lebanon, the 11th day of September, Anno Domini 1776.

JONATHAN TRUMBULL.

It will be seen that the Guard was now relieved from the necessity of acting solely on its own responsibility, in seeming defiance of local and colonial authority.

With the Declaration of Independence the scene had changed, and loyalists were driven in cover, while the patriots held the field.

In May, 1777, the resignations of Captain Arnold and Lieutenant Leavenworth were accepted, and Hezekiah Sabin was chosen Captain; James Hillhouse, Lieutenant; and Major Lines, Ensign.

On May 4, 1778, General Arnold arrived at New Haven, having been granted a brief furlough to attend to private business, afterward supposed to have been connected with his scheme of treachery. The Company records note the fact that

He was met on his way into town by his old command, the Guard, then on duty, several Continental and Militia officers, together with a large body of citizens of the first respectability, who went out to testify their regard for his military service. He was received with every mark of esteem, and upon entering New Haven was saluted by a discharge of thirteen cannon.

That no military authority at this time could interpose between the Guards and the Captain General, is shown by the following order received by Captain Sabin, and read to the Company October 12, 1778.

STATE OF CONNECTICUT.

BY THE CAPTAIN-GENERAL.

To the Commander of the Governor's Guard at New Haven.

You are hereby ordered and directed to furnish and order a guard of two sentinels to attend at the door of his Excellency the Governor's lodgings from eight o'clock in the evening through the night, during the session of this Assembly, as per advice of my Council.

Given under my hand at New Haven, this 9th day of October, 1778.

On May 3, 1779, Captain Sabin having been promoted to the rank of Lieutenant-Colonel in the Militia, resigned from the Guard, and James Hillhouse was chosen Captain. He retained command until October 3, 1783, when he resigned, and Daniel Bishop was elected Captain.

The brief records plainly indicate that the company had ere this established itself on a firm footing as precisely what its name implied, "The Governor's Guard." They paraded as his personal escort on the occasion of his inauguration, at the opening of the General Assembly, and on all occasions of a public nature in which a military escort to the Governor was appropriate. Through all the changes to which the active militia force of the State have been subjected, the status of the Governor's Guard has remained substantially the same to the present time. While the records of the company, brief as they are, afford abundant material for an interesting volume, such condensation is here necessary as to render a connected narrative impossible.

Captain Bishop was succeeded October 30, 1786, by Captain Nathaniel Fitch, and he, on September 28, 1788, by Captain William Lyon. Captain Lyon held the position during six years, and on May 15, 1795, resigned to accept the Colonelcy of the Second Regiment of Militia. He was succeeded

by Captain Dyer White, and he in turn by Captain Hanover Barney, October 24, 1796.

On May 5, 1800, James Merriman was chosen Captain. Resigning on October 31, 1805, to accept the colonelcy of the Second Regiment of Militia, he was succeeded by Captain Jeremiah Atwater.

At the spring session of the Legislature in 1809, a charter was granted an independent Cavalry Company in New Haven, to be known as the "Second Company Governor's Horse Guard." The company was quickly organized, with Elihu Munson commandant, with the rank of Brevet-Major; William A. Babcock, First Lieutenant and Brevet-Captain; and Josiah B. Morse Second Lieutenant. The Horse Guards were authorized to muster sixty-four men, rank and file, and to recruit their membership from the militia companies of adjacent towns. The advent of this new company rendered it necessary for the older company to adopt a more distinctive title than that of "Governor's Guard" conferred by its original charter, and it became known thereafter as the Second Company Governor's Foot Guard. The following foot note in the record book of the Foot Guard at a date soon after the formation of the new company is significant:

The nearly equal rank of the Commanders of the Horse and Foot Guards oftentimes made, when parading together, much contention for the command of the line and for the right flank, engendering strong differences of feeling among both officers and men.

There is no record, however, of the "contentions" assuming serious proportions, and the two companies always paraded, and frequently dined together on State occasions until the Horse Guards voluntarily disbanded, without surrendering their charter.

The commanding officers of the Horse Guards succeeding Major Munson, were Major William A. Babcock, Josiah B. Morse, Enos A. Prescott, Henry Huggins, William J. Forbes, and Josiah Barnes, Jr., the latter being in command at the time of the temporary disbandment of the company.

By an act of the General Assembly in October, 1809, the charter of the Foot Guards was so amended as to authorize the muster of one hundred and eighteen men, consisting of one Captain, four Lieutenants, one Ensign, eight Sergeants, eight Corporals, and ninety-six privates.

The company did not at once recruit to the maximum number, but on October 24, 1810, Captain Atwater having resigned, the company elected the following full complement of commissioned officers: Luther Bradley, Major-Commandant; Henry Eld, First Lieutenant and Captain; Timothy Bishop, Second Lieutenant; Eleazer Foster, Third Lieutenant; Jared Doolittle, Fourth Lieutenant; Timothy Plant, Ensign. The full number of non-commissioned officers was not chosen until June, 1812.

At a meeting of the company May 17, 1813, convened for the purpose of adopting measures for the defense of New Haven in case of attack, the members unanimously voted to volunteer their ser-

vices for the common defense, considering themselves "in honor bound, upon an alarm being given, to repair with all possible speed to the place of rendezvous, and to act in as strict obedience to the command of our superior officers present as when on parade duty." The "alarm" agreed upon was the ringing of the church bell and the firing of two cannon in succession.

The first service actually rendered by the company in response to such an alarm was on the 21st of August following, and was not for the repelling of invaders, but for the suppression of a sailors' riot on and in the vicinity of Long Wharf. New Haven was then an important port of entry. The war with England had, to a great extent, driven American seamen into idleness, and the large number then ashore at this port were in daily contact with a corresponding number of Swedish and Portuguese sailors engaged in the "neutral" merchant service which was taking the bread from their mouths.

These opposing interests led to a strong feeling of hostility between the two parties, which, with local differences a bling fuel to the fire, finally led to a general desperate melee on the afternoon of the 21st of August.

The Mayor, Hon. Elizur Goodrich, issued his order to the commander of the Guard to call out his company and aid in suppressing the riot, when the signal was given, and the company rallied promptly at the place of rendezvous. After forming they proceeded to the shop of John Duntze for their arms, where, under command of Captain Eld, Major Bradley being sick at the time, they took up their march for the scene of conflict.

Arriving at the junction of State and Crown streets, they halted, loaded with ball cartridge, fixed bayonets, and continued on to the foot of Fleet street. A guard was here posted at each extreme side of the street, with the main body of the company at the head of and directly across the wharf. Captain Eld then addressed the combatants, assuring them that if resistance was offered to the action of the Guard, and if they did not quietly disperse, they would be fired upon with ball, as full power was vested in him to quell the disturbance at all and every hazard.

A detachment of two platoons was then ordered to the front by Captain Eld, who, accompanied by the Mayor, marched them with a charge bayonet down the wharf, the sailors breaking before them, and retreating on board their vessels. In this manner the length of the pier was cleared, and order in some measure restored.

The Guards remained in possession of the wharf during the night, and there being in the morning no indication of a recurrence of hostilities, they were marched to their quarters and dismissed, with the thanks of the Mayor for having rendered with remarkable promptness and efficiency a very important service.

The next sudden call to duty was on April 9, 1814, and portended even more serious duty. A brief account taken, as was the previous quotation, from foot notes in the company record books, is here given.

Information having been received that a British frigate, man-of-war, brig and tender—the same squadron that sent seven barges up Connecticut River and burnt twenty-six sail at Pittipany—were off Guilford and standing towards this port; by request of General Howe and other military officers, together with the recommendation of the Mayor, Hon. Elizur Goodrich, the Guards were ordered out under arms between nine and ten o'clock in the evening, and stood guard on Long Wharf until morning, when all apprehension of an attack from the enemy having subsided, the company returned to the State House and were dismissed.

Five commissioned officers and twenty-eight men responded to this night alarm, and their names are faithfully given in the company record.

On Wednesday, April 13th (the record continues), the same squadron appeared again, this time in the harbor, and came to anchor at evening a few miles westward of this port. The company was again ordered out and marched to the State House, where arms and twelve rounds of ball cartridge were distributed to each man, and the company ordered to be in readiness in case a final alarm should be given by guns from the fort, a fire on Prospect Hill, and the ringing of bells.

The "final alarm" expected was not required, and the Guards were, after the danger had passed, dismissed.

At a meeting of the Company August 25, 1814, it was

Voted, That the Second Company Governor's Foot Guard appear at their usual place of parade with knapsacks and canteens, on Wednesday morning next at 7 o'clock, and there place themselves under the direction of the committee appointed to fortify Beacon Hill in East Haven.

At the appointed time the company assembled with full ranks, "equipped with knapsacks and canteens, and armed with shovels, pickaxes, hoes, crow-bars," etc., and were marched direct to Beacon or Prospect Hill, overlooking the entrance to the harbor, where they worked industriously on the fortifications until late in the afternoon, when they marched back to town and were dismissed.

On the morning of Tuesday, September 6, 1814, the ringing of bells and the firing of cannon brought the company hurriedly together at the rendezvous. News had been received by express that the enemy were landing in considerable numbers near Branford. The company remained under arms until evening, when advices were received that the enemy had withdrawn, and they were dismissed.

On this occasion eighty-five members of the company, officers and men, rallied for duty, all of whose names are given in the company record, and in addition, "twenty-two young men of the town and the college offered themselves as volunteers, and were accepted, and were furnished by the company officers with muskets, ammunition, knapsacks, canteens," etc.

On May 22, 1815, Major Bradley having tendered his resignation, Captain Timothy Bishop was duly elected Major-Commandant of the company, with Jared Doolittle second in command. Captain Doolittle died in September, 1816, and Major Bishop resigned October 23, 1817, and on the last named date Ezekiel Hotchkiss was chosen Major-Commandant; with William B. Wallace First Lieutenant and Captain; William C. Atwater, Second Lieutenant; Daniel Brown, Third Lieutenant; Silas Ford, Fourth Lieutenant; and Joel Mattoon, Ensign.

Under date of May 3, 1820, the records of the company are as follows:

On this day the Foot Guards met at their usual place of parade to celebrate the first election day in New Haven under the new State Constitution, and to perform escort duty to his Excellency the Governor, and the Senate.

Between ten and eleven o'clock the line was formed under command of Major Hotchkiss, with the Horse Guards on the right, Foot Guards on the left, and the Artillery in the center.

At two o'clock the Governor and Senate were received at the Court House, and from thence escorted to the North Church, where appropriate services were performed. At the close of service at the church the line was again formed and marched back to the Court House, where His Excellency took the oath of office, delivered his annual message, and was escorted to his lodgings. The Company was then dismissed for dinner, and sat down for a bountiful entertainment at the County Hotel.

On May 21, 1821, Major Hotchkiss resigned his commission, and Bela P. Peck was chosen Major-Commandant in succession.

Major Peck resigned in May, 1823; and, on the 27th of that month, Charles B. Grannis was chosen Major; with William W. Boardman, First Lieutenant and Captain.

On August 21, 1824, the Guards assembled at 7 o'clock A.M. for a day of parade in honor of General Lafayette. The General, traveling by canal from New York, arrived in New Haven at 10 o'clock A.M., under an imposing escort, commanded by Major Grannis, and all the military organizations in the city. It was a gala day in New Haven, and drew together the largest concourse of people which up to that time the city had ever seen.

On May 18, 1826, Major Grannis resigned the command, and was succeeded by Major William W. Boardman, who in turn was succeeded, September 11, 1828, by Major Leverett Candee. Under Major Candee the Guards performed a four days' tour of camp duty, including a complimentary visit under arms, with camp equipage and a full band, to Greenfield Hill, the home of Governor Tomlinson. The Guards left New Haven with sixty-eight men in line on August 3d and returned on the 6th, having completed the tour of duty in a manner which reflected great credit upon the company.

From that time to the present the commanding officers of the company have been as follows:

Major Leverett Candee.....	May 17, 1830.
" James E. Hotchkiss.....	" 2, 1832.
" John Merriam.....	" 21, 1834.
" Lucius K. Dow.....	" 17, 1836.
" Allan U. Smith.....	" 30, 1840.
Captain John Miller.....	April 13, 1843.
" Elias F. Main.....	August 28, 1845.
" John M. Hendricks.....	October 10, 1849.
Major William D. Hendricks.....	April 9, 1853.
" John Wilcox.....	February 20, 1854.
" Radcliffe R. Lockwood.....	September 19, 1856.
" John A. Munson.....	April 24, 1861.
Captain James H. Lansing.....	December 6, 1865.
Major Hiram Camp.....	June 15, 1866.
Captain Samuel H. Grannis.....	April 12, 1869.
" Jacob G. Phile.....	February 5, 1880.
" Edward J. Morse now commanding.	

The company occupies commodious quarters in the Union Armory on Meadow street; is in excellent condition; and sufficiently proud of its honorable record to assure the permanency of its organization in the future.

SECOND COMPANY GOVERNOR'S HORSE GUARDS.

The Second Company of the Governor's Horse Guards has always held an honorable place in the military annals of the city. In its earlier career,

from 1808 to 1826, and from 1861, the date of its renewal of military life, to the present time, there have appeared in its ranks as active members many prominent citizens, who were then, or have been since, intimately connected with the business and official life of the city.

The position of the company in the military system of the State has been independent; obligation to do military duty existing simply as a body guard to the Governor—obligation to obey his orders in a personal way, rather than his orders as Commander-in-Chief of the State's military forces.

Escorting the Governor to the capitol upon his taking his seat, or to deliver his semi-annual message to the General Assembly, has been for the most part the sole official duty of the company.

In the system of double capitals, the General Assembly met alternately at Hartford and New Haven, and it was natural that the citizens of New Haven should be as attentive to the honors attending the first official of the State as Hartford, where for twenty-one years the First Company had done honor as His Excellency's body guard.

At the meeting of the General Assembly held in New Haven in October, 1808, a petition was presented for the establishment of a second company of cavalry under the immediate command of his Excellency. This petition was signed by Elihu Munson, William A. Babcock, Joel Walter, Josiah B. Morse, Leonard A. Daggett, Charles K. Shipman, William H. Judd, Henry C. Rossiter, William B. Townsend, Daniel L. Daggett, George S. Shipman, Ralph I. Ingersoll, Caleb Bacon, Charles Austin, George Munson, Thomas Goodsell, Jesse Hunt, Charles Hunt, Reuben Rice, George Miles, and Hazard Britton. A glance at this list shows many names closely identified with the history of the city.

In the original charter, granted unanimously, it was provided that the members of the company should be sixty, and that enlistments might be had in the surrounding towns of East Haven, North Haven, and Hamden, subject to the same drill and discipline as the members of other military organizations of the State. The company was to provide its own equipments and uniforms, and, in consideration thereof, was exempt from every other kind of military duty.

The organization and the filling of the ranks of the company went forward with enthusiasm, nearly all of the members being New Haven men. Elihu Munson was elected Major.

The headquarters were at the County House, where the City Hall now stands, and twice a year the company was called out for drill and parade. These occasions were gala days for the people of the city.

The uniform consisted of a blue suit elaborately trimmed with buff, with hats from which waved long white plumes.

The duties of the company being largely honorary, there was much pride taken by the members in all that pertained to its equipment and discipline.

It was customary, the evening previous to the

opening of the Legislature, for the company to march out of the city, intercept the Governor on his journey, and escort him with great pomp to his lodging.

Elihu Munson was followed by William Babcock as Major in 1814. He served but a year, his death producing a profound impression upon the company and the community. The company having assembled for its annual spring parade in 1815, marched, under the command of Captain Morse, to headquarters in the County Building to receive its commanding officer. Major Babcock appeared, answered the friendly salute, and proceeded to mount his horse, when he fell in a fit of apoplexy and in a short time expired.

Major Babcock was followed by the next in rank, Captain Josiah Morse, but there being a general feeling against him in the company, he resigned, and did not appear in public as Major of the company. He was followed as Major by Enos A. Prescott, who had always taken a deep interest in the company.

The interest and enthusiasm in the organization had now begun to wane, and it was only the energy and executive ability of Major Prescott that kept the ranks full and its discipline creditable.

Meantime it had become necessary to secure enlistments from the towns mentioned in the charter, and from 1820, to the time of its disappearance from the public in 1826, the ranks were made up largely from members not residents of New Haven.

Major Prescott retired in 1825, and Byard Barnes, of North Haven, was elected Major, but the company never appeared under his command, it passing into a comatose state, from which it did not revive for thirty-five years.

Upon the breaking out of the Civil War in 1861, the subject of a reorganization of the company was favorably considered by many who remembered its glory in the earlier days. The movement at once became popular, and in March the old company again showed life, with an entire new membership under command of Colin M. Ingersoll as Major, and Lucian W. Sperry as Captain.

The maximum membership was soon enlisted, and at the May session of the General Assembly the charter was so amended as to allow a double company or squadron of 114 members under the same restrictions and privileges granted the original company in 1808. The following were the commissioned officers upon the reorganization: Colin M. Ingersoll, Major; Lucien W. Sperry, Captain; Charles Shelton, First Lieutenant; Edward P. Judd, Second Lieutenant; John S. Lyon, Cornetist.

The company met for drill in the Lincoln and Hamlin wigwam, then standing in what is now Home Place, off Olive street. Afterward an armory was established in the Adelphi Building, where it continued until 1866, when the upper floor of the Cutler Building, corner of Church and Chapel streets, was very elaborately fitted up for the armory.

The new company was now at the high tide of success. The ranks of the double company were filled by prominent business men of the city.

Upon the visit of the Governor to the city he was met at the suburbs of the town, and escorted to his headquarters. Elaborate receptions were given to the Governor at the newly furnished armory.

The uniform at this time was most showy. It consisted of a suit of gray trimmed with red, leather leggings, and bearskin hats. The officers wore chapeaux with plumes, while the horses were caparisoned with red collars and pommel front saddles.

A noticeable ornament to the armory for many years was a carved figure of a horse with a man just ready to mount. This figure was carved by Nicholas Countryman from oak taken from the old jail, which stood where the Police Building now stands.

Captain L. W. Sperry followed C. M. Ingersoll as Major in 1865, and two years later T. P. Merwin was elected to the command. After the close of the war the number of the company gradually decreased, until it reached the minimum designated in the original charter in 1873.

The following is a list of Majors, from the retirement of T. P. Merwin in 1869, to 1886: Captain Horace P. Hoadley, January 6, 1869, to December 28, 1869; First Lieutenant R. P. Cowles, from 1869 to 1873; Captain J. F. Gilbert, 1873, to January, 1875; F. C. Smith, elected January 27, 1875, but did not assume command; Lieutenant Theron A. Todd, March 25, 1875, to August 2, 1876; Charles W. Blakeslee, August 2, 1876, to July 7, 1881; Major H. H. Strong was commissioned July 7, 1881, and still continues in command.

For thirteen years F. L. Newton has acted as Secretary of the company.

The company removed its Armory from Cutler Corner to the Glebe Building, corner of Church and Chapel streets, where it continued until the completion of the new armory on Meadow street, erected by the State, where it has since been located. Since the establishment of Hartford as the capital of the State, the visits of the Governor to New Haven are less official, and the distinctively attendant duties of the company have largely decreased.

The company is called out twice each year for drill and parade, and, under the command of Major Strong, is a thrifty and efficient organization. It now numbers sixty-four members.*

THE NEW HAVEN GRAYS.

The military company bearing the above designation, but officially borne on the rolls of the State Militia as Company F, Second Regiment Connecticut National Guards, has had a continuous existence as an active military organization since the year 1816.

In that year, although the country was at peace, the military spirit was rife and popular, in consequence of the impetus given it by the war with the

* A member of the company desires that record should be made that the Governor's Horse Guards voted at a dark time in the history of the Civil War to offer its services to Governor Buckingham to be sent to the front; and that during the draft riot period they spent their nights at the armory ready for any emergency.—EDITOR.

mother country, then just ended with honor to the American flag. But though peace had been declared, there was, and could be no guarantee that it would be perpetual.

Young men of spirit naturally felt a desire to be enrolled among the armed defenders of the country in any like emergency in the future; and it was equally natural that they should desire to do so in better form than that afforded them in the ununiformed militia. The idea of an independent uniformed company, fully equipped for service or parade at all times and in any emergency, could not but carry with it something of fascination to the minds of young men just ready to begin life in earnest, and eager to be among the first wherever duty might call.

Under circumstances thus briefly outlined, a young graduate of Yale College, and a lawyer of brilliant promise, having secured the co-operation of other young men of kindred spirit, took vigorously in hand the organization of the New Haven Light Infantry. That was the name the new-born company gave to itself. The popular name, which on the first public appearance of the company was given to it, which it has ever since proudly borne, and which nothing could now induce it to disown, "The Grays," was originally due to chance more than design.

With commendable desire for economy, and aversion to any flaunting display of gaudy color in its dress, and with an underlying sense of sturdy independence withal, the company determined by vote to make use of nothing in its uniform or equipment which was not of American manufacture. The color selected for the uniform was dark gray, with the stipulation, in order to secure exact uniformity, that all the material used should be from one factory. The result was a surprisingly neat and serviceable uniform, on account of whose peculiar character the designation "Iron Grays" was by common impulse given to the company at its first appearance in public on parade.

The organization of the company was completed September 13, 1816, when the enlisted members held a meeting in the Court House on the Green, and elected Sophos Staples, Captain; Thomas G. Woodward, First Lieutenant; and Samuel J. Hitchcock, Ensign.

Captain Staples was the young lawyer previously alluded to as taking the lead in the work of organizing the company. In this work he had not only the hearty co-operation of young men of his class, but of older men of high social standing and military experience. Among them was naturally his brother, Seth P. Staples, a lawyer in well established practice, who, during the war just ended, had been in command of the mounted force of the State organized for home defense, and to whose name perpetual homage from the legal fraternity is due, he having been the founder of the Yale Law School.

Lieutenant Woodward had but recently come to New Haven from South Carolina, where, as editor of the *Charleston Courier*, he had made his mark as a journalist, and was at this time editing and publishing the *Connecticut Herald*.

Ensign Hitchcock had previously been connected with the State Militia, in which he had attained the rank of Major, while as a lawyer he held the position of Professor in the Yale Law School.

With its organization accomplished, the company took up in earnest the work of putting itself in condition for active duty.

John Cotton Smith was then Governor of the State, and Captain-General of the Militia. Specifications for the uniform were at once submitted to and approved by him, and doubtless, although there can be found no record of the fact, a requisition for the latest pattern of flint-lock muskets was also submitted and approved. Every article of uniform and equipment, except the muskets, were paid for by the members of the company, but the arms were probably furnished by the State, and of home manufacture. Pending the completion of uniforms and equipment, the company held frequent meetings for business and drill.

Hillhouse avenue, then but little more than an open field in the outskirts of the city, was the place of meeting for drill, and the Court House on the Green, or Mix's Assembly Room on Olive street, at the foot of Court street, the place for business meetings or evening drill.

The first public parade of the company was held on May 5, 1817, on which occasion the company was fully armed and equipped, and made a strikingly fine appearance. The commendation called forth by the new company was possibly attributable in part to the neatness and novelty of its uniform, but the occasion being that of the regular May parade required by law, and participated in by the entire active militia, there was no lack of opportunity for comparison. The company was commended not only for its fine appearance, but for its efficiency in drill and in all points legitimately subject to military criticism. The young men had signed the roll and donned their uniforms with a determination to excel, and from the time of their first parade it was deemed an honor to be one of the Grays.

The next public appearance of the company on parade was during the visit to New Haven of President Madison in July, 1817, when a military review was tendered his Excellency, and the Grays had a position in the line. Captain Staples had just previous to this parade severed his connection with the company by removing to Georgia, and the company was commanded by Lieutenant Woodward. Soon after this parade a duly warned meeting was held at the Court House on the Green, and the Captaincy was filled by the election of Dennis Kimberly, Esq.

Captain Kimberly had been one of the most active helpers and advisers of Captain Staples in the organization of the company. He was a lawyer with a practice well established; had benefited by considerable previous experience in the militia; and had frequently, by request of Captain Staples, exercised the Grays at their regular drill prior to their first parade. He now took hold of company affairs with a firm hand, and a fresh impetus was given to recruiting. The Grays had been assigned the second

position of honor in the Second Regiment, the first being held by the Milford Grenadiers, which, prior to the advent of the Grays, had been the only uniformed company in the regiment. The military activity of that time is shown by the frequency with which the companies were assembled for drill or parade.

Captain Kimberly gave his company a vigorous drill in Hillhouse avenue, September 1st; another on the Green, September 7th; and participated in a regimental parade and inspection at New Haven, September 8th. Officers and men evidently realized that hard work was essential to the achievement and maintenance of such a reputation as they had determined should be won by the Grays.

At the close of the year 1818, the strength of the company was not less than eighty members rank and file, and not one of its original commissioned officers remained. The formative period of the company had been successfully passed, a new and important accession had thus come to the Second Regiment, and it had come to stay.

Captain Kimberly continued in command of the Grays until the spring of 1821, when he resigned to accept the colonelcy of the Second Regiment. He afterwards became Brigadier-General and Major-General of the State Militia, and rose to a position of commanding influence at the Bar.

Captain George J. Whiting assumed command of the Grays in June, 1821, retaining it until May, 1823, when he was commissioned Lieutenant-Colonel of the Second Regiment. The period covered by his captaincy was a prosperous one for the company.

On July 9, 1823, Lieutenant Philip S. Galpin was elected Captain, and a system of regular weekly drills was at once established by his order. It was under his command, early in January, 1824, that the Grays received their first order to turn out under arms, for the prevention, or, if necessary, the suppression, of a riot. The occasion arose out of popular indignation at the surreptitious manner in which students at the Yale Medical School attempted to supply themselves with subjects for the dissecting table. Excitement ran high for a little time, but prudent counsel from those in authority, backed by the prompt rallying of the military companies fully prepared with arms and ammunition for something more than a parade, quickly prevailed, and the excitement was allayed without harm to life or property. Captain Galpin continued in command of the Grays until the spring of 1826, when he was promoted to the Lieutenant-Colonelcy of the Second Regiment. He was a thoroughly competent and efficient officer, and held his company well in hand.

At the fall parade of the Second Regiment in 1824, which was held on the Green in New Haven, the Grays were assigned the right of the line therefore held by the Milford Grenadiers. This new order of things was not concurred in with good grace by the Grenadiers, who were inclined to attribute the change to favoritism on the part of the regimental commander, Colonel Whiting, formerly Captain of the Grays. As a matter of fact the

change was rendered imperative by the new tactics then recently adopted by the General Assembly, seniority of commission resting with Captain Galpin, and the Grays held the position until his promotion.

The last parade of the Grays under Captain Galpin, was the election parade of 1826, and Lieutenant Charles Nicoll was chosen his successor in command. Captain Nicol was, in 1828, appointed Major of the Second Regiment; and Ensign John H. Coley succeeded to the Captaincy of the Grays. First Lieutenant Charles B. Whittlesey, over whose head an Ensign had thus been promoted, tendered his resignation and received an honorable discharge.

Following his example, twenty-four members of the company withdrew, organized another military company, and by election tendered its captaincy to ex-Lieutenant Whittlesey. He declined its acceptance, from a desire to retire permanently from military duty, and the captaincy of the new company was then tendered to and accepted by Mason A. Durand, a former member of the Grays, who thus became the first Captain of "The New Haven Blues."

Discussion *pro* and *con* as to the propriety of this movement had been warm and widely extended, but good feeling soon prevailed. Activity in recruiting rapidly strengthened the Blues and as rapidly filled up the thinned ranks of the Grays, and only a friendly rivalry survived the demonstration that New Haven was big enough for both companies.

At the fall parade and target shoot of that year (1828), the Grays paraded fifty men and twelve musicians.

Captain Coley continued in command until after the September parade in 1829, when ill health induced him to undertake a trip to Europe, and he resigned, leaving the company in excellent condition, with Sidney M. Stone, Lieutenant commanding.

In April, 1830, Lieutenant Stone was chosen Captain. The two years of Captain Stone's command were years of marked prosperity. In addition to its regular duties, Captain Stone took his company to Hartford, July 4, 1831, in response to an invitation from that city to participate in a parade in honor of the fifty-fifth anniversary of American Independence. Companies from all portions of the State were present, and the Grays were especially commended for their soldierly bearing in line, and their gentlemanly deportment as individuals. It was thereafter, even more than before, considered an honor to belong to the Grays.

Captain Stone was a deservedly popular commander, and soon after his accession to the captaincy, was tendered full command of the brigade, which he declined.

His immediate successor in command of the Grays was Captain Charles Bostwick, who, almost simultaneously with his election, received a commission as Major of the Second Regiment, which he accepted, and on May 25, 1832, Lieutenant Russell Hotchkiss was elected Captain. The notable events occurring during his command were the reception of the Seventh Regiment of New York, which

arrived in New Haven June 18th, bringing all equipage necessary for a six days' encampment, and the parade and review in honor of President Andrew Jackson, June 15, 1833.

Captain Hotchkiss resigned in 1834, and on July 15th of that year Lieutenant Benjamin M. Prescott was chosen to the vacant position.

Sufficient time had now elapsed since the War of 1812 to bring about a different feeling in the popular mind with respect to military affairs from that which existed when the Grays were organized. The spur of necessity for such organization had yearly become less apparent until it was now well-nigh out of mind.

The ununiformed companies of militia which under the law were compelled to parade on stated occasions, each soldier appearing with whatever style of gun, cartouche box and bayonet he might chance to possess, had, by the striking contrast they presented in line with companies fully uniformed and equipped, furnished inspiration to numberless extemporized companies of "antique and horribles," which needed only slightly to exaggerate in their outfit the uncouthness of the militia itself to be the cause of measureless ridicule and hilarity at every general training.

The ununiformed military companies were not a direct target for this ridicule, but the military spirit felt its shafts, and indirectly the uniformed companies suffered in consequence. They were thrown more upon their own resources, and those companies which survived the collapse of popular military enthusiasm, as did the Grays, only did so by virtue of an *esprit de corps*, which compelled constant energy and well directed effort on the part of officers and men.

The four years of Captain Prescott's command were eventful, and illustrative of the increased independence of action which the company found itself forced to adopt in order to live.

As calls for duty with the militia decreased, more frequent opportunity for parade, independence of the militia, was sought, and wider extension of military courtesies was the result.

On July 3, 1835, the Union Blues of Newark visited New Haven to celebrate the "Fourth," receiving every possible attention during their stay from the Grays and the Blues and Governor's Foot Guard.

On the 1st of July in the following year, the Grays, under Captain Prescott, and accompanied by the Field and Staff officers of the 2d Regiment, left New Haven, by boat, to accept a return of hospitalities, on the "Fourth," from the Union Blues of Newark, N. J.

On July 4, 1837, the Grays entertained, in New Haven, the Light Guard from Hartford, and in September following return courtesies were extended, by the Hartford Light Guard, to the Grays during their attendance upon a three days' brigade drill in that city.

Interchange of courtesies of this nature were of frequent occurrence from this time forward.

The immediate successor of Captain Prescott was Captain Elijah Thompson, who held the posi-

tion but one year, and was succeeded by Captain George P. Stillman.

Even at this early period, when military ardor was at a low ebb, and steadily waning, young men were in the ranks of the Grays who were to witness a revival of it such as the wildest imagination could not have pictured.

Among these was Private Frederick Meyers, afterward Assistant Quartermaster-General of Volunteers, and in the Regular Army, and especially distinguished for services with the Army of the Potomac during the Civil War.

The command of Captain Stillman continued until 1841, when he was succeeded by Captain John Galpin, who, like his predecessor, held the position, with high honor to himself and the company, during two years. On his retirement, in 1843, Lieutenant Samuel Tolles was chosen Captain. The three years of his Captaincy were more than ordinarily eventful, and surprising efficiency in drill was attained by the company, the complete execution of the manual at the tap of the drum, and without command, being one of the innovations successfully introduced.

Notable events of this period participated in by the Grays, were the reception to ex-Vice-President Richard M. Johnson, October 5, 1843; reception of the Fusiliers of New York, July 4, 1844; inauguration of Governor Roger S. Baldwin in the Spring of 1845; the visit of the company to New York and Newark, N. J., in July of this same year; reception of the Hancock Light Infantry of Boston in the fall; and the occupation of the new armory of the company in the Glebe Building.

Captain Tolles surrendered command, by resignation, July 19, 1846, and was succeeded by Captain Elias P. Barnes, who, almost immediately, in consequence of removal to New York, gave place to Captain Raymond A. White, during whose two years of command the Grays fully maintained their reputation, though the muster roll of the company showed but thirty members.

Resigning early in 1848, Captain White gave place to his First Lieutenant, James M. Townsend, who was chosen Captain in February, but was compelled by ill-health to resign in the following June. Second Lieutenant Albert C. Nash was then chosen Captain, First Lieutenant Luther P. Bradley declining promotion. Captain Nash was an exceedingly competent commander, but the year of his command was one of discouragement for the company.

The general stampede for the gold fields of California severely depleted the ranks of the Grays.

Captain Nash removed to Wisconsin, and in January, 1849, at a meeting of the company ordered for the election of officers, only eight members were present. Colonel Nicholas S. Hallenbeck, commanding the 2d Regiment, was tendered, and accepted the captaincy of the Grays, and a strenuous effort was made to improve the condition and prospects of the company. Lieutenant-Colonel John Arnold, of the 2d Regiment, took the position of First Lieutenant of the Grays, and ex-Captain George P. Stillman that of Third Lieutenant.

Recruiting soon became lively, and at the inaugural parade of 1849, held at New Haven when Thomas H. Seymour became Governor, the Grays were able to muster in uniform thirty-three men.

Just previous to this parade Colonel Hallenbeck had resigned his brief captaincy, and ex-Captain James M. Townsend, by request of the company, assumed temporary command as acting Captain for the occasion.

Immediately thereafter the command devolved upon Lieutenant John Arnold, who, on August 30, 1850, was chosen Captain. From this time to 1854 the prospects of the company, brightening at times, and then becoming depressed, the result of the whole was but little more than hope for the future.

Captain Arnold was succeeded in command by Lieutenant William A. Leffingwell, acting Captain, who, on accepting appointment as Major of the 2d Regiment, left the command of the Grays to Second Lieutenant Charles S. Jones.

On January 22, 1853, Lieutenant James M. Woodward was chosen Captain, and held the position with honor until his appointment as Lieutenant-Colonel of the 2d Regiment, when he was succeeded in the captaincy by Charles S. Jones, who had previously acted as Captain on the retirement of Captain Leffingwell.

In October, 1854, First Lieutenant Charles T. Candee became Captain of the Grays, and continued in command until 1858.

Coming events must now have cast their shadows before, for with nothing more than a continuance of previous endeavor on the part of the company and its friends, the Grays were enabled to parade, under Captain Candee, June 29, 1854, forty-three enlisted men and three commissioned officers.

The celebration by the company of its fortieth anniversary, in 1856, called out forty-one men in line as active members. A feature of the parade on this occasion was the reception of the active company on the Green by a battalion of one hundred and fifty veteran Grays, who had been mustered and formed by the Mayor of the city, ex-Captain P. S. Galpin, and by him turned over to the command of General Kimberly, who, as the second Captain of the company, had marched at its head thirty-nine years before. The occasion was one of great *éclat*, and culminated in a grand banquet at the Tontine Hotel, participated in by the entire body of actives and veterans, with a notable array of distinguished military guests.

In the following year much dissatisfaction was occasioned in military circles by the passage by the Legislature of a revised Militia law, so formed as to deprive the Militia of a part of the support it had received from the State. In August of that year the Grays, at a company meeting, took the initiatory steps toward complete severance of their connection with the Militia, and reorganization as the "Independent New Haven Grays."

Though the company went so far as to return its arms to the State Arsenal, and was thereby debarred from participation in the annual encampment of the 2d Regiment in 1857, the movement was not

consummated, and on January 19, 1858, Captain Candee having accepted the position of Major on the Brigade Staff, Lieutenant William H. Steele was chosen Captain, and the Grays continued in service as Company A, 2d Regiment Connecticut Militia. In the spring of this year William A. Buckingham was inaugurated Governor, and an imposing military parade, participated in by the Grays, signalized the event.

Space cannot here be given for a full list of the veteran and active Grays then or afterward prominent in military circles, but even a partial list will indicate the important service rendered by the company as a school for the development of military talent destined to be of inestimable value to the State and the country in a fast approaching time of need.

John Arnold, ex-Captain of the Grays, and afterward Colonel of the 3d Connecticut Volunteers in the Civil War, was then Brigadier-General, commanding the Second Brigade, with a number of ex-Grays on his Staff.

Alfred H. Terry, who joined the Grays in 1849, was then Colonel of the 2d Regiment. His subsequent career as successively Colonel, Brigadier and Major-General of Volunteers in the Civil War, culminating in his name becoming a household word as "The Hero of Fort Fisher," is too vividly borne in mind by all to require further mention here. He is now a Major-General in the Regular Army.

Luther P. Bradley, a First Lieutenant of the Grays in 1848, performed so distinguished service during the war as to occasion his promotion to high rank in the Regular Army, where he is now in service as Colonel of the 13th Infantry.

E. Walter Osborne, at the first inauguration of Governor Buckingham, a Lieutenant of the Grays, after succeeding to the captaincy of the company, led it with marked ability in its three months' service in the 2d Connecticut Volunteers, under Colonel Terry. He then re-entered the service "for the war" as Major of the 15th Connecticut Volunteers, and was mortally wounded at Kingston, N. C., in March, 1865, while heroically leading the left wing of his regiment in an attempt to stem an overwhelming charge of rebel troops under General Hoke.

Stephen R. Smith was then a non-commissioned officer of the Grays, and Treasurer of the company. With the exception of a single year, his service has been continuous in the National Guard of the State since February, 1858. From the ranks of the Grays, promotion carried him successively to the position of Adjutant, Major, Lieutenant-Colonel and Colonel of the 2d Regiment; Brigadier-General of the Connecticut National Guard, and Adjutant-General of the State, which last position he now holds.*

Henry C. Merwin was at this time a private in the Grays, and afterward became a Sergeant. He served with distinguished honor in the Civil War as Lieutenant-Colonel of the 27th Connecticut Volun-

* The Connecticut National Guard owes in large measure its present excellent and constantly improving condition to General Smith's administrative ability.—E. D.

teers at the fearful storming of Mary's Heights; at Fredericksburg; at Chancellorsville; and finally at Gettysburg, where he fell, mortally wounded, in the thickest of the fight.

Samuel E. Merwin, Jr., at this time an active member of the Grays, subsequently served with great acceptance as Captain of the company, Colonel of the 2d Regiment, and Adjutant-General of the State.

L. A. Dickinson, who joined the Grays in 1855, was at this time Adjutant of the 2d Regiment, and rendered distinguished service in the civil war as Captain in the 12th Regiment Connecticut Volunteers. He afterwards received the rank of Brigadier-General as Quartermaster-General of Connecticut.

Honorable mention of past and active members of the Grays, whose services in the company previous to the inauguration of the grand old War Governor, had prepared them for an emergency which neither he nor they had yet divined, might be extended almost without limit, but the few here given must suffice.

Early in 1859, Lieutenant E. Walter Osborne was chosen Captain, and the four years of his command were eventful.

A reception was given by the Grays to the State Guard of New York City in September, 1859, which was a very successful affair, and in September following, the City Blues, of Paterson, N. J., with a large number of distinguished military guests, were similarly entertained by the Grays in New Haven. Later in the same month the Grays, under Captain Osborne, paid a return visit to the State Guard of New York.

At the September parade of the 2d Regiment, held at Brewster Park, soon after the return of the Grays from New York, the company turned out with thirty-two men in line.

In March, 1861, the Grays took possession of a spacious new armory in the Collins' Building, just erected in Chapel street. Omens of civil war now suddenly spread dismay throughout the land, and almost before their full portent was realized, war itself became a hideous fact. Connecticut called upon her sons for the sternest duty which patriots can perform, and the noblest response which patriots can give was instantaneous.

The Grays were among the very first to volunteer. All other considerations were thrust aside, officers and men entered with equal enthusiasm upon the work of preparation for active service in the field, and the Grays were soon formally mustered into the United States service as Infantry—Company C of the 2d Regiment Connecticut Volunteers, commanded by Colonel Alfred H. Terry.

Following is the roster of officers of the Grays in the three months' campaign: E. Walter Osborne, Captain; Albert C. Stevens, First Lieutenant; George L. Northrop, Second Lieutenant; Albert C. Hendrick, William W. Morse, George D. Sanger, Henry C. Merwin, Sergeants; William M. Blake, Charles W. Cornwall, Edwin F. Chapman, George F. Peterson, Corporals. Sixty-five privates and two musicians completed the company.

After a busy encampment at Brewster Park, the regiment embarked by steamer for Washington, May 10, 1861, arriving at the National Capitol on Tuesday, May 14.

In the eventful campaign which ensued, culminating in the battle of Bull Run, the 2d Regiment bore a conspicuously honorable part, and of the ten companies composing it none could lay claim to superiority over the Grays.

On the return of the regiment to New Haven it met a most enthusiastic reception, participated in by Governor Buckingham, and at its conclusion the other companies were invited to, and very generally accepted, a farewell greeting at the armory of the Grays.

Recruiting, for three years' service was now the order of the day. Fifty-one members of the Grays who served in the three months campaign were soon again in the service. The State Militia proper was in effect a suspended organization, as active field service which the General Government demanded of the Connecticut Volunteers, absorbed all the resources and energies of the State.

It seemed for a little time that the Grays as a local organization were to lose their identity by absorption into the army in the field. But there was an *esprit de corps* among the veteran and active Grays which would not permit the company to die, or even to become temporarily inanimate.

On September 20, 1861, a meeting of old members of the Grays was held at the armory, and an organization of the company independent of the Militia was effected and thirty signatures were appended to the roll. It was determined to render all possible aid in recruiting for active service in the field, and at the same time to preserve an effective local organization, by filling vacancies which might thereby be occasioned in the ranks of the company.

Captain E. Walter Osborne was re-elected commander, and the hall in Collins Building which had previously been occupied as an armory, but surrendered prior to the three months' campaign, was reoccupied and fitted up in attractive style as headquarters of the Independent New Haven Grays.

The sad harvest of war was now fast ripening, and the funeral dirge in honor of brave ones brought home for burial was heard almost as frequently as the life and drum of the recruiting squad.

More than usual preparations had been made for the celebration of Washington's Birthday in 1862, in which the Grays, together with the entire military force of the city, participated, but what would have been of itself a notable parade was rendered most deeply impressive by the funeral escort tendered the remains of Colonel Russell and Lieutenant Stillman, of the 10th Connecticut Regiment, who had fallen in Burnside's attack on Roanoke Island.

In May, 1862, while Washington "was uncovered" by the transfer of the Army of the Potomac to the Peninsula, in the Yorktown campaign, Governor Buckingham called for ninety-day volunteers to hurry to the defense of the National Capital. The Grays promptly held a meeting, and by unanimous vote tendered their services to Governor Buckingham for the emergency.

Preparations were at once begun for departure to the front, but, pending receipt of orders, McClellan brought the Potomac Army to its old position, and the service so promptly volunteered was not required.

At the monthly meeting in August, 1862, Captain Osborne tendered his resignation, to accept the position of Major of the 15th Connecticut Volunteers, which had just been recruited in New Haven and its immediate vicinity for three years of the war.

Active and veteran Grays had been largely instrumental in raising the Regiment. Company B, Captain Theodore R. Davis, being recruited under their special patronage, and officered by active members of the independent company, ex-Captain of the Grays Samuel Tolles, was appointed by Governor Buckingham Lieutenant-Colonel of the Regiment. The meeting at which Captain Osborne's resignation was accepted, was one of deep feeling and profound regret at the necessity of bidding him farewell, though, in loyalty to the cause, no voice was raised to dissuade him from his purpose of re-entering the service.

It was a final farewell, for the gallant Major fell in the last year of the struggle, and died of his wound while a prisoner of war.

At the same meeting Sergeant Henry C. Merwin and Secretary Frank D. Sloat, both active members of the company, were, by vote, authorized to recruit a company for the 27th Connecticut Volunteers in the name of the Grays, with the privilege of using the company's armory as recruiting Headquarters.

The gallant Twenty-seventh was soon in the field, with Colonel R. S. Bostwick, late Lieutenant of the Grays, in command; and with Henry C. Merwin, late Sergeant of the Grays, as Lieutenant-Colonel. Captain James H. Coburn, of Company A, an ex-Sergeant of the Grays, soon became Major of the Regiment; another ex-Gray, George F. Peterson, was Adjutant; and Company A, Captain Frank D. Sloat, was officered entirely by Grays.

The company felt severely the depletion of its ranks thus occasioned, but its period of consequent inactivity was short.

The Militia law of the State had been remodeled, and at a meeting of the Independent Company in February, 1863, it was voted that the company offer itself for re-enrolment in the State Militia, on condition that the company be permitted to retain the Gray. The condition was accepted, and the New Haven Grays became Company F, 2d Regiment, Connecticut National Guard, and S. E. Merwin, Jr., was chosen Captain.

New energies were imparted to the company by this action, and at the inaugural parade at Hartford in May following, the Grays participated with their old-time spirit, and with forty-eight men in line.

In June, 1863, a period of feverish apprehension again swept over the country. Lee, with his army, was in Pennsylvania. Governor Buckingham was prompt to echo the call of the President for troops for the emergency, and the Grays were as prompt to respond.

At a meeting called for the purpose by Captain Merwin, the company by vote again tendered its services to the War Governor. The three days' battle of Gettysburg so quickly ensued, that the company was not called upon to leave the State.

The commingling of stern resolve with tenderest emotion was a constantly recurring feature of this trying period, which none of its participants can ever forget.

Gettysburg put an end to the preparations of the Grays at home for service in the field; but it sent back the confined forms of Grays already in the field to be tenderly borne to rest by their comrades at home.

The impressive pageant called forth by the burial of Rear-Admiral Foote was still fresh in the minds of all, when the Grays were again marching, to the beat of muffled drums, as a guard of honor around the body of one who was a brother to them all in esteem, as he was to their Captain in fact—Lieutenant-Colonel Henry C. Merwin, of the 27th Regiment.

Only a few days later, the body of Captain Jedediah Chapman, of the same regiment, who, like Colonel Merwin, got his death wound at Gettysburg, was buried in New Haven with military honors, the Grays firing the final salute over his grave. And now, with Lee hastening as best he might, with his beaten and dispirited remnant of an army, back to the defense of Richmond, a new danger threatened the loyal North. The draft riots had begun, and a reign of terror in all Northern cities seemed imminent.

All were forced to realize the common danger, but few, save the military and those in authority, knew of the measures quietly, but sternly taken in New Haven to quell at the very beginning any riotous demonstration threatening life or property. In obedience to orders from Major General Russell, commanding the State Militia, Captain Merwin placed the armory of the company under guard day and night for more than two weeks, the entire company being called to duty by detail in five reliefs.

During this time the gallant 27th Regiment returned from the front for final muster out, and was honored by a reception nobly earned by its heroic service in the field.

Captain Merwin, who, as commander of the Grays, had now the fullest commendation of all in authority or in a position to know and appreciate his services, received promotion to the Lieutenant-Colonelcy of the 2d Regiment Connecticut National Guards.

On October 26, 1863, a meeting of the company held by order of the General commanding, filled the vacancy thus occurring, by the election of First Lieutenant George L. Northrop to the captaincy. Captain Northrop's term of command continued until December 4, 1864, when he resigned, and Captain Frank D. Sloat, late of the 27th Regiment, and an ex-member of the company, was chosen his successor. At this time the battered remnants of Connecticut regiments were returning from the field at the expiration of three years' service, and it was fitting that the Grays, who were always in line to accord them a soldier's welcome, should have for their Captain one who had served in the same ranks at

Chancellorsville and at Gettysburg. Captain Sloat continued in command of the Grays until October, 1865, when he tendered his resignation.

The year had been one of unusual activity in the history of the company. Besides participating in the grand parade at Hartford at the eighth inauguration of Governor Buckingham; the notable Fourth of July celebration of that year; and the encampment of the Second Regiment at New Haven in September, it paraded in the welcoming escort of not less than six Connecticut regiments returning from the seat of war for final muster out.

On October 5, 1865, First Lieutenant Edward E. Bradley became Captain. The civil war had finally been brought to a close, and in all its trying emergencies the Grays had borne, with never a sign of hesitancy, a conspicuously honorable part.

From that time forward the fair fame of the company has been nobly upheld by its prompt and honorable service as Company F, 2d Regiment Connecticut National Guard. Captain Bradley continued in command until June 30, 1868, and the Captains who have succeeded him to the present time are as follows:

Captain Wilbur G. Howarth . . . October 25, 1869.
 Captain Albert C. Hendrick . . . December 22, 1875.
 Captain Emil A. Gessner March 18, 1878.
 Captain Charles E. Rounds July 28, 1879.
 Captain George S. Arnold May 6, 1885.
 Captain Frank T. Lee . . . at present in command.

The company occupies finely furnished rooms in the Union Armory on Meadow street, and in addition it occupies, together with the veteran organization of the company, a suit of club rooms in the Glebe Building at the corner of Church and Chapel streets.

THE NATIONAL BLUES.

The company popularly known under the above designation, but since the reorganization of the Connecticut Militia, in 1872, officially known as Company D, 2d Regiment Connecticut National Guards, was organized in 1828. On the 28th day of June in that year a company election held by the Grays to fill vacancies occasioned by the resignation of their Captain, resulted in the choice of an Ensign to the vacant captaincy, to the surprise and disappointment of First Lieutenant Charles B. Whittlesey and his many warm friends in the Grays. As a result, twenty-eight members withdrew from the Grays, then known as the New Haven Light Infantry, and twelve of the number united with several others in organizing the City Artillery, which was the first company designation borne by the Blues.

The brief outline of company history here given is mainly compiled from an historical address delivered by Lieutenant Richard F. Lyon at Union Armory in New Haven, on the occasion of the observance of the fiftieth anniversary of the company, September 11, 1878.

Three days after the unpleasant outcome of the election of officers previously alluded to, the following petition, signed by thirty-one citizens of New Haven, eleven of whom had, until then, been

honored members of the Grays, was forwarded to the destination indicated by its address:

To His Excellency GIDEON TOMLINSON, Captain-General of the Militia of the State of Connecticut.

SIR,—The subscribers, citizens of the town of New Haven, believing that it would be for the interest of the Militia in this section of the State to form a new Artillery Company within the limits of said town, to be attached to the Third Regiment of Light Artillery, respectfully request your Excellency to issue an order forming the subscribers into such company.

One month later, July 31, 1828, the response came in a General Order in the following terms:

The Captain-General having received the petition of Curtis M. Doolittle, and other inhabitants of New Haven, praying for the organization of a Company of Light Artillery at said New Haven, to be annexed to the Third Regiment of Light Artillery, grants the said petition, and hereby authorizes the said Curtis M. Doolittle to raise, by voluntary enlistment, such company, *taking particular care not to reduce any battalion company of Infantry below the number required by law.*

Whenever a number of men shall have been raised, by voluntary enlistment, to constitute a company of Light Artillery, according to law, you will apply to Brigadier-General Eli A. Elliott, of the Artillery, to issue the necessary orders to organize such company with the proper complement of officers. The company when formed will be the Tenth company in the Third Regiment of Light Artillery; will rendezvous at New Haven; and be subject in all respects to the laws of this State.

By order of the Captain-General.

GEORGE COWLES,
Adjutant-General.

It will be noticed that special precaution had been taken in framing the order to guard against a too serious depletion of the ranks of the Grays by withdrawal therefrom and enlistment in the new company.

Recruiting now proceeded with spirit, and on August 6th, by an order from Brigadier-General Elliott, Major Clarke Wooster, of the 3d Light Artillery, was directed to repair to New Haven, and lead the new company in the completion of its organization by the election of officers. The meeting for that purpose was held in the Lecture Room of the Baptist Meeting-house at 2 P.M., August 9, 1828, and resulted in the election of the following officers: Charles B. Whittlesey, Captain; Rudolph E. Northrop, First Lieutenant; Levi Francis, Second Lieutenant; J. R. Church, Benjamin Beecher, Jr., George A. Townsend, Charles Adams, Sergeants; P. B. Whitmore, Daniel Merrill, P. H. Cone, R. N. Mount, Corporals. If previous to this time the new company had been open to the taunt of having been born in a quarrel, it was now possible to retort that it was christened in a church.

In a communication to the company, stating at length, and satisfactorily, his reason for such action, Lieutenant Whittlesey declined to accept the position of Captain, and on August 25th, at a meeting of the company, held at the "long room" of Mr. Dowd, at the corner of State and Court streets, the captaincy was tendered, by vote, to Mason A. Durand, and by him accepted.

The company was now fully organized, and went vigorously at work to promote further enlistments.

and perfect itself in drill. At a meeting held in Dowd's long room, August 28th, it was

Voted, unanimously, That although this company is yet in its infancy; and although it has been intimated by the Brigadier of Artillery; that it would not be ordered to duty during the present season yet, impressed with the belief that its prosperity would be greatly assisted by a volunteer parade, we will therefore appear, fully equipped in full uniform, on this day two weeks, viz., on the 11th day of September next, at 9 o'clock A. M.

Committees were appointed to procure music, cartridges, the requisite number of caps and swords, and such trimmings as the commissioned officers might see fit to adopt for the caps, which were to be of the West Point cadet pattern.

It was voted that the uniform coat of the company should be that adopted by the Light Artillery of the State, with the exception of three rows of bullet buttons instead of one, as usually worn; and white pantaloons, instead of blue, were adopted for company drills.

On September 4th, Captain Durand addressed the following letter to General Elliott:

DEAR SIR,—The Tenth Company Light Artillery, recently organized in this place, having voted to do voluntary duty on the 11th inst., and having in our preparation naturally made some inquiries relative to ordnance, I find that there has been no appropriation for this company; and although one of the six-pound pieces recently in use of the late Fourth Company is here, I have no authority for making use of the piece on this occasion.

As the State will in all probability furnish us with ordnance soon, it would be agreeable to me if this piece could be one, the other having been transferred to the Humphreyville Company until further orders by General Nathan Jordan, and which at a proper time, and on a more fitting occasion, I shall petition to be returned for the use of the company under my command.

At present you will oblige me in directing an order to Captain Harrison and Mr. H. Sanford, or either of them, as shall seem to you proper, to deliver to me the property deposited in their keeping by the late Fourth Company.

I do not apprehend there would be any denial to a request for the piece, but, on reflection, I have thought it more proper that an order should be had which will place the matter beyond dispute and save me from any embarrassment, and hope the subject will be viewed by you in the same light.

Your obedient servant,

M. A. DURAND.

General Elliott did view the subject in the same light, and on September 6th issued the order desired. Other details of preparation had been attended to with equal energy and success, and promptly, at the designated hour, on September 11th, the company was in line on State street, right resting on Court street, fully uniformed and equipped for its first parade.

The appearance of the company at its morning parade and drill was so creditable, that Major Boardman, of the Governor's Foot Guards, who was to parade his own company in the afternoon, extended an invitation to Captain Durand to unite with his command, forming a battalion, and the invitation was accepted. The result was a pleasing surprise for the public at large, and amicable relations between the two commands, which have ever since continued.

A noticeable feature of the new Artillery Company on this occasion was the brass six-pounder. Light Artillery field pieces were then mostly of

iron, but brass pieces were in existence, and therefore no inferior metal would satisfy the new company. Two six-pounders would complete the outfit of the company, and one of these, by discreet management, was already company property. A second piece was in the possession of an Artillery Company in Humphreysville, and was the one to which Captain Durand alluded in his letter of September 4th, previously quoted.

After considerable correspondence between the Governor, Captain Durand, and the Captain of the Humphreyville Company, the matter was referred for final adjudication to Major Boardman, of the Governor's Foot Guards, with the result which Captain Durand desired. The new company got the gun, and its artillery outfit was now complete.

Fourteen musicians were recruited for a company band, which, without delay, and entirely by voluntary subscription, was provided with first-class instruments. The field pieces, which heretofore had been manipulated by means of drag ropes in hands of the men, were each furnished with a pair of horses, and on May 4, 1829, the company made its first regular parade in compliance with orders. Line was formed, in conjunction with the Governor's Guard, in front of the County Hotel, where now stands the City Hall, and, after a review by the Governor, the two companies made an extended parade, which called forth many commendations from the public, as had the review from his Excellency, the Governor.

An additional feature of interest on this occasion was the presentation of a standard, the donation of four warm friends of the company, among whom was Charles B. Whittlesey, who will be remembered as the ex-Lieutenant of the Grays, who had been active in the formation of the Blues.

Lieutenant Francis received the standard from ex-Lieutenant Whittlesey, with his company drawn up in line at the flag-staff on the public square, with the field-pieces manned and pointing from either flank. The ceremony concluded with a national salute of thirteen guns, during which "Hail Columbia" was played by the company band.

At a meeting held August 27, 1829, arrangements were made for the first target practice of the company. Captain Durand submitted the offer of three prizes to be fired for in the course of the ensuing month in lieu of all other duty required by law; each member to have the privilege of an elevation, he paying the expense of the shot and other incidental expenses of the day. The target was eight feet square, and placed at a distance of five hundred and forty yards. Sixty-four shots were fired, eighteen of which struck the target.

At the invitation of Major Leverett Candee, of the Governor's Foot Guard, the city artillery participated in the inauguration parade, May 5, 1830, and fired the salute on the arrival of the Governor at the State House. On this occasion it is recorded that the Governor particularly complimented the Artillery on their fine appearance and discipline.

At this period, whenever the three uniformed companies in the city united for parade as a bat-

talion, opportunity was given for animated discussion as to the respective position of the organizations in line. The older companies were reluctant to surrender to the youngest of the three the right of the line or post of honor. Captain Durand claimed the position for his command by virtue of its character as an Artillery Company, and for adjudication the matter was referred by him to the Adjutant-General United States Army, at Washington, D. C.

It was by his decision authoratively settled that for the purposes of parade and review the Artillery Company was entitled to the right, the Governor's Foot Guards the left, and the Light Infantry Company the center, without regard to seniority of commission. This decision settled the question quite in accord with the claim of Captain Durand, though it also asserted that either of the three Captains who might hold the brevet rank of Major, would be entitled to command the battalion.

This order was observed at the Independence Day parade of this year, held on July 3d, and participated in by the Blues and the Grays in the order named.

Captain Durand, having been appointed Aid-de-Camp on the staff of General Elliott, tendered his resignation as Captain, and was honorably discharged August 26, 1830.

On October 6th, First Lieutenant Levi Francis was chosen Captain; John R. Church, First Lieutenant; and Benjamin Beecher, Jr., Second Lieutenant.

The company paraded as escort to the city procession on July 4, 1831, and was accorded praise without stint for its fine appearance.

The celebration of Washington's birthday in 1832, its one hundredth anniversary, called out all the military companies in the city, among them the Blues with fifty men in line, appearing in white pantaloons and with powdered hair.

On June 28, 1832, the 7th Regiment of New York arrived at New Haven for a six days' encampment, having selected a camp ground just outside the city, in what was then known as Barnesville.

On their arrival they were met at the steamboat landing by the Blues and the Grays, and given a most hearty soldiers' reception and an escort to their camp ground.

In May, 1833, Captain Francis resigned, in consequence of removal from the State, as Lieutenants Church and Beecher had previously done, and Lieutenant George A. Townsend was elected Captain. The period of his command extending to April, 1835, was one during which there was but little military activity.

No event of importance in the company's history occurred until July of that year, with the single exception that, in the previous April, Captain Townsend resigned, and Lieutenant P. B. Whitmore was chosen to succeed him; with Morris Tyler, First Lieutenant; and C. B. Doolittle, Second Lieutenant.

In this year, the Union Blues of Newark, N. J., had determined to celebrate the Fourth of July by an excursion, and a tour of camp duty at New Haven, Conn.

Their intention had been duly announced, and their reception by the military companies of New Haven was most cordial.

On the 3d of July, the company, under command of Captain Whitmore, paraded, with forty-seven men rank and file, and a band of sixteen pieces, and united with the Governor's Guards and the Grays in escorting the Union Blues from the steamboat to their camp ground on Wooster street. The battalion was formed on the public square under command of Colonel Gardner Morse, commanding the 2d Regiment, and with the City Artillery on the right. The visiting company was received in front of the Pavilion Hotel, the Artillery Band giving the salute, and were then escorted through the principal streets of the city to their chosen camping ground.

On the Fourth the guests united with the military companies of the city in escorting the procession to the North Church, where appropriate and impressive services were held. From the church the military companies marched to the Pavilion Hotel, where, with the Mayor of the city to preside, they partook of a bountiful collation. The occasion had been one to call forth much enthusiasm, and the Union Blues expressed great pleasure at the manner and heartiness of their reception.

On September 29th in this year, a battalion review was held in Guilford. The company sent its band ahead a day in advance, and itself left early in the morning of the 29th, in eleven barouches, chartered for the occasion. On arrival at Guilford their band was in waiting to receive them, and the company marched in the review with steps as youthful and elastic as if its members were in the immediate vicinity of their own homes.

Owing to the gradual decline of military spirit and enthusiasm, naturally resulting from a prolonged period of peace, the feeling of retrenchment in military expenditure began now to effect local military organizations. The weaker ones were, as considerably as was convenient, hastened to their death, and the stronger survivors were more than ever put upon their own resources for means, and a motive for continued life.

As one result of contraction of the militia force, the artillery began to be assimilated with the infantry, and this was rather plainly foreshadowed to the City Artillery in orders of April 5, 1836, when the company was ordered to appear in full uniform with carbines. In the same orders the official designation of the company was changed from the Tenth to the Sixth Company Light Artillery. In this year the company first formally assumed the name National Blues, which it still retains.

Captain Whitmore having been promoted to a staff position, First Lieutenant Morris Tyler was, on September 20th, chosen to the position, with C. B. Doolittle, First Lieutenant, and Chauncey Wells, Second Lieutenant.

On July 10, 1837, a General Order was issued, designating the National Blues as the Fifth Company, Third Battalion, annexed to the Second Brigade of Infantry. This was again significant of what was to come. The company, however, still retained its distinctive feature as an Artillery Com-

pany, and, on September 7th, held its annual tour of target practice, both with field pieces and carbines at Oyster Point.

The second centennial commemoration of the settlement of New Haven called forth the most imposing military display the city had ever witnessed, and in it the National Blues bore a conspicuous part.

On January 22, 1839, Captain Tyler having resigned, and First Lieutenant Doolittle declining promotion, Chauncey Wells was chosen Captain, and Daniel Spencer, Second Lieutenant.

On June 18, 1841, Lieutenant Doolittle became Captain, vice Wells, promoted to be Colonel of the Third Battalion Light Artillery.

On May 4, 1842, the Blues participated in an escort to Governor Cleveland and staff on their arrival in New Haven, and on the next day took part in the inauguration parade. The company had held its spring parade on the 2d, making three days of severe duty in a single week.

On the 5th of October, 1843, the Blues were at Hartford in attendance upon a brigade review, at the special invitation of General Pratt, and on their return to New Haven were accompanied by Governor Cleveland and ex-Vice-President Richard M. Johnson, then on a tour through New England. Honors were lavished upon the distinguished visitor with a free hand during his stay in New Haven, and the Blues were warmly complimented for the part they took in the affair.

From this time the records make mention of no important events until August 14, 1844, when, at his own request, Captain Doolittle was honorably discharged by General Wilcox, who expressed in a letter to Captain Doolittle his regret and "thanks for the honor you have done the Second Brigade, the Fifth Company, your fellow citizens, and your country."

On August 26, 1844, a company election was held, and William Watrous, Jr., was chosen Captain; William McCracken, Jr., First Lieutenant; John Arnold, Second Lieutenant; and Howard Higgins and John C. Hollister, Brevet Lieutenants.

On March 27, 1845, the Blues extended an invitation to the Hancock Light Infantry of Boston, commanded by Captain John F. Pray, to visit New Haven during the coming summer. The invitation was accepted and the "Hancocks" arrived in New Haven on the afternoon of August 19th, as the special guests of the Blues. They were royally received and escorted to a building in the heart of the city just completed, but not yet occupied, which had been fitted up by the Blues as the quarters of the visiting company during its stay. The visitors remained three days in New Haven, and during their stay the Blues were most cordially assisted by the Grays and the Governor's Guards in the extension of courtesies. After their return to Boston, the Hancock Light Infantry expressed to the Blues, with warmest thanks, their hearty appreciation of the whole-hearted, soldierly greeting and entertainment accorded them in the City of Elms.

Soon after this occasion, Captain Watrous was compelled by ill-health to resign. On October 18th,

a company meeting was held for the choice of his successor. Lieutenants McCracken and Arnold declined promotion, and Brevet-Lieutenant John C. Hollister was elected Captain.

Independence Day was this year celebrated by the Blues at Fair Haven, where, on invitation from the citizens, they joined with the Fire Department in a general parade.

On June 28, 1847, the city was visited by President James K. Polk, and in the military parade in his honor, participated in by the entire uniformed force of the city, the Blues held the right of the line. The reception was a brilliant affair, and on the departure of the President the Blues alone served as his escort to the train.

On August 10, 1847, another election of Captain was rendered necessary by the promotion of Captain Hollister to the position of Division Inspector on the staff of Major-General Francis Bacon. Lieutenants McCracken and Arnold had previously been honorably discharged, and First Lieutenant John H. Scranton was now elected Captain, with Samuel T. Eccles, First Lieutenant; Nathan T. Johnson, Second Lieutenant; and James Quinn Third Lieutenant. The last named commission had recently been authorized by the Legislature.

On February 12, 1849, Nathan Johnson was chosen Captain in place of Captain Scranton, who had resigned, and James Quinn was made First Lieutenant; with Lyman Bissell Second, and Edwin B. Bowditch Third Lieutenant. Lieutenant Bissell had but just returned from service in the Mexican War, where, in the famed 9th Regiment, under Colonel T. H. Seymour, he had held the rank of Captain.

In May of this year the Blues participated in the parade at Hartford in the inauguration of Governor Thomas H. Seymour.

Few events of importance in the history of the company occurred in the next five years, and of such as did occur but the briefest possible record has been preserved.

Following Captain Johnson, the captaincy was held successively by James Quinn, Lyman Bissell, Willis Bristol, and Samuel J. Root, and in 1859 Captain Bristol was re-elected, and retained command until 1861.

September 13, 1850, the company celebrated its twenty-second birthday by a parade and supper at the Tontine.

July 18, 1853, joined in an escort to the Union Blues, of Newark, N. J.

April 27, 1854, participated in dedication of monument to General Wooster at Danbury.

July 24, 1854, took part in funeral ceremonies in honor of President Zachary Taylor. Field pieces in line.

August 27, 28 and 29, 1856, performed duty at brigade encampment in Fair Haven under General Hallenbeck.

June 8 and 9, 1857, gave a reception and entertainment to the Highwood Guards, Captain Hatfield, of Hoboken, N. J.

July 5, 1858, made an excursion to Wallingford to take part in the dedication of the Soldiers

Monument, and received handsome entertainment at the hands of the citizens.

August 29, 1860, the company, under command of Captain Bristol, made an excursion to Boston, in company with the Highwood Guard, of Hoboken, N. J. Going from New Haven by boat to New York, the Blues were there met by the Highwoods on a ferry boat chartered for the purpose, on which they were conveyed to Hoboken. On the next morning the two companies left by steamer for Allyn's Point, where they took cars for Boston. On arrival they were handsomely received and entertained. Returning *via* Springfield and Hartford, the two companies were met in the outskirts of New Haven by a large company of veteran Blues, with a band, and escorted to the armory, where a collation had been prepared.

Soon after this the momentous issue of the civil war became the all absorbing theme of thought and solicitude. In the ranks of the Blues no marked diversity of sentiment existed. All were loyal, and all were ready to give to the Government the most effective support which loyal citizens could render. How best to do this was the only question. The experience of the company under State direction and control as a part of the militia force authorized by law had on the whole been such as to induce the conviction that the coveted "State patronage" as a help to earnest endeavor was quite as much an illusion as a reality.

Under the constantly changing militia law of the State, the status of the company had been subject to repeated change, and each change had forced it more than ever before to rely upon its own resources, in other words, to act independently.

As a body the company chose to leave its members free to act independently now. Captain Bissell was already in the regular army, and during the organization of the 2d Regiment for the three months' service, many of the Blues enlisted and others were active in the work of recruiting and preparing the troops for the field.

With the call of the President for volunteers to serve for three years, came the necessity for the State to bend all its energies to the care and maintenance of its active force in the field, and even the slight support it had previously given its home militia establishment was wholly withdrawn.

The armory and company property of the Blues was at this time placed in charge of a committee of fifteen, and so remained until, in 1864, an independent organization was formed, with General John C. Hollister as Captain; Philip A. Pinkerman, First Lieutenant; and Augustus R. Treadway, Second Lieutenant.

Under this command the company participated in frequent parades in honor of the dead brought home for burial and at the reception of regiments returning from service in the field.

On the reorganization of the State Militia in 1865, the Blues, with George F. Gardiner as Captain; Augustus R. Treadway, First Lieutenant; and Philip A. Pinkerman, Second Lieutenant, became again attached to the 2d Regiment as Infantry Company D.

Legislation had not yet wholly debarred the company from claiming recognition as an Artillery organization.

Active work in recruiting soon brought the company roll to show one hundred and thirty-five men for duty and secure for the Blues official recognition as Battery F, acting as Infantry, and attached to the 2d Regiment.

Captain Jefferson B. Shaw was commissioned April 22, 1867, and was succeeded August 24, 1868, by Captain Elizur Cook.

In 1870 the Adjutant-General's report gives as the only commissioned officer of the company Second Lieutenant Henry D. Phillips, but in September of that year, Jefferson B. Shaw was re-commissioned Captain, and under his command the company became Company D, 2d Regiment Connecticut National Guards.

From that time to the present the company has retained this designation, and has been commanded as follows:

Captain Henry D. Phillips ... December 1, 1874
 " Luzerne I. Thomas ... January 6, 1880
 " Andrew H. Embler ... November 20, 1884

under Captain Embler the company has been recruited to the maximum number, and has attained the highest figure of merit ever accorded a company in a monthly drill report, it being credited in official report with 99.50 of a possible 100.

THE CITY GUARDS.

COMPANY B, SECOND REGIMENT, CONNECTICUT NATIONAL GUARD.

This company was organized September 14, 1861, with George A. Basserman, Captain; Jacob P. Richards, First Lieutenant; and William K. Schmidt, Second Lieutenant. In May of that year the General Assembly, finding the old regiments of the State Militia very much depleted, and in danger of extinction by the transfer of their numbers to active service in the field, passed an act intended to encourage the formation of new companies to be assigned to the stronger of the existing regiments of Militia. By the addition to the 2d Regiment of Companies B and E under this act, the Adjutant-General was enabled to report five companies for duty at the beginning of 1862.

Captain Basserman was promoted Major of the 2d Regiment, September 22, 1863, and October 20th following, First Lieutenant Richards became Captain.

He was succeeded in command, March 11, 1865, by Captain William K. Schmidt, promoted from First Lieutenant.

April 4, 1866, Lieutenant Carl G. Engel became Captain. In August of the same year Major George A. Basserman, the first Captain of the company, was promoted Lieutenant-Colonel 2d Regiment. June 4, 1868, he was promoted to be Colonel, and held the position until August 16, 1869. Captain Engel was succeeded August 8, 1868, by Captain Frederick Bucholz, but on February 27, 1871, Captain Engel again took command, retaining it until July 15, 1878, when he was promoted Major of the

2d Regiment. He was succeeded in command of the company by Frank W. Tiesing, who continued in the position until his death, November 8, 1883.

On November 30, 1883, the command devolved upon Captain William Kaehrle, with John Gutt First Lieutenant, and John Widman, Jr., Second Lieutenant.

May 14, 1886, Captain Kaehrle resigned, and First Lieutenant John Gutt became Captain, with John Widman First Lieutenant and Charles G. Miller promoted from First Sergeant as Second Lieutenant.

NEW HAVEN LIGHT GUARD.

COMPANY F, SECOND REGIMENT CONNECTICUT
NATIONAL GUARD.

This company was organized early in 1862, the commission of its first Captain, Benjamin N. Tuttle, dating from February 5th of that year. It has ever since then honorably held the place assigned it in the 2d Regiment, participating promptly and with spirit in all duties which have called out the regiment or the city battalion.

Captain Tuttle continued in command until May 25, 1863, when he was succeeded by Captain Rollin J. Bunce, who held the position during nearly five years. Captain Bunce was a very popular and efficient officer, and under his command the company attained high standing, which assured its permanency as a component part of the 2d Regiment.

He was succeeded January 27, 1868, by Captain Charles C. Smith, who on December 1st of the same year gave place to Captain Russell Thompson.

April 7, 1870, Captain F. Stanley Bradley succeeded Captain Thompson, continuing in command only until January 4, 1871. Captain Lewis Dinger then took command, and held it until February 27, 1874, when he resigned, and Josiah N. Bacon was commissioned to fill the vacancy.

Captain Bacon was made Lieutenant-Colonel of the 2d Regiment in September, 1875, and on October 4th of that year Charles A. Butricks became Captain of this company, which position he held until his death in 1878.

Henry R. Loomis succeeded to the Captaincy November 4, 1878, vacating to accept the position of Major of the Regiment December 15, 1884. Theodore H. Sucher was then made Captain, and still continues in the position, a worthy successor to a long line of efficient commanding officers. The company was never in more prosperous condition than now, and its promise for the future is all that can be desired.

That this company has been a good school for military men to graduate from, is shown by the promotions and appointments accorded its commissioned officers.

Captain Bacon, as previously mentioned, became Lieutenant-Colonel of the Second Regiment and held the position until his death.

Captain Loomis became Major of the Second Regiment, and was promoted from that to the

Lieutenant-Colonelcy, which position he now worthily holds.

George C. Bradley became Major and Lieutenant-Colonel of the Forty-seventh N. G., S. N. Y.

Captain Russell Thompson served long and with great acceptance as Adjutant of the Second Regiment; and Lieutenant William E. Jackson is now the efficient Signal Officer with the rank of First Lieutenant, representing the Second Regiment in the Signal Corps of the Brigade.

THE SANSFIELD GUARD.

This fine company, designated as Company C, 2d Regiment C. N. G., has been in service since 1865. Though its history properly begins in that year, it cannot be inappropriate to preface it with a brief mention of what may be regarded its predecessors in the military line.

In 1855, of the ten companies composing the 2d Regiment, Infantry Companies D and E, in New Haven, and Rifle Company B, of Birmingham, were made up, rank and file, of young Irishmen.

As a consequence of the political excitement then rife under the name of "Know-nothingism," these companies were in that year disbanded, as were companies organized similarly in other parts of the State.

Company D, of the Second, was at the time of its disbandment commanded by First Lieutenant Patrick Maher, and Company E by Captain Thomas W. Cahill.

Such was the military spirit of the young men thus disorganized, that an independent military company, under the name of the Emmet Guards, was at once projected, and in 1857 it completed its organization, with Thomas W. Cahill, Captain; Patrick Maher, First Lieutenant; and Michael McCarten, Second Lieutenant.

The company numbered sixty-three men, rank and file, and well compensated itself in the personal enthusiasm of its members for the loss of fostering care on the part of the State.

The Emmet Guards continued a strong independent military organization until the breaking out of the civil war in 1861, when it not only formed the nucleus around which rallied the gallant 9th Connecticut Regiment, but sent many brave officers to other Connecticut regiments, and to the 69th New York.

Not a full list can here be given, but the following will serve to show that the military ardor of the young Irishmen of that day, as of this, had something more behind it than mere fancy for parade.

Captain Thomas W. Cahill became Colonel of the 9th Connecticut Volunteers, and, during much of the time of service of his regiment, commanded a brigade. First Lieutenant Patrick Maher served with distinguished gallantry as Major of the 24th Connecticut Volunteers. Second Lieutenant Michael McCarten, Commissary M. A. Williams, Orderly Sergeant James P. Hennessy, Corporal Terence Sheridan, and Private Lawrence O'Brien all became Captains in the 9th Connecticut Volunteers, while Private John G. Healy became Lieu-

tenant-Colonel of the 9th Connecticut Volunteers, and had full command of the battalion of re-enlisted veterans who continued in service after the original term of enlistment had expired. Many other members of the Emmet Guards served honorably as commissioned officers in the 9th Connecticut Volunteers, the 24th Connecticut Volunteers, and the 69th New York.

On the return of the volunteers from the field in 1865, there was no one to call in question the right of young Irish-Americans to bear arms, or the expediency of permitting them to do so. In August of that year was organized the Sarsfield Guard. From that time until the present it has been known as Company C, 2d Regiment C. N. G.

Made up largely of veterans of the late war, the company at once took high rank for efficiency in marching and in manual drill, and from then until the present has never permitted itself to be accorded second place.

Since its organization it has probably made more independent excursions out of the State, and given more exhibition drills abroad than any other company of the regiment, and always with credit to itself and the regiment whose designation it bears.

The following Captains have commanded the Sarsfield Guard in the order named: Captain Joseph H. Keefe, from August 18, 1865, to 1869; Captain John Cunningham, from 1869 to 1875; Captain Maurice F. Brennan, from 1875 to 1881, when Major Joseph H. Keefe, who had for a time been Major of the 2d Regiment, again took command, continuing until 1886, when he resigned and was succeeded by Captain John Garrity.

THE WILKINS GUARD.

COMPANY A, 5TH BATTALION CONNECTICUT NATIONAL GUARD.

In the winter of 1863-64, a regiment and a battalion of four companies composed of colored men, designated respectively the 29th Regiment and the 30th Battalion of Infantry, were organized, equipped and forwarded to the aid of the Federal Government from Connecticut.

Both organizations were in service until November, 1865, each being rated as efficient and reliable and creditably sustaining the enviable military record and honor of the State which it represented.

From the veterans of these two organizations, together with a few of the discharged soldiers of colored regiments from other States, was organized in 1867 an independent company, designated the Wooster Guard, in honor of William B. Wooster, the efficient Colonel, who led the 29th Regiment through its term of service in the field.

Although Connecticut had employed a battalion of four colored companies during the War of the Revolution, as well as the two organizations here mentioned in the war of 1861-65, no military company of colored men had existed in this State in time of peace previous to the organization of the Wooster Guard.

The original officers of the company were: Captain, Henry McLinn, veteran of the 14th Rhode

Island Heavy Artillery; First Lieutenant, Thomas J. Griffin, ex-Sergeant-Major 29th Connecticut Volunteer Infantry; Second Lieutenant, James H. Wilkins, Color-Sergeant 54th Massachusetts Infantry.

The company was compelled to depend entirely upon its own resources for arms, equipments, uniforms, armory, etc., and progressed slowly toward a permanent basis, but gradually uniforming and equipping itself until it paraded from 75 to 80 members.

The first notable parade of the company was on the occasion of the first Memorial Day ceremonies of Admiral Foote Post Grand Army of the Republic (July 4, 1868), when the Wooster Guard being first to report as escort to the post, was accorded the right of the line, causing such chagrin to other local companies that no other military company appeared in the escort.

The company was drilled first in the basement of the old State House on the Green, afterward at the Colored Masons Hall on Webster street; and finally at Lamar Building (formerly Bishop's Building), located on Crown street, between Church and Temple, where it remained until it was reorganized and admitted into the Connecticut National Guard, May 14, 1879.

For nearly twelve years the company existed under the name of the Wooster Guard, finding a drill-hall wherever it might, and undergoing the various vicissitudes incident to the life of all such organizations, and being commanded successively by Captains McLinn, Griffin, Wilkins and Lane.

During the latter portion of this term, the company received from the State an allowance of one hundred dollars per annum, as assistance toward the expense of sustaining an armory. This company eventually united with similar companies in Hartford and Bridgeport, and formed an independent organization known as the Wilkins Battalion, commanded by Major William H. Lane.

The independent battalion was on March 21, 1879, incorporated into the National Guard of Connecticut, but under such restriction as deprived it of full recognition as a portion of the Guard.

Further reorganization being found necessary, the Wooster Guard was disbanded, and from it was organized a new company, which took for its name the Wilkins Guard in honor of its former commander, Captain James H. Wilkins, who had through many years been extremely active in forwarding the interests and welfare of the Company.

Thomas J. Griffin was elected Captain, George W. Ladien, First Lieutenant, and Henry Bell, Second Lieutenant. The new company was now recruited to the maximum permitted by the State laws, and mustered into the service of the State May 14, 1879.

The years 1879 and 1880 were spent in improving the condition of the command, and when the various companies of the Connecticut National Guard were inspected in May, 1881, by an officer of the regular army, this company alone, of the four composing the battalion to which it belonged, received favorable mention, and in the report subse-

quently rendered by this officer was rated as No. 27 among the forty-two companies then composing the Connecticut National Guard.

The Legislature of 1882 so improved the status of the colored troops, that the Fifth Battalion was placed upon full military equality with other commands of the Connecticut brigade.

In 1883, the entire brigade being ordered into camp at Niantic by Governor Waller, this company, with the battalion to which it belonged, served its first encampment (September 10th to 15th inclusive) with credit to itself and to the fair satisfaction of its superior officers.

It has obtained the reputation of being one of the best grounded companies in the State in the general requirements pertaining to the duties of the soldier in active service.

The commanding officers of the company have been

Captain Griffin, from May 20, 1879 to September 8, 1880.
 " Wilkins " September 13, 1880, to April 13, 1881.
 " Lathrop " April 26, 1881 to April 15, 1884.
 " Lathrop " " 28, 1884.

Since its connection with the Connecticut National Guard this company has taken part in nearly every local parade in which the military bodies of the city have appeared, and also in New York City with the Connecticut Brigade on the occasion of the Centennial celebration of the evacuation of New York, November, 1883.

Aside from this the Company has been but once beyond the limits of the State, when it visited the City of New York as the guests of the Skidmore and Veteran Guard.

THE SECOND REGIMENT.

In the first part of this chapter allusion was made to the early history of the 2d Regiment, and historical facts were cited which are proudly referred to by members of the regiment as establishing its claim to be considered the oldest existing military organization in America.

A careful search of the colonial records, in which Mr. Charles J. Hoadley, State Librarian, has rendered important aid from the early State records in his custody, and from the records of the Adjutant-General's office, the following list of commanding officers has been compiled, and may be relied upon as historically correct. It will be noted that while the dates and facts previously cited assign the birth of the organization now known as the 2d Regiment Connecticut National Guard to a date prior to 1649, this record of commanding officers begins with the year 1673, when the commanding officer was a Major. But as early as 1639 different companies, or squadrons, were organized and under compulsory duty, commanded by Captain Turner, and nothing is more certain than that the form of organization then instituted continued until it was merged in one whose commanding officer heads the list here given, and that the military body now bearing the name of the 2d Regiment Connecticut National Guard has really

had a continued existence since the first establishment of the New Haven Colony.

 " Walter J. Leavenworth February 16, 1885.

Very many of the commanding officers above named achieved military distinction far in advance of that here indicated.

Colonel Robert Treat was specially commissioned as Commander-in-Chief of the Connecticut forces engaged in the Indian War of 1675, and in the following year he was made Deputy-Governor of the colony in recognition of his services in King Philip's War.

Lieutenant-Colonel John Hubbard became Brigadier-General 2d Brigade Connecticut Militia, as did Lieutenant-Colonel James Merriman, Lieutenant-Colonel Hezekiah Howe, Colonel Dennis Kimberly, Colonel Amos Thomas, Colonel Nicholas Hallenbeck, and Colonel John Arnold.

Colonel Alfred H. Terry led the 2d Regiment to the field early in 1861, and the 7th Connecticut later in the same year; became Brigadier-General and Major-General of Volunteers, and Brigadier-

General and Major-General in the Regular Army.

Colonel Stephen W. Kellogg became Brigadier-General, commanding 2d Brigade Connecticut Militia.

Colonel Samuel E. Merwin, Jr., attained the rank of Brigadier-General as Adjutant-General of the State; and Colonel E. E. Bradley succeeded to the same rank on the Staff of the Governor.

Colonel Stephen R. Smith, called a second time by unanimous vote to the command of the regiment, was made Brigadier-General in command of the entire active Militia of the State after its consolidation into one brigade, under the title of Connecticut National Guard, and continued in that command until promoted to the position of Adjutant-General of the State under the administration of Governor Henry B. Harrison.

Colonel Charles P. Graham became Brigadier-General commanding the brigade Connecticut National Guard, on the promotion of General Smith.

Emergencies have occurred in its history when the 2d Regiment has seemed possessed of a double identity. In 1758 and 1759, while Colonel Roger Newton was in command of the regiment at home; Colonel Nathan Whiting was specially commissioned in command of the 2d Regiment in the field, and his command did most excellent service under the blundering and incompetent Abercombie in the campaign of those years against the French and their Indian allies.

Again, in 1861, when under the command of Colonel Terry, what was essentially his own regiment, the 2d, took the field in the three months' campaign in the Civil War, it might be said that the regiment was also in existence at home, though for a time without a regimental commander.

In fact the body of the regiment went to the front under its gallant Colonel at the very first call for troops, closing its three months' field campaign at Bull Run with such soldierly bearing as to win from its Brigade Commander, General E. D. Keyes, of the Regular Army, most hearty commendation in general orders. At the same time it was deemed necessary to keep up the regimental organization in the State, and skeleton companies which had been depleted by enlistments for active service were recruited anew, and new companies were formed, so that the Adjutant-General's report for 1861, while showing the 2d Regiment with ten companies to have been in the field south of the Potomac, showed also five companies reporting for duty at the same time within the State.

While in a certain sense, the muster of volunteers into the United States service terminated the militia service of the soldiers so mustered, it would be unfair to consider their after-service entirely dissociated from the organization which had been their school of preparation. And as such a school, the 2d Regiment has served too long and too well to be ignored or slightly regarded. The high esteem in which this Regiment is universally held has been so nobly earned, that even its most partial friends can never over-estimate its service to the State.

Even before the late war, at a time when, by reason of long-continued peace, the military spirit throughout the North was at its lowest point, and when the aid given by the State to its Volunteer Militia was little more than an aggravation, the 2d Regiment was noted for its efficiency, and was probably kept as well in hand by its thoroughly competent and enthusiastic officers as any militia regiment in New England. Its loyal service did not end with the three months' campaign. Immediately on the termination of that service, officers and men alike lent their energies to the promotion of long term enlistments, and Colonel Terry was soon in the field again in command of a regiment of three years' men, designated as the 7th Connecticut Volunteers.

As illustrating the effective enthusiasm at that time of past and active members of the 2d Militia, it may be mentioned that an entire company of the 7th Connecticut Volunteers was recruited at the expense of Captain James M. Townsend, an ex-Captain of the 2d Regiment and of the Grays. It took the name of the Townsend Rifles; was largely composed of active and past members of the Grays; and its Captain, Edwin S. Hitchcock, was from the same company.

The entire 15th Regiment of Connecticut Volunteers organized for the war, and taking the field in 1862, may be regarded as a child of the old 2d Connecticut Militia; all its field officers, many of its line officers, and a large portion of its men having previously served in that organization.

Nearly the same may be said of the 27th Connecticut Volunteers, organized a little later for nine months' service, a regiment which at Frederickburg, at Chancellorsville, and at Gettysburg breasted the fire of battle as bravely as could a regiment of re-enlisted veterans.

And so all through the war, the 2d Regiment of Militia, in more ways than can be told, and in organizations where its own name did not appear, gave its animating spirit and its active strength to the State and the General Government, proving a most efficient aid to Connecticut's grand War Governor in promptly answering each and every call upon the State for troops.

With the war at last ended, military ardor and enthusiasm again centered upon the 2d Regiment as a permanent State organization. The coming of peace found Colonel Stephen W. Kellogg in command of the regiment, with Samuel E. Merwin, Jr., Lieutenant-Colonel, and George A. Basserman, Major. The regiment was soon recruited to ten companies, and quickly resumed its old position as a model militia organization.

Major-General Wm. H. Russell was then, as he had been during the war, in command of the Connecticut Militia, organized in a division of four brigades. He was in hearty sympathy with the common desire to have the militia of the State reorganized upon a better plan, and given more effective aid by the State, and the good work done by the 2d Regiment in promptly reorganizing itself as soon as the war was over, made him firm in the belief that the most generous provision the State

could be brought to make for the maintenance of its Militia, would be more than returned to the State in the value of the service rendered, even in the time of peace.

In the first reorganization of the Militia after the war, the designation Connecticut National Guard was adopted, and from that time the initials C. N. G. have had a peculiar charm for military men in the State. In 1867, it was determined to further reorganize the military establishment of the State. The force was reduced to four regiments and four batteries, and a committee of three civilians was appointed to report to the General Assembly a plan for further improvement of the organization.

The Adjutant-General's report for 1872 shows the reorganization so long under consideration to have been effected by bringing the entire force of the State into a single brigade, under the command of a Brigadier-General. In all the disbandments of organizations necessary to the placing of the Guard upon this footing, the 2d Regiment had been but little affected, and its numerical designation remained the same.

In October, 1863, the regiment held its first encampment after the reorganization of the militia, under Colonel Stephen W. Kellogg, at East Bridgeport, and in the following year encamped at Waterbury. The field officers at this time were Colonel Kellogg, Lieutenant-Colonel S. E. Merwin, Jr., and Major Edward J. Rice.

In September, 1865, the regiment, under command of Colonel S. W. Kellogg, held an encampment of one week at New Haven, ending with a dress-parade upon the Green.

The encampment of the following year was participated in by the entire 2d Brigade, under command of General Kellogg, with Colonel Merwin in command of the 2d Regiment. It continued for one week, and was held at Bridgeport.

In 1867, the Second held a regimental encampment for one week, beginning September 11th, at West Haven, under command of Colonel S. E. Merwin, where it was reviewed by General Kellogg and Staff, and subsequently by the Governor and Staff.

A regimental encampment was again held in 1868, beginning September 7th, Colonel George A. Basserman in command. This encampment was at West Haven, and reviews by the Brigade Commander and the Commander-in-Chief were the closing features.

The regimental encampment of 1869 was held at New Haven during one week, beginning September 6th, with Colonel E. E. Bradley in command. Friday was "Governor's Day" at this encampment, and the regiment was reviewed by Governor Jewell, attended by Adjutant-General Merwin and the entire Staff. The final dress-parade upon the Green on Saturday, witnessed by an immense throng of spectators, elicited the highest praise from all.

The 2d Regiment had now established a reputation second to none for promptness in the performance of stated military duties, and soldierly bearing on parade. Would its bearing be as prompt

and soldierly in response to a sudden call for duty with ball cartridges? If any were in doubt upon this point, their doubt was dispelled early in 1870. Proximity to New York, ready means of access, and an almost utter absence of local force for the suppression of disorder, had for a long time rendered the shore towns of western Connecticut peculiarly liable to incursion of the sporting and pugilistic fraternities. The last named species of roughs, seemingly one of the undesirable legacies left over from the civil war, were uncommonly numerous and belligerent at that time, and their favorite method of operation was to make a sudden and unannounced incursion by rail from New York City, take temporary possession of a quiet Connecticut town, carry things with a high hand so long as they pleased, in defiance of local authority, and wind up the raid by taking boisterous possession of whatever railway train best suited their convenience in returning to their haunts in the city. A local police force or a sheriff's posse had no terrors for such a crowd.

When the Sheriff of New Haven County received telegraphic information from the first Select Man of Milford that such a body of roughs, numbering over one hundred, with a numerous crowd of hangers on, had taken possession of Charles Island in that town, he promptly telegraphed a request to Governor Jewell for military aid, and the Governor as promptly transferred the call to Adjutant-General Merwin with "power to act." He did act so effectively that a battalion of the 2d Regiment with the Second Company of Governor's Foot Guards* were almost immediately on their way to the scene of disorder, under command of Colonel E. E. Bradley and Lieutenant-Colonel Stephen R. Smith, Adjutant-General Merwin in person accompanying the force.

At low tide Charles Island is a peninsula, jutting out into the Sound from the town of Milford. Not a moment was lost by the military force on its arrival by rail at Milford, nor was any trifling indulged in with blank cartridges. The troops were at once ordered to load with ball, and with Colonel Bradley and Lieutenant-Colonel Smith in command of the right and left wings respectively, the force pushed forward for the capture of the island and its mob of desperadoes. The ground marched over by the right wing was such as to bring them in full view of the occupants of the island, who, thinking that was the only force which threatened them, made all haste to escape by way of the submerged strips of sand connecting the island with the main land.

Just as the mob of roughs felt certain of this line of escape, and as many of them were about to wade ashore upon the main land, Lieutenant-Colonel Smith, with the left wing, emerged over rising ground which had concealed his advance from view, directly across their path. He at once deployed, and, advancing at double quick, drove the roughs back through the water to the island, and in a short time was followed by the right wing. The game was now completely bagged, and the troops returned to New Haven with about one hundred

prisoners, who were marched to the station house and turned over to the custody of the civil authorities.

The military feature of this affair was a model of promptness and energetic action which strikingly attested the executive ability of Adjutant-General Merwin, Colonel Bradley and Lieutenant-Colonel Smith, as well as the firm reliance which might be placed upon the rank and file of Militia in any sudden emergency. It taught the baser elements of the metropolis the wholesome lesson, which, much to the profit of Connecticut they have since remembered, that in this State there is a force armed with a more effective weapon than a club, with a field of operations not circumscribed by the curb-stones of a city, instantly available for the suppression of disorderly assemblages however large in numbers or desperate in character.

On May 31, 1871, the Second and Sixth Regiment united in a military parade at New Haven, under command of Lieutenant-Colonel S. R. Smith. Both regiments were in fine condition, and the parade closed with a review by Adjutant-General Merwin, and a dress-parade on the Green.

In September, 1872, the 2d Regiment under command of Colonel Stephen R. Smith, made a notable excursion to New York and New Jersey, receiving such honors and merited praise from high military authorities as never prior to that time had been accorded a Militia regiment from New England. The Second was received at the Forty-second street depot in New York by the famous 7th Regiment, under Colonel Emmons Clark, and escorted by it through the city to its own armory, where, after a brilliant reception, Colonel Clark tendered to Colonel Smith the use of the armory for his regiment during its stay in New York.

At noon of the next day the Second was escorted by the Seventy-first New York, Colonel Richard Vose, to the Jersey City Ferry, passing in review before the Mayor at City Hall Park. On arriving at Jersey City, the Second and Seventy-first were received by Major-General Runyon, and Brigadier-General Plume, with their respective staffs, and by a special train were then escorted directly to the State Fair, then in progress on ample grounds in the vicinity of Newark. They were there received by the Third New Jersey Regiment, Colonel Drake, and the three regiments were giving a marching review by Governor Parker.

The splendid marching of the 2d Regiment in "division front" at the Fair Grounds and subsequently in the City of Newark, was most enthusiastically praised by all spectators and by the military critics without exception. Returning to New York escorted by the 71st, the 2d was received by the 22d New York, Colonel Porter, and under this escort was marched to the fine armory of that regiment and tendered the same hospitalities as were previously tendered by the 7th.

On leaving New York, the 2d was escorted to the boat by the 22d, and the warmest possible reception awaited it on its arrival at New Haven, participated in by the Governor's Foot Guards, the independent companies, and the organizations of

2d Regiment veterans. The excursion had proved a splendid success, and placed the 2d Regiment very high in the estimation of military men.

Prior to March, 1873, it was determined that the 2d Regiment should represent Connecticut in the parade at the second inauguration of President Grant. The necessary arrangements were taken in hand with a determination to still further enhance the reputation of the regiment, and on the morning of March 3d, Colonel Smith started his command for Washington with over six hundred men under arms. Arriving in New York, a repetition of former courtesies was extended the Second by Colonel Vose, at the armory of his regiment.

On leaving New York the Second was joined on Broadway by the 5th New York, Colonel Charles S. Spencer, which was also bound for Washington. After mutual courtesies, in line the two regiments marched directly to the Jersey City Ferry, and were soon *en route*, each regiment on a special train, for the capital, the Second Regiment being in advance.

Seemingly inexcusable railway mismanagement so hindered the trains, that at the time when the inaugural parade began, the regiment was scarcely beyond Baltimore. This was a bitter disappointment to officers and men of the enthusiastic Second, and to the keen chagrin at the delay was added the discomfort occasioned by such severely cold weather as would hardly be exceeded in midwinter in New England, with no provisions for comfort on board the loitering train.

Not until after the inaugural parade was ended, did the train bearing the 2d Regiment arrive within a mile of the Washington station, and then it came to a final stop.

Colonel Smith was here met by his old commander, General Kellogg, then a Member of Congress from Connecticut, who brought the welcome news that, in consideration of its unfortunate detention, President Grant would give the 2d Regiment a special review on the following day. Cheered by this unexpected recognition, Colonel Smith determined to get his command to the capital without further hindrance from any source, and forming the willing companies in regimental order, he immediately took up the line of march.

Arriving at Pennsylvania avenue, he found an ovation awaiting his command which he had little expected. This parade was an addition to the day's programme, which everybody in Washington seemed prepared to enjoy, and the grandest thoroughfare for parade on the continent was packed with expectant people. Every man of the Second caught inspiration from the scene, and its Colonel, with the bold confidence in his command which had been so fully justified at the Newark parade the year before, formed column by divisions and swept down the avenue with such even tread, perfect intervals, and splendid alignments as Washington never had seen excelled on the grandest reviews.

In the official programme for the day, Colonel Smith had been assigned command of the Fifth Division, comprising his own regiment, the 5th New York, the 3d New Jersey, and the 5th Maryland. Although the 2d Regiment would have nobly led

that division, it could not have won more conspicuous manifestations of praise than in this voluntary parade after the prescribed exercises of the day were over.

During the march on Pennsylvania avenue, Colonel Smith was officially tendered a review in front of the Union Club House by the Governor of the District. The Second accordingly marched directly to the point designated for the review, and though greatly fatigued, hungry, and nearly frozen the men passed the ordeal in splendid style. They then marched to the National Armory on Sixth street where a very welcome dinner awaited them.

At ten o'clock on the 5th the Second took up its line of march for the Presidential review. As it wheeled into Pennsylvania avenue from Sixth street the Vice-President, accompanied by Governor Jewell and ex-Governor Hawley took position among the distinguished guests, preceeding the regiment in carriages. The exceptionally fine marching of the day previous had seemingly made everybody desirous of seeing the 2d Connecticut, and the dense mass of spectators lining both sides of the avenue could not be kept back off the curbstones. It pressed into the street and the applause, as the steady ranks with perfect alignment passed, was continuous.

The review was perfect, and drew words of commendation from President Grant, Lieutenant-General Sherman, Major-General Hancock, and other military men who witnessed it. Continuing the march down the avenue after passing the President, the Second received from the battalion of West Point Cadets, commanded by General Upton, a recognition never before accorded by that command to a militia organization.

The Cadets were giving an exhibition drill before the Secretary of War, as the Second approached, and by permission of the Secretary, General Upton suspended the drill, opened ranks and presented arms as the Second marched past in its favorite form with division fronts. Colonel Smith responded with a marching salute, and General Upton afterward waited upon Colonel Smith at his hotel, and personally complimented the Second in the warmest terms. The splendid advantage of every opportunity taken by the regiment finally transformed what at the outset seemed foredoomed to disaster into a most gratifying success, and the Second returned to Connecticut with a large accession of confidence in itself and its able officers.

In May of this year, on the occasion of the annual encampment of the Grand Army of the Republic, which convened in New Haven, the 2d Regiment paraded in escort of President Grant, Vice-President Wilson, Lieutenant-General Sherman, Major-Generals Sheridan, Hancock, Burnside, McDowell, and a large number of other military notables in attendance upon the encampment. The regiment fully answered the expectation of its friends in its full ranks and fine bearing on this parade.

In August, 1874, the Second, in company with the Fourth, held its annual encampment for one week at the State Camp Ground at Niantic. In

November of this year Colonel Smith resigned the Colonelcy of the 2d Regiment, and Lieutenant-Colonel Bario succeeded to command.

The next notable parade of the Second of the year 1876 at home, was on July 4th. Colonel Bario having resigned in the preceding January, Colonel S. R. Smith had, by a unanimous vote of all the field officers, been called back to the colonelcy and had accepted the position. Extensive preparations had been made for a military and civic parade in New Haven on the Centennial Fourth, and with Colonel Smith as Chief Marshal, the 2d Regiment was to participate. The arrangements were fully carried out with commendable spirit. The Second, true to its reputation, set the pattern for fine marching, and after the final review of the immense line, held an exhibition dress-parade on the Green.

In September of this year the 2d Regiment participated with the entire Brigade Connecticut National Guard in an encampment for ten days at Philadelphia. This encampment was authorized by a special act of the Legislature, and took the place of the annual State encampment.

The encampment was conducted in a most orderly manner, the State gained high credit abroad for the efficiency of its Militia, and in no respect was the Second behind its companion regiments in the prompt and soldierly performance of all duties incident to camp life. From the many columns of commendation of the Connecticut Brigade which appeared in the Philadelphia papers during this encampment, only the following brief extracts can be given, but they fairly illustrate the appreciation which was accorded our troops by impartial cities.

We extract from the *Philadelphia Times*, September 9, 1876.

Connecticut has been made famous as the wooden nutmeg State, and wooden clock workshop. But her sons seem as much at home with muskets and knapsacks as with tools at their bench.

Their appearance as they paraded through the Centennial grounds yesterday was remarkably firm and soldierlike. It showed that the high rank which the Connecticut Militia has always had was well deserved.

Aside from their appearance in the ranks, the manly and independent way in which they came, and their gentlemanly conduct during their stay in this city, shows them to be good citizens. They imposed no obligations on our citizens or on our troops, but paid their own way, and will go home to-day with the best wishes of every one, and sure of a hearty welcome when they come again.

The following is but the introductory portion of a long article in the *Philadelphia Sunday Press* of September 10, 1876:

SECOND REGIMENT CONNECTICUT NATIONAL GUARDS.

SOMETHING OF THE FAMOUS REGIMENT—ITS RECEPTION HERE.

This famous regiment was elected to the maiden honor of entering the Centennial grounds Monday as the advance guard of the Connecticut National Guard. To say that it is a fair representative does not half express it. It is without exception the best in drill and marching in this country, and we are satisfied that in all the details that go to make up a good military organization the 2d Connecticut takes the lead.

The grand dress parade Sunday was the first we had seen of this regiment. The perfect storm of applause along the

Stephen P. Smith,

whole line of ten thousand spectators as it came past in company front straight as an arrow, every eye to the front, marching and looking like a polished piece of machinery as the sun reflected on their showy gray uniforms with gold trimmings and white pants, told whether the third oldest regiment in the world kept up its reputation.

So many and such warm words of commendation, without a word of disparaging criticism, could scarcely be accorded without being in good measure deserved.

On the route home, Saturday, September 9th, the Connecticut Brigade was received in New York by the 1st and 9th New Jersey Regiments, and the 5th, 9th, 12th and 22d New York, the whole combining to make one of the most imposing escorts ever afforded a body of Militia.

It was a long march through Canal street and Broadway, past the plaza at Seventeenth street, where the column passed in review before the Mayor, and thence by Fourth avenue and Twenty-third street to embark by steamer for Harlem, but the enthusiasm of the men did not flag, and the parade has been remembered by participants and spectators as a most notable one, even for New York. The Second, with the rest of the brigade, arrived safely home on time, having had an experience in mobilization and varied field duty such as seldom falls to the lot of a militia organization.

At the Inter-State Rifle Match at Creedmoor in this month, the team of twelve sharpshooters exclusively from the 2d Connecticut Regiment competed with a team of like number made up from the best shots of the entire National Guard of New York, and the Connecticut team were the victors at both the 200-yard and 500-yard range, winning the Inter-State trophy under circumstances which had seemed to render it simple foolhardiness for Connecticut to think of competing at all.

The 2d Connecticut might well be said to have now established a National reputation. In the ten years which have elapsed since the Centennial year it has done nothing to forfeit or impair that reputation, but much to sustain it. Proud of its record, it is ever prompt and efficient in the performance of whatever duty the State service or military courtesy may require, and as the promotions from its field abundantly attest, the efficiency of its officers has received handsome recognition at home as well as abroad. With the Centennial's Colonel successor to General Graham, in the position of Brigadier-General commanding the Brigade; thoroughly competent and wide-awake Colonel Leavenworth at its head, and the maximum number of well-officered companies in its ranks, the future of the regiment would seem to be as promising as its past has been brilliant.

GENERAL S. R. SMITH.

Stephen Richards Smith, the present Adjutant-General of the State, is by birth and training a son of New Haven, having begun his career in the village of Whitneyville, August 28, 1836.

His father, a highly respected citizen, was employed by the Whitney Arms Company for a long time prior to his death, which occurred in Decem-

ber, 1855, when he was only forty-seven years old. In 1831, he married a daughter of Captain Stephen Richards, who was a noted mariner of that day and resided at West Haven. Mrs. Smith was a remarkable character, possessing a strongly-defined individuality, replete with attractive qualities. Her devotion to the welfare of her five boys was equaled only by their ardent affection for her in return. Her lifetime of love and labor in their behalf was well repaid. Her oldest son, Joseph A. Smith, in the course of twenty-five years' service in the Yale National Bank, rose from a clerkship to the Vice-Presidency. Although belonging to the political minority in New Haven, he was for two years (1873-74) elected City and Town Treasurer. He is now Assistant Treasurer of the Ansonia Clock Company, of New York. The third son was the Rev. John Eaton Smith, a graduate of the Berkeley Divinity School, and a young clergyman of unusual promise, which was defeated by his untimely death in September, 1870. Of two other sons, one who possessed marked literary ability, died in New Haven at the entrance into middle life, and the other is now a successful coal merchant in Philadelphia. Mrs. Smith lived to see the prosperity and honors of her children, and died May 9, 1885, when seventy-five years of age, at the home of her son Stephen, with whom she had always resided.

General Smith received his early education under the tuition of the late Mr. Amos Smith, and while attending faithfully to the duties of school, did much towards contributing to his own support and winning his way in the world. After school hours he carried papers, and at one time maintained three routes daily, besides feeding the press and doing up the morning mail. This laborious preliminary training stimulated to a remarkable degree his natural faculties of industry, quick perception, and dauntless energy. When fourteen years of age, he entered mercantile life as book-keeper in a large dry goods store in New Haven, and rose from one step to another until after three years' service in the New Haven Savings Bank, he became the head clerk in that institution. In 1855 he was actively engaged in the organization of the Tradesmen's Bank, and in February, 1856, he accepted the position of Teller in the City Bank of New Haven, where he remained until he established himself in the coal business in February, 1864. From small beginnings he was enabled to build up one of the largest wholesale and retail coal concerns in New England. The competence thus accumulated was partially swept away by sudden and unforeseen financial reverses, so that, in 1880, he relinquished his own business and became manager of the New York house of the Winchester Repeating Arms Company. In 1883 he returned to his early love, banking, and connected himself with the flourishing banking-house of Watson & Gibson, in New York, and T. L. Watson & Co., of Bridgeport. With their fortunes he has since been identified.

General Smith's military career began in February, 1858, when he joined the New Haven Grays. He served that company in the various capacities of Private, Corporal, and Sergeant, was elected also

while Sergeant, to the Second Lieutenantcy, but declined the honor. He occupied the position of Treasurer of the company for several years. October 7, 1863, Colonel S. W. Kellogg appointed him Adjutant of the 2d Regiment, and this post he retained also under Colonel S. E. Merwin, remaining in the office until June 4, 1868, when he became Major. August 16, 1869, saw him a Lieutenant-Colonel, and two years later (August 9, 1871), he was promoted to the Colonelcy of the 2d Regiment. That important office he held until after the fall encampment at Niantic in 1874, when he resigned with the intention of retiring permanently from military life and duty.

But the men whom he had trained and marshaled were unwilling to lose his leadership, and after the lapse of one year he was urged on all sides to resume command. Not until it appeared that the whole regiment, seven hundred strong, had given an absolutely unanimous vote in his favor, did General Smith yield, and he was recommissioned Colonel of the 2d Regiment, January 13, 1876. He continued at the head of the 2d Regiment until July 8, 1878, when Governor Richard D. Hubbard promoted him to the command of the brigade, a well-deserved recognition of General Smith's long and faithful service in the National Guard of the State. He retained this responsible position and performed its functions to universal satisfaction until January 8, 1885, when Governor Harrison placed him in his present office, at the head of the Staff of the Commander-in-Chief.

No man is more familiar than General Smith with all the details of the work of the National Guard, and no one has been more prominently and honorably identified with its fortunes during the present generation. Most of the noteworthy events in the recent history of the 2d Regiment have occurred during his terms of command. In 1870, when he was Lieutenant-Colonel, he marched with the expedition under Sheriff Hotchkiss and Colonel Bradley, to capture the New York roughs who were about to hold a prize fight on Charles Island. The whole gang, one hundred and fifty in number, was intercepted by Colonel Smith's battalion, and taken to New Haven, a reception which gave the New York sporting fraternity a wholesome lesson, not yet forgotten.

In 1872, General Smith commanded the regiment in its famous excursion to New York and New Jersey. In the following year he took the regiment to Washington to attend the inauguration of General Grant, and subsequently in New Haven,

commanded the escort to General Grant and the Army of the Potomac. He was Chief Marshal at the Centennial parade in New Haven in 1876, was also at the head of the regiment during its ten days' encampment, at the Centennial in 1876, and went with the regiment to Boston and Providence in June, 1878.

He commanded the military division at New Haven's centennial celebration in 1879, also the brigade at Groton in 1881, and held the office of Grand Marshal in the famous parade at New Haven, in 1884, on the occasion of the centennial of the organization of the city.

From his first connection with the National Guard of Connecticut to the present time, General Smith's popularity has never waned. Without relaxing a jot of the strictest discipline, he has known how to retain the respect and hearty good-will of his men. To his good discipline and executive ability must be attributed in large measure the present efficiency and prosperity of the Connecticut National Guard. In civil life General Smith has always endeavored to do his part as a good citizen of the Republic.

A Republican in politics, he commanded in the New Haven Wide-Awake Club of 1860, the second organization of that kind in the United States. He served for seven years as Secretary of the Board of Engineers of the old Volunteer Fire Department; was a member of the Board of Common Council for one year (1869), and an Alderman for nearly three years (June, 1870 to January 1, 1872). He is a veteran Mason, and is connected with the Knights of Honor and various other societies.

General Smith married, in October, 1856, Miss Sarah Jane Veader, daughter of Mr. James M. Veader, for many years the foreman of the painting department with Henry Hooker & Co. Mr. Veader was a gentleman of Knickerbocker descent, for eight years (1853-61) an official in the New Haven Custom House, and very well known in masonic circles. Mrs. Smith is one of the most active members of the First Baptist Church of New Haven, connected with its manifold organizations for religious and charitable work, and noted for energetic interest in denominational effort throughout the State.

Together, General Smith and his wife are devoting their lives to faithful labor and to the accomplishment of good deeds; the reward of every good citizen comes to them in the shape of esteem and approbation from the community at large, and of warm affection from their many friends.

CHAPTER XXXVIII.

PHILANTHROPIC INSTITUTIONS.

IN New Haven, as in every Christian city, one institution after another has been established for the relief of human misery. Some charities are so limited to narrow social circles, or to particular classes of beneficiaries, that they have a right of privacy, if not equal to, at least somewhat resembling that of a family. We do not propose in this account of the principal philanthropic institutions of New Haven, to mention any of those homes which some of our churches have established for their homeless members; or, indeed, any of the charities which are limited to the members of one congregation. Our object is rather to mention institutions in which all philanthropists unite in a common work.

NEW HAVEN HOSPITAL.

Of such institutions in New Haven the oldest is the hospital. It owes its origin to the physicians of the city, who, at a meeting of the Medical Association of New Haven, at the house of Dr. John Skinner, May 8, 1826, appointed a committee to solicit subscriptions for a hospital, and gave liberally themselves. A charter was obtained the same month from the General Assembly of the State. Gentlemen of the medical profession have always been in the front rank of the friends of the hospital. Of the ten persons incorporated as the Hospital Society, one was William Leffingwell, a retired merchant; and all the others were physicians and members of the State Medical Society. Of the first Board of Directors, Mr. Leffingwell was the only person not belonging to the medical profession. It is due to that fraternity to state, in any history of the hospital, that the physicians of New Haven have given to the institution not only their professional services without fee or reward, but contributions of money far beyond their proportionate share.

The fine plot of ground on which the hospital stands, was purchased in 1830. The plot when purchased was larger than at present, and the value of land in that neighborhood soon increased so much, that subsequent sales reduced the cost of what the hospital still retains to less than \$500. This pleasantly situated piece of ground contains about seven acres; is bounded by four streets; is sufficiently near to the harbor to be exposed to the sea-breeze; and so near to the heart of the city that convalescent patients can find, as often as a new day dawns upon them, a new place for exercise and amusement.

The first hospital building was completed in 1832; but, apart from the sick and disabled seamen whom the Hospital Society cared for in fulfillment of a contract with the United States, and in return for the hospital money which the Government col-

lected of seamen and paid into the treasury of the hospital, the number of patients was small. From 1840 to 1850, the average number of patients, including the marines, was about fifteen. In 1850, at the instance of Dr. P. A. Jewett, Secretary of the Hospital Society, and one of the attending physicians, application was made to the State Legislature for an annual appropriation of \$2,000 for charity patients. Dr. Jewett in his "Semi-Centennial History of the Hospital," to which we are indebted for most of the material out of which this sketch has been made, thus speaks of a movement which all but himself believed would fail:

The writer well remembers the opposition, not to say derision, his proposition met in the Board of Directors, when he proposed to make application to the Legislature for an annual appropriation of \$2,000 for charity patients, to be expended on the same terms as the appropriation of \$5,000 for the Retreat for the Insane at Hartford. After persistent efforts before several meetings of the Directors, at which the matter was discussed, the proposer being the only one in the affirmative, apparently to get rid of the annoyance, the Directors gave their consent that the Secretary, Dr. Jewett, who had brought the matter before the Board, might prepare a petition to the Legislature, to be presented with his signature and that of the President, Dr. Knight, if the latter chose to sign it. It was also directed that, as the matter was so sure to fail, no record should be made. A petition was prepared and signed by the President and the Secretary. This was presented to the Legislature and referred to a special committee of one from the Senate and eight from the House of Representatives. As the appointment of the committee seemed to mean something, other members of the Hospital Society came forward with offers of assistance.

Contrary to the expectation of all but Dr. Jewett, and perhaps sooner than he expected, this application to the State was a success. From that time to the present the Legislature has continued to make an annual appropriation for charity patients, greatly increasing the usefulness of the hospital.

From that time to the present there have always been beneficiaries of the State in this institution, some of them able to pay a part of the expense for diet and medicine, and others supported jointly by the towns to which they belong and by the State, but none exclusively by the State, except soldiers. The entire expense of a patient in the hospital has been about six dollars per week. This includes diet and medicine, and there is no charge for medical attendance or the use of the buildings, which are freely given, even to those who are called paying patients.

During the War of the Rebellion, this institution was converted into a military hospital. The conversion took place gradually. In April, 1861, at a special meeting of the Directors, it was voted to offer accommodations at the hospital for such sick and wounded soldiers as the Surgeon-General of the United States Army might direct to be sent. A communication of this offer was made to the Surgeon-General through our Member of Congress, Hon. James E. English. Through his kind co-oper-

ation the offer was accepted, conditioned upon there being a necessity to make use of the hospital.

In May, 1862, Dr. Pliny A. Jewett was employed by the Surgeon-General as Contract Surgeon, to take charge of the soldiers sent to the hospital. Very soon after this an order was sent to him to accept the offer of the society, at the rate of \$3.50 per week for each soldier cared for in the hospital, the Directors to furnish all food, medicine, medical and surgical attendance, and quarters, the surgeon in charge only to be paid by the Government, and to make immediate preparations for the receipt of two hundred and fifty sick and wounded soldiers. Application was made to the Legislature, then in session, for aid in the erection of buildings. Three thousand dollars was at once appropriated. With this a large temporary edifice was erected. Before it could be completed, two hundred and fifty sick and wounded soldiers from the battle-field of Fair Oaks arrived, and were temporarily accommodated in the old building, and in tents pitched upon the hospital grounds. Soon more sick and wounded soldiers arrived, and it was evident that additional buildings would be needed. The Legislature being again appealed to, appropriated fifteen thousand dollars for buildings and furniture. Sheds were erected sufficient to accommodate about five hundred men, and other temporary buildings for the accommodation of the physicians and surgeons. The physicians and surgeons consisted of the regular hospital staff, and such others of the city as volunteered their services. The contract between the society and the Government continued till the spring of 1863.

In November, 1862, an order was received from the Surgeon-General to terminate the contract as soon as it could be done without injury, hire that portion of the grounds on which the temporary buildings were situated, and place the hospital entirely under the control of the Surgeon-General. At this time the surgeon in charge received his commission as Surgeon of Volunteers. The Directors voted to lease the grounds to the Government at the rent of \$1,000 per year. In April, 1863, the contract was completed, and the Military Hospital entered upon an independent existence. This continued for several months, when, it being thought expedient to enlarge the accommodations at the hospital, an offer was made by the Government to lease the hospital building and the remainder of the grounds. The Directors accepted the offer, and made immediate arrangements to move to another location. A large building on Whalley avenue was purchased, to which the State Hospital was removed. The old hospital building was occupied by the surgeon in charge for offices and quarters for the officers on duty at the hospital.

At this time a necessity existed for larger accommodations for sick and wounded soldiers; as the Governor of the State had received the consent of the Secretary of War to send all Connecticut soldiers who were proper subjects for hospital treatment, and able to bear transportation, to the hospital in New Haven. The State had refused to

make any further appropriations for buildings, and without these the additional number to be sent could not be received. In this emergency Governor Buckingham came forward with the liberality which characterized him when the comfort of our soldiers was at stake, and authorized the surgeon in charge to erect such additional buildings as he thought necessary, and draw on him for the money to pay the bills. This expenditure amounted to the sum of \$10,000. With these additional buildings the hospital was increased to 1,500 beds, a much larger institution than was expected when the first arrangements were made for 250 patients. Soon after the hospital was assumed by the Medical Department of the Army, and, in accordance with the custom of giving to all military hospitals the name of some living member of the profession, the hospital was called, at the suggestion of the surgeon in charge, the Knight General Hospital, after Jonathan Knight—a tribute of respect to the eminent surgeon, the good man, the exemplary Christian, and the perfect gentleman. "All (says Dr. Jewett) who were connected with the military hospital when the first detachment of sick and wounded soldiers arrived, recollect the enthusiasm and untiring energy Dr. Knight displayed in attending to the call of suffering humanity. He was the first on the grounds, and did not leave till every wound was dressed."

The total number of patients treated in the hospital was 25,340. Total number of deaths, 185, of which 11 were accidental. This small percentage of mortality is to be attributed to the location of the hospital. It is situated on an elevated plateau. The soil is dry and sandy. The change to such a location in a northern climate, from the influences operating on the sick and wounded in a southern climate, was very marked. Patients began to improve before a diagnosis was made. Another fruitful cause of immediate improvement in the Connecticut men, was the fact that they were in their own State, where they could visit their families or receive visits from them.

Soon after the surrender of Lee, in April, 1865, orders were received from the War Department to close the hospital as soon as the men under treatment could be discharged. This was accomplished in November of the same year, and soon afterward the Government property on the hospital grounds was sold at auction, the temporary buildings were removed, and the premises reverted into the possession of the General Hospital Society of Connecticut. The property in Whalley avenue being no longer needed, was sold.

Soon after returning to the buildings and grounds which they had patriotically vacated for the use of the military hospital, the society determined, if possible, to erect additional buildings to accommodate the increasing number of patients.

Incipient measures being taken about the same time for the establishment of a training school for nurses, the society formally "*Resolved*, That if a society is organized for the training of nurses, the Directors of the General Hospital Society of Connecticut are hereby authorized and advised, under

suitable regulations, to afford to said society such facilities for the instruction of nurses as can be given at the hospital consistent with the proper management of and general interests of the hospital."

A society distinct from the Hospital Society having been organized for the establishment of a training school, the two societies have worked in harmony from the commencement of the school to the present time. The nursing in the hospital has been better done than ever before; and from year to year a class of trained nurses has been sent out to pursue a career of professional usefulness.

The training school commenced its task of nursing in the hospital when the additional buildings were completed and ready for use. At first it was allowed board and lodging for six pupil nurses, in consideration of the work expected of the pupils; and from year to year, as the number of patients has increased, the Hospital Society has consented to board a larger number of the pupils in return for services rendered.

The original hospital building was covered with stucco, after the style introduced into New Haven by Mr. Ithiel Town, of which examples may be seen in the residence he built for himself in Hill-house avenue, afterward enlarged into the palatial mansion of Mr. Sheffield; the State House of 1830; and others too numerous to mention. The addition, completed in 1875, is of brick. It cost about \$88,000, of which \$75,000 was appropriated to the object by the Legislature of the State, on condition that \$15,000 should be raised by subscription.

The erection of the new building, the improved quality of the nursing, and other causes, chief among which is the better acquaintance of the community with the work of the hospital, have given it an increase of favor; and there is great probability that, notwithstanding the multiplication of hospitals, further addition to its capacity for usefulness must soon be made to this, the earliest institution of the kind within the State of Connecticut.

NEW HAVEN DISPENSARY.

A dispensary, like a hospital, has for its object the healing of the sick; but while the hospital provides beds and receives its beneficiaries within its walls to be nursed, the dispensary imparts medical advice and medicine to those who, though sick, have sufficient strength to leave their beds and come to the place where this assistance is rendered. A hospital is for the rich, if they are able to pay, and for the poor, if provision has been made for their gratuitous entertainment; but a dispensary is a charity established for the benefit of those who cannot provide for themselves.

The New Haven Dispensary was organized in 1872, "for the purpose of supplying medicines and medical advice to such as may be sick and needy in New Haven and vicinity." It has an office in York street, adjoining the Medical College, where those who need medical advice and medicine may come and, if unable to pay, have their wants supplied "without money and without price." The

attending physicians receive no compensation for their professional services, and the medicines are supplied by charitable contributions.

The number of patients varies from year to year, increasing when the poor are unable to find work, and falling off when better times succeed.

THE NEW HAVEN ORPHAN ASYLUM.

The New Haven Orphan Asylum may be found at 610 Elm street. We cannot so well relate its origin and progress as by copying an extract from a historical sketch written by Mrs. H. M. Packard for its semi-centennial anniversary in 1883.

In February, 1833, fifty years ago, New Haven was not the large and bustling city it now is. Its population numbered but little over 10,000, instead of the present 60 or 70,000. Everybody knew where everybody lived; a city directory had not been dreamed of. There was a daily mail from New York, but it came by stage, and was not to be confidently relied on by gentlemen eager for Webster's or Calhoun's last speech in Congress. Perhaps this February was a month of heavy snows; certainly the *Connecticut Herald* issued on the 26th day of it, contains two items that look that way, viz.: that the New York stage had not come through for four days, and the stage for Hartford had upset a mile from New Haven. This very *Connecticut Herald* was only a weekly. In these days there were still chatty breakfast tables; master and mistress were their own autocrats, and were not silenced or dominated by the morning paper, as at present.

Our orphan asylum was started in a pleasant, human sort of a way. The first public intimation of it is a notice in the *Connecticut Herald* of February 18th, of "A meeting held with a view to encourage the establishment of an orphan asylum." Dr. Jonathan Knight and Dr. Croswell, Pastor of Trinity Church, find suddenly left upon their hands four little orphan children, the youngest only a few weeks old. The two good men, physicians, one to the body, the other to the soul, have met at the bedside of the dying mother; the father had died of cholera a few months before. They cannot bear to send the children to the Almshouse; so, knowing the ladies were ready to commence the work, they call a meeting of gentlemen to encourage them in it. Many a talk there must have been before this, over "those poor little Daniells children." Many a motherly heart must have compassionated them and planned for them, and now the husbands and fathers step in to pledge their support to the plans. At the meeting these resolutions were passed:

First.—That this meeting cordially approve of the design proposed by several ladies of this city, to establish an asylum for the protection and education of destitute orphans within the city, and will most cheerfully unite with them in any measures calculated to effect this desirable object.

Second.—That Messrs. Silliman, Boardman, Knight, Brewster and Winthrop be a committee to communicate to the ladies alluded to in the preceding resolution, the sentiments of this meeting with regard to their benevolent design, and to co-operate with them in its prosecution.

The ladies were so effectually encouraged, that they met on February 26th to organize. They met in Franklin Hall, a large room frequently used for college festivities, on the second floor of what had been the stage house and main hotel of New Haven, a long, white, wooden building, with a gilded bust of Franklin in front, on the corner of Church and Crown streets, nearly opposite the present Post Office.

At this meeting a society was formed, under the name of "The New Haven Female Society for the relief of Orphans, Half Orphans, and Destitute Children." A constitution, that disagreeable, but necessary thing, was read, and officers chosen. This constitution was retained, as originally drawn up by Henry White, Esq., until 1874, when it was revised, mainly by our President, Miss Foster, with great care and pains. It has been rewarding to find that since the revision it has not only worked well in our own institution, but has been helpful to others, who have adopted many of its provisions and have sent their thanks for its suggestions. The

charter given by the Legislature in 1833 has been amended, or revised, twice since. The ladies whose names appear in this charter were as follows: Mrs. Abram Heaton, Mrs. Jonathan Knight, Mrs. William Bristol, Mrs. Francis Winthrop, Mrs. Benjamin Silliman, Mrs. Charles L. Strong, Mrs. Abel Burritt, Mrs. Daniel Whiting, Mrs. Charles Atwater, Mrs. Henry White, Mrs. Elias Hotchkiss, Mrs. Eleazer T. Fitch, Mrs. Abigail Hull, Miss Fanny Miller, and others. We can only wish the others had all been named in full. Of this number only Mrs. Henry White and Mrs. Whiting, now Mrs. Brainard, are living. Mrs. Heaton was the first President.

These ladies were given a committee of gentlemen, called "Advisers," to assist them in important decisions. It was not until 1865 that the Legislature, in view of the property acquired by the institution, constituted this committee a Board of Trustees. I give the names of those among these Trustees who have held the office twenty years, or nearly that time:

William W. Boardman.	Sidney M. Stone.
Dr. Jonathan Knight.	Atwater Treat.
William Fitch.	R. S. Fellowes.
Benjamin Silliman.	Abram Heaton.
Henry White.	Wyllis Warner.

Of course this by no means includes all the early friends of the asylum. Among others who gave to it in 1833 or 1834, we find the names:

Dr. Croswell.	Colonel Trumbull.
Noah Webster.	Samuel St. John.
Joel Root.	John Anketell.
Amos Townsend.	M. G. Elliot.
Thaddeus Sherman.	J. Forbes & Son.
Elihu Sanford.	Asa Bradley.
Abram Bishop.	Deacon George Smith.
S. B. Chittenden.	Alfred Daggett.
Professor Woolsey.	Aaron Skinner.
Titus Street.	Timothy Bishop.
James Brewster.	Dr. Hunt.

The constitution and the officers were excellent things for the children, but next to them must be a house. So seems Dr. Knight to have thought, for we next find him buying a cottage on Grove street, near Church, the one occupied not long ago by the Misses Churchill's school, and immediately renting it to the ladies at \$80 a year. It did not take long to furnish this little Grove street house; the hearts of its friends were big and it was not. The first quilting party held in its parlor is still remembered, and how it was laughingly moved and carried that each lady should write her name on a square of their first asylum quilt. By the first week in May, the Daniells children, who had been scattered among friendly families, were brought together under its roof. Three new children from the Almshouse were also brought in, but the young matron, Miss Amelia Good year, aged twenty-four, was quite able to look after them all, at the salary, as it was called, of \$75 for the first year.

The asylum has been blessed in its matrons; there have been but seven in all—Miss Goodyear, Miss Colburn, Miss Bush, Miss Williams, Mrs. Curtis, Mrs. Bardwell, and Mrs. Kingsley who has been with us longest of all. They have all been women who loved the work and did it well, making the children both love and respect them, and regretted at their departure by children and managers.

But to return. At the end of this first year it is thought best to buy the Grove street house. The Secretary wisely remarks at the close of her first report: "The location is as good as could possibly be selected, being retired and yet convenient to the city, and the lot (65 feet front and 200 feet deep) is sufficiently large for building any additions that will ever be required." The purchase was effected in 1835, the price paid being \$1,125. This was the day of small things. It was perhaps easier to be personally interested when one could run in any time at the little asylum around the corner, and could know each child by name; when Dr. Knight could send in milk from his cow, and Mrs. Baldwin and Mrs. Prichard, and the other kind ladies, could rummage out from their attics what would just fit into this corner or that space in the needy little building. Your historian never knew most of these kind, good people, but in collecting the records of their work she is constantly remind-

ed that it seemed very small in their own eyes; they did not realize that in each little gift they were helping on a work which should endure so long as this city endures; that the hours and strength, snatched for this from their busy days, had a stronger flavor of immortality about them than the rest, for their influence would surely reach out over many generations. When, in 1835, Mr. Heaton sent a Christmas dinner to the fifteen children in whom his wife was so much interested, did he fancy for a moment that he should go on doing that, and his daughter, Mrs. Robertson, after him, to this very winter of 1882-83? And yet that is a very poor, matter-of-fact way of putting it. Did he think he was fostering an undying charity; was only standing among the first in an innumerable, unending procession of earnest workers?

It may be interesting to know what it cost to support a child at this time, when potatoes were 60 cents a bushel, whale-oil \$1.12½ a gallon, and eggs 12 cents a dozen. While the number was small it cost \$1 a week; as it grew the cost sank to 75 cents a week. But there was always difficulty in meeting the expenses. The first contribution was from the Dorcas Society, the sewing circle of New Haven, at which small sums, ninepences, quarters and half dollars were contributed for the orphans. In 1836 a united service was held in one of the principal churches, a sermon preached in behalf of orphans and destitute children, and a collection taken, amounting to \$80.61. This united service was continued until 1850, but the sum raised was never very large, usually less than \$100, rising once to \$300, and when in 1850 it was given up and each church took its separate collection, each one was often as large as the whole previous contribution.

First Home of New Haven Orphan Asylum

The encouraging result of this change was most opportune, for in this very year 1850, the Secretary, Miss Blake, now Mrs. McWhorter, says: "All the income to be depended upon is the one dollar subscription of two hundred and fifty ladies."

In 1838, during Mrs. James L. Kingsley's presidency, the asylum family had so increased that it was necessary to buy or rebuild. So a house was bought in Oak street, near asylum, at an advance of \$750 on the price for which the Grove street home was sold. This removal taxed all energies. Not only does one of our present managers still remember the exciting hours she spent as a child, entertaining the children at her own home on the eventful day, but from it dates the joy of every asylum child's and manager's heart—Donation Day. It began as a house-warming; an innocent tea drinking of ladies and children, with almost unnoticed cash receipts—the first recorded being \$9 in 1841. At the monthly meetings for a year or two before the date of this removal, 1838, and long after, the ladies sewed on clothes for the children, who were too many to depend longer on casual supplies. For the first two years they stayed to tea, the tea being provided by the two ladies who were visitors for the month, who always took care to

have enough left for the children. It appears, too, that after this removal a cow had to be bought, now that Dr. Knight's was so distant.

Somewhere in these years, our friend, Miss M. P. Twin- ing entered upon the asylum work, soon taking the post of Treasurer, whose duties she discharged for thirty-five years with the most faithful care, and with that admirable judgment which always characterized her.

And now came dark days in the history of the asylum. There are no records for some years; but in 1844 the Secretary, Miss H. S. Foster, says: "The receipts have not met our expenses, and our little fund, \$594, has been drawn upon. Our reliable income is only \$300, and we are obliged to conduct affairs on the narrow principle of 'Do as well as you are able,' not 'Do as well as is possible.'" It was in this year that Mrs. R. S. Baldwin raised money for bringing the well-water to a pump in the kitchen of the Oak street house, which then contained twenty-three children. This was a very grand improvement. In eleven years from this time the fund had risen to \$600, six dollars gain, but there were forty-eight children in the crowded little house. It was wearing weight to be President of so needy an institution; to be anxious almost from day to day for bread and clothing, instead of being free to help on the children with one's best thoughts and time. After Mrs. Kingsley's presidency of eleven years, we have two shorter terms to chronicle, Mrs. Charles Atwater occupying the post from 1847 to 1850, and Mrs. Tomlinson from 1850 to 1853. It was found to require almost unlimited time and care, and in 1853 it was taken by one who had both to give, and the consecrated will to give them—Miss H. S. Foster. More truly a Sister of Charity than many who bear that name, she has given her life to this asylum work, and verily it hath prospered in her hands.

But we have left our story, and at one of its gloomiest crises. It would be impossible to mention all the friends who were raised up for the asylum from time to time; but the reports of these trying years are full of gratitude to Deacon George Smith, who helped along in every possible way—by advice, by encouragement, and by going about most cheer- fully in the ungrateful task of collecting the means for daily bread, in connection with Messrs. Henry White, Henry Kingsley, William C. De Forest, and other gentlemen.

While all this business worry was pressing, the internal management of the asylum seems to have been most success- ful. When the children were under the exclusive care of one or two, much in the way of character and intellect was needed in that one or two, and much seems to have been granted. The school was necessarily a family school of all ages, but the reports point with pride to the progress of the children in learning. The town helped in the school ex- penses, at first to the amount of \$36 yearly; then, from 1841 to 1849, \$50 is acknowledged as school fund. From 1850 to 1866, the appropriation was \$100; but meantime, in 1862, the schools were taken under the care of the Board of Education, and the appropriation ceased to be called school fund, and was paid as board, at least in part, of those children whom the Town Agent commits to our care, usu- ally from the Almshouse. In this form it has gradually increased until in this fiftieth year of asylum history it is \$2,000.

It is interesting to glance over the list of occasional do- nations, starting from the time of this removal to Oak street, with one of \$495 from a young ladies' fair. Such fairs occur often in it, interspersed with such items as "Avails of two Little Girls' Needlework," "From some Members of the Fire Department," "Professor Olmstead's Lecture," "Sale of Flowers." Here comes in a legacy from Mr. Daven- port, a toy dealer, of property at that time worth \$8,000, subject to the life interest of his wife. He said his money came mostly from children, and it was right that it should go back to them. Then follows, "Benefit of Panorama of Holy Land," "Signor Blitz, \$50," and that twice; "Fair held by Little Girls of St. Paul's Church," "Concerts of Ancient Harmony," "Tableaux Vivants at Miss Dutton's," "Chapel Street Sewing Circle," until we come to the start- ling items, "Orphans' Fair at Alumni Hall, \$6,384" in 1864, and in 1866, "Promenade Concert, \$4,023." But long before this another great donation had been made by Mr. James Brewster, who, with his friend Mr. Heaton, had been much interested in this charity from the first. At the managers' meeting of March, 1854, a letter from Mr. Brewster was

read offering to build an edifice for the use of the asylum, on condition that the town provide the ground, and that the comparatively small building then in use should be transferred to him. These easy conditions were of course complied with. Abram Heaton and E. K. Foster were appointed to solicit a lot from the town, which they did speedily and effectively; for within a month the deed of gift of the present Asylum site was executed. Mr. Sidney M. Stone gave his services as architect and supervisor, a gift of \$2,000. Mr. Austin generously offered his assistance, and the work of building went on rapidly. The asylum had not hitherto been a beloved and well-known charity in the town. It had received four or five legacies, but no large gifts from living men. Mr. Brewster was a man who had felt it his duty all his life to devote a certain portion of his income to charity, and had conscientiously carried out his convictions. While still a young man, from 1825 to 1832, he was associated with the Rev. Claudius Herrick in maintaining a Sunday service at the old Almshouse, which stood on the lot adjoining the present asylum premises. He then saw the crying need of some provision for orphan children, and made a "covenant with God" to do some- thing in the future, as circumstances might warrant. He was led to move in the matter at this special time by a visit made in company with his wife, in 1854, to the crowded Oak street asylum. He never regretted the step. It was a constant source of pleasure and thanksgiving.

His offer was to erect such a building as the managers deemed necessary and convenient. He gave them \$200 to use in visiting other institutions, that they might the better know what they wanted. One can see how his heart grew into the work. In eight years he wanted to build a new wing, and did so; and we find him setting aside \$2,000 as a repair fund, making his gifts amount to \$20,000. His friend Mr. Heaton took pleasure in supplementing these gifts; to him the asylum owes the laying out, grading and fencing of its grounds; the introduction of water; an additional \$2,000 of repair fund; a lot in the cemetery; and other things. Mayor Skinner presented the one hundred ever- green trees which now adorn and distinguish the asylum inclosure.

The War of the Rebellion multiplied the number of fatherless children in New Haven, and greatly increased the rate of expense for each child; but the burden thus put upon the asylum served to in- crease and spread the interest which the public had begun to feel; and through the efforts made in be- half of soldiers' children, the asylum was more and more adopted by the community as an institution to be valued, cherished, and supported.

ST. FRANCIS ORPHAN ASYLUM.

An orphanage for children of Roman Catholic parentage was incorporated by the Legislature of the State of Connecticut, May Session, 1865. Its commodious buildings, in the midst of pleasant grounds, may be found in Highland street, between Whitney avenue and Prospect street.

The corporation consists of the pastors of all the Roman Catholic Churches of the Orphan Asylum District and their successors in the pastorate, and three laymen appointed, at the annual meeting of the corporation for the ensuing year, from each of the Roman Catholic parishes of the City of New Haven. The Bishop of the Diocese is, *ex officio*, President of the corporation.

A board of managers, appointed annually, con- sisting of fifteen members of the corporation, have the supervision of the general affairs of the institu- tion. They devise ways and means for raising funds for the support of the asylum, and direct the outlay of the same.

The asylum is supported by a charge for board and voluntary donations. No child is admitted under the age of three years, nor over the age of twelve years. There are 160 children, 112 boys, 48 girls. The interior management of the asylum is intrusted to fifteen Sisters of Mercy.

THE HOME FOR THE FRIENDLESS.

Within the past quarter of the century the minds of many of our most philanthropic citizens were much impressed with the fact that our streets were frequented by many idle and vagrant young girls who were being enticed into evil ways.

A meeting of benevolent ladies was called together to consult upon the best plan for correcting this state of things, and for providing shelter and instruction to these wanderers from the paths of virtue. Many of these young neglected ones had, on account of intemperance or other sin, been cast off by their own families, and, having forfeited the confidence of the community had small hope of escaping the vortex of disgrace and death which threatened to engulf them.

The first meeting of these ladies was held at the house of the late Mrs. Eli Whitney, always foremost in good works, where the society to be called *The Home for the Friendless* was organized.

The request for incorporation was presented to the Legislature of the State, and in May, 1867, an act of incorporation was granted, by which the founders and their successors were made and constituted a body politic and corporate, to continue forever by name, style and title of "*The Home for the Friendless*."

Through the benevolence of a number of gentlemen interested in the cause, among whom Mr. James Brewster and Mr. Morris Tyler deserve especial mention, the means were furnished for the purchase of a house, and the home on Clinton avenue was opened with nineteen inmates.

As time went on it was found desirable to extend the benefits of the home to others besides the class for whom it was at first designed.

Destitute wives with small children, women feeble in health and destitute of the means of support, even little neglected children—too young to be received at the Orphan Asylum—knocked at our doors and could not be refused. For this reason some alteration was made in the terms of admission, and the institution is more than even at the first inception of the work, a *Home for the Friendless*.

From the small number who were at the first inmates of the home, its benefits and shelter have been accorded to no less than nine hundred and sixty persons during the nineteen years which have elapsed since its foundation, and it now takes its place among the benevolent institutions of the city which from year to year enlist the sympathy of the charitable. Upon such sympathy and the gifts to which it prompts, the home is dependent for its support.

The officers of the society at the beginning of the present year (1886) were: Miss E. W. Daven-

port, President; Mrs. William Hillhouse, Vice-President; Mrs. Charles C. Foote, Treasurer; Mrs. Justus S. Hotchkiss, Corresponding Secretary; Mrs. Samuel Harris, Recording Secretary.

THE NEW HAVEN AID SOCIETY.

In November, 1864, a society was organized under the name of *The New Haven Work and Aid Society*, its object, as expressed in the constitution, being "to relieve extreme poverty, to prevent street begging, to expose imposture, to provide employment for and otherwise look after vagrants, discharged and convicted criminals, and degraded children."

Besides other officers, a manager was appointed for each ward, who was authorized to divide his ward into sections and appoint a visitor for each section. For a few years an agent was employed, who received, at a central office, applications for assistance, and distributed to the needy, clothing, etc., furnished by the citizens for this purpose. But the office requiring for rent and attendance too large a per cent. of the society's receipts, this feature was relinquished. In 1867 the name was changed to *The New Haven Aid Society*, more for brevity's sake than because of any change in the society's methods of aiding its beneficiaries. It has been from the first its policy to aid the poor by assisting them to find work.

The society has never been incorporated, nor held any permanent funds, but has depended entirely on the liberality of citizens of New Haven for means to carry on its work. The amount distributed during the twenty years of its operation is \$46,800, averaging \$2,340 yearly. The expense of administration has been about eight per cent. since the discontinuance of the central office.

Officers for 1884-85: William L. Kingsley, President; James Olmstead, Professor Francis Wayland, James P. Smith, Ruel P. Cowles, Samuel G. Thorn, Louis Feldman, Vice-Presidents; Richard E. Rice, Secretary and Treasurer. Ward Managers: First Ward, James Fairman; Second Ward, Horace P. Hoadley; Third Ward, George R. Bill; Fourth Ward, Nicholas Countryman; Fifth Ward, Dr. L. M. Gilbert; Sixth Ward, Simmons Hine; Seventh Ward, M. M. Gower; Eighth Ward, William J. Atwater; Ninth Ward, Daniel Bacon; Tenth Ward, James Olmstead; Eleventh Ward, James P. Smith; Twelfth Ward, George E. Thompson.

UNITED WORKERS' SOCIETY.

In the summer of 1872, a few ladies, representing different churches, met to consider the increasing need of practical benevolent work among the poorer classes of the city, in addition to that done by existing organizations. This meeting resulted in the formation of *The Society of the United Workers*, in October of the same year. The name was chosen as indicative of the aim of the society, viz.: to include all denominations among its workers, and to unite all feasible branches of work under the same organization.

Of the many objects that appealed to a society thus established, only four could receive immediate attention—the visitation and relief of the sick poor; the systematic visitation of the Almshouse; the recognition and protection of working women and girls, especially strangers, by providing a suitable boarding-house; and the establishment of a coffee-house where laboring men could find cheap, warm meals, in connection with reading-rooms that would rival in attractiveness the low dram shops.

There was much interest in the movement, and many enrolled themselves as subscribers and volunteer workers. Each different department was placed in charge of a committee, under the general direction of an Executive Committee of nine ladies and an Advisory Committee of gentlemen.

Two other objects soon claimed an enlargement so imperatively, that a boys' club and an employment bureau were added. The former was to make provision for the boys who were crowding into the coffee-house reading-room; the latter, to help poor mothers of families, whose circumstances cut them off from the ordinary resources of working women, and whose skill in sewing was insufficient to secure them better work.

For a few years the boarding and coffee-houses brought heavy expenses, although generous donations aided in their furnishing. The boarding-house did much for the class for whom it was intended, but it could not be made self-supporting. This difficulty, added to business depression and limited resources, made it necessary to abandon the enterprise after six years of usefulness, since the amount of good accomplished, though great, did not justify so much expenditure on the part of a society having other claims on its funds. This work, so reluctantly dropped in 1878, has since been undertaken by the Young Women's Christian Association.

The coffee-house reached a self-sustaining basis at the end of five years, and in the ninth year a second house was opened, but coffee-house No. 2 was never financially successful.

In 1883, after eleven years under the patronage of the society, the whole coffee-house business was sold out, because it was found that the need of such a house was met by many cheap temperance restaurants, when formerly there had been only one, and other societies were doing the purely charitable work that might fall to a coffee-house.

The Almshouse Visiting Committee during its first years, brought so many of the then existing evils before the public, as to be largely influential in procuring the changes that have since made its mission comparatively simple.

The Committee for the Relief of the Sick Poor found a steadily increasing demand upon its resources of money, time, and patience. The words sickness and poverty combined are sufficient to reveal the need of this department. It is comparatively easy to give money in charity; but to take the care of a poor family into one's heart; to meet with scenes physically and morally repulsive; to give leisure hours, thought and energy; to be undaunted

by ingratitude and failure; all these form a difficult task, but it was cheerfully undertaken by this committee.

The Employment Bureau has always been the most important ally of the Relief Committee, making it possible to help the poor without pauperizing them. The value of the work given has rarely been over fifty cents a week to each applicant, and it has never been given except in cases of real need; but the number of applicants for this small sum has grown to from forty to seventy each week, and the garments made are so largely salable as to sustain the department at a cost of \$250 a year.

The Boys' Club has been the only part of the society's work which called for the expenditure of money in salaries, and here, at an average cost of \$500 a year, a warm pleasant room, with attractive books and games, has been provided for street boys.

The club room has been so well patronized and enjoyed as fully to justify the expenditure. A gymnasium and carpenter's bench have been added within the last two years with good results.

The latest advance of the society has been the addition of a sewing school, especially for the children of its beneficiaries. In this branch of industry, forty or fifty children are taught each week in the room occupied by the other committees in the Old State House, which has also given shelter to the Boys' Club for some years.

The yearly subscriptions have been only about eight hundred dollars, an amount increased by donations and entertainments to an average annual income of about fifteen hundred dollars, but the large corps of volunteer workers, and freedom from the need of salaried officers, has enabled all money to tell directly on the work of the society; which has closed its thirteenth year with every prospect of continued usefulness and assurance of public interest and support.

LEILA DAY NURSERY.

Early in the year 1883, it was determined to renew an attempt made in previous years to establish in New Haven a day nursery, where working women could be assured of a safe place and good care in which to leave their children on going to their day's labor.

A small house was secured in William street in January of that year, but during the first summer there was slight success in the undertaking. In the autumn a new matron entered upon the work with more earnestness, and it soon became appreciated by those whom it was intended to help. Since then some forty-three families have been assisted each year, and there are now in the nursery, on an average, thirteen children each day, the greatest number during the past year on any one day having been twenty-six.

For a few months during 1884, the nursery extended an invitation to the free kindergarten to use one of its rooms, and some of the nursery children have ever since gratefully continued their connection with the kindergarten.

Late in the year 1884 a laundry was established

in the basement of the nursery, to aid the mothers of the children who found it hard to procure work. This continued for a year and a half, and was only discontinued this summer, in the hope of renewing it in the autumn under some efficient head laundress.

The great need of the institution is a building which will be large enough for both laundry and nursery. Of this, five hundred dollars is on hand and another five hundred has been promised, but this is hardly one-sixth of the amount required.

The running expenses of the nursery are met by subscriptions, donations, and an annual fair. The matron is Mrs. Helen Pritchard.

THE YOUNG WOMEN'S CHRISTIAN ASSOCIATION

was organized in 1880, and incorporated by the General Assembly in 1882. Its object is to promote the temporal, moral and religious welfare of women, especially of young women who are dependent upon their own exertions for support. It provides for those who come to our city to obtain employment, a home where they are under good influences and at the same time self-supporting.

Connected with the home are various classes for instruction, some of which are gratuitously taught by ladies belonging to the association and others by professional teachers, who are remunerated by means of contributions made for that special purpose.

The association owns the house it occupies on Chapel street, opposite Wooster square, but in purchasing it, incurred a debt which impedes the much needed expansion of its benevolent work.

THE YOUNG MEN'S CHRISTIAN ASSOCIATION

is in some sense a philanthropic institution, though not to the same extent as the association which cares for young women; inasmuch as young men are better able to provide for themselves than the weaker sex.

The Young Men's Christian Association chiefly depends for its support upon those who partake of its privileges and advantages. It furnishes a reading-room, classes for instruction, and occasional lectures; and is a place of resort where moral and religious young men coming into the city and strangers may find congenial society.

While its members are able to pay for the privileges it affords them a sufficient amount to defray ordinary expenses, the money of a philanthropist might be judiciously invested in a larger and more commodious edifice than that which the association now occupies.

THE BOARD OF ASSOCIATED CHARITIES.

The New Haven Board of Associated Charities was organized in the year 1878. It had its origin in the evident need of some system by which any person asking for help could be sure of considerate attention, and by which, also, any one desiring to bestow such help could be certain that it would

reach the person really in need and worthy of kindly aid. There were already in New Haven many excellent charities of various names and for different objects, but each doing its work in its own way, and generally without much, if any, knowledge of what others were doing. Among them all there was none where continued attention could be depended upon until there was no further need of help. There was no way by which those who were able to work could show, when out of work, their willingness to provide for themselves as far as they were able; neither was there any means of showing who were able to support themselves wholly or in part and yet were unwilling to do so.

At the time of its organization the New Haven Board of Associated Charities was, as far as then known, the only work of its kind in this country. Efforts had been made in London and in some continental cities to bring charitable work into some system and order, but on this side of the water there had been hardly any attempts at organizing charity. The work in New Haven was commenced as a part of the work of the City Missionary Society, and, in order to separate its relief work from its religious work, a central office of charities was opened by the Superintendent of Missions, Rev. W. D. Mossman, and for several months carried on as a department of mission work, having among its special subscribers Hon. H. B. Bigelow, Hon. O. F. Winchester, Professor Timothy Dwight, Professor E. E. Salisbury, Hon. S. E. Baldwin, Professor F. R. Honey, and others, including also a number of ladies prominent in the charitable work of the city.

The object in this experimental work was to provide for the sending to the central office all unknown applicants for charitable help; for the careful investigation of each case presenting itself there; and the obtaining of help for those who were worthy, through the relief agencies already established. The success of the undertaking was such, that, having received the approval of several of the principal charitable organizations of the city, Mr. Mossman proposed to place the office and its work in the care and control of an association to be made up of representatives of any or all of the existing charitable organizations of the city, as intended not to do the work of any of these societies, but to assist in the work of each, and to supplement the work of all. Eight societies having accepted this proposition, the organization of the New Haven Board of Associated Charities was effected June 1, 1878. Hon. Francis Wayland was elected Chairman of the Board; the house and grounds at 47 Court street, were leased for the work of the Board; public notice was given by printed circulars, as well as through the daily papers, of the principles upon which the work was to be conducted; and cards were given, to all who would use them, for the sending of all unknown applicants for charity to the headquarters of the organization.

In the limited space of this article it is, of course, impossible to fully give the history, or describe the operations of the organized charities of

this city. The annual reports and other papers issued by the organization fully explain the methods and results. A few of the principles may however be stated, and among them are the thorough investigation of all cases brought to the notice of the central office; the proper relief of all deserving cases of destitution by the existing charities whenever possible; the giving of relief when immediate aid is needed; and also, when all other sources fail, preventing, as far as possible, all forms of begging, and especially saving children from growing up as paupers; making employment of all able-bodied applicants the basis of relief; endeavoring to bring about co-operation among all charitable agencies; a system of visiting the poor at their homes; a careful study of the causes of pauperism; also the best means of improving the health and habits of the poor, and the bringing them to self-support and self-respect.

In the faithful endeavor to carry on this work in accordance with the principles stated, many difficulties have been met with, including much diversity of opinion as to this new way of doing charitable work. But the exposing of imposture on the part of some who had been helped for years from generous private purses; the improvement in families that had never made any such progress under the old system of relief; together with the general acceptance of these same principles for the guidance of benevolent action in between fifty and sixty other cities in this country, have gradually brought the work of this Board to the approval and support of the best citizens of New Haven. One of the best proofs of the public confidence in its work, as well as in the efficiency of its management, is the proposition recently made, that it shall undertake the administration of all the outdoor relief now given officially by the town.

The Board of Associated Charities now includes representatives of fourteen different charitable organizations or institutions in the city, together with a number of pastors of churches and citizens elected to membership because of their special interest or help in the work, or actual experience in dealing with the problem of poverty and pauperism. Among those not already mentioned who are now connected with the work of the Board, are Hiram Camp, Max Adler, Rev. E. S. Lines, Charles A. Sheldon, S. G. Thorn, Colonel S. J. Fox, R. E. Rice and S. H. Barnum. Removed by death while connected with the Board are found the names of Atwater Treat, George Alling and Dr. Thomas P. Gibbons. Hon. Francis Wayland has continued Chairman of the Board until the present time, and to his efforts in behalf of this work much of its success is due. Rev.

W. D. Mossman had for eight years the general care of the work as Chairman of the Committee in Charge. Special mention should also be made of the generous help of Hiram Camp, President of the New Haven Clock Company, who for several years gave \$600 annually to provide the salary for the agent of the Board; as also of the first subscription of \$100, made up jointly by Hon. Francis Wayland, H. C. Kingsley, Hon. H. B. Harrison, and E. C. Read, to enable the newly organized Board to establish a labor test without delay.

This sketch would not be complete without including the influence and advice in the early part of this work by Mrs. Dr. Francis Bacon, together with help in various ways by Mrs. Walter Osborne (the first subscriber), Mrs. Professor W. D. Whitney, Miss Frances Walker, Mrs. M. L. Parsons, and Mrs. H. E. Cutler. The central office of the Board was successfully maintained for five years at 47 Court street, with E. N. Seelye as agent, and Mrs. Elizabeth Pierce as matron, and in 1883 was transferred to 23 Church street, a more central location and convenient surroundings; where, with S. O. Preston as agent, and Mrs. E. J. Baker as matron, the work of organized charity is now in daily operation and open to the inspection of all who are interested in its success.

It invites the kindly and intelligent criticism of any who may be able to suggest improvement in its efforts to benefit the dependent people of this community, and especially asks a careful study of its principles and methods of work. It is also very desirable for the more complete carrying on of its work that a large number of people should each take some share in that work, either as contributors or friendly visitors to the poor, or in various other ways that will be suggested to those who may offer their services. The object is not to gather information at a central point in order that all the duties involved may be centered upon those employed for the doing of certain parts of the charitable work of the city, but rather to distribute from that point to such others in the community as are able to bear it, the responsibility that always begins when information is anywhere received of others in distress. A substantial proof of acceptance of such responsibility would be the erection of a building suitable not only for the various uses already called for by the work of the Associated Charities, but also for the common use of all organizations in the city engaged in work of like character, the service of the strong for the saving of the weak. This would indeed be a life-saving station, an honor as well as an ornament to the city; an enduring memorial to those who shall erect it for others rather than for themselves.

CHAPTER XXXIX.

CEMETERIES.

FROM the settlement of the town in 1638, to 1797, the common place of sepulture was, according to the old English custom, contiguous to the house of worship. The first meeting-house was probably placed exactly in the middle of the square which, from the beginning, was sequestered for public use. When there was occasion to dig graves they were dug behind, that is west of, the meeting-house. The second house of worship was placed so far east of the first that it could be completed before its predecessor was demolished. The third meeting-house was so placed that its front was in a line with the west boundary of Temple street, the steps at the east door projecting into the street.

Some of the graves must have been near to this third meeting-house, but there is no reason for believing that it covered any of them. When the present Centre Church was erected in 1813, it was by design placed further west, and consequently over the graves that were near to the west wall of its predecessor. A few graves were disturbed in digging trenches for the foundation of the new edifice, and whatever human remains the workmen found were transferred to the new cemetery. The church was then built over the graves inclosed within its foundation walls, and for about three-quarters of a century has preserved their ancient tombstones from injury. Recently the Ecclesiastical Society, to which the house belongs, has paved "the crypt" with concrete, and furnished it with gas burners, so that one can read the inscriptions, which, but for this care, the visitor might have found illegible.*

In 1797 the cemetery in Grove street began to be used, and from that time burials on the Green gradually ceased, the latest being that of Mrs. Martha Whittlesey, who was buried by the side of her husband, the Rev. Chauncey Whittlesey, in October, 1812. These two graves are in the crypt; but in October, 1812, the trenches had not been dug for the foundation of the church.

The Centre Church covers the tombstones of about one hundred and forty persons, whose names are inscribed on tablets in the vestibule of the church. More than eight hundred other tombstones have been removed from the Green to the cemetery in Grove street. About four hundred and seventy of them may be found ranged in approximately alphabetical order against the west and north walls of the inclosure. Others are in the family lots of persons who have cared for them as memorials of their kindred. The oldest stone removed from the Green is believed to be that which commemorates Samuel Hodshon, who died August 26, 1673, aged nine years. The oldest in the crypt

is said to be that which was erected to the memory of the father of the above named child. It bears the inscription:

Mr. John Hodshon deceased in the 74th year of his age in Octob^r Ye 14th 1690.

Mr. Hodshon left the largest estate settled in the colony previous to the eighteenth century. He made a legacy of five pounds to the first church in New Haven with which to buy plate, and one of the cups used by the church still bears his name. There is, however, a stone on the Green, outside of the walls of the church, which is older than the Hodshon stone in the crypt. It is the stone, so small as easily to escape observation, inscribed E. W., standing near the inclosure of the Dixwell monument. It was too small seriously to obstruct either vision or motion, and was probably left in its original position because it was thought to be the tombstone of Edward Whalley, one of the regicide judges. A more critical age connects it with the memory of Edward Wigglesworth, who came in 1637 from Hedon, Yorkshire, and died in New Haven in 1653.

Another stone left in its original place on the Green, because it was supposed to commemorate a regicide judge, is that marked ⁸⁰MG, not far from the grave of Wigglesworth. The grave beneath it probably contains the ashes of Matthew Gilbert, one of the seven men selected by the first planters to be the nucleus of the Church and the origin of the State. The fruitful fancy of President Stiles saw in the unskillful lettering an attempt to conceal the resting place of William Goffe.

There is undoubtedly one of the regicide judges of King Charles the First, buried in New Haven. John Dixwell settled here in 1665, under the assumed name of James Davids. A Stone placed at his grave soon after his death is inscribed:

J. D. Esqr DECEASED MARCH Ye 18th IN ye 82 YEAR OF HIS AGE 1688.

A monument erected by his descendants in 1849 stands near this ancient memorial.

Some of the notable inscriptions in the crypt, besides that which commemorates Mr. John Hodshon, are the following:

Mrs Hester Coster
Aged 67 Deceased
April Ye 6th 1691.

In Memory
of
M^{rs} Margaret Arnold
Wife of
Benedict Arnold Esq
who departed this
Life June 10th 1775
in the 31st Year
of her Age.

*For these improvements in the crypt of the Centre Church, the public are much indebted to the thoughtfulness and diligence of Mr. T. R. T. & Co., Inc.

M. M. S.

Mrs Rebekah Hays
the amiable and virtuous consort
of Capt Ezekiel Hays
& daughter of Col. John Russel
late of Br'nford, departed
this life May 27th 1773
in the 51st year of her age.

Her children rise up and call her blessed. Her husband
also praiseth her.

The Hon.
James A. Hillhouse
died Oct 3. 1775 -
Æ 45.

Sacred to the memory of
James Abraham Hillhouse;
who died Oct 3. 1775
Also his wife
Mary Lucas
who died June 20, 1812
Aged 89

In Memory of
The Hon^{ble} Jared Ingersol Esq.,
Judge of the Court of Vice Admiralty
in the Middle District
in America.

A man of an uncommon Genius
which was cultivated
By a liberal education at Yale College
And improved by the study of Mankind,
And of Laws, Policy and Government,
He distinguished himself at the Bar,
Where his perspicuity and Energy in Reasoning
And Equality in Conducting Causes
Elevated him

To the First Eminence in his Profession.
Under the appointment of the General Assembly
He was twice honored
With the AGENCY from CONNECTICUT
At the Court of Great Britain.
His Morals were unblemished.
He was thoughtful, collected and sagacious,
open and sincere,
mild, affable and courteous.
Adapting himself to all
By a rich variety of sentiment and Expression
Yet preserving in his whole Behavior
A graceful and majestic Dignity.
He died Aug. 25th A.D. 1781
Ætat 60.

By his side lieth also interred,
His amiable Consort
Mrs Hannah Ingersoll
who departed this Life
Oct 9th A. D. 1779
Aged 66 years.

HERE LYETH Y^e BODY OF Y^e REV^d
Mr JAMES PIERPOINT Y^e LATE
FAITHFUL AND ABLE MINISTER
OF Y^e GOSPEL IN N HAVEN.
AN ELOQUENT MAN & MIGHTY
IN Y^e SCRIPTURES. WHO BEING

LATIONS & ABUNDANT IN LABORS
HAVING SERV^d HIS GENERATION
BY THE WILL OF GOD, 5 YEARS
A TUTOR, & 26 A FELLOW, OF
Y^e COLLEGE, & 45 PASTOR OF
Y^e 1st CHURCH IN N HAVEN
DIED JUNE 14 1761 AGED 73.

Mrs ABIGAIL NOYES
Relict of the Rev. JOSEPH NOYES
died at Weathersfield y^e 10th day of Oct. 1768
Æ 73 & was Buried in that place.

A Gentlewoman of a sweet and delicate Temper, of fe-
male Virtue an Example. She greatly excelled in the Knowl-
edge of Y^e Scriptures they were the Guide of her Youth &
Y^e Comfort & Support of her Age. She was a LOVING
Parent, to y^e Poor, Charitable to the Faulty a faithful Re-
prover, to the Cause of Truth a Friend. Her life was dili-
gent & useful. Her heaven began on Earth. She saw through
a Glass darkly but now face to face.

O Grave, where is thy Victory.

To the Memory of the reverend
CHAUNCEY WHITTELSEY
A.M. fifth pastor of the first Church in this city. With eminen
natural talents and human acquirements he united a firm
attachment to the principles of civil & religious liberty. He
inculcated the doctrines of grace as motives to holiness, con-
stantly taught and in various relations exemplified the more
excellent way and, having discharged with fidelity & dig-
nity the duties of the pastoral office closed his useful life
with a full hope of immortality July 24, 1787 in the 70th
year of his age and 30th of his ministry.

Dan^l XIIth 3d
And they that be wise shall shine as the brightness of the
firmament and they that turn many to righteousness as the
stars for ever and ever.

The merit of originating the Grove Street Ceme-
tery is due, as has been said in a previous chapter,
to the Hon. James Hillhouse. Moved, as he pro-
fessed, by a desire "to secure to his own and the
families of his fellow-citizens a sacred and inviolate
burial place," he purchased six acres, and soon
after four acres in addition, in what was then the
edge of the town, to be divided into family lots.
The division into family lots, though now an ordi-
nary feature of cemeteries, was then an original
idea. Associated with Mr. Hillhouse in the under-
taking were thirty-two other persons, who so far
assisted as to agree to purchase family lots. These
persons were incorporated in October, 1797, under
the name of "The Proprietors of the New Burying
Ground in New Haven." A committee was then
chosen to "ornament the grounds with such kinds
and so many rows of trees as they shall judge ad-
visable." The first burial in the new cemetery was
that of Martha, wife of John Townsend, who died
November 9, 1797.

In 1800, the finances of the company being in
an unsatisfactory condition, Mr. Hillhouse paid its
debts with his own funds, and agreed to make the
improvements which had been contemplated, and
wait till he could be paid out of the receipts for
lots to be sold. From 1800 to 1815 he had the
entire management of the affairs of the company.
In 1814, about eight acres were added to the ten
previously acquired, and changes were made in the
position of a highway which brought the additional
land into the same inclosure with the older por-

tion of the cemetery. In 1820 the city paid the company for a tract of three acres, till then unused, and after selling a portion to Yale College, and setting apart sections for the burial of the poor and of strangers and people of color, removed the tombstones from the ancient burial ground on the Green to a section set apart for their reception.

The report of the committee appointed to superintend the removal was submitted, as follows:

The Committee appointed to superintend the removal of the monuments from the Ancient Burying-Ground beg leave to report. That they purchased for the city the proposed lot, inclosed and leveled the same. It was then laid out in conformity with the general plan of the Burying-Ground and divided as follows:

Six City Squares, numbered 1, 2, 3, 4, 5, 6;

One Square for Yale College;

One for Strangers;

One for People of Color.

After the Religious services in the church, the Committee, accompanied by the President and Officers of the College, commenced the work of removal by conveying the monuments of Officers and Students to the new College Square. Their next care was the removal, on application of survivors, of monuments into family lots in the New Ground.

All the other monuments were then removed to City Square No. 1; on the north of which are two lots reserved for the Methodist and Baptist Societies, the other Societies having had lots assigned to them in the first distribution of the ground.

The burial of citizens not having family lots, has commenced at the southwest corner of City Square No. 2 and will be continued in regular order till that square shall be filled, when the burying in No. 3 will be commenced at the S. W. corner; and the same order will be observed without any variation, in the other City Squares and in those allotted to College, to strangers, and to people of color.

The committee caused the Ancient Ground to be leveled, and a common monument to be erected in rear of the Centre Church. A copy of the inscription is inclosed, together with a list of the deceased, whose monuments are covered by the Centre Church; also a list of those whose monuments were recently removed, and a plan of the New Burying Ground entire, with the names of the original owners or present proprietors of family lots.

Some survivors removed the remains and monuments of their friends into their own lots, previous to the general removal. Some of the monuments had been broken, and the inscriptions on others were either illegible or very obscure. Our lists must in some respects be incorrect and defective; but, such as they are, we trust that they will be acceptable to our fellow-citizens, whose friendly and zealous co-operation with us in the discharge of this public service is gratefully acknowledged.

The audited expense of this concern, including the purchase of the lot, being \$1,289.38, has been fully paid to us by the City Treasurer.

In behalf of the Committee.

JAMES HILLHOUSE,
Chairman.

NEW HAVEN, September 1, 1821.

As there were thirty-two purchasers of the ten acres set apart as a burial place in 1796, so there were thirty-two purchasers of the eight acres added in 1814; and as in the first instance so in the second, the name of James Hillhouse was at the head of the list. In May, 1821, upon the petition of the proprietors of the eight acres added in 1814, the General Assembly of the State "*Resolved*, that said eight acres of land, described as aforesaid, be and the same is hereby added to said burying ground, subject to the same rules and regulations, and entitled to the same privileges and exemptions; and that the petitioners and other purchasers shall

become members of said corporation on the terms and conditions provided in said resolve."

But as it was provided in the act of 1821 that it should not go into effect until the proprietors had signified their assent, and this formality was neglected till 1839, the proprietors of the eight acres added in 1814 did not become, legally, members of the corporation till 1839.

In the year just mentioned a new interest sprang up in the cemetery. A committee appointed at a meeting of the proprietors in May, 1839, "to inquire into the condition of the New Haven Burial Ground, and to propose a plan for its improvement," reported in September. From that report most of the material for the historical sketch given in the preceding pages has been derived.

The report of that committee awakened such interest in the improvement of the cemetery, that the Common Council of the city voted "to pay for the purpose of inclosing and improving the City Burying Ground, a sum equal to that which may be raised for the same purpose by individual donations or from other sources, provided that the sum so appropriated shall not in the whole exceed \$5,000, and to be paid in three annual instalments."

A joint committee of five appointed by the proprietors, and five more appointed by the city, was organized to inclose and improve the cemetery, and continued to prosecute the work with which they were charged for ten years, the city having meanwhile added to its original gift of \$5,000 an additional \$2,000 for the construction of the massive gateway through which the inclosure is entered.

The funds expended by the joint committee amounted to nearly \$25,000. Of this sum, about \$11,000 were laid out on the wall built on three sides of the inclosure; \$3,500 on the iron palisade in front; \$5,600 on the gateway; and about \$2,400 on the preparation of the ground, the planting of trees and shrubbery, and expenses incident to their preservation.

In 1849 this joint committee surrendered their trust to the two parties by whom they were appointed.

Two members of this joint committee deserve especial mention. Aaron N. Skinner, having graduated at Yale College and spent several years in teaching, commenced the practice of law in New Haven. But his reputation as a teacher bringing him applications to receive into his family a few pupils, the number of his pupils increased beyond his original intention, till he withdrew from the practice of law to devote his life to the profession of a teacher. He was several times chosen by his fellow citizens to represent them in the General Assembly; was Mayor of the city for four years in succession; and, but for his unwillingness to continue in the office, might have received another nomination. "As a member of the committee under whose superintendence the cemetery was inclosed and made beautiful, Mr. Skinner was more efficient than any other person. His taste; his judgment; his readiness in all efforts for the public good; and his influence with his fellow

citizens, were all employed with a heartiness and enthusiasm characteristic of the man. From the earliest preliminary consultations till the work was completed, he never grew weary. The wall, the fence, and the gateway were constructed under his watchful oversight; not a tree was planted but under his personal direction. Every hour that he could command was devoted to the work till he saw it finished."

The other member of this committee who deserves special mention, is Edward C. Herrick. No one rendered more willing or more constant service than he. "His name appears in the list of the committee who first reported, in 1839, on the condition of the cemetery and the improvements which might be made. In September, 1841, he was chosen clerk of the proprietors. In May, 1842, he was appointed a member of the joint committee on the part of the city. He had hardly entered this body when he was appointed its Secretary, and he held this office, as his neat and legible record of all the subsequent meetings shows, until, in the summer of 1849, the committee was dissolved. And when, at this change in the affairs of the burying ground, the future care and oversight were entrusted to three persons to be called the 'Standing Committee of the New Haven Burying Ground,' Mr. Herrick became a member of that committee and held the office till his death."

Since the dissolution of the joint committee, in 1849, the cemetery has been under the care of a standing committee of three persons, of whom one is the Clerk of the Corporation. This standing committee at present consists of James M. Mason, Clerk of the Corporation; Daniel C. Eaton and Nathan H. Sanford.

It is estimated that there are buried within this city of the dead, the mortal remains of 10,000 human beings. Many of this myriad were known only to their own townsmen; but it includes with them an unusual proportion of persons who have achieved a wider fame.

Commencing at the southeast corner of the cemetery, one may find in Sylvan avenue the grave of "Hiram Bingham, 1789-1869. He and his associate, Asa Thurston, were the first preachers of the gospel to the heathen of the Hawaiian Islands." In the same lot, is the inscription: "Samuel W. S. Dutton, D. D. Born in Guilford, March 14, 1814. Pastor of the United Church and Society from June 5, 1838, till his death January 26, 1866." On the other side of the avenue, in the tier of lots next to the wall which bounds the cemetery on the east, is a monument inscribed "Oliver Ellsworth Daggett, Born June 14, 1820, Died September 1, 1880."

In Cypress avenue, next west of Sylvan avenue, one may find in the lot belonging to Trinity Church a tablet brought from the Green, which bears the inscription:

In memory of
Enos Alling Esq: Merchant
who
Received a liberal Education
In Yale College

Became an industrious and useful member
of civil Society

and

In a course of extensive and successful commerce

He approved himself

The man of Integrity, Virtue and Honor.

He was a member of the London

Episcopal Society for propagating the Gospel

In foreign Parts

and died universally respected

Sep. 11, 1779. Etat 61.

The lot next north is the family burial ground of the Rev. Bela Hubbard D.D., the first Rector of Trinity Church. On the other side of this avenue is a small stone commemorating John Hotchkiss, who was killed while resisting the attack of the British upon New Haven, July 5, 1779. Further up the avenue is the tall obelisk erected to the memory of Henry Trowbridge, founder of the commercial house so well known under the name of Henry Trowbridge's Sons. Still further up is the monument to the memory of the distinguished lawyer Dennis Kimberly, and nearly opposite to it on the other side of the avenue the monument of Captain Edwin S. Hitchcock, of the Townsend Rifles, who was killed in the battle of James Island, S. C., June 16, 1862.

Near the south end of Maple avenue is the burial place of the family of Ingersoll. Here lie the remains of Jonathan Ingersoll, a Judge of the Superior Court of the State of Connecticut, and from 1816 till his death, in 1823, Lieutenant-Governor of the State. Here are also the remains of two members of the same family, sons of the preceding: Ralph Isaacs Ingersoll, born February 8, 1789; died August 26, 1872; Representative from New Haven in the General Assembly of Connecticut from 1819-25; Representative from Connecticut in the Congress of the United States from 1825-33; Minister of the United States to the Court of St. Petersburg, 1846-48; and Charles A. Ingersoll, Judge of the United States District Court for the District of Connecticut; died February 7, 1860, aged 63 years.

Within the same inclosure is a monument to the memory of Commander Ralph Voorhees, United States Navy, whose wife was of the Ingersoll family. He died at Smyrna, Asia Minor, while in command of the U. S. ship Preble.

On the other side of Maple avenue is a lot belonging to Yale College, but so filled with graves that there is no room for more. Next north of it is the family lot of President Dwight. Next to that is the grave of Pierpont Edwards, born April 8, 1750, died April 5, 1826. On the same side of the avenue is the family lot of Titus Street, in which is the monument to the memory of Rear-Admiral Andrew Hull Foote. Further up is the monument of Isaac H. Townsend, Professor of Law in Yale College. Still further north, and on the same side of the avenue, one finds a monument with this inscription: "Nathan Beers, Born Feb. 14, 1753, Died Feb. 11, 1849. He served his country in the army of the Revolution as Lieutenant and Paymaster from March, 1777, until after the army was disbanded. Was

Deacon in the North Church from 1804 until his decease."

In the same lot is a sandstone slab brought from the ancient burial ground on the Green, inscribed, "Here lies the body of Nathan Beers who was born at Stratford and for the last 25 years of his life was a respectable inhabitant of this town. He received a mortal wound in his own house from a party of the British troops in an incursion they made to this place, July 5, 1779, with which he languished till the 10th, when he departed this life in the 61st year of his age."

On the right hand side of this avenue is the family lot of David Daggett, United States Senator from Connecticut, Professor of Law in Yale College, and Chief Judge of the Supreme Court of Connecticut. In this lot lie the remains of Sereno E. Dwight, D.D., who was a son-in-law of Judge Daggett. Next north of the Daggett lot is that of the Bishop family. It contains a sandstone monument brought from the ancient burial ground on the Green, commemorating several generations of the family, from James Bishop, Deputy Governor of the Colony of New Haven, to the second Samuel Bishop, Mayor of New Haven, who in his old age was appointed by President Jefferson, Collector of the Port. In the center of this lot is a granite monument to Abraham Bishop, who, succeeding to his father as Collector of the Port, remained in office more than a quarter of a century.

On the left hand of this avenue is the grave of Professor E. T. Fitch, whom so many of the older sons of Yale remember as the preacher in the College Chapel. It is said that while he occupied this office no student became an infidel. Beyond the grave of Professor Fitch is that of Simeon Baldwin, a Representative of Connecticut in Congress, a Judge of the Superior Court and of the Supreme Court of Errors, and Mayor of the City of New Haven.

The same lot contains the grave of Roger S. Baldwin, son of the before-mentioned, who was Governor of Connecticut and one of her Representatives in the Senate of the United States. In the lot next north of that belonging to the Baldwin family, is a tablet commemorative of Roger Sherman, the first Mayor of New Haven, and one of the signers of the Declaration of Independence. Still further on is the grave of Jeremiah Day, President of Yale College from 1817 to 1856.

On the left hand side of this avenue, and nearly opposite to the Baldwin lot, is the burial place of the Hillhouse family. It contains a monument to the first of the family who settled in New Haven, James Abraham Hillhouse, who died October 3, 1775. Another monument commemorates James Hillhouse, nephew and adopted son of the before-mentioned, who was Treasurer of Yale College from 1782 to 1832; Senator of the United States from 1794 to 1810; First Commissioner of the School Fund from 1810 to 1825. Other members of this distinguished family are commemorated by suitable monuments. Among them is one to the memory of James A. Hillhouse, the author of "Hadad" and other poems. Near the north end

of Maple avenue, but a little west of it, in the tier of lots which abut upon the north wall of the cemetery, is the burial place of the Gerry family. Elbridge Gerry was never a resident of our city; but, after his death, his widow and children adopted New Haven as their home.

In Linden avenue, and near its southern extremity, one may find the sandstone tablet which the Colony of New Haven erected to the memory of Governor Eaton.* It bears the inscription

Theophilus Eaton, Esq., Gov.,
Deceased Jan 7, 1657, Etatis, 67.
EATON, so famed, so wise, so meek, so just,
The Phenix of our world here hides his dust.
This name forget, N. England never must.

In the same avenue, and not far distant from the monument of Eaton, are two ancient slabs of sandstone inscribed respectively:

Thomas Munson, aged 73, deceased
the 7th of 3d m., 1685.
Joanna Munson, aged 68, deceased
the 13th of 10 m., 1678.

In Central avenue, opposite the chapel, is the tomb of Nathaniel Jocelyn, the portrait painter. He was born January 31, 1796, he died January 13, 1881. Further up this avenue, and on the same side of it with the chapel, is the burial place of the family of the late Governor Henry Dutton. The name of Henry Melzar Dutton, who fell in the battle at Cedar Mountain and was buried on the field, is inscribed on the monument over his mother's grave.

Further north is a sandstone slab inscribed, Benjamin English, died July 5, 1779, aged 74. He was stabbed, while sitting in his own house, by a British soldier.

Near the north end of this avenue is a monument to the Rev. James Murdock, S.T.D. Born, 1776; died, 1856.

In Locust avenue, near Grove street, is the tomb of General Amos B. Eaton, of the United States Army. Further up is that of the Rev. Harry Crosswell, D.D., Rector of Trinity Church. Died March 13, 1858, aged 79 years. Still further up are the graves of Professors Hadley, Larned and Gibbs; of Joseph E. Sheffield and Samuel St. John. Near the north end of the avenue is a monument to the memory of Elisha Lord Cleveland, Pastor of the Third Congregational Church, "Erected by members of his congregation."

In Cedar avenue is the family burial place of the first Professor Benjamin Silliman. Beyond it is that of Jedidiah Morse, the father of American Geography. In this lot is buried the first wife of Samuel F. B. Morse, who gave to the world the electric telegraph and to New Haven, Washington Allston's picture of Jeremiah. In Cedar avenue is also the monument beneath which are the remains of David C. De Forest, who having resided many years at Buenos Ayres, was appointed by the Gov-

* "At a General Court for the jurisdiction the 26th of May, 1658, the Court, calling to mind the good service done to this colony by our late honored Governor, did order that a comely tomb, such as we are capable of, shall be made over his grave."

George Washington
D

ernment of that country, Consul-General to the United States. In the early part of this century, he was one of the foremost men in New Haven in wealth and style. He built the house on the corner of Elm and Church streets now occupied by Mr. Sargent. North of his grave is the granite monument, with a Latin inscription on a plate of copper, commemorating the services to his country of David Humphreys, aid-de-camp of Washington.

On the right hand side of this avenue is the grave of Theodore Winthrop, one of the early martyrs of the war for the preservation of the Union. He was killed at Big Bethel.

Just beyond Winthrop, lies the Rev. Samuel Merwin, Pastor of the North Church in the early years of this century; and in the next lot beyond Merwin's are the graves of Nathaniel W. Taylor and Lyman Beecher. Near these clergymen rest the remains of Eli Whitney, the inventor of the cotton gin; and of Noah Webster, maker of spelling books and dictionaries.

On the left hand of the avenue is buried James Brewster, a pioneer in the manufacture of carriages and a citizen of extraordinary liberality and public spirit. Near the north end of this avenue and on the right hand side is the grave of the Rev. Leonard Bacon, D.D.

In Spruce avenue, far up toward its northern extremity, may be found the monument of Rear-Admiral Francis H. Gregory.

In Holly avenue and near its northern extremity is a monument inscribed

CHARLES GOODYEAR,

Inventor.

Born in New Haven, December 29, 1800.

Died in New York, July 1, 1860.

In consequence of the difficulty of obtaining lots in the Grove Street Burial Ground, the Evergreen Cemetery Association was formed, under a general statute of the State of Connecticut. A preliminary meeting was held September 15, 1848, at which it was resolved to form a cemetery association; to purchase a tract of land containing about thirteen acres, owned by Nathan Peck; and to divide the stock into three hundred shares, the par value of a share being ten dollars. The name at first was The Washington Cemetery Association, but it was changed to the Evergreen Cemetery Association at a meeting of the stockholders October 19, 1848.

The first interment was made in lot No. 50, Myrtle avenue. At the head of the grave stands a plain marble slab with the following inscription:

LEWIS FISK,

Born April 10, 1807,

Died November 29, 1848,

Aged 41.

He was the first person buried in this cemetery.

The ground was consecrated to the burial of the dead with religious services June 29, 1849. In 1856 the limits of the cemetery were extended by the purchase of the land known as the Peck Woods, lying south of the original lines of the

cemetery. The property was conveyed to the trustees by Henry E. Peck, April 21, 1856, for the consideration of seven thousand dollars.

In less than forty years from the first interment in this cemetery it has become a populous city of the dead.

St. Bernard's Cemetery is the burial place of the Roman Catholics of New Haven. It may be found on the south side of Columbus street, and not far from the bank of the West River. At first Catholics were buried in the yard of the first Catholic Church, where St. John's Catholic Church now is, but soon it became necessary to provide a larger burial place. St. Bernard's will not long be sufficient for the burial of all who look toward it as their final resting place, and the necessity for providing graves for our increasing population confronts all classes of our people.

There is a small cemetery in Fair Haven in the rear of the First Congregational Church, for Protestants, and in the western part of the city is a place of burial for the accommodation of the inhabitants of Westville. Adjoining to this Westville cemetery is a burial place for Hebrews, the children of the patriarch, "who stood up from before his dead and spake unto the sons of Heth, saying, I am a stranger and a sojourner with you; give me a possession of a burying place with you that I may bury my dead out of my sight."

ELBRIDGE GERRY.

[Austin's "Life of Elbridge Gerry" has been consulted.]

The city of New Haven enjoys the unique honor of protecting, among its inhabitants, the child of one of the illustrious signers of the Declaration of Independence. Members of the immediate families of those intrepid men are now probably with this single exception, numbered with the dead. We are wont to think of the fathers of our country and their contemporaries as the pillars and ornaments of an age and generation which are now gone forever.

For nearly half a century the household of Elbridge Gerry has lived under the elms of New Haven. The bereaved wife and children have walked among us, and one by one, have joined the silent majority. Three daughters, and a son, who bore also the name of Elbridge Gerry, now rest with their mother in New Haven's ancient burying ground. But Mrs. Gerry's youngest daughter, who was twelve years old at his death, and who now bears bravely the weight of more than fourscore years, survives in our midst and opens a century of the national existence with memories of her famous father and his friends.

Some time after Mr. Gerry's death, in 1814, his widow with four of her daughters, removed from Cambridge to Boston, and afterwards to New London. In the latter place they resided for six years. About 1837 the family came to New Haven and abode for a few years in a dwelling upon Orange street, but subsequently made their home on the southeast corner of Temple and Wall streets. There

still resides the venerable lady who calls Elbridge Gerry by the sacred name of "Father." Since Mr. Gerry's family has for so long been identified with the city, New Haven deems itself to be also an inheritor of Elbridge Gerry's fame. As citizens of that great nation which he helped to found, no less than as neighbors of his children, the people of this community are interested in recounting the general sum of his life-work, and in recalling what manner of man he was. But his words, deeds, and the influence of his personality have become part of a nation's history, and are written upon a wider, more enduring page than this can hope to be.

He entered into the service of his country while Massachusetts was a royal colony; supervised the foundation of independent State governments; helped to frame and administer the Articles of Confederation; assisted in forming the Constitution, and held the next to the highest office under it when death called him. At that time he is believed to have been the only individual in any branch of the Government who had been a member of the Congress of 1776. He was conspicuous as a leader and counselor in the measures which dissolved the royal power in Massachusetts; in the Declaration of Independence by the United Colonies; in the direction of the civil, military, foreign and domestic concerns of the Confederation, and in arrangements for the cessation of hostilities. In the convention which changed the Confederation into a nation, and created a new epoch in the his-

tory of the United States, he attracted no common share of the public attention. At the organization of the Federal Government he was a member of the House of Representatives. At the time when our foreign relations were the most strained; when the United States was a foot-ball between the contending powers; and when war with France was especially imminent, he was engaged in an important embassy to that power. During the intense agitations which preceded the second war with Great Britain, he was the Governor of his native State, and through the greater part of that war he presided over the Senate of the United States.

In personal appearance Mr. Gerry was of middling stature and spare frame. His head was large and broad, with a high and prominent forehead, and enlivened by quick, piercing, and expressive eyes. Extremely temperate in his habits, he preserved a constitution not naturally robust, so well, that to his latest day he walked without the use of a cane, and could read the smallest print without the aid of glasses. His chief relaxation he found in the delights of his family life, in the charms of society, and in the refinements of intellectual companionship. Throughout the three-score years and ten that were allotted to him, he labored steadfastly to fulfill his own memorable injunction, which was most appropriately placed upon his monument, "It is the duty of every man, though he may have but one day to live, to devote that day to the good of his country."

APPENDIX.

WITCHCRAFT IN NEW HAVEN.

HOWEVER the fact may be accounted for, no person accused of witchcraft was ever executed or even condemned to death in the colony of New Haven. Accusations were sometimes made, but, as Professor James L. Kingsley well says in his "Historical Discourse," delivered on the two hundredth anniversary of the first settlement of New Haven; .

The Court on all occasions of this kind acted as it they had approached the conclusion, long after commended by Blackstone, "that in general there has been such a thing as witchcraft, though one cannot give credit to any particular modern instance of it."

It might be surmised, from Professor Kingsley's mode of expressing himself, that there had been more than one person summoned to answer to the charge of witchcraft. But the writer has not been able to find more than one instance in the town, or even in the colony of New Haven, in which a person was thus accused.

Mrs. Elizabeth Godman, whose first appearance before a Court was as plaintiff complaining to a "Court of Magistrates held at New Haven for the Jurisdiction August 4th, 1653," of divers persons that "they had given out speeches that made folks think she was a witch," was two years afterward called

first to the Town Court and then to the Court of Magistrates to answer to charges of witchcraft.

Mrs. Godman was an inmate of the family of Deputy-Governor Goodyear. At the hearing in which she was plaintiff, she accused Mr. and Mrs. Goodyear and others of the same family of slanderously speaking of her as a witch; and not content with thus charging the Goodyear family, she extended the accusation so as to include some of the neighbors.

Mr. Goodyear's mansion was, as the reader is probably aware, on the site now occupied by the New Haven House. On the same side of Chapel street, and on the opposite side of College street, lived the Rev. Mr. Hooke, the ordained teacher of the church, who, with his wife, was included in Mrs. Godman's accusation, as was also the wife of Joshua Atwater, whose residence was where South College now stands.

After the agitation of these things, the Court declared to Mrs. Godman, as their judgment and sentence in this case, that she hath unjustly called hither the several persons before named, being that she can prove nothing against them, and that her carriage doth justly render her suspicious of witchcraft, which she herself in so many words confesseth. Therefore the Court wisheth her to look to her carriage hereafter, for if further proof come, these passages will not

be forgotten, and therefore gave her charge not to go in an offensive way to folks' houses in a railing manner, as it seems she hath done, but that she keep her place and meddle with her own business.

About two years afterward, viz., on the 7th of August, 1655, the old charge, with some fresh ones of similar nature, having been brought forward in the Plantation Court, and Mr. Goodyear's family being now unwilling to retain in their family so disagreeable an inmate, the court ordered "that she be committed to prison, there to abide the Court's pleasure. But because the matter is of weight, and the crime whereof she is suspected capital, therefore she is to answer it at the Court of Magistrates in October next." She was, "with respect to her health," released from prison September 4th, though warned at her peril to appear at the Court of Magistrates, and was told that she must not go up and down among her neighbors to give offense, nor come to the contribution as she hath formerly done. Thomas Johnson bravely received this afflicted and troublesome woman into his family, where she was kindly cared for till October 9, 1660, when she was released by death from the troubles which had proceeded partly from her own disordered brain, and partly from the superstitious fears of her neighbors.

About six weeks after Mrs. Godman was released from prison,

at a Court of Magistrates held at New Haven for the Jurisdiction the 17th of October, 1655, Mrs. Godman was called before the Court, and told that upon grounds formerly

declared, which stand upon record, she, by her own confession, remains under suspicion for witchcraft.

Mrs. Godman brought divers persons to the Court that they might say something to clear her, and much time was spent in hearing them, but to little purpose, the grounds of suspicion remaining full as strong as before, and she found full of lying; wherefore the Court declared unto her that though the evidence is not sufficient as yet to take away her life, the suspicions are clear and many, which she cannot, by all the means she hath used, free herself from; therefore she must forbear from going from house to house to give offense, and carry it orderly in the family where she is; which, if she do not, she will cause the court to commit her to prison again; and that she do now presently, upon her freedom, give security for her good behavior; and she did now before the Court engage fifty pounds of her estate that is in Mr. Goodyear's hand, for her good behavior.

This is the only prosecution for witchcraft in the jurisdiction of New Haven which has come to the knowledge of the editor of this volume; and he regrets that the distinguished jurist who wrote the chapter on the Bench and Bar has spoken of an execution for witchcraft which occurred at Fairfield, as if it happened in the Colony of New Haven. The Editor was ill when the sheet passed through the press, and the person who acted in his stead, though an accomplished scholar, was not an expert in the history of the New Haven Colony.

Certainly there never was an execution for witchcraft in the New Haven Colony; and probably the reason for such dissimilarity between her history and that of Connecticut and Massachusetts has been truly rendered in the foot-note on page 250, in the words of Dr. Leonard Bacon, cited from page 99 of his "Historical Discourses."
